the Gowt doth originally respect the Seeds: Notwithstanding, seeing nature is wholly careful of the Sex, and a diligent preserver of the particular kinds to be preserved, and a savor thereof; she peculiarly, what she can, forsees, that that Character doth not infect the Species, or that it do not fall on the Stones: wherefore she could not at least prevent, that in respect of its disposition, it doth not immediately infect the liquor next to the Seed, which *Paracelsus* calls the Sunovie, being plentifully powred forth between the chests of the Ligaments, and the co-touchings of the Bones. But at the very moment of Copulation, the Character of the Gowt, otherwise sleeping in the Spirit the *Archeus*, being stirred up under so great a stirring of Lust, is contempered with the Spirit, together with the seed, plainly after an irregular manner: because nature being then unable to govern the Rains, could not restrain, but that the Poison of the Character doth fermentally infect the Lustful seed: Therefore seeing the Seed or Character of the Gowt doth regularly defile the Spermatical or Seedy parts; therefore, as speedily as may be, the Sunovie, which no where happens alone, but where two Bones do mutually touch each other: Hence is the place or Nest of the Gowt in the Joynts: which things, seeing they ought to succeed by causes already constituted, nature being at least needy of her own preservation, doth not suffer the imprinted Spirits to infect the Sunovie, but in places far distant from the heart: For from hence the name of Podagra or Gowt of the Feet, and of Chiragra or Gowt of the Hands is borrowed. But at length, when as the Disease hath gotten strength in going, and nature hath lost hers; the Gowt molesteth more-nigh places also: Therefore the sharpness of the Gowt being conceived, is in the Spirit, as also in the seed potentially, without an actual tartness; to wit, even as the seed of a Pear doth not shew forth the tast of the Fruit: but while the time of ripening is urgent or at hand, a sharpness is actuated in the Spirit, and defiles this, which in a little space after, defiles the Sunovie with its own Ferment; no otherwise, than as the smell of a soure Earthen-pot, doth a little after, curdle new Milk poured into it. But in the mean time, while these things happen within, the whole *Archeus* of the body is altered in himself: For many Gowty persons have known that they did foretel to themselves a fit at hand, from the Excrement breeding between their Toes its being changed: which thing surely, doth not bewray so much the defluxion of a Humour, as the very altering of the Sweat and Latex it self. The Sunovie therefore, from whence or what time it once falls down, or becomes sharp, cannot but provoke Paines, wherefore by reason of a greater and less sharpness, do the heats, greatneses, or cruelties, & properties of the Gowt only differ. But the Sunovie is a certain cleer Musilage or slymie juyce, such as drops out of the shanks of a killed Calf when his feet are cut off: but a sharpness being presently conceived, the Sunovie waxeth clotty, in the form of Cheese, and becomes thick: And so also it is thereby rendred unapt, that according to a wonted Tenour of health, it can wholly exhale, without the residing of a dead Head: And hence the degenerate, diseased Birth becomes an unhappy mother of knots: for then it suffers a puffing away of the watery parts, the remainders of the thick and hardened Sunovie being retained: Hence are those monsters, Lime and Chalke. Therefore that sharpness is the cause of the pain, but the pain is the cause of the flowing forth of the neighbouring venal blond which is good and guiltless: But the affluxion of bloud, is not a defluxion from the Head, or Liver, sent thither thorow straight passages of wayes impossible to the understanding: And although it may deceive the unwary senses, and they may seem to feel a defluxion from above; yet they are only the deceitful judgments of the senses; even as when the Tooth akes, an increase seemeth to raine down to the payning causes on the whole side of the Head: no otherwise than as at the pain of the cleaving of the Skin at the roots of the Nales of the Fingers, or a White-flaw, a Kernel appears under the Arm-pit. For by a local Remedy, the pain of the Teeth departs, or it being pulled out by the roots, ceaseth, and the Kernel vanisheth when as the Finger is eased of pain.

This is the original & root of the Gowt, & this is the manner of its making: the which surely is confirmed by things helpful, and hurtful: Not indeed that I do approve of that Maxime, shameful in it self: or that I will have curative judgments to be drawn from thence: But errors being sometimes admitted, do instruct Judicious erring persons, who are willing to be wise in Charity, as good Remedies do confirm good operators: And therefore, whatsoever begins a subtile sharpness in the Spirit, doth ripen, increafe, or promote the same; that also Spurs on the Fits of the Gowt; of which sort are white, sharptish Wines, containing little of Wine, and much of Vinegar,

gar being the more largely drunk; and likewise whatsoever things are corruptives of the liquor Latex, as Asparagus, &c. In like manner also, whatsoever things do take away sharpness out of the Spirit of life, and the Latex, before the fit, being inwardly taken, or outwardly applyed, do remove, prevent, or preserve from the fit; at least-
 24 wife they do mitigate the pains, and hinder the knots. But in curing the Gowt, the sharpness produced is not to be regarded (which is instead of a fruit and of a product) but we must meditate, after what manner the Seminal or seedy Character of the Gowt may be abolished out of the Spirit of Life: The which otherwise, remaining, nothing is done which is worthy a choice Physitian.

For neither doth every Letter-Carrier come unto the Caskets of the vital Spirit; but
 25 only the Embassadour who is a Friend. And therefore the purging by the Coralline secret, kills the Gowt in its seed. But that Arcanum is not the Colour or Tincture of Coral (as the rout that are ignorant of Chymical matters do scoffingly interpret; because the applied words of Paracelsus (which is of the essence of Gold) do sound another thing: Nor also doth the colour, sulfur, or Tincture of Gold move the Belly: but this secret is in matter, metallick, in Colour, Coralline, in savour, like hony, and in essence, Golden: Not indeed, that it was ever a Malleable or Hammerable Body; but it is the Horizon or circular bound of gold, an un-concluded or un-enclosed and fixed Body, whose Sulfur is sweet, and Co-mixable with our constitutive parts: For in this Sulfur the almighty hath Collected all the virtues of Sol, to whom alone all Honour and Glory is due. He that understands me is rare; yet he knoweth that what things I have said concerning Gowt, are true. Nevertheless, seeing that is not sufficiently spoken, which is not sufficiently understood, it shall perhaps be profitable, to have repeated the rise, and progresse of the Gowt in an Epitome.

26 In the first place, those that have the Gowt or are Gowty, do complain that they do well perceive or feel the defluxion of a burning Humor.

27 But I have already sufficiently and more than sufficiently taught, that there never was any humor of us in nature, besides the blood, the Latex, and a secondary or nutritious nourishment; and besides a degenerate excrement, and that none of these do flow down, and much less can a defluxion be felt, a humor no where existing but in Galenical books.

28 Therefore in the supposition of feeling or percivance, there is (of necessity) an error. Therefore the Gowt is a disease Character, Seminally implanted in the spirit of life: the which at the set bounds of its own ripeness, doth beget a fermental sharpness, co-fermentable with the spermatick or seedy parts. Therefore the Gowt doth not exist in the venal Blood, and much less in the excrements.

29 But Gowty Persons are first disturbed in their Midriffs, and they do as well feel the inward successive changes of Drinks and Meats, as the outward ones of the air, yea
 30 and oftentimes they preface these to come. Wherefore, they at first undergo feverish motions about the Shop of the vital Spirit, and indeed in the beginnings of a fit: For the first Motions do ascend out of the Midriffs, and assault the Seat of the Sensitive Soul: For the Character conceived in the Midriffs, unfoldeth the figures of the Moon; and Mercury, and afterwards is perfected in the Heart: But the formed, or ripened Character, doth there put on a feverish Spirit, as it doth infect it: The which, as soon as it hath conceived the sharpness of the consent or co-resemblance of Life, or a fermental sharpness, it is ill-favouredly driven by a feverish Motion, and is feverishly brought unto appointed places, to wit, those of the raw sperm, in the Sinovie of the joynts: The Spirit I say, being thus infected, and not a humor (which thing is to be noted) doth Coagulate the Sinovie, being a transparent thing in it self, with the sharpness of a ferment, into a thick clot; So that by reason of the degree of a conceived brackishness, heats, pains, and swellings of the Gowt are distinguished. But that the Humor Latex is called by the horn of pain, and is dismissed by the veins, to wash it off, it is certain, that it hath confirmed in the Schools the errors of defluxions, an accused Liver, and the Head to have paid the punishment of an undeserved fault, and to have sustained a thousand vain Medicines. Therefore the Gowt is not that which Paineth, and that which Swelleth, or burneth; but they are the products hereof: For neither when the foot is taken off by the Bullet of a Gun, is the Gowt taken away, or the Joynt-sickness: for truly, in the act of feeling, by an instrument of feeling, there is made only a consent of parts:

31 Which thing hath deceived the Sick, and Physitians who believe or trust to them: neither in the mean time, doth Swelling prove a descending: For that which follows the

the Pain, ought to go before it, if the descending of a humor, or a Swelling should be the cause of the Pain. Add to this, that the hottest Gowt is without Swelling: For that is wont to be seen in the pain of the Teeth, in the thorn fixed in a part, that the pain of a place doth counterfeit the defluxions of the upper parts: But what have these things common with the fable of a Catarrhe? On the contrary, the *Schools* do persist, they inflict Cauteries on the opposite side, that they may pull back the humor flowing down into the opposite Leg, and expunge it by a hole: But in good sooth, what do Cauteries suck out? nothing but Snotty, and liquide corrupt matter: But these are the fruits of a Wound, the degenerations of venal Blood. Is therefore the matter of the Gowt, Snotty corruption, or liquid corruption? Or the Snotty filths of an Uleer? Is Snotty matter ever transchanged into a Chalk? Is Snotty corruption quiet without corroding? Therefore the *Schools* sell their own Dream to the Young beginner; that Snotty corrupt matter doth descend between the joints, or that it is apt to be turned into a Chalk; but well, that it makes an opening to it self by Corroding: And it is more childish that any Snotty corrupt thing flowing down into the right foot, should decline from the scope appointed to it, if the Wound be made in the left leg; the which if it do flow down, it falls down of its own free accord, or is sent and directed by a Commander.

I pass by in the meantime, the absurdities of making it, and of waies or passages which I have elsewhere blown away: And likewise the falling down of humors separated from the venal Blood, I have already before, together with the humors themselves, banished without the nature and hope of things, in an appointed Book: First of all that there is no part Commanding, Sending, Darting, or Directing, hath been elsewhere sufficiently concluded: But if of its own accord, it fall down into the side perpendicular unto it; surely the humor will not fall in one that Sleeps, if the whole Body Sleepeth in a plain Bed, because a Perpendicular line is wanting; neither shall a humor sliding down by its weight, be called away from its purpose, although the hole be in the opposite Leg.

In the Gowt therefore, surely, nature hath derided the vain purgations of Physicians, their extenuations, cuttings of a Vein, Searrifying, hot Baths, and Cauteries, the which do even detract from the strength, and shorten Life: For it is certain that nature fore-perceiving and fearing a ruine procured unto her, such remedies do often mitigate the aforesaid Symptoms; but that appeasing is presently to be requited with a more cruel pain, and cruelty of knots. Therefore all things have been hitherto attempted with an unprosperous event.

In the next place, they appoint dry sweats with lesse loss of Life indeed; but with the like unprosperousness of successes. At length, they give drinks, from a barbarous foundation, of the utmost corner of the Earth, to drink, and when they perceived our own Country remedies to be in vain, they promise that humors (never seen, named, and bred) are to be dried up at least by barbarous remedies.

But why do they give these drinks to drink also in a dry consumption? Is it not that they may dry up the defluxing and exorbitant ill juicy humor? But let them first satisfy the question, whether the thing be, or not; whether watery decoctions are for drying up? And then let them teach, that these drinks will not by a certain privilege, dry up the Blood, as neither those Humors which they call secondary ones; but the other three Dreamed ones only in the Blood; or next, only Phlegmatish excrements; lastly, that they will not vitiate the requisite composition in the Blood, and the due proportion of the thing composed: But if these sort of decoctions do only dry up slimy and sharp excrements, at leastwise, they shall increase the clots and knots, by leaving a curd of harshness. But if they do these things in Rheums, why not in the Gowt? Or if not in the Gowt, why also not in Catarrhs? If they do dry up Phlegm between the joints, when they are given to drink for prevention of the Gowt, how shall they not constrain Phlegm sliding in the Veins, or in the passage between the Skin, unto a Sand-stone and knots? If tough Phlegm be dried up into the Sand-stones, by decoctions; shall they not increase hurt in those that are distempered in their Lungs? And therefore are they wickedly prescribed and given to Drink: If dry things do imbibe or drink up moisture, at leastwise, I do not see how moist things shall dry up, especially where the Drink of that which is decocted doth alwaies remain Moist.

Lastly, at leastwise a Catarrhy humor could not chuse but be an excrement: But the *Schools* have not considered, that excrementous things cannot be blown away, as neither bedried up without a dead Head. For I have elsewhere taught, that drying up is only

only of heat, and cold: This whereof, in an increased degree scarce Tolerable for living Creatures, doth convert watery Bodies into a Gas; but the other is not an Operative quality into a drying vapour, as neither into Moisture; but that the dry doth drink up the moist, and on the other hand, that the moist doth moisten as it is imbibed: But moisture is not dried up by dryness, but the moisture departing, being supt up by heat, or cold. The Schools in defluxions, do forbid hot things, do forbid Wines, do perswade Barley Broaths, and so in the middle of the Waters, sometimes moistening, and sometimes drying up (as they say) they endeavour to dry up; but they know not what, in what manner, and by what means, because hitherto, the Humor the Author of so great evils, is an unnamed one. I therefore have not known, either the Motion, or manner, or means, whereby these Drinks are able to dry up, by a true drying up, and much less hurtful excrements only, and least of all, can they perform those things which Physitians do promise. Nature therefore despiseth these Dreams of Physitians, and doth alwaies make, and will alwaies make void their promises. I beseech the most excellent God, that he would pardon the offences or sins which we have contracted, not by a stubborn ignorance, but from humane frailty: Yet I fear, least that befall Physitians, which doth other men; among whom an ignorance of right or Law, takes away or loofeth the inheritance.

Last of all, even as the Gowt is truly, a primary or chief disease; hence the knowing thereof, depends on the knowledge of chief Diseases; about the end whereof, some things are recorded concerning the cure of the Gowt.

CHAP. LII.

A Raging or Mad Pleura.

1. The Pleurisie of the Schools. 2. The errors of the definition, and forgetfulnesses of themselves. 3. Some Dreamed assertions. 4. Whether the weight of Phlegm falling down, doth pull away the Pleura from the Ribs. 5. Some more gross assertions. 6. The Vain Azugos hath no regard unto the essence of a Pleurisie. 7. The vain hope of revulsion and derivation. 8. Towhat end Blood-letting may conduce in a Pleurisie. 9. The Schools are deceived by Artificial things. 10. Both causes of the Disease do remain in their own effects. 11. Some rashnesses of Paracelsus. 12. The carelessnesses of the Schools. 13. The consideration of the Author in a Pleurisie, declared by an example. 14. A contemplation of sharpness in the bounds of a Pleurisie. 15. A Prooffe. 16. The vanity of blood-letting. 17. Things required in a Remedy. 18. A sharpness is proved in the Pleurisie. 19. How the Pleura may be pulled away from the Ribs. 20. Whence an inflammation of the Lungs is. 21. The Thorn being plucked out, the place doth oft become thorny. 22. From whence a Pleurisie is. 23. Where the Kitchin of a Pleurisie is. 24. The repentance of nature in a Pleurisie. 25. The Antients have spoken something of a Husteron Proteron, concerning the Pain of the Pleurisie. 26. How the bloody Flux separates it self from a Pleurisie. 27. Wherein a Peripneumonia or inflammation of the Lungs, and an Imposthume full of Corrupt Matter, do differ from a Pleurisie. 28. What a Clyster can work in the bloody-Flux. 29. The use of Eclogmaes are taken notice of. 30. The Schools are every where buisie about the Cloakative cure of Diseases. 31. The cruel carelessness of Physitians. 32. Remedies wrested in a Pleurisie. 33. Notable absurdities about the Bloody-Flux. 34. Why a Clyster is hurtful to a Bloody-Flux. 35. Observations of the Author who had a Pleurisie. 36. How a seasonable cutting of a Vein differs from that which is delayed.

THE Pleurisie is by the Schools numbred among defluxions or rheums, & they define it to be a bloody Apopteme, wherein the Pleura or coat which girdeth the Ribs, is plucked from the ribs, with a continual Fever, & pain of the place. And Apopteme is the general

general kind of the Disease defined; and so those who always define a Disease to be a disposition, and do place it among qualities, do now think, the product or effects of a Pleurisie which follow upon the placing of a defluxing rheum, to be the Disease, and do provide it a place among substances: but they no longer place it among a distemper, disposition, and hurting of an action; but they now affirm it to be a material product and Aposteme. In the next place, they leave it uncertain, whether they may ascribe the Pleurisie to a Phlegm or salt Rheum, or indeed, to venal blood expelled thither: But neither do they also explain in the least, what that furious disposition may be, which by its angry heat, doth rent the Pleura from the Ribs; Yet that animosity is in nature, and motion, before the defluxing rheum, and the Catarrh before that pulling asunder, and that division goes before an Aposteme.

Therefore they define the effect, also they think that a defluxing rheum, doth by its weight of salt phlegm, actually rent the Pleura from the Ribs: Moreover, the Schools omit, that they do in a Pleurisie decree not any remedy for a Phlegmatist Catarrh, as also, they are forgetful of the Pleura already torn, because they do provide for expectorations only, by sugared lickings or Ecligmaes. Indeed they sufficiently see, that the Pleurisie is a sudden Disease, for which, the saltness of the Phlegm could not far of have produced a corroding in the place, or have made a hollowness, which the blood falling down thither, doth fill up, and further extend: Therefore, they will have that defluxing Phlegm, only by its weight to rent the Pleura from the Ribs: As if, it should not flow down by drops, and the weight of Phlegm that flows down from above, now falling down perpendicularly on the place, should make the force of some pounds at once! But they have not yet declared the hollowness in which that height of heaped-up Phlegm should reside: For although the sick should be as empty in his brain, as is the present foolish assertion of the Schools, yet so great Phlegm in the Scull could not tear the Pleura from the Ribs. 2. They have not yet taught the wayes, whereby the continuance of the Rheum in its passage from the brain, should be unto the membrane between the Ribs, and much less which by its weight, aloof of, should perform that. 3. Neither also, have they as yet denominated that renter and so mighty tearer, which may pluck away the Pleura, grown to the Ribs on every side, by a stiff and much fiber, or which may stretch water into a dropscial belly, like the tympany. Neither lastly, do they shew, why that Catarrh doth rain down unto an appointed and small place, which was made or detained in the brain in common: For doth not the subsequent subscribing to each other, from so many and so great rashnesses of the Schools, deserve to be of suspected credit? For it is a work of greater violence than that of Phlegm falling down, to have pul'd away the Pleura from the Ribs: For as many as have commented on the ninth Chapter of *Almanzor*, longly and largely, concerning the vein *Azugas* or stock arising from the right side of the trunk of the upper part of the hollow vein, whether it be distributed between the Ribs, without a peer or fellow, do scratch themselves, and so forget their defluxing rheum, even as also the weight of the same, being turned only unto the emptying of venal blood: For herein they rather consider the one only remedy which they have, and that alike known to Country People, to wit, by the only repeated cutting of a vein, than the very nature of the Disease, or the Schools their supposed causes of a Rheum.

And moreover, all have altogether declined from that absurdity, because the consideration of a Rheum being rejected in time of curing, they think to have brought the cause from that part first, from which the blood slid as it were by accident, out of the unlike vein, between the Pleura: For they have alwayes so greatly fallen under sluggishness, that they for the most part overshadow the causes, by meditating on the effects: Neither have they ever heeded, that the blood is not brought down by the veins of their own accord, as neither that it slides into the place by its own proper fall: For to tear the Pleura from the Ribs, to send venal blood thither, and the like, are the offices of life, but not the faults of a sliding liquor. But what will the Schools do, which are accustomed to subscribe so much to *Pagans*, whose doctrine is wont to imitate, not nature, but science Mathematical it self in artificial things? For they see the vein *Azugas* to be extended and derived thorow both Ribs, therefore from hence also, they beg all the cause; No otherwise than as a Traveller sleeping about a river, and a dead carcass is found slain in the next wood by Thievs, therefore, that sleeping man, loosing his head as guilty, ought to shed all the blood. Therefore they appoint blood-letting, and try to draw forth blood by revulsion, out of the vein *Azugas*, made

- guilty, as the most heer, immediate, and containing cause. But where now remains your Catarrh of Phlegm, or Choler flowing down from the head? and the which only by its weight, doth tear the Pleura from the Ribs. They at least intend to pull back blood from the unlike or non-peered vein, not only flowing, but also in possibility to flow: And it is for that cause, called revulsion, even as also, some more near vein being pierced as it were the mediatress of the evil, is called derivation. Alas! how circumspect are the Schools in discursive and artificial things? Which in nature are nothing but mockeries? Because although a vein of the elbow may empty out all its blood, even into the hollow vein, and this consequently, may draw the blood out of the vein *Azigos*; yet the Schools ought to know, that presently after, the whole venal blood is equally restored again into the veins; So that, although the vein of the elbow might be wholly evacuated (which is never) yet that the whole blood should be presently again equalized throughout the whole co-weaving of the veins: whence it is manifest, that the trifles of revulsion and derivation are vain, because they are such things, which being granted, yet would be serviceable to the intention but for a small time of delay. I pray therefore let Physitians consider, that blood-letting is not of use in the Pleurisie, for revulsion and derivation, but for a meer exhausting of the blood and strength, and the lessening thereof; To wit, that nature being sore afraid of that evacuation, may desist and cease from sending an increase of venal blood about the Pleura: Let them well mark, I say, whether this be not, with so notable and sudden a loss of strength (in a disease wherein the faculties themselves alone do bear the whole burthen) to cure from the latter or effect, by a forecaution and prevention of its increase? Is that, I say to go unto the co-knit and nourishing cause, while as they do not convert their whole endeavour unto the thing doing or causing, but unto the thing to be done? They are altogether foolish services which are drawn from artificial things: For a Brook flowing to a certain bound, is diminished and stayed if its bank be opened at the side, and it slide with a more near and ready journey to a steep place: But what shall that profit, if the blood can be only emptied unto some ounces alone, and indeed with a notable loss of strength? Shall not the blood, when the vein is stopped up, flow again unto the place appointed, as long as the beginning of motion doth remain? Shall it not be more convenient, to have stayed the beginning of the Flux? Seeing that, from a vein being cut, no other good can be expected in the Pleurisie, than that which may be hoped for by the weakning of the strength? To wit, because nature being greedy of strength, needy and wanting of venal blood, ceaseth from a sumptomatical motion toward the Pleura, as long as shee remains enfeebled: And therefore, the Pleurisie not increasing for a while, nature as it were repenting of the rumor and storm, thinks of a ripening of the corrupt Pus that is to be framed of the out-hunted blood: All which things would more successfully follow, the blood being retained, wherein the life, that is, the strength dwells; because the life is nature, which is the alone Physitians of Diseases, and shee failing, the Physitian takes away his shoulders. Therefore the Schools have not hitherto taken heed unto the impulsive cause, which pours forth the blood out of the veins into undue places, beyond bound and measure, and which furiously plucks away the Pleura from the Ribs, and prepares a wound and hollownes.
- 10 Which causes being co-knit together, are indeed before the effect; yet do they so persevere in the same effect, that they are materially and efficiently the very effects themselves: Unto which effect indeed, flow and impotent is the race of false and salt Phlegm out of the head, and the dreamed rheumy defluxions, through channels or continuations of passages not existing.
- 11 But *Paracelsus* meditating of this pulling away of the Pleura, and being willing to square a cause thereunto, hath brought in other follies, that he may defend his own mad laws of a little world in us: For he feigneth anew, and Ogertine salt, else never named by him, however variously he itcheth in himself concerning salts in Ulcers and Apostemes, even to the fetching off of the skin.
- 12 And first of all, he teacheth, that this Ogertine salt is of the property of Arsenical Sulphurs: in the mean time, he is silent concerning its mines, veins, property, history, etymology, and reason of its etymology, because it was dreamed by him: But at leastwise, he had acted nothing more clerly herein; seeing he dawbs no less with the same clay, than that wherewith the Schools are defiled: For truly, none hath hitherto declared, why the Pleura departs from the Ribs, whereunto it is adjoined by a continued thred of fibers; to wit, whether it be pulled away of its own free

free accord, or indeed by another tearer: they are content, as satisfied in the doubt, if they shall say, it is rent from the Ribs by the weight of a down-rouling Catarrh: in the resolving nevertheless, of which doubt, as of the root, the whole cure and prevention of a Pleurisie doth consist: For the root of every Disease, is worthy of the dumb silence of the Schools (to wit, I shall shew in a peculiar treatise, that the very essence of any kind of Diseases whatsoever, hath been hitherto unknown in the Schools); it hath seemed to suffice them, if they have applyed their doctrine unto without, unto artificials, unto the latter symptoms, unto the consequent fruits or products: as though the stage of causes and essential roots were ridiculous and in vain.

Paracelsus also, if he reckoned to confirm any solid thing toward a Disease of so great moment, and to add his doctrine thereto, if he determined not to derive his Ogertine salt it self, from a power unto act, out of the blood; at leastwise, that unwonted, unnamed, and unknown salt ought to have brought a necessity of its invention, and of its generation, that at least, some place might be afforded for prevention. For this, the pretended title of the Monarch of secrets doth require. But all things have remained neglected, because the chiefdome of healing hath stood founded upon empty stubble. I promise therefore, that whatsoever hath been built thereon, shall fall to the ground:

For whether a fire, the searcher out of truth, be built, or next, whether the voluntary corruption of dayes shall consume the stubble, at leastwise I know, that at length that building will fall to the ground.

But I, in a Pleurisie, consider, the first inward moover, or spur, and afterwards the tearer of the Pleura: And both those being one and the same efficient cause of it, I call the Pleurisie it self: But the venal blood flowing thither, and that which is poured out thither, and the aposteme sprung from thence, I consider as the product; to which end I will bring common experience for an example:

Let a Thorn be thrust into any part of the Body, the which, pain instantly succeedeth; from the pain there is presently a Pulse, from the Pulse, an afflux of venal blood, whence ariseth a swelling, a fever, an Aposteme, &c. the Thorn therefore mooves the other things after it.

Therefore the Metaphorical Thorn of the Pleurisie, and by speaking properly, the Pleurisie it self, is a forreign sharpness conceived in the Archeus, the which if it chafeth, or layes aside into the blood of the hollow vein, surely that is expelled unto the vein *Azugas*, yea or into the very flesh near the Ribs, from whence ariseth an Aposteme as the product of the Pleurisie.

In the next place, as an Aposteme which is bred from a Thorn fastened in the finger, is not but rashly cured by cutting of a vein; but it promiseth a cure by reason of the plucking out of the Thorn only: so it happens in the Pleurisie.

For as sharpness in the stomach, is an acceptable, and ordinary savour; so out of the stomach, all sharpness is besides nature, and hostile, which hath been hitherto unknown in the Schools.

For so, from a sharpness, are wringings of the bowels, there is a strangury in the Urine, a corroding in Ulcers, in the skin a scab, in the joynts the Gouts, &c. And the which, if thou wilt experience to thy hand, mingle some drops at least, of sharpish Wine, with the Urine that hath been newly pissed out without pain, and cast it in with a Syringe: Thou shalt experience against thy will, that I teach the Truth.

In the humor Latex also, (of which afterwards in its own place) it raiseth up a bastard Pleurisie, (the which they, altogether through the same carelesness of narrowly searching, as in other Diseases, do call a windy one): but if the Archeus hath laid up a gentle sharpness into the lap of the venal blood, unhappily applied to it; it as despised, is presently hunted out, and cast out of the veins, and brings forth an Aposteme in whatsoever place that shall happen: but if that doth happen to be the deeper or lavisher in the veins, a certain pestilent affect ariseth:

The which, I prove; for the venal blood, or flesh, do never wax soure or sharp, without an actual obtaining of putrefaction (the which I have els-where on purpose proved by the fleshes of Beasts which do most swiftly Putrifie under the Dogstar, therefore yielding soure Broath,) for the blood waxing soure, is, contrary to the nature of the Veins, and to the disposition of the whole flesh (as long as it liveth) presently coagulated: For the venal blood in a dead-Carcasse, is preserved by the Vein, a

good while from coagulating, out of which, if it shall fall, it waxeth presently clotty; which is more largely declared els-where.

- 16 Hence it follows, that of an Aposteme made in a Pleurisie, the blood of the same cannot be evacuated by a Vein being cut, however the name of Revulsion and Derivation be boasted of, for fear of the disease, and delusion of the Sick: And likewise, neither doth the cutting of a Vein hinder, that any thing doth any more for the future, wax sharp, seeing blood-letting hath the power only of a Privation: neither can the venal blood which is brought forth, hinder, that that which (being within) hath drawn a sharpness, should not lay the same aside. But a meet Remedy for the Pleurisie, is bound to cause an averfness from the conception of a sharpening in the Archeus. If therefore the sharpness of the venal blood be a token of the same putrifying, it is certain, that a Vein doth receive into it self, neither putrified, nor putrifying blood, neither that it suffers it to putrifie, if as yet after death it defend the same from coagulating. Therefore there is some exorbitant or pestilent Impression in the blood, if it wax sharp never so slenderly. But if the Archeus be infected by an Endemical matter breathed into the Breast, or a sharp Poyson otherwise bred within, and he shall affect the blood of the Veins, or other blood designed for nourishment; any part whatsoever being fore afraid of corrupting, doth presently repulse the same blood from it. This I say, is the efficient and true Spur of the Pleurisie: and that thing, Hippocrates the first of Physicians seemeth to have perceived, while he writeth: *Hot, Cold, Moist, or Dry, are not diseases; but that which is Sharp, Bitter, Soure, and Harsh.*
- 17 But that there is sharpness in a Pleurisie, is manifest from this; because in the Pleurisie, the Urine and venal blood being drawn forth by a cut Vein, do wax clotty even in going forth, or before the co-thickning of the blood, which clottiness or cheefness is the effect of sharpness: But the Latex which waxeth sharp, lighting into the flesh between the Ribs, causeth a Pleuritical pain; but not a true and constant affect: And therefore, that which they name a Flatulent or windy one (although windy Blasts do never reach thither, unless by taking of a transchanging Poyson; even as concerning windinesses) doth by a slender Remedy presently produce it self discussable, to wit, by unperceivable Transpirations. Therefore the sharpness presently brings forth pain: but I have called (in the Book of the Disease of the Stone, in the Chapter of Sensation) the proper companion, and cause of pain, a Convulsion: In which Convulsion, the Pulse which before lay hid, is manifested, the Artery waxeth hard, and pain accompanies it: But because a Convulsion is for the most part extended, and slackened by intervals (which the pain of women in Travail doth testifie) hence it comes to pass, that as oft as the Pleura is intent on its cramp, by a proper Blas of motion, so often something of the Fibers is rent asunder from the Ribs; and while it doth but never so little slacken it self, the neighbouring blood runs to it into the place of the wrinkles made by contracting of the Fracture: And this by repeated turns, is the cause of a great Aposteme, according to the frequency, and sharpness of the Contractures: But the venal blood being hunted out, or otherwise exceeding a just Dose, by reason of the mark of a sharp or soure Ferment conceived, becomes hostile, and is presently curdled.
- 18 But if indeed the sharpness be dispersed by the infected Archeus into the Arterial Vein, or Venal Artery (which are the vessels of the Lungs) a necessitated Inflammation or Impostume of the Lungs doth happen. Let the Schools therefore see and discern, whether blood-letting can cure the containing cause and root; or whether indeed their whole endeavour doth only extend it self, that with a procured loss of strength, they may prevent an increase of the Pleurisie, when much: For thus the manner of making diseases ought to be explained by their motive and vital causes, if it be needful to have young beginners rightly instructed, and for Physitians to be so consulted with, that afterwards, every one may rightly perform his office, and that the sick neighbour may thereby crop his desired Fruit. For the Thorn being pulled out, the rest doth easily cease; unless perhaps long delay hath made the Apostem it self Thorny. For an Apostem, or Ulcer being once formed, although they have neither privily gotten root in the body, nor are nourished from elsewhere, yet they do afterwards stand by themselves, and subsist without any other Patronage of them. We must therefore employ our selves about the plucking out of the Thorn: and there is a stubbornness of a consumptive Ulcer; because the Ulcer hath not now, a Thorn, but hath become Thorny.

The Pleurisie therefore, is bred in us of its own accord, when a guest of the first digestion being a stranger, flees into anothers Harvest; or otherwise, a Poysonous Endemick being breathed in; and then a Pleurisie is frequent among the people. For in much heat, a sudden and much abundant drinking of cold water or drink, doth contract the Pleura, no otherwise than as any other sharp thing which rusheth on it. Also the kitchen of the Pleura is not in its most thin and undividable little membranie; but in the flesh between the Ribs which co-toucheth with it: For its too much slenderness doth not suffer a kitchen to be hid within it self: Therefore the blood of the Pleura it self, is most swiftly mortified by a violent external thing rushing on it, whether it shall be sharp, or a sudden cold; Because in that outward kitchen, nourishment is not digested, and prepared for it. The blood therefore being vitiated, while it is in making for the nourishment of the Pleura, it straightway waxeth sharp, and becomes a true Pleurisie: But they do feel the Pleurisie, not indeed, to come, but to have come, and to be present, while it is generated by an external thing rushing on it: For natural generations are made as it were in an instant: And therefore the degeneration of the blood in the aforesaid and outward kitchen of the Pleura, is as it were in an instant. But the Pleurisie happening from sharp venal blood defiled from elf-where, hath for the most part, other fore-shewing diseases. But it is also proper to the Pleurisie, that it presently repenteth nature of her offence: And so from the horror of the admitted error, she willingly correcteth the offence of her own digestion: And therefore for cure, there is only required, that the Thorn, & product of the confused Digestion be taken away, in the blood it self encompassing, yea and in the Apostem it self:

But the Pleurisie which is restored by blood-letting, doth oft-times, after a years space return, and doth more often leave a Consumption behind it; Because the business of the remaining Thorn is left to be overcome by the shoulders of nature alone, without a help restoring the Character which there stayeth behind. The Antients indeed have perceived, that where Pain, and Heat are, thither venal blood doth flow:

But none (that I know of) hath hitherto reached to the Thorn, and foregoing motive sharpness, as neither to the convulsive pain; from whence notwithstanding, comfort ought to be hoped for. It might justly be doubted, why the Pleura slackening a little while from its contracture, doth not again drive back the venal blood contained within it, unto the places from whence it came: But it is already manifest, that the venal blood doth from the sharpness, presently wax clotty, and hath learned also constantly to stick in this place: After another manner, Tumours do often disperse elf-where; because their venal blood is not estranged by a sharpness.

Furthermore, the Dysentery or bloody-Flux differs from the Pleurisie, not so much in the sharpness of the material cause, as in the variety of the subject: For neither have the Bowels flesh behind them for a kitchen; And therefore a Bowel hath its own Thorn fastened in its own coats: For besides a double coat of a Bowel or intestine, a third is entrenched with the Gown of the Mesentery: And because it hath not without it self, a kitchen in the flesh: therefore the membrane thereof doth not bring an Apostem: wherefore the blood coming to it for ease of the gripings or wringings, it is not hardened, or waxeth clotty, neither hath the blood as yet obtained the Fibers of the Mesentery, whereby it may be coagulated, or swell into an Apostem: Wherefore, in the bloody-Flux, that blood following to the place for an easement of the pricking pain arising from the sharpness, flows forth without being made clotty: But in the Pleurisie, in one respect, a bloody Spittle not coagulated (because not yet sharp) as it were hastening, being sent for an easement of the pain; neither that, nor such Spittle, is the occasional cause of that disease: but in the other respect, sharp blood is stayed between the Pleura and the Ribs, waxeth clotty, is Apostemized, and therefore is made corrupt Pus. Therefore very much blood hastening for an ease of the pain (where pain is, thither blood hastens) beyond or thorow the Pleura, doth pierce into the Breast, which is reached out by Spitting with a most troublesom Cough.

Wherefore a Pleurisie differs not from a Peripneumonia or Inflammation or Imposthume, of the Lungs, in its occasional causes, as neither in its Remedy: For blood is poured into the substance of the Lungs, according to the pleuritical thorn: For in a mattery Imposthume, although the Lungs do contain venal blood, & divers hostile things in them, yet through want of a sharp Thorn, there is not a Peripneumonia: but there are other defects proceeding from the Excrementss of their own Digestion. Therefore

many

many diseases do not differ in their occasional matter; but in the diverse agents, and properties of members, and functions; The which for the most part do not so much vary the Remedies, as adjacent things depending on the powers of properties.

- 28 For it is thereby manifest, how vain the Remedy of Clysters is in the bloody-Flux; because the bloody-Flux is only of the slender Bowels, which are someells distant from the more gross ones which are capable of Clysters.

Therefore in the Pleurisie, and Peripneumonia, they make use of Blood-letting, for a necessary remooval (as they say) of the causes; as if the abounding of blood alone (the which nevertheless, they say is the one only and suitable betokener of cutting of a Vein) were their mother.

- 29 But besides, therefore they have prescribed Ecligmaes, not indeed for remooval of the Thorn; but for a more easie expectorating of Spittles; to wit, lickings or Ecligmaes of Colts-foot, of Fox-lungs, &c. For seeing this living Creature is almost unwearied, they have thought, that dying (for without thinking, the strong authority of the Schools faileth) he had bequeathed the Remedy of curing difficult breathers to his Lungs, although the Bowel, the author of the Thorn in us, doth remain badly affected, the Apostem which threatneth snotty corrupt matter persisting; And the which, unless (as Galen is authour) it be wholly cured by a set number of dayes, an

- 30 undoubted Consumption of the Lungs is to be expected. Wherefore, the whole study of the Schools, doth not aime so much to cure, as only to prevent its increase; that is, not in respect of the radical cause, but by viewing of the latter product, to wit, that it decline not into a worse State: For the Schools have this faculty always, to leave their burden to nature, to hope for and defer the time for a critical day: For seeing that they scarce acknowledge Remedies besides purging, and letting out of blood; they proceed only unto things which diminish the liquor, and strength, and only unto a cloakative cure, being busied about the effects, and latter products; to wit, that they may banish the remainder into the Hucksterries of the kitchen and a prescribed diet, whether it be those whom a more blessed disposition of strength preserveth, or otherwise have rushed into more difficult diseases, and being destitute of hope, they have reduced into the number of incurable ones.

For as I have said concerning the Lohoch of Fox-lungs, they likewise in the Palsey, commend the brain of a Coney and Hare, because they are swift in running, the Yard of a Stag for those that are cold, because he is a wild Beast very much inclined to Leachery. If therefore a country man shall eat the boyled hand of a Musitian, shall he perhaps artificially strike the Lute?

But the Schools do require, that Ecligmaes be swallowed by a slow drawing, and therefore are they endowed with the name of lickings-in, that the Remedy may materially descend unto the place of the Cough. I wonder in the mean time, why they have not likewise prepared Lohoch sanum of a Horses taile, which is stirred all the Summer for brushing off the flies.

- 31 But nothing hath been thought of by the Schools for taking away the Thorn of the Pleurisie; by reason of one only Fault; to wit, because they have not known the same, and have neglected diligently to search, being content with subscribing to each other. In the mean time, they render the strength of a weak man weaker, and pull it back, as if they were willing to destroy him by repeated cuttings of a Vein; as if the strength being prostrated, some commodious thing is afterwards to be hoped for.

I bewail in the mean time, the condition of mortals, who have gotten such helpers in so painful a disease, who being ignorant of the cause, do attempt any absurdities, so they have first weakened the Sick through a Penury of venal blood and strength; in the mean time, they have left nature swimming with her one Oars: But if in the mean time, a proper strength shall help the infirmity of Youth; they require, and ascribe honour (that is, in effect, a reward) to be due unto themselves: And they declare that they have gotten the priviledge of killing two hundred others by the same meanes: or if the strength being wearied out by the emptying Chyrurgion, doth fail, is extinguished by a long Consumption, and a daily mournful Spectacle; at least wise the Physitian can excuse himself by a cruel and unwonted greatness of the disease, because the best Remedies being administred, he hath nevertheless declined into a Consumption: none such whereof would happen (for I promise and promise upon the penalty of proof) if the cruel cutting of a Vein being despised, the Balsam of life, and strength of

of nature being reserved, the radical thorn be plucked out: so the pain, bloody Spittle, and Fever do pleasingly cease, and that which held together being rent asunder, is it self, presently incarnated. But the causes being hitherto unknown, have brought forth the ignorance of a Remedy. For my Remedies are such as forsake none in the Pleurisie, and Peripneumony.

The Powder of the Yard of a Stag, or Bull, or the venal blood of a He-Goat, or the juice of wild Succory, of the flowers of wild Poppy, and many such like. I especially commend the Blood of a He-Goat, not indeed that which is sold; but I hang up a He-Goat by the Horns, and his hinder feet being tied to his Horns, his Stones being cut off, he is gelded: The blood issuing from thence even untill his death, is received, and dried: And it is known from the Saleable blood (which is nothing but Sheeps blood) because that which is sold, is easily beaten, and the Powder thereof is of a red or Pomegranate Colour; but the true He-Goats blood is most difficultly and tediously beaten, and the Powder thereof is of a pitchie Colour: But the beating is so troublesome, not indeed by reason of its toughness; but by reason of its meer and incredible hardness. For these kind of Succors being friendly to the *Archeus*, and homebred or familiar to mans nature, do correct the immediate cause in the *Archeus*, and take away its sharpness, and do dispose the blood to transpiration, do appease the pain, because they extinguish the sharpness: Also the ferment of Tartness being taken away, they resolve as much as they can of the out-hunted Blood, and the appointment of Corrupt Pus being neglected, they do seasonably cast out the rest by Cough: Wherefore the same Remedies are given to Drink to those that have been thrown down or have fallen from an high place, as they do disperse the venal blood made clotty by the Bruise; that is, they take away the thorn, they take away the poyson, and for that cause do incarnate the place: And so they do satisfy all betokenings, by the one only amendment of the thorn: For the which, the unexhausted bounty of divine clemency hath made many the like things.

For a bloody Flux doth not require astringent Medicines; for under an ordinary judgement, or under a close stoppage and astriction, death is straightway present: For I being present, and greatly astonished, after 426. vain Clysters, at length, an emplaister of Diapompholigos dissolved in Oyl of Quinces, was cast into a noble man with a Clyster, by our chief Physicians, with an notable stupidity of the Schools: For truly after 18. hundred stools and more, he was cured by me without a Clyster, by a Remedy taken in at the Mouth. And likewise the Schools proceed as yet still to Teach, that the bloody Flux doth not consist but with an Ulcer of the Bowels; for healing whereof, the Physicians did therefore infuse or pour in the aforesaid Emplaister: As if an Ulcer of a greater Bowel were to be healed by that emplaister! When as a simple Wound thereof is reckoned incurable. And likewise if the bloody Flux be in the smaller or small Guts, why do they not emplaister the long ones? For who of the Galenists hath ever cured an Ulcer of the Oesophagus, wind-pipe, or of a Bowel, by Clysters; seeing they know not how to cure a Fistula of the fundament, which they have at hand, by Emplaisters? I pray let Physicians remember, that the natural Tear doth not bite the Eye thereof, as neither the Urine the Bladder; So also the Dung in a Bowel, is not to be perceived, untill it be nigh the place of utterance; Because it is a natural excrement: But that a Clyster doth pain, because it is a forreigner to a Bowel: Therefore it is hurtful in the Bloody Flux. That error floweth from the Schools, who define the bloody Flux to be an Ulcer of the Intestines or greater Bowels: The which, how inveterate soever, and almost desperate, I have seen to be very often cured, and indeed with much safety; To wit, by administering some specifical remedies. But surely I behold a bloody Moloch to sit president in the Chairs of Medicine. Look behind ye or recollect your selves therefore, my fellow Brethren: For a cruel horror will invade the world, at the Sound of the Trump, when every one is to give an account of his Stewardship.

Finally, I will declare, what I my self having a Pleurisie, have observed. On the third of the Calends of (the 11th. Month called) *January*, a Fever suddenly invaded me, together with a gentle rigour, so as that my Teeth did shake; there was a Pricking pain in the forepart of my side about the Breast-bone, which hindered my in-breathing: presently after, a bloody Spitting was present; at length meer blood bewrayed it self: I took presently a cropped piece of the Genital of a Stag (for it was at hand) and the pain was presently diminished; by and by, I drank a dram of He-goats blood: On the fourth day therefore, my spitting of blood ceased, a seldom small Cough remain-

ing, together with some Spittings out by reaching; but the Fever continued: For on the second day, the pain about my Girdle enlarged it self on my left side, with a difficult breathing, an increase of the Fever, and an intermitting Pulse. I had now finished my 63^d. Year, and I did expect that an Aposteme was Co-agulated in my Spleen; Because my Milt waxing round into a Lump, did cause a weight; for if I did lift my knees on high, or lay down on my right side, I felt the falling globe of a great weight; And so I suspected the Pleurisie to be stirred up from my Spleen, the which, when it was driven away by meet Remedies from my Ribs, it at length afflicted my Spleen: The which I presently withstood, by drinking of Wine boiled with the stones of Crabs, and within few daies, all the pain, and lump of weight vanished away. In the mean time, I was visited by a Noble man, who had heeled his Boots with sweet-smelling Prussian Leather; through the smell whereof, I presently felt the pain of my Spleen, and the Fever renewed: From whence I collected, that the Archeus of my Spleen was the Author of the whole tragedy. Lastly I noted, that in the beginning of a Pleurisie, a Vein being cut, doth indeed stay the inward breaking forth of blood, and the Sick seem to be the better:

And although a letting out of Blood shall increase weakness; yet they adjudge the same not to the Launcet, but to the Pleurisie: But if there be a more flow opening of a Vein, the Blood already Co-agulated, and the Aposteme conceived from thence, and the ordained corrupt matter, do hasten unto their bound or limit: For hence, from curing by cutting of a Vein there is a frequent Consumption, or a Pleurisie returneth every Year; which otherwise, by the afore said Remedies, are not beheld to come.

CHAP.

C H A P. LV.

That the three first Principles of the *Chymists*, nor the *Essences* of the same, are not of, or do not belong unto the *Army of Diseases*.

1. *Why the Schools leave the Market?* 2. *Why Paracelsus hath sought other beginnings of Diseases?* 3. *He hath theevishly transferred on himself the Invention of Basilus.* 4. *An easie slip or fall of the Paracelsians.* 5. *An Abuse discovered by degrees.* 6. *Paracelsus was deceived by Chymical Rules badly understood.* 7. *He aspired to the chiefdome of Healing.* 8. *He failed under his Fardle or Burden.* 9. *He was deceived also by Ulcers.* 10. *Some Rashnesses of his.* 11. *Robbery is covered by Sin.* 12. *Some Rashnesses of his.* 13. *The Doctrine of the Elements of his Archidoxis is taken notice of.* 14. *He fleeth to the Stars, least the curious should follow him running away.* 15. *The Adeptical part of Healing.* 16. *The Boasting of Paracelsus.* 17. *The most perfect Distillation of Art.* 18. *The wonderful Coal of Honey.* 19. *Paracelsus thrown down from his pretended Monarchy.* 20. *Fabulous meanes of Diseases.* 21. *The Venal Blood is blown away without a Dead Head.* 22. *What things Nature hath once refused, she never retakes again.* 23. *The Water, although it be a thousand times Disfilled, it is not notwithstanding, therefore made subtile.* 24. *Some Absurdities.* 25. *The Fiction of a Microcosme in the manner of making Diseases.* 26. *The Ambition of Paracelsus.* 27. *Whence he had the boldnesse to invade the Monarchy.* 28. *That the Three first Things are not in us.* 29. *He was ignorant of the Bond of the Three first Things.* 30. *He was ignorant of the Original of Salt.* 31. *Some of his Rashnesses.* 32. *His Error in the knowledge of Feavers.* 33. *An Example that the whole venal blood doth melt by purgings.* 34. *Diseases do not bewray the Three first Things.* 35. *How the Three first Things are made.* 36. *That Galen and Paracelsus were almost alike in Boldness and Error.* 37. *The Three first Things are resisted.* 38. *The Error of Paracelsus about the Essences of Diseases.* 39. *That the Three first Things are not, nor do operate in Diseases.* 40. *Paracelsus came more nigh to the Truth than Galen.* 41. *The Three first Things do not immediately support Life.* 42. *Although the Three first Things are not Diseases, yet they are Remedies.* 43. *The manner of the Operation of Remedies, is badly weighed in the Schools.* 44. *A Quintessence or Fifth Essence is withstood.* 45. *It hath been inconsiderately subscribed unto the foregoing Things, because the Essence of Diseases hath remained unknown.* 46. *That the Three first Things is a late Invention.* 47. *That the Three first Things have not fore existed before their Separation: but that they are bred anew.* 48. *That Water passeth over into Oyle.* 49. *For those Three Things to be changed into each other, doth resist Principles.* 50. *Proofs of Positions.* 51. *Against Aristotle, that there are onely two Beginnings of Bodies, which are also their beginning or initiating Causes.* 52. *The oversight or rashnesse of the Paracelsists.* 53. *That those Three Things are not in any Bodies whatsoever.* 54. *That the Three first Things are not in the Water, as neither in Mercury.* 55. *The Objections of some Writers of the Enterance into Chymistry.* 56. *They proceed further.* 57. *Paracelsus is brought on the Stage.* 58. *An Answer.* 59. *Whence the Immortality of Mercury is.* 60. *The Principiative Maxims of Chymistry.* 61. *The truth of Bacon.* 62. *An Answer to a Paracelsian Objection.* 63. *What the Three first Things in Bodies are.* 64. *Other Instances*

in Sand, a Flint, &c. 65. It is proved by Handycraft-operation, that the Salt in Lime is not an extract of the thing contained. 66. How a necessity of Offices hath invented the Three first Things. 67. That the Three first Things were not natural or proper to a Body, as it was a Body. 68. It is proved by Handycraft-operation, that the Fire is the Workman of the Three first Things. 69. The Unstability of the Three first Things. 70. That in the Digestion of Meats, a Separation of the Three first things doth not happen. 71. Why a Disease is not of the Three first things. 72. That the Three first Things are not the Principles of Bodies. 73. They are ultimate Things, that is, Principiated ones, or those that are begun. 74. The Unconstancy of Paracelsus. 75. He was ignorant from whence the Salt of the Urine is. 76. An Essence is said to be after divers manners. 77. A Chymical Essence. 78. Some Homogeneous things do not send forth a Fifth Essence. 79. A greater Virtue is in some Simples than in their extracted Essences. 80. The Rashnesse of Paracelsus. 81. Putrefaction also doth else-where generate a Fragrancy. 82. What a Quint, or Fifth Essence properly is. 83. The Liquor which makes Plants fruitful. 84. The Essential Oyle of Spice, or Crasis of the same : How the Elixir thereof may be made, and that more strong by an hundredfold.

NOW after that I have demonstrated, the Elements, Complexions, first Qualities, and at length Tartar, to have been rashly introduced into the Essential causes of Diseases, by the Schools, as well of the Ancients as of the Moderns; I proceed to teach, That the Three Beginnings of the Chymists, and those of late brought into the Art of Medicine, have been falsely intruded into the Essential causes of Diseases. What therefore will the more refined Physicians do, while as they do clearly enough behold, not onely the miserable stuffe of their Remedies, but also the unprosperous Helps of the howling Sick? So that they have many times seriously and secretly confessed to me, that nothing almost did any longer obey their indeavours, and that all the curing, aswel of sharp Diseases (for of Chronical Diseases they have all every where long since despaired in their mind) as of any of the least ones, was in very deed nothing but a Cloakative cure, and a meer juggling with the sick, to wit, whereunto, unlesse as it were a certain resurrection of the Nature of the Sick, doth voluntarily succeed, the appointed and sure comfort of Remedies is in vain expected. And moreover, that hence it comes to passe, that many an Old Woman is in many places, far more successful in curing some defects, than is the whole School of Medicine, with all their discursive Speculations, speculative Prescriptions, Kitching Precepts of Diet, confirmed by the long experience of the destruction of their Neighbours, and a multiplicity of their Dispensatories. When therefore the more ingenuous persons were long since wearied in the Correcting of Distempers, in the vain expelling of Humours: they now incline to another thing, seeking a Haven from shipwrack, and being easily seduced by Theophrastus Paracelsus, they have so bent their Studies, that what was not yet found out by the Greeks and Arabians, they may find more successful elsewhere. Hence indeed they have been devolved with a steep fall, unto the Fictions of Tartar, but surely their curiosity is to be had in great esteem, although it shall not attain unto its desire. For, *It is not of him that willeth, nor of him that runneth, but of God alone that sheweth Mercy.* Therefore the Schooles donow leave their title and Market; For what shall they do, if the conjoynd root of Diseases, and method of Curing them, be not to be drawn out of the Elements, Qualities, Contraries, Humours, Stars, Windes and Catarrhs?

2 But seeing other Examples of healing have possessed the more Modern followers of Paracelsus, it must as yet be diligently searched into, whether the Causes of Diseases have been made known to Paracelsus. For when he (the Lessons of the Ancients being rejected) had sufficiently understood, that there was nothing of a Foundation or Truth in Complexions and Humours, he began by variously doubting, to inquire into the most immediate Cause of Diseases, and Posterity owes him Praise for it. Although he hath not exactly touched at the matter, that cannot be accounted a fault, if the Most High, the Dispenser of Gifts, as yet vouchsafed not to open the Truth to Mortals, in Paracelsus's days.

3 This man therefore had learned of Basilus Valentine, that Water, Oyle, and Salt, were to be separated by Distillation from most Bodies : He began to call these Three Things, not

not only the first universal beginnings of corporal beings : but also, he so introduced them within Diseases, and the necessities of healing, that he referred all Diseases immediately into some of those three things. And thus he made his followers almost mad, that the first hope of diligently searching into the truth being rejected, they consecrated all things to the three first things. Which Doctrine hath fixed its roots the faster, because the three things are actually separated from most Bodies, and so that they were not undemonstrable, like humours arisen from feigned beginnings. But surely this abuse was discovered, while as these three beginnings were wrested aside unto the originals of any Diseases whatsoever. For truly, because many Bodies being dissolved by the fire, gave from them, Salt, Sulphur and Liquor (which they point out to be Mercury) it was thought, that all Diseases did owe their Birth unto those constitutive beginnings. First of all, *Hermes* before the industry of the Greeks sprang up, because in his *Pyramander*, he had noted every Trine to be perfect, consequently also, he foresaw, that in Chymical things, Mettals did consist of two extreame (to wit, of a Body and a Soul) and the which, he would have cleave together, not but by the baudery of a certain third thing, or Spirit. Afterwards, *Basilus Valentine*, a Monk of *Benedict*, wrote more distinctly; he named the Soul of a Mettal, the Sulphur, or Tincture, but the Body, the Salt; and lastly, the Spirit he called the Mercury. Which things being thus borrowed of *Basilus*: *Theophrastus Paracelsus* afterwards transferred by a wonderful diligency of search, into all the Principles of Bodies, he being one Age younger than *Basilus*. The Doctrine of whom (the Authors name being suppressed) he snatched on himself, and by a liberty of his own, introduced it into the speculations of Medicine. So indeed, that after he had banished every Disease into the Catalogue of Tartars, and had not yet satisfied his own scruple, at length, he adorns his Paramire of the three first beings, with much boldness. Indeed he forged these three things, as it were the beginnings of all Bodies, and declameth many things in general touching Diseases; but being constrained by necessity, when as he would reduce Diseases into the ranks of the three first things, being pressed down under the burden, he was silent.

Except in the Family of Ulcers, where he had seemed to himself to have found salt: at least wise, in the other two beginnings, he on both sides remained scanty and almost ridiculous. For he had commanded that it should every where be believed, that the four Elements were nothing but the incorporeal Wombs, and as it were, the Inns of Bodies: but that the first beginnings did so supply the conditions or offices of Bodies, that also the Elements of the world have all their substance and subsistence from those three things only. Elsewhere also, he being unmindful of these, hath stuck wholly in the Elements, and next, he hath ascribed the inclinations and properties of Stars and men, to the complexions of these. He also hath dedicated unto all the particular Elements, their own fruits, and degrees of fruits, but not all to one Element: nor the fruits any longer proceeding from incorporeal Elements as Wombs: but that these did borrow their Bodies from the material Elements themselves. Lastly, by the same liberty and unconstancy of a borrowed matter, he hath taught that Bodies do by a resolving, decay, sometimes into four, but sometimes into three Elements only. Truly he hath so graced the Art of the Fire, by bringing it into Medicine, that he breaths after an eternal Name for himself, and hopes that the time would come, that he should sometimes wax proud with the Title of the Monarch of Secrets. He foreseeing that the Doctrine of *Basilus* was not commonly known, therefore the Name of the Author being concealed, he made it his own, and in this respect, hath he enlarged his own Sections. Wherefore, his Tartar now and then losing its universal dominion in Diseases, it being suppressed, he makes an invasion, as being constrained by the Laws of his three first things. Which his three first things (as presuming on increase) he would at length, that they should become the Mothers and Wombs, even of all Diseases, as well of the mind, as of the Being or Body. This indeed was only his own, and not the Invention of *Basilus*: and the which, when he would endeavour to disperse into the ranks of Diseases by Troops, he sometimes goes confusedly to work; yet doth he again more oft go beyond himself, being every where forgetful of his own Doctrine delivered. For in his Archidoxals, he hath dedicated a little Book to the separation of the Elements, which are to be brought out of the flame, air, water, and earth. And thus far he hath resisted his own Doctrine, concerning the three first things, and concerning the Wombs of the Elements, because now there should be four beginnings, no longer the three first and ultimate, into which at length, by long labour, the three first things, as being after the Elements, so of right no longer the first, should be derived. For they being also thus enriched by one number, should beget far more Diseases than of late, than

- while that pretended Monarch commanded only three to be the principles, as well of Bodies, as of Diseases. Yea truly, he accuseth as guilty, only, and at length, one only Tartar, to be the cause of almost all Diseases. But elsewhere, in some peculiar Treatises, he
- 14 calls the Heaven, the assisting and co-operating Work-man of all Diseases, an angry Parent and revenger. For he saith, that the unknown Star (*Zedo*) is the immediate and containing cause of the Dropsie. So, he affirmeth, that to the Consumption, Gout, Apoplexie, &c. doth belong their own peculiar (yet unnamed) Star, and unto every Epilepsie or falling Evil, its own proper constellation. But in his Paramires, he affirms the three first things to be the immediate causes of all Diseases; that is, all things confused. Let him explain and excuse him that will; for I have not dedicated my life to the interpreting of others dreams. Therefore have I seriously searched into Nature, and the particular
- 15 kinds of Diseases, and it hath happened unto me, no otherwise than as to all others before me, until that the Doctrines of all Authors being cast off, I had seriously implored the Divine Grace. For then I suddenly knew, that unto every Disease hath happened its own matter, which may nourish a Vulcan proper to it self within, the which, although he doth sometimes imitate the courses of the Stars; yet that the enforcing cause thereof, did not depend on the Stars. For all Seeds do possess, as it were, their own Commonwealth, especially their own vital light, whereby, of their own proper vertue, they do shew forth a proportionable resemblance of the Stars. Be it a ridiculous thing, that the Consumption or Dropsie, although they may be stirred up more severely and mildly, under diverse starry positions, are caused or made by the motion and light of the Stars; the which do after another manner generate by a manifest occasion, through so clear a collection of filths, and the which being removed, Health doth also follow, without leave of the Stars. The exposition of which Doctrine by me, thou shalt read in the Book of the Plague and elsewhere. But the matters of Diseases, with their seminary Vulcans, from the first, even unto the last, I have prosecuted, with all their duplicity and interchangeable courses, in respect of humane life. The Almighty grant, that so much as he hath bestowed on me, I may nakedly refer unto his Honour, and the profit of my Neighbour, and that he may bestow another more able than my self, on the world. For *Paracelsus* hath framed divers Books concerning long life, to have chosen death for himself, that he would by a Divine privilege, have comforted his own old Age by his Elixir of propriety, but not by Remedies prescribed by him for long life, who died in the 47th. year of his Age. So great boasting therefore, and unconstancy of this Man, have hitherto made me a little careful. In the mean time, many difficulties have long since held me in doubt, about the three first things, until that I having obtained help from God, knew,
- 16 that Woods and Herbs were to be distilled without any Dead head. For I did long ago wonder, that out of the coal of Honey, no ashes, and by consequence, neither the salt of ashes could be had. Which things afterwards I willingly (through an universal resolving of a Body) beheld. For it was sufficient for *Paracelsus*, to have forsaken all things involved under doubting, who in a slender draught, had drunk down anothers Invention, and had not yet converted it into nourishment, and making it his own, of robbery, hath
- 17 (he striving to flie unto a Monarchy) slipped out of his Nest before he had sufficient feathers. For he snatching unto himself the glory of the Invention, hath well pleased himself, in dispersingly repeating one and the same thing often, although in the mean time,
- 18 he made little progress in things of his own. For it is a ridiculous thing, and like a Fable, that Sulphur should be distilled, sublimed, reverberated, calcined, resolved in us, and that, from hence divers Diseases should be caused, only indeed by the boldness of the Man, without a Pledge or Surety of greater authority than himself. For he knew not, nor durst to draw Diseases into an open profession or publishment, he being not yet fully committed hereunto by his Inventer. It is also a childish dream, that salt is distilled, sublimed, calcined, circulated, and doth undergo other torments in us; or that Mercury doth sustain these strict examinations in us, and for every interchangeable course of variations, that it doth of it self alone, bring forth other Diseases, pains and defects, and that others again, be infolded with its other two fellow beginnings, or masked with divers degrees and doses. They are also trifles, that Mercury, by reason of the highest circulation of its subtilty, might be the cause of all sudden death: which we have known to be constituted by its causes, to cure and prevent. For first of all, eight ounces of venal blood,
- 19 are daily blown away in nourishing, without a Dead head, pain and defect, yea without feeling, while they pass thorow, and whereby they pass thorow. But whatsoever hath once been dedicated unto expulsion in the shew of Water, Mercury or Sweat, or whatsoever hath been once reckoned unfit for nourishing, or the offices of nourishment being
- 20 now

now once performed, is designed for scattering or blowing away: that is never afterwards distilled, sublimed, calcined, or circulated in us. For the works of Nature are too serious, because they do ultimately respect God. For Nature doth not play at Ball, that it should again receive excrements into favour, being once rent from the commerce of Life. It never returns into the same point, because it proceeds, and never keeps Holy-day. In the next place, if any watry liquor be a hundred times re-distilled, it shall not therefore be the sharper or subtiler, but rather, by degrees (the Seed of its middle life being worn out) it passeth more and more unto the simplicity of an Element. For rain water, which now falleth down from above, is not more subtile or fine, than that which rained in the beginning of its Creation. But if any watry thing should exhale by our luke-warmth, and should obtain a sharpness through dreamed returns, that should not be the fault of subtilizing of Mercury, but of an adjunct. Surely I wonder that so great a *Chymist* hath not known, that the venal blood is not circulated, nor that it doth bear the circles of subtilizings in us, and that it doth not persevere in us above one only course of the Moon, and the which tribute of feeble blood, a Woman doth therefore pay. Because she is she, which ought to abound with very much blood, as well for an increase of the Young, as for the sucking of Milk. But that *Paracelsus* might the better overshadow his own Fiction, he supposeth, that one of the three first things being separated, doth presently assume from a Microcosmical Nature, an actuality in that which is casual to any, and one Being, of those which are infinite, a thousand Seeds whereof being collected into one, it did contain; and therefore, that by reason of a monstrous and strange Nativity, a hostile thing is for that very cause in us, and is made the cause of Diseases. And so that there are tenfold more Diseases at least, possible in us, than there are particular kinds thereof, in Animals, Plants, Minerals and Stars, to wit, as many as there are particular kinds of Salts, Sulphurs and Mercuries, and of those folded together in nature. He moreover giving a caution by an Edict, that any one do not rashly put forth himself to Medicine, who hath not sealingly, certainly, properly and distinctly, known all things most inwardly and most outwardly, by their causes, essences, particular kinds or species, properties, proportions, interchangeable courses and defects. That every one may believe, that *Paracelsus* himself, who teacheth these things, had also thus sealingly known all these things. Furthermore, he will have us bring back the Microcosme or little World, unto the Rule, and therefore that the three beginnings of our Body doth bring forth as many Diseases in us, as there are particular kinds of created beings. For he drives the knowledge of Medicine and young beginners, head-long into a thousand confusions, obscurities, ignorances and impossibilities, by reason of one only fault, to wit, that he may seem to be skilful in all things, and that his dreams may be thought true. He indeed easily knew, that the Medicine of the Schools was supported by false foundations; for neither therefore (as he supposed) might it be hard for him, utterly to overthrow the Schools. Wherefore he meditated for himself, of the Name of Monarch in healing: but when as he thought it an easie way for destruction or throwing down, at least wise, for the building up of so great a principality, strength was wanting unto him, in so great idiotism. He therefore hath brought the three beginnings into Diseases. It is thus: Those three things are found indeed in many Bodies; or (as I may more distinctly speak) the three things are, at least, separated out of many Bodies. But he being bold, a certain absurdity of that which was unconsidered, hath deluded the man, because he hath not considered the impossibility of the matter, for Diseases. Because, those are never separated, or to be separated, whether in us, or elsewhere, but with a corrupting of the whole Body, and that indeed by the fire. Whose sequestred Family-administration, notwithstanding, he hath judged to bring forth Diseases in us. Because the Essences of the first things are co-knit in us, by the middle life of the same, under the dominion whereof, they notwithstanding are restrained, and do alwayes remain that which they are. For first of all, Salt it self hath deceived him, that he might become unsavory, because it confirmed to *Paracelsus* his own conceit in the Urine, sweat and tears; he nothing heeding, that, that Salt, is not of the three first things of our body, but a meer excrement of transchanged meats and drinks. From hence therefore he being raised up into a credulity, by thinking, was led aside into Errors. For he had well marked, that a Wound being badly healed, doth pour out salt water, the proper Latex of the body, begotten with child by a strange Salt; or that the blood it self doth degenerate throughout its whole, as in an Ulcer, Dropsie, &c. and hence he hath collected a plenteous Harvest of Ulcers & Diseases for Salt, which, he being deceived, thought to be one of the three things or beginnings, and not the whole blood at once converted into a salt water, without a separation of the Sulphur & Mercury, by erroneous

neous transmutations. He thought therefore, that as much salt as there was, so many turns of Mercury, and parts also of Sulphur there were, and being confident that his Household-stuffe would be sufficient, he had willingly designed the predicament of Diseases unto them. But remaining unfit for the burden, he dyed. But he had discovered his own Error, if he had not been deceived by a bold attempt of great matters. For he ought, without the hope of ambition, and head-longness of preventions, to have examined where the remaining Sulphur should stay, if the salt in Ulcers, in the Dropie, &c. should by so plenteous a separation, be plucked away from the whole, and its other two companions. He ought also to have been mindful of his own (although erroneous) Doctrine, whereby he calls the Salt which is fluide out of us, and present within us, a meer exprefsure of the Salt-peter of an evil Star, or Cagastral. And so he endeavours to perswade, that not only flesh and blood, but also that the whole Body is with the life of Salt-peter, and that Cagastrical. For the blood (as the water yeelds all fruits) is wholly similar, or alike, which being seasoned with a poysonous or strange ferment, doth sometimes degenerate into divers off-springs of Salt, but another time, into divers off-springs of Dungs, without any memory of a Posthume, Mercury, or Sulphur.

- 32 In the next place, that *Paracelsus* may find out his own cause for Diseases, he for example, doth oft-times define a Feaver to be an Earth-quake of the Microcosm; which trembling of the earth, he sometimes defines, to be our Falling-sickness. But elsewhere, he attributes the trembling of the earth, to tremblings sprung from burnt or smoaking Mercury. In another place again, he defineth a Feaver to be a Disease of Sulphur and Nitre; boasting, that the Cause, and also the Remedy, are in that his essential definition. For truly, under an ulcerated Imposthume, the whole Body being in it self fat, is made as it were a Sceleron; neither doth it expel any thing besides corruptions. So through the force of loosening Medicines, the whole habit of the Body doth oftentimes suddenly melt into putrefaction. The which is brought to pass by the Art of Physitians; but this
- 33 other, in a Flux, through a defect. But at leastwise, the same poyson on both sides, is only applied and co-tempered, after a different manner. A Dropical man indeed, hath a girdle of eight foot: but by an Emperick, in one day, & that by a drink, he is loosed from his Dropie, and the water weighed perhaps 40. pound, but verily his belly even presently again swelled up into its antient bigness, and after few hours he dyed. Indeed the remainder bears a resemblance before it, of nothing but skin and bones; because his flesh and blood had presently at once wanded into the salt water of the Dropie. And that wonder I saw in this Man. That to day, his belly had plainly asswaged, and that the morrow it again returned unto its former pitch of swelling, extension, and hardness, and then he dyed. If therefore that brine of salt had been one of the three beginnings, of necessity likewise, 40. pound of Sulphur had remained beholdable. An ulcerous Oak weeps continual salt water, and waxeth lean with rottenness; but if that salt were one of the three beginnings of the Oak, surely the Oak should wax fat like the heart of the Pine Tree, neither should it wax lean, as being unjuicy, rotten, and almost divorced from the Kitchens.
- 34 Therefore disease destructions do not testify to these beginnings; but that the whole body is diversly affected, doth melt, and is made to putrifie, according to the guidance of divers Seeds and Ferments. For he had learned that, from *Galen*, thinking that the blood did consist of as many simples as it was resolved into. I wonder therefore at the unconsiderateness of *Paracelsus*, that he did not know, that the three first things are never separated but by the fire, their last life being destroyed, the mark of the Seed of their middle life being retained. But that they are not therefore to be called three beginnings, for they are made, and so are bred or born. And much less are they to be reckoned the beginning of Bodies, while as that returneth whole, through the guidance of a strange Seed, by transmutation into another nature. For neither hath that Man ever seen the three first things of any composed Body, to have appeared in living Creatures, in any degree of heat, nor otherwise made and extorted, but by fire. I am also angry, that it is not known, that the same first things remaining, they are nevertheless, materially subject to the divers transmutations of Seeds, under the same weight. He hath after a sort
- 36 relapsed into the Errors of *Galen*, who thinks that the Elements do essentially remain in mixed Bodies. For thus was he deluded in his three Principles. For there is every where the same defect of both, in the Principles of Philosophy; which teach, that the life alone doth operate in a living Body, and into a body.

- 37 But that the subordinate forms of the entire parts, even of the three first things (if these are within, before they are made by extraction) are restrained by the form or superiour life, under the unity of an *Archew*; because the three first things do never appear

pear and operate, much lesse do they offend by distemper, or are disease, unlesse their obedience due to the Archeus, be first dissolved : that is, that they shall be separated by the fire, and their last life be destroyed, with a persevering, not of the whole seed, but of a small quantity of the middle life of that composed body, whose properties every one of them do after some sort imitate, when they are made a Being, by it self subsisting. For this being unknown, *Paracelsus* thought, every power, and the formal operations of things, so immediately to depend on the Essence of the Three first Things, that he hath described the properties of Vegetables, as they did contain such a Mercury, Salt, or Sulphur, and all those according to his own pleasure. As though, these beginnings being shut up under a formal Archeus, could operate, the Archeus of life being idle or at rest. For *Galen* attributed all things to the Elements : for which *Paracelsus* being angry, thereupon attributed all things to his three adoptive beginnings. Like *Quack-salvers*, who having gotten one onely Oyle or Emplaister, give forth, that that prevaieth wholly for all Diseases, and at least for most Diseases. *Paracelsus* I say, heeded not, that Lead, as long as it is Lead, hath other virtues, than when it is changed into Sulphur and Mercury.

For Water, Oyle, and Ashes being shut up in a bottle, do not operate out of the containing Vessel. The bottle indeed as such, doth operate ; but not as it containeth three things, which, of themselves may be separated. So also judge thou of the Three Things as long as they are enclosed under a common Life. *Paracelsus* therefore, although he hath searched more nearly into Nature than *Galen*, as some of the Three Things are actually allured or drawn out of many Bodies, which doth not happen unto feigned Elements and Humors : yet both of them have stumbled in this, that he hath introduced his own suppositions into Diseases, when as, otherwise, nothing feels sicknesses in us, besides the vital powers themselves. But the Life moves and altereth matters by its own Seminal Blas, and nothing doth materially hurt us within, which is not hostile, forreign, and an excrement in respect of the Life, and so that it cannot be of its first adoptive beginnings.

For neither are those Three Things originally and immediately subject to the whole Life, but to the middle Life of that seed, where of they are said have been to the three corporal beginnings ; to wit, the Three first Things of the flesh, blood, brain, &c. are not immediately subject to the command of the total Archeus, but to the Seminal mumial Ballame of composed bodies ; And that not before their manifested Nativity. Diseases therefore do not owe the Original, or Cause of their birth, unto the birth of the Three first Things, or any of them. Because they cannot be, act, or hurt, unlesse being first separated from each other, and the intireness of the whole Body, wherein they are potentially contained, being destroyed by death. But if they should be separated, that they may be able to wrong and hurt ; surely that should be made by some internal disease and agent, besides Nature, and by a former thing or cause. Therefore the separation of those Three Things from each other, could never be but a product, and so also a more later thing than the Disease ; neither should it first appear, unlesse, a Disease being supposed. Therefore it could not be the immediate or nearest occasional cause of Diseases.

For although the Three first Things are not the Causes of Diseases, yet this doth not argue, whereby the Salt, Sulphur and Mercury of things are ever the less the Medicines of Diseases. For it is not requisite that the Remedy and external Cause of a Disease should have a co-resemblance, how ever notwithstanding *Paracelsus* hath so commanded, whereby he might oppose the maxime of *Galen* ; *Contraries are cured by Contraries*. For Poysons are not overcome by a co-resemblance of the Venome, but by that which conquers the Venome. For those medicinal Powers are the gifts of God, which do neither bear a contrariety, or character of hostility, mutually towards themselves, nor towards Diseases. But every thing acteth from a gift, that which it is commanded to act. And moreover, bodies being freed from their lump, enclosure, filths, and impediments, do unfold most noble gifts and most excellent Powers or faculties. Even as elsewhere more largely.

Furthermore, it hath been already sufficiently and over demonstrated, that Nature doth not suffer four Elements, neither that she doth admit of their congresse or encounter for the constitution of composed Bodies, and consequently, that there is no contrariety or skirmishing of the Elements for a Disease or Remedy. It follows also from thence, that there is no Quintessence, or Fifth Essence, by a proper Name to be so called, if a Fifth Thing shews a necessary relation unto other four. The Invention therefore of a Fifth Essence, is indeed Chymical, but of Phylosophers, who before me, knew not the Number, Essences of the Elements, and the Nullity of their mixture : Which things, if *Paracelsus* had known, he had undoubtedly named the Essence which he calls a Fifth, a Fourth,

Fourth, in respect of his Three first Things. Indeed he thought that every Body is constituted, even as also resolved, as well by Art as by Nature, into these Three Things, and that nothing besides remained. For in so great Novelty, he being unconstant, knew not unto what side he might throw himself. For now and then, he denieth the Elements to be Bodies, but he calls them, void and empty Wombs, Places and Seates of Bodies: But that all Bodies are nothing but the Three first Things, but not Elements. But elsewhere he having followed the flock of his Predecessors, teacheth, That the Elements do remain in all particular Bodies, are therein to be found, and that they are thence drawn out safe. So that their Essences and Bodies do remain in the mixt Body, being onely heaped together by mixture. Certainly, aswel in the Three first Things, as in a Fifth Essence, it is
 45 at this day no lesse emptily subscribed to *Paracelsus*, than it hitherto hath been to the Fables of the Elements, Mixtures, and Complexions. For they began in the late Age, by plausible novelties, to have belief and Names given to the Invention of *Paracelsus*, without a diligent search. Although I have seen, read, or heard of none hitherto, who hath been able, and much lesse hath boldly attempted, equally to separate the Three first Things out of Bodies. Wherefore I state this Proposition.

46 *The first Three Things are a late Invention, contrary to the truth of Nature, and of a Thing.*

The first Position.

47 *Although that the Three first Things, are in part drawn out of some Bodies by the Fire, yet that is not done by a Separation of the same, fore-existing, but as by a Trans-mutation made by the Fire, they are there generated, as it were new Beings, and there is made that, which there was not before.*

The Second.

48 *A branch of a Tree of one pound, growing as yet, green, will scarce yield a Drachm of Oyle, which about October, or the Eighth Moneth (waxing wooddie) will yeeld about seven Drachms of Oyle. And at length, in the Twelfth Moneth, called February, after, will give almost two Ounces of Oyle, and fivefold more of Coal and Ashes, than before in the Sixth Moneth called August.*

The Third.

That those Things which were not in, as constitutive from the beginning, cannot be the first Things, but they themselves are made and exchanged into each other as later Things, to be made to a likeness, and which are to arise from the directions of Seeds.

The Fourth.

49 *Elementary Water is made Oyle in Vegetables, Animals, and Sulphurs; Likewise all Oyle, with its adiunct, is easily reduced into Water. But the first Principles of other things, cannot be exchanged into each other, or cease to be that which they were before.*

The Fifth.

Some Bodies do not contain the Three Things, but are content onely with one alone, or with two.

The Sixth.

There are some Bodies, from whence the Three Things were never separated by skilful workmanships hitherto used, the which, do alwayes by a suitable weight, weigh equal with the body from whence they are drawn.

The Seventh.

50 *Some Bodies are altogether Unchangeable and Inseparable, and not containing a Duality or twofoldness.*

It is profitable for me a little more exactly to explain these things for the sake of young beginners, who do easily subscribe to other mens devises.

For

For, First of all, Woods contain Water and Oyle, not a Coal which was not in them, but is produced by Art, neither was it in them, except materialy, potentially, remotely, neither could it ever be made from thence but by the fire. In the next place a Coal unlesse it burn with a manifest fire, it is never in the least changed, so far is it that it should be turned into Ashes or Salt. In a Coal indeed some fatnesse burns, the which is immediately and materialy reduced into a Gas, never to be seen. This Gas doth at length pals over into Water; but as long as it is a Gas and is separated from its concrete Body, or Coal, it is not Sulphur (for it is wasted away, and trans-changed by burning) not Salt or Mercury (for those should not return into an uncoagulable Gas, but should return into Mercury and Salt, if they were the first and constant beginnings of things.) therefore some other thing out of, or besides those three. But besides, neither is the whole Ashes which remaineth of the Coale, a Salt, because the Lixivial or Lyee Salt being taken away, that which remains, cannot be calcined by any fire, as neither be turned into Salt, Sulphur and Mercury. But if it be by additions turned into Salt, it is a sign that it is made, but that it is not a Salt, and so that a Principle should be born. Therefore Salt in the Ashes ariseth not by extraction, or separation, the other two being wasted away by the fire, but by a trans-changing into a new Being, which was not before. For whatsoever is framed of that thing, is not in that thing. For so blood and bones of divers general kindes and species were in the bread. For neither doth Marble contain Glasse, although of Marble with an adjunct, Glasse be made. For it is one thing to dispute of those Three Things, as the total matter of things, and those actually constituting a thing, and far another thing, that the Tree is in the Seed, or a Fish-bone or Gristle in the Bread. For a Hide or Wood, are not a stone, although they are in some springs stonified. For in things trans-changed, the end differs from it self, in the beginning of motion, at least in the particular kind. I have elsewhere also demonstrated, that a fixed Alkali, or Lixivial Salt, hath not fore-existed in Vegetables, but that it is fixed in burning. Wherefore the doctrine of the first Things doth not satisfie, because it doth not onely compel Nature under violent Rules, but that if they are the first Things, and do obtain the desert of [making to begin] they ought to be stable (which thing was not hid even from Aristotle) neither can one be changed into another. For if Wood doth consist of Salt, Oyle, Water, and Ashes, if Salt be prepared out of Ashes, by the Salt it self, of the Ashes: Also if every distilled Oyle be to be changed into a Salt, as also into Water, by things adjoynd, and there be so great unconstancy of those Three Things, and they might therefore also be made by the fire in the separation, and destruction of the composed Body: We must needs in Bodies establish one first, and last, material, real beginning, which is the Water, but not the three things, because they are those which are the off-springs of the seeds of Bodies composed of water. And then there is another motive and effective Principle, which is an Essential seed, or the very Archeal Essence of the seed differing from the form of a thing, because this hath not a rational respect of making to begin, because it is that which it self is generated by generating, as the scope of generation, which is by degrees brought through by passable dispositions unto the perfection of a Being, together with the end of generation. These are the two Principles, as also the Causes of all Bodies. For if every thing be by its Causes, and be thereby principated, or made to begin, it is a vain thing (after the manner of Aristotle) to believe other Causes, and other Principles of things. They are therefore Principles, which never slide into each other, by any whirling of successive changes. For the first is stable, perpetual, the real beginning, and prop, and Seminary of Bodies. And it is the last thing whereinto the dead, or ended Tragedies of things do return. But not a certain feigned, sluggish, and impossible hyle or matter. But the other is the Principle of the beginning of motion, with every property of things to be acted under their Tragedy. Yea truly, seeing particular kinds do exist into general kinds, no where solitary, or without companions, and they are individuals only, which are, and do subsist by a real Act: Principles ought to have been real, and individually existing. So indeed, that the universality of the matter be individually limited by the activity of the efficient Cause.

Wherefore, a fallshood being granted, to wit, That all Bodies might be reduced into those Three Things, by the motion of a proper dissolution; yet it doth not also from thence follow, that these Three things are the beginnings of Bodies. Because an immediate resolving of Bodies, doth not prove Principles, but a diversity of kind of the matter, being ultimated or brought to its last state. And the last resolving of the last matter, is a Witness only of the Seeds of the concrete Body, but not of Principles. Neither in the next place, is there any reason, why the Three Things may be called the First Things, if three do return, or may be reduced into two, and lastly into one only thing. Yea although

in the Beginning, three bodys should be seen trans-changably passing over into each other, neither were they therefore, to be reckoned Three rather than Two, if of Three, they may be presently after be made two only. Therefore where the three things are found, they are not the material beginnings of Bodies; but the Bride-beds of the Seeds. The which being worn out, all things do of their own accord, return into their original Element of Water.

53 But that those Three Things are not contained in any Bodies whatsoever, and so are not necessary Principles, is manifest; because the Mercury, which is drawn out of a Metall, is so single, homogeneous, simple, and undivideable, that it is impossible for Salt or Sulphur, to be drawn from thence by Art or Nature. But Mercury is never in any respect to be divided. To wit, it hath grown together onely from an elementary Water, and the virtue of a most simple Mercurial Seed, into an undivideable, unpenetrable, and unseparable Body, the which among generated things, hath not its like.

54 Otherwise, it is like unto Water, which in it self being defiled with no Seed, hath on every side, a co-like simplicity, and impossibility of separation. But inasmuch as I have sometime attributed unto the Water its Three Things, that was spoken Analogically, or by way of suitable resemblance, as (besides abstracted Spirits) nothing is so alike in Bodies, that it is not understood to be diversly affected according to divers dispositions, and as those dispositions must of necessity respect some diversity of kind of being. For it is sufficient, in the same place, also to have admonished, that the Heterogeneous parts of Water, are in the most simple Body of an Element, undivideable, and really impossible by Art, Nature, and all Ages, they consisting of the utmost simplicity. Therefore although I have there called them the Three first Things of the Water, yet they are not the Three of composition, as the more formerly Beginnings of the Water; but the Three things of heterogeneity or diversity of kind. Which Heterogeneity (at least mentally to be divided into diverse things) although the Water doth by the Law whereby it contains a Body, contain: Yet seeing it is an impossible thing that they should be drawn asunder from each other, there is onely place for conjecture, that although those things are not true Sulphur, Salt, and Mercury, at least wise that they do in some sort answer unto them. Therefore there is an instance in the Water no lesse than in the Mercury, whereby the Three first Things are denied to be from thence accounted to be separated.

55 I seem to hear whisperings, that I shall offend very many Artificers, who with full cheeks, do boast of the Oyle, Salt, Vitriol, and Water of Mercury, and that I shall convince them of a Lye, or juggle, while they promise the aforesaid things. I answer, That an active Imposture, or deceitful juggle, doth bring forth its own Imposture, unworthy of life and happiness: But that a passive imposture is worthy of pity. But they who do not as yet discern the fallacy whereby they are circumvented, do Argue,

56 First, Gold (they say) a Body which is the most exceeding constant among sublunary things, is dissolved into parts of divers kinds, therefore also Mercury by a more strong reason. Indeed they strain from the less to the greater. Again they urge, Nature hath known, of the first Elements to compose Mercury: therefore she hath known also to destroy it. But the way of composition, is not to make Mercury immediately of the Element of water: but by dispositions of the matter coming between, which are unlike. So also, the way of corruption in Mercury shall proceed by the same dispositions, with a retrograde pace, and a diversity of kind of matter. Where thirdly, *Paracelsus* saith, the matter of things which cannot be destroyed by Art, is at least wise destroyed by Nature. Because all sublunary things, which are not subject to death, are at least wise, subject to a bound or end.

58 Unto the first, I answer: That Gold is indeed the most constant of Bodies in the fire, but it borrows the constancy of its separation from the Mercury: And so, if the Sulphur thereof doth include a Heterogeneous duality, that doth least of all touch at the Mercury. For Mercury, being pure, and distinct from combustible Sulphur (which is more or less in the common Mercury) doth plainly refuse all twoness or duality. That is to say, the nature of Mercury includes a perfect Homogeneity or sameness of kind. But to the other I say, that Nature hath indeed proceeded from the purity of the Element of water, unto the composition of Mercury. Yet that it cannot (the admitted Seed of Mercury being once enclosed in the innermost parts of the water) return to the destruction of that composed Body. Because that Seed is not mortal, nor frail, nor subject unto sublunary Laws: as *Paracelsus* saith in his vexation of *Chymists*.

59 But the reason of immortality in Mercury, is, because the Seed and Fruit thereof in the constitution of Mercury, are now one and the same thing, Mercury in Mercury. Neither hath Nature known to invent a manner of destruction in a thing so Homogeneous, where

where the Seed hath become the Fruit, by a most perfect and undestroyable or undissolvable union. Seeing that Nature cannot pierce unto a dividing, where there is no knot or diversity of kind. I admit indeed, that Mercury through a composition of transmutation, and a marrying of the Sulphurs of Mettals, becomes a Mettal; and that this is destroyable by reason of the doubleness of its Sulphur: notwithstanding the Mercury of that Mettal, remains undestroyable.

Hence *Paracelsus* in the aforesaid Vexation: *Although thou shalt destroy a Mettal ten thousand times; yet it shall alwayes rise again the far more perfect by its destructions.* And in his Archidoxals, in the Book of the separation of Elements, in the Chap. of Mettals. *Every one of the Elements in the shew of the Oyle of a metallick destruction, may be again reduced into its former white and malleable Mettal, except the Element of fire, which containeth the Tincture or Sulphur.* Therefore, although the Mercurial part in Mettals, and so also in the Body of Mercury it self, doth by reason of adjuncts, receive the masks of Vitriol, Oyle, Salt, or Water: they are nothing but the jugglings of the eyes. Because it alwayes returns Mercury from thence, because it is alwayes therein according to its Nature, and all its Properties.

Therefore I hold with the Principles of the more abstruse or hidden Philosophy: if Mercury should be divideable into Heterogeneal parts, the Art of Chymistry should not be true; and the Mercury it self should be unfit for work or operation. For unless I had seen Mercury so subsisting, I should deny the Art to be true. For Nature cannot destroy the Seed which cannot dye, nor be separated from its own matter. Neither can it dye through the sublunary engines of this World. Likewise, it is more easie to frame or make Gold, than to destroy it: So also, it is easier for Nature, to compose Mercury, than to destroy it. As many therefore as do promise the separations of Gold or Mercury, and yet do not know how to make or compose Gold in a wealthy quantity, seeing, they know not that which is far more easie, let them believe also that they do not know, that which is as yet, far more difficult.

Therefore *Bacon* inquiring into the first matter of the Art, and running thorow all the Bodies of the World, denies Gold and Silver to be the matter of the Art: because the reducement of the same into Sulphur and *Argent vive*, is plainly impossible, from whence the Son of the fire, so much in love of the Philosophers, is made.

Lastly, unto the third, I say, That those things which are not subject unto death, separation or change, are at least wise subject or lyable to a term or end. I grant that to be true, if we understand it of the dissolution of the World, and the fire of Hell, in the finishing of the World, of which I have nothing to say. Otherwise, the aforesaid affirmation, contains an idiomism. For a term or bound doth naturally operate nothing: but the operation is finished by the agent, in the very term or bound [unto which.] But such an agent faileth, about undissolvable things. In the next place, neither time nor duration doth operate any thing by it self: but only the middle dispositions of moveable things, happening in time, do operate. Therefore, whatsoever doth not hearken to the dispositions of changeable things, much less doth it hearken unto time or term of continuance; which term is included in changeable things only, but not in things unchangeable. If now metallick Mercury, the most noble, I say, of Bodies, of the most constant union, doth wholly want all Sulphur, it is lawful to consider, this Law of the three first things to have failed, like a broken chain.

Therefore that other Bodies are not the three first things; but altogether one only material beginning readily serving for the divers appointments, ends, scopes, and necessities of Seeds, and playing various suppositionalities or supposed parts. Those three things therefore are not the first things where they are found, but are made by the dissolving of the fire, and their matter is not espoused according to a principiating of Salt, Sulphur and Mercury, but according to the ends of Seeds. Neither indeed are they beginnings, but subordinate means to the last life. In the next place, I know, that out of sand, flints and stones that are not limy, Sulphur or Mercury can never be drawn. For their Seeds were content with a stonyfying coagulation of water, without an appointment of fatnesses, or Mercuries. But stones which may be calcined, do attain the nature of salt and tartness of lime. But that very thing is a transchanging into a new Generation promoted by the fire: but not an extraction, drawing forth, or separation of the thing contained. Which thing, the Chymical School before me, hath been ignorant of. The which I prove. Because I have known how to reduce a great or rocky stone, and all stones, into a meer salt, of equal weight with its own great or small stone, wholly without all Sulphur or Mercury, and so whatsoever is lost in burning of a rocky stone, let it be rather

that of salt, than of three things. But because that unity of the composed body doth respect a way unto its first reducement into the Element of water, neither is the operation obvious to every one: therefore we have been wont by a general way of speaking among Chymists, to speak of things under the name of the three things, to wit, of Salt, Sulphur, and Mercury. Not indeed, that I think those to be the principles of things: but because they are separated by the fire, out of most things, we use their Etymology to distinguish the diversity of kinds of composed Bodies. The same thing happens to a stone, which befalls a coal: for unless both are burnt in an open fire, they are never changed into lime or ashes. And although a coal doth by a fan or stirrer up, yeeld a flame, and thus far, whatsoever perisheth of a coal, is of Sulphur: yet seeing nothing is enflamed or enlightened in a stone, let it belong rather to Salt than to Sulphur. Therefore while a small stone, gemme, great stone, or sand, are artificially reduced into a Salt, that Salt, by reason of the every way Homogeniety of it self, which is left it by the fire, cannot send forth, or contain a Sulphur, or be drawn into divers parts.

66 In the next place, if glass be made by the fire, of ashes and sand, there is not an extraction of glass out of ashes; but a fabrick and new generation of artificial skill. For all Bodies, seeing they derive their matter immediately from the Element of water, being espoused by virtue of the Seeds, truly let the Sulphur be the act of the Seed; but the salt is bred in the composed body from a voluntary inclination of the Water, yet being changed by the disposition of the Seminal Sulphur. Those two beings therefore do immediately proceed from the two Principles of Bodies: but the Mercury of things, is nothing but meer Water, not as yet sufficiently ripened by the disposition of the Seed, and inclination of the material beginning. And that is thus ordained by the profession, or study of Nature, that by reason of the watric Principle, being as yet not fully changed, a growth out of its element, and a co-placing with its mother, may by an agreeing resemblance, be the more fitly granted.

67 Therefore I do not admit of the Three first Things to be the constitutives of Bodies, as neither universal things. Which thing indeed is proper to my austereness, who am not wont to frame universal Maxims from any particular thing. But let him do that, that will, I had rather be distinct, that I may the more distinctly understand. For I have found for the most part, that those Three Things do not proceed from Bodies out of which they are thought to be drawn, unless a third trans-mutative thing being adjoyned, or by composition: which is rather to be attributed to the happening or supervening seed, and to the trans-mutation thereby bred, but not unto the first things existing within, as the necessary, immediate, and universal Principles of Nature, out of which, and into which, Bodies may be again resolved. For they cannot give us sure credit, that they are in a Body before their separation, even as they are pressed out by the fire, and much lesse that they fore-existed before a Body, whose parts they seem to have been. It is also manifest, that many things are changed by Distilling, neither that they are so, and as much in their composed diversity of kind, even as while they are made by the Fire. Which thing is manifestly the one onely Example of *Tartar*. For truly in distilling sixteen ounces of the best *Tartar*, scarce one onely ounce of Water is drawn forth, but of Salt, at the most, two ounces and a half; the rest is wholly Oyle: that is, of sixteen there are almost thirteen oylie parts. Yet *Tartar* is not crude, neither doth it act as an oylie Being, neither doth it burn as the bark of the Birch-tree, but hath the nature of a sharp Salt, wherefore by distillation, the nature of a sharp Salt is changed into Oyle. And then, again, if the Salt of *Tartar* be of its own accord made a Lixivium, and Oyl be joyned to it, indeed a Wash-ball will be thereby made, which being distilled, shall be accounted for the most part Water, and shall cease to be the former Oyle, and shall be changed into another thing. For what is more clear than this handy-craft operation, whereby it plainly appears, that the Fire is the maker of the first Things; and so, that they neither are in themselves, the first Things, neither that they do fore-exist: such is the composed Body, as they are separated from thence by the Fire: For truly, there is not a naked separation of unlike things, but a trans-changing of the concrete Body by the Fire, according to the activity, which the Heterogeneous parts do finish among themselves.

69 But surely, if those Three Things should be in all particular Bodies, so that no Body could be void of them; yea if all of those Three should keep their ancient disposition, the Salt, I say, should never be made Mercury, neither this likewise be made Sulphur, &c. Then indeed *Paracelsus* had apparently thought, that every Body is originally composed of Salt, Sulphur, and Mercury. But seeing there is an undoubted successive change of things, through things, and the least parts of Things, even as also through the pas-

passages of a threefold Life, those successive changes cannot denote a sameness of the three, nor of constant things, whose very race it self is altogether unconstant, and the perseverance thereof unstable. For forthwith after *Paracelsus*, every one almost hath subscribed to his Invention, and none durst to pierce into the condition of those three things; they were astonished at the sight of Heterogeneous things, which are often extracted by the fire, whence they being as it were fed with *Lorus*, or a feigned Tree, they suffered themselves to be misled whither *Paracelsus* called them. But let *Paracelsus* learn, that while Venal blood is made of Food, there doth happen indeed a separation of the pure from the impure, but none of the three things.

For as oft as a Being passeth through the last Life into a new Life, the lump indeed is changed into a juyce, with a dividing of the Heterogeneous parts, by an extinguishment of the form, and properties of the middle Life: yet not into, or unto the three first things; but there is a proceeding unto a radical destruction, with an ultimate or utmost annihilating of the former Life, under which, at length, they draw a new Seed, for a new generation. For that is the way of the recourse or going back of the Night of *Hippocrates*, unto the Day of *Orpheus*.

At leastwise it is perpetually true, that those three things are never separated without the Fire, and so before the art of the Fire flourished abroad, those things were unknown to the Ancients: And seeing that Fire, and a degree thereof is wanting, which is the Separator in us, and whatsoever through a degree of our heat is blown away out of us, doth tend unto a Dead Head, or *Caput Mortuum*, unless it be prevented by a Blas and Ferment, (even as I have taught above concerning the Blas of man) surely the original of Diseases cannot any way be imputed unto any one, or more of those Three Things.

I deny, in the next place, that Salt, Sulphur, and Mercury are the universal Principles of Bodies. Because they neither existed before the composition of Bodies, nor flowed together, to the making of a mixture, neither lastly, by a natural resolving of Bodies into the Term of their last Life, have they ever appeared in Nature, but onely are brought by the Art of the fire, and that onely out of some Bodies; as the Seeds of things are clothed with a material Principle of Water, and are strengthened by the efficacy of their own Efficient, they assume the properties partly of Salt, and partly of Oyle; but the Mercury of Bodies, is nothing but a part of the Water, being not yet great with Child by a sufficient ripeness of the Efficient Seed. Therefore they do no where exist by themselves, do no where obtain the Virtues of principiating; Because they have not their own Natures, Conditions, Properties, from an interchangable course, whereby they might fore-exist, but partly from a disposition of the Seeds flowing down into the properties of the concrete Body, and partly from the digestion of the Fire and burning, obtained in time of their separation. For truly it is manifest, that they are made reciprocally of each other by a mutual transmutation.

They are therefore the Last things, but not the First, however they may be taken. For all Vegetables, as long as they are not woody, do contain a spirit of Wine, as a spirit of Wine is drawn out of them, they being opened by their Ferment. But out of the same matter, now made Wood, an *Aqua Vita*, or Water of Life, is no longer extracted. It is made, I say, in Vegetables; through the art of the Spirit of Wine, which before was not in them from a disposition of the matter of a putrifiable juyce, and agreeing resemblance, of a winie Ferment. For therefore the Spirit of Wine shall not be the Principle of Vegetables, as all Vegetables divers in themselves, do agree in this Spirit, and might be drawn out of every one of them; but the Spirit of Wine bears the reason of an Effect and Product: In like manner therefore those three things are principated, but not principles. For shall the Blood want a Salt in distilling, because it hath severed the Urine, which *Paracelsus* calls, *The Salt of the Blood*?

And, If Salt be one of the Principles, surely the venal Blood shall in supposition be Eternal, if it wants a beginning, or something shall be able to subsist of Mercury and Sulphur without the Principle of Salt, which thing hath not seemed strange to *Paracelsus*, striving with his own Doctrine of the Three first Things; when as he teacheth, That the venal blood and flesh of Leprous persons is deprived of all Salt. And from hence again, his own History of Ulcers falls to the ground, if the Ulcers of Leprous persons, being without Salt, are voluntary, and not to be despised.

For he hath badly distinguished the Salt of the drink, from the Salt of the Venal blood. Neither hath he known the difference of the Salt in the external humour Latex, from the Salt which is wiped out of the venal blood by distillation, in the torture of the fire. He

being

being wholly ignorant from whence there was Salt in the Urine, Salt being not frequently eaten. Because the rank of digestions being unknown, natural knowledge in *Paracelsus* was overshadowed with darkness, and through the ignorance of Physicians, the dayes of Mortals are cut short, and burying places do become bossie.

Concerning a *Quintessence* or *Fifth Essence* also, it hath been soberly enquired into, hitherto, as if it were a glorious thing, through sluggishness, to have subscribed unto others devises, and to have stuck in fabulous Principles.

76 An Essence therefore is called by divers names. For it is most principally understood of the most Great and Excellent God, who is the True, Immediate, and the most Very Essence itself, of all things, from which the Being of things doth issue, and depend inseparably in nature. But an Essence for the actual being of things in the Abstract, is the Life in living Creatures, or in the Soul. Otherwise, it is a Form, by reason whereof, every thing is that which it is.

77 But the Life or Form, is not by Chymists taken into the Essence, because the thing being dead, it doth return into nothing; therefore have they considered of a certain most famous substance, wherein the whole Crasis or constitutive temperature or mixture, and perfection of a thing doth inhere; as in Spices, there is somewhat, like Oyle, which being withdrawn, the body of the Spice remaineth, as it were ungrateful; to wit Cynamon, its Oyle being withdrawn, savours of the Bark of an Oak, in its astringent or binding quality. But in things tinged, the Essence is a coloured liquor extracted from things, which substances, as they are more active, so they have themselves by way of a Life or Form, as to the residue of the Lump.

78 So that the name of Essence is plainly Metaphorical. Wherefore very many things have not an Essence, even as I have demonstrated concerning Mercury, Chrystal, great Stones, and things Homogeneous, or of one and the same kind. Then in the next place, a greater power and efficacy, is oft-times in a thing being entire, than in its separated Essence. As is manifest in the Load-stone, Carabe or Amber, &c.

79 For very many Simples do loose their specificall property by preparing; and more by separating, and the fire. In the *Elkes* Hoofe, and *Bezoardical* things, there is a certain thing which had rather be proper unto crude Simples. But the Forms, or Essences of Herbs will not be subject to the Artificer. For many things do alike prevaile, whether their Vegetative power, (they call it a Soul) shall die or as yet exist in them. But after that they have plainly withered or been dried up, some Herbs do produce their Essence; but many Herbs, (especially *Water-Pepper*) do loose the same. However therefore an Essence be taken, it is an improper Name, and a [*Fifth*] Essence, is an unfavoury Epithite. For truly, what Essence they do promise, either it is not equally in all, neither doth it obey the Artificer, or it is not drawn from any place whatsoever. But under other things, in the crudity of things, it laughs at painful or diligent Labours. Neither doth every sweet smelling thing sit in the middle, but in the last Life. For the Flowers of *Jasmine*, of the *Lilly of the Valleys*, &c. by putrifying do loose their grateful Odour, and Medicinal Virtues, they wax sharp, neither do they ever re-take their former Fragrancy. But elsewhere the sweet smell sits under the middle Life, which Odours indeed do keep their sweet smell in time of putrifying, the which they send forth in Distilling, as *Roses*.

80 This thing hath deceived *Paracelsus*, and hath made him to think, that the Essences of things do thus putrify; and so he was ignorant, that in Dung and dunged-Fields, he dictated safe Mansions for ever. Not knowing, that the Offices of Seeds being loosed and dead, all things do yield themselves to rest, and at length do require their first Inne of Water, or at least wise obeying a stronger seed coming over them, they againe suffer themselves to be led into new Colonies, and themselves to be brought into new Tragedies. Yea there are many Simples which do find a fragrancy in the bosome of putrifications, which before they had not in their own Species. Such as are Mosch, Ziver, Amber, certain Dungs of bruit Beasts, and putrifying Woods. For a various putrifying by continuance ariseth in them, whence their Seeds do draw a fragrancy to themselves, and do transplant them into a new generation. Therefore the Spiciness if it be fast tied to the Balsame of the middle life, is not overcome in putrification, by a separation of parts, and is the more fitly sequestred from corrupt things. A Chymical Essence therefore is not properly a Fifth Essence, seeing there are not Four others in a concrete Body, neither is it extracted out of the Three things, but is the Seminal part of the Sulphur of the composed Body.

82 Of the Sulphur, I say, Because the Sulphur is the off-spring of the efficient Cause, and

and so, more formal. For Cynamon, while it is without a spiciness, is indeed, as yet, Cynamon, even as the young, or a foolish person, are men. I therefore name the best part of a thing, the Crasis thereof, whether the Spice or sweet smell do sent or not. But in Herbs which are not fragrant, I call the seminal or seedy Liquor, their Crasis. To wit, I know that from every plant or seed, and likewise from the trunk or stemme of some Plants, a Liquor is to be extracted, which contains the Power of the Seed: which Liquor, although it be not fit for sowings, because the Seed included in it, not being able to draw a More in the Earth, doth exhale, yet it blesteth with a wonderful fruitfulness, a Plant of its own likeness, being poured on its Root. For the seminal Liquor contains a Crasis for propagation, and therefore it is also truly Essential, yet not commonly known, yea not indeed to every of the most expert men. Therefore I pity the progresses of extracting Quint or Fifth Essences, as vain. No wonder indeed, if all the virtues of the thing generated, do shine in the Crasis. Likewise the Oyles of Spices, as Oyles, struggling with, and being unconquered by our digestion, do bring little help, to wit, when as they being taken within, onely for the smells sake do refresh us for a little space.

But when the Oyle of Cynamon, &c. is mixed with its own fixed Salt, by an Artificial and hidden Circulation of three Moneths, without all water, it is wholly changed into a volatile Salt, doth truly expresse the Essence of its own Simple in us, and doth dart itself even into the first constitutives of us. But otherwise, where the medicinal virtue is hid in Odours (indeed strong and stubborn Odours do overcome our strength, and are scarce overcome and digested by our Archeus, and so they do importunately or unseasonably act in us; For the Archeus Labours much, that he may destroy them, and imprint their Odours into the Substance wherein they are) and especially if they shall be fermenting ones, however they shall promise ease or refreshment, yet because they do not abide, that they may pierce into our first constitutives, they do not afford a constant ease in healing. Chiefly, because they do easily decay in themselves, and degenerate of their own accord: therefore the rather, if they are subdued by our faculties. For so Mosch and sweet smelling things do die, if their Crasis shall depart, although their Body shall remain in it self, safe: and so the Crasis or constitutive temperature or mixture of a thing, doth nothing touch at the dreamed Beginnings of things.

CHAPTER.

C H A P. LVI.

Of Flatus's or Windie Blasts in the Body.

1. *A fourfold Blas or Windie Blast.* 2. *The Gas of Life, and Wind of the World, do differ in the whole Element.* 3. *The Opinion of Galen concerning Flatus's.* 4. *They have been ignorant of a fivefold Gas.* 5. *The Art of the Fire, what it can teach.* 6. *The Schools are deceived.* 7. *They contradict themselves.* 8. *The Error of Paracelsus concerning the Limbus or Zodiack of the little World.* 9. *His ridiculous Doctrine of a fourfold Colick, and a microcosmical Identity or sameliness.* 10. *That there is not a windie Gas in us, unless it be inspired.* 11. *Why Paracelsus hath neglected in the Womb, the Cardinal Winds of the Universe.* 12. *Paracelsus is reproved.* 13. *His Error concerning a contracture, from the Colick.* 14. *The Causes of the aforesaid Convulsion and Palsie.* 15. *The Life of the Muscles is concluded from the Blas of them.* 16. *Why it is not the last that dieth.* 17. *Unsound or mad Remedies in windie Blasts.* 18. *Of what sort that should be, which drives away, or discusseth or scattereth Winds.* 19. *They are as yet ignorant of the properties of wringings of the Bowels.* 20. *The Womb wants its proper windie Blasts.* 21. *Windie Blasts are not stirred up without their Bounds.* 22. *A Flatulent or Windie Plurisie owes its rise unto a Fiction.* 23. *We must be ashamed to have accused conceived Winds.* 24. *Wind is accused by many, to be the beginning of all Diseases whatsoever.* 25. *How cold doth occur hereunto.* 26. *What is to be known in this respect.* 27. *What is afterwards to be done.* 28. *By whom usual Remedies profitable in Windinesses, were invented.* 29. *The Ileos or Iliack passion is an averse co-writhing of the intestine.* 30. *That Affect hath in its Causes and manner, been even hitherto unknown.* 31. *A History hath discovered the deceit of the Schools.* 32. *A new Doctrine concerning Flatus's or windie Blasts.* 33. *A sixfold Flatus in us.* 34. *No Flatus in us can be a Vapour.* 35. *What is a wild Gas.* 36. *Flatus's are distinguished.* 37. *A certain windinesse is necessary for a Bowel, whereof none hath hitherto taken notice.* 38. *It is proved by a Monster.* 39. *Some sequels flowing from thence.* 40. *A consideration about the mean, and abounding of this Flatus.* 41. *From meats vitiated, or excrements seasoned with a vitious ferment, are paines of wringings in the Gutts.* 42. *The Convulsions of a Bowel.* 43. *Galen was Ignorant of the use of parts.* 44. *The Schools neglecting other Flatus's, have had respect onely to Farting, whence a Fartisme.* 45. *The windie blasts of a Tympany.* 46. *The Effects of a dungie-ferment, in respect to Flatus's.* 47. *The cure of a most stinking windiness by loosening things.* 48. *Dungs are not the voluntary putrefactions of things.* 49. *A difference between the windy Blast of the Stomack, Ileum, and Colon.* 50. *A Scheme or Figure of the Flatus's in us.* 51. *The Tympany is more mortal than the Drophe Ascites.* 52. *Two considerations touching windie Blasts.* 53. *A consideration of Flatus's.* 54. *A Flatus is the vice of us, not of things.* 55. *What the interchangeable course of Flatus's may respect.* 56. *That Flatus's are made in us by a causing Agent, but not by a separating one.* 57. *Galen is withstood concerning Flatus's.* 58. *Divers times again.* 59. *An Error about lustful Meats.* 60. *Venus or carnal lust hath respect unto the Spleen.* 61. *The ingendring of Flatus's, whence and how it is.* 62. *An example of windy Blasts.* 63. *A windie Blast doth not fore-exist in the Food.* 64. *A notable thing concerning the Grape.* 65. *A notable thing touching*

touching the Ferment. 66. Respects of Flatus's, and of the Stomack. 67. The handy-craft-operation of Flatus's in a threefold Monarchy. 68. The notable Gas of Tartar. 69. The windinesses of meats. 70. Sulphur teacheth a flatulent or Windie matter, and the supposing of a Dungie Ferment. 71. Whence wringings of the Guts are. 72. Why poysons do for the most part make the habit of the Body to swell. 73. Why Leavened or Fermented things were forbidden to the Jews. 74. A dead Carcase that is drowned, when it issues up out of the Water. 75. A remarkable Remedy concerning the lesser hot Seeds. 76. The Judgement upon the beholding of the dead Carcase of a gentile Matron. 77. The vanity of a Name and Remedy driving away Windes. 78. A distinction of the Volvulus, or pain of the Ileus, from the wringings of the Bowels.

After that the more judicious of Physitians, had vainly implored aid from the Elements, Humours and Stars, and in the next place, had in vain invoked Tartar, and also the supposed beginnings of the Chymists for their helps, they afterwards meditated, against the will of the Galenical Schools, that the Head-ach, pain of the Megrim, and that pain which was left of yesterdaies drunkenness or gluttony, and likewise the giddiness of the head, Doatages, Asthmaes, bastard Pleurifies, the Convulsion, Cramp, the Disease of the standing of the Yard, the Tympany, furies of the Wombe, yea and of the falling Sickness, with some other affects, divided in their particular kind, do without controverfie, owe their beginnings unto windy blasts, and vapours: wherefore also, they by an equal right, enlarging the Catalogue, brought down their searches unto the Book of Hippocrates [Peri Phusion] or concerning natural things. That old man, hath so altogether consecrated all Diseases to flatus's or windy blasts, that he hath promiscuously confounded winds with the principles of life. Therefore the more fruitful wits of the Schools began to search, not so much into the nature and properties of windinesses, as (the suppositions of windy blasts being granted and yeelded to) further to superstruct and build the nature and causes of almost all Diseases, and to dedicate them to windy blasts, vapours, and exhalations, climbing from beneath upwards: or being thrust head-long downwards. But when as they were not able wholly to deliver themselves out of straits, nor that the edifice of so great a moment could stand firm, because it was supported by no foundation of a more solide enquiry, it was as it were the thred of an enterprise, broken asunder by too much twisting.

Truly Hippocrates, constrained a flatus into a predicament, whether they should be partakers of life or death, or at length of destruction, and should contain the causes thereof, or should be stirred up from Heaven by the Blas of the Stars, and so should promise causal necessities of the heavenly circle, or at length they should obey a sublunary, or voluntary Law: to wit, he left it wholly undecided. And so he left a broken method. And that stood, because there was not yet so great a necessity, experience, frequency and stubbornness of Diseases. For it was not as yet known, that the vital spirit had conceived the light of life, which was that of the sensitive soul, and that they were the immediate seats of the forms of soulified Creatures, and so, that they did contain the crasis or temperature of the whole Essence. For none then had learned that the matter of that Gas, the Water, and so none had as yet dreamed that the vital spirit did differ from the wind of the World in the whole Element. For truly the Schools had easily fallen down into this ditch of windy blasts, and had stubbornly there remained, but that they acknowledged the succours of purging Medicines, and blood-letting in winds, to be vain, and foresaw, that they should be in vain without the aid of both those succours. Galen indeed had seen, that Oyles and fatnesses did by degrees exhale through fire, therefore he thought, that winds also are awakened in us through a melted fatness, or the inordinacy of the digestions, because he was he who was not able to distinguish the Air or wind from an exhalation, from a vapour, and from a windy blast.

The Galenical School, I say, hath not hitherto known the difference between a windy Gas (which is meerly Air, that is, a wind moved up and down by the Blas of the Stars) a fat Gas, a dry Gas, which is called a sublimed one, a fuliginous or smoaky, or endemical Gas, and a wild Gas, or an unrestrainable one, which cannot be compelled into a visible Body. Wherefore the obscurity of the darkness of natural things, hath remained unexcusable among those that are ignorant of the Art of the Fire. The which doth instruct us, in what degree, watry Bodies, or in what degree, and order, every fatness may flie away, in the next place, by what separation, or by what Ferment, Bodies, may depart

from each other, may putrifie what all particular Bodies may carry with them by resolving; in the next place, by what means, the Crases of Seeds, and properties of a composed Body may shew themselves. Lastly, by what endeavour, all of whatsoever is in us, may be disposed into transpiration, without a separation of parts. They had heard indeed winds in the belly, and then unhurtful rumblings, and painful wringings they took notice of to be in the stomach, and Colon, but in Winter, a plurality of winds, wherefore they dreamed of an icy Phlegme in the bowels, and hot Remedies to be applied to cold Diseases. Wherein the Schools do at first infold or ensnare themselves, while they deliver the original of vapours and windinesses, and do intend to cure and put these to flight, by contrary Remedies as they call them. For they contradict themselves in their principles or beginnings, mean, and manner. For if windinesses in us are vapours or exhalations in us: Surely there will follow upon the administering of hot Remedies against winds, a greater exciting of pains and flatus's, and stretching out of parts, because vapours must needs be increased, and torments be multiplied, as well by reason of stretchings out, as the sharpness of the winds. And that thing, the Art of distilling doth prove throughout the whole. *Paracelsus*, although a Potentate of the Art of the Fire, was not free from the storm of winds. Because he was he, which was ignorant of the nature of winds and of the Air, that the matter of vapours or flatus's, is a watry Gas, that their efficient causes, manners, means, as also matter, is water got with child by a Seed. Because he was he who plainly despised the authorities of Philosophy, and endeavoured to bind nature under his own idiotism: he was also forsaken, God so permitting it, by the light of nature, who maketh such endeavours every where void. Also no man ever attaineth unto Wisdom, who hath thought to have come thereunto by himself. For *Paracelsus* doth every where constantly perswade, that we ought to feel the Diseases and defects of all things, because we are hitherto every way an extract of the whole universe. That we ought to express the universe, as it were, the Parent of a Son. For so he will have us to contain winds and their varieties, our wringings of the bowels also, to answer unto the tempests of the Air. But I will not depart even a nails breadth from the famous Image of God, that we do resemble the Macrocosme or great World, rather than God in his Image. For I believe, that I am not a man, that I might undergo Diseases, and so resemble, *Pirke Olam*, or *Holam Hapiroud*: but rather I know, that I do undergo Diseases, that I might shew a depraved and mortal nature, but that I am a man for no other end, than that according to the good pleasure of God, I may represent his lively Image.

That man therefore divides the wringings of the bowels into four parts, according unto the four accustomed hinges of the winds. Whereof, the Northern one, he first of all placeth in the loyns, whose wind in its colick, should blow against the Navil. But in the Navil he placeth the Southern one, which in its colick, should blow Diametrically on the back. So also he hath disposed the Eastern one in the right side, as also the Western in the left, and he at length, ascribes to every wind their proper Remedies, involved under Hieroglyphicks, as yet to him unknown. Alas! with how sorrowful a pledge are all these things, and by how sporting a means, hath that man invaded the principality of healing? to wit, that we are all little Worlds! for at how dear a rate doth he sell us this Idea or Image of the Macrocosme! and by what a scanty argument doth he found his dreams! when as, in very deed, there are no winds, nor matter of winds in us which we do not breath in and breath out, otherwise, that neither is there a flatulent or windy Gas in us, unless in one way, house and passage: To wit, from the stomach, through the bowels, even into the fundament. Indeed *Paracelsus* had known these things in part, in the next place, that of winds in the Womb, Pleura, Head, and Muscles, there were old Wives fables: Nevertheless, he as yet weaved greater, that he might compose these ridiculous hinges of winds: the which by a stronger right, he had transferred into the Wombe, then into the bowels: The which with great grief doth writh it self sometimes on the left side of the bottom of the belly, sometimes on the right side, and besiegeth even the Navil, or inclines it self behind unto the back and loynes. But he had remained doubtful where he had found a fifth wind in the head-long Wombe, and where a sixth, while the Womb is carried straight upwards; and therefore although he at large declameth concerning the Star or Astrum of the Wombe in a particular Book. yet he sleeping, hath neglected the Cardinal winds of the World in the exorbitances of the Wombe.

Although he also doth seriously declare, that the Womb is a World. but moreover less than the Microcosme. But oh *Paracelsus*! by supposing some Els of a bowel stretched out by wind, and that wind shut up on both sides (for if it be not shut up, it shall neither

cause

cause pain, nor stretch out, but shall be evacuated by its own emunctory, of its own accord) and so that it doth neither breath, nor is carried side-ways after the manner of winds. My question is concerning the Name, Essence, Original, and Remedy of that wind? And then, when the Ileon is extended, perhaps for 40 turns, as well from the back forwards, as with a side passage on both sides, with what and what order of twisting shall the hinges of the four winds have their Scituation, Name, and property of Name? For so in every winding circle, there should be now, forty Southern winds, and as many Northern ones, &c. For if in the twentieth, or in every particular twisting of the intestine, thou oughtest to have added a reason, why not in the tenth or twelfth, if thou desiredst credit to be given to thee, dreaming of these things. But surely thou hast not been a faithful Æolus of those winds. Because thou marking the colick to have oft-times afforded the contracted muscles of the hands, Convulsions I say, and Palseys, hast not blushed to say, that winds are carried from the bowels through all the muscles and tendons. And thou hast affirmed that, with so much the more liberty, because thou findest the Schools prone unto every service of vapours and winds, perhaps for all Diseases. For when through the dictating testimony of truth within, they found not rest for themselves in Elements, Complexions, and Humours: they being confused, sought out a mean whereby they might find the cause of Diseases by vapours and winds. For perhaps when humours had deceived them, they wished that they might not be reproved by an invisible position of winds. Indeed it was an invention of the Impostor Satan, who seeing he endeavours to be Gods Ape, by the belief of invisible things, pretends that the understanding of the credulous or those rash of belief, is due unto himself. And that they do suffice for all Diseases, so the belly do ruffle its rumblings in the ears. And therefore I ought also by all means to have treated of flatus's or windinesses. Surely I pity, on both sides, so great unconstancy of *Paracelsus*, and ignorance of those that believe him, whereby he excludes and cuts off from himself his pretended title of the Monarch of Secrets. For he knew not in this place, that such is the property of any poyson being administred even under the friendly shew of purging Medicines, that they do sorely trouble or shake the Archeus, and stir up a Blas thereof, according to the Aphorism. *A Cramp or Convulsion after Hel-lebour, is mortal.* And that, that colick which besides the wonted wringings of the bowels proceeding from a sharpness, doth moreover contain an infection of poyson, is also the Author of the Convulsion. Although wind in the mean time, be not carried out of the gut Ileon. So a man dying with a total extinguishment of his strength, leaves his dead carcass on both sides extended with a general Tetanus; but whenas he is snatched away by a violent Death, his dead carcass is flabby. Whence I have learned, that there is a certain life, feeling, and motion or Blas in the flesh, besides a voluntary one. To wit, that life apprehending poysons and death, together with an extinguishment, doth extend the tendons on both sides. Whence it is false, that the heart is the last which dieth. For the life of the Muscles doth as yet remain surviving, which is most powerful in Insects, & so also the head being plucked off, flies do as yet, flie away. And in a woman long dead, her Wombe hath oft-times chased out her young. Therefore every Convulsion of the Muscles, whether from the colick, or by taking a laxative poyson, or any other thing, is not from a voluntary motion: but from a natural act of feeling, and moving of the Muscles: but not that the flatus which extends the bowels, doth also efficiently extend the Muscles. Even as in the Book of the Disease of the Stone, in the Treatise of Sense, and Sensation, I have abundantly confirmed.

It is therefore for a sound decree. This is carminative, that drives away winds; but that scatters windy blasts. As if by enchanting verses, winds, to be renounced by Physicians, should depart. For if the conduit and passage of utterance do lay open, wind never wants a foreign aid, as neither a strange driver, that it may go forth. Yea which is more, wringings of the guts do not alwayes cease, although there be a free egress for flatus's. Otherwise if the way be without an impediment, the windy blast whether the Physician will or no, shall find it: for truly there is but one only passage of the bowels, and that continual unto them. But such driving Medicines ought to have some mean, even as a Pestil thrusts forward the contained clysters. But that mean, that it may be fit for the expelling of a flatus, it ought suitably to answer the conduit of the bowels, as well in the slender as in the grosser ones: and moreover to have a pulfive or driving Blas. But wind being shut up, doth cause the less pain, so long as it is quiet: So every pulfive Remedy, should of necessity increase the pains of the wringings or gripes, and so nature sheweth, that we must abstain from things that do drive or force windiness. But they strongly meditate, that in carminatives, there is the force of a whip. But are flatus's like unto cattel? For do they acknowledge that they and their carminatives are to be

- set in the place of a suitable Pestil? or that perhaps carminatives have the same virtue, like a voice which drives away cattel? and that windy blasts in the Body do hearken unto the exhortation of enchanting Poets or Singers? I know indeed from hence, that the
- 19 Schools are ignorant of the force, property, causes and manner, as well of the gripings or wringings, as of the Remedies. For winds are not to be driven away, and secondly, not to be dispersed. For this is impossible: but that contains a childish Fiction. Neither also by an honest man are flatus's to be restrained by any Verse or Song, a religious Ety-
- 20 mology whereof, doth notwithstanding hitherto remain in the Schools. A windy blast is not inwardly stirred up in the Wombe, because the Wombe is destitute of a flatulent matter, and its digestion is not fit for creating of flatus's: but outwardly, Air scarce enters into the Wombe: because it is that, which least it should suffer a vacuum or emptiness in its membrane, it falleth down wholly moist and flaggy: and so of its own accord, a passage for the breathing Air is prevented, unless it be by force, cast into it, by an instrument.
- 21 In the next place, neither do external winds borrow a force from the mouth, that they may enter into unwonted regions, and that they may strongly thump the Pleura grown to the ribs, but that between this, and the Muscles between the ribs, they may stir up a flatulent Pleurisie, and presently after tear the Pleura from the ribs, and frame a true inflammation of the Pleurisie. Because there is no way for Air thither: yea if it should reach
- 22 thither, it hath not a Blas behind, which might be of any damage. And by which way it had entred, for therefore, before it had hurt, it had expired. Neither also are flatus's made internally in those parts, the matter whereof, and the efficient cause hindering it. It is also like an old Wives Fiction, that an external wind, or blast of Air, doth pierce thorow
- 23 the skin, however so pory it be, even as also the fleshy Membrane, and also the Muscles under it. According to the shameful reason of Physitians, wherein they say: He hath lately contracted wind, whence his parts are ill affected. For I have oftentimes with my
- 24 own blushing, heard this cause to be assigned almost to all Diseases, from the head even to the ankle. The distemperature of the Air is accused for the vices of the head, eyes, ears, teeth, Oasand; for hoarsenesses, coughs, likewise for all defluxions, unconcoctions, feavers, and so the Air hath been accounted a *Pandora's* box. And that not only by the touching of cold, as an outward cause, but as a windy blast hath been drawn inwards; and there unduely detained. Of which things elsewhere.
- 25 But now our speech is of our, and those, internal windy blasts. I grant indeed that an unwonted cold (as a guards-man of Death) doth indeed affect some noble part or servile one, as it disturbs the last digestion thereof, whence excrements, pains, yea and Apopthems of the familiar parts do diversly follow. But in these, the faculty of the cold is only an outward occasional cause; which shews a prevention, not likewise a cure, or quality of a Remedy. Therefore let the trifles of the Schools bid farewell. But besides, that
- 26 any Physitian may rightly perform his office, he shall know first, what wind is, and then, what is a windy blast, from whence it is made, why it causeth pain; and then the Remedy shall be easie unto him.
- 27 Indeed the cause of flatus's being known, we must take heed, least their concrete or composure be turned into a Gas. But a Gas which hath been once made, prepareth an easie way or passage for it self. But if not, and if the bowel where it is beneath it, be stopped with a more hard obstacle, this is to be loosed. But where there is no excrement as a partition, and yet the wringings do proceed, shall not those things be vain, which drive away winds? and foolish which disperse them? For truly not the windy blasts, but the matter from whence the bowels are drawn together, and the bowels themselves do generate windinesses, is to be brushed away. The cure, I say, may not be converted unto the
- 28 flatus produced, but unto the cause producing it. I see therefore that the Remedies of Dill, Caraway, Anise, Cummin, wild Carrot seed, &c. were found out not by the Schools, who are ignorant of the causes of wringings of the bowels: but that they were made known from Divine compassion, to little ones and poor ones, from whom the Schools have begged them, as also many other experiments from thence. For truly the original, essence, matter, property, process and history of flatus's, have lain hid to the Schools.
- 29 In the next place, neither is the Volvulus, Iliack passion, or that of a barbarous name [*miserere mei*] any twisting or writhing together, and extravagancy of the lesser bowel. For besides that it should be a perpetual, and of necessity, a relapsing evil, Anatomy resists it, which shewes the bowel to be cloathed with the mesentery, to wit, with an external cloathing, with a third garment and upper skinny one, and it being fast tyed to the loynes, by that mesentery, to hang or bend forwards. Therefore that bond being once burst asunder, and the society of the mesentery despised, there is no hope for the future,

of reducing the bowels into their former case, from which they had freed themselves by breaking Prison. And so the evil being by a strong fortune restored, should of necessity presently return, and should alwayes afterwards rush into a worse state. Again, throughout the whole tract of the bowel, there should henceforward be no nourishment with the Veins, and no attraction of chyle for life; when as nevertheless in the mean time, that Disease gives place to an easie Remedy. For if, besides its wonted circles, the bowel should be co-writhed, who should be that mover? or who that tormenter? For from without it hath none, and fears none, which bowel is covered with a smooth caule and simple bladder of the Abdomen or bottom of the belly. Also, if it be stopped up by an internal excrement (for this nor the other can happen unto it) now the gut Ileon is stopped (wherein excrements are not yet wont to be hardened) by an unwonted dung: but not co-writhed, not dissolved without the case of the mesentery. And so the Schools being amazed, that Disease, hath been unknown in its causes and manner. For I remember, that *Thomas Balbani* of *Antwerp*, when I was a Youth, dying within a week of a *Volvulus* or an *Iliack* passion, offered eighty thousand Flandrian pounds to him that should cure him, having sent his Coach-men or swift Riders every way. The Physicians of *Antwerp* then, by the decree of the Schools, with a lofty look, accused the bowel to be roulded inwards, and to be inwrithed as it were with a Gordian knot, their remote ignorances providing a Remedy by way of excuse, but not for the sick man. But Anatomy discovered their Deceit and galls ignorance. For hard dung was found in the slender gut to have stuck sixteen fingers above the blind gut, and much loose ballast to have swumme through the Ileon from above. For it is a rare thing for dungs to harden in the slender gut. Wherefore I afterwards suffered none to perish of the Disease (ill called) *Volvulus*. To wit, I gave some leadden Musquet bullets to drink, that by their weight alone they might drive forward that hard excrement. For by how much the more and bigger bullets are drawn down, by so much the safer and swifter cure follows, so the sick party doth stand, walk, or beeled, with the bottom of his belly as it were raised upright. Now moreover, I will declare a history of flatus's, although a fordid one. Indeed all windiness is in the stomach and bowels. Even as winds are only in the Air, but not beneath the water and earth. Indeed the nativity of a windy blast doth fore-require a certain stomatical sharpness, and yet not an ordinary fermental one. Which thing, because it is not elsewhere found than in the aforesaid places, a flatus also is no where else generated. Even as shall hereafter be manifested.

In the next place, every flatus is raised up either from meats, not yet digested, or from the cream, or from the dung of meats, or from the seedy nourishment of the bowels degenerating. There is therefore a four-fold internal flatus in us, a fifth is external, that of a Tympany, which is enclosed without the intestine. One is natural and requisite, or ordinary. But a seventh is poysonom, in the habit of the Body. But none of them is a vapour, or watery exhalation: because that is that, which of its own accord, and from its proper consistence, doth presently and easily return into water.

In the next place, no flatus is air, or wind: seeing the wind or air is not of the composition of concrete Bodies, even as I have longly and largely proved. Therefore it remaineth, that every flatus in us, is a wild Gas, stirred up among the digestions, from meats, drinks, and excrements. One therefore is in the stomach, and is called belching, and it is unsavory, fower, brackish, burntish, stinking or specifical. I call that of unconcocted meat, a specifical flatus: for so Garlick, Radish, and the like, do afford their own favours in belching. But an unsavory and fower flatus, is a belching of the cream, indeed digested, but stirred up through an impotency or weaknesse of the stomach. But a brackish flatus, such as is in inordinate appetite, and a burntish one, are made of meats, well nigh degenerated into a dungy disposition. There is therefore also, another flatus, stirred up in the slender bowels, through the vice of the ferment of the Gaul: and it is either unsavory, sharp, fower, bitter, dungy, cadaverous, or stinking, according to the variety of the matter, and the power of the gaully ferment. This flatus is called a Fart, neither doth it ever ascend through the Pylorus into the stomach. The which if it be stinking or burntish, doth denote the ferment of the dung to be fore-ripe, and lifted up into a strange harvest. There are moreover, two other flatus's in us. One is plainly heteroclitic or of a differing kind, being detained and bred, as well in the bowels, as in the whole habit of the Body. For from a poysonous, and dungy forreign ferment, a certain windy blast ariseth in the last digestion of the similar parts; To wit, while a poyson being taken, dead carcases become swollen, and are blown up: for a fower or sharp corruption entereth into fleshes, after a heteroclitic or degenerate manner; and the solide

part dies, and indeed the implanted vital spirit is extinguished, and the part is affected with the poyson of the Venome, whence is a dungie, deadly Flatus, abominable to our nature. And so the immediate or spermatick nourishment of the solid parts, is changed into a wild Gas, and the whole body swelleth, or a part is peculiarly affected.

37 There is also another unfavoury Flatus in the Ileon, to wit, natural, and a certain profitable product, indeed therefore ordinary and natural. And seeing it is made in most, and those oppressed with much hunger; I conclude with my self, that that unfavoury Flatus was bred of the very immediate nourishment of that bowel it self, being well disposed. For otherwise it should be impossible in Caliack passions, and other dissolvings of the belly, that so suddain and swift expulsions of excrements should be made, if the Ileon being shut in its emptiness, and falling down, with the continuation of a natural Flatus, should not after some sort, gape perpetually. That thing, I say, the Schooles have never diligently searched into. Whereunto, I will also add greater perplexities, to wit, unless the Ileon do alwaies, naturally, and moderately swell with wind.

38 For otherwise, in the first place, the endeavours of some fibers in the bowels seemed to be in vain, if the Ileon doth not meanly swell with a continual Flatus. For a boy, who suffered a monstrous burstnesse in his Navil, (for his Navil was wholly clear or shining as it were with a thin upper skin, to the largeness of half the palm of ones hand) for this plainly monstrous child, as oft as he underwent the gripes or wringings, did afford us the storm of the Ileon to be beheld. So that, that bowel as if it had boyled up, when he walked up and down, did seem to be twisted and pulled together. And that especially as oft as new torments or gripes did molest him: Which things, seeing thty were in such a manner in time of paines, I would also contemplate, of what sort the family administration of the bowels might be in time of health. And then I observed, that there was plainly another successive motion, whereby the bowels did exercise themselves. For as oft as any thing was sent through the Body from above, unto the fundament, (for it was in the consistence of a more liquid syrupe, and obscurely yellow) the bowel contracted it self with its own athwart or transverse Fibers, as though it were wholly closed that way, and did drive down the excrement beneath it self: For this was made by a successive contracture of the transverse fibers, no otherwise than as a fidler opens finger after finger, and looseth the former. Even so that it did indeed drive forward the Excrement, together with the Flatus, but this did forthwith return unto its antient place. Surely a thing worthy of great admiration, that through the providence of God, the parts are not inwardly idle, but do thus without feeling or perceivance, and uncestantly operate, even while we are sleeping.

Next I beheld, That as long as the Boy did lie on his right side, the transverse fibers did press themselves together, in the upper part of the bowels of the same side, that they might drive the excrement upwards into the steep part: yet the hairs or threds of the down-bending part of the bowel, then not at all labouring, or being pressed together. I saw therefore, that a Flatus is not alwaies driven forward by the Ileon unto the Fundament, with the excrements: but that it doth leap backwards, and return unto the parts of the Ileon, which are re-opened presently after the secluding of the excrement. From whence, I conjectured, that such a Flatus was natural and profitable, and not burdensome. For the same closure of the Ileon it self, is most exact, before that, that which is thin and slideable can be driven upwards, which being seen, I presently collected;

39 First, That in the Caliack or belly passion, the digestive faculty doth not onely erre by reason of the corrupting of a decaying Ferment, but also the retentive faculty of the Pylorus: and furthermore that the propulsive, or forth-driving faculty of the bowels doth then rage with a sumptomatical error. And then, that some kind of Flatus is natural to the Ileon, being stirred up by its own Spermatical nourishment; and so that it is to arise from the sixth digestion of that bowel, without stink, sharpness, and trouble: and so that it directs it self into a mean of quantity.

40 But whatsoever of this Flatus, as superfluous, doth exceed its quantity, is presently expelled out of doors. A vice therefore in quantity, doth of its own accord, bewray it self, and is easily banished. It is indeed from a superfluity: but yet it neither causeth pain, nor biteth.

41 But if windy blasts are stirred up from meats vitiated in themselves, or those seasoned with a vitiated ferment in time of digestion, they are painful through their sharpness, and a foreign impression, but far more powerfully, if the bowels are pulled together, especially when as a tough muscilage, seasoned with a vitiated ferment, the mother of wringings or gripes, shall stubbornly any where adhere, to wit, for the driving out whereof (for the most part

part in vain) the bowels do co-press, contract, and co-wrinkle themselves.

But I call a contracture, the generatress of cruel gripes or wringings, as oft as a bowel 42
is drawn together, not indeed on the transverse, or oblique part of its circle, but wholly
on the length of it: especially because contractures by the transverse or athwart, and ob-
lique or crooked fibers, are daily, natural, and without pain.

Galen triumphing of the use of parts, being had in great esteem by the Schools, is shewn 43
by *Vassalini* in an 116 places or errors, never to have seen the dissection of an humane
body, which demonstrations of that Anatomical work, as the Schools shall never wash of:
So I maintain, that the chief uses of parts, the scopes of the Formative faculty, or their
delights, are untouched, not heeded, but unknown hitherto. Indeed since *Galen*, they
have sufficiently seen, that the strait, oblique, and transverse fibers of a bowel, do prevail
unto the driving forth of the excrement: yet have they not known, whither, and how, e-
very one of those might incline themselves in their services. For they who in tediously
writing, have rashly erred in the platting or weaving of the Choroides or wonderful net
of the brain, in the sporting motions of the Lungs, and the passed by uses of the Pulses,
have sluggishly passed by the uses of the Pulses, and Bowels in their services. Thus far
of Belching and Farting.

And Likewise I have discussed concerning a degenerate Flatus throughout the whole Bo-
dy, and concerning the natural and requisite Flatus of the Ileon. For truly, I never saw
a dead carcase dissected, which would not offer to the Beholders, the Ileon swoln with a
Flatus. Now moreover I will proceed concerning the Flatus's of wringing or griping dis-
eases, and the authors of Death.

In the third place, there is a Flatus or windy blast in the more gross bowels, consequent- 44
ly bred in the bowels of the blind gut. The Schooles indeed have heeded no other Fla-
tus besides this, as if Flatus's were not conceived but in the strait gut and Colon. And
therefore also they have called the Colick, the disease of windinesses, and they have solid-
ly distinguished it into the Colick of the Colon, and of the stomach, into a sandy and win-
dy Colick, and the like shamfulnesses of Confusions. A third Flatus therefore ariseth from
a dungy and putractive ferment, and it is twofold, to wit, from the food already putrified
by a dungy ferment; and from a spermatical nourishment, degenerate, mortified, and more-
over dungified. For this is the most stinking one of all by far. There is also at length a
foreign Flatus, which although it have not place in gripings or wringings in the belly as
a Cause, yet it is oft-times as a subsequent effect of the same, and is for the most part,
worse than a Dropsie, and is called a Tympany.

But I call that a dungy ferment, as it is bred without a bowel, so also whose seat is in 45
the blind gut, where the excrements of meats begin to putrifie, under the specifical dif-
ference of soulified creatures, and so they there borrow an impression of a dungy ferment,
according to their proper kind, or species, neither surely is it an idle or dreamed fiction of
this ferment, which doth on every side bring forth a specifical diversity, when as other-
wise there is not any transmutation of things without a peculiar ferment.

In this ferment therefore oilynesses are made volatile, and an inflammable exhalation is 46
stirred up out of putrifying things, wherefore Chymists do premise all things into putri-
faction, that those things, which else being weighty, hidden, and shut up, would remain
in the lee, might be lifted up together, with the watriness of the matter. For Fleshes,
Eggs, Meat-broths, and whatsoever things are of their own accord mortified, do yield
most stinking excrements, as also windy blasts. So Amber-greese, Mosch, Ziver, and
such sweet smelling things, because in their original, they are partly of Fleshes, and part-
ly because they have once gotten a dungy ferment of that species, being easily
again afterwards subdued by our ferment, do bring forth most stinking excrements and
Flatus's.

By this right also, excrements and Flatus's, which are drawn out by loosening medi- 47
cines, because immediately dropping from a dead carcase, transchanged aswel through a
putractive ferment of the loosening poison, as of the place or bowel: besides the proper
horribleness of the mortified matter, they are moreover, most exceeding stinking. And 48
so it is even from hence manifest, that there is a certain dungy ferment in soulified crea-
tures, because it is that which besides the property of its own particular kind, doth as
yet keep as many diversities in it self, as there are of Objects receiving. Especially be-
cause dungs are not the voluntary putrifyings, or artificial putrifications of things; but
the limited, and specifical ones: whose efficacy, seeing it doth not proceed onely from
the thing it self, it hath need of an external author alwaies operating in the same agreeing
resemblance, also in the same manner and character; most especially, because the impres-
sion

49 fion follows both the healthy disposition of its ferment, as also the sick one. Which thing doth from thence more clearly appear. Because belching, or a flatus originally in the stomach, even as also the flatus of the Ileon, do extinguish the flame of a candle. But a dungy flatus which is formed in the utmost bowels, and breaks forth thorow the fundament, being sent thorow the flame of a candle, is enflamed in flying thorow it, and expresth a flame of divers colours, like a Rain-bow. But that which is formed in the Ileon or slender bowel, is never inflameable, is often without smell, unless it bring down the mixture of another with it, it oft-times strikes through, being tart, sharp, and brackish in the Fundament. Therefore flatus's or windinesses, do differ in us, in their matter, form, place, ferment, properties, and so in their whole species. Neither have flatus's less, their own generical and specifical varieties, than the Bodies from whence they proceed. For flatus's are in no wise Air. Yea flatus's are not only distinguished by the matter whereof they are, but also by the ferment and seed of flatus's. Hitherto have those things regard, which I have taught concerning the birth of a Gas, or wild Spirit, which surely, should else remain in its antient concrete Body, unless, a ferment of the place being adjoyned, and a seed of sharpness drawn, it be made or composed into a flatus or Gas.

50 I will repeat in this place, the general kinds of diversities of flatus's bred in us, which are speciflicated by their ferments and the properties of things from whence they arise. Behold their Scheme or Figure. For there are two irregular flatus's in us, whereof, one is ordinary, natural and necessary in the Ileon. The other is plainly pestiferous and degenerate, the which, a poyson being taken, or bred within, doth for the most part lift up the whole habit of the Body into a tumour. And then, there are four flatus's in the stomach and bowels. One of the stomach, which is belching. And this is either specifical, from undigested, hard and stubborn meat. Another is unsavory, of the cream being almost digested, but bred from a weakness of digestion: but a third is sower, from the cream digested; but yet hindered. A fourth belching is brackish, being produced from the ferment of the place being exasperated. The second flatus, is that of the and it hath some diversities in it. The first whereof containeth farting, arising from Ileon, the abundance of the afore said natural flatus. The other is bitter, which breaks forth from strange and ill digested dregs; And it hath somewhat of an over-hasty dungy ferment. Also the flatus of the gut Colon succeedeth, from meats not plainly freed from their stomatical sharpness, but being corrupted by a prevention, a dungy ferment fore-timely coming unto them. There is also a dungy, mortified flatus, from a resolving and putrefaction of the lively and vital nourishment of the solide parts. Lastly, without the channels of a bowel, is the flatus, Tympany, arising from a diseafifying cause between the Bought of the intestine, and the concave of the Peritoneum or skin which covereth the bowels. Which diseafifying cause hath the property of a local matter, but a more mild one. But the flatus which is hence begotten, is not from a diseafifying matter, but it is the product thereof, indeed it is from the same matter, whereof the natural and ordinary flatus of the Ileon is: That is, from the very immediate nourishment of the bowel. But it is mortal, as well from a poysonous cause, or from a radical Disease, as in respect of the place: which produced Disease may be increased without a limit, and at length may choak the sick; like the Dropsie Ascites.

52 The Scheme being now finished, thou shalt see that the matter whereof flatus's are, is that concrete Body, about which a ferment doth operate. And then, that he who strives to drive away flatus's by propulsion, or dispersing, and so to overcome the Disease, doth not take away the cause: but goes unto the last effect. Which thing, that it may be the more clearly made known to thy view, I will suppose three Brethren to be nourished with the same drink and meat: one whereof, can send forth almost no flatus: But another, and the weaker, can bring forth many un-savory, and now and then sower belchings. But the third undergoing a disproportionable temper of his bowels, can make many crackings.

53 From whence, first of all, it becomes plain to be seen, that flatus's are not made of flatulent or windy meats, the use whereof is therefore so greatly forbidden in the Dietary of the Schools. But even as fulness doth for the most part cause many windy blasts, the which sobriety excuseth: therefore it follows, that the fardle is for a burden: but that a burden presupposeth, a labour, or weakness of the digestive faculty. So sharpish Apples, if they are roasted, do puff out very much windiness, the which if they are eaten by a strong stomach, are void of windiness. Whence it is sufficiently manifest, that a flatus is the vice of us, but not of things. The which, that nothing hinders, that some things

54 are more apt for the producing of flatus's, and that from hence they are called windy. Because those things which are most flatulent, do not beget flatus's, but in defective persons.

sons. For if windinesses were by themselves and materially in meats, flatus's should equally bewray themselves in all, and he that should send forth the less of flatus's, the same being retained, he should be the weaker. Both whereof is false. Therefore the

In the next place, if it should be moved principally from the matter, and there be a fatty flatus in us: but that could in no wise be troubled or moved by our luke-warmth, which is first obliged to vaporal moistures, before that it can be sufficient for dry and oylie exhalations. Therefore even from hence it is also manifest, that flatus's are made by

Again, that also of *Galen* is absurd, that some things are windy in the first digestion, but that other things utter their flatus in the second, which he calls sanguification; and so also, hence, he names them things venereous or causing natural lust. But the third things he calls windy in the last digestion, even as he saith concerning the keepers of Fig-trees; *That their fleshes are blown up, and swollen with windiness, from the eating of abundance of Figs.* For every flatus, which was after any manner materially in meats, at least while the food is boyled, and afterwards formally resolved into a cream, seeing the cream, liquor, or water, could never take away the flatus's within, or beneath it self, it should of necessity, presently exhale by belching. But that a flatus out of the cream of meats, doth remain in the blood, or after sanguification is finished; if that be rightly sifted, it contradicted the position of the Schools, whereby they suppose, that a natural or livery spirit is bred in the blood, not indeed an external one, stirred up and retained from things: but being made anew, by an ordinary power of the Liver. For that flatus in the venal blood, should be a foreign windiness (to wit, of the Parsnip, Pease, &c.) rebellious and stubborn against the formal transchanging of the food into blood. Or if it be by the strength of the Liver, supposed to be transchanged into natural spirit, which they suppose to be the spirit of the venal blood; first of all it shall be the spirit of the Liver acting; not of the matter of the venal blood. Seeing the flatus also, which else, every where is not produced but by the error of the digestive faculty, in this place, shall be privileged, and be made by the force or vigour of the digestive faculty. And so it shall belong to the strong Liver, to be able to stir up very much windiness out of the cream. Surely, I think it a sign of notorious weakness, not to be able to reduce the transchangeable lump into a single and equable substance: but that a strange and heterogeneous windiness should be left by the Liver to be overcome.

The Schools therefore contend, that the strength of Venus or carnal lust, doth begit self for a foreign flatus. Shall therefore a windiness arising from strange nourishments, be fit for a species, and specifical propagation? or from an imaginative spirit of the Liver, bred in the blood, being as yet unripe, shall it by the assuming of an external flatus, be fit for natural spirit, or in the Seed, for humane generation? I will not believe that the Schools were so mad, as if the first mover of the seed and stones, can be the supposed Air of the venal blood. And much less the more crude flatus of nourishments. Lastly, neither do the Schools satisfy themselves herein. For if a flatus of meats had remained in the cream, and should afterwards as yet, be surviving in the making of the blood, (for we must not think that a flatus can continue materially in act, for the aforesaid reasons) therefore at least wise, they will, that an aptness or disposition of the matter unto flatulency, should remain. But this very thing they seriously withstand, being unwilling that the same accident should be in the thing bred or begotten, which was before in the thing corrupted. But all these devices of the Schools do sleep, eftssoon after, that it was plainly shewn, that there is no spirit of the Liver in the venal blood, and much less the retained flatus's of Pease, Parsnip, Eringo, or the Seed of Ash. For I have sufficiently shewn, that the Gas which wanders to and fro in the vital blood, is not a windy one; nor that it doth relate unto the flatus's or smell of meats: but that it is a lightsom, but that it is a formal Being, the seat of the Soul. But that the matter, bowel, property, interchangeable courses, & defects of Venus hath not yet been made known to the Schools, I will teach in its place concerning the Spleen.

Here it sufficeth to have separated the matter or power of Venus from flatus's. A weak digestion therefore, brings forth many windinesses, which a stronger digestion doth not find, even by examining every thing more curiously, and transchanging them more strongly. For a wandering ferment, draws out of a thing that which is not in it materially; but only potentially: That is, a flatus ariseth from an error of the ferment, being estranged in digesting. For truly, flatus's are not drawn out of the matter, as though con- creted and co-agulated ones had fore-existed in it: nor from the digestion it self, as a

cause by it self, even as heat doth ordinarily allure vapours out of water : but as, there ariseth a certain diminished disposition under the digestion of the ferment, from whence the digestive spirit sucketh a Flatus, as it were a guest inconvenient for it ; and as though the Archeus would correct the Error of the ferment : wherefore a begun indisposition of the matter, was born to change into a wild Gas : the which apprehend thou by an Example.

62 For, *Sal Armoniac*, and *Aqua Fortis*, are those things which may be distilled, and suffer heat by themselves apart : but if they are joyned and become lukewarme, they cannot but be presently transchanged into a wild Gas, or an unrestrainable Flatus. So that if the Vessel be most exactly shut, and although most strong and large, yet it bursts asunder, even in the cold. Salt-peter likewise, melteth with a bright burning fire, is cold, and a remedy of Squinancies : yet a coal being adjoyned unto it, both are presently consumed, and do flie away into a flame Gas. For neither are an Ass and a Horse turned into a Mule ; But the Seminal beginnings of both, from their conjunction, do produce the mule. For so very many things which were not before, materially within, are made anew by adjuncts, ferments, digestions, errors, and interchangeable courses. And those things which under their first ferments, were not materially flatulent ; yet because they were not fully digested, and thereupon far removed, they as excrements, when as they undergo another following ferment, do pass over into inordinate Flatus's.

63 So also a Flatus doth not fore-exist in the meats, and much less in the Cream : But there is a certain new and monstrous generation, from the thorow mixed seeds of things, or from the matter unduely transchanged, being placed under the action of another ferment, which thing concerning digestions, shall be more clearly manifest. For so a weaker stomach doth cause the food to putrifie before, or in the chyle, and brings forth frequent belchings, also burntish ones, even as in Feavers, where out of an empty stomach, a frequent belching leaps forth, unaccustomed to healthy persons. For so putrifying doth in distilling, bring forth the colour of Roses, together with the sweet smell and water thereof, which otherwise is not lifted up by the same heat. Likewise there is in the Bowels their own estranging of ferments, and of that which is putrified, its own estranging, and degrees under which Flatus's are generated, and do break forth.

64 For as long as a Grape is on every side enclosed in its skin, it is sooner dried, putrifies by continuance, or is changed into a raisin ; than that it sends forth a flatus ; but if the skin of the grape be never so little hurt, presently after the wound, the ferment (the foregoer of any kind of putrification) decayeth ; from whence, neither doth a wild Gas afterwards cease to belch forth, as long as the heat of the boyling ferment shall endure ; or as long as, from the juyce of the grape, the wine is not perfected.

65 For as meal differs from the leavened paste or dough, and the mealie lump from bread, so doth wine from the juyce of grapes. And as meal if it be boiled, doth not bring forth windinesses, but being leavened, doth of its own accord belch forth windy blasts : so meats do not in their own nature contain the flatus, which the ferments do draw out. A wonder surely it is, that the Schooles have perceived nothing, have written nothing of these things hitherto ; but that they have delivered all things by hand, to the command of heat. Moreover, concerning the Gas of new wine, and properties of a wild spirit, enough elsewhere. Neither let those things be unseasonable or unfit, which I have elsewhere written concerning ferments, concerning digestions, touching transgressions under anothers harvest, and the disease transplantations sprung from thence, to have brought them over unto this limit, concerning flatus's.

66 A most weak stomach therefore, affords un-savoury belchings, but a less weak one, soure ones : a vitious stomach, burntish, bitter, and sharp ones. But a stronger stomach doth indeed rightly concoct meats that are full of juyce, not likewise the Onion, Garlick, Radishes, &c. Belchings therefore do witness some weakness, and therefore do express the favours of meats. But under the fardle of much meat that is full of juyce, brackish, also burntish belchings do bewray themselves, especially if the meats are mortified. But brackishness being stirred up by an exasperated ferment, doth bring forth a various appetite to meat. Furthermore also, that flatus's are not bred of windy things ; mark an example.

67 Distilled Vinegar, while it dissolveth Crabs stones, Crysulcha, Silver, a wild spirit is belched forth. A harsh apple in roasting, stirs up very many flatus's : not so if it do longer sweeten on the tree by ripening. If therefore in the same apple, a flatus had materially been, it must needs be, that the greatest part of the apple which was flatulent, and a meer windiness, was through ripening, converted into the sweet and homogeneous substance of the apple, that is into a non-windiness. That a mixt Body, (as they say) is made of almost a simple element. Wherefore the whole apple, whether it be ripe

or unripe, consisteth of the same matter; and indeed not of a windy one. A sharp apple being roasted in a glass Hermetically shut, constraines the vessel by reason of its windy blast, to burst asunder. But a like apple, being closed up in the like glasse, with as much water, as that it may boyle, sends forth no Gas, but onely a watery exhalation. *Aqua fortis*, being distilled by its self, doth wholly pass into the vessel receiving, without a wild Gas. But if a dissolvable mettall be added unto it, it brings forth a Gas, so as that if the glass be well stoppt with mortar, although most strong, it breaks in pieces: when as in the mean time, none of the aforesaid mettall departs into a Gas.

The Tartar of Wine, cannot be distilled so much as with the hundredth distillation of its own oyle, unlesse a chink or chap be left in the joynts. Otherwise a wild Gas, how big soever the vessel be, doth suddainly break in pieces. But if therefore Tartar should materially contain a flatus, it had uttered the same in its first combustion, at least in another distillation, the which notwithstanding, is made a new afterwards, in every of its distillations, also of its oyle or sulphur onely. Because a hidden sharpness of the Wine, and also a volatile Alkali is herein, whence of the coupling of them both, a wild Gas is made.

For the food not being sufficiently subdued in the stomach, putrifies, and causeth a Gas. For it putrifieth through the corruption of the place, which is of the dung of the stomach: or by an action besides nature. For the least atomes of the meats being well chewed, are well turned into chyle: but the greater atomes in a more weak stomach, although in their circumference, and outward appearance, they are by digestion resolved into chyle; yet in their center, seeing they indeed perceive sufficient heat, yet do not equally enjoy a ferment, they remain undigested, are corrupted, of a yellowish colour, and for the most part do the business for the bowels: or if they do retain the ancient sliminess of the food, together with a little sharpness, they are changed into wormes (which are alwayes messengers of weakness) but the ferment of the stomach finding some things resisting it, and therefore half-cooked, and half-putrified, presently enflameth, doubleth, and heighteneth its tartness, whence there is a gnawing, belching, from a brackishness, the companion of appetite; which lump falling down into the intestine, stirs up rotten and stinking flatus's from a fat putrefaction. By way of handy-craft operation.

Take of Sulphur one part, let it boyl with a double quantity of oyle of Line: presently the Sulphur putrifies, and the substance of Birds lungs appears, breathing forth the smell of humane dung, even as also in distilling, the like Gas belcheth forth. The lump therefore being badly digested in the stomach, descending through the intestine, stirreth up sharp flatus's, if the tartness shall be heightened, whence there are wringings of the guts. But if any snivelly thing thereof shall adhere to a bowel, the more stubborn gripes or wringings are made, and now and then an accompanying Flux. And by so much the more cruel, by how much the sharpness shall be the more brackish. For from a brackish flatus, there is a small and fluid Colick: but from meats it is far more stubborn, and changeth its places and wandereth. But if from a brackish, adhering, and affixed muckiness, it most cruelly afflicts and puls together. Flatus's or windinesses therefore do proceed not from the matter properly: but from an operation of the ferment attempting a new generation besides nature, and from the error of the provoked Archeus. These things of natural and disease flatus's. But poysons being drunk, why they produce the habit of the body swollen with a flatus: Know thou, that that comes to pass a little before and after death: For neither doth a dead carcase swell, by reason of an attainment of a new matter, but because the life is chiefly in the bowels, therefore the habite of the body is first defiled by the poyson. But the corrupting of the flesh is alwayes in a sour or sharp savour (for leavened things are by a famous mystery read to have been forbidden to the *Jewes*) therefore a sudden and cruel corruption dashing it self into flesh, doth also beget in them a windy blast and swelling. So a dead carcass that is drowned, doth presently sink to the bottome, so long as until the flesh waxeth sharp under putrifying, then indeed it springs up, and is swollen with windiness, and the life of the muscles, which is as yet left after death, doth work the flatus. For it is wont to be said, *That a dead Carcass will issue to the top of the Water, when the chest of the Gaul is broken.* For neither doth this want its own vigor of truth. Not indeed, that it is literally true, that the bladder of the Gaul being broken, and that its bursting forth had brought a lightness to the dead carcase: but the Gaul is the balsome restraining corruptions, which are to arise in living creatures from a sharpness: wherefore while corruption is present, a defect of the Gaul is conjectured. A new Alder settles to the bottom: but when the juyce contained in it is corrupted, the tree springs up from the bottom.

Furthermore, I have said, that the lesser hot Seeds were from divine compassion, made

known to mortals, and by the good common People, the use of the same brought into the Schools, not knowing the cause, and circumstance of Flatus's. Those seeds therefore do restrain the corruption and also the sharpness of matter, and therefore they are refreshments of the Bowels. But that ease or comfort learn thou by this Example.

There was a burst man that was negligent, whose Intestine fell out into his Cod; it presently riseth unto the bigness of ones head, is hardned, and at length waxeth black and blew, or envious. For they in vain attempt with a various warmth of milk, and a lukewarm fomentation of Cows-dung, and it seemeth to be sixfold less through the hole, than is the swelling of the Cod, which is to lay aside the hope of its return, by reason of hardness. And then through the drink of the seeds, to wit, of annise, caraway, fennel, coriander, &c. in wine, the hardness of the bunch doth presently vanish, and it suffers it self to be repulsed inwards. The which, a clyster, and outward fomentation afforded not, therefore that defect doth by it self, silently speak; That the bowels being exorbitant about the stones, do presently put on an hardness, and stirre up flatus's. All which things by a comfort to the Archeus of the bowels, do presently disperse; which else would cause a swift and painful death. But I will adde something concerning the natural flatus of the Ileon, which is not known by the Schools. A noble woman is taken with a little pain of her belly, she walks about the chamber, had dined, the pain streight way ascends as to her right pap, invades her shoulder, and a little after kills her. Her dead carcass being dissected, nothing is viewed by the eyes, which could be blamed, to have brought death on her. But they fitly see the Ileon stretched out with a little flatus. Wind, wind, I say, the Doctors accuse to be the Executioner. The judgement being brought unto me; I judged, that the pain of the belly was from the womb; therefore that it ascended unto the dugs, with whom the womb doth ordinarily talk; and so to have strangled the woman. But the wind in the Ileon, I said, was not onely guiltless, but that in every dead carcass (even in him that is slain by a sudden death) the Ileon is alwayes naturally stretched out with a little wind, because that is natural, unseparable, and proper. For without wind, the bowels should fall down, the excrements should the more difficultly pass thorow. For unless they were driven and liquid, from behind, they should easily return backwards, and as it were without progress, should there contract too much delay. If therefore some wind be a native inhabitant in the Ileon or slender Gut, there is no place for complaint of a flatus in gripes or wringings of the guts, and much less for things carminative, expelling, and dispersing of winds. Let wringings therefore be of a brackish musilage, more or less sharp, at the resolving whereof (if they shall stick fast) or expulsion (if they shall floate) a restoring of health is expected. But if in the mean time a sharp flatus be bred, or the Ileon do ill with windes more than is meet, that doth easily find a way for it self. A dismissing of windie blasts doth indeed, lighten from pressing together or stretching out: but a flatus doth not cause wringings or torments of any great moment, but that they do soon produce a way for themselves. But if indeed, a flatus be prevented from utterance by a more hard excrement from beneath: now it is called a volvulus, or rowling pain, and hath departed from the word, of wringings or gripes. Therefore it is now sufficiently manifest, that flatus's, or windy blasts in the body, are not made by aire, but materially from things cast into the body, things ordinary, or from poysons corrupting the similar liquor of nourishment. And then, that they cannot be made elsewhere than in the first Kitchen of the digestions: and they are belchings; in the second also, which is finished in the gut Ileon; but by no wise in the following families of digestions, unto whom every sharp and brackish thing is a forreigner; Except in a poyson being taken. Wherefore there is no occasion, force or power in flatus's, for a disease of these regions. But so far as doth belong to a windy blast or exhalation, or vapor, lifted up from the stomach, from the womb, or any other place; that I will shew in its own place to be frivolous. Let these things therefore suffice concerning flatus's.

C H A P. LVII.

The Toyes or Dotages of a Catarrhe or Rheume.

1. *Who is the Heir of Diseases, and Nature.* 2. *Some suppositions in the room of premises.* 3. *A conclusion.* 4. *It is proved from experiences.* 5. *An explication of the thing granted.* 6. *The Lungs are the first thing dying.* 7. *Why the Author hath departed from the Schooles.* 8. *Things premised of the miseries of old Age.* 9. *Why loosening Medicines do hurt in these cases.* 10. *The miserable Testimonies of Physitians, of their own ignorance. Because the Phrygians are wise too late.* 11. *A shameful Maxim, which is drawn from things helpful and hurtful.* 12. *The Errors of Physitians.* 13. *The Unconstancy of Paracelsus, whence it was.* 14. *The manner of making a Catarrhe, is like unto an old Wives Fable.* 15. *The Diseases attributed to Catarrhes.* 16. *How great destruction of mortals ariseth from thence.* 17. *After what sort they make the sick perpetual bondslaves unto them.* 18. *An ordinary privy shift of the Schooles.* 19. *Thirteen Positions.* 20. *Nineteen Conclusions proceeding from those Positions.* 21. *By a sufficient numbring up of parts.* 22. *A Dilemma or convincing Argument.* 23. *Some Absurdities.* 24. *Catarrhs or Rheumes do arise in the Schooles onely from their mother Ignorance.* 25. *Ignorance is the same Fountain of Absurdities in Curing.* 26. *Shame makes the Schooles unstable.* 27. *A denial of Principles granted in the Schooles.* 28. *Whence heat happens to the Liver.* 29. *A proof from Remedies of none effect.* 30. *The Tooth-ach is again examined.* 31. *The digestion of the Tooth and Nail, differs from the digestion of all the parts.* 32. *A Rheum unto the inward parts is shewn to be impossible.* 33. *A Pose is decyphered.* 34. *Absurdities following upon a Rheume of the Stomack.* 35. *A Rheume is fanned into the Lungs.* 36. *What may drop down at the beginning of a Pose, and what afterwards.* 37. *An Argument from an impossibility, against the Cause of the Cough of the Schooles.* 38. *The original of matter in affects of the Lungs is demonstrated.* 39. *The vanity of Remedies from Ignorance.* 40. *That the drinks of China, Sarsaparilla, &c. do not dry up Excrements, as neither hinder the generations of the same.* 41. *Some Absurdities caused from hence.* 42. *What we must diligently heed in affects of the Lungs.* 43. *The Doctrine concerning the motion of the Lungs, is false.* 44. *The use of the Lungs is not known in the Schooles.* 45. *One and Twenty peremptory Reasons against the motion of the Lungs.* 46. *The Error of the Schooles concerning the use of the Diaphragma or Midriffe, established by eight Reasons.* 47. *Seven conclusions issuing from thence.* 48. *Why the Remedies of Physitians are of no worth.* 49. *That preventions for the restraining of Catarrhes, are old Wives Fictions.* 50. *Galen in his Books of the Preserving of Health is wholly ridiculous.* 51. *The Ignorance of the Schooles is to be pitied and bewailed.* 52. *The dissecting of a live Dog hath deceived the Schooles.* 53. *A new Error about Ecligmaes.* 54. *They suppose a falsehood.* 55. *Some proofs.* 56. *Whence the Error of Catarrhes or Rheumes was brought in.* 57. *A refuting of a mad perswasion.* 58. *What it may be, which is felt to cause the mask of a defluxing Rheum.* 59. *What the future and succeeding matter may be.* 60. *The ignorance of the humour latex, hath confirmed Catarrhes.* 61. *A prevention.* 62. *The torture of the night.* 63. *The Unconstancy of Paracelsus.* 64. *Liquid things, which are not yet vital in us, do not talk with the Stars.* 65. *The Marrow is not among Liquors.*

IT is now a seasonable time to shew, that the great heap of Diseases which hath been dedicated to a Catarrhe or Rheume flowing down from the Head, even into the very top of the Toes, without let or hinderance, is an old Wives Fiction, not invented but by the enemy, the troubler of mankind; to wit, lest the causes of Diseases being known, the Remedies of the same, should also be made known. However it be, at least wise, from thence it is manifest, that the Schools are even unto this day misled by the errors of the Heathen, in the generating, supposing, defluxion, manner, way or passage, matter, means, places, instruments of a Rheume; and likewise in its revulsion or pulling back, and Remedies: indeed it is false and absurd, whatsoever thou shalt build upon one absurdity or impossibility. Whence likewise, the vain hope which is placed in Cauteries or searing Remedies, falls to the ground, even as I shall demonstrate in its own place. *Natures themselves are the Physicianes of Diseases*: but the Physitian is their Minister of Servant, according to *Hippocrates*. But that is concerning Diseases, which nature cures of her own free accord. But when she hath failed, so that she cannot renew her strength, a Physitian chosen by the bounty of the Lord, and with whom all Diseases are almost of the same esteem (for such a one is he, who hath obtained some universal Medicine, among many of the like sort) he remains no longer a Minister or Servant; but a prevailing Interpreter, Ruler and Master. Let the Name of my Lord Jesus be exalted for ever, who doth alwayes bestow his bounty on his little Ones, who are base or dejected in their own humility. For nature being the chief receiver of the diseasifying impressions of the sick, and the sensitive Soul a mover on the opposite part: likewise where entertained Diseases do prevail, man dies, or at least wise, liveth for the future, more miserably than death it self, unless he be restored by the Physitian, into his former state. Yet it doth not happen to every Physitian to go to *Corinth*, unless to him that is called, elected, exercised and commissioned, or entrusted. For the universal perfections of healing, which contain in them, the tune or harmony of nature, had not yet been made known to the age of *Hippocrates* (for they are as yet scanty, and derided by the common sort of Physitians unto this day) therefore *Hippocrates* deserves pardon, if he thought that the whole businesse of a Disease was to be finished by nature, as a Mistress.

Moreover, I have said elsewhere, that even forthwith from the beginning of the Young, an implanted Spirit, doth sit president over every member as an assisting Ruler: but that the other, being an inflowing spirit, doth issue from the heart, being the awakener and comforter of the implanted one, the which notwithstanding is neither limited nor individually disposed, unless it be first subdued by the implanted spirit.

I have also taught elsewhere, that every member doth grow or flourish, according to the virtue of the implanted ferment, and so that neither is a transmutation to be hoped for, for a new generation, unless by a ferment mediating. Consequently it is from thence understood, that all growth is made by the spirits, and so, that a weakened digestion of the members, doth depend on the diminishing of the spirits, and of the ferment of these, according to that saying, *My spirit* (the sheath of the ferment) *shall be diminished* (therefore) *also, my dayes shall be shortened*. So as that, a member, which in health doth produce even no visible excrement, doth make much thereof, and that without ceasing, if it shall be wounded, hurt, diminished, or hindered in the vigour of its ferment. In the next place, it also from hence follows, that through a hurt, and the variety of things hurting, a disagreement and undue proportion of excrements is bred. Not therefore, from one Fountain, to wit, the Head of man (whence indeed, the Schools do devise all Catarrhs or Rheums to rain down) but from an own proper affection or suffering, or from the proper indisposition of every part, brought upon it by local ferments, do Diseases arise. For so wounds which are cured, do suffer a relapse, do oft-times bring forth Ulcers and Imposthumes. And the axle of the winds being turned, they wax fresh, and grieve again, a long course of years after. So indeed, Coughs, Pleurifies, spittings of blood, and Erisipelasses, do return. For a mountain cold exceeding a mean, or any other sudden cold suddenly invading, the night Air, a fenny Air, or Gas of Mines belched out, do oftentimes by one only on-set, tread the ferments of the Brain and Lungs under foot, that for the whole life-time after, they are made shops for divers excrements. Truly after this manner, excrements (not indeed snivelly ones from the Brain) are made in the Eyes, Ears, Teeth, Jaws, by an error of their own. So Coughs and Asthmaes do at first begin, and persevere by a continued ferment. Not indeed through snivel flowing down from the Head, but generated within the Lungs by the violated ferment of the place. For the Lungs are most easily affected or disturbed by an external thing rushing on them, be-

before the other members: because it is the first of the members which waxeth old and dieth. As is manifest by the Cough of old folks, and the snortings of dying persons, although afflicted with another vice than that of the Lungs. For that is proper to the Lungs, because it alwayes drinks crude or fresh Air, and being neighbour to the oppressed heart, doth readily restore its strength, and for that cause its own strength the sooner faileth. For truly, I first of all dissent from the Schools, because I know this kind of vice to be of the parts containing, but not of the liquors contained. For those contents are the certain products of a root, which are begotten by the Archeus of the parts being badly seasoned. And then, I also differ in this, that I know it to be a local evil, but not bestowed or dispensed by a secondary affection of the Head. For the Coughs of old age are made under a difficult hope of restoring, because a very small quantity of the excrement bred in the Lungs, doth reside in the utmost small branches of the Airy pipe, which doth not only stop up the reeds: but also, through its presence, disturbeth the ferment of the place, and lessens it; whence new excrements, the wealthy household-stuff of Coughs, are stirred up every hour. Which in old age, are scarce cured, by means commonly known. Because they are those which do not pierce unto the places affected; yea, neither have they obtained a strength of restoring. Such excrements therefore, are the local defects of the parts. And every part hath its own weakness, whether it be in-bred or attained with a diminishment of the growing or flourishing ferment. And so also from hence, all those excrements of parts do proceed. I understand therefore in the first place, that the repetitions of purges are vain and hurtful in these affects: because they are those things which are appointed only about the products, but not about the causes. Then also, and chiefly, because such excrements do not give place by loosening Medicines. However it is, they do no way reach to the primitive blemish and hurtful root in us: but only do meditate of latter effects: but the former causes or roots, they are not able to touch. Adde thou, that although loosening Medicines do seem sometimes to have succoured for two dayes space, as the lump of the venal blood of the Mesentery being taken away, a more sparing dispensation, and nourishment is brought unto the Lungs, and hence, there is a more sparing spitting forth by reaching. Yet notwithstanding, laxative Medicines do oppose the general strength of the whole Body, by weakening it more and more. Which thing, while Physitians do even see as it were throw a sieve, neither know they to have profited the sick party, by a diminishing of the Body, and exhausted strength, they at length, dismiss the weak, to be handled by the rules of Diet, and the only aids of a sober Kitchen: only by the aid of a Cautey, and repeated assistance of the more gentle laxatives, they proceed medicinally, that is, to live miserably. By which supposition in the first place, they at least insinuate, that the Kitchen is to be preferred before any unfaithful or distrustful Medicines of the shops, and experience being made, they decree, that these must be abstained from as hurtful. And I wish, that after so many wipings away of the strength, that might suffice; neither that they would again any more afterwards, by the same succours, attempt to exhaust the hope, Body, veins, strength, and purses of the sick! I would to God also, they were mindful of their own Maxim, wherein, their chief curative indication or betokening sign, is to be taken from things profitable and hurtful. Which rule, although it be shameful, and only that of Empericks: I would that at least, by the same, they would now skip back from their committed errors. Neither that in the Cough and Consumption, they would return unto Remedies, which hitherto they have found to have profited none. For loosening Medicines, cuttings of a vein, purgers by the nostrils, drawers of phlegme by the mouth, Ecligmaes or Lohochs, the decoction of China, Sarsaparilla, Sassafras, a Cautey in the Coronal suture or seam of the scull, and other unfaithful aids of that sort, would fall asleep, being applied by the Physitian, that they may after some sort, seem, not to have received their money from a free gift. At least wise, I would that they had learned by their practice, that while they meditate of the removings, revulsions, derivations, and preventions of latter effects, that is, excrements, they do openly shew, that the knowledge of the causes have lain hid unto them, neither that they have methodically cured their sick by a taking away of the causes. They had also found the respect of food, to be a dainty or costly, languishing, weak, and desperate kind of Remedy for so great an enemy, now an in-mate, yea and a Patron.

No wonder therefore, that the common People, heeding the vanity of these Cures, have took an occasion to say: that it is the best Medicine, not to use Medicine. For I have oftentimes bewailed with great compassion, in reading thorowly of the centuries of medicinal counsels, and especially while they afresh prosecute all the Diseases of Almanzor, from the crown of the Head unto the soal of the foot, because they narrowly searching

searching into the catarrhical or principal cause, from the beginning, (as they think and boast) they do every where accuse some natural, or attained singular distemper, yet under the uncertainty of a doubt, whether they should appoint the same as the disease, or indeed as the antecedent cause of the disease, whereof they consulted. But least they should erre, even in any diseases, they have accused heat and also cold. To wit, they complain almost in all cases, of a coldness of the stomach, alone, or combined with the heat of the liver, whence they many wayes divine, Rheumes to arise, and to have slidden down into divers parts, and they prosecute as the diseases of the same, not onely almost all internal ones, but also even unto the defects of the skin. Thus indeed do the Schooles season their young beginners, theorically and practically. For so Rheumes are guilty of the defects of the eyes, ears, jawes, tongue, teeth, breast, armes, loines and legs. So coughs, consumptions, astmaes, plurisies, peripneumonies, apoplexies, palsies, suddain deaths corrupt mattery imposthumes, spittings of blood, have found their already supposed cause in Rheums. So in the next place, the Stomack casts up its vomit, loatheth, labours with an unconcoction, the liver also, and the spleen are ill at ease. For an undigestible snivel having slidden down out of the head; obstructions, hardnesse, dropies, aposthems, scirrhus's, fevers, wringings of the bowels have taken up their room among Catarrhes, their Clients.

13 Unto which Catarrhes, *Paracelsus* (although elsewhere triumphing in Tartars, and his Three first Things, through an invention) hath notwithstanding, for the most part subscribed, and hath alwayes manifestly acknowledged the name of the defluxion (*flussen*) by nodding under his Mistris, *Uncertainty*.

14 For the Schooles do so seriously adorn this deplorable fable of Catarrhes, and deliver it from hand to hand, unto each other, that it may supply the room of Truth: yea Idiots being made passive Physitians, do declaim with me concerning their Catarrhes, even unto a long tediousnesse or wearinesse. Wherein indeed, seeing it is hard and nauseous for me to learn all that are unaccustomed, to pluck them out of their supposed doctrine, and to bring in a true light of the Theorie: Especially, seeing the multitude are of that minde, that like new hogheads, they do scarce lay aside their odour at first drawing. Therefore I am wont to be silent for the most part, among the great ones; I plead not for a disease, not for its causes, not for its particular kindes, nor for its medicines; I being silent, as to that easie Theorie of the Schooles, do seem ignorant of all things, agreeing to depart from all. Yet elsewhere I shew that I have been otherwise instructed: but that Idiots are not capable of Medicine, seeing neither am I their School-master. I likewise admire daily, that none hath hitherto taken notice of the so great ignorance of Physitians: but that the Christian world hath drawn after it these dreames of the *Greeks*, for a ridiculous lying worship or service, and destructive to humane society. Indeed they determine, that the original fountain of Catarrhes, is in a cold distemper of the stomach, and a hot distemper of the liver, and that the great part of infirm mortals, are subject to this tyranny: Forasmuch as the manner of making it is, that the stomach being incessantly in the time of concoction, made hot by the liver, cannot but alwaies send vapours to the head; but that the brain is in its own nature cold, and like a cover to a boyling pot, or in stead of the hollow head of an Alembick, whereinto vapours do ascend, and are constrained into water. The which, seeing it ought naturally to flow down, it suggests an ample and general matter for Catarrhes or Rheumes.

15 The which if it fall down into the eyes, ears, jawes, teeth, &c. The parts do deservedly grieve, that they have a neighbour brain, and a superiour tyrant: But if it rain down into the lungs, they are transchanged into a cough, shortwinded affects; next into a consumption of the lungs, beating of the heart, and so also into suddain death. But if indeed, these Rheumes do rain down into the stomach; now he paies the punishment of their fault by unconcoction, crudities, vomitings, inordinate appetites, stomach paines, faintings, obstructions, fluxes, caliac passions, cholers, colicks, consumptions for lack of nourishments, dropies, scirrhus's, and all defects of the belly; yea fevers, putrifyings in the veins, also affects of the spleen, stones of the reins and bladder, do draw their beginnings from the muckiness of a Catarrh. But if Catarrhs do derive themselves into the bosome of the Cerebellum or lesser brain; now suddain death, the apoplexie, and palsies are at hand. But if by the chance of Fortune, Rheums do divert themselves thorow the nucha, or marrow of the back-bone, into the sinews, arteries, muscles: divers joynt-sicknesse, plurisies, palsies, and convulsions of the parts do presently happen. And likewise, they will have Rheums to beget Chyrurgical defects of paines, aposthems, and the divers off-spring of ulcers. But if they do not fall down, and the brain doth ease it self of its burden, by poses and coughs; the drowie evil, the Coma or sleeping evil, the Catochus or stiffe-taking disease, the lethargie, giddiness of the head, apoplexie, losse of memory

memory and the senses, are present. For truly, besides the aforesaid distempers of heat and cold, and a Catarrhe of necessity bred from thence : the Books, Speeches, Counsels, Conversations, Chairs, and Practises of Physitians do re-found nothing : and so the whole hinge of healing is at this day conversant in purgings, cuttings of a vein, scarrifyings, baths, sweates, cauteries, and in summe, not but in the diminishments of the body and strength, or dryings up of Rheumes. To wit, to which end they have given the roots of China and Sarsaparilla, from the utmost part of the East, to drink, together with the wood Sassafras, to dry up.

But they measure the Dietary and Medicinal part, for the most part, by the rule of heat and cold : and by this meanes they never dismiss the Sick out of their hand ; but detain them for perpetual Clients, as it were gotten bondslaves : yet under a manifest dispaire. To wit, that the cure or healing would be impossible, seeing the Physitians are ignorant of the Causes and Roots, and do see themselves to operate in vain, because the natural cold of the Stomack, contradicts the heat of the Liver : and so that those things which should profit the Stomack should hurt the Liver, and on the contrary. All which things seeing they conspire for the destruction of Mortals, likewise the destruction of the Commonwealth and Families ; It hath been my part utterly to overthrow this execrable Heresie of the Doctrine of Medicine : and I ought to have done it so much the more forcibly, because that plague doth possesse all the mindes of the Europeans, even from the daies of Galen. The rich indeed learn this Doctrine for a proper reward of Learning, and what they have learned, they teach others ; So all Diseases sound as bred of Catarrhes or Rheumes.

I will therefore shew by Positions granted in the Schools ;

1. The Stomack of a man, as long as he is alive, is actually hot, and its membrane or coat is besmeared with some moisture.

2. But it is impossible for any watery moisture, to be actually hot in us, but that also for that very cause, it stirreth up a Vapour from its self.

3. The upper passage out of the Stomack, is the Throat or Oesand, a membrane extended like a Cane or Reed, from the Stomack even unto the Jawes, being like to the membrane of the Stomack.

4. The Oesand, by it self, is actually, wholly moist, and it is shut (seeing else it crookedly falls down by reason of a vacuum or emptiness). actually and alwayes, no otherwise then as a bladder which wanteth its proper Content : the Throat therefore doth touch it self side-waies, through a necessity of Nature, which doth not suffer a vacuum. For the Throat which hath not meats, drink, or air in it, should of necessity be empty, if it should lye open : but that it doth not lie open or contain air, is manifest from that ; because else, every morsel being swallowed, the air which should be beneath the same, and should resist the suited gobbet, should be thrust downwards to the Stomack, and so, there should be as many belchings as there are goblets swallowed. In the next place, seeing the membrane of the Oesand is moist, it should of necessity fall down on it self, unless it were on every side extended by a certain force, the which is neither presented to the view, in dissections, neither should it serve for any end in living creatures.

5. The mouth of the Stomack is shut by a natural, not by a voluntary motion.

6. But there is no other Anatomical knowledge of the Throat, than that it is narrow, shut beneath, being co-pressed by the Pylorus or lower Orifice of the Stomack, and in mans Neck, by very many Vessels.

7. The Throat draws not, as neither doth it contain Aire : For it falls down through the proper motion of a moist membrane, and a penury of the thing contained.

8. The Oesand is not opened throughout its length, unless it shall send nourishments thorow it : The which if they are the dryer, they stick in the passage, neither do they easily descend, unlessse drink be over-added : which could not be done, if it should contain air under the Gobbet or morsel, but that Belching would follow. But the Oesand layeth open about the Wind-pipe, in the beginning of its self.

9. The Oesand or Throat is shut beneath, by a strange, or anothers right, and therefore, neither is it opened, unless by an external guest entring in or breaking forth, or in time of hunger, it is also opened by anothers will.

10. No Aire, and much lesse a Vapour, breaketh forth upwards out of the Stomack, without the sound of Belching.

11. If Heat, which is necessary for the Stomack, causeth a Vapour, yet it doth not thereupon violently thrust forth the same upwards, so that it is able to stretch out and open the locked mouth of the Stomack and Throat: Seeing any contradictory thing being placed, there should be a continual Belching unto every one.

12. In the Stomack, no otherwise than as in the other Vessels, which are of a lukewarmth, every watery Vapour, doth by the least pressing together, sooner grow together again into drops, then that it doth elevate or stretch out the co-pressed Membrane through its length. And therefore neither do they make vapoury Belchings, but Aire, and a wild Spirit or Gas onely.

13. That a Livery Spirit of the venal Blood, being supposed, all the Veines should by their heat, bring forth Catarrhes, either about the parts of the Liver, or in their outmost branches, which are neglected by the Schooles.

The first Conclusion.

20 From these Positions for the most part granted, and clear by Anatomy, It followes,

1. First of all, That no Vapour is carried out of the Stomack into the Head, and that the supposed matter for Catarrhes or Rheumes faileth.

2. If so great blindness hath circumvented the world in things manifest; what is not to be suspected of things more hidden?

3. That the Doctrine of the Schooles standing, a healthy and hot stomach should generate much greater, and more Rheumes, than a sick one, and otherwise, a colder stomach; which is already contrary to the Schooles.

4. That they should rather employ themselves in cooling than in heating the Stomack,

5. That all mortals should of necessity be Rheumatick, and alwayes infirme.

6. Because the same Oesand, Brain and Stomack, being actually hot, all do equally consist of moisture, and of the same figure or shape.

7. That every man, like Swine, should almost at every pace, naturally belch, because an unnecessary heat and moisture should of necessity send upwards, a continual Vapour.

8. That although a Vapour raised up from the Stomack, should stretch out the Oesand, yea should ascend without Belching; yet it should wholly bee alwayes blown away through the mouth and nostrills, before it should proceed unto the Brain through the strait and closed passage of the membrane: Because that Vapour ascending from the meats out of the Stomack, should of necessity also smell (in every man) of the meats, and the transmutations of these, and should be offensive to himself, and the standers by; so that if the Belchings are now and then smelling or of a stinking savour, all the breath of all should also continually stink, through an admixed flatus or blast of the meats.

9. That seeing Belching is a wild Gas and a far more subtile thing than a Vapour, and yet doth not strike the brain, unlesse, the mouth being shut, it be dashed forth through the Nostrills: surely much less shall Vapours be conveyed to the Brain.

10. That Belchings are never carried from the Throat unto the Brain, by a right or strait passage, but only by the instrument of smelling; and therefore that they do not yeeld a smell, unlesse the mouth being shut; and much less shall a Vapour of its own accord be carried out of the Stomack unto the Head.

11. That

11. That, that a vapour the matter of a Catarrhe, might as yet by some means ascend unto the head, or the instrument of smelling: this ought not to be able to be done, but by shutting of the mouth. And so that there would not be a possible matter for a Catarrhe to him that gapes: and therefore this is an easie Remedy for a Catarrhe.

12. That, seeing two bodies cannot naturally pierce each other in the same place, and seeing the passage from the jawes, unto the brain is narrow, filled up (for there is not a Vacuum granted in those Organs) shut above, nor passable (for the breath, although it be pressed together, doth not breath forth upwards to the Head) therefore a vapour cannot reach out of the Stomack unto the bottom of the brain. For example, A Cane, if it be stopped above, although it be held over hot vapours; yet this doth not admit them to ascend, by reason of the presence of Air, where- with it is filled.

13. It being granted, that a vapour could climb upwards; yet it shall not find any plain or hol- low thing upon which it should grow together into drops. And much less such a one, which may re- present the cover of an Alembick or earthen Pot: but in the bottom of the brain, whither the vapour is freely granted to ascend, there is a narrow part, the basin, or bottom of the funnel, which hath two tables toward the nostrils, and as many toward the neck; which two latter little mouths, the ascending vapour should only find. And they are almost continually filled with snivel, are moist, and do drop, as the proper emunctories of the brain appointed for the casting forth of its muck or filth. And therefore a vapour of its own accord ascending, being granted: yet there should not be a place for the growing together of a Catarrhe.

14. A vapour, if any one possibly being made from the stomach, had also ascended even thi- therto; yea and had grown together into drops in so slender a space, and if it should fall down together with the muck or snivel, it should bring less damage than the muck it self, which is the ordinary excrement of the Brain. All which things the Schools have seen by Anatomy, and shall by Science Mathematical (if they do weigh them) know to be inevitable: yet they go on, they have eyes, and see not; have ears, and it is to be feared, that they will not hear.

15. That although belching be the Gas of meats, and it bears their smell before it; yet any kind of vapour of meats whatsoever, doth give an un-savoury and unhurtful waier. For exam- ple, let the snivel or spittle be distilled with a slow luke-warmth, such as is that of the stomach of a living Creature: Certainly, thou shalt draw out nothing but an un-savoury, and no glewy wa- ter: and much less a salt, sharp, and tart Rheume.

16. That although snivel do slide into the jawes, and doth diversly and oft-times badly affect these, according to the divers indispositions of the snivel; notwithstanding, neither that filth, nor the dropping down thereof, can bear the reason of a Rheume; no more than the urine sliding out of the kidney into the bladder, is to be called a Rheume. Wherefore if there be an un-savoury, salt, sharp, or soure, fluide, or gross snivel sliding down into the parts, whereby it is deputed natu- rally to be purged, as it were through an emunctory, it is not to be called a Catarrhe, however badly also it may affect the parts; even as also the urine, if it shall afflict the bladder.

17. By how much less ought the Flux of any feigned humour, or dreamed excrement, bred, and derived after a manner, through means, places, and journeys naturally impossible, to be rec- oned a Catarrhe?

18. If the brain in living Creatures be not actually cold; the reason of condensing of a va- pour ceaseth: but if it be less hot than the other parts: doth therefore a vapour seek the more cold part, by sense or feeling, and choice? because it desires rather to be coagulated, than to re- main as it is?

19. Or are vapours driven by all the more hot parts on every side, unto the brain, as the more cold part? But thus there should be altogether a continued unexcusable tempest in healthy folk.

But yet all these things being disregarded (the which notwithstanding cannot have them- selves naturally by way of necessity) Rheumes should nevertheless flow down. But not in the first place, toward the outward parts, between the scull and the skin. For truly, the

Schools themselves do teach, that vapours, or the foregoing matter of a Rheume doth climb from the stomach, unto the bottom of the brain, and there doth find a certain plain (an imaginary one, nor as yet found by Anatomy) in the hollow whereof, it doth presently grow together, and presently after that concretion, it falls down by drops. Far be it surely from thence, that an enemy which is a stranger, a meer excrement, a forreigner to the brain, and the cause of so great infirmities passing into water in the lowermost plainness of the brain, should from thence pierce thorow the very body of the brain, or that in the form of water, or at length again in shew of a vapour, it shall sport in the aforesaid plain. For not in the likeness of a vapour, as though a vapour reacheth from the stomach unto the bottom of the brain, and doth grow together in the place of cold (as they say) surely by the same opportunity of cold, it shall remain water, neither shall it be again made a vapour. If therefore that vapour be now there made water by reason of the cold of the place, it is not to be believed that this hostile water is drawn inwards, and much less to have become so subtile, that against the will of the receivers, it should pounce the brain, coats of the brain, seames, scull, and the Perioftion, or skin covering the bones, that it may be stayed and run down under the skin. For besides unavoidable, and very many absurdities, that water shall be as it were rain water, and unfit for slimy Catarrhs, waxing very hard with muckiness. Yea the Rheumes which are hence to arise, should at the first sense of heat, sooner vanish away by every sweat, unless the *Galenists* do teach that the water which is made of the vapour of a luke-warm stomach, is afterwards fixed. Also that it hath become salt and sharp, only by the touching of the plain, which thing, the knife hath not yet observed. And then, the skin of the scull being far more pory than the scull, should sooner root out that water by transpiration or sweat, than the evils, from thence believed, can be made. Moreover, the skin which is stretched over the scull, is more toughly adhering hereto; neither doth the steepness only of the place suffice for the flowing down of a Catarrhe, and for the renting of the skin from the bone. Yea and more is, this water bred from the vapour of the stomach, should of necessity, have a driver within, which should drive it thorow the brain, coats, bone and Perioftion. But that should not be any heat: for then it should cease to be water, and should again be made a vapour, which is feigned to be condensed into water by the coldness of the brain.

In the next place, Rheumes are said to be more accustomed to old folks, weak people, and to the colder stations: therefore that driver or forcer shall be cold (which after another manner, is wont to bind the parts together) and shall now (the order of things being overturned) drive the water thorow the brain, and that indeed in the form of water. And that driving or pulse in the water, sprung from the meer vapours of the stomach, shall be even in the brain, which should open it self together with the coats and scull, unto the water coming to it.

Again, seeing all such water co-thickened by a vapour, is said to be hanging on the bottom of the brain, neither that it can there be detained beyond the bigness of a drop; but that it of necessity will presently and droppingly fall head-long down, or the brain being forgetful of its duty, shall set up this excrementitious water by drops. And then, besides a driver, the water should have need of a leader, which should stretch out the skin, and pluck it from the ribs, that it may provide a place (to wit in the Pleurisie) for it self hastening downwards. And as well the leader as the driver in the water, should be more powerful than our Blas.

24 Lastly the mask of credulity being at once discovered; at whatsoever price I shall prostitute the dreams of the Schools concerning Catarrhs, none shall buy their false wares. Neither could I hitherto sufficiently admire, that the world hath been circumvented by Catarrhs: that mortals have placed so great credulity, by reason of one only fault, to wit, ignorance; in a thing I say, so blockish, foolish, and wholly impossible. Because the Schools, not finding a cause, whereto they might ascribe the Catalogue of Diseases, have commanded these dreams of Catarrhs to be believed. But at least wise, the sweat is salt: wherefore the humour latex should rather afford the matter of a Rheume than that feigned vapour, to be led through so many windings, and scarce possibly consisting, through a thousand absurdities. Then also, the accustomed saltiness of the latex, hath more immediate causes of pains, than an unfavoury water derived upwards in feigned vapours.

In the next place, if water doth pass thorow the brain, coats thereof, scull, and about the bony membrane; shall it now therefore, being wearied, not be able to pierce even the skin also? or shall it forget the wayes? why shall the sudoriferous and pory skin, resist

first the water which was able to pierce the scull? But when as it should be collected under the hairs, then it should either there swell into a descending flood, or indeed should flow down with a slender thred of small drops. If it being little, should be dis-cuffed in manner of sweat, or if it should make a collection in the temples of the Head, it should presently bewray it self to the finger. What if it flow down from thence; at least wise it could not but in the term or bound [to which] of motion, stir up a tumour of sweet distilled water. But at least wise, that water could never fall down into the muscles, or be the sooner collected among the muscles: because they are they, which are every one cloathed with their own membrane. And moreover, neither is there room nor passage for flowing down between the skin, and the Periostrion of the scull, unto the Muscles between the ribs, that the distilled water may cause a Pleurisie. For that which was without pain, under the skin and hairs, should presently with so great a fury of pains, stir up a Pleurisie, and only with its descending, by its naked weight, rent the Pleura from the ribs, it being implanted in, and joyned unto them by fibers. Certainly a huge cruelty should happen by defluxing. At length, neither can a Rheume fall down unto the teeth, and the sinews or nerves thereof; Because the sinews which on both sides enter from the bottom of the brain, unto the cheek bone or jaw, do, without and within, so fitly or exactly fill up the hole, that they make a sheath so just and so equal, that there is not room for the entering water to run down; and so much the less, because the water doth not undergo a small hole, shut beneath. And much less, shall it flow down to one only, wonted, and only rotten tooth, which it may afflict. And furthermore, a Catarrhe being gathered together under the hairs, should run down into the cheeks, but shall not fall down under the gums, thorow the fleshes of these, and without being thorowly mixt with venal blood, according to the guidance of the sinews, under the flesh, nigh the jaw bone, perhaps unto some one tooth. And which more is, if the water should rush downwards from above, and it be granted for a cause of pain of the upper jaw: Yet in no wise, nor ever, water not alive, could molest the lower jaw. What if a Rheume can decline unto the eyes or ears, surely its troublesome matter should first proceed from the plain, and feigned basis of the brain, into its bosom; it had first called a counsel, yea, had sooner brought forth death, than an ophthalmie or inflammation of the eye.

Moreover, I remember, that a Pleurisie is not between the skin, or the external fleshy membrane, and the Muscles between the ribs (whither notwithstanding it should flow down from the skin of the scull, rather with a straight line, and not inwards) but either in the very oblique Muscles between the ribs, or between these and the Pleura compassing the ribs, whence it hath found its name. Which way therefore shall a Catarrhe fall down hither from the Head? I grant indeed by way of supposition, that snivel doth fall down through the palate, even in Children and healthy folks, into the stomach. Yet this doth not pertain unto a Catarrhe or Rheume. Neither doth the snivel arise from that so much reported vapour of the stomach: but it is an unprofitable excrement begotten by the wandring keeper. As in its own place. I further grant, that in the joynt sickness, and elsewhere, a salt excrementitious liquour is oft-times sustained, but the humour latex alone, is the Vulcan, Morter or Parget, and fewel of these: but not an ascent of vapours out of the stomach, into the brain, nor many humours, nor the feigned distillation of Phlegme conjoynd with choler. For the very Schools themselves being smitten with shame, that the Head being on every side, filled with the brain, should be the Colledge of Catarrhs, and that from thence almost all Diseases should rain down; have accused the stomach (Alas!) smoaking with, and supplying matter for continual vapours. But when as they found the stomach in healthy persons, to be guiltless: but for the joynt sickness, do suddenly accuse defluxions in healthy persons; through the shadow of an over-spread bashfulness, they whisper, neither dare they to speak clearly, as from knowledge: for they borrow sharp choler, and salt phlegme from the venal blood, and leave the controversie before the Judge, whether those humours are to be fetched from the Liver, and are separated in the veins from the blood, that they may be expelled unto the joynts, or indeed, water, or a certain snivel, or a certain un-named thing, be brought down thither out of the Head between the skin. For they are as yet uncertain; and so much the more confused, because they are ignorant, who that separater, or who that deriver of humours should be, which alone might bring these sincere humours not defiled by the venal blood, unto the joynts, and should make choice, sometimes of this, and sometimes of that part: but should forsake the more weak and more sluggish part, and should daily enslave a new one unto himself, yea and invade the knotty part, and that which is subject to stoppage. Whatsoever therefore the Schools do prattle concerning vapours lifted up out of the stomach,

27 mack, for the matter of a Rheume, let it be old Wives Fables. For the stomach is never more cold than is meet; it is the more diminished indeed in its digestive ferment, whereunto the coctive faculty ought to be attributed, but not to heat; as I have elsewhere taught at full.

The Liver also doth never from its own proper temperature, offend in heat; seeing there is no heat in us, but what is by reason of life: and therefore, every dead Carcass, when the life is extinguished, is suddenly cold. But the troublesome heat of the Liver, is
 28 alwayes by accident. For example. Let a cold thorn be fastened in the finger (an example moreover, elsewhere minded, concerning Fevers) there is presently a pulse, and heat, and swelling, from the pain. For this is not, because the thorn is hot, nor because the neighbour blood was hot before the thorn: but the heat by reason of the thorn cometh by accident. So think thou of the Liver; for if it be hot, it hath its own thorn, which doth not shew a cooling of it, but a taking of it away. For cooling refreshment makes
 29 not only a cloakative Cure: but draws the evil it self into desperation. And that thing the Schools may seriously take notice of, and the vain device of the heat of the Liver, and the manifold errors of curing sprung from thence. Likewise, let them seriously note, that the Medicines (Alas!) those appointed or applyed to the Head, Stomack, and Liver, for Catarrhs, have been vain and void. A Catarrhe or Rheume therefore, hath not matter, place, passage, custom, admission of piercing into the brain, through the coats thereof, skull, &c. For there is never the room or right of a pledge, for an excrement: for there would be a daily need of a Chyrurgical borer or piercer, no less for a Catarrhe
 30 than for snotty corrupt matter. But why doth a Rheume cease to flow down, presently after the tooth is rooted out? For is it, because it was forgetful of the wayes? But if matter be supplied beneath, whither I pray shall this flow? or in what part shall it fall down, the which before was wont to enter thorow slender holes, wherein the sinews do enter, as well the inward as the outward, and as well the upper as the lower side of both the jawes? shall, happily, the tooth being pulled out, the stomach cease, or not dare any longer to afford vapours, and matter for Catarrhs? or, the tooth being pulled out, shall all the matter of Rheumes, also of those which are to come, flow forth together with the blood? or, the hollow of the tooth being stopped up by the flesh straightway grown up, nor a passing forth being granted, shall the Rheume therefore cease? But the Rheume did not seek passage thorow the most hard tooth. For why shall it not stir up a necessary Aposteme, in the coats next unto it? why, one tooth being pluckt out, shall it oftentimes descend unto another tooth? Is the channel changed when one is pulled out? and doth it not any longer know how to flow down, at least wise, into the nerve of the tooth that was pulled out, and into the flesh grown up? and doth it more easily think of passage for it self thorow the tooth, than thorow the flesh grown up from the plucking out? why doth it not hold the way which it hath prepared, and keep the passage for it self that way, before the flesh grow up? surely that Catarrhe is miserably deluded by the Chyrurgion, which thinking to flow down into the tooth, and finding it taken away, should be compelled to return the same way, unto a noble part, which it may torment in revenge of the Chyrurgion. A tooth therefore doth not ake from a Catarrhe: but either the gum being uncovered, it is made too sensible: or else, the matter of its last nourishment being badly
 31 digested, doth putrifie about the root of the tooth. Hence is pain. For in this doth the digestion of the tooth and of the nail, differ from the digestion of other parts: that this is made in Kitchens inward unto it; but the other, in Kitchens co-touching with their root.
 32 But that a Rheume doth not descend unto the inward parts, the stomach, lungs, liver, reins, bladder, veins, arteries, muscles and sinews, is in part already sufficiently manifested, from the common and feigned matter being taken away, from its passage, and from the manner of its making: and partly, because nothing can fall down out of the Head, especially unto the stomach, against our wills, but it may be cast forth by spitting out by reaching. For they do not swallow down the mucky snivel descending from the Head, but at unawares. Neither is a Catarrhe of that intention or disposition, to expect sleep, whereby it may oppress one at unawares. Let Fables depart in healing.

33 Whatsoever therefore rusheth downwards from the head unto the jawes, is a snivel natural, or altered, according to the indispositions of the keeper. But that snivel is different from the spittle which is cast out of the breast by cough, in the whole species of an excrement. For what will the inconsiderateness of the Schools advantage them? to wit, whereby they command, that the spittles rejected by coughing, are to be lookt into; whether they be watery, frothy, cleer, liquid, white, compacted, yellow, or of an ashie colour? whether round, or running down, &c. why I say, do they bid the dispositions of the

the breast, or affects of the Lungs to be from thence divined of, if the spittles are the very defluxing excrements or Catarrhs of the Head? So indeed the Rheume of the straining or spongy bone, obtaining a certain co-thickning from the snivel, doth wet with a crude and watery muck, because nature sends thither a capacious or received latex for the washing off of that obstructing muck or snivel. For if the matter hereof should be brought up out of the stomach, why, when the spongy bone is stopped, doth a healthy stomach rage with vapours? How shall those vapours being co-thickned a little above the palate, come down unto the fore-head in the shew of salt water, nigh to the instrument of smelling, to wash off the hurt from the bone prefixed to it? For whence shall un-savoury and guiltless vapours, draw forth so much salt in their passage, which they may melt, and carry down head-long with them, that by their sharpness, they may stir up frequent squinancies, and other inflammations of the jawes? why shall a matter lifted up from the stomach, and only by its co-thickning into water (because it is that which by handy-craft operation, is proved to be of necessity without savour) being first changed from it self, a vapour, falling down into the stomach, cause so great troubles unto it, which a little before, with the rest of the Chyle, was acceptable to the same? Whence hath it that enmity: for is it from the brain, a principal bowel, and rich in vital beginnings? But if the vapour shall touch at least the lowermost plain of the brain (as they say) and presently after, as soon as it shall come down unto the compleat bigness of a drop, it falleth down; and seeing there cannot be another third, which may detain every drop: therefore the perverseness of that hurtful matter, shall not be from that small delay, nor from the contagion of a malignant part; nor lastly, shall there be a perverseness from a seed there received; unless perhaps, they shall shew, that besides a co-thickning of the vapour into drops of water, some other thing hath interposed: Which they have hitherto neglected to prove.

But seeing that very many Comments have every where arose in huge Volumes, Councils, and distributions, concerning Rheumy and Lungy affects: It is my office to have shewn, that nothing was ever more negligently, blockishly, and destructively taught by the Schools. Because they have hitherto made no sin of less esteem, than murder or manslaughter, committed through carelessness; only the earth covers the fault, and they are excused by the delivered maxims of murder. But I have from thence considered, that the Devil *Moloch* doth sit President in their chairs, and that they have hitherto made the world mad by Catarrhs. Whose matter, birth, place, efficient cause, manner of making, Cause containing, passage, and society of co-bindings, do fail at once, and are false. And therefore, none but the old Serpent, the father of a lye, hath taught these things hitherto, unto the destruction of mortals: for truly, whatsoever issues out of the Head is a muck or snivel, and a meer excrement: but not derived thither out of the stomach. Snivel is white, thick and slimy, the keeper of the brain being well constituted: but the powers of the same being diverted and ill affected, the snivel is watery, sharp, salt, harsh, yellow, tough, &c. and runs down by a way which is the more fit for it, out of the basin, or it appeareth in its brain-funnel. For that which in the beginning of a Pose, drops down in the form of water, is not meer snivel: but a salt latex, whereby nature endeavours to wash off that which sits on the spongy bone, which is next the brain, as a forreign enemy, even as I have said. And then, that which flows down yellow and slimy at the declining of the Pose, is not the same which the latex at first was, nor is it there, so long detained and thickned (as nevertheless, the Schools do teach) when as otherwise, the whole scull, although it were empty of brain, should scarce be sufficient for a Cause, for so great a quantity of excrement. For such new snivel is created every moment, being far different from a healthy one, in colour, stink, slyminess, and sharpness.

Moreover, it is a ridiculous thing, that this stinking snivel, should be said to be now cocted, and thickned by the former latex: the which doth again grow, by a strange vice. But that it is the latex in the beginning of a Pose, is manifest: for, presently after two dayes, the belly is dryer, and the urine more sparing.

In the next place, that latex, being by a luke-warmth evaporated, hath scarce any thing whence it may wax snivelly; as much snivel soever as the latex, bringeth down with it, so much muscilage or slyminess it hath, and no more. However it is, and whatsoever that is, which flows downwards from the brain unto the jawes, not so much as one only drop thereof enters unto the Lungs, but first it should at every drop, stir up a peril of choaking. For truly, if one only drop of water by an unwary swallowing, falling down into the winde-pipe, doth incur a fear of choaking unto him that drinketh: what should not so great a plenty of snivel do, which doth now and then, in a small space, fill basins? For it is far out of the way, that a few hours sleep doth bring down whole basins of snivel into the

the Lungs, without feeling, and that they do enter them without the fear of choaking. For I being long since in the time of my young beginning, deluded by the Schools, have placed these kind of sick folks in such a manner, that they might sleep between pillows, on their face, hoping that the mucky snivel would slide down thorow the nostrils, which else, should slide into the Lungs; and thus far, I hoped for a freedom from the effect of the Catarrhe. But the following morning, derided (through spittings out by reaching) my ignorance. For then I diligently searched into the Orthopnea, which placeth such as breath, with a straight neck, that it did a little stop the doctrine of a Catarrhe, and convince it, as frivolous. Seeing they should be strangled by a laying with their face upward, and Astronomer like, whereby notwithstanding the fore-going matter of a Catarrhe should be cut off. Wherefore, I began to take good notice, that every member which is badly affected, doth frame, not only very much of its own excrement; but also, of an adverse or
 39 contrary one. For so the eye being diversly affected, very much liquid corruption, and of a sharp tear, doth issue forth: the jaws also, being stopt up by a squinancy, a slymie thread doth continually hang down on the fore-part of the tongue.

Hence therefore, I have believed, that the Lungs were held by the Law of other members; so that, as oft as it was provoked, hurt, pricked, slain, oppressed, or affected through the injury of the Air, or by an Endemical Gas, it did bring forth, through an error proper to it, divers testimonies of its weariness or grief; not that therefore, those so guilty excrements do unsensibly slide from the brain (for the most part found) between the slender conduits of the rough Artery.

Then, at length, I began to wonder that the Schools in the Pose, did see indeed a proper member to degenerate, and to imitate the excrement of the Head: and in the mean time, that they have not supposed the same thing could happen alike to the Lungs, as to the rest of the members. So whatsoever is brought forth of the Lungs, that is wholly to be attributed to the brain, and that, that falls down (a ridiculous thing) into the rough Artery without feeling, and is by degrees decocted in the banishment of its race, for the most part there to be detained without difficulty of breathing, even until a ripeness. When as now and then, more is cast forth by cough in one moneth, than the whole capacity of the breast is large. Therefore the yellow and ashie spittings of persons in a Consumption, are the errors of the vegetative or flourishing faculty in the Lungs, and the venal blood there degenerated; the which therefore, a wasting leanness of the whole body follows.
 40 Wherefore vain and deplorable Remedies, Cephalical or for the Head, are administred; vain are the drinks of cooling Barley-broath or Cream, Lohochs, Syrupes, and whatsoever by swallowing, descends into the stomach. Because it is that which is oftentimes formally changed in its journey, before it come unto the part affected. For what is more
 41 foolish, than to give Indian roots to drink for the drying up of Rheumes? for what shall China, Sarsaparilla, Guaiacum, dry up, being drunk in the form of water? for what shall they dry up, which thing dried up, should not be more hurtful or pernicious than the liquid thing it self? why do they call for drying up those things, which that they might
 42 not be made, have need only of a restraining Remedy? and the which, when they are made, do require; not to be dried up; but to be cast forth? why have the Schools every where regard unto the effects, and not unto the roots? what if those forreign and barbarous Remedies do provoke sweat, and diminish the latex with the dammage of the sick, do they therefore come unto the root? for truly by a sparing nourishment, and plenteous sweat, they do primarily lessen the venal blood, and secondarily cause a leanness, together with weakness. Which thing, the Schools have falsely brought over into the drying up of superfluous humours, thinking to comprehend a competent quantity of venal blood, and the degenerating of a disease excrement, and the expulsion thereof, in one and the same name of drying up. For shall therefore, the indisposition, and changing Vulcan, which of good venal blood, brings forth consumptional spittings in the Lungs, be overcome? sleep? diminished? wax mild? and desist? which Vulcan in the mean time, under an extream leanness of the Consumption, doth never slacken from his fury. *Good God, turn thou away the slaughter, which the School and root of Pagans, gaping after a little advantage, doth commit.*
 43 The disease erroneous impression only, is to be taken away (which I call the inward corrupter of the Lungs) which doth empty the membranes of the veins, the gristles of the rough Artery, and the whole lungs of their nourishment, and trans-changeth them uncessantly, and with a continual thread, into divers filths. But if a Spitting of blood hath gone before, and an Ulcer be present, learn thou to prepare medicines where-with Paracelsus hath cured the Consumption. Any of those Medicines, which cure the Cancer and eating Ulcers, being taken in I say, at the mouth, which is to have cured the
 Ulcer

Ulcer of the Lungs. For whatsoever cureth by its draught, an Ulcer of the thigh or foot: why may it not do also the same in the Lungs? But what will the Schools do? they are ignorant of the Causes, they are ignorant of the Remedies, and with a lofty countenance do mock at Mercurius Diaphoreticus, which is sweet like honey, and fixed: and the volatile tincture of Life. And likewise the milk or element of Pearls. For unless the whole Body be universally tinged with a super-eminent Balsam, internal Ulcers are never made whole, or confirmed. For the Lungs first waxing old, and first dying, doth most difficultly recover from threatned death, and doth therefore, reboundingly despise the Remedies of the vulgar. Wherefore a continued error of the Schools succeedeth, which sooner than they do acknowledge a defect in their own wan Medicines, they accuse nature of defects, and its most glorious Author, of a drowsie omission: To wit, they decree, that the four lobes of the Lungs, are as long as we live, uncessantly enlarged and pressed together like bellows, for the use of breathing; so that the blast or imbreathed Air is drawn only within the Lungs, neither that it doth reach any further, to the hollow of the breast; which thing surely, hath afforded no guiltless ignorance in healing. Even as also the sporting or mocking privy shift of the Physitian. For by an uncessant and unexcusable necessity of enlarging and pressing together, or from a restless motion of the Lungs, they endeavour to excuse themselves of the impossible miseries, of the Ulcers of the Consumption, and other parts. Alas! as if for the future, they could cure an ulcerated Cancer, and quiet Fistula of the fundament and eyes, at pleasure! which error I thus oppose: A thin fine dust of Atomes, flies about the Air: but by a continual necessity, we draw our breath together with powdered or dusty Atomes: and therefore also the whole breast should be filled up with clay or dirt, unless we should have Lungs, in the windings whereof, the aforesaid Atomes of dust should be affixed; and in this respect, the Lungs do not else unburden themselves of their excrements, but by spitting by reaching; to wit, that the conceived dust being ensnared, may be brought forth, together with the daily excrement of the Lungs. Surely it is a use, which hath been neglected by the Schools, unanimously denying the Lungs to be passable. Indeed hair in the nostrils, doth detain every fiber flying in the Air, and drives it away, lest it be drawn inwards: and then a manifold enlargement of the pipes of the rough Artery, causeth, whereby the more thin fine dust doth after another manner, the less fully pass.

A. Furthermore, that it is certain, that the Lungs is wholly unmoved, that is sufficiently manifest, not only from their use already manifested:

B. But besides, much more, because the substance of the Lungs is altogether incapable of enlarging and pressing together:

C. Therefore in that manner, the Lungs of Birds (it serving for the same uses in a Bird and us) where it is firmly annexed to the ribs, refuseth all enlarging and pressing together of bellows.

D. In the next place, the Lungs consist of three vessels suitably dispersed throughout the whole (to wit, one being the arterial vein, the venal Artery, and the rough Artery) substance of the venal blood, and a membrane, as it were a gown, being poured about or spread over them. But the three vessels are channels, equally divided throughout the whole Lungs; the two former whereof, are filled with blood, and so incapable to lay up new imbreathed Air within them. But the third channel doth alwayes appear filled with Air, and therefore it is also incapable of other new and in-breathed Air, unless the Air contained shall give place to a stranger, shall enter into the breast; and so, that third channel or pipe be bored thorow, together with the membrane cloathing the Lungs. For this third channel is alwayes stretched out and laying open with gristly rings, and those co-touching one another, no otherwise than as the trunk of the rough Artery it self. But the fourth part of the bowel, is its substantial flesh, equally incapable of Air approaching it. Lastly, the fifth part is the little membrane, or coat of the Lungs. There is nothing therefore of these which is capable of new Air, nothing capable to receive new breath, and nothing which may sustain an enlarging and pressing together, or motion. A wonder surely it is, with how great drowsiness the Schools do nevertheless, snort, in that they know all, and admit of the things already spoken; nevertheless do not yet even at this day, cease to teach, that the Lungs like a pair of bellows, are driven with a continual motion.

E. Furthermore, it being as yet granted, that the third of the vessels, or aforesaid pipes, were not full of Air, but plainly altogether empty of all Air: at least wise after respiration or breathing forth (when as notwithstanding it otherwise layes open, neither is it able to fall down on it self like a bladder, the gristle of rings forbidding that thing) it should

conceive at least as much new Air in it self, as the part of the bowell should otherwise be. Notwithstanding, seeing we do at one only turn, breath in at pleasure, so great a part of Air, as the whole Lungs is large. It is altogether of necessity, that the Air be not only breathed into the pipes of the rough Artery, to press down and enlarge the other impotent parts: but that it do proceed inwardly from these, into the hollownes of the breast.

F. In the next place, if the muscles between the ribs of any one, be pierced by a dagger, the wound is presently bewrayed to have pierced thorow: For by a windy blast, it extinguisheth the flame of a candle. But if afterwards, the wound be shut by breathing in, and again be opened by breathing out, it alway blows out the light of a Candle. Which is impossible to be done, unless the conveyed and inspired Air, proceed beyond or thorow the Lungs, into the breast: And by consequence, that the Lungs are at rest: Especially, because there is in the breast, a double Mediastinum or partitional membrane or coat, from the top to the bottom of the breast, for the defending of the heart from the injuries of the Air. Which Mediastinum or Midriffe, divideth the right side of the breast, from the left.

G. Therefore it is manifest by a mechanical necessity, that the breath is carried in a right line into the breast, thorow the Lungs, and so also, that this is quiet. Which thing, is alike manifestly obvious by the expectorations of the Pleurisie. Because those spittles which were first hunted out and purified in the ribs, and hollow of the breast, are cast away by cough. It behoveth therefore, the membrane of the Lungs to be very wide, which may suffice for the sending thorow of venal blood, and corrupt snotty matter. These things the Schools see, know, confess and write: yet they deny that the breath is blown away out of the Lungs into the breast: but that the Lungs themselves, are of necessity stirred like a pair of bellows. They grant indeed, that the Lungs have pores, through which, the venal blood and corrupt snotty matter, are in a Pleurisie, supt up: yet they will not have the Air to be transmitted through the same pores, into the breast: but they alike stiffly command the Lungs themselves, to be driven like a pair of bellows. Neither is it a wonder. Because they meditate that they are nothing but dead carcases, as well made, as to be made, in whom the pores of that membrane, are shut by death. For the same thing also happens to the optick Nerves, the thorny marrow, the partition of the heart, and little mouths of the veins at the bowels. The lungs of bruit beasts swims upon the waters, wherein they are boyled whole; but being cut in pieces, it settles or sinks, because the rough Artery is filled with Air. Whither (it is added by way of impertinency) if the boyling water hath not access, while it seeths: how shall a Catarrhe obtain passage thither? The same thing, by mechanical operation.

H. Blow thy breath out of thy breast, as much as thou canst; measure the circumference of thy ribs with a thread: then again, breath in the Air as much as thou canst, and again measure: thou shalt find by a square, that more Air was attracted, than to the bigness of the Lungs of a man. By how much more, because a great part of the breath doth deceive this measure. To wit, as much as the Midriffe shall bend the stomach downwards.

I. Therefore, make tryal again. Draw to thee thy breath, as much as thou canst, and breath it into a bladder, and thou shalt find the same thing as before: and the inspired Air to exceed the greatness of the whole Lungs.

K. In the mean time, remember, that after every expiring or breathing out, the pipes of the rough Artery have as yet remained open with their rings, and to be as yet, filled with Air as before. There is no doubt, but that the breast and belly doth swell up with in-breathed Air: but if therefore the Lungs may be extended (the which in no wise they are) yet at least wise there should not be room for placing the in-breathed Air, by almost the tenth-fold so much as the breast is extended. Therefore the motion of the breast doth not prove a necessary motion of the Lungs.

L. But if the Lungs should fill up the whole hollow of the breast, which it manifestly doth not, it were consonant to reason, that the elevating of the ribs might extend the Lungs: but seeing Air doth not sustain an enlarging and pressing together (as is wont to be said) therefore the elevating of the ribs should not draw an equal or suitable quantity of Air. Yea, seeing that attraction should as yet, be violent (to wit, for fear of a vacuum) which is adverse to a natural and vital motion, it also follows that the motion of the ribs was not appointed to extend the Lungs. And seeing the Lungs hath not any principle of its own motion in it self, nor elsewhere, unless from the motion of the ribs (according to the Schools): It follows also, that the Lungs are moved by no mover, but that they are plainly, alwayes at rest.

M. For what is a greater folly, than to confesse that all the small branches of the rough Artery are opened by a co-weaving of gristle-rings; and yet to teach, that all the same little branches, new Air being moreover attracted, are alwayes enlarged, divided, and pressed together?

N. At length, the Schools teach, that the Diaphragma or Midriffe, is sufficient for our ordinary use of breathing; yet they substitute or appoint the muscles between the ribs in the office thereof. Then besides, there is a frequent belching out of the stomach, which doth expresse the odours drawn into the Lungs. Therefore the Lungs and the Midriffe are members capable of breathing them thorow. Surely it is to be bewailed that such pains hath been taken in the Schools about such hurtful negligences and childish mockeries. For truly, if in laying with thy face upward, thou shalt place one hand upon the bottom of thy belly, but the other upon thy ribs; but shalt draw a moderate, or unconstrained breath, thou shalt then easily feel, that the muscles of the bottom of thy belly only, have operated.

O. To wit, thy belly being lifted up, that thy Diaphragma was drawn downward, and consequently, that so much of the hollow of the bottom of thy belly was enlarged, as the plain (which is loose in it self) or the Diameter of thy Midriffe is less in the Semicircle of it self being drawn downward, and by so much the more ample, by how much also the looseness of the plain of thy Diaphragma is easie to be drawn. Yea, if thou shalt compass thy ribs with a strait girdle, and shalt draw thy aforesaid breath: thou shalt feel thy belly to be lifted up, and pressed down, thy ribs being wholly unmoved. And by consequence, that the Lungs, although it were otherwise moveable (which it is not) yet that it can thus rest for a whole day.

P. But in a sigh, gaping, sneezing, and strong breathing with difficulty (but not before) the muscles between the ribs are felt also to perform the office of a Vicarship and help. For the Semicircles of a rib are hanging down on the forepart, all which, the muscles between the ribs do every one draw upwards unto them.

Q. For this cause also, they are made bigger by lifting up, as they are then made rounder, and so do enlarge the hollownes of the breast.

R. For so those that breath forth only with a straight neck, do bring their shoulder-blades and shoulders for a help of the blast, do press both their hands on their seats to elevate their shoulders, that the hollow of their breast may be increased, and their Midriffe hang over downward, with the bigger bunch. The Wife of a Senatour, in bringing forth off-spring or travelling with a Child (for she brought forth with her buttocks foreward) break and tear her Pleura between the seventh and eighth rib, without feeling (for the greater pain obscureth the less) an Aposteme, &c. Presently after the time of her delivery, she felt that as oft as she pressed her breath together in singing, or giving suck, if she had stript her breast, a great flatulent tumour presently bloomed up, which would give place unto a finger pressing it, and did hasten inwards when her breath was dismissed: And so afterwards, she slept not but with a tyed or bound breast.

T. Whence it cleerly appears, that the breath is drawn in a straight line, thorow the Lungs. Which thing also I have likewise noted in a Noble Woman or Princess, who had retained her self from Child-bearing, that as oft as she pressed her breath together, the one side of her throat, shewed it self to us, swollen like a bladder.

V. Then also, hitherto doth this conduce, that those that are distempered in their Lungs, and likewise those that breath with difficulty, I have attentively considered, and certainly found, that such do for the most part lay more favourably on one side, and on the other side, that they can scarce breath. For it is not to be doubted, but that that is the vice of the Lungs themselves; and that on the steep side of the Lungs, for (that is it on which the sick person then layeth) and with what part it then toucheth the membrane of the ribs, the pores are stopped, through which, otherwise, he is wont to breath: also, that both the Lobes of the side of the Lungs, then laying upwards, the pores thereof are diseasedly stopped, if not all, at least wise for a great part of them, and that is to be measured by the proportion of the failing breath. By which argument, it is manifest, that the Lungs are not lifted up, and do not fall down like bellows: but to be penetrable by pores, through which, the Air passing unto, and without the breast, doth equally answer unto the largeness thereof, being extended and contracted.

Hence indeed those that are raised upright, do breath better than those that lay along. Because the lungs hanging, hath its pores on every side free, which have not failed through the vice of stoppage. It is therefore an error of the Schools, in that they teach, the Diaphragma or Midriffe to be the one only motive member of the Lungs, and so the proper

and principiative, efficient instrument of breathing. To wit, because, while the Diaphragma contracts it self into its own center, it causeth a breathing out : and as much as this looseth from contraction, so much we breath in.

1. For seeing every voluntary motion is executively made by a muscle, its tail being drawn back unto its head, now, the Diaphragma shall be the first, a differing kind of, and the most principal muscle, and its head shall be in the middle or center of it self.

2. But if therefore the Midriffe be the chief executive instrument of motion, the Diaphragma should by it self attempt motion, even the bottom of the belly and ribs ceasing. Which is false.

3. Yea the muscles of the Abdomen or bottom of the belly, which are ordinary muscles, shall not move, but shall be moved by the Diaphragma.

4. Therefore the belly its own fleshy membrane, should be sufficient for this office, and those muscles should be made in vain.

5. In the next place, seeing every instrument of voluntary motion doth draw in moving; the breast ought to be drawn inwards by the drawing of the Diaphragma, and without, about the Midriffe, to resemble the figure of an Hour-glass.

6. Yea, breathing out should not be a resting from motion; but the motion it self of the Midriffe being contracted.

7. And so, breathing forth even in healthy persons, should alwayes be more difficult than breathing in. Seeing,

8. Breathing in, should not be a motion: but a re-loosing, or resting of the contracted Diaphragma. From whence I conclude:

- 49 1. That the use of the Midriffe hath hitherto remained unknown.
2. That the use of the Lungs also hath lain hid.
3. That the manner of making breathing, hath been unknown.
4. That the first and principal instruments of breathing, have been unknown.
5. That for a modest in-breathing and out-breathing of the breath, the muscles of the Abdomen only do suffice.
6. That the Lungs is never moved, and that it readily serves for a sieve, that the pure Air may enter into the breast.
7. That the difficulty of curing the defects of the Lungs doth not consist in that, that it is impatient of rest, and that in this respect, it refuseth Remedies: but because, its utmost orifices being besieged and obstructed, they are for the future, made void of hope to be expected from common Remedies: Seeing nothing is carried thither in a right line, besides Air, and because the Air by reason of a stoppage beneath, is hindered or prevented, therefore also interclosed; and likewise doth at length, the more dry up the stopping muscilages, according to which, other products are stirred up, which in length of time will assume a dryness, sharpness, and malignity: Whence are short-winded affects, a corrupt mattery Aposteme, gnawing or corroding of the vessels, spitting of blood, an Ulcer, Consumption, and Death. For let us suppose, that all the Air is ordinarily carried into the breast, by a thousand orifices of the rough Artery, and so many to be sufficient for health; if therefore a hundred of them are stopped, then that man, by a swift daily motion or ascent, shall be unlike, and short-winded, by a tenth part. Therefore from hence it is
- 50 manifest, why Syrupes and Ecligmaes, seeing they do not reach unto the places affected, are vain Remedies: Yea, if they could reach thither, that they would aggravate the malady. And then, why none of these defects may hope for cure, unless the art of the fire
- 51 shall graduate or exalt a Medicine, into the tone or harmony of nature. But the preventions from Catarrhes, which do command Coriander and such like things to be taken after Supper, to restrain vapours arising out of the stomach; surely, of how great pitty are they worthy! For if the rise of vapours, from their own causes (to wit, the moisture of matter, and heat of the place) and the ascent of the same, should be natural; what could Coriander effect, whereby those effects should the less follow their causes? For shall Coriander being cast into boyling water, effect, that vapours should not be made or ascend out of the water? Let those Remedies be like it, which are prescribed by combining and rubbing, to wit, that Rheumes may be derived, not in the evening, but in the morning, not in the fore-part, but toward the hinder part of the Head. For old Wives trifles have shut both the gates of healing, because the Causes of Diseases, have lain hid, neither hath it been hitherto greatly laboured in searching into them. For how frivolous is the doctrine of *Galen*, in his five Books of preserving health? all the which, is famous in a Bath, rubbings, and wearisome exercise! and although in all things, and every where, I have pittied the poverty of *Galen*, yet I have in nothing more manifestly discerned his wit,

wit, than where he seriously prescribeth distinctions of rubbings, at length, athwart, crooked wise, and circularly, as it were the Ceremonies of Necromancers, to be observed with strict obedience, upon the command of the penalty of a capital punishment. For so, the world, being from the cradles of Physicians, driven into a Catochus, and being delighted with a Paganish stupidity, hath laughed as it were by a tickling. For in the first five ages, there were fewer Diseases at Rome, and fewer dead Carcasses; Diseases also were milder, than after it had triumphed for the conquest of Greece. The which, all the Europeans, with whom a Physician is rare as yet, or there is none at all, will willingly confirm. For the Schools do seriously admire at the vast heap of filth or snivel expelled by Coloquintida, and yet that the spittings of Lung-sick persons are nothing diminished, and so seeing they did rejoyce, that they had found the fore-going cause of a Rheume; yet being astonished in the effect of laxative Medicines, they would not acknowledge the falseness of phlegmy maxims. For Coloquintida, Scammony, Elaterium, &c. do dry up the Body more in one day, than the drink of China in three moneths. What therefore is to be hoped for in China, when as loosening Medicines are in vain unto you? and the use of these horrid? Wherefore the Schooles sticking in the Doctrines of Predecessors, have at length determined to search more profoundly into nothing; but to cure according to the antient and thread-bare speculations of Art; and on both sides, the matter hath alwayes failed them in their Practice, and they saw it to answer nothing to their own Rules; yet under the drowiness of impossibility, they have spread a vail over their so cruel ignorance, and they had rather that the miserable sick should remain in suspense with calamities and evacuations, than that they would think of any thing beyond the other, for the miseries or griefs of their Neighbours. But surely, so many thousand rashnesses and absurdities had not remained in the Schools, in men I say, so acute, honest, witty or quick-sighted, and exercised (of whom I willingly confess my self to be the least) if they had been once but a little willing to depart from the Maxims of Pagans. They are beset I say, by the enemy of primitive Truth, who either through arrogancy, or carelessness, or cruelty, or covetousness, or sloathfulness, or blockishness; or lastly, through a bashfulness of repentance, keeps them bound to himself. Good Jesus! when, at length, wilt thou take away this Devil out of the Schools? when, at length, shall there be a heap and ripeness of those evils, that by the light of thy Truth, thou mayest take away so great blindness, and destruction of mortals? Thou answerest, there is not a Remedy for him that opposeth the known or acknowledged Truth. Therefore,

*Just God, all things that thou approv'st of, are most just:
Thou stedfast Rule of Truth, and spring of Godliness.
But since thy sacred Will to do we have no lust:
A mock-prey we are made, to vulgar dotishness.*

For there are Anatomists, who have dissected a live dog, and while they came to the wind-pipe, they cast in broath besmeared with a strange colour, by way of the mouth, that they might see, whether any of it entered unto the Lungs. And some small quantity thereof, was found to have tinged the side of the rough Artery. Therefore they cryed out, that there is an unsensible and ordinary falling down of excrements out of the brain into the Lungs: and they established Ecligmaes to be the utmost Remedy of the Consumption, seeing they are immediately brought unto the wind-pipe, and thereby, unto any of its slender trunks. That experiment was indeed, cruel to the dog; but far more cruel and unhappy unto mortal men. Because the Schools, at the perswasion thereof, have delivered from hand to hand, and have subscribed unto so pernicious trifles. For first of all, what could Syrupes or Ecligmaes commit in the little branches of the rough Artery, besides the hurt or dammage of obstructions? for what end therefore, should they naturally and ordinarily, hasten, be sent, or admitted thither? Seeing they cannot be there coisted, nor changed into a good nourishment, nor heal corrupt snotty matter, or mucky snivels.

In the next place, if this should ordinarily come to pass, the ordinary spittles of healthy persons, would cast a smell of putrified broaths, or in-licked Syrupes. And although the first spittles do sometimes presently after, resemble the Ecligmaes; yet those do not come from the Lungs, but from the neighbouring parts of the jaws. Neither therefore do spittles being repeated, any longer express the Ecligmaes, even as, after another manner, repeated spittles, do reach forth smoakinesses with them. Then also, he that should lick in some ounces in one evening, should of necessity, presently after, yield not onely to an

Asthma,

Asthma, but also to choaking. For a part of the Ecligmaes had filled a great hollownes of the rough Artery. Surely it is a wonder, that the Schools being seduced by sowa an experiment of a dog, have not taken notice, that through the unmindfulness of the dog, in so great a howling of torment, that coloured broath was snatch within the wind-pipe. Not that therefore, that is wont to happen in healthy folk, or is observed in rheumatick people, as they call them. Truly, if a man that hath the stone, in making water, doth even against his will, loosen his fundament for pain, shall that therefore be proper to the muscle of the bladder, that by opening it self, it also, ordinarily opens the fundament? For the parts do now and then, by reason of pain, badly perform their offices, and do mislead other neighbouring ones, with them, into error. The History was rather to be believed, wherein it is written, that a certain person was choaked by reason of a small feather, but another, by reason of an hair: That they may know, that the Lungs are in no wise capable of receiving forreign things, without notable hurt and anguish, yea and more is, that short-winded persons could not endure so much as fragrant perfumes (for the reasons rehearsed concerning the Blas of man.) If therefore, helpful perfumes, are a burden to the Lungs; what shall not Ecligmaes be, although it be granted, that they may come down unto the Lungs? For therefore, as often, as any thing is swallowed, the wind-pipe is seriously shut with the cover Epiglottis, which resembles the form of an Ivie-leaf; that not even any the least thing do slide down unto the Lungs. And I have known some choaked, who at least wise, on one side, had not the Epiglottis strictly enough shut, by reason of a Convulsion of the one part, or a resolving of the other. And therein a new error of the Schools is discovered: To wit, in that, they do affirm, lickings or Ecligmaes

55 which are swallowed by degrees, to be admitted into the Lungs, but not those which are abundantly and hastily swallowed. Hath therefore the dissected dog licked in, and not supt up the broath of herbs injected? for to what purpose have they cast it in, to be drunk, if they knew that a way would lay open unto the Lungs, through an in-licking alone? But the supposition standing, that the Lungs doth despise all society of all forreign things, except that, of naked Air, not joyned to smoaks: it also, necessarily follows, whether any thing be swallowed by licking in, or by drinking, that the same care of the Epiglottis the keeper, is alwayes acted, and the same shutting of the wind-pipe observed. For truly, in the same place, no less than the loss of life is concerned. Therefore Ecligmaes and Syrupes, although they make the parts smooth for the affording of spittings by reaching, yet they in the first place, hurt the stomach, and do not in the least, absolutely profit in affects of the Lungs. But they say, that the spittle, by a voluntary sliding, also without feeling, doth flow into the wind-pipe, and that Ecligmaes or Lohochs would in this respect be helpers. But neither of these subsist with truth. Because however the neck be 56 disposed of, the warinesse of nature is alwayes the same, that not any thing do at unawares fall down, or flow down into the wind-pipe. A Player was lately seen (his hands being unseen) by raising up his feet and body, to have drunk a great cup of wine, having his head nigh the earth.

57 I appeal to Anatomy, and submit my hand to the Ferule. For there are some, who sleeping, a great deal of spittle flows out of their mouth; who if they sleep, laying with their face upward, they do of their own accord, presently rowle themselves on their side, or are awakened, nature being affrighted with the fear of eminent danger. But if any thing of spittle shall then through carelesness, fall down into the wind-pipe, the cough henceforth, ceaseth not presently to expel it. But at length, what shall sugar being licked in with fryed stinking Fox-lungs, or being seasoned with the juice of Colts-foot, profit the Lungs, if the Lungs it self abhorring all forreign things, admits nothing of the same, but through carelesness, and straightway with great trouble, expels it? For shall that be sufficient for the restoring of the hurt faculties? Is the root of Catarrhes thus cut off? Certainly, which way soever I shall turn myself, I do not see the Schools to withstand Diseases, but by the feigned dreams of Heathens, in an Image, in their effects, and from a latter thing: And that by reason of the ignorance of Diseases and Causes. For thus the name of Physitian, hath deservedly departed into the merriments of Comedians, because they do not think or consider, what to do, what to say, or what is to be done by them, that they may satisfie that precept: *Be ye merciful, as your Father which is in Heaven is merciful.* And even as St. Bernard speaks concerning the Clergy, *who eat up the sins of the People, as they live only by Alms-deeds*; for Physitians do not think whether they do satisfie the command and expectation of charity, who eat up the sicknesses and infirmities of the People.

But I do not see that these plagues of Egypt had been brought into the utter darkness of

of the Schools, but that, they being ill seasoned, oft-times found affects whereto they might apparently, and without narrow search, attribute the Tragedy of Catarrhes. Because some one having a pain in his Head, hath forthwith felt his neck to pain him, a difficult motion, a restless night; presently the pain hath manifested it self in the loynes, being from thence propagated unto the thighs, and then, it hath seemed to descend to the calves of the legs, and feet.

Hence arose the decree, that pain, seeing it is an accident of inherency, doth not wander from one subject into another, unless some material thing shall depart in dregs out of the brain, by the muscles of the turning joynts, through the readinesse of a sliding Rheume, and doth square to the received Etymology of a Catarrhe. This perswasion of a Catarrhe, its mask being discovered by Anatomy, ought to be known. For truly if the painful matter doth successively drop down out of the brain through the neck: surely that shall be brought down thither, either through the bosomes of the brain, or through the brain and its coats, or between both coats, or between the hard coat or Dura mater, and scull, or at length, between the scull and skin. For the consequence is of force, from a sufficient enumeration of parts. But not in the first place, through the bottles or vessels of the brain; because that could not subsist without an Apoplexy, and an undoubted Palsey of the whole body: if so be that the supposed doctrine of the Schools concerning these Diseases, standeth. For if it be successively expelled from the former bosomes, unto the fourth bosome: the matter of the Rheume cannot but shut up that forreign and sharp excrement into the thorny marrow, and henceforth breed the Apoplexy and Palsey.

Secondly, that matter of a Catarrhe, cannot, by sweating thorow the brain, be heaped up, and slide down between the brain and thin coat, so that both coats may keep a continual separation from the very marrow of the thorny sinew: because the sliding Rheume should bring forth a renting, and solution of that which held together, in the marrowy root of the sinews, throughout its length. Which doth not want very many absurdities. In like manner, if the Catarrhe should rain down between both the coats: first of all, both the little membranes should be double, which might defend the thorny marrow as with a coat of Mail: which thing, the eye hath not yet viewed hitherto. And that being supposed, it could not at least wise, disturb the motion of the muscles, or know pain. And so, there is an error in the Position; Because a sinew is indeed a deriving or conveying instrument of the command of the will, but not therefore, an executive instrument of a voluntary motion. Especially, because a small Nerve, doth now and then, scarce exceed the grosseness of a doubled thread: and it being externally implanted into the muscle, the Rheumy humour could not be cast into it, but by a bringing of a Palsey on the part, but not cruel pains of the moved muscle.

In the next place, if a Rheume should flow down between the Dura mater, and the scull, Anatomy teacheth, that the egress of the sinews side-ways, thorow the little holes of the turning joynts, is so suitable and narrow, that a passage for a Catarrhe is in no respect granted from the thorny marrow unto the muscles.

Lastly, if room should be granted for that device, at least wise, what should be the cause of its succession, that the humour having once slid down between the little sinew of the two turning joynts, should re-hasten unto other successive Nerves? doth perhaps, the Rheume being affected with a weariness of one muscle, henceforward wish for other Clients of delights? For how shall the Catarrhy humour flow down through the small little vein, without an astonying or stupifying of the member? Shall it enter into the muscle, even unto its tail, by a strange implanting? but shall it again from thence depart unto other muscles, which henceforward are of a more steep or inclinable situation? or if a new Catarrhe be feigned, to flow down with a like success, unto other, and inferiour parts; how therefore do the upper parts, seem to be free from evil? for seeing it should proceed from the same fountain the brain, and through the same channel of the marrow of the thorn of the back; why doth it not rather follow the path already opened? doth it more largely fall down unto a weakened, inclinable, and affected part, and commit new adulteries? why doth it shake and seek new Innes? Is that perhaps the delight of nature, that through a whorish appetite, it doth molest and divide new parts successively? Finally, that there is no place of refuge for a Catarrhe running down between the scull and the skin, and the muscles cloathed with their own membrane, hath been already before discussed. Therefore there is no way, manner, mean, connexion, or dependance, whereby a Rheume may in truth subsist. And seeing no material thing runs down in those affects, for which the Schools have rashly feigned Catarrhs: therefore, let the lovers of truth, know,

know, that as oft as a strange or forreign Air, odour, ferment, or forreign seed is received into the Spirit which makes violent assaults; so often that spirit being defiled by the Archeus, is excluded from the Communion of life. But the genius or disposition of that conceived Seed, hath no less parts, whereby also the Spirit defiled by a strange ferment, is sent unto remote, rather than to nigh places: As shall be said in its place concerning the joynt-sickness or Gout, in the Duumvirate, and elsewhere. For so Mercury, being even outwardly anointed, doth affect the jawes, tongue, & teeth. Moreover, when this defiled spirit shall come down unto the place of its sending, it presently seasons the nourishment of the part with its own ferment, transplanteth and translateth it according to the idea or likeness of the Seed, and that Seed doth there interrupt the offices of digestions (by successive blasts being drawn) with strange dispositions. Whence it at length stirs up a plentiful household-stuffe, and doth oft-times characterize the impression there made on the implanted spirit, with a brand durable for life. These things the Schools beg for primary feigned humours, and for the fallings down of defluxions from the one only brain. I therefore am far from a Catarrhe, who deny the matter, shops, efficient cause, manner of making, and defluxing thereof; and therefore I also seperate the causes, effect, as also the cure, far from the fictions of a Catarrhe. Therefore salt, soure, sharp, phlegmatick, and cholerick humours do not fall down: but as often as the defiled spirit hath passed thorow unto the places, the first which shall come thither from a common endeavour and study of washing it off, is the liquor or humour latex: For the spirit being depraved by a forreign contagion, is carried through the Nerves, Arteries, yea and through the very habite of the Body. From whence the brain hath bore the blame, and the sick do feel as it were the falling down of a defluxing humour: and because the latex is designed thither by the veins, not as a primitive cause of the evil (although by accident, it doth oftentimes nourish the evil the longer) but for an easment, and washing off: therefore the Schools have as yet remained doubtful, whether Rheumes should be dismissed from the Head through the sinews, or between the skin; or indeed through the veins out of the Liver, at least wise in Gouty persons. Therefore the Phlegme and Choler of the Schools, do not flow from a Fountain or Flood-gate, as if the Head were the one only sink of these: And then, neither do they fall down by reason of a steeper scituation, or by reason of an easiness of passages. For truly, as in a dead Carcass there are no such defects, but in live creatures only: so, whatsoever of these defects doth come to pass, it proceedeth from a spirit which maketh a violent assault, and from a vital beginning: In whose family administration, an ascending upwards, is no more difficult than a descending downwards: Seeing nothing of these in living creatures, flowereth by its own motion of weight: but indeed is directed, being sent unto its own certain bounds. It also often comes to pass, that the latex being defiled with a strange salt, doth thenceforth infect the spirit, so that the spirit is not therefore alwayes estranged by an external injury of Air, or from a proper Air of contagion bred within: but rather being stirred up by the latex (because that is less lively) it takes on it an animosity or angry heat. And the latex accompanies it, being troublesome as well through its aforesaid sharpness, as through quantity; and it enters as an importunate Souldier against the will of his Host. Wherefore natural and artificial Baths, do reconcile many of these sort of defects: and overflowings: to wit, by consuming the latex, they restore health, rather than the loosening and drying Medicines of the Schools.

Vain therefore is the History and matter of a Catarrhe lifted up out of the stomach unto the Head: vain also is the defluxing and falling down thereof between the muscles and the skin, and deplorable Remedies from unknown causes. Vain also are cauteries or searing Remedies to pull back and consume feigned humours.

Lastly, vain are the Medicines of drying drinks, seeing the evil or Malady is by the latex and a larger quantity of drink, only occasionally bred. Therefore it is manifest, how wholesom, sober drinking is: for the liquor latex, in respect of its appointment ought to be without savour; but it waxeth sharp through the much drinking of pure and more sharp wine. But the History and necessity of the latex is due in its own Chapter. Thou shalt remember, that all the fruits of composed Bodies do materially spring from water. Let us therefore also suppose the un-savoury latex, through a little help of a Seed, presently to wax sharp. For example. For at the Spring-time, a plentiful liquor drops out of a Vine or Birch-tree. To wit, if the bark near the earth be hurt, it poures out an un-savoury liquor of the earth. But if the wound be made in the stem or branches; now the same juice is sharpeish. So it comes to pass in the latex, being of its own nature without savour, which through the contagion of things receiving, doth at length wax sharp, or becomes the

the heir of a strange quality. For the Schools have neglected the latex, because they have confounded the urine with the latex. But it is a blockish argument, to have co-melted the thing generated with the matter [whereof] as if the snivel, spittle, water between the skin and flesh, and urine, were drinks. The Liver therefore being badly affected, if it recal the latex unto it self; truly it doth not thereby prepare urine, but Oedemaes, or the Dropsie Anasarca: therefore I am not such a man, as to call the Pleurisie, Tooth-ach, and other madnes of furies, non-beings. For I know and grieve for their too much serious commands over us. I do indeed admit of those very Diseases: but the causes, manner, means, passages, end or appointments of a Rheume, I deny. I deny those causes, and I diligently search into those, in the removal whereof, health consisteth. I acknowledge indeed, that a corrupt mattery Imposthume of the Lungs being broken, any one doth presently dye: yet I deny, that the mattery Imposthume is a Rheume, or that death is to be imputed to a Catarrhe: And much more vehemently do I deny, that the corrupt mattery Imposthume is bred of a vapour of the stomach. So I name a Consumption, not a defluxion into the Lungs; but I know it arose from an inward error of the Lungs. I grant that the Gout is fore-felt as it were a hot defluxing drop: yet I do not admit of a Catarrhe, in its matter, manner, means, and bound of making. Even as in its own Chapter, more cleerly. The latex also being dedicated to the sweeping or cleansing of the Kitchens, is in it self, indeed, guiltless: but it, in the way, admitting of a coupling of dissolved salts, doth constitute divers Colonies of Imposthumes, Ulcers and itchings. I deny therefore, that vapours are carried into the Head, which may pierce through the brain and coats. Neither in the next place, do I endure, that the breath, is carried from the breast unto the stomach, and the bowels, in a direct passage (as it hath otherwise, pleased *Paracelsus*) but that a very small quantity thereof, doth breath thorow the pores of the Diaphragma. For neither, when the breath is pressed together, doth any thing worthy of note, go forth under the Midriffe, neither doth the breath smell of the places which are under the Diaphragma. In like manner, neither are vapours carried from the stomach into the Head, but by the Arteries, if men are made drunk. But whatsoever causeth the giddiness of the Head, faintings, and other distempers of like sort, is the retainer of another Common-wealth than that of vapours. So neither from the womb are vapours derived into the Head, however brutish symptomes of the Head may thereby be said to be bred: for that is not the obligation of transpiration, which is the single duel of another Monarchy, and that whereby the throat ariseth unto the height of the chin, is not to be called the action of vapours: indeed it is an action unknown to the Schools, which I shall some times explain to be that of government, whereunto all parts in the Body do owe a Clientship. For there is no other command of the womb over the whole Body, than that whereby the stones do distinguish a Cock from a Capon, a Bull from an Oxe, and a Man from an Eunuch, in figure, blood, flesh, hide, and courage. But because in supposed Rheumie affects, the liquor latex being defiled, doth obtain its own dominion of water: hence as many Diseases as are ascribed unto Catarrhes, are for the most part exasperated in the night time: indeed the Blas of the Moon doth work the operations of successeive changes in us: The which, do most especially boast themselves over the weak or defective brain, and likewise over the sinews and membranes; and these operations do oft-times fore-feel and fore-divine future tempests; and therefore, I also call them, *the torture of the Night*. And I wish this knowledge of presaging, were not sold to us at so dear a rate, that they ought to be thorowly paid by pains and anguishes. For a short-winded Gouty person, yea he that carrieth a callous matter or corn under his foot, being often awaked out of his sleep in the bed or chimney, doth fore-feel the future storms of times or seasons, a black cloud to be by degrees spread over the Heaven, and the hinges of winds to be shortly changed.

But *Paracelsus* would have Mercury to be President or chief over the liquor of nourishment throughout the whole Body, and therefore he elsewhere (concerning Minerall Diseases) confounds that in name and thing, with an earthly Moon: Yet I know, that the humour follows the commands of the seminal or seedy part, whereunto it is most neerly resembled: for therefore, neither do liquid Bodies as yet rejoyce in the conferences of the Stars, as long as they are not radically implanted in the Spirit of Life. For from hence it is manifest, that the marrow is a homogeneal or simple part of the Body, but not the liquor thereof: Because it manifestly answers to the Moon and brain, whereunto the bones are obedient. For so, whatsoever things do tyrannize under the name of defluxions, and likewise the foul Disease, Convulsion, wringings of the bowels, do return

63

64

65

66

67

under the torture of the Night, because they hearken to the latex, through the Dominion of our Moon, they being offensive affects, which hearken unto the motion of the Stars.

C H A P. LVIII.

A Reason or Consideration of Food or Diet.

1. They prescribe a Diet for Diseases, who are ignorant of Diseases.
2. The dietary part of Medicine is suspected.
3. Some errors about the rules of Food or Diet.
4. Curing is not subject to the dietary part of Medicine.
5. The Authors opinion.
6. The object of the dietary part.
7. A proof from a common event.
8. Crooked ends.
9. From a numbring up of parts.
10. A diet doth privily accuse of the ignorance of a Remedy.
11. A just complaint of the poor.
12. Observances of the Author.
13. The mockeries of the dietary part.
14. Bread is not so much a meat, as a universal victual.
15. Why bread is mixt with meats.
16. The chief hinge of the dietary part.
17. A certain rule.
18. Why the commands of the dietary part of Medicine are not to be trusted to.
19. Ten Positions of the Author.
20. How far the force of a sparing Diet may extend it self.
21. The necessity of chewing.
22. Whence the varieties of things digested are.
23. An examining of Barley water or Cream.
24. Some preventions or fore-cautions accustomed to the Author.
25. A Question concerning the Ferment of the Stomack.
26. The digestions do prescribe the Rules of Diet.

After that I had finished the Treatise of Digestions, I had willingly brought Diseases on the Stage: but the action of Government being too scanty in the Schools, was left behind as yet maimed, and the Majesty of the Duumvirate it self, and plainly the spiritual radiation or beaming influence of spirit, according to its whole. Wherefore I interweaved the Treatise of the Soul, as it yeelds up its full right to the Duumvirate. But I could not as yet, moreover, depart out of the Stomack, but I presently added upon the Duumvirate, some examinations of my opinion concerning Diet. Truly I have promised to demonstrate, that the Schooles have passed by those things, the profession whereof they chiefly boast of: to wit, that they have not as yet known a Disease in the general kind, or have diligently searched into it by its particular kinds or species, or to have handled it by its causes, or by meet remedies. And therefore it consequently follows, that if through the aide of Physitians, by conjectures, there hath been successe in any thing, it hath been from the proper goodnesse of Nature.

- 1 For as soon as might be, after the universal Succours (for so they name cutting of a Vein and Purging) they presently yeelded a half part of curing unto the government and orderance of food and Life, which for the most part, through Heats, Colds, and the temperance of these, they esteemed for a consideration of good Juice. They shall finely indeed, prescribe the consideration of diet, for the obtaining of an end unknown unto themselves, while they wallow in the heats and colds of Elements.
- 2 For truly besides their grosse Ignorance, the consideration or respect of food was even long since suspected by me, and a certain wretched juggle of Physitians was seen, and the Slavery of the sick, prescribed under the pain of a Capital punishment, bringing forth a rash belief and confidence in the sick.
- 3 For first of all, whatsoever is sold at a dear rate, that is presently commended as most healthful: And in Medicines, leaf Gold, Pearls, bruised or powdered, Scarlet dying grain, the worm Cuchineale, Raw-silk, &c. (for perhaps Spiders webs, if they were brought a great way off, should be sold at a great price, as is Crocodiles dung) but in meats, whatsoever hucksterry is therefore grateful to the tongue, not very difficult to the stomack, that universally and presently is published to be of good juyce, healthful and wholesome: inso much as those things which do chiefly please the palate, ought to be most acceptable and wholesome. And therefore these do vary according to the palate of Physitians. For that which

is by one, praised to be healthy; by another, whom that thing less pleaseth, is dispraised. For by this means, Pheasants, Partridges, Starlings, Black-birds, and fatted Capons, are preferred before four-footed Beasts: although these together with us, do bring forth a live Young, and in this respect, are they more familiar with us, than Birds, Fishes, and Insects, that is, living creatures bringing forth Eggs. So also, Fishes in stonie waters are preferred before sea-fishes, and Bread of the finest of the corn, before that which is branny. For those Physitians which are somewhat delicate, do study the huckstery of the Kitchin, and that they may please the sick, who being destitute of remedies and knowledge, have otherwayes enslaved themselves to a barren profession; for they are those who become teachers of Cooks. How leisurely do they view all things, that they may exercise their commands in Kitchens and Parlours; and that they may seem to have foreseen all things diligently, they are ready to exercise their tyranny on the sick. As if meats and drinks should be the Medicines of the more grievous diseases.

Truly it hath alwayes notably shamed me of this part of Medicine. For even from a young man, I did already inwardly foresee, that cures were the Effects of Medicines, but not of meats: wherefore as I said, suspect the feeble endeavour of meats: So also I conjectured, that a strict obedience of diet, as well in the commander as obeyer, did favour of an implicate ignorance of a true and suitable remedy, or of a juggle.

But on the contrarie, he that hath fire, he can burn; and he hath a knife, he can cut; So also he that hath a secret, fit for curing, he may cure, despise the rules of diet, and passe by the needlesse industrie or flattery of the Schooles in this respect. For otherwise, an error which may unexpectedly happen from the choice of food, is by the prevailing goodness of the remedy easily prevented. For if *Hypocrates* preferreth things accustomed, although less wholsome in themselves, before things unaccustomed, neither that the diet is easily, nor safely, nor speedily to be changed from things accustomed: what therefore is not to be thought of chosen, wished for, and desired meats and drinks, which have been accustomed to be used? Because they are those, (which nature dictating to them within) have, to the great shame of Physitians, been found to have oftentimes excelled a remedy, especially, where they had before forbidden them.

Diet in the first place, doth not treat of things apparently hurtful: for it is not disputed whether it be healthful to eat poysonous things, or the sheards of earthen pots, &c. yea, neither indeed, if it be wholsome for a sick person to be filled with much meat and drink, although of good juyce; or whether gluttony, drunkenness, and an inordinate life, are healthy acts, and fit helps to preserve or recover health. But the whole of diet is busied onely in the choice of meats and drinks: The which, notwithstanding, being as it were indifferent nourishments, do consist within the limits of goodness, and differ onely in the latitude of neutrality. And so therefore, I have alwayes beheld the dietary part, to be as it were a bewrayer of the ignorance of the causes of true Medicine, and of a prevailing remedy.

How many indeed soever they are, who refusing the rules prescribed to them, have oftentimes not recovered: Doth the Physitian in the mean time, laughing between his teeth, at the disobedient sick, arrogate the praise of curing to his Rules? For from hence that art of healing is drawn into all Tragedies, because the Rules of the dietary part of Medicine do testifie a poverty of judgement, as well in the Physitian as in the sick.

Whence Physitians do oftentimes hope to get occasion of excusing death, by the disobedience of the sick, about the rules of diet not being strictly observed. Alas for grief, how great absurdities are committed through this deceit, which do not yet sufficiently appear unto the world! Because while they know nothing, or have nothing whereby they may drive away the Disease, and constrain it to obey them; are they at leastwise reckoned, that they will take away through the flatteries of the Kitchin, and much carefulness, the impediments of its increase?

If the observance of a diet should be profitable, it should be serviceable in the disease or in recovery of health; But in the disease, how unseasonable, troublesome and impertinent is it? while as the appetite doth for the most part, lye prostrated, and the which perswades a complacency to its self, that it may not wholly perish: and the preservation thereof is of as great moment, as the betokening of life is! For in the state of a staggering or feeble appetite, nature doth for the most part suggest unto it self, some convenient food, and that oftentimes, then especially, while it is most in need of help. Then do Physitians strive with this pleasure of nature, by their own rules of food, whereby the sick may abstain, if he will not be imputed the whole cause of his own death, by the unfaithful helper. For then the Archeus doth sumptomatically rage, because he perceives the wished for, and

perhaps his familiar food to be denied him; and so in strife they stir up new strife. Verily, even as a horse which passeth through a water, and not drinking sufficiently according to his desire, doth thereby retain in himself an anxious difficulty of breathing for his life time.

10 But a diet after a Disease, or in time of recovery, is also wonderful troublesome, if not also in vain; seeing now, nature shall have enough to do of her own accord. For truly, the prescription of a diet cannot but accuse a defect of a sufficient remedy, and so of an implicate confession of an unfaithful cure. For let a Physitian cure as he ought, and Nature promiseth for a sure performance of Restauration. Truly the Almighty hath seen and judged, that whatsoever things he had made, were good. That is, whatsoever, he had appointed for food, was good; or whatsoever he had ordained for payson, was a good payson. For else, the poor man might from much right complain, that God had dealt lesse fatherly with him, because he had denied means, whereby a poor man, by answering the dainty rules of diet, might be able to recover his health: but unto the rich, together with wealth, that he had also bestowed health: because bestowing meanes upon him, whereby he might pay the price of his diet.

12 For I have now experience with my self, for fifty years space, that I cured more, even those not seen, and the rules of diet being despised, than many Physitians together, who wander to and fro in our City. I have experience, I say, that I do cure all continued and intermitting Fevers, in few dayes, yea and for the most part, in few houres, blood-letting being not admitted of; but wine being permitted.

13 For truly, the chief part of the diet of Physitians is sumptuous, in the flattery of the sick, being gotten at the favourable pleasure of the Physitian, except wine for the most part: Also every Physitian declareth those things to be healthful, which are the most pleasing unto themselves: But least that should be understood to be a kind of assenting, they enjoyn a strict obedience, that by that way of severity of Lawes, they may be thought to restrain the Bridles of Life.

14 Bread in the first place, is accounted the primary or chief food; but other nourishments are onely co-meats, or victuals in general. But I on the opposite part, call other nourishments, true meats; but bread alone, the Universal victual: For many are found to have lived long, with milk onely. The *Irish* also, being men swift, and of a most ready strength, do in some place, use Chambroch or three leaved-grass, only for bread. And some Northern people do live a long time only with fish, without bread, and do remain stubborn, against colds and diseases. A filling with bread (in the Proverb) is worst of all: not onely because it is a token of poverty; but in very deed, because it is the most burdensome in a weak stomach.

15 For why, bread, by reason of the received leaven (for else it is nothing but paste or dough) melting into a cream, constraines the hearbs and meats, with which it is chewed, to co-melt (which thing we daily experience in the digestion of dung) and this is rather onely to be called by the name of [*Apsonium*] or general victual, then [*Cibus*] or meat. But I may not long be conversant in Nominals, for it is sufficient for me, after whatsoever manner it be called, so that the use and necessity of bread be known to prevail most especially unto the melting or dissolving of meats.

16 Furthermore, I have alwayes had Sobriety in great esteem, as it were the hinge, of all Diet. Then also, if the Appetite was carried about any Object, I have willingly admitted it, yet with the moderation of a mean.

17 Yet I am not he, who am ignorant, that one meal is better, is more convenient for a sick person than another: But I am little troubled or grieved, whether of them both the sick might take, if so be that he had also obtained some good remedy.

18 I supposing if a Remedy, be not able to withstand a Maladie or Evil, by a less convenient food; far less also shall it be able to overcome or expell diseases. Therefore I have held those Remedies, which are hoped for from the prescription of Diet, to be unconstant and feeble. Because, as is wont to be said, it is easier not to admit of, than to expell a Guest. And from a Correlative; Whosoever presumeth to overcome a Disease by virtue of a Remedy, let him be sure, that he shall by the same Remedy, far more easily vanquish things accidentally happening from the disagreements of meats. I have therefore reckoned it a sign of weakness and distrust in a Physitian, as oft as he is disquieted with the shameful care of the Kitchen; for he wanting a meet Medicine, that in the mean time, he may seem to do something, or least he should take his Fee in vain, layes up his hope against a Critical day, and prescribeth a choice of meats. For by this my perswasion, I have learned,

1. First, That Nature in us, is wiser than any Physitian, and more skilful of her own profit and loss, than all the Wits of all the Schooles.

19

2. That Nature doth therefore choose to her self, and wish for the most convenient things.

3. That Cattel have never died, because they had satisfied their thirst, unless perhaps they had swallowed Poyson, and did faint through too much devouring; because drink in Feavers doth subvert very many discommodities of Dryness.

4. That to drink in thirst, should be no less natural, than for one that hath need to piss, to have made water.

5. And therefore, seeing this doth not require the consent of a Physitian, that also should not want Consultation.

6. That I did administer some drops together with the drink, with the which, easily piercing, especially in thirst, I have many times quenched most Feavers together with the thirst, with a delightful pleasure of the sick.

7. That a great appetite towards a thing apparently hurtful in the Rules of Diet, is for the most part dictated by nature it selfe, to whom her own Remedy hath been made known, but not to the Books of the Schooles.

8. That therefore we ought to be little careful about things desired, which are but little hurtful, and less accustomed.

9. That if a Remedy ought to prevail over a Disease, Meats and Drinks cannot in their own latitude, contain the strength of a Medicinal Being.

10. That Meats, if they do not contain a Remedy, therefore also scarce hurt; in speaking of meats as such, that is, of indifferent things.

I have thus perswaded my self of these things, thus have I prescribed these things to others: To wit, That abstinence and sparingness, are the best meanes in the Dietary part: And the rather, where any thing is eaten for pleasure and delight, according to the Proverb; That which Savoureth, Nourisheth.

1. For it sufficeth the Appetite by quality, but not by quantity. Otherwise, if fullness grieves or burdens healthy persons, much more sick and weak folks.

2. To wit, Let them eat, not indeed to the filling up of the hollownes of the stomach, neither at the dictate of pleasure and taste; but as much as easily sufficeth for the defending of a healthy life. And if that be difficult to him that at first accustomes himself; at leastwise, it shall not be to him that hath accustomed himself. For how foolish a thing is it for him that groaneth or sigheth through a Disease, to wish for his long since denied ingorings? Yet I will not, that any man perswade himself, that this sobriety of living, and light fardle of Food, doth prevent any man from having the Plague, a Fall or Bruise, a Wound, Thunder-bolt or Stone. For external incidencies or accidents, do despise the Family administration of the digestions, because they overcome them. Indeed I reject the Stone even among external things, because it is made by a Ferment that is now a stranger.

20

3. Seing all food ought to be changed into a Cream, and an exquisite chewing is that which makes the digestions easie; hence I most strictly commend chewing at all times. For truly one onely morsel, being not rightly chewed, makes more adoe in the body, than three which are well bruised in eating. For therefore birds, because they want teeth have need of a double stomach, however most powerful otherwise, they were in digesting. Every Beast also which cheweth the cud, as it was greatly esteemed in the Law, so it seriously insinuates unto us, that the necessity of chewing is not to be despised. Yea for that cause, a bruit which chews the cud, is in the holy Scriptures chosen for a clean Beast.

21

4. In the next place, whatsoever things are taken in gluttony, beyond the power of the Ferment of the Stomack, are indeed made hot within, and do putrifie, neither also,

22

are

are they for that cause digested; as in Feavers is most plentifully to be seen. But as much of the more tender meats as is taken under gluttony, is indeed digested, and slides out of the Stomack: but it carries headlong with it, a great heap of that which is undigested, as well by reason of the extension of the vessel, as the negligence of nature being loaded, and forsaking the raines. But if that which is most exceeding tender, shall be digested, and that stayeth in the Stomack longer than is meet, that retained food doth also of necessity wax too sharp, or plainly putrifie, is brought over into a bitter excrement in the morning, being oft-times rejected by Vomir: And the which, the Schooles have falsely called Choller. For Diers do by one onely Kettle of Dye, change above a hundred diverse colours, if the Cloaths be first diversly affected: So also one only wandering ferment of the Stomack, doth diversly dispose and determine of the cream, by reason of the diversity of its parts (else single or simple) if it containeth in it, diversities not as yet plainly digested. So that, although it ordinarily tingeth nothing but the digested part of the cream with its ferment; yet it ceaseth not to affect the undigested part, and wrongfully to season it, by reason of the defect of the receiver. Wherefore most things do thus grow to an exorbitancy in the kitchen of the first digestion.

5. Whatsoever accustomed thing is not taken as malignant, but desired; that also, fulliess being absent, is the more easily digested, and in Diseases, is safely admitted, if it be soberly and moderately taken. Because the ferments do easily subdue those things which are accustomed, and especially if they are desired. For Hippocrates perswades us to use a most slender food, in sharp Diseases, to wit, until an appetite doth arise again. For I praise the more thin Ales or Beers, as much as I (trusting to the words of Galen) do despise sweet Drinks and Barley-broths.

23 Barley (saith he) being a little boyled, causeth Ventosities or windinesses; but stoppages, if it shall be somewhat better boyled. Wherefore, our Ancestors believing that Barley is not unhurtful, being any way boyled, do constrain that to bud (which they then call Malt) by which work, they prevent, aswell windinesses, as stoppages. But of Malt and Hop, they make Beers or Ales.

24 6. I also urge none with Broths compleated with beaten Eggs, &c. if a sharp Feaver be present; being mindful of that Precept, *Impure Bodies, by how much the more thou nourishest them, by so much the more thou hurtest them.* For although in sharp Diseases, people live without meat, and onely by drink; yet a peril of their life doth not thereupon invade them. Yea thus do they the sooner recover, and the strength and appetite do renew with much less difficulty: As oft indeed as a putrifiable or mortifiable thing, is cast into the Stomack wanting its own digestive ferment, it putrifies that which is digested, & not digested. And that is the true explication of that Aphorism. For I never wished, that those who were sick of sharp Diseases, might return fat, or fatted; but I did well intend that one only thing, to wit, that they might recover, and indeed not much curtailed, in their strength. The greatest part of Diet therefore, in Diseases of the Stomack, I have drawn out of the Aphorism: That a sower Belching (of a repaired ferment) coming upon burnt ones, is good. For burntish Belchings, voluntary loathings, an averseness to Fleshes, Fishes and Eggs, yea and loadings of the Stomack, have commanded the sick to be nourished with things that are to be drunk onely: For else, by things subject to stink or mortifie, I had learned, that strange accidents were to be expected, defects of the mind, and other discommodities of that sort. Then because drinks do moisten, do comfort thirst, and satisfie heat, do drive away drinesses, and weaknesses following thereupon. But by drink, I do not here understand, the suppings of Broths which do abundantly nourish, to wit, of those, which in a hot stomach, without a digestive ferment, are of their own accord mortified: but altogether of those, which do least of all putrifie: such as are Ponadoes, and likewise Beer or Ale tinged with wine, wherewith crums of bread also are co-mixed; that they may be meat and also drink. Hither I recal what I have elsewhere taught at large; To wit, That digestion is made by a proper ferment, but not by heat. As oft therefore, as there is an averseness to flesh, and burntish belchings, heat is signified to be present, and a sharp ferment to be wanting. Give heed to this, how easily, new flesh, being fast tied to a hot foot or head, doth putrifie, and presently stink. Therefore in a Feverish Stomack, being very hot; wise Nature fears least a dead or stinking carcass should be made in it, and therefore she is presently averse to fleshes. But whither then hath the ferment of the Stomack in a Feverish man, departed? Hath it wandred to some other place? or was it extinct? For whither had the Ferment departed, which is no where acceptable but in its own dens? neither also hath it perished, because it is a vital thing; but whatsoever vital thing hath once perished, doth not return again after privation. But a ferment is that which returns afresh.

afresh. That therefore happens. For either sometimes the dismissing of the ferment doth not reach out of the Spleen unto the Stomack, by reason of some defect of either of the two : of the duumvirate, or at leastwise, the ferment received into the Stomack, is covered over with a strange and Feverish odour : The which, thus understand thou : Any one being an hungry, and in most perfect health, staying too long in the importunate fumes of Coales, doth presently perceive a loathing or nauseousness to arise upon him, and an averfeness to meats, and then also a pain in the fore part of his head ; and at length a Vomiting. Therefore the ferment of the Stomack, as it is covered with the hurtful odour of the Coales ; So likewise, through a poysonsome odour and burntish contagion of the moved Fevers, it happens, that an averfeness to fleshes is straightway bred, as the ferment proper to the Stomack is overspread with that burntish odour or contagion.

These things, I had thus concluded with my self concerning Diet, and the consideration of Food, within those few common rules abovesaid ; I did measure according to the course of Nature ; before I had obtained the greater Remedies. Yet knowing, whatsoever is converted in the Stomack, in the likeness of a transparent cream, by virtue of its ferment, that that hath received the beginnings of a vital juyce, although not yet life ; and for that cause, not so readily or voluntarily to putrifie. But whatsoever, is either not dissolved, or if in it self it be dissolved, neither yet hath received a ferment, as the latex, the brine of Salt ; that very thing, is either an excrement, or is easily made such, or is obvious or ready for corruption. Therefore in the consideration of Diet we must especially give heed unto the Diseases, and Meats, which by reason of the Disease, the sick party is averse to, or desireth. For we must be hand-maides to Nature, but never command her ; To wit, the ferment, which ought to concoct the meats, prescribeth those, but not the Physitian according to his own appetite or desire ; neither may he take out of Authors one form for every thooe. As if the various nature of men, should not have it self by way of relation unto some particular thing.

Finally, Exercises, Labours, Works, Rests, Sleeps, and Aire, do depend on the Rules which the moments or requirances of other Digestions do dictate unto us ; To wit, that the juyces generated of the Cream, may the more succesfully attain unto their own ends or come unto their bounds. This is the truth of Diet, which Nature doth of her own accord shew and teach ; and let that thing be one and perpetual ; *That whosoever hath obtained the best Remedies of Secrets, as he presently restoreth the sick, and vindicates them from any Disease whatsoever ; So also he prescribeth no other Diet for sick, than for healthy folk.* For to the healthy all things are accounted healthy ; because the digestive ferments do powerfully draw and restrain all things into their own jurisdiction : And so digestions do prescribe the rules of Diet.

C H A P. LIX.

A Modern Pharmacapoleon and Dispensatory.

1. *The Art of Healing hath crept into Fables.* 2. *The Barbarians excel the Europeans in Herbarism.* 3. *The custome of Galen, of filching the Inventions of others.* 4. *A Tragedial sex of Herbs.* 5. *The signate or thing signified in Herbs, was ridiculously translated into Palmestry.* 6. *The Rashnesse of Paracelsus.* 7. *It was a vain Invention, to have brought back Herbs into the Zodiack.* 8. *How little that is regarded, which is very much to be weighed.* 9. *It is a shameful thing to measure the natural endowed gifts of Simples by their degree of heat.* 10. *The stumblings of Herbarists.* 11. *The true refining of Simples hath been hitherto scanty.* 12. *The venal Blood, and arterial Blood, do differ even in Plants.* 13. *Ice hath deceived Quercetanus.* 14. *The Father of Lights, is the alone giver of infused knowledge, without the observance of effects.* 15. *Vain means to know the virtues of Simples.* 16. *A specifical savour.* 17. *Things desired in the knowledge of Simples.* 18. *The art of the Fire opens the way.* 19. *The diversity of Agents in Nature.* 20. *A diverse activity of Spagyricall or Alchymicall remedies.* 21. *A Balsame preserving all the juices of Herbs from putrifaction, without an alteration of their properties.* 22. *A censure or valuation of Extracts and Magisteries.* 23. *A horrid confusion and plurality of Simples.* 24. *Dispensatories prevail onely for expedition, but not for appropriation.* 25. *A deceiving of Clients or Patients, obtained by the authority of Magistrates.* 26. *God composeth some things, which man may not separate, nor over-add a third thing unto them.* 27. *When a conjoyning is to be admitted.* 28. *A sentence concerning the prevalency of Dispensatories.* 29. *The virtues of many things are blunted by sweet things.* 30. *An Answer to things Objected in behalf of sweet things.* 31. *The vanity of Syrupes.* 32. *Chymistry is preferred before other professions.* 33. *The use of things from beyond the Seas.* 34. *The Crasis or constitutive temperature is the kernel of Remedies.* 35. *Vices in Decoctions.* 36. *A defect in Electuaries, Pills, and Confections.* 37. *Against the confoundings of Simples.* 38. *An examining of loosening Medicines.* 39. *What kind of preparation of Simples is to be despised.* 40. *The dammageable boyling of Odoriferous things.* 41. *The ridiculous burning of Harts-horne.* 42. *The Correction of many things is fatal.* 43. *The Offences of Simples.* 44. *Absurd Miscelames, or Hotch-potch mixtures.* 45. *The whole Earth bath, and brings forth Poyson.* 46. *Under Poysons do lurk the most powerful Secrets.* 47. *An Errour concerning the gelding of Asarum.* 48. *An errour concerning its Crudity.* 49. *No true Poyson in its first Being.* 50. *The Death of the Marquess Spinellus, by the folly of Hellebore.* 51. *The examination of the Viper.* 52. *Arsenical things, by what right they are the Remedies of Ulcers.* 53. *How Poysons may be made Remedies.* 54. *The Chymicall Remedies of the Shops.* 55. *An examining of Gold and Pearles in healing.* 56. *The use of Oylie things.* 57. *What hath departed from clarified Sugar.* 58. *The manner of applying of external things.* 59. *The Collection or gathering of Simples.*

THe Art of Healing is every where drawn into the Tragedies and scorn of the vulgar. Because Physitians will not be wise, but according to the custom of the Schools. For what they read, they believe, and what they believe, they deliver to the trust of the Apothecary, his Wife, and Servant or Family, to be put in execution. For thereby every maker or seller of Oyles or Ointments, and old Women, do thrust themselves into Medicine, scoffe at Physitians, because also, they oft-times excel them in many things. For they were wont in antient time to reserve some things to themselves for a pledge of fame and family. But afterwards, sloath overcame, and gain disposed of Medicine as a plough, and by the just judgement of God, all things grew worse.

Before my entry of the Shop, I cannot but be angry at the describers of simples: For although there be no field more spacious, plentiful, and delightful in the face of the whole earth, and where the mind is more delighted, than in Herbarism; yet there hath scarce been a less progress made in any other thing. For truly the *Arabians*, *Greeks* or *Gentiles*, *Barbarians*, wild country People, and *Indians*, have observed their own Simples much more diligently than all the *Europeans*. For even from the dayes of *Plato* (wherein *Diascorides* a man of War, lived) nothing almost hath been added to Herbarism: but much diminished.

Galen, from a desire of robbery, wrote this study of another, his name being suppressed. He being plainly a non-*Diascorian*, snatched up the words of *Diascorides*. The which, in the mean time, *Pliny* hath besprinkled with many trifles: Because, as its very likely, he being of a mean judgement, not being able to distinguish between truth and falsehood, scraping many things together, on every side, hath described them, that he might equalize his name unto the greatness of his Section. But even unto this day, the more learned part of Physitians do as yet carefully dispute only about the faces and names of Herbs: As if the vertues could not speak before their countenance were known; the vertues I say, being first delivered by *Diascorides*: As if the power of Medicine had attained unto its end, in the first Author. But the more modern Herbarists, began to distinguish Herbs into Sexes, and supposing that they understood many things from thence, complained, that these things had remained hidden or veiled: As if nature, did labour in jest and not in earnest, had been careful of a Sex, where it was content with a promiscuous and Hermaphroditical Being or Body. For a sex doth respect only generation, but not operation, or the relation of like or equal objects. Therefore, that she might not frame, even the least tittle, in vain, who hath wholly referred her self unto the certain ends known to her Creator, wherefoever there was not need of the marks of Sexes to generate, she hath also disesteemed them in operating. But if of two Simples, one be stronger or rougher than another, surely that doth not denote the Sex, but the degree. For while the same Simple putrifieth, and is changed into small living creatures, these indeed, are not of one, but of both Sexes. The which surely could never be, if those Simples, should now have a Sex, or sexual vertues within them. For the same Herbs in number, are in Sex as well Masculines as Femines, promiscuously bred.

There were also afterwards, others, who would observe signatures in Herbs, as it were a Palmestry: and this Meditation, the root of Satyrion or dog-stones, hath notably promoted. And therefore through the desert hereof especially, they have introduced a sealed knowledge, or essayed Anatomy, that is, new names, and great swelling Titles, embroidered with their own boldnesses. I believe by Faith, that man was not of nature, and therefore likewise, that nature is not the Image, likeness, or engraving of man. God out of the eternal providence of his goodness and wisdom, hath abundantly provided for future necessities. He himself hath made and endowed Simples for the appointed ends of all necessities. Therefore, I believe, that the Simples, in their own simplicity, are sufficient for the healing of all Diseases. Therefore we must more study about the searching into the vertues, than about disputing any hard questions: Seeing that in Simples there is a perfect cure, and healing of all Diseases: And by consequence, that Dispensatories, which will us to compound and joyn most things together, do destroy the whole, and through a hidden blasphemy, do as it were strive to supply divine insufficiency.

Hence *Paracelsus* rightly writeth to Chyrurgions: To what end do ye over-adde unto *Symphitum* or the root of greater Comfrey, Vinegar, Bole, and such like wan additaments? when as God hath composed this Simple as altogether sufficient against the ruptures of bones? finally, whatsoever thou shalt adde unto it, thou makest, as if thou wouldest by thy correction, supply the place of God. Thou dost grievously erre.

Inlike manner, I also think, that God hath perfectly, and sufficiently composed in Simples, compleat Remedies of any Diseases whatsoever.

In the next place, I infallibly know, that there is in the Archeus of vegetables, no anatomical alliance or affinity with us, whether we regard the whole, or at length, their parts. For the endowments of Simples, are by creation: but not from an usurpation of possession: for properties were already in their own Herbes, before sin, death, and necessity.

Lastly, I believe, that God doth give the knowledge of Simples, to whom he will, from a supernatural grace: but not by the signes of nature! For what Palmestrical affinity hath the Boars tooth, the Goats blood, the peisle of a Bull, the dung of a Horse, or the Herbe Dayfie, with a Pleurisie? or what signature have those Simples with each other? Truly, I praise my Lord, who before Diseases were, created all things primarily for his own glory; neither marked he Simples for Diseases that were to come by accident: but for the grace of the universe, from whence indeed the Lord hath honour. Therefore

- 6 I have laughed at *Paracelsus*, because he hath erected serious trifles into the principles of
7 healing. There have not been those wanting also, who have brought the huge Catalogue of Diseases, into the signes of the Zodiack: whose number, seeing it was too narrow, they have enlarged every one of the signes into a threefold Section: To wit, that they might divide all the virtues of Herbes into 36, and gather them into a narrow fold. But the earth hath of it self, a seminal virtue of producing Herbes, the which, therefore, it doth not beg from the Heavens. For the whole property of Herbes, is from their Seed, and the seminataive power is drawn from the earth, according to the holy Scriptures: but not from the faces of the lights of Heaven. For 16 or 20 Stars, may be put to make a constellation, or one of the 12 Houses, and to be extended into 30 Degrees. But in what sort could so few Stars, contain the essences, feeds, faces, and properties perhaps of five hundred plants, differing in their species and internal properties? Moreover, besides a thousand vain attributions of so many things, as well humane as politick? Away with these trifles! The properties of Herbes are in the Seeds, but not in the Heaven or Stars. The powers of the Stars, are grown out of date, the which by an old Fable, have stood feigned unto heats, colds, and complexions. For the Stars, in whatsoever manner they are taken, do differ from Plants, much more, than Herbs do from mists and frosts, or fishes from precious stones. Let it therefore be a faulty argument, to have attributed effects to causes, which do contain nothing at all like a cause in them. That is even as for a watch-man to dream, if he shall believe such a thing, or wholly to go out of his wits by his own thought. *Mathiolus*, *Tabernomontanus*, *Brasavolus*, *Ruellius*, *Fuchsius*, *Tragus d'Allichampius*, and other observers of Herbes, are hitherto busied, only about the faces, and visual knowledge of Plants: but their virtues, they all as one, describe out of *Dioscorides*: they also tye them up unto the degrees of heat and cold, as though they did demonstrate something from the foundation: A shameful thing indeed it is, to have
9 drawn the Crasis or constitutive temperature of Simples out of heat, but not from the fountains of the Seeds. *Dodonanus Friso*, being now become a Dutch-man, *Tabernomontanus*, with a few others, although they did insist on the same steps of Degrees, yet they have subjoyned some additions, from their own, or the gathered experiences of others: but as yet, plainly confused, uncertain, and badly distinct: because that they have not written from knowledge, but either from the noted revelation of the vulgar, or they
10 being things drawn from a casual experiment. There is none amongst them all, who hath knowingly described the properties of Simples, even as he, who had described all things, from the Hyssop, even unto the Cedar of *Libanus*. As a sure token, that true knowledges or Sciences are not elsewhere to be fetched, than from the *Father of Lights*: even as I have elsewhere touched at by the way, concerning the hunting or searching out of Sciences. A living creature that is entire, and alive, cannot be bruised without its dung. It
11 is therefore to be lamented, that it hath not been yet weighed, that Herbs have much dung, which have never cast forth any out of them, and so that they are to be refined with the greater wariness.

- 12 In the next place, we distinguish the arterial blood in a man, from his venal blood, by divers marks: But in plants, it hath seemed sufficient to have said it. That plant, in one only subject, consisteth of divers and opposite properties: they have acquiesced, neither hath there been a deeper entrance, than by some common favours, and uncertain events. For out of the stalk or hollownes of Poppy being hurt, Opium distilleth. Celandine or Swallow-wort weeps a golden, and Tithymal or Spurge, a milky juice; out of the burdock, gums, out of the Herbe Chamelion, a Bird-lime, &c. whose Simples, if thou shalt
bruise,

bruise, they shall give forth another and a far more inferiour juice, to wit, a dung and venal blood, well mixt with arterial blood, however they are clarified. For let young beginners learn to distinguish and separate an arterial blood from the venal blood and substance of Plants, if they do ever minde to have performed any thing worthy of praise, by Simples: for from hence it comes to pass, that how stoutly soever thou hast operated in extracting, (the manner thereof being taught by those of late time) yet one dram of crude Rhubarb doth effect more being administred in powder, than whatsoever thou shalt extract out of a dram and a half. For the stomach resolves more by its ferment, than whatsoever the mediating or middling juices of extractions can take away; because they resolve without distinction, liquor of the substance which is like unto a dreg, and despised. For *Quercetanus*, when as he had taken notice, that the innermost powers of things were not to be sufficiently examined by Palmistry, and Anatomy, which they call, Sealed; calls divination by the fire unto his help, but he failed in the way; to wit, he had drawn out of the ashes of a nettle, a Lixivium or Lye, the which by chance of fortune, an Ice in his galley pot, had a little constrained or bound together (for if the Lye had been the stronger, it could not have been frozen) he wondring in the morning, cries out; *Behold, oh what a figure of the nettle, do I behold in the glass!* And rejoicing, he established a Maxim: To wit, *That a seminal figurative Being of Herbs, doth remain in the ashes, unconquered by the fire.*

13

That good man declareth his ignorance of Principles, not knowing, first of all, that every Ice, beginning, maketh dented or tooth-like points, like the shape of the leaf of a nettle: And then, that the Archeus is the figurer of the thing to be generated, which is burnt up by the fire, long before a coal or ashes is made.

Thirdly, if a Lixivium should express the seminal Being of Herbes, surely it ought to resemble, not the leaves; but the root, stalk, flowers and fruits. But the figurative power of the Seeds, lurketh in the Archeus, the Vulcan of herbs and things capable of generation, which cannot subsist with fleshly eyes. It is to be begged only of God, that he may vouchsafe to open the eyes of the mind, who to *Adam*, and who to *Salomon*, demonstrated the properties of things at the first sight. *St. Theresa*, having once, mentally seen a Crucifix, perceived it to be the eyes of her soul; the which she thenceforth kept open for her life-time, and the flesh hath shut them up in us, through the corruption of nature. For neither for the future, do we else, know natures from a former cause; neither do we now know the interchangeable courses of the Archeus, but by a naked observation. Many Simples are indeed assigned us; but for the most part, false and disagreeable. Neither doth the reading of Books make us to be knowers of the properties, but by observation: No otherwise than as a Boy who sounds or sings the Musick, doth notwithstanding, not compose it, as neither hath he known the first grounds of harmony, by means whereof, the tunes or notes were so to be disposed. If this thing thus happen in sensible things which are to be known by sense, the reason whereof, the hearing measureth: what shall not be done in Medicinal affairs, wherein the virtues of Simples are not penetrable by any sense? But the descriptions of all kind of Medicines, are read, being delivered in the Shops, with a defect of the knowledge of properties and agreements. For I speak concerning a knowledge of vision, such a one, as the soul hath, being separated from the Body, and such a one, as God bestoweth in this life, on whom he will, and hitherto hath he removed this knowledge from the company of those who ascribe all reverence unto heathenish Books. The *Father of Lights* therefore is to be intreated, that he may vouchsafe to give us knowledge, such as once he did unto *Bezaleel* and *Aholiab*, for the glory of his own Name, and the naked charity towards our Neighbours: For so, the Art of Medicine should stand aright in us, under every weight. But it is to be feared, lest he who hath suffered the Books of *Salomon* to perish, may reserve this knowledge of Simples for the age of *Elias* the Artift. For the Schools have by favours or tastes, promised an entrance unto the knowledge of Simples: That as it were the crafts-men of all properties, they by sharp, bitter, salt, sweet, astringent, soure, and un-favoury, heats and colds, would measure them. But proud boastings are made ridiculous by the effect. For truly, also Opium being very bitter, the which in this respect, they will have to be hot; yet they teach it to be exceeding cold. So sharp or tart Camphor, according to their Rules, ought to be hot; yet they declare it to be (without controversie) cold.

14

In like manner also *Aqua fortis*, oyle of Vitriol, Sulphur, &c. being soure things, according to the Rules of tastes, ought to be exceeding cold. But I am to shew, at some-time, in its place, that the Schools have not yet beheld the faculties of things, as to the outward bark or shell of them; and therefore that they have passed by the fountains of

15

their seminal properties. Finally, there is in every thing, a specific favour, which ought to teach their property, if there be any other external signates: To wit, there is in Cinnamon, besides a quick sharpness, a peculiar grace or acceptableness in favour, the which thou canst scarce find in any Simple besides. So Gentian, Elecampane, &c. have besides common bitterness, a specific favour, which (by reason of a singularity proper to any kinde of Simples) cannot be reduced under Rules, and is the alone accuser, as also distinguishing of all properties.

Furthermore, that Simples are to be chosen or gathered in the station wherein they are in their vigour, this is common to the Schools, country people, and my self: To wit, Seeds, while they are almost dry: but stalks and leaſs, while being juicy, they are moiſt through a full quantity of venal blood: roots also, while they swell with strength, and are not as yet worn out with generating and cocting: but being now filled through much reſt, their Archeus being awakened, they meditate of budding. Others perſwade the Autumn; I for the moſt part, love the Spring: the which I have learned by experience in Polipodium, Briony, &c. For the juice of Herbes, is their venal blood, the which being more and more ripened, is either gathered into them, or ends into the nature of fibers, or at leaſt wiſe doth ſlackly perform its office, whiſt the vital power meditates of propagating a Seed.

Therefore, in ſearching into, and gathering Simples, nothing hath remained more neglected, than that which was moſt deſired, and wherein, even from the beginning hitherto, there hath been no progreſs. Indeed the powers of Simples, and their immediate ſubjects, have remained unknown. For thoſe, beſides a cleer and viſual knowledge of them, do require a deſired preparation and appropriation. Firſt of all, the knowledge of Sciences: but that doth not preſuppoſe traditions declared at pleaſure, and tranſcribed one to another. But preparation doth not only require the boylings and bruifings of the ſhop: but the whole Art of the fire. At length a fitting or ſuiting, applying or appropriating, requires a ſpeculation founded in the light of nature, of man, Diſeaſes, and affects, and then their dependencies, changes, and interchangeable courſes. Its no wonder there-
18 fore, that the Doctrine of Simples, hath remained barren. In the mean time, under ſo great ſloath of mortals, the Almighty hath vouchſafed to raiſe up Alchymiſts, who might worthily think of the tranſmutation, ripening, tincture, and promoting of virtues, as of things chiefly neceſſary: And ſo they having proceeded by degrees unto the harmonious unity of Medicine, have become the obtaining followers of their own deſire. For they have not gone unto the unequal tempering or mixture of feigned humours, their ſtriſe, and deſluxions; yea, nor indeed, unto the products, or fruits of Diſeaſes (to wit, for the averting whereof, they had known that they followed only the relapſing cloakings of Diſeaſes) but they converted their ſtudy unto the more formerly, or firſt cauſes: knowing that the impowering foundation of many defects, was ſtamped or imprinted in the Archeus of Life. Wherefore, by the purity, ſimplicity, and ſubtility of Remedies which have a mark of reſemblance, they have attempted an entrance unto the middle Life. That if any of them do not pierce unto the firſt Conſtitutives of us; at leaſt wiſe, they may unfold their natural endowment in the entrance of theſe, by ſtirring up our powers, by their acceptable talk or communication. For truly, nature doth not only acknow-
19 ledge the actions of agents, which do wholly enter into the jurisdictions of Patients (indeed there is only a corporeal action of ſuch, and an obedience of the nourishing faculty) but there is alſo another authority of agents, not to be deſpiſed, which is an unfolding of their native endowment, into the very middle Life of the Archeus, by reaſon of the ſequeſtrings of mortality, dreggineſs, and turbulency. By which ſuperiority, ſuch agents, do ſuffer not any thing from their Patients, and much leſs are they altered, by reſiſtance
20 or re-acting. For ſome Remedies being thus prepared, do by their deaf wedlock, ſo reſreſh our faculties, that they do the more aſſure us, that they came into the world for this purpoſe. For ſome things do even reſreſh us by their fragrancy: Alſo, there are other things, which being ſhut up, are hindered from ſhewing their good will unto us; as gold, and gems or precious ſtones. Others in the next place, (their ſhakles being looſed) are brought up into a degree, being as it were happy through the favour of an increaſe, and the liberty & authority of their powers or virtues being obtained, they raiſe us up from a fall, and comfort us: Surely not more ſluggiſhly, than (after another manner) deadly poyſons do proſtrate our ſtrength: To wit, they drive away a corporal, yea and fermental poyſon: but not that any Medicine is able to renew again the powers implan-
ted in the parts, they being extinguished, aboliſhed, and worn out.

But it hath been the error of the Schools, not firſt to ſubdue the juices of Herbs, together

ther with their substance, and their ferment, before that a choice or separation of the best parts be possible to be made. Then also, they have neglected diligently to search, that the juice of things being pressed forth with a press, doth afterwards, only through the odour of a certain sulphureous fire, remain uncorrupted, without sugar, or any other ad-ditament: by favour whereof it attains a certain Balsamical Being, and translates the airy draughts incorporated with it, unto a great act of perfection. Moreover I now descend unto the labours of the shops. For first of all, although Extracts may seem to ease a weak or dull stomach of pains: yet I have those in no great esteem, for their errors already before noted. But Magisteries, I willingly lay up in the place of extracts, whereby the whole substance of a thing is reduced into its primitive juice. Which manner of preparation, shall remain for ever unknown to the common sort of Physitians. In which regression or return of solution, juices differing in kind, are voluntarily separated, swimming upon each other, for the most part, with divers grounds, and one Ruler, famous in diversity, containing the seminal Being, settles to the bottom.

In the second place, I pitty the so many connexions, and confused hotch-potch mixtures in the shops, the bewrayers of ignorance, and uncertainty. For the Schooles hope, that if one thing help not, another will help: and so (through the preachment of Herbarists) they joyn many things together with each other, they being extolled by them, for the same purpose. The sisters of huckstery, seething and tempering or seasoning, are adjoyned: Therefore the Dispensatories described by the Schools, and used by Physitians, are commended, for expedition, and promptitude or readines (indeed for this cause, Promptuaries or store-houses have their name) but not for property and necessity: To wit, they having only general and universal intentions, with a substituting and dispensing one thing for another. Whence they are called Dispensatories. In all and every one whereof, the concurrence and confounding of crude Simples, do afford a conjectural event. For the sick man is on every side (for his money) deceived; indeed, as well through the belief and deceit of the Apothecary, as by the oath of Doctorship. He thinking, that he cannot erre, deceive, or be deceived, who swears that he is admitted as a skilful and sufficient Physitian. Ah, I wish that Magistrates, may prevent so great deceiving of Patients, and fraud of Physitians. I, in the first place, do greatly admire a sincere composition in Simples, which is made by Gods compounding. For, I find in the greater Comfrey, a full Remedy of a broken bone, it having all things whereof that hath need. Whereto, if thou shalt admix Bole, Vinegar, or any other forreign things, even as I have admonished above out of *Paracelsus*; thou hast now corrupted the mixture ordained of God. Yet, as oft as any particular things have not there intent, I do forthwith admit of adjoynings, if the things do couplingly attain that by their conjoyning, which they had not in their singularity: Which is hereafter to be confirmed by a teaching experiment. An example whereof, is most evident in Ink, and Tinctures or Dies. For indeed, at the time of repenting me of my studies, I often considered, that seeing there was in nature, a certain proportion of matter unto matter, and of form unto form, the same proportion of properties unto properties, and by consequence, of effects unto effects was also kept. But the composition of Simples, presently taught me the defect of these, where their interchangeable courses do presently enter after the co-mixt beginning of the Seed, and do for the most part, demolish themselves, no otherwise than as the Seeds of many things being bruised and confounded together, do exclude a seminal hope.

I afterwards knew, by many labours, and expences, that the matters of Remedies being advanced to a more noble dignity only by their preparation, did ascend unto a degree of perfection, liberty, subtilty, and purity, and did far excel the Decoctions, Syrupes, and Pouders of the Shops co-heaped under Honey. For whosoever is well instructed in the exercises of the fire, doth cleerly behold with me, that there is no Medicine to be found in dispensatories, which may not contain more hurt than profit. For the Schooles which profess *Hippocrates*, if they acknowledge that Diseases do proceed from sharp, bitter, salt, or soure; may see, that they do wholly mask and season all things with one honey, and one only sugar, and do blunt the properties of Remedies (otherwise weak enough in themselves): as though the one and alone Medicine, and top of all Diseases, did stand in sweet. For they answer, That laxative Medicines do operate nothing the more unsuccessfully, although sugared; as also, because they are the more acceptable to the palate; and thirdly, because they are thus preserved from rottenness and corruption. As to that which concerns the first; I grant indeed, that poysons have an equal effect, whether they are accompanied with sugar, or are swallowed alone. For truly the power of laxative things, is wholly sealed in the melting of the Body, as also in the putrifying of that which is melted,

ted, and so that it ought to be of no credit or esteem with poyson. Therefore the answer of the Schools by poysons, is impertinent unto the question concerning the Remedies of Diseases, as bitter, sharp, &c. Unto the second I say, that it is a frivolous answer, while there is not satisfaction given unto the first. They know not therefore as yet, that the virtues of Remedies are changed and blunted by sugar. That to many, the taste of Aloes is more grateful, than that of honey.

In the next place, that those who desire to flatter the tongue; yet, cannot the stomach, which only by the beholding, abhorreth Medicines covered over with the deceit of sugar. That a thing is more easily taken in some liquor, in a few drops, and is more freely digested or concocted within, than being seasoned with plenty of sugar. Again, that things being immingled with a convenient liquor, do the more fully or piercingly enter, than being overwhelmed with much sugar. That sugar, although it be grateful to healthy persons, yet it presently becomes horrid unto sick folkes, being hostile in most Diseases of the stomach and womb: but that in other Diseases, it oft-times makes the help of the adjoynd Medicine, ridiculous or vain. For sugar is diametrically opposite to the four ferment of the stomach, and therefore it causeth the more difficult digestions. For sugar is clarified with the Lixivium of Calx vive, and Potters earth. For if the Schooles had known the sharpness of the spirit of honey, and the stinking dregginess of sugar, they had been content with a more sparing use of them among the sick.

31 Lastly, unto the third, I say, that the Schooles herein confess their ignorance, that they know not how to preserve Medicines from corruption, without a pickling, and gelding of their virtues. The deceit therefore of Syrupes, is sufficiently discovered, which are made onley by boyled Simples, honey or sugar being added. Hitherto at length, that tendeth; that Vegetables do only lay aside their juice and musilage, by boyling in waters: Which crude and impure things, do impose their troubles on the stomach, before that they being digested with the honey, do appoint us to be heirs of their virtues. Especially, because the gumminess of herbes, is fryed with the honey and sugar, becomes ungrateful and troublesome to the stomach, and by boyling, a notable waste is made of its virtues.

32 I praise my bountiful God, who hath called me into the Art of the fire, out of the dregs of other professions. For truly, Chymistry, hath its principles not gotten by discourses, but those which are known by nature, and evident by the fire: and it prepares the understanding to pierce the secrets of nature, and causeth a further searching out in nature, than all other Sciences being put together: and it pierceth even unto the utmost depths of real truth: Because it sends or lets in the Operator unto the first roots of those things, with a pointing out the operations of nature, and powers of Art; together also, with the ripening of seminal virtues. For the thrice glorious Highest, is also to be praised, who hath freely given this knowledge unto little ones. I also, seldom use Remedies fetcht from beyond the Seas, or from the utmost part of the East; as knowing, that the Almighty hath made all Nations of the earth capable of curing; neither that he would, that wares should be expected to be brought from the Indian shore, as neither, that God was

33 less favourable unto mortals, before the Indies were known. Therefore the Divine Goodness hath perswaded me, that for Diseases Inhabiting us, their own Remedies are to be found at home. And Alchymical speculations have taught me, that a small liquor may be prepared, which keeps the Crasis of Simples uncorrupted, without a foreign or hurtful

34 seasoning. Therefore, they boyle Herbs in water, wine, or a distilled liquor, unto a third part, half, also co-heaped in a double vessel (as they say) and under a Diploma. Wherein, the chief virtues, if they do not perish; at least wise, none but the burdensome and un-

35 grateful muck of the Herbes (to be digested by the stomach) is drawn out, however the decoctions and juices may be refined with whites of egges, and may be masked with sugar: Because they are drunk without a separation of the pure from the invalid or weak part, without an unlocking of the shut-up virtues, without the root, and participation of life, an amending of defects, crudities, excrements, and violent powers, whose activi-

36 ties our nature cannot bear without a grievous damage. And then, Electuaries, Confections, or Pills, whether to comfort, or to loosen the Body, do as yet abound with greater miseries than Syrupes: for they are ridiculously, ignorantly, and unconsiderately cō-

37 knit of many Simples, without boyling, only by bruising or powdering; the which, are for the most part, crois to each other, do hurt one another, and themselves are hindered from joyning in a mutual endeavour for us, as they ought. For that is not in nature, which the Schools have expected in numbers, wherein forces do agree together in one, because they consent by unities. For truly, in nature, every thing is singular, lives in its own heal-

Family-administration, nor rejoiceth it in Wedlock. Thus far also, the operation of healing proceeds into the middle life of the Archeus, the which, by connexions and confoundings, if it doth not plainly perish: at leastwise, it is manifestly weakened. For the vain successes by the mutual embracing of many seeds, ought to have admonished the Schools, to abstain from the confounding of so many and so divers Simples. By how much the rather, because under that multitude, many suppositives or things put in the place of others, opposites, vain things, but besides most of them ponderous, impertinent, unfit, improper, and therefore, weak, barren, evil and dead things, do run together, or at least wise, are made. For although the worthinesses, and adulteries of Simples, belong more to the Merchants, than Apothecaries: yet not to have distinguished of those Simples, is the part only of a sluggish, ignorant, or covetous Apothecary.

In the mean time, it is certain, that for the most part, all things are at length, taken crude, hard, unripe, shut up, poysonfom, impure, bound, and unfit for the communicating of their virtues, and to be the more depraved by co-mingling. And because the stomach of sick folks is in the entry of the House, and therefore also first offended, because it is weak, and unfit to extract the middle life, being beset with so many difficulties: Therefore it was by all manner of labours and singular care to be prevented, that we may prepare all things for a weak stomach, if we hope sweetly to reach unto our conceived and desired ends. The use therefore of all Confections, is horrid, nauseous, and tiresome. And therefore, from hence is the Proverb: *Take away that; for the Shops have a smell.* Also, if thou takest way from loosening Medicines, Scammony and Coloquintida, the whole fabrick of the Shops in loosening Medicines, will fall to the ground. For purgative Medicines, besides Scammony, Coloquintida, Euphorbium, Elaterium, Esula, and so manifest poysons, and those moreover adulterated, sordid, and horrid (the heads of diminishing of our faculties and strength) do contain plainly nothing: unless we suppose the same poysons to be mitigated in Aloes, Rhubarbe, Senna, Agarick, Manna, and the like, and to be so much the more obvious or easie for deceit. Therefore I have hated the preparations of Simples, as oft as washing, boyling, burning or scorching, adjoyning, or calcining, makes havock of their faculties. For Aloes looeth its juice by washing, and the residue remains a meer Rosin, the which, by its adhering unto the bowels is a stirrer up of wringings, and the piles.

In the next place, seeing the proper and chief virtue of Spices is in that which is odourable, if this doth of its own accord vanish away, and voluntarily cease from the Body perfumed, what shall at length be done by boyling and roasting, especially where a degree shall happen thereunto? which thing, our distillings of odoriferous things do teach. At length, what can be said to be more foolish in the Schools, than to have reduced Harts-horn into an un-favoury ashes (and that deprived of all virtue) for great uses? and to have substituted a gelding or rather a privation, in the stead of preparation? For I have learned, that that or most Remedies, do by their odour & favour, as well within as without, help our infirmities: and therefore I have detested the co-mixtures of many Simples, because, if unto a healing odour, thou shalt moreover adjoyn another, which may suppress, cloak, convert the former into its self, or also raise up a neutrality from them both; I have known, that from thenceforth, the specifical healing virtue would be abolished, and the effect desired by the sick, made void. Therefore, the joyning of Spicy odours, and sweet tasted favours are suspected by me.

Furthermore, I have hated many other Confections of the Shops, because foolish ones: whereby they endeavour to cloak and blunt the supereminent and violent power of things, by some ridiculous things. Yea, in the mean time, they declare abroad, that the in-bred favour of such a Medicine, is by so much promoted, by how much they do withdraw its powers by virtues adjoyned thereunto. For in most of them, they admix some grains of Cinnamon, or other sopperies, that they may subdue the furies of the more violent things; as if the furies of laxative Medicines, are tamed by some grains of Spices! For who that is but even slenderly instructed in Chymical preparations, knows not, that in Spicy Confections, there is in the first place, the offence of plurality? and then, that most of those things also do vainly offend in the crudity, hardness, shutting up or closeness, choice, and substituting of Simples.

In the next place, that those Simples do moreover, flow thither in an uncertain Dose? whence indeed, the hoped for effect is prevented? And indeed, by the error of every one of them? And that I may resolve this thing by one example: what is there I pray you, in Lithontribon, or the Confection for wasting or breaking of the Stone, which may satisfie the promises of its Etymology. For to what end is there in it, Cinnamon, Cloves, the

43

three

three Peppers, Acorns, or Galengal, Costus, Rhubarb, Cassia, Bdellium, Mastick, Amomum, Peucedanum or Dog-fennel, Spikenard, Ginger, the wood and juyce of Balsame, Gumme-dragon, Germander, Euphorbium, also the Oyles of Nard and Muske? Do every one of these conspire for the scope proposed in the Etymologie? Or whether from those being co-mixt together, and perfuming the intentions of each other, a new virtue shall arise, which may compleat its Promises? To wit, Can it powerfully break the stone in the Reins and Bladder? and can it presently loosen all the defects of Urine? should not Opobalsamum, rather perish in other excrements and sweepings? But in Opiate confecti-
 ons, there is the same deafness, as in spicie ones, every where easie to be seen. The which, that I may resolve by one onely example also. For whither in *Aurea Alexandrina Nicolai*, doth the confounding together of sixty five Ingrediencies tend? Of which Simples, there is no affinity with Opium and Mandrake, the pillars of the Confection? Truly the congresses of Simples made at the pleasure of an ignorant man, have befooled the Schooles, and killed the sick: they have frustrated them of their hope put into them, and by uncertaine conjectures have exposed them to sale, and made them to passe by the occasions of healing, which are unstable every moment. Therefore the compositions of the shops, if thou dost examine them without prejudice of mind, thou shalt on every side, with a profitable admiration be astonished, that in Syrupes, Electuaries, Pills, Ec-
 ligmaes, Trochies, and other things, the World hath been deluded by the prate of Physitians, the foolish blockishnesses of the Schooles, and their hurtful presumptions.

For we being Christians, do believe with the Stoicks, that the World was composed for Mans use. And when as I in times past, earnestly contemplated of that thing with my self, it presently seemed to me, that humane use might commodiously want so great, or so many Poysons: For our more cold climates, I have found, at least, in this, to be the more happy, that they want creeping, poysonsome, and deadly Monsters, wherewith otherwise, the hotter Zone doth abound. Surely, we have not much necessity, familiarity, abundance of poysons, neither shall their use, in any respect recompense so many calamities arising from thence: Yea if the earth doth bring forth Thornes and Thistles, as a curse of Sin; truly it brings far greater calamities unto us, on its back, as well in the order of living creatures, as vegetables, which are importunate of the life of Mortals: wherefore, the Text threatens some very small matter by the Thistles and Thornes, which man had now bewailed as the greatest, in the craftiness of the Serpent his Enemy. Surely if it be well searched into, Nature hath scarce any thing free, which hath not its own Venom secretly admixed with it. For we have not Roses or Violets, which do not assault us; as that under so great a fragrancy, they do not hide the contagions of Poyson: to wit, notable markes of Putrifaction, a co-melting of our body, and filching away of our strength or faculties.

45 Therefore we entring into an account of simples, shall find but few guiltless: Yea if thou shalt cast an eye on the fields, the whole globe of the Earth, is nought but one onely and conjoyning spiders-web. Moreover by a more full heeding of the matter, there seemeth to be at this day, the same face of things, which there was before one only sin. And so perhaps, that there were from the beginning, more hurtful and guilty Poysons, than there were good Medicines in the earth; yet there was not a Medicine of destruction for man: Because *Paradise* wanted those Poysons, although Serpents were present; or perhaps, Poysons were to be of no hurt to man in *Eden*, by reason of his immortality. But on the contrary, the Almighty saw, that whatsoever things, (even in the World, out of *Paradise*) he had made, were good in themselves, and for their ends. Wherefore I long agoe was deceived in my self, as thinking how unworthy Poysons were; both because the Honour of God did not require their existence; and also because man had willingly wanted many Poysons, and so I supposed that Poysons were made neither for the glory of God, nor for the use of man. There are indeed a few things which are guiltless, in the use whereof, without a caution, there is safety; but most things do fight against us with a horrid Tyranny. Other things also do gnaw us by scorching us with their sharpnesse; very many other things do every where, under a shew of friendship mock us, and carry a secret destructive enemy within them. But there is nothing (universally) which doth not abound with dreggs, and is not horrid through impurities: In the next place, which doth not consist with crudities, an unequal tempering, and an unvanquished stubbornness of perverseness. For although man was brought into *Paradise*, yet the Creator of things worthy to be praised, foreknew from Eternity, that the World should be a Mansion for Man; and as he gave the Earth to the Sons of Men, so also he made the same for Man, with all things contained therein.

At length, I by Chymistry, beholding all things more clearly, it repented me of my former rashness, and blockish ignorance; For truly, I did on every side, humbly adore, with admiration, the vast Clemency and Wisdom of the Master-Builder. For he would not have Poysons, to be Poysons, or hurtful unto us: For he neither made Death, nor a Medicine of Destruction in the Earth; but rather that by a little labour of ours, they might be changed into the great pledges of his Love, for the use of Mortals, against the cruelty of future Diseases. For in them lies hid an aid or succour, which the more kind and familiar Simples do (otherwise) refuse. So, horrid Poysons, are kept for the more great and heroick uses of Physitians. For brut Beasts are scarce fed with them; whether it be that they do beholdingly know a Poyson, which else by odour and savour, is not bewrayed; or that a certain Spirit, the Ruler of Bruits, doth preserve those Poysons for greater uses, as heirs of the greatest virtues: At least-wise, it is sufficient, that brut Beasts do leave the most powerful Remedies for us, as it were by the command of the most High, who hath more care of us, than of Beasts. For crude *Asarum* or *Asarabacca*, with how great anguish doth it provoke Vomit, and the Stomack testifieth that a Poyson is present with it? and how easily doth it depart through boyling, and the Poyson is changed into an opening, Urine-provoking remedy of lingring Fevers, the which, the occult or hidden spiciness therein, doth discover? So, *Aron* or *Wake-robbin*, being boyled in Vinegar, waxeth milde, and becomes a healing Medicine of great falls.

Wherefore the Schooles have appointed corrections; but I wish they were not ridiculous ones, not rather geldings, not withdrawals of their faculties! Indeed they think that the laxative part flies away out of *Asarum* by boylings, even as every thing doth (through its own rottenness) in languishing years, consume.

But at leastwise the root of *Asarum*, doth not wax mild being boyled in Wine, even so as it doth if it boyle in Water: Yet in an equal degree of the fire, its laxative part would in like manner fly away.

Therefore others think, that the crudity in *Asarum*, is the effector of its loosening; but these do neglect pot-herbs, which are more crude than *Asarum*: But that *Hellebore* is not to be ripened by boyling, if Vomiting be to arise from crudity. They boyl *Scammony* in foure things, that they may mitigate it; but the common sort of Physitians have already known that *Scammony* is thus gelded; so as, that if it be exposed unto the sharp vapor of Sulphur, it is plainly deprived of its virtue; and so much of the *Scammony* doth depart, as it shall draw of the sharpness. But I being willing from a fatherly affection, to correct the furious force of Medicines, do understand, that the ancient faculties or virtues of things ought to remain, and to be turned inward in their root, or to be transchanged under their own simplicity into other endowments or qualities privily lurking in the same place, under the Poyson their keeper; or to be bred a new, by reason of an added perfection: After which manner, *Coloquintida*, turns its laxative and destructive quality inwards; and a resolving faculty springs up from the bottom, being a greater or singular curer of Cronical or long continuing Diseases.

For *Paracelsus* laudably attempted that thing in his tincture of the Lile of Antimony; yet was he silent, or knew not that the same thing was to be done in all Poysons of living Creatures and Vegetables whatsoever, by their own circulated Salt: For truly all the Poyson of those perisheth, if they shall return into their first Beings.

This Hinge, not the Schooles, but Physitians chosen of God, whom the Almighty hath chosen from their Mothers Womb, in time to come, shall know; and he shall make a difference of the Sheep from the Goats. Simples therefore of great powers or virtues, are not to be gelded, nor mortified, but to be bettered by Art; by reason of the extracting of hidden faculties, or by a suspension or setting aside of the poysonfomeness, or by a substituting of one endowment in the roome of another, by commanding specifical adjuncts. These things are for those, to whom it hath not been granted to taste the power of the greater circulated Salt. For some things do by adjuncts wax milde, their cruelty being laid aside, do become neutral; to wit, through virtues being partakingly assumed on both sides. Neither therefore may we borrow these adjuncts from the received Dispensatories of the Shops, which do not teach a bettering, or even corrections; but a destruction of things, or surely they afford nothing but correcting mockeries. For Example; *Marques Charles Spinelli*, late General of the *Genoans*, when as he had walked late on foot about the City, having thorowly viewed all the Walls, commanded the Physitians to be called, and said unto them, that he had sometimes laboured with the Falling-sickness, and was cured by me, and that now and then he as yet felt a giddiness in his Head, since he had come out of *Aquitane* into *Liguria* or *Genoa*, by crossing the Sea.

A circle of Physitians, next morning, gives him a scruple of white Hellebore to drink, and for a correction thereof, added as much of Annise-seed; presently after half an hour, he Vomiteth, and afterwards he invokes the aid of me, being absent, and accuseth his Murderers, saying, *Helmonti mio, voi me lo dicesti, gli Medici t'ucciderano*. Oh my friend *Helmont*, thou toldst me this; that these Physitians will kill thee. He was silent, and after two hours, his Stomack being first contracted, and then having a convulsion throughout his whole body, he dies: the Physitians seek excuses, and the Earth covered their fault. For so the Confections of the Schooles throughout their Dispensatories, do carry many foolish correctives into the fardle with them, Opiates have hot things (especially) adjoynd unto them; but laxatives, for the most part, Ginger, Mace, Annise, and whatsoever things might cure wringings of the bowels, from a later effect of loosening Medicines. Fie, with how unpunished a liberty, doth ignorance rage on mortals! How little do they understand their own *Hippocrates*: If those things are taken away, which is meet, (that is, which hurt and burden) the sick feels himself better, and doth easily bear it. For seeing those things which hurt within, do now and then, scarce weigh a dram, every purge which is directed for health, ought to be an evacuation, either unperceivable, or at leastwise, exceeding moderate, and that with a restoring of the strength or faculties. For this is that which the sick do easily bear, with profit or help. The Correctories therefore of Medicines, are unprofitable patcheries, and a weight described by the Schooles, without the knowledge of things, and so destructive at least, to the Medicines, if not together also, to the sick. This part of Medicine requires a diligent and expert Secretary of Nature; Because in that part, the most ample riches of Medicines, and guilded household-stuffe of *Glaura*, is found. The Schooles had in times past, learned of our Philosophers, that most excellent virtues do inhabite in Simples, over which destructive poysons were appointed chief Keepers: thereupon, their rashnesse succeded, which co-mingled expresse Poysons, and manifest Corrosives, with Antidotes; hoping, that by the goodness and quantity of adjuncts, the malignity of the Poyson was to be overcome; as if it were convenient for health, for a pestilentious Glove, to be brought unto guests into a chamber filled with healthy aire.

51. For I do not here accuse the Viper in Triacle, without which, to wit, this hotch-potch of Simples is as it were dead; For the flesh of Vipers is in itself unhurtful, and without Poyson; yea, an Antidote against Poyson: But little balls prepared thereof, in the boyl-ing do leave all their state in the Pottage, which the raw flesh did keep. I complain in this place of Arsenical things, which are Magistrally (as they call it) put into an Antidote. For the Schooles by reason of the rashness of boldness, or self-confidence, presume to deserve credit, and to have placed the glory of Studies, in the Authority of their possession. Neither is it alwayes, that even the most excellent virtues do abide or dwell about destructive Poysons, in the same subject, so as that these are covered over by Poysons.

52. For Arsenick and Orpiment, &c. How much soever they may be fixed, and dulcified or made sweet; yet they are never to be taken inwardly, however others shall otherwise perswade. They onely prevaile without, and do kill and tame other Poysons of Ulcers, if they themselves have been first subdued. The corrections therefore of Medicines, are without the knowledge of properties, parts, and agreements. For what doth a spice Balance, in respect of a Poyson? If the whole body of man being strong and full of life, doth presently faint or fall down at the stroke of the tooth of a Viper? Shall Wolfes-bane wax mild through the admixing of the clove? Shall Coloquintida cease to putrifie, together with its gripings, if it be joyned with Gumme-dragon? The Corrections therefore, in Dispensatories, are burdens, and blockish addittaments, which do not cause the moderat-ings of poysonous qualities: but wastings of their faculties.

53. For even as Poysons, have a fermental readinesse of acting, so we were to have laboured, that we might reserve the strength and aptness of Medicines, but withal that we might direct them through the in-graftings of Art, unto the necessities of Chronical and far scituated Diseases. This one onely thing remains in this business, that we do infringe and tame the chief or greatest violence of the thing, with the propagation of its ferment.

54. Wherefore as I do (in general) pity the Compositions and Corrections of the Shops; so I do as yet more detest the precipitatings, glassifyings, and preparations of Mercury, Antimony, Tuttle, Sulphur, &c. And likewise, the adulterations of Spirits out of Spices, hot Seeds, Vitriol, Sulphur, &c. For they are prepared for gain, by our fugitive servants, and purchased by the Shops, rather to the disgrace of the Art of the Fire, than for the defect of the sick.

I like-

I likewise bewail the shameful simplicity of those, who give men, leaf-gold, and bruised or powdered precious stones, to drink, with great hope, telling their ignorance, if not deceit, at a great rate. As if the stomach may expect even the least succour thereby. And therefore the more subtle error of those, is more to be bewailed, who corrode Gold, Silver, Corals, Pearls, and the like, by sharp liquors, and seem to dissolve them, and think that by this means, they are to be admitted within the veins, and truly to communicate their properties with us. For they know not, alas, they know not, that that which is sour, is an enemy to the veins; and therefore that the foreign sharpness of the dissolving liquors being conquered and transchanged, those Metals and Stones are a powder, as before: The which, into howsoever the finest powder it may be reduced, yet nothing of it is digested by the stomach, or bestows on us, its virtues. Which thing that thou mayest see before thine eyes: For pour thou the salt of Tartar on things that are dissolved in some brackish corrosive liquor, and presently, that which was dissolved, will fall to the bottom in form of a powder: For if strong waters or aquæ fortes's, do not change metals in their substance (although those are made transparent, which were before thick or dark) but that Silver is thence, safely recovered; with what blindness therefore, do they give Stones and Pearls to drink, as if through the corrosives, they should lead the antient essence of Stones or a Metal behind? For it was the invention of a subtle deceiver, that he might have his Medicines in great esteem with the sick: Because ignorant deceivers think, that if the thing dissolving be not distinguished by the sight, from the thing dissolved, that the very thing also dissolved, is truly transchanged in its substance.

In the next place, Oyles and fatnesses are not of value for Balsams, Oyntments, and Emplaisters, unless perhaps, as they may give a consistence to the Medicine.

For first, a great part of men do not suffer Oyntments in their skin, because they stir up itchings and wheales, with swelling. And then, because the aforesaid Oyles, are for the most part prepared out of Herbes, the virtue whereof, lurketh in a muscilaginous and gummy juice: but that juice is drawn by boylings, into the broaths, or is pressed forth with a press, the which is not truly married to Oyles, but being fixed, doth at length, wax hard. But I do more rightly constrain or gather the Balsams of flowers, in Honey: Yet, I more admit of the simplicities of simple Oyles, than of compound ones: Therefore I do most especially expel the dissonant and deaf compositions of the Oyntments and Emplaisters of the Shops: because nothing is more blockish, than for the Powder of Vegetables, in fixing, to be scorched, and so made unfit under various fatnesses, and those ignorantly co-mixed: The which, if it shall be Mineral, it doth not admix it self with fat; but rather, is so covered and imprisoned within the Oyntments, that it becomes of none effect, and is for weight only. For nothing is to be mixed with Oyles, Oyntments, or Emplaisters, which cannot be Homogeneally resolved in them, throughout their whole Body.

It is also worthy of loud laughter, that Loaf, or the whitest Sugar, is commended, not because it is more sweet, and more worthy in its virtue; but because it is dearer, and hath often boyled with the Lixivium of Calx vive: Whereas the name of purity, hath caused a juggle. Flowers, Herbes, &c. being bruised, and Loaf-sugar admixed therewith, do fall asleep; those which are mixt with the more sweet Sugar, do snatch up a ferment, and in waxing hot, do unfold the virtues of a simple: But presently after, through a close digestion of heat, the ferment is restrained, and they become far more powerful. But the diversity of the Ferment depends on the Lixivium, wherewith one of the Sugars doth abound, but the other wanteth that Lixivium.

I am wont also, to apply Unguents outwardly, with choice or judgement: To wit, in affects, wherein the Cure is abroad or far from the Center, as in a wound, bruise, burn, &c. I perswade them to be applyed luke-warm. But where an inward affect requires an outward succour, as the Bloody-flux, Collick, Convulsions in the Stone of the Reins, a Schirrhus, &c. I bid that the Oyntments be cherished from without, with a heated stone, or hot sand: And that thing, I learned, by beholding Chaff walking upwards and downwards in a kettle of luke-warm water, as it were from heat under-kindled: and therefore first I conjectured, that through a potent heat, Oyntments being applyed, are quickened, and do joyn their Spirit to our venal blood: and then, I certainly found, that thus, the evil or Malady is drawn or allured forth, and that symptomatical on-fets are stayed: And that whatsoever things Baths do perform in the whole Body; this same thing, heated and kept-warm Oyntments, do finish in a part thereof, without the decay of the

the whole body. For a cherishing Tile or Brick, doth drive the odour of the Emplaister inwards, and doth attract outward, those things, which being the more flow, do else stick fast: and likewise the spirit making the assaults, is attracted together with the blood, is dispersed by the heat, and another succeedeth in its place, draweth the force of the Medicine, and as it were boyling up within, is driven back.

- 59 Concerning the gathering of Simples also, men are not every where, sufficiently grounded. They determine, that roots are to be gathered in time of Autumn: But for the most part, many things do afford the more effectual roots in the Spring-time. Polipodium flourisheth chiefly at Spring; but in Autumn, it affordeth a grey and black root: indeed barren and oldish. I judge, that all things are to be gathered immediately before their state of maturity: for a full ripeness is a beginning of declining. Therefore let all Fruits, Flowers, Roots, Leafs, Barks, &c. have their own determined spaces of ripenesses. For also, the juice in Plants doth first abound, the which in many doth forthwith after wax dry, or is consumed into Leafs. Therefore, the variety of maturities, doth bring forth, a variety of Collections. For so, some Leafs are more lively after their Flowers, but others are more juicy before their Leafs. Then also, there are some things which are stronger before the increase of their Fruit. Some remain with a perpetual countenance. Wherefore, they do the more rightly determine, who measure Simples according to the requirance of their aim.

CHAP. LX.

The Power of Medicines.

1. The Authors comfort in his persecutions. 2. The Author decyphers his Adversaries. 3. A dream of the Author. 4. He felt or perceived the Elementary qualities. 5. He perceived Coagulations. 6. He perceived Atrophies or Consumptions of the flesh. 7. He perceived drynesses in us. 8. He perceived drynesses in other things. 9. An Error of the Schooles. 10. Whence the heat of the Liver is, and in what manner it subsisteth. 11. He perceived the adulteries of Merchants. 12. He perceived two savours of things. 13. Notable things touching the taste and savour. 14. He perceived the Causes of Healing. 15. And likewise, a twofold manner. 16. He perceived the hope of immortality to be taken away. 17. He perceived a certain goodness in nature. 18. He perceived the digestive Ferments. 19. He perceived true diureticks or provokers of Urine. 20. He perceived the changing properties of Salts. 21. He perceived the spirit of Salt to be changed by the co-touching of things connexed. 22. He perceived the high or ready, or slow obediences of Salts. 23. He perceived Salts to be the Authors of wringings of the Bowels. 24. The top or perfection of Salts is seen in their first Being. 25. He perceived specifical Savours. 26. The definition of a Savour. 27. Things without savour are tasted by the stomach, which are not judged of, or discerned by the tongue. 28. He perceived the occult property, and the boastings of the Schooles. 29. The searching after hidden or secret things, is not [for what] but by the way [of because] from the effect to the cause, according to the Gospel. 30. He perceived unstopping or opening things. 31. He perceived the activities of Salts. 32. He perceived the spirits of Minerals. 33. He perceived the loosening poyson of purging things. 34. A threefold sign of a laudable Laxative. 35. The error of Paracelsus. 36. Chymistry. 37. Distilled things are not to be judged suitable, or equal to their concrete Bodies. 38. He perceived many things to be transchanged by adjuncts. 39. He perceived the sanguine glassie colour of a Mettal. 40. He perceived the distillation of Lead, whereof Paracelsus above. 41. He cured divers Diseases. 42. He perceived that the planetary faculties of Mettals were to be drawn forth by a higher or deeper resolving, than that which hath been before. 43. He perceived the divers virtues of dissolved Gold. 44. He perceived the virtues of the Alkabehest. 45. He perceived the virtues of Mercurius vitæ, in its synonimal or fellow name of Lile. 46. He perceived the action of renewing things. 47. He perceived the root of a bewitching Sorcerie. 48. He perceived Poysons. 49. He perceived the actions of things, according to the applications of the receiver. 50. An Idiotism of Paracelsus, about the nourishing of a Wound. 51. The use of Salt. 52. The variety of Oyles. 53. The use of the water, and salt of artifiacted things. 54. The Elixir of a Spice. 55. The praise of Magisteries. 56. Meats seasoned, why unwholesome. 57. A censure of some Minerals. 58. He perceived a sixfold digestion. 59. He perceived when the venal blood is quickned. 60. What the inward and anointed grease may suffer. 61. He perceived the action of Cantharides and Caustick Remedies. 62. He perceived the virtue of an Amulet. 63. The

63. The virtue of Stones. 64. He perceived whence the diversity of effects in acting, is. 65. He perceived the necessities of death. 66. The order of Chymical operations.

- 1 VExation brings forth understanding, as too much pressure stifles it. Although in my sharpest adversities, I might make use of *Job*; and *Paul*; yet the Lord Jesus, the Son of God, so over-mightily helped me by his exemplary straits or griefs, that he did not only ease my labours; but as it were bear them in himself. Let his name be alwayes honourable in my sight. For I perceived the examples of Saints, to be indeed inductives or motives, but not to confer any grace, by themselves. For my mind in my greatest pressures, for the most part, grieved, that I was comforted after a certain humane manner, and through the sloath of unsensibleness: that I did rather resemble an arrogant Stoicism, than that I did with the joy of concentricity or a mutual centredness, purely resign up my tribulations unto my most bountiful Jesus. For I feared that rest of my soul which innocency raised up, lest it might proceed from a despising and arrogancy, and so lest my tribulations should be fruitless: That I, (I say) being immingled with the common lot and fellowship of the good men of the age prophesied of, had become evil and unprofitable. For I feared every hour, that I was unsensible of grief, neither that I did in the least, feel those persecutions brought on me by a certain Clergy-man, and those great ones which joyned with that Clergy-man, and at length, by the better part of the people, otherwise, in a man which was but in the least judicious, very sensible ones. For I feared, lest that unbroken rest of my mind, might happen from a despite toward my enemies. I intreat therefore, that God, the fountain of all good, may judge with Clemency: At least wise, I often considered, by largely running through the foregoing ages, and future persecutions of the Christians; that the first persecution of the Church, was violent, and that of Tyrants: Afterwards, that there was another which followed, that was fraudulent, and that of Hereticks: But ours hath indeed, arose from Hypocrites; but that it should be composed of deceit and force. *For there are those (as saith the Prophetess St. Hildegard) who shall first deceive the potent Prelates, and their subjects or substitutes, under a shew of Piety: and at length, as many as will not favour them, they shall oppress by the power of great men.*
- 2

Good God, what have not I felt, and how much could not I witness? But the whole revenge, have I referred to thee alone, and I intreat thee out of Charity, that thou wouldst spare them, or that thou wouldst not damn them for my sake: Because I receive all things from thy hand, and they know not what they do.

- At length, I thought of a means whereby I might meditate, that all my tribulations were transferred on the head of *Nero* and *Tiberius*. Therefore I being at once, wearied and refreshed, and suddenly with great consolation, sliding as it were into a dream, I saw myself in a certain Kingly Pallace, excelling humane artifices. But there was a high Throne, encompassed with an unaccessable light of Spirits. But he who sate in the Seat of the Throne, is called [*He is*] And the foot-stool of his feet [*Nature*] The Porter of the Court, was called [*Understanding*] who without speech, reached unto me a little Book, a choice out of darkness, the name whereof was [*The bud of a Rose not yet opened*] And although the Porter uttered no voice, yet I knew, that little Book was to be devoured by me. I stretched forth my hand, and ate it up. And it was of an harsh and earthy taste, as if it would stop up my winde-pipe; so as I swallowed it with a great slowness of labour. From whence, afterwards, my whole head, seemed to be transparent. Then, afterwards, another spirit of a superiour order, gave me a bottle, wherein was [*Fire-water*] as being in one word: A name altogether simple, singular, undeclinable, unseparable, unchangeable, and immortal. But I knew not what my business was with it: Neither, heard I any thing more of it; and by reason of the fear of its greatness, my jawes were shut up, and my voice clave to my jawes. At length, having performed due worship before the Throne, I endeavoured diversly to experience, what the bottle might contain. Behold, before the doors of the Court, there was the Art of the Fire, a cheerful old Woman being the Turn-key, who did not open the locks without, unless the Porter had first withdrawn the bolt within; the which he did not attempt, unless, from a sign given him by the light of the Throne. But unto those that knocked at the doors, the Porter answered, the Key-keeper holding her peace: I know you not. But they who tryed to look in thorow the lattices of the windows, being smitten with darkness, forthwith fell down mad, many wandred up and
- 3

and down, promising great things without a foundation. I stood a good while silent; and then afterwards, a hand (the rest of whose Body I saw not) led me aside unto a pleasant Garden: where on a sudden, all Simples worshipped me, as though every one had been singular by themselves. In which assault, I felt or perceived all the Simples of the world, not indeed, as if their qualities did act in me (for I being but one, had not been sufficient for the bearing of them all) as it were, their object: but they all were seen, as on a Theatre, to represent in me their Tragedies. And I wish, I may well declare them with my pen!

I perceived in the first place, that all heats, colds, moistures, and dryths, were as it were momentary qualities, happening on things constituted, like colours: But those things which do heat, cool, moisten, or dry us up, I perceived, that that did not happen indeed, by reason of an excess of those qualities, whose names they did obtain: but in respect of an appropriation of the object. For in this respect, the dead carcass of a man, who dyed of a languishing death, although being nigh the fire, it violently waxed luke-warm; yet, unto our touching, it seemeth to be most cold; so that the hand can scarce recover its heat a long while after it. And surely, that comes not to pass, through a quality generated in us, which is named cold: the which indeed in contemplating of it, doth so many points exceed our heat, that it imprints an excess of so great cold: but rather because the vital spirit being greatly afraid of the dead carcass, doth depart or retire from the hand. For in like manner, Camphor, resembling the savour of Pepper, and bitter Opium, are said to cool, as they subdue or chase the Archeus: After which manner also, a Feverish Blas, being the same in number, doth stir up, first cold, and afterwards heat, in the Archeus. I perceived therefore, that hot things, from the moment of their first degree, even unto the degree of an Eschar, do not brand our temperature with an excess of heat: To wit, by producing in us an excelling of their heat: but by the ministry of sharp salts, they do so inflame our Archeus, that they do more and more exasperate the same; and at length, do by burning, assume a fiery violence, through the motion of their own Blas: Such as is the Prune and Persian fire. And therefore, none of those hot things do heat dead carcasses.

In the next place, I perceived, that nothing doth properly moisten us, but by appropriation, and therefore that neither doth water properly moisten us through a defect of appropriation, which is the cause of approximating or the nearest approaching, and assimilating. But those things which do besmear, stuffe up, resolve, and make the substance of our body (as it were by small points) salt, without the sense of burning heat and sharpness: those things I say, do moisten. And that only occasionally, and as it were, by accident. Therefore I have perceived, that whatsoever things do dissolve, resolve, and co-melt glutinous things, do moisten: To wit, as they do withdraw the impediments of coagulation and drying. And therefore the Mallow, Marsh-mallow, and those things which are believed to be moistening, and so do stop transpiration, have produced an error in the Schools. For truly, such a moistening, was nothing but a disease detaining of excrements, but not a dewie moistening of the parts. I perceived also, that no other things do dry up in us, but those which by extenuating, do dispose to exhalation. For so sweat, although it moisten the skin, and make the habit of the Body swollen, yet it meerly dryes us.

Furthermore, whatsoever things do coagulate, I perceived rather to harden and make clotty, than to dry up; and therefore resolving is opposite unto coagulating, but not moistening.

But those things which do induce an Atrophie or Consumption for lack of nourishment, and do make lean, I perceived that was not done by a drying quality; but because the Liquor, otherwise nourishable, is theevishly withdrawn elsewhere: by occasion whereof, the Ferments connexed to heat, do perfect a true drying.

I perceived therefore, that there was no other drying in us, than that which was made by the resolving of the Ferments, and the distillation or puffing away of heat. I perceived, I say, that Coagulation it self, or hardening, did proceed from its own curd, or property of a seed, promoting the Liquors into a more solid Fruit.

I perceived also, that dry things, which drink up liquors into them, although they are actually dry, yet that they are quickly satiated or filled with moistures, do cease from combibing, neither that they do at length enter into the root of the mixture of dry things: And therefore I perceived, that thirst is not an introduced quality of driness; but that natural thirst is a sense of the Latex being diminished, but not so plainly failing, that it may even accuse of a principiating driness. So I perceive, that a thirst besides nature was not a token of drying; for such do drink and extend the bottome of their belly, their thirst remaining safe. For that thirst doth proceed, as a forraign excrement doth cause the

nourish-

nourishable juice of the stomach to melt. For truly, while I describe my feelings or perceptions, I am not so much besides my self, as that I shall deny the excess of an external heat, to burn, and cause a wound or ulcer; or that cold excelling, doth mortifie as if it did burn. But in the Dream proposed, I onely perceived them as they are serviceable to the speculation of healing. Therefore the examples of excessive heat and cold, are like a sword, but not to be referred among the occasional and internal causes of diseases, to be considered by a Physitian; If indeed, according to the speculations of Medicine, health is expected by the removal of those: wherefore the speculation of external and antecedent Causes, is not curative, but onely now and then, significative and directive. For a wound being once inflicted, although the sword be taken away, the wound is not healed; neither is the fire to be taken from the hearth, although it hath at sometime burnt or scorched some-body in the same place. For truly, the causes of Diseases are inward, as they are connexed occasions; therefore the consideration and removal of those, is truly medicinal.

- 9 But the Schools, when they saw the fire to burn its objects, likewise also, cold to mortifie and destroy; and so the body of man, by those external qualities excelling, to be diversly disturbed; they for that cause thought, that Effects which should have heat adjoyned unto them, were raised up by fire; and in this respect, that in Feavers, two Elements did strive in us, whereof the Water should alwaies obtain the former part of the victory; but the Fire the latter part thereof; to wit, that the Fire did cause Erisipelas's, the Prune or burning coal, the acute or *Persian* fire, the burning Feaver, &c. That it did likewise harden by drying or exsiccation of Schirrus's, Stones, Bones, and Knots. They have also decreed Remedies becomming such rules, by contrarieties, not knowing after what sort the spirit of life may stir up heats and colds, without fire, or icy cold; because neither from the Elements of our body, or from feigned humours: But they have
- 10 on both sides neglected the [*τὸ ἐννοούμενον*] or violent assailant of *Hippocrates*: Even as I have sometime by one example of a thorn thrust into the finger, demonstrated; wherein the Heat, Pain, Inflammation, Feaver, do not efficiently proceed from the fire of the thorn, but because the sensitive Spirit doth grievously bear the foreign thorn: So indeed, heat and cold are accidents, impertinent to the nature of a Feaver; even as in the Liver are felt its heats, because in the same place there are its thorns; and the heat is not the cause, but the effect of the thorn. And therefore the alterations which do happen in the vital Family-administration, and do cease in dead carcases, do not depend on the fire or icyness of the body or humours, but on the Beginnings of life. Yea, if the Schools had touched at the matter as it is, they had found, that natural, artificial Baths, &c. do not dry and burn us up, but rather moisten us, unless their heats are inordinate, and of daily continuance; yea, neither then indeed, otherwise than because more is consumed than is received, doth the body accidentally wither.
- 11 At length, I presently after the first qualities, perceived the theevish adulteries of Merchants, wherewith they load, defile, estrange, and substitutively dissemble foreign Medicines or Drugs; who have no need of my Doctrine, because they are such as are not moved with the fear of Hell.
- 12 I presently after perceived two distinct Savours at least, of things, if not sometimes three or four; one to wit, whereby things are sharp, bitter, salt, &c. but the other, which is called specifical, being appropriated to the seed. The first therefore I perceived to be the dignities and offices of Salts; not indeed of Salts separated from the three first things, or (as they say) drawn from corporeal Beginnings, but of Salts glistening in their composed body: But the other of the savours, I perceived to be the seminal nature of Odours, performing, or at least unfolding the office of Forms in concrete bodies: for Salts, as being most sensible, do first offer themselves to the taste; whereunto therefore *Hippocrates* hath attributed the knowledges of diseases; to wit, bitter, salt, sharp, and brackish, pointing forth diseases. But heats and colds he rather understood to be subsequent affects or passions, than diseases. But I do ascribe their judgement to the taste, by reason of the afore-said tastable qualities, wherein for the most part a more profound power or faculty sits, and containing the seminal and efficient cause. But not that therefore the judgement concerning diseases doth belong to the tongue and the palate; but I name it the taste, by reason of the tastable qualities: Otherwise, it is the feeling wherewithal the Instruments are strongly endowed, whose sensitive force, by an approximation of touching, makes the signs of friendship, or enmity about the hidden thing perceiveable. After this manner therefore, I perceived that it is the offices of the salts exceeding in force, which do unfold the virtues of the subordinate forms of their concrete body, and carry them unto the

Archeus, as it were their object whereon they act. Therefore I perceived that Cures, as well by Medicines as by Nature, are made by an appeasing of the disturbed *Archeus*, and the removal of the feminal and disease character produced by the *Archeus*. This indeed I have perceived to be the nearest, safest, and highest or chiefest curing: But that which succeedeth by the help of secrets, is busied about the taking away of the product. And therefore I have perceived, that *Arcanum's* do operate as Salts. Indeed such cures do happen, by removing of that which is hurtfull, and by adding that which is defectuous: for else, those things which do hinder increases or appropriations, have rather a regard unto prevention, than unto curing it self; but hurtfull things are taken away by resolving, cleansing, exhaling, or expelling; which properties are agreeable unto Salts. But the removals of that which is hurtfull are not duly wrought by poisonous, melting, and putrifying things; as neither by the withdrawals of the venal blood and life. But the adding of that which is deficient, I have perceived not to be done by a proper means; and therefore that we go back or decline by little and little, through great want of the Tree of Life; the which be it spoken of the vital faculties, but not of the want of the venal blood, which is restored by the kitchens. But I have perceived, that Nature doth voluntarily rise again, and repair some of her defects, if she shall be made to fit up after her prostrating: To which end also, balsamical and tinging things do help. I perceived also, that in the stomach is bred a soure salt, partly volatile, and partly fixed. But that both are afterwards changed by their ferments of the bowels, which being enslaved by snatched ferments, do often and successively measure their Original: To wit, of a mummial ferment, is made the salt of the venal blood, which is to rectifie or govern our family-administration: but if in the kidney it be made diuretical, it is now made an Urinary salt. I perceived therefore, that those things are onely and truly provokers of urine, which have a faculty of increasing the urinary salt, and which do make it an easie client unto themselves.

In the next place I perceived, that not onely in the dispositive ferments of the organs, but besides, by reason of *Magnum Oportet*, or the necessary remainder of the middle life, in Simples themselves, that there are their properties of propagating and changing salts. For some things have more gross salts, and those unfit for receiving the ferment of the stomach, and therefore they remain unconquered. Others, in the next place there are, which by a hostile property, are contrary to the vital powers, and so they enter not but for troublesome ends, into the Inns of Life. I perceived, that the volatile salt of the spirit of Vitriol, did from a ready obedience in the first action of dissolution, pass into a meer Alume. For if the body of Mercury shall coagulate into a white powder, although it reserve nothing of the matter or vertues of Mercury (for that declareth the former weight of Mercury) yet it passeth into a meer Alume. But if the sharpness of Vitriol shall finde in the stomach a musilage meeting with it, it melts the same; neither yet therefore doth it become Aluminous: So that I perceived one and the same salt to be diversly transchanged by the thing connexed with it. I perceived therefore, that there were some salts which would cleanse away the filths in the stomach, before they were subdued by its ferment: but others which did slowly open their saltinesses, and that not but after another digestion; and seeing they did now manifest that thing, that they were diuretical, and diaphoretical or sudoriferous salts; so also, that then they would successfully free the veins of their obstrucers.

I moreover perceived, that there are salts which do not finde their disposition but at the time of dunging; and they are sharp and colical, or those which are opposite to these, and are connexed in oily essences. But the chiefest and most successfull of salts, is that which reacheth unto the utmost bound and subtilty in Nature, which passeth thorow all things, and in acting doth alone remain immutable, and the which doth at pleasure through a ready obedience, resolve other things, and melts and makes volatile all rebellious matter, even as hot water doth snow.

I by and by perceived, specifical favours, (to wit, of Mace, Saffron, &c.) to be as properties, or as the shop of the ultimate forms, uttered by salts excelling in strength. Not indeed that these favours were the proper vertue of that form, but rather the fermental putrification of that seed; proceeding unto that ultimate form. For truly, a favour, as such, is a solitary quality, unprofitable for healing, a witness of the putrifying of its ferment by continuance, a co-operator of curing, as it disposeth the *Archeus*, as a messenger, that it may descend into the knowledge of a hidden property: For unless things shall smile on the *Archeus* by favour and odour, they are not admitted within. Yea, purging Medicines being in their first look without favour (as are Turbith, Hermodactiles,

Jallop, Mercury, Stibium, &c.) as being masked with much Sugar; yet if they are taken again, they cause horreur and abomination. There is therefore one taste of the tongue, and another in the stomach, as it were the utmost part of the Archeus. Therefore stomatical favours which are acceptable, do denote, that there is in the thing, a bountiful life a-kin to ours: Wherefore a Cat is more delighted with the smell of putrified and stinking fish, than of Cinnamon. So indeed, we do oft-times well perceive, that poysons are occult or hidden, by reason of their specifical savour and odour, horrid to our Midriffs.

28 In like manner, as oft as a pleasing taste appears in a poyson, I have perceived, that under the same Simple, there lurketh a great secret; the which, the poyson being repelled, is born and ordained for difficult effects. I afterwards perceived, that besides specifical favours, and the gratefulness, benevolence, or horrors of these, there was a certain formal property issuing forth; yet unperceivable by the tongue, and to be comprehended by the Archeus alone. The Schools are amazed, when they come unto occult qualities, as they do therefore call them: For when they cannot ascribe their trifles to heats, colds, and the begged complexions of these, Writers indeed do lay aside their pen, and Physicians do lift up their shoulder and eye-browes, because they accuse that property to be known to them in the effect, but unknown in the cause: and they excuse themselves of this ignorance, because the searching into those properties is impossible for mans understanding, the which, they else, had already long since enquired into: As if they should say; We Schools are able to determine of as much as the mind of man can search: We therefore decree, that no powers of things can be understood, or searched into by man, but those which are the first qualities of the Elements, or to arise from these: We confess therefore, that the formal faculties are occult, because impossible to be known. Certainly, the Schools are exceeding clayie or earthy, watery, airy, cloudy and fiery! how ignorant do they shew themselves of their own objects, and how unlike to the exercise or practice which they profess! For they have enslaved their wits to sluggishness, that nothing may be more acceptable unto them, than to have inclined to excuse their excuses in the ignorance and impossibility of nature, wherewith every one vails his own in particular. For at first, when the Antients saw any Disease to be cured by a specifical and appropriated Remedy, they were amazed as it were, at the miracle of an unwonted thing: But afterwards the Schools thought it satisfaction enough, to have banished their blockishnesses into a general ignorance. For neither, although they had distinguished causes from the elementary qualities, unto them known, had they therefore spoken any thing undefiled, and without suffusion of the sight. For whoever hath more searched out the cause of moistness in the water, or of heat in the fire, by a reason from a former cause, than of drawing Iron in the Load-stone? The elementary qualities therefore, are as hidden as any other.

29 Truly in this were the Schools blinded, because they have proceeded against the Doctrine of the Gospel: For primitive Truth willeth, that we know the Tree by its Fruits; but the Schools will, that the Fruit ought to be known by the Tree. I will therefore shew by the Fruits, in what manner we must come unto the knowledge of the Tree.

First of all therefore, for the knowing of occult causes, a certain effect is supposed, and likewise a cause thereof; neither is it doubted, what that effect, or what the cause thereof may be; but the knitting of them both, is only sought for: To wit, after what sort, the effect proceeds from the cause; or on the other hand, after what manner, and by what means, such a cause may produce its effect. The knowledge I say, of the Tree and its Fruit, is presupposed: The which, if we compose them for healing (for if the whole world be for man, also the whole physical knowledge of nature, shall therefore be subservient to man) the knowledges of ones self shall be first to be presupposed: To wit, that a true Physician, doth know the Tree of the whole nature of man, and the fruit thereof; to wit, health. Likewise also the tree of vitiated health, and the very rank or order of health depraved, as the Fruit of that. Which proper knowledges of the thingliness or essence, together with its adjacents, are required. Therefore, that we may know the Tree in its root and properties, that ought to be done by the Fruits: wherefore also, the Fruits are first to be known. But the Fruits as well of entire, as of vitiated health, seeing they are the Scopes whereunto the properties of occult Remedies are referred, have themselves in manner of a Tree and Trunk, whereinto the young budding slips, and seeds of things ought to be ingrafted, as it were the Fruits of the same. This indeed the ordination of Medicine requireth, that Remedies, although they have themselves, in manner of a cause; yet that they become fruits or effects in us, as they do fructifie in our Tree: and so, they are not only the Fruits of their own native Tree, whence in the nature of things they are derived; but rather, they are new Fruits, from an ingrafting of a product,

and

and so are plainly promiscuous, of a branch, or Fruit of the Tree implanted, and of the vital power of the stock, whereinto it is ingrafted. Such fruits indeed, do bewray their own Tree : And so, as in every progress of nature, a duality of Sex is required for the production of every Fruit ; it was no wonder that the rank, and applications of occult Qualities, or Remedies, hath remained unknown, if it hath hitherto stood neglected, that a healthy, and diseasie state is bred by the same Parent : and so also they have referred the whole essence of a Disease, into external, occasional, efficient, and warring causes ; but not into the true and inward Tree of sicknesses. Let us suppose therefore the Archeus to be provoked, and almost furious, the which being provoked by occasional causes, doth pour forth its own blood, and causeth the Bloody-Flux ; or likewise, let us feign the Archeus, grievously bearing the mark of pain, conceived in some part serving to the last digestion, and being as it were stung with fury, to stir up an Erisipelas. The question is, of finding out a Remedy, by the occult or hidden property. The Schools therefore have considered to apply cooling things to the Erisipelas, as to the fruit, and they would not apply a Remedy to the vitiated tree. But the Secretaries of natural things, have attended to the aforesaid furies, to be restrained by fear ; so that the fear is not to be incurred on the man, but on the Archeus. Therefore they have killed the most fearful creature ; to wit, a Hare : Not indeed with a weapon, that he might dye by an unexpected death ; but by hunting, that he might perish by the biting of Dogs : whereby a doubled force of fear may be imprinted on his whole Body. Therefore they have tinged a bloody Towel in the blood of the Hare, and kept it being dried : And that they have administered by pieces in Wine, and the Dysentery was cured. And likewise, they have put it dry on the Erisipelas, and it was cured. Yea, the *Germane* Souldiers, do give an Hare dried in the smoak, in drink, and the Bloody-Flux or Dysentery is cured with an undeceiveable event. From whence they have learned, that cuttings of veins and purgings are vain, whether thou respectest feigned humours, or in the next place, a diminishing of heat and strength, together with the blood : likewise, that coolings are ridiculous ; because they are those things which endeavour to heal from the effect, do never touch at the roots, and for that cause, do for the most part provoke nature into greater furies. The Erisipelas therefore, and Bloody-Flux, have obtained some common point wherein they might agree : And that is a certain Ideal poyson bred by the Archeus : For truly in the Tree of man, every exorbitant passion of the Archeus, doth tinge its own Idea or likeness on the blood, yea and on the excrements, no less than in the Tree of a Dog, through the exorbitancy of madness, Fruits are bred in his spittle, which do afterwards produce in us, the Fruit of the transplanted madness. Therefore the knowledge of hidden Remedies, is badly sought into from the Fruit. For I have known, that whatsoever things are made in the world, are made from the necessity of the Seeds of every Archeus, and so by means of an incorporeal and invisible Being. But I have known, that seminal Beings do arise from an imaginative force of soulified things, or the Archeus of the same, by a co-like perturbation : And so, that by a certain invisible Principle, this visible world is continued : But in things subjected, or not soulified, I have observed, that they after a co-like manner, have themselves by the same certain Analogical proportion : But that every disjoyning or irregularity of the Archeus, doth by its Idea's, frame the Seeds to be poysons unto its own Body, and so a sound Tree rusheth into a vitiated one. I have considered, that the poysons of some things which are bred with us, do bear Seeds, not those which by the exorbitancy of their of own Archeus ; but in respect of our Archeus, might produce vitiated Idea's, and to themselves natural, to us mortal Idea's. Whence indeed, if Fruits or Branches be implanted into the Tree of our entire health ; it happens, that from both, as it were from a promiscuous Sex, vitiated or poysonous Fruits do arise in us. But the poysons are on both sides, among the number of occult properties. Let therefore, suitable helps or Remedies, have Idea's which are chiefly the extinguishers of the poysoned Idea's : or those which by an eminent goodness, may transchange as well the Archeus, the producer of the poyson, as the poyson it self produced : whence I have very clearly learned, that almost every poyson, and its Antidote, and so also the whole race of occult or formal properties, do feminally descend from the activity of a vital light. For so the poysons of soulified creatures do arise from disturbances : the which, by how much the sharper they shall be, by so much also, the more cruel poysons they bring forth. For so the poysons of Serpents, are bred from anger, envy, pride, and those being variously mixed with fear. But the corrosive and putrifiactive poysons of Minerals, are bred of Salts, Sulphurs, and Mercuries, whereby their fury is propagated by a Seed Analogical or agreeable in proportion. But how evident is that thing in the company of Vegetables ? where those se-

mineral perturbations, and therefore also co-natural ones, are by Seeds, transplanted with a continued course. For we may well know any kind of poisons which are reduced by the ranks of perturbations, by distinguishing of them. Consequently also the knowledge of specific properties is drawn [*per quia*] or from the Effect of the Cause; if they are reduced unto the certain orders of perturbations or disturbances, and affections: Even as more largely elsewhere concerning the Plague: So indeed, many things are searched into, and found out; we thereby, by the Effects come to the Causes, and being led by the hand from one knowledge to another, the poisons of an Erisipelas and Dysentery, being in their Terms, from the wroth of the Archeus, their cure is in a Hare, wherein is fear, meekesse, flight, and an harmless life. Neither is the argument of contrariety of value: For, first of all, I have admitted of contrarieties in living Creatures; and I say, that the properties of those being as it were sealed in the Idea's of living Creatures, are in some sort contrary in the priority of the efficient tree; as the Seals of Passions do end in to this Idea. And so the fruits of this tree, do act no more by way of contrary Passions; but from the force of a received and inbred seminal Character, wherein every thing acteth according to the Talent received, even as it is in it self; but not by reason of a repugnant duality, or disagreeing contrariety. Therefore the blood, wherein is the seminal product, and the effecter of the fearful meekness, doth mortifie the poison which is bred from a poisonous wrothfulness. For I have noted in things, loves, hatreds, terrors, and the seminal products, seals, Idea's, and characters of these: Whence I have found out the immediate Causes of many hidden Remedies: But I have interpreted them to be found out and suggested by me, with the truth of possible and appearing consequences.

These things I have spoken concerning occult or hidden properties, out of the Dream, that we may cease to be occult Philosophers, and may follow the manifest Doctrine of the more tractable ones. Now I will prosecute my Dream.

31 I perceived, I say, that Smallage, Asparagus, and whatsoever things are taken to open Obstructions, have indeed a Salt of a specific favour; the which, being with their middle life made the Cream of the Stomack, remaineth surviving, although enfeebled; yet that they do obtain weak Remedies for the opening of Obstructions. For truly, those things which do keep the Savour of their own concrete Body, under the ferment of the Stomack, as Onion, Garlick, Mace, Turpentine, Asparagus, &c. Those I perceived even to slide along with the Superfluities, because they wax soure with their specific Savour; and then do take (under the Gawl) the nature of a Salt, and at length under the dungy ferment of the Reines, do put on a Urine-provoking or diuretical faculty. But whose specific Savours, do putrifie by continuance, and perish with the sourness of the Cream: those things, I perceived to be indifferent meats; but whose Savours do not plainly yeild themselves into the sourness of the Cream, and do after some sort remain in their mediocrity (for the Cream, if it should alike on every side receive a ferment, and wax soure, it should easily be sharper than Vinegar) those things indeed do through the force of the Gawl, easily perish in the Meseraick Veines; that together with a third, or mumial ferment, they may be changed into Venal Blood. Therefore I perceived those to reach forth feeble aides, for dissolving or opening of Obstructions.

At length, I perceived, that all simple Salts, (of the Sea, *Sal gemma*, Fountaines, Salt Peter, &c.) as such, do depart through the Urine and Intestines, and in the mean time resolve the filths or dregs in those passages, and render the expulsive faculty mindful of its duty. But I perceive that Salts which carry a Mineral fruit in them, are Strangers to our Nature, and therefore are scarce to be inwardly admitted. But Salts which are a part of the composed Body, as Lixivium's, and Alkalies; I perceived to be deprived of Seminal Virtues, and to have onely an absterfiv or cleansing, Soapie or resolving property, unless they are volatile; wherein I perceived the radical Beginnings, and seminal Balsams of the concrete Body to be. I perceived, I say, that these are easily transchanged into a new fruit, because they do associate themselves with, and act in all things, according to their inbred endowments.

32 In the next place, I have perceived the corrosive spirits of Minerals, to differ far from themselves, being crude; to resolve the Excrements adhering to the sides of the first Vessels: Yet not to be altogether destitute of Damages, by reason of an occult infection of Arsenick admixed with them, from their original. Therefore I perceived that occult properties, as they call them, being feminally traduced into the Archeus by the generator or efficient, do unfold the presence of their Object, and a sympathetical knowledge, as they are immediately entertained in the bosom of the Formes; Some, to wit, by a motive local Blas, as the Load-stone, Amber, Gummes, Lacca, the herb Turne-sole, Diamond,

(for

(for this also even as Carabe or Amber, doth attract chaffes) &c. do bewray themselves ; but other things are terminated into an alteration, as poysons ; likewise laxatives, medicines tied about the Head or Body, Antidotes, &c.

Laxatives, I have peculiarly perceived, to operate onely by reason of a poyson lurking within them, which being once admitted inwardly nigh the entrance, whatsoever they touch, they do ferment, do afterwards resolve the things fermented, and for that very cause do putrifie the things resolved. I perceived therefore, that Laxatives do putrifie the vital juyces, but seldom the excrements, the occasional causes of Diseases. For seeing they are Poysons in respect of us, and not of excrements ; hence they rise up rather against us, than against Diseases ; And most speedily, indeed, do putrifie the more crude juyce, or the not yet vital blood of the Veines, or the yesterdays Cream. But because they scarce suppress the excrements, neither do these in like manner obey them, seeing every action or Blas in us, doth proceed from the Spirit which maketh the assault, whereof excrements are deprived ; hence no Physitian, dareth by taking Laxatives, to promise a cure. But true Solutives, do neither cause Putrification, nor selectively draw forth feigned Humours, neither therefore do they resolve our vital parts or things ; and the which Solutives, I have perceived to bewray themselves by a three fold Sign.

First,

That they draw nothing from a healthy Body, neither do they move after or weaken that Body.

Secondly,

That they do not fetch any thing forth, but what is offensive, and therefore they do not aggravate, but ease of the burden ; and presently the sick doth thereby feel himself well.

Lastly,

In the Third place, That they do not draw out the Disease, by Sweat, Vomit, or Stool ; but do unsensibly resolve, in whatsoever part the Disease is entertained ; Nature being busied about the rest.

I have perceived also, That such Laxatives, do not electively bring forth Humours, which are in themselves feigned ; but (seeing we are nourished by none but one onely juyce, the blood ; therefore also we intend the driving forth, not of the blood but of Disease excrements) do resolve whatsoever foreign thing is implanted within the Inne of Life, but not vital things, unless they are taken in an undiscreeit dose, or frequency. Otherwise they onely have respect to excrements ; Nature affording her aid within, to this end. And chiefly, seeing they are from God, as well by Creation, as the endowment of knowledge ; they have received the ends of their Ordination, onely for a good purpose.

Therefore I perceived that Paracelsus had erred, who teacheth ; *That Laxatives do no otherwise operate, but as the Laxative Medicine by calcination, and a supervening moisture, should be resolved together with the Humours, like Calx vive.*

For first of all, he that proclaimed War against the Humorists, now again acknowledgeth Humours. Then also, his assertion is wholly ridiculous ; Yet the lesse, if either Laxatives should be taken being first calcined, or might have been calcined within ; or the ejections should ascend onely unto a treble of the things taken. For what of calcination have the leaves of Sena in them ? Doth not Asarum, by boyling, cease from making Laxative ? And thus far is ignorant of a Calx.

I have furthermore perceived, That Chymistry doth give more powerful and absolute operations, and that there are those things prepared by the same, which before were not. For neither was the Oyle of Tiles or Bricks formerly in the Oyle of Olives, as neither the spirit of Salt in Salt, or of Vitriol in Vitriol, &c. For by the fire, they assume an Acrimony, as Honey, Sugar, Manna, Dew, Earth, &c. Other things do thereupon lay aside their corrosion ; as the juyce of Citron, Scarrewort, Frogwort, Water-Pepper, &c.

They erre therefore, who do equally judge of the Spirits by the concrete Body : For truly, although Spices and sweet smelling things, do persist in distilling ; yet the seminal virtues of the concrete Body, do for the most part perish through the fire, and are made another thing. For some things, their volatile parts being separated, do become an Alkali,

li or fixed Salt, a Calx, Ashes, and Glafs; which things were not before in the composed Body: For I perceived, that there was nothing in the concrete Body, which did not issue from its seed. For the Fire seeing it is the death of things, if it doth not totally destroy the seeds of things, yet at leastwise, it notably transchangeth them. Therefore, in one thing a preparation doth transchange the whole matter; as in Magisteries; but elsewhere, by reason of a sequestration of some things, it onely changeth, sharpeneth, destroyeth or consumeth the things which are left.

Thirdly, In the next place, by things adjoynd, now and then, the things themselves, together with their adjuncts, are diversly transchanged by the Fire, and become neutral; as Glafs, which is no more Ashes and Sand. Often times also, without the fire, adjuncts do pierce the root of the mixture, and that especially a ferment coming between; and then a neutral concrete Body is constituted. For so, of Rie-bread and Honey, Ants are bred; of Honey and Dew, Eeles; of Basil and the hoary putrifaction of a Stone, Scorpions; of a Calf being strangled and Dew, Bees. But those things which are mixed by fusion onely, do oft-times suffer themselves to be reduced into their former Being: For so, although Glafs be no longer Sand; yet from thence by Art, yea and through the oldness of putrifaction by continuance, the same Sand is found; because it is as yet, alwayes materially in it, not thorowly changed, because without a ferment. I perceived therefore, that many volatile things being joyned to volatile things, by reason of a mutual action with each other, are transchanged into a certain third thing.

38 In the next place, that volatile things are fixed by fixt things; and in this respect, do pass over into a new Being; after another manner fixed things being joyned with fixed things, do remain in their antient Being.

39 I perceived also, that Mineral Remedies, being changed into the nature of Salt (I do not understand those which are seasoned by an adjoynd Salt) do carry with them their seeds, yet exalted into a degree. These things *Paracelsus* hath sufficiently taught concerning Hematine or sanguine glassie Mettals; wherein, although the whole Mettal be resolved into a strange disposition (which is that of a Magistery) yet, because the running Mercury is straitway drawn out from thence; whatsoever hath truly assumed the nature of a resolvable Salt, is not the Mercury, or inward and immutable kernel of the Mettal; but onely the Sulphur thereof. Wherefore those Hematines or Magisteries, do perfect admirable operations in the Remedial part of Medicine. I perceived therefore that the Hematines of *Sol* and *Lune*, or of Gold and Silver, although from the purity of their Balsame, they might comfort; yet that they did contain some strange thing in them, in respect of us.

40 I perceived, I say, That the crudity of *Saturn* or Lead, was solvable through the fannesse of fixed Salts, to be sometimes destroyed piece meal, by the Fire alone; and so, that the parts of the composed Body were divided, and the crude Argent-vive, permitted to run; the fugitive Sulphur overcoming in the *Saturn*, doth draw unto a volatilized fixed one, unseparably joyned; And the which, the sublimation of the *Saturn* doth chiefly dispatch. In the expression whereof, there is no difference of colour, or substance between that which is elevated, with that which resideth: Whence also, the causes of Heat, Fusion, and Softness, deeply or inwardly residing after the calcinements, and reductions, doth not refute the Fusion and wonted Softness, without the Fire. There is the same cause of the sweetness of *Saturn*: For the most sharp calcined things, if (as in Lead, they are tempered by a concourse of Vitriolated things, they are dulcified or sweetened with the properties of Sal Armoniack resolved, and of Tartar being putrified. The Symbols or resembling Marks of all which things, in all their examinations, especially in distilling, separating of Lead into Salt, fugitive, sulphurous, coloured, fat parts, with the sharpness of Roch-Alume, are discerned by a quick-sighted and industrious Chymist, not without great delight.

41 I perceived, I say, That there are Planetary virtues in Mettals, if they are reduced into the nature of a Salt or Sulphur; yet that ought to be done without the remainder of every adjunct, wherein, not every Boaster, could go to *Corinth*. For after that I knew

42 how to unloose bodies by things agreeable to their radical Principles; then at first, I began with a comfortable weariness, to deride my blockish credulities, whereby I in times past dissolved Gold: yet I less profited by its potable juyce, than by the decoction of any Simple: But afterwards I could dissolve Gold, and mock it with the face of Butter, Rosin, and Vitriol: But I no where found the virtues attributed to Gold, because it was also so reluctant to our ferments. I perceived therefore that Gold without its own proper corrosive, is dead; dead, I say, unless it be radically pierced by its own corrosive.

Not

Not indeed that it doth then resemble the Nature of the Sun, and doth add any thing unto its vital faculties; but onely that its whole body doth by purging unſenſibly cleanſe, in a uniſone, tone or harmony. Yea alſo, the pretious Pearles called *Unions*, are by that corroſive changed into a Spermatical Milk, which is ſociable with the firſt conſtitutives of us; and in this reſpect are they a Remedy of the Conſumption, Palfie, &c.

At length I perceived, That the liquor Alkaheſt, did cleanſe Nature, by the virtue of its own Fire: For as the Fire deſtroyeth all Inſects, ſo the Alkaheſt conſumeth Diſeaſes. 43

In the next place, I perceived, That *Mercurius vita*, reckoned by *Paracelſus* among his four ſecrets, beſides the fiery force of the fire of Hell, doth clarifie the Organs, no otherwiſe than as Stibium doth purify Gold from things admixt with it; which ſame thing, I judge concerning the tincture of Lile, a Sunonymal. Nature in the mean time, deſireth as it were, by a new ſpring, to riſe again under theſe Medicines: Yet we are without hope of reſtoring into our former ſtate, ſeeing an infuſion of new faculties, arguing immortality, is wanting unto us. For it is appointed for every living Creature once to die. Be- cauſe there is nothing in Nature which can have an equal prevalency with the Temple of the Image of God. 44

Therefore I perceived, That all renewing Medicines, do operate by refining, and in this reſpect by exhilarating; otherwiſe there is not a true renewing of Youth. And then I perceived, That Secrets which do cure by reſolving, and expelling, do nothing but awa- ken the faculties placed in us; the which impediments being removed, do as it were bud again, under a new ſpring. 45

Laſtly I perceived, That there were Simples, wherein a proper iſſuing of the forme doth not operate; but the command of a ſtrang form and character doth happen unto them, that they might cauſe a contagion between Symbolizing or co-reſembling things; and from thence are Sorceries and Inchantments. For whatſoever things are prepared by a voluntary Blas, are for the moſt part propagated to the functions of local motion, they are directed, I ſay, unto the Sinewes, being moſt apt for the ſtirring up of pains, and ſickneſſes or griefs. For neither have they poiſons or ferments, unleſs an evil ſpirit do add them, or couple them by functions vanquiſhed by himſelf; for then they do excell other poiſons, being a-kin to the poiſon of the Plague. 46

Yea I perceived, That even all poiſons (beſides corroſives) did act by reaſon of a ſpecificall property, emulous of, or imitating the imaginative faculty, placed in the ſeed, formally inbred, and having the powers of a ferment equivocally acting. 47

I perceived moreover, That every thing doth variously diſſuſe its activities, accord- ing to the manner of the thing receiving, and of application: For bread operates other- wiſe within in us, and otherwiſe in all bruit beaſts, and otherwiſe in the Stomack, Liver, and in the other Kitchens: by reaſon of the diverſities of ferments. So I perceived, that fleſh applied to the outward parts, doth preſently putrifie, which within is reſolved by the fer- ments, and at length aſſimulated unto our parts. To wit, I have perceived Polenta or Barley floure dried by the fire, and fried after ſoaking in water, to beſmear and ſoften the outward parts; which within nourifeth, heateth, bindes the belly, and moves flatus's. For every Simple, being outwardly applyed, doth under the ſixth digeſtion, diſplay its virtues with us; the which within, is almoſt in its firſt progreſſes, for the moſt part ſubdu- ed. A live man, being long detained in the water, would putrifie; but dead fleſh, be- ing alwayes well rined in a new ſtream, doth put on the nature of Baſame: So the Sto- mack, although it be perpetually moiſt, yet it doth not thereby putrifie: For the operati- ons of Nature, *Galen* was ignorant of, becauſe he ſmelt not out the properties of fer- ments. 48

But *Paracelſus* hath cauſed the incongruities of an Idiotiſme, in affirming, that Oyles, and Emplaſters, are digeſted and tranſchanged into new fleſh, in a Wound, even as meats are in the Stomack. But he is ignorant, that there is no paſſage into the ſixth digeſtion, but gradually, by precedent digeſtions. For this cauſe, there is no venal blood made in the Stomack; as neither is any nourishment made by a Clyſter detained in the Colon, or confines of the Ileon; however the Schooles may whiſper to the contrary. For Brothes do preſently putrifie in the Bowels, neither is there a making of Cream; but far be it, that blood ſhould be made, if it ſhall not be firſt a Cream: neither is the Liver the ſhop of the Cream; much leſs is there an incarnating in the Stomack: But leaſt of all, that of an Emplaſter, fleſh or blood ſhould be made; For the ſkin being opened, putrifa- tion is preſently introduced into it, no otherwiſe, than as the ſhell or peel of an Egg be- ing bruifed, there is corruption. 49

For

- 50 For hence is there a weeping Liquor, Sanies, Pus, Sandy-water, Latex, Wormes, &c. for preventing whereof, the whole care of the Chyrurgion diligently endeavourereth; and the which, being separated, the flesh doth voluntarily grow, but not by applyed Remedies. I have also perceived, that Salts, which are domestical unto us, are fitter for seasoning of meats, also for dissolving, and exterging, or clean wiping away of filths; than that they are promoted into nourishment: But that Oyles are scarce proper for sanguification; but least of all, those which ascend by the fire. But that distilled waters, have small conditions of medicine; Because Nature doth every where rejoyce in nourishment, 51 caused of Bodies existing in their composition. And therefore artificial Salts do pierce deeper, than Oyles, the which do resist sanguification; neither are they thoroughly mixed.
- 52 And therefore the Salts of Spices, or sweet smelling things, which are made of their Oyles, do supply the room of their first Being.
- 53 Magisteries are to be had in great esteem; because, the substance of these is entire, digestible, and obedient to the ferments.
- 54 And therefore Nature refuseth meats which are hidden in their Essences, by reason of their difficulties of fermentation; For all things that are too much graduated, do draw after them the middle Life of the Blood; but they are not easily subdued by the ferments. In brief, Those things which do the more stubbornly keep their middle Life, are not easily vanquished by our Archeus; neither are they onely stubborn in digesting; but they are obstinate in perseverance, and do act on us, so far as they are not subdued.
- 55 But Verdigrease, Crocus aris, Cerusse, Precipitate, Sublimate, &c. have ascended into a poysonfomnesse by addittaments. But these, seeing they are not admitted, within the roor of the Mercury, do operate onely without, about the Sulphur, and are there variously disposed, according to the manner of the receiver.
- 56 At length, I perceived, That there was a sixfold difference of Digestions in us, and that the three former of them, were busied about the disposing of the matter appointed for to nourish; the which, although they do truly transmute, yet they are sent before, rather for 57 a preparatory disposing, than for a vital espousing thereof. For truly, in the Fourth Digestion, a vital power is communicated to the venal blood; and so the Controversie is decided, whether the arterial blood be quickned. For the venal blood is not truly enlivened, until it be made arterial blood; The which is drawn through the partition of the Heart, into the Arterie Aorta; for no other end, but that in that Buttery it may be endowed with Life, and informed with a mind. But we are nourished by both bloods, even as we have our original of the seed of a twofold Sex. For perhaps, the Myserie of the Lyrurgie is hence known; why a little Water is mixed with much Wine: That the Water may pass into venal blood, and the Wine into arterial blood. I perceived therefore, That the Fifth Digestion, was plainly occupied about the participative communion of Life. But Lastly, That the sixth did operate by a dispositive quality, but did rejoyce in an assimilating ferment; and that, inducing humanity. Therefore external aides, are stirred up, and do operate by another quality than internal ones. Fat or gross persons, are taken with Paines, or Crampes, or Convulsions of the Tendons; the which notwithstanding, the grease of man being outwardly over-smear'd, doth alay. For the Sixth Digestion 58 is wholly assimilative; therefore it indeavours to change the grease brought on it, into its own vital aire. But the internal grease of fat things, being now subdued by an assimilating ferment, is kept without action. But the Sixth Digestion enters into the middle Life of the external anointed grease, the which our Archeus doth therefore appropriate to himself; which Life, and its properties, are hidden in the last Life of the internal grease.
- 59 Moreover, I perceived, after what manner a Cantharides doth embladder in living People, but not in a dead carcase; as neither doth it raise up a burnt Escharre in the dead carcase, although it dissolves the dead carcase no otherwise than as Calx vive powdered doth resolve Cheese. For the Cantharides, as long as it remains dry, doth not act, but is moistened by an unsensible efflux of our dew; then first it begins to itch, whence the Archeus under the Epidermis or outward skin is furiously inflamed, not much otherwise than as under an Erisipelas, the burning Coal, or burning Fever; and so the Cantharides begins in the Epidermis, and an Escharotick in the skin; the same which a Gangreen doth at length finish in the habit of the Body. For Causticks do at first crisp the skin; the which afterwards they resolve into a muscilage, after they have fully moistened. For then they do not onely sharpen our heat, but also they assume the strength of a proper corroding. Then 60 I say,

I say, they do not onely make an Escharhe, which ariseth from an inflaming of the Archeus, but do melt the whole.

Lastly, I perceived also that Amulets or preservative Pomanders, things bound about the Head, and hung about the Body, do act by the virtue of influence, and that directive, without the evaporation of those things, which indeed do reside in the more fixed Bodies. Although there are other things hung on the Body, which are by little and little diminished of their Virtues, because they dismiss a Vapour out of them. But things tied to the Head or Body, are Bony, Horney, Animals, and Plants; but others are Mettallick, Stony, Salts, Transparent things, or Thick or Dark things. But Mettals are seldome Amulets, unless they are as yet opened, or exalted by an external adjunct: Because they have a dividable Sulphur in them.

But in Stones there is great virtue; but of Stones, some are transparent Looking-glasses, but some are thick or dark ones; As Corral, Coraline, the Turcois, the Jasper. But in clear Stones, the Evestrum or Ghost of Life, being well or ill affected, doth reverberate; To wit, the life rejoyceth to be reflexed in a clear glass, whereby it is then made like to the Understanding, which in its own light is altered, (after the manner of a Chamelion) at the assimilation of Objects. Neither also have I in vain perceived, Gemms to be as it were thick Glasses, well polished: Because the native and natural Endowment that is in them, from the nature of the Glasse, doth more powerfully reflect the vital beam communicated unto it. For something is continually, and necessarily discussed or blown out of us, which is not yet plainly destitute of the participation of Life. That very thing doth keep the activity of its own sphear about us; the which, while it findeth in the polished Glasse, it easily reflecteth on the whole Body from whence it issued; for thereby sympathetical Remedies or Things were first made known. But afterwards when it was known, that things tied about the Body, were applied in operating, by virtue of a Glasse; there were thereupon, boughtie or convex, concavous, &c. figures of Looking-glasses, presently bethought of, whereunto Gentilisme joynd Hieroglyphicks; that by a figure they might denote the sign of a hidden virtue: Superstition in posterity thereby encreased, who anointed *Gamabens*, *Talismanicks*, and devilish Scurrilities of that sort: Thinking that Figures had not indeed the virtues of a Sign, but of a Cause. But transparent Glasses, do receive an Evestral or Ghostlike faculty, the which, although they do not reflect, as otherwise dark ones do; yet they approach nearer unto the nature of life, or the shining glasse.

Finally, I perceived that the diversity of Effects, the end and appropriation of Medicines, did not proceed from the fourfold fiction of Complexions: but from the very powers of Simples themselves; whose Election, dose, and preparation, have therefore stood neglected, because they have not been hitherto searched into, in their root and manner. After the perceivances of all these things; at length, another Spirit, took from me the bottle, which the other had given me: And with great grief I then perceived all the necessities of Death in me, unfit to be declared: Whereby I presently returned unto my self, neither could I receive comfort, but when I truly knew that all things were acted onely by a Dream; and because that if I ought to rehearse the virtues of things, I could not better performe it, than if I had as it were felt all those things within. This one thing, at least, I did moreover remember, that Chymical things did rather act by the force of Art, than by the native power of Nature, because their beginnings were brought forth and changed by the Fire.

To wit, Chymistry separates fixed things from things not fixed, which is the first and easiest sequestration of Heterogeneous things. There are not a few things also which it fixeth, before they were volatile, or on the contrary: And then, among some volatile things, it separates odoriferous things from things not odoriferous; which distinction is falsely reckoned, of the pure from the impure. For truly, the action of the fire, is to burn, and therefore it burns as well the pure as the impure. And then a third separation is made by digestions and proper ferments, as the parts which do stick fast with a stubborn continuity, do depart from each other, through a discord of the ferment. For so Bodies do in the fulness of their last life, voluntarily decay; and entertained faculties do come to light.

Moreover, by boyling and melting, the parts formerly ruled by one rein, do now act on each other, under which degree they attain other virtues: Therefore Chymistry produceth those things, which else should never be made, or had in Nature; and that not onely in separated volatiles, but also in things residing, and the which residues, are therefore calcined. But if by a co-mingling, and co-fermenting of the composed Body, new facul-

ties do arise ; that very thing is more beholdable in Alchymical things, not only because Art doth wholly imitate Nature in all her operations ; but also in a peculiar efficacy of a moist influx and melting, which do perform various operations under the fire, and change the Nature. For so, the spirit of Salt-peter doth elevate a moist Sulphur, and embrination or sharp waterishness of Vitriol, from whence are poysonous waters ; the Spirits of both which, notwithstanding being separated, were fit for Healing, and grateful to the Stomack.

In the last place, Chymistry doth bring up some more milde things unto a degree ; as poysons may be made of Honey, Manna, &c. most things, how violent soever they are, do also wax milde under the Fire : So that fixed Alcalies, is they are made volatile, do equalize the powers of great Medicines : Because by the virtue of Incision, Resolving, and Cleansing, they being brought even unto the entry of the Fourth Digestion, do fundamentally take away the toughnesse of things coagulated in the Vessels. For Chymistry doth so resolve the most hard and compacted things, that they being not onely forgetful of their former curdling, and constancy against the Fire, do retire into a tameable juyce, and being occult, are made manifest ; but moreover they become social unto us : Yea it doth not onely so prepare things themselves ; but it also effecteth means, whereby Bodies may be opened. For so, coagulated things, do depart into the Family of resolved things ; fixed things are changed into volatile, and on the contrary, crude things are ripened, and things Heterogeneal or of diversity of kind, are divided into their Classes or Ranks.

In the next place, drowfie or sleepe things, do attain degrees of Virtues ; and many new things spring up which have remained unknown in the Schooles of the Gentiles.

66 Finally, and finally, Chymistry, as for its perfection, doth prepare an universal Solver, whereby all things do return into their first Being, and do afford their native endowments, the original blemishes of Bodies are cleansed, and that their inhumane cruelty being forsaken, there is opportunity for them to obtain great and undeclarable Virtues. But how much purity the Understanding may attain under this Work, the Adeptist hath onely known.

Ah, I wish the Bottle once possessed by me, had not been taken away ! But God hath known, why he hath given to the Goat so short a Taile. *Let his Name be exalted throughout Ages ; and let the alone sanctifying Will of him onely be done.*

C H A P. L X I.

The Preface.

1. *The Authors intention.* 2. *The Authors excuse.* 3. *The event is suspected from Divine Ordination.* 4. *A wish of the Author.* 5. *A reason of doubting of the fallacy of the Devil,* 6. *How the Author knew, that he was not deceived.* 7. *A Reason, teaching that this Talent is of God.* 8. *The judgement of quick-sighted men.* 9. *The whole light of Healing hath appeared in one only moment.* 10. *What the Author hath conjectured from thence.* 11. *Why the Author hath written sharply against the Chaires.* 12. *The event is intellectually foreseen.* 13. *Fewers are frequently stirred up, the occasional cause being absent.* 14. *A Relation of terms, seeing it is not a Being, it doth not cause a Being in act: To what end the dissection of a man of sixty years old, was re-minded in his sleep.*

I Have deliberated in the good pleasure of God, to make manifest, that before the world, and especially in the Schools, the causes of Diseases, the knowledge of their essences, and their Remedy, have been hitherto hidden: To wit, that the essence of Diseases have not yet been pierced by so many Ages and Judgements of men. Truly I have earnestly and notably grieved, that this Ignorance of Ages past, and of the present Age, is true; and so, that it ought to be discovered by me an unprofitable old Man. It hath seriously grieved me, that they have been careless, as well for their own life, as for the life of their Neighbours, and that Physicians should seem to have studied only for gain: but that such was the ordination of God, that as long as the Schools did adhere to Paganish Doctrines, they should also persevere in the aforesaid darkness; until at length, in the fulness of times, there should be one who should open the essence and thingliness of Diseases unto his Neighbours, and that indeed, before the very Chaires of Medicine; to wit, that as it were in a Fountain (the errors of Heathenism being driven away) the Truth may hereafter shine, and as many as had not shut their eyes through obstinacy may repent.

Truly, I propose to the whole World, and to our Posterity, a matter new, and plainly to be admired. And ah, I wish, that I alone, who do first make manifest these things, may therefore contract on my self, and sustain the reproaches, nor that the life and health of my Neighbour may suffer. For I had willingly been silent; neither had I divulged my Talent, but that I knew this one only Talent to have been given me for the life of my Neighbour. And while I do as yet contemplate with my self of the greatness of the thing, in the succession of so many Ages, and their fatal ignorance, and the continued sluggishness of Body, or negligence, in a thing I say, of so great moment, as is the life of Man; I cannot but many times, for amazement, look back, repose my quill, and doubt of my own fallacy of rashness: To wit, that in the Universities themselves, wherein fresh, the more fervent wits, and those not yet defiled with gain, are exercised, a Disease is as yet altogether unknown; to wit, the adequate or suitable object of the Medicinal faculty; the object I say, of so many readings established by Princes. Surely, I had wholly doubted of my own rashness, unless he who giveth such a Talent, were the dispenser of the same within, and did give a cleanness beyond all demonstration and fear of error. Otherwise, it had been hard for me to persuade my self, and believe, unless I being constrained within by the authority and security of a greater Title, ought boldly to object my self against the censures of all. For what I teach, will be at first incredible, among quick-sighted men, if they shall place me at the Tribunal of so many Ages, who willingly confess my self unfit to reach unto so great a top of light, unless expert men do the more lively contemplate with me of the wonted super-abounding of the Divine Majesty. For no man shall the more clearly know the honour of God in this case, and the present gift to come freely from the Father of Lights, unless in my abjected smallness and

ignorance, they do see it to be the accustomed path of God, that he reveals unto little ones, that which he hath ordinarily denied unto the greater of the World: To wit, by reason of one fault; because they all have by a continued error, even sunk themselves into the Precepts of Pagans. For quick-sighted men, will from hence discern, first of all, that they must not go against me, as against a man.

Then, in the next place, they will weigh in their own judgement the Reasons of the Schools, drawn out of my bosom: Whence at length, they themselves being as it were led by the Principles and Theorems of nature, will voluntarily hasten unto far more sublime and famous Beginnings of healing, whither the tenderness of my judgement could not ascend.

For truly, I admonish and exhort the wise men of this World, that the errors and ignorances of Physicians, have not opened themselves to me by little and little, and by degrees entred into my Soul; so as that I have conceived or meditated of one thing before another: To wit, that I at first considered the Schools to be deceived, about the Congress, tempering, and complexions of Elementary mixtures, and disease distempers; but that from thence, I was tossed or tumbled about the errors of Catarrhs: and afterwards in the next place, that I had sought for the roots, causes and essential thingliness of Diseases and Remedies.

Indeed none of these: For if one thing had been made known unto me before another, I had thought, that all this progress had been the inductions or inferences of reason and imagination, subject to errors and fallacies. But after that, one only flash or enlightning of light had overshadowed the whole intellectual conceit (to wit, of the ignorance of Physicians, as well in the knowledge of causes, Diseases, as of Remedies and applications) at once, I undoubtedly knew, that this Talent was given to me for the profits of my Neighbours; and therefore, that it was to be handed forth to the Chairs (from whom correction is much desired and expected) and to be seriously under the penalty of the more grievous punishment, profered unto them.

When as therefore, I had now determined to demonstrate, that the Essence of Diseases, by their intimate and proper roots was not yet known, there was a night, before the fourth hour in the morning, the ninth of [the sixth Month called] *August*; and it seemed to me, that as from the crowing of the Cock, dreams are sometimes formed, I heard from the fore-conceived care of writing, that I should call to mind the Anatomy (whereof a little after, I shall make mention) and when I seemed admonishingly to have understood these things, I doubted being half awaked, which way that dissection of the dead carcass, might touch or concern the Treatise which I had determined to write touching the essence of Diseases. Therefore I being without care, dreamed, that I saw a man externally big, sitting at my Table, and eating fresh Salmon in the sauce of Vinegar and Pepper, and so greedily, that as if he would fill himself thereby (for in his own Country, fresh Salmon was not found) and I saw, that two dayes after, about the evening, a small Ague took hold of him, and that his teeth did shake; and from thenceforth, that it kept the figure or resemblance of a Tertian: That is, on the fourth day from the digestion of that meat: So that nothing of its remainder had putrified; and much less, that that had remained which might provoke the Aguish tumult, at set intervals. For that which commonly sounds, is that an Elementary distemperature was left, which should prepare the disease impression. But that thing, besides the absurdities of distemperatures and complexions, by me elsewhere demonstrated, seemeth to signifie a meer [*Ens rationis*] or Being of Reason. Because the thing imprinting and imprinted, are indeed things in act, and relative terms; but the impression it self, seeing it is nothing but a relation, resulting from a co-fitting of the terms, it can contain only the room of a Being of Reason. Wherefore, at least wise, the impression or distemperature, cannot remain a survivor, where the thing distempering, or imprinting it self, hath ceased to be, and by consequence, hath ceased to hurt.

It must needs be therefore, that the thing imprinting it self, had produced a hurtful quality out of it self; and had deposed it, as it were its product, on the subject of impression: And that thing, seeing it was made in an Organ which was the partaker of life, that product likewise, ought to be by all means, and immediately sunk, or entertained within the bosom of life it self; and the rather, if it ought to return at set periods, and to interrupt the silent rest of health; yea, if by acting in a hostile manner, it ought after some sort, to shew forth signs of the life disturbed. Even so, that I have by this dream, the more perfectly confirmed the essential thingliness of Diseases: For even as these things do not happen beneath and without the life; so the life it self, is the very impulsive cause, after

after that it is once disturbed in its place, peace or rest. Behold, on the same day, after the aforesaid Dream; a Senator, whom I had not seen for many years before, comes as a guest unto my table; and seeing it was the Vigil, or Eve of *S. Laurence*, it happened also that a fresh Salmon boyled, was set on the Board, and he eat no otherwise than as I had seen in my sleep: Yea, that two days after, he slid into a Tertian Ague: But the dissected dead Carcass, whereof I had received admonition, hath respect unto the same ends. For truly a man of sixty years old, had from the entrance of his age, lived in a tender health and through occasion of a light error, was easily feverish; whom sudden death, afterwards at length took away; and I being willing narrowly to search, whether I could find the Cause of his Feverish aptness, in the places wherein he lamented that he was pained as oft as he had the Fever: Indeed it was the Hypochondrial in both his sides, as well where the Liver, as where the Spleen are kept. But there was not the least thing about these parts to be seen with the Eyes, which might be fitly accused.

Wherefore this dissection being compared with the dreaming Vision of the Tertian Ague, from the eating of too much Salmon; I presently perceived, why they were both at once recalled to mind, while I was about to write the present Chapter; to wit, that through the opportunity of them both being remembred, I might the more strongly insist about the true thingliness or essence of Diseases, con-centred in the bosome of the vital spirit; but that the dregginesses, which the Schooles have reputed for the immediate and containing causes of Diseases, are nothing but the external occasional Causes, how intimately soever they should be admitted within the veines themselves.

CHAP.

C H A P. LXII.

A Disease is an unknown Guest.

1. *A Narration of things hitherto done.* 2. *The Object and Intent of the Author.*
3. *That the Art of the Medicine of the Pagans was an invention of the evil Spirit.*
4. *A Prayer for his Persecutors.* 5. *The Author searcheth out or espieth from his Persecutions, that the evil Spirit was the Inventor of the Doctrine of the Pagans.* 6. *The Labours of the Schooles from hence are vain.* 7. *The Authors Anguishes.* 8. *A Prologue of the thingliness of a Disease.* 9. *The most immediate, containing, and essential Causes of Diseases.* 10. *The necessity of a seminal Idea is collected.* 11. *How far this Doctrine departeth from the Schooles.* 12. *The true causes of things and of Diseases.* 13. *The Schooles, their ancient definition of a Disease.* 14. *The first Contradiction of the Schooles.* 15. *Another Stumbling.* 16. *A Third.* 17. *The Author teacheth (in his Treatise of the Elements) that there are not mixt Bodies, as neither humors in Nature, whence the whole foundation of the Medicine of the Schooles goes to ruine.* 18. *A Fourth Stumbling.* 19. *A Fifth.* 20. *A Sixth.* 21. *A Seventh.* 22. *Against the distemperature of Elementary qualities in us.* 23. *An Eighth staggering.* 24. *A Ninth.* 25. *A Tenth.* 26. *An Eleventh.* 27. *The Error of the Schooles is discovered.* 28. *A Twelfth stumbling.* 29. *An absurd consequence according to the position of the Schooles.* 30. *The uncertainty of a predicament for Diseases.* 31. *Arguments on the opposite part, and against a feigned disposition.* 32. *The true efficient Cause of diseases.* 33. *The occasional matter.* 34. *Wherein the whole thingliness or essence of a Disease may be situated.* 35. *Whence the Schooles have been seduced.* 36. *Two false Maxims of the Schooles.* 37. *Another delusion of the Schooles.* 38. *What natural generation is.* 39. *The Schooles deceived by Aristotle.* 40. *Some ignorances arisen from hence.* 41. *A Disease consisteth of matter, and an efficient cause.* 42. *Whatsoever is generated, that is made by seminal Ideas.* 43. *All the predicaments are in every Disease.* 44. *The slip of Heathenisme in healing.* 45. *That the definition of a Disease hath been hitherto unknown.* 46. *A Disease is not a Being of the first Constitution, yet hath it entred into the account of Nature.* 47. *Wherein Diseases are distinguished from other created things.* 48. *The Error of the Schooles from the subject of Inhesion of Diseases, and very many Absurdities issuing from thence.* 49. *That those Absurdities are not to be connived at by Christians.* 50. *A stubborn ignorance.* 51. *Hunger is not a Disease.* 52. *The Schooles depart from their own Hippocrates.* 53. *Some neglects of the Schooles.* 54. *The rashness of the Schooles.* 55. *That the hurt of action, is not to be regarded for the essence of a Disease.* 56. *Whence that fiction sprang.* 57. *The consequent upon a confounding of the cause with the symptome.* 58. *A removal of the Cause doth not of necessity respect a withdrawing of the occasional matter.* 59. *The Schooles being deluded by artificial things, delude their young beginners by artificial things.* 60. *How the Seed may differ from its constituted Body.* 61. *A Thirteenth stumbling.* 62. *Some knowledges chiefly true in the Author.* 63. *What a kind of production of a Disease is made by a Blas.* 64. *The efficient Cause in a Disease.* 65. *A Disease pierceth the Life with a formal Light, in a point.* 66. *Some*

66. Some differences of efficient Causes. 67. An example in the Stone. 68. The Stone is not properly a Disease. 69. While the Effect hath concluded the occasional efficient, there is not the former Disease. 70. The products of Diseases neglected by the Schooles, are touched at. 71. The Error of the Schooles about the Objects of Contrarieties in Diseases. 72. Some Arguments against the Schooles, that it may jerk them. 73. The Products of Diseases, Secondary Diseases; together with a distinction of Symptomes and Fruits, are resumed. 47. Weakness or Feebleness, what it is. 75. An improper division of Diseases, by the Organical parts. 76. Whence there is a divers action of diverse things. 77. From the handy-craft operation of the Fire, of Pepper, an Escarrhotick, and Caustick, are Thirteen Conclusions, Paradoxes to the Schooles, and diverse things are illustrated, worthy to be noted. 78. The Fire is but little profitable unto the Speculation of Curing. 79. Some notable things concerning our heat. 80. A various Classis or Order of the Occasions of Diseases. 81. Hippocrates is explained with a connivance. 82. That which Nature doth once despise, that she never afterwards receiveth into favour. 83. A Disease is of the matter of the Archeus. 84. An explaining of Products. 85. Our Nature is ruled by an erring Understanding, after that it is corrupted. 86. The Schooles again deluded by artificial things. 87. To Produce, differs from, to Generate. 88. The Schooles have onely thought of taking away the occasional cause. 89. In us, there is a Nature standing, sitting, and lying. 90. A decree of Hippocrates is explained, with the moderation of that age. 91. Anatomy is frequent to excuse excuses in sins. 92. The sloathful negligence of the Schooles. 93. After what manner death and a disease, have become the Beings of Nature, since the creation, and have received second Causes their producers. 94. Two Objections of the Schooles refuted. 95. A Guest or Presage from the unseparable goodness.

THe integrity of Nature being already, at first, constituted, to wit between the Matter, the Archeus, and the Life, or forme of a vital Light, with the seminal and vital beginnings; the ferments also, the authors of transmutations, being newly discovered, also the elements, qualities, complexions, and miscellanies of these, their fights, strife, and cursary victories being rejected: likewise humours and defluxing Catarrhes, being banished out of Nature: Lastly, Flatus's, Tartars, and the three Principles of the Chymists, being banished out of the exercises of Diseases; it now remained that the defects and interchangeable courses of Nature themselves, should be intimately or pithily considered.

Wherefore, before that I make a more profound entrance, I have undertaken to prove, That Diseases have not onely been unknown in the Schooles, in the particular, and therefore that their Cure hath radically layn hid; but moreover, That the very Essence of a Disease hath been hidden in the general.

Truly it is matter of grief, that it hath been so ingeniously elaborated in other Professions; but that in the Art of healing alone, men have been hitherto, so stumbled through deaf Principles; wherein, notwithstanding Charity towards our Neighbour hath been penally commanded: For all things have remained most obscure, many things most false; and those things which might chiefly conduce unto the scope of Curing, untouched. For there is no where a tractable acuteness, but on every side a great dulnesse; So that, from what hath been said before, there is none but may easily gather, that whatsoever hath been hitherto diligently taught, according to the Doctrine of the Pagans, and against a mutual Charity, was the Invention of the evil Spirit. Therefore indeed, the stability of Paganish Theorems, hath remained through the perswasion of the Devil; which speculations notwithstanding, through their easinesse onely, at the first sight, ought to have been suspected by any one of a sound mind. Therefore nothing more hard, inhumane, and fuller of cruelty, hath been received now for so many Ages, among the Arts of Mortals, than that Art, which under a con-centrical subscription, makes fresh experiments by the deaths of men. The Professors whereof, while they presume, that themselves do keep the keys
of

of knowledge, they neither enter the passages themselves, nor admit others who are willing to enter in: but do drive away all, by all wiles and subtilties: *Alwayes learning, and never coming to the knowledge of the Truth*; according to the Apostle.

4 'Oh Jesus, my light, my life, my glorying, and the helper of my weakness and corrupt disposition, who in thy own matters, dost easily find out a passage, with whom that is easie, which with mortal men, is as it were impossible. Thou, who hast made me to undergo all adversities: I offer unto thee my calamities; and the oppressions of justice. Nevertheless, thou hast always comforted me with thine unvanquished right hand; afford me thine hand, that if thou vouchsafe not to snatch me out of the deepe pit of so many tribulations; at least wise, that through thy strength, I may not sin against thee, and that they may repent, who have hated me undeservedly: and that they who adore thy Power, may acknowledge in me, that thou alone art God, the helper of the oppressed, and the undoubted hope of them that trust in thee: Let them be cloathed with contrition, and find favour with thee; and that I wretched man, may sing forth the praises of thy greatness, after this life. For the rottenness of this Age is such, that (thy judgement being hidden) the hypocrisie of mighty men, professeth Faith in deceit, and collects their wickedness under the shadow of Piety.

5 But in so great a tempest of my miseries, unto the miseries of mortals, and the defective errors of Physitians, before the view of my mind, I have attempted, under thy command, to record in writing. That as hypocrisie hath trampled on me and my fortunes, so I likewise know, and that primarily, that the father of lyes, hath introduced the cup of ignorance, and the bane of charity and health, into the Paganish Schools; lucre strewing the way, under the beaten stormy path of Tritons. For every young beginner that is to come, shall admire with me, that nothing hath been so unskilfully handled, as those things which concern the life of mortal men. For truly, according to *Thomas a Kempis*, it is all one with the Devil, so he may render thee incapable to serve God: whether that be by true things, or things appearing. Therefore it sufficeth him, so he shall but frustrate man of health, and cut short his life, wherein he might serve God, if so be he shall make him a despiser of Divine aid, by the appearing Doctrines of Pagans. For the Schooles have written a thousand Volumns concerning the temperature and strife of qualities; in the next place, it hath been much and long interpreted by the Successors of *Galen*, about these trifles, and they have daily relapsed into new centuries and patcheries. And at length, they have squared unto those qualities; feigned and excrementitious humours, which should so wholly govern man, as well healthy as sick, that they should be chief over humane affairs: as though the conditions, manners, healths, appetites, instincts, inclinations, slips or mis-deeds, strengths, valours, defects, events of fortune, yea and the deserved punishments of loss or damnation, and the adoptions of eternal life of mortal men, should depend thereon. A horrid, surely, and intollerable thing, that these toyes have stood so long, and that from things not existing, and never to be, and the which, by the asserters themselves, are accounted for excrements, so serious and pernicious Fables have been co-feigned and believed. And so that, by the Schooles themselves, scarce any thing hath been ever narrowly searched into, which under such Principles, may in very deed, be truly true and good. In the mean time I grieve (I testifie it again) not indeed, that I have obtained the light of Truth, from a long compassion towards my Neighbour: but that it hath behoved me to lay open these Errors: That is, I grieve, that the Devil hath deceived the Schools, and will deceive them, as long as they shall suffer themselves to be deluded by Paganish Fables, and to be separated from the Schools of Truth. But that, that thing may be manifested, I will by a Prologue, declare it by the way, and as it were by a positive demonstration.

8 For truly, God made not Death. And that is of Faith. Therefore man became mortal, from another thing than from God. And seeing the scope or bound of most Diseases, is Death it self (because it is that which is nothing else, but an extinguishing of life) therefore a Disease and Death, are Diametrically opposite to life. Whence it follows, that every Disease doth immediately act on the life. But nothing is able to act on the life, unless it be applyed unto it, and well mixed with it. But a Disease, the enemy, is not applyed unto the life, promiscuously, unless it shall besiege a part of the life, and so shall sit totally or partially in the very life it self. Which being done, that part of the life besieged or overcome, doth retire from the vital Air, and the which, being thus vanquished and become degenerate, is made hostile unto the life as yet remaining, or as yet constituted in its integrity.

Hence it necessarily follows, that every Disease, as it finds matter in the Organical or instru-

instrumental Air of life, whereby it most immediately and inwardly riseth up against the life it self, so in the same vital light, it finds an efficient cause: And so a Disease, being thus instructed or furnished with matter and an efficient cause, is entertained about the life. Neither is it of concernment the while, whether that contagion of a Disease, be drawn from occasional Causes; or in the next place, be bred within in the Archeus, through the error of Life: At leastwise, it is sufficient in this place, that the Life it self is on both sides the principal object for the hostile disease. But seeing the Life it self is a light-some Being, it acts not but by its instrument of the vital aire, or by the Archeus, as a mean, between the light of Life flowing from the father of lights, and the body: But this aire or Archeus, doth not act, but after the manner wherein every seminal spirit acteth on the mass subjected under it; that is, not but by an imprinted mark, or sealie Idea, which hath known what, and which way it must act. Therefore all and every disease, hath a sealie mark, and as it were a seminal act, which is expert of things to be acted by it self.

This Declaration therefore doth far recede or differ from an elementary distemperature, from humours, and the disproportionable mixture of those, from the fight and contrariety of the elements of our composition; because every disease is nothing but a Sword to the Life, wounding, or totally cutting it off. For as a Sword doth exhaust the Life, together with the arterial blood and vital aire, wherein, according to the holy Scriptures, the Soul it self sitteth; So a disease consumeth the same air of Life, on which it afresh seal-eth an hostile character, drawn as well from occasional Causes, as gotten through the error of its own indignation.

This exact account of a disease being granted; lo, I come unto the explaining of a disease.

And first, I will demonstrate from the very Theoremes of the Schools, that the thing-ness or essence of a disease, hath been hitherto unknown.

Whence, in the next place, any one shall easily judge, what hath even hitherto been done in the remedies and vanquishing of diseases.

I have oft-times promised, that I will demonstrate, that the Schools have hitherto neglected (that is, that they have not known) the essence, root, or nature of a disease, in its own universal quiddity or thingliness: And seeing I have already from the Elements, prosecuted that thing even unto a conclusion, thorow all their privy shifts; now at length, by an Anatomy of particulars, I shall also stand to my promises, if I shall detect the same in the general; and especially, if I shall shew that thing no longer by the fictions of Elements, temperaments, and humours, but by the very words of Authors, whereby they corrupt their Young beginners, as it were, with a mortal contagion.

In the premises, it hath already been demonstrated by me, that the Ages before me, being deluded by the trifles of the Peripateticks, have been ignorant of the Causes; to wit, the Matter and Efficient of natural things.

Then also, that a thing it self is nothing, besides a connexion of both Causes; and that this same thing is in diseases; especially seeing a disease, although happening unto us by sin, is now admitted for a prodigal Son of Nature. Truly, the univocal or simple homogeneity of Causes in natural Beings, hath compelled me hereunto; whereby the efficient Cause is denominated from effecting, but not from the Effect, which is after the Efficiency.

Therefore the Schools do first of all define a disease to be an affect, or disposition, which doth primarily hurt the actions of our faculties, wherein they do, as yet, very much stumble.

For truly, first they name this Affect, a distemperature of one or two qualities of the first Elements: For so they rehearse the same thing, because they confess a disease to be an elementary quality it self, as it exceedeth a just temperature. Therefore a disease shall no longer be that disposition, resulting from the first qualities, which they suppose immediately to hurt the functions themselves: And so they feign the whole disease, hereafter to consist in nothing but in a degree or excess of an elementary quality.

Again, now and then they call the very distemperature of qualities, not indeed a Disease, but well, the antecedent cause of the same: They will, I say, have those four solitary qualities to be diseases, whether they shall proceed from external qualities co-like unto themselves, or whether they owe their beginning in the body to be from a strange disproportion of mixture.

Furthermore, they afterwards combine those qualities in a bride-bed; from the congress whereof they then derive their off-spring, a Disease; to wit, they believe that the

- Elements are so subservient to their own dreams : As that also, qualities being joyned at their pleasure, they have commanded them to answer to as many elements. So that those naked qualities being even balaced with feigned elements, and dreamed humours, they have feigned to be Diseases themselves. For in this place I declare the unseasonable, yea sporting varieties of the Schools, and their poverty, greatly fighting : otherwise surely I have sufficiently proved elsewhere, by a Demonstration chiefly true ; That in the nature of things there are not four elements ; and therefore neither are they mixed, that bodies which they have called mixt may be thereby constituted : and by consequence, that neither can distemperatures be accused for diseases : As neither, that ever there were four constitutive humours of us in the nature of things ; whereby it is sufficiently and over-manifest, that the causes of diseases, yea and diseases, and the predicament of diseases, have been hitherto unknown in the Schools. Notwithstanding, I will now dissemblingly treat with them, by the supposed Positions of the same Schools.
- 17 Therefore the Schools sometimes repenting them of their sayings, will have the elementary qualities, and not unfrequently, the humours equal to these, not indeed to be diseases, but onely the containing causes of almost all diseases.
- 18 Otherwise again, that of those qualities being more intense than is meet, a third or neutral one doth arise, which they have called the Diathesis or Disposition, or Disease it self : And so, however they toss the business, they have hitherto commanded a disease to inhabite among qualities : but humours, although intemperate ones, they have for the most part driven out of the rank of diseases. Indeed a Cataract in the eye, although as a substance, it doth immediately intercept the sight, yet it cannot be a disease. Therefore they have feigned a certain Being of reason, and an imaginary relation, or obstruction, which might contain every property of a disease, and might be truly a disease, the Cataract being rejected : And so by degrees, a disease comes down unto non-beings and privations. And now and then, they for the essence of a disease, do ridiculously distinguish a simple distemperature from a conjoynd one ; and again, both of them from a humours one ; when as a humour should be a substance void of degrees. Indeed they have distinguished the societies of proportionable and disproportionable mixtures of the first qualities into pedigrees ; and then they have thereby erected specious Schemes ; and at length they have filled whole Volumes with those fables : But at leastwise they have never admitted an evil or vitiated humour to be bred in us, which may not presuppose some elementary distemperature to be mother unto it. Wherefore a distemperature, in the Schools, shall be onely the cause of the cause, and of the thing caused : but it shall not be the thing caused it self, or the disease ; nor in the next place, the immediate and connexed cause of the disease.
- 20 Oft-times again, the opinion of their minde being changed, they have withdrawn those qualities out of the account of diseases and causes, and have undistinctly banished them into the troop of symptomes and co-incident things onely : being altogether doubtfull, what a disease, what a cause causing, or what a symptome should be : But of the internal occasional causes of diseases (which in the Book of Fevers I first brought into open view) and of the equivocal or various kinds of products of diseases, nothing hath been heard in the Schools. For besides heats, colds, pains, weakneses, and co-incidents of that sort, they have known no other fermental effect of a disease ; whereunto, at length, for a conclusion, they have brought death. And so they have confusedly joyned privative things to positive. In the mean time, they have doubted to what predicament they might ascribe diseases. For they oft-times denominate a disease to be a quality : otherwise also, a certain relative habitude or disposition of body ; oftentimes also, to be a quality of the number of actions ; they do often say it to be of the predicament of quantity ; to wit, while they say that diseases are not the first qualities themselves, but their distemperature, or degree, or excess onely ; and while they bring a sixth finger into numbers. But being unmindfull of what they said before, they will have a certain disposition, resulting from a hurtfull quality of humours, to fill up both pages or extensions of a disease ; to wit, so as that, that disposition may be the daughter of the hurtfull quality, as of the diseasifying cause. And so then a disease should supply the room, rather of an action hurt, than of the hurter of actions. And likewise a disease should not be any longer a distemperature, or the excess of a quality, but another product (as yet unnamed) from the distemperature it self (to wit, a hurtfull quality of humours) shall generate the disposition ; which onely and alone, should at length be truly the disease. For truly, a man that hath the falling Evil, a mad man, a gouty person, and one that hath a Quarantine Ague, besides and out of the fit, are disease, and do nourish the disease within :
- 27 Yet

Yet they have not such a diathesis or disposition (for if the Schools do believe diseases to be meer accidents, surely these know not how to sleep, neither are they while they do not act) in the time of rest from invasion. Therefore at least-wise in that sort of sick folks, the disease shall by no means be such a dispositive disposition.

Again, they being unmindfull of themselves, do will, that if that disposition be small, it is not to have the reason or essence of a disease: but therefore, that it then doth bring forth a neither state, or an hermaphroditical Being, between a disease and not a disease: so that its essence doth, for the half of it, partake of a non-being; and that as well in the state of declining, as of recovery: And which more is, they reckon such a small diathesis not among diseases, but with the weaknesses of a state of neutrality, and among symptomes: And that there it doth patiently wait, until that having obtained a degree of a symptome, it be made a disease: And so a disease disposition is not a disease, if it hath not as yet manifestly hurt by its excess: wherefore also, not the disposition itself, but the excess thereof, is the disease of a proper name in the Schools: The correlative whereof is, that the degree onely of some qualities doth make and change the essence and species of its own self; neither shall a species therefore have its own thinglikenesse, in its being specifical, but onely in the point of excess. So at length, a disease shall wander from a quality, into the predicament of relation.

In the next place, if a disease be an effect, immediately hurting action; they ought even from thence, at least, to acknowledge that the Archeus himself, or the maker of the assault, while he is irregularly moved, (to wit, while Scarr-wort doth embladder a living body, not likewise a dead carcass) and layes aside, and loseth a part of himself, for this purpose, ought to be the universal and primary disease of all: Even as I have threatened to demonstrate concerning Feavers. They likewise ought to acknowledge, if material causes do by themselves, and primarily suffice for an immediate hurting of the functions themselves (to wit, as a Cataract before the apple of the eye doth by it self, and immediately bring forth blindness: even as the cutting off or mayming of a tendon, doth take away motion, without the intervening of a disposition really distinct from the curtailling wound) that there is no need of feigning such a disposition; for there is not any stoppage, or diathesis which stops up the passage of the urine: if the stone alone doth immediately do that, and materially stop, and doth so perfectly and really contain the whole foundation of a relation in it self, that the disposition or stoppifying action proceeding from the stopping stone, is nothing but a relation, and meer Being of reason, which in diseases, in time of healing; as also in true Beings, and things truly existing, hath no place: wherefore extrinsecal diseases, such as are wounds, and what things soever do intercept any passage; seeing they do not arise from a seminal beginning, nor do nourish a cause which may stir up the Archeus, they are the clients of another Monarchy. But for seminal diseases, it is a nearer thing in nature and motion, to suppose the Spirit, the Archeus, as it is the efficient beginning of feeling and motion, to be immediately, and most nearly affected by hurtfull things, and that, that occasional cause, and the Archeus, do mutually touch each other in a point; whence a disease: For the occasional matter, whether it be brought to within, or be bred within, or be coagulable, or putrifiable; lastly, disperfable, or waxing hard, doth alwaies onely occasionally stir up the Archeus, that he may thereby be astonied or fore afraid, and wax diversly wroth: To wit, under whose perturbation, an Idea is bred, informing some part of the Archeus. And that thing composed of the matter of the Archeus, and the aforesaid seminal Idea, as the efficient Beginning, is in truth, every seminal disease. Therefore the Schools being seduced by their own proper liberties of dreams, have thought, that because the consideration of Causes and Principles differs from the consideration of the thing produced by them, therefore from a necessity formally causing, all Causes ought in making, being, operating, and remaining, to remain perpetually separated from the things caused: not heeding, that for the most part, the consideration of Causes and Principles, doth not otherwise differ from the consideration of the thing caused, than by the relation of a mental Being; the which, although it be received in Science Mathematical, and discoursary things, yet not in the course of Nature. Therefore the Schools, being deluded by such faulty arguments, have believed every efficient Cause to be of necessity external; and that therefore it cannot be united with the thing caused; and therefore that neither is the thing generating a part of the thing generated; when as otherwise in Nature, that which immediately generates a Being, is alwaies the internal, vital Governour, and assisting Architect or Master-workman of Generation: and so he who for an End, directeth all things unto their scopes, causeth all things for himself, and for himself acteth all things. There-

- 37 fore they being also deceived in Diseases, have believed that the diseasifying Cause is external in respect of the body of man; or at leastwise in the beholding of the Family-administration of Life. For it hath not been known, that Generation bespeaks nothing
- 38 but a flux of the Seed unto perfection, maturity of properties, an unfolding of things hidden, and a consummating of Orders unto their own ends.
- 39 First therefore, *Aristotle* hath deceived the Schools, teaching, that Corruption and Generation do throughout whole Nature, and that alwaies and of necessity, by steps succeed each other: And therefore he hath made a mental Being, a meer negative, non-being (a naked privation) the immediate Principle in Nature, between Generation and Corruption.
- 40 Neither could ever the Schools understand, that the same Workman which hath made a Plant of a Seed, hath not failed in the generating of a Plant, hath not, as being banished, departed, as being worn out, not died; nor lastly, that another hath been surrogated in his stead for the coming of a form (whereof that Workman remains the immediate executive Instrument, for ends foreknown by God) or a participation of life: but that he himself doth even onely and alwaies remain in the government of Life. Hence indeed, neither have they understood, that the thing generated doth proceed from Causes really and suppositively, not distinct from the essence of a thing; yea nor indeed, with any interchangeable course of causality: Because the Schools have hitherto more diligently considered of Operations demonstrable by Sense, (Science Mathematical, I say, and artificial things diverse from Nature) than the natures of things themselves, seated in the Cup or bosome of essentiality. For they have never heeded that the Instrument of Art, the Artificer himself; yea, the Measures themselves of things measurable, cannot generate any thing seminally in nature, or introduce a seminal, substantial or essential disposition, for the transchanging of products. Consequently also, neither have they understood a disease, as a real and substantial Being, but onely in manner of an accident: when as otherwise, a disease is not a disposition, not an accident hurting the actions; and much less the hurt of an action it self, proceeding from a duel of hurtfull Causes without ruling Powers: But a Disease is a real Being, having its Causes, the Material and Efficient, stirred up by occasional Causes: For if a Disease, and Nature, or our Faculties, do stand in a diameter, (for so they will have them) a Disease and a sound or healthy Life, cannot be at once in the same immediate Subject: therefore a disease cannot be a disposition, which doth even bring a detriment unto our powers: but such a disposition should be rather a fruit of the disease, and a consequent more latter than the disease, and the mother and nurse of weaknesses. I therefore distinguish this disposition from the occasional causes, and products of diseases. But the fruits of a disease, seeing they have respect unto the term [unto which] the disease generates those its own products, they may also be co-incident, or happen together with the Life; and therefore some symptomatical fruits are among dispositions; which thing the Schools have not yet explained: To wit, the defects of digestions, motions, &c. And likewise weaknesses are dispositions, which proceed indeed from the products of diseases (even as by and by in its own place) yet they are not diseases, because they light into nature, whereinto they are introduced by the strange violences of disease seeds, and thus far are unially entertained in the life; neither therefore can they have the nature of a disease, because a disease cannot remain together with the life, in the same point of identity. But a disease retires out of the bosome of life, no otherwise than as it separates it self out of health. But Life is in it self, a certain integrity or sound state of light, with which a disease cannot co-habite; as neither doth a disease subsist but in the vice of life, or in life that is degenerate: The which indeed is separated from the vital light it self; and therefore also, from the central point of life it self. For as light, which the Soul it self is, is not life it self: So neither is the light of life it self, a disease it self: But this sits in the ulcerous degeneration of the vital Archeus, and so also vitiates the light hereof: and therefore by reason of a mark of resemblance, it participates of life, and doth sometimes render it conformable to it self, and doth wholly vitiate it: which thing, in the Plague is ordinary and manifest. It hath not been known therefore in the Schools, unto what predicament they might attribute a disease. But I say, that a disease consisteth of Matter, and an efficient Cause, no otherwise than as other Beings of nature do: For the efficient Archeus, in labouring by his own disjointings of passions, and in bringing forth the Idea's of his own disturbances (for whatsoever things are made in nature, do arise, & are propagated by Idea's inclosed in seeds; for otherwise the progresse of nature should be foolish, which want an internal guide or leader) procureth to dispose of some portion of his own substance, according to the hostile ends

ends which he hath proposed to himself, and to the whole Body, in that very kind of his estrangedness; and at that very moment, wherein the matter comes down unto the bound proposed to the efficient Idea, a disease is bred: Even so that, every seminal disease consisteth in a real act, which causeth an indisposition of the matter proper to it self, that is, of the very Archeus which makes the assault, and being applied unto us.

I therefore have learned, that every circle of predicaments, are in very deed in Diseases after the true manner of other Beings by themselves, subsisting in Nature: For by this meanes, I have found, not Diseases in Predicaments, but all Predicaments in Diseases: For truly in all seminal Diseases, I find an occasional matter, which like a violent guest, making an assault, doth violate the Inne, and right, and disturbs the administration of the Family. From thence I find, that the Archeus himself is disturbed in all particular Diseases: for from hence also, I consider another internal matter of a Disease, to wit, that part of the Archeus, which he hath defiled by his own exorbitancy; on which part he hath fashioned the Idea of his perturbation, and the seminal efficient Cause of a Disease.

So indeed a true and real Being, doth conserve in it self the respects of all the Predicaments; through the ignorance of which, or one only point, heathenisme hath overwhelmed the Schooles of Medicine, with the contagion of blindness; And all curing hath been believed to be subject unto naked qualities, excesses of degrees, relative respects and actions. For from hence they have feigned, Contraries to be Remedies of Contraries; and no Disease to be mitigated by the goodness of Nature, the mildness of Medicines, and by the appeasing and repentance of the Archeus, that was first disturbed; but only by fighting, skirmishing and war, to be reduced into a mean, or temperature of the first qualities; So that seeing they think every Disease to be a Disposition, likewise that all Remedies ought to be a naked Disposition, or they are deceived in their position; whence it follows, that the taking away of the stone out of the Bladder, shall never be able of it self to import a cure of the sick.

For truly, seeing it is a Remedy onely privative, whereunto an appeasing of the Archeus belongs; but it is not a Disposition contrary to the Stone: And much lesse a prohibitive of the foregoing matter, which they suppose of necessity to be supplied from elsewhere, uncessantly to flow thither, nor to cease, the Stone being taken away by the knife, to wit, if the Disposition generating the matter [whereof] shall not first cease: Therefore according to the Schooles, *He that is cut for the Stone, should be cured onely for a little space, to wit, as the Impediments of Functions are taken away, otherwise produced, and cherished by the Stone being present; and also as the disposition mentally interposing, is secondarily, casually and by accident obliterated.* But the matter is far otherwise; For truly a seminal Disease is a creature, which made and found out its own matters, and its own Idea's in us after sin, by an hereditary right of the Archeus, neither had he it originally in Nature: And therefore the root of Diseases, ought totally to be unknown to all Heathenisme: And seeing an essential definition is not to be fetched from the Genus of the thing defined, and its constitutive difference (even as I have taught in the Book of Feavers) by reason of the manifold perplexities of Errors, and ridiculous positions; but altogether, from a connexion of both Causes, which are Beings in Nature, and therefore, that the primitive and Ideal cause of Diseases hath stood neglected hitherto: It follows also, that the definition, knowledge, essence, and roots of a Disease, have remained unknown: And finally that curings have been instituted by accident, with an ignorance of the universal disposition of internal properties, their efficacie and interchangable course.

Truly I know, as a Christian, that a Disease is not a Creature of the first Constitution; because it is that which hath taken its root from sin, in the impurity of Nature, which afterwards in their own spring have at length budded in Individuals. For neither were created poysons Diseases, as long as they were without us, but then, when the Archeus of the same was made domestical unto us, through the forreign disposition of its middle life, it raised up seminal Idea's in our Archeus, even as Fire is struck out of a Flint: Then I say, Diseases, are made unto us, the fore-runners of Death, from an occasional poyson. Diseases therefore do continue with us, when they have their provoking occasions subsisting in our Nature, until neither their occasional matter be wasted away, or at least until the Archeus be rid of his own perturbations, or of his office. For Diseases indeed came on us by Sin, and afterwards in Nature now corrupted by Sin, the ferments and ready obediences of matter, waxed strong, and so they pierced into the number and catalogue of Nature, and even unto this day do most inwardly persevere with us, after a singular manner: Yet alwayes distinct from other created things in this, that the created things of the first con-

constitution, have a proper existence in themselves ; but diseases neither are, nor are able to subsist without us : Because they proceed as it were from a formal light, and the vital constitutive Beginning of us : And therefore the natural Archeus and a Disease, do pierce each other, because they have a material co-resemblance.

- 48 But the Schooles, when they heeded, that Diseases do never exist without us, supposed that our Body was the subject of Inhabitation of Diseases, and consequently, that Diseases were only accidents, and therefore to be stirred up from an elementary distemperature, because they apprehended them in a most prompt, and rustical sence; also for that cause, they hoped that they should sufficiently, and over vanquish Diseases by Heats and Colds : And therefore they likewise decreed, that every refreshment, aid and help, which nature being informed, did require of the Physitian, was not to be administered in shew of a refreshment, in peace and tranquility ; but herein onely to prevail, and that wars, strifes, contraries, and discords were to be appointed, whereby the hostile elementary qualities being broken in us, they might by constraint, return into a mediocrity of temperature, that so they may restrain the injuries of Nature now corrupted by contrary injuries, and subdue them by revenging : Which thing surely they have thus judged, nor have otherwise understood, because that, they knew no other action, than that which from a superiority of the agent, rules over the patient. But surely those things do not favour of an help, neither is the Law of Christ (by whom all things were made) conformable to those Lawes of the Schooles : And so (as elsewhere more largely) either Christ is not the parent of Nature, or an adversary to himself in Nature, or such Heathenish speculations of healing are rotten. The Schooles therefore have not considered, that the matters of many Beings do not consist but in a strange Inne, whereunto they were appointed : Wherefore, by reason of their different kind of manner of existing, they thought a Disease to be a meer accident, but predicamentally separating the matter, which a Disease might carry before it, from a Disease : As if an Embryo should be an accident, because it is no where but in the womb. Indeed it pleased the revenger of sin, that Diseases, with their matters, as well that occasional, as that equal and inward unto them, should not subsist, but in those whose the Diseases and offence should be, and that without respect of the Being of one unto another. For neither have the Heathenish Schooles ever considered, as neither the Moderns who have been established on Paganish Beginnings, that this relation of existence came unto them from the condition of sin, and the procreation thereof, from the Archeus sore shaken with perturbations : Because such thoughts never entred into Heathenisme, neither is it a wonder, that the *Gentiles* knew not the force of Transgression, although they do deliver by the Fable of *Prometheus* and *Pandora*, that they learned something from the *Hebrews* : Yet it is a wonder, that they were ignorant that a Disease, before it should be made ours, ought to proceed from the most inward Beginning of Life, and to be incorporated in us ; neither therefore, that occasional Causes, can be the connexed and constitutive Causes of Diseases ; for truly, those Causes do as yet remain after life, and yet Diseases cease.

- 49 But we must in no wise indulge Christians, who are thorowly instructed by the Scriptures, that they have even until now, esteemed it for an honour to have delivered their minds bound unto the hurtful stupidities of Heathens. They took notice indeed, that there was that affinity of some Diseases with us, that they were so connexed unto our Body, in respect of an occasional matter, that they could scarce be divided from a consent of the mind, or be separated from a hurt action ; as in Wounds, instrumentary Diseases, those deprived of the strength of Seeds. For the Haw upon the Coat Cornea, is that which immediately, hurteth the sight ; as also the Stone, doth without a medium, stop up the passage of the Urine.

- 50 But the obstruction flowing from thence, is a relation and Being of Reason ; the which as it acteth nothing, so neither hath it the reason, nor consideration of a Disease in Nature : Nevertheless, the Modern Schooles had rather to commit the Essences of Diseases unto Elementary discords, than that they would confess the Bodies of Nature, to bespeak nothing else besides a connexion of both constitutive Causes, to them unknown. For that reason, miserable mortals have hitherto groaned under this burden of blindness, expecting Cure from those, who were fully ignorant of the constitutive Causes of Diseases.

- 51 Wherefore, seeing a Disease ought to contain its own efficient Cause, and its own matter within it self ; Hence it easily appears, that hunger, although like a very sharp Disease, it kills in very few dayes, yet is not a Disease ; because it doth not consist of Disease Causes, whether it be considered as a sorrowful sence of the number of Symptoms ; or next as it consisteth of real defects : Because for as much as the soure ferment of the Stomack

mack (even as in the Treatise concerning Digestions) wanting an Object whereon it may act, yet cannot therefore take rest, it attempts by resolving the secondary humour, and immediate nourishment of the Stomack; for the Archeus is as well in hunger as in fullness, the cause not onely of a Disease, but of Health it self: But a want of the matter of Food, bespeakes a privation, but not a Disease: Wherefore we must altogether exactly note, that Hunger although it doth cruelly slay, as if it were a Disease; yet that it is not a Disease, in that respect, to wit, because the Archeus is in no wise diseased in hunger: From whence it ought to be clearly manifest, that every Disease doth primarily and essentially respect its efficient Archeus.

For that cause it was rightly decreed by Hippocrates, to the carelesnesse of the Schooles, that hot, cold, moist, or dry (not indeed as such, and concrete or composed) are not Diseases, or the causes of these; but sharp, bitter, salt, brackish, &c. For peradventure in the age of Hippocrates, the occasional cause was not yet distinguished from a true Disease. Indeed, he knew a twofold excrement to be in us: One indeed natural and ordinary, and so ours; but the other a diseased one, from its mother error, and a hostile propagation, and the which, we Christians know to have proceeded from the vigour of sin: For when the old man had distinguished this by foreign favours, he supposed, that if it were not a Disease it self, at leastwise, it was the adequate or suitable occasion of Diseases, not yet then distinguished from a Disease: The removal whereof at least, should open both the folding doors of Healing. But it is matter of amazement, that he whom the Schooles do boast to follow as their Captain, they have skipped over this his Text, through sluggishness; as also another Standard-defender of the same Captain; wherein he hath declared, that every motion, unto a Disease, Death, and Health, is efficiently made by the Spirit which maketh an assault: And likewise wherein he saith, that *Natures themselves are the Physitians of Diseases*; and by consequence the makers also of Diseases, if that assaulting spirit by its disturbance, doth work all things whatsoever are done or made in living Bodies.

Indeed the Schooles have passed by many such things, which did deserve to be accounted like Oracles; because they being deluded and bewitched by four feigned Humors being traced by the deep shipwrack of sleepiness, drowsiness, and sluggishness; have neglected the liquors which he himself nameth secondary ones: as if a Disease might not be as equally possible in those, as in the four feigned primary humours. Therefore have they also neglected the Diseases arising from the retents or things retained of Digestions and transplantations; because also they have been utterly ignorant of the Digestions and Fermentations themselves, even as I have taught in its place. Alas! How penurious a knowledge hath graced Physitians hitherto, whom otherwise if they had been true Physitians, the most High had commanded to be honoured.

For they have considered a Disease to flow forth as an accident, produced by its Agent, a diseasifying matter (wherein therefore that its own efficient is, they have in the entrance been ignorant) and the patient, which they say is the Body of Man.

First of all, They do not distinguish the Agent from the Matter, which is most intimate hereunto.

Secondly,

Then, They deny a Disease to be material, because it is that which they suppose to be a meer Quality.

Thirdly,

Neither do they distinguish provoking Occasions, from the internal Efficient; because with Aristotle, they suppose every Efficient Cause to be External.

Fourthly,

They separate the constitutive Causes from the thing constituted.

Fifthly,

They know not the Chain of Efficient Causes, with their Products.

Sixthly,

They for the most part, confound Occasional Causes with their Diseases and Symptoms.

Seventhly,

They sometimes look upon a Disease as a Disposition skirmishing between the Orders of Causes, and the Body of Man.

Eighthly,

They had rather have that very later disposition, arisen (as they say) from the fight of Causes, to be a Disease, the which, to wit, should immediately (so they say) hurt the actions, whether in the

52

53

54

55

the mean time, it be contrary unto a vital action; or indeed, it be the effect of that contrariety, which shall offend the functions.

But I do not heed the hurtings of Functions for the Essence of a Disease, but the operative disturbances extended on the Archeus, do I contemplate of, in Diseases. For he doth often die without a sense of action, being hurt, who indeed suddainly falls down, being in the mean time long diseased; or he that perisheth only by a defect of Nature: Wherefore also, I reckon it among other impertinencies, to have tied up the Essence of Diseases unto the hurtings of the functions, seeing that is accidental and latter to Diseases, but not alwayes a concomitant.

65 Yea truly, because a voluntary restoring of the enfeebled faculties, doth follow health; hence the Schooles have measured the Essence of a Disease, to owe an unseparable respect unto the hurting, and things hurting of Functions; So indeed, that these Essences of Diseases should be included therein: Because they have thought, that the whole hinge of healing was rowled about contraries; when as otherwise, it is wholly by accident, if in Diseases, Functions are hurt; otherwise, whoever was he, who denied a Disease not really to be present in the silence of a quartane Ague, the falling sickness, madness, and Gout? When notwithstanding no hurting of Functions is seen? who is he, which doth not now and then observe in a person recovering, greater hindrances of actions and weaknesses, than in the flaming beginning of Diseases? It hath therefore alwayes seemed a blockish thing to me, for a thing to be essentially defined by later and separable effects. And seeing a Disease is primarily made by the Archeus which maketh an assault, (yet by an erring one) certainly the action hereof shall be much nearer into the faculties themselves than into the actions of the same; especially because, as long as the faculties are as yet (in one that is in recovery) as it were vanquished and sore shaken, there are indeed impediments of the faculties present, likewise a hurting and suppression of actions, yet no Disease surviving. And seeing that I have elsewhere sufficiently demonstrated, that both causes in natural things, do not differ in supposition from the very thing it self constituted: Therefore if a disease should be the cause of the hurting of an action, as the constitutive difference of the same; it should also of necessity be, that a disease it self, is not any thing diverse from an action being hurt; which thing is already manifest to be false. It should also be false, that the cause and the disease, should by the one onely title of the hurter of an action, be undistinctly comprehended, or the Schooles do badly decree, that the hurter of action is the cause of a disease it self. But the hurting of the action, should be the disease, and the action hurt, the symptome it self; for that is also a devise too childish.

For First, *A Disease should be a meer being of Reason, mentally arising from a disposition of the terms of the Cause unto the Effect; To wit, of the Hurter, and the thing Hurt.*

And then, an Error is discerned in the definition of a Disease delivered by the Schooles; To wit, *That a Disease is a Disposition, primarily hurting an Action:* Because it is that which should define the Cause, and not the Disease it self, or the Effect of the Cause.

Thirdly, *If a Remedy ought to remove that it self which hurteth the Action; that shall either have a singular Monarchy, whereby it may call forth, and shake off the Hurter it self, or the Remedy shall joyn it self to Nature her self, and that so most unitingly, that their forces being conjoynd, and they being now as it were one united thing, doth set it self in an opposite term, against the Hurter it self.*

But the first of these is not true. Because the Remedy should be as forreign unto Nature, as is otherwise the Disease it self; by reason of a particular direction, and arbitrement of motions despised by our Archeus. For if it ought to help, it should have a power superiour to man's Nature, in such a manner, that it should obey, neither the Lawes of things causing Diseases, nor bringing Death: And so it should expel the Cause which bringeth the Disease, as well from a dead Carcass, as from a languishing person. Neither likewise hath the later, place. Because, if the Remedy should be united to nature, radically, and by an unitive mixture, it should have a priviledge above the condition of nourishment. A hurting therefore of Action it self, doth not fall into the definition of a Disease: Especially, because a Remedy doth not respect so much the occasional Cause, as the internal efficient Cause of a Disease it self. Whence that Maxime is verified; *That Natures themselves are the Curesses of Diseases, as the Effectresses thereof.*

They indeed do on both sides confound the Disease with the Symptom, to the destruction of those that are to be cured, seeing curing is seated oftentimes in the removal of the occasional Cause, but never in the removing of Symptomes. And because the removal of the occasional cause is thought to be an eduction or drawing out of matter: nothing but solu-

solutes and diminishers of contents have flourished hitherto ; whereas otherwise, a removal of the occasional cause doth more respect a correction or pacifying of the immediate efficient, than a pulling away of the occasional matter : Because after correction, even without a removal of the occasional matter, a cessation, and unhopd for rest, yea, and also a cure, do for the most part, by and by happen: The which in a sympathetical cure doth frequently come to hand, and manifestly appeareth. The Schools therefore have been deceived by artificial things, and because they have thought, that all generation is begun from the privative point of corruption ; They have not known, that that which now flows in the material seminal Beginning of all things whatsoever, hath already, for that very cause, its own real Being, although an unripe one, and that it is hereby, [this something] in it self, and distinct from any other thing ; and that it doth by a natural generation attain only a maturity and illustration in its top or perfection, by reason of a new formal light of acting. Neither indeed, doth the seed therefore differ from its constituted Being, by the efficient internal cause and matter ; but only by an individual alterity or interchangeable course of the perfection of a formal light, even as elsewhere concerning the birth of Forms. For the Seed which at first, had need of an exciter, this formal light being obtained, is afterwards for the moving of it self. The Schools also do now and then consider a Disease, even as if it were a neutral product, proceeding or issuing forth through an activity of the cause, and a reluctancy of our nature : But I know, that as well the formal Agent, as the Patient, in a Disease, are strangers unto us in that act : To wit, I know, that the Falling-sicknesse, is no lesse really in us, at the time of its silence, than when it shall be in its full fit.

I know also, that a Disease is a real substantive Being ; but not a relative Being, not a naked disposition of the Agent and thing striving, unto the Patient, as of extrems unto a mean or middle thing.

Neither lastly, that it is a conformity of proportion or disproportion, between extrems : Although this respect of forming a relation between the Beings of Reason, be nearer than the effect produced.

I know further, that every natural Agent, is born to produce its like, except that which acteth by a Blas (but the power or faculty, as well that locally motive, as alterative, because it wanted a name, it seemed good to me, to have it called Blas, in the Beginnings of the Physicks or natural Phylosophy.) So the Heaven generates Meteors, not Heavens. And a man, by a voluntary Blas ; and likewise the Archeus, by an ideal and seminal Blas, stirs up divers alterations. But a seminal Agent, being inordinate, doth through a strange Blas, bring forth a Monster, which is properly a Disease: For although a Disease, according to its causes, be natural ; yet in respect of us, it ceaseth not to be against nature, as well, in as much as it began from a forreign Blas, as that it carrieth a hostile Blas, and raiseth it up from it self: And therefore, neither doth this Monster generate a Young like it self, unless it by ferments doth transfer its own seminal contagion, and so causeth Diseases in others by accident. But as to that which belongs to the efficient cause of Diseases ; There is in an abortive Birth, a certain efficient cause bred within (as is a Cataract in the eye, the stone in man, a Feverish matter) the which, although it be called by the Schools, the efficient, immediate, and containing cause of a Disease; yet it is only the occasional cause of Diseases, and external in respect of the life, wherein every Disease alway is : And therefore neither can such a visible matter, not only obtain the reason of a true efficient ; but neither also can it be of the intrinsical matter of a Disease it self, to be any part thereof. It remains therefore the conciting and occasional cause of Diseases: Because the efficient and seminal matter, if it ought immediately to reach and pierce the vital faculties, and so also the life ; even as also in a point it is altogether necessary, that it doth contain a resembling mark of life ; Even so that also, that thing is perpetual in seminal Diseases, that a Disease, as it is never in a dead carcass, so it cannot but be in a living Body.

Furthermore, of efficient causes, there is a certain one, which is and remaineth external : As a sword, having obtained an impulsive force, maketh a Disease in the divided matter, which is called a wound : After the like manner, is the fretting of the bladder, which is made by the Stone ; For although some external efficient, have their own seminal Beginnings whereof they are generated (as the Stone) yet in respect of the Disease which they produce, they want Seeds, and therefore are they external and forreign to the Disease it self. But internal occasionals have a Seed, whereby they nourish the Disease stirred up by them, and are also oft-times shut up or finished in their being made : As is manifest in a Fever, an Imposthume, &c.

In the next place, there are occasional efficient, which do defile by a continual and fermental propagation: As Ulcers, the Jaundice, &c. And there are internal occasionals, which do now and then sleep a long time: As in the Falling-sickness, Gout, Madness, Asthma, Fevers, &c. Of internal occasional causes also, some do incessantly labour, that they may estrange the matter of our Body from the Communion of life: Whereto if a Ferment shall come (which thing, *Hippocrates* in Diseases, calls divine) co-meltings of the Body are made. But in a Fever the efficient occasional matter, according to its double property, doth stir up the Archeus unto a propulsion or driving out, for the consuming of it self: Wherefore, neither doth it leave any other product behind it, unless a new Idea shall from the Archeus being provoked, spring forth by accident: In like manner, as the Dropsie followeth Fevers, &c. But let pains, drowinesses, watchings, weaknesses, &c. be symptoms and dispositions; so also, a strange seminal efficient doth beget the Stone, and there ceaseth, although it thenceforth stirs up troubles every moment, and new motions. But the product of the Stone are excoriations or gratings off of the skin, and new Diseases, which are Monsters unlike their Parent. For in speaking properly, the generation of the Stone is not a Disease; and much more the Stone it self, which in it self is a natural composition, but in respect of us, disease: Wherefore also in the Chamber-pot or Urinal, and without the life, it is generated by its own causes of putrifaction or stonifying: And so, it is a monstrous and irregular Disease; because it is that which is bred in us by accident, and without the life.

67 In the next place, as soon as the effect or product in its being made, hath lost its occasional efficient, that product is no longer the very connexion of both causes, or the former Disease; but it hath its own causes, more latter than the connexion of the first causes. For so an Imposthume hath brought forth an Ulcer; but this weeps a poysonous liquor; this in the next place, doth oft-times excoriate, changeth the former Ulcer, or raiseth up a new one: But it nothing pertains unto the causing Ulcer, whether its liquor doth afterwards ulcerate or not; because there is not in it an effective intention to produce an Ulcer by the liquor: Because the corrupt Sanies or liquor it self, is the product of the Ulcer causing it, which received its effective and seminal intention in its own essence; but not for the propagation of a new Ulcer, which is therefore unto it by accident. The Stone also, is the product of its constituting causes, which it encloseth and terminates in it self: Because the causes thereof being brought unto the end of their effecting, do cease in the product, and are shut up as if they were buried: Although that Stone be an occasional means, whereunto the generation of a new Stone happens by growing: In the mean time, it is to the Stone by accident, if it produce other Diseases more cruel than it self; yea, than death it self. But in the Dropsie, the efficient Archeus of the Reins, in the conception of an Idea begotten by his own perturbation, closeth up the Kidneys, and a Dropsie is made: Yet the former efficient doth not cease, even unto the strangling of the person. In that Dropsie being caused, and the water being produced and dismissed, there is not a further intention to produce any other thing.

After another manner, oft-times, the product of a Disease, seeing it is an in-bred Monster, it hath an occasional propagative faculty from the property of the efficient Archeus, not enclosed or bound up in the product; but free in the Organs of life. Whence indeed other products do now and then successively spring forth: At least-wise, the lavishments of the faculties and life, ought not so much to be accounted the products of Diseases, as their ordained fruits, and symptoms, and the periods of these. Neither in the mean time, is that a Disease by a less privilege, which is produced by a disease ferment, than was the Disease, the Parent of that Product: Neither indeed doth it more sluggishly corrupt some vital thing or part, by strange efficient being received, than that, in the primary efficient of whose action, the Disease it self is. But the Schools do suppose a contrariety of the Disease, with health, with life; and again, with the Remedy it self. Therefore unto one term, they apply many contrary ones, contrary to the nature of relatives, and contrary to their own Maxim; *That one contrary is said to be as many wayes as the other.* For the doctrine of contraries in Remedies, standing; health likewise ought to come forth of Medicine, as a chick out of an egge: Or seeing that contraries ought to reduce each other unto nothing, health ought to proceed from a Disease, even as otherwise weakness proceeds from a Disease: For if a Remedy be contrary to a Disease, verily the faculties of our life, cannot be contrary to a Disease; and by consequence, a Disease shall not be able to hurt our faculties, or the actions of these. And the Schools have erred, while they contend, that in a Crisis or judicial Sign, a Disease doth in its whole course, sustain a single combat with our faculties. But if a Disease be contrary to our faculties, and

and to the Remedy it self: at least wise, they shall incongruously apply cold things in a Fever, they being applied no lesse to the vital faculty, than to the Disease: Yea, if from a contrariety of disposition, a Disease be bred; our action ought not wholly to depend on the Spirit making the assault, but on the meer cause of the Disease: and the which therefore, seeing it should have the principle of its motion in it self, it ought to operate as well in a dead carcass, as in a living Body; and the whole skirmish should be only between the dispositions of strange accidents suppressing each other: Of which strife, the life it self should be only a hateful spectator, without discommodity to it self. What other thing is this, than to have feigned a sluggish and cold vital Philosophy? and that the Physitians or Curers of Fevers, are cold? What if a Disease doth stand in a quality, whose contrary warriour they will have to be known by sense, and elementary: why therefore are so uncertain, weak, and slow Remedies of Diseases devised? Why are there so manifest and ready Tokens, Remedies, and Simples of manifest contrary qualities, boasted of in the Schooles? Therefore according to mee, a disease is a substantial Being, begotten by Ar-
cheal causes, as well materially as efficiently. But heat and cold, and that sort of sign-
ed Concomitants, I call fruits and symptoms, far different from the produced Diseases: For a Disease is oft-times furiously moved against us, wherein many symptoms do inter-
pose; which Disease notwithstanding, doth oftentimes cease without a product: As is man-
ifest in intermitting Fevers: For neither doth a new Disease arise from thence; But on-
ly nature intends to shake off a tedious guest; under which endevour, fruits and symp-
toms are produced; drowinesses, heats, colds, pains, watchings, disquietnesses, vomits,
weaknesses, &c. Elsewhere also, a Disease doth often convert the matter of its Inne:
To wit, while the Archeus being stirred up by an occasional ferment, doth bring forth a
new product: whether in the mean time, the former Disease be shut up in the term of the
product, or not. Neither doth a Disease also seldom occasionally produce a Monster un-
like to it self: While a Fever doth cause the Dropsie, a Cataract, Scirrhus, &c. because
they are the products of Diseases by accident: To wit, whereof a new Idea from the Ar-
cheus is the Mother: as shall appear beneath in its place. But weaknesse is a universal
Fruit of Diseases, the Chamber-maid of these. The which indeed is no other thing, than
a disposition following a diminution of the strength or faculties: And it is either total,
by reason of the afflictions of a notable or noble part: It happens also, through an adhe-
rency of a disease occasion, unto some solid part; Whence the Archeus being at length
the extinct, a blasting of that part, and presently after a death of the whole Body, do also
proceed: Or weaknesse is particular, by reason of a particular Blas, affecting some mem-
ber by its animosity or wrathfulness: For so from the stomach is there a giddiness of the
Head, Head-ach, &c. as from the Womb, the parts do diversly and miserably languish
by an Aspect: Which things surely, are the symptoms and fruits of the Archeus, but not
the Diseases thereof: the which otherwise, do naturally lay up their own efficiencies in
themselves: Even as elsewhere, concerning the action of Government.

In the next place, the product of a Disease, differs from a symptom, in this; as this is
a fruit: it requires indeed a mitigation from the Archeus himself; but not a curing as it is
by it self: Because it likewise vanisheth together with the Disease. But I find no men-
tion of the product of Diseases in the Schooles; but it is either confounded with a symp-
tom, or is attributed to a certain new distemperature, and a new afflux of humours.
Others also are wont to dedicate Diseases to the parts containing; the causes likewise, to
the parts contained: but to banish symptoms into the spirit making the assault: Being
in the first place, badly mindful, that they attribute the heat and cold of the first qualities,
as Diseases, to humours contained. In the next place, if a Disease be in the part con-
taining, and the cause in the thing contained; If the spirit in-bred in us, shall not move
or stir up the cause and the disease, whereby I pray you shall it be done? what shall beget
a disease by a cause, if not the spirit? For as wrath, bashfulness, and agony, do heat by
a Blas; so fear, grief, and sorrow, do cool, without the aid of humours. But Pepper and
heating things, do heat living creatures; but not dead carcasses: as neither do Cantha-
rides, Scar-wort, or Smallage, embladder these: But Causticks do even waite a dead car-
casse; and that, not through the effect of their own heat, but only by virtue of a burning
Salt, which resolves the solid parts into a Salt, without heat: To wit, even as Calx vive,
doth resolve Cheese into a musilage. Causticks therefore, or searing Remedies, do ge-
nerate an Eschar in a live Body, but not in a dead carcasse; but they do resolve this, by a
simple resolution of their Salt: But because in a live Body, the Archeus is also inflamed
within, an Eschar is produced from both Agents: To wit, the Caustick and the Archeus.
Lastly, the fire doth indifferently burn, as well a living as a dead Body; and more speedi-

77 ly, the live Body it self: Because the fire consumes from without, by burning; and the spirit it self through its inflaming, becomes caustical or burning within. Therefore, from a fourfold handy-craft operation; to wit, of the Fire, Pepper, a Veficatory, and Caustick, the remarkable things which follow, do voluntarily issue.

1. That the efficient heat of heating things, is ours. In Pepper therefore, there is only an occasional exciting heat.

2. That a Fever is not heat essentially, but it hath things proper to it, as well cold as heat, from the property of an alterative Blas: And that not efficiently, but only occasionally, incitingly, and accidentally: But the Archens alone is the efficient of heat and cold. For neither is a Feverish matter in a Body, otherwise hot, now made cold, then afterwards hot, that the whole Body may be cold and hot at the successive change thereof: But they are the works and signatures of life; not the properties of disease Seeds in the matter, but meer passions of the Body, thus moved by a Blas, from the heat and cold of the Archens: And therefore, neither do they any longer happen in a dead carcass, as neither after a Disease obtains the Victory, neither also when the Disease ceaseth; the occasional matter in the mean time remaining.

3. That the very thing, which worketh heat in us, doth efficiently also produce cold: Nor indeed privatively, in respect of heat; because cold is a real and actual Blas of the Archens.

4. That no curing is made by contraries, as neither by reason of like things; because a Disease consisteth essentially in the seminal Idea, and in the matter of the Archens; but at leastwise, substances do not admit of a contrariety in their own essence.

5. That a Disease is primitively overcome, by extinguishing of the Idea, or a removal of the essential matter thereof. 2. Originally, by allaying and pacifying of the disturbed Archens. And 3. From a latter thing; to wit, if the occasional matter be taken away, which stirs up a motive and alterative Blas of entertainment, that the Idea or Disease, may be efficiently made.

6. That both the inward causes, connexed in the Archens, is the very substantial Disease, having in it, its proper root: But the occasional matter, however it be received in the Body, is alwayes external, because it is not of the inward root and essence of a Disease.

7. That Symptoms are accidents by accident, breaking forth by excitation or stirring up, according to the variety of every Receiver: And it is rather a wandering error, or fury of our Powers.

8. That the Archens, which formed us in the Womb, doth also direct, govern, move all things during life. Therefore occasional causes are perceived only in the Archens: who afterwards, according to the disturbance thereby conceived, doth bring forth his own Idea's, which immediately have a Blas, whereby they move, direct, and change, and finish, whatsoever happens in health and Diseases. But the parts of the Body, as well those containing, as those contained, and likewise the occasional causes of Diseases, of themselves, are dead and idle; neither can they move themselves, or any other thing; Seeing nothing is moved by it self, which is not by it self, and primarily vital; except weight, which naturally falleth downwards.

9. That the products and effects of Diseases, are seminal generations, so depending on the Seeds, that they do shew forth the properties of these.

10. That heat, cold, heates, &c. seeing they are not the proper causes of a Disease, nor the true products of Diseases, but only the symptomatical accidents and signatures of Diseases; therefore also, neither do they subsist by themselves, but they do so depend on Diseases, that they depart together with them, like a shadow: Because they are the errors of a vital light, or an erroneous Blas stirred up from Diseases.

11. That Diseases are seminal Beings (except extrinsecal ones, wounds, a bruise or stroke, burning, &c.) and therefore effects of the Archens resulting in a true action, from the occasionals of the exciter, accidentally sprung up in an Archeal error of our Powers.

12. That, although without the will of a living Creature, contraries should be found in nature; yet by these, there should be no possible restauration of the hurt faculties, as neither a pacifying

cifying of the Archeus; and by consequence no curing, if that be even true, That Natures themselves are the Physitiannes of Diseases, and that the Physitian is their Minister.

Truly that thing is proved by the Fire; the which, by reason of the most intense coldness of the Aire (which I have elsewhere proved to be far more cruel than the cold of the Water) doth the more strongly flame and burn: So far is it, that Fire should be extinguished by cold, which is falsely reputed its contrary: And moreover, neither have the Schooles known, that Fire is not extinguished by Water, because it is cold, moist, or contrary to it; but by reason of choaking onely: The which we daily see in our Furnaces. For as the Fire is momentany, and connexed unto it self by a continual thred of exhalations; hence it is stifled almost in one only moment: for so the water, because it is fluid, enters into the pores of the burning matter, and by stopping them up, doth suffocate or quench the Fire; so also a Mettal or Glasse, being fired, and burning bright, do shine long in the most cold bottom of the Water; and in the mean time, a Coal being fired is choaked in an instant, under the Water: Because the pores thereof are presently stopped. Therefore Copper burning bright, is sooner extinguished than Silver, and Silver than Gold. But Glasse being fired, because it wants pores, shines longer under the Water, than a like quantity of Gold: Yea hot Water doth sooner quench Fire than cold; because it sooner pierceth the pores. Therein also, they have remained dull; that they considered our heat alwayes, by making a comparison of it with Fire: For although the Fire be a Being of Nature, yet because it was directed by the most High, for the uses of Mortals, that it might enter into Nature as a Destroyer, and might be as it were an artificial Death; therefore it prosecutes its own artificial ends, but hath not any thing in its self, which may be vital or seminal: There is therefore, no Fire in Nature, if it hath not first arose unto a due degree for a Destroyer, wherein it is nothing, or little profitable for the speculation of Medicine.

78

Surely, our heat is not graduated, and therefore neither is it fiery, neither doth it proceed from the Fire as being weakened or diminished; but it is the heat of a formal light, and therefore also vital; neither therefore doth it subsist in its last or highest degree, even as the fire doth: For it admits of a latitude, and its degree is made to vary according to the provocation of its Blas. For although it be from a formal light, and in that respect doth live; yet through a Blas, it doth oft-times ascend higher, or is pressed lower, as well in healthy persons as in sick folk.

79

In the next place, it more highly deviates through furies, and then it (as burnt up) uncloaths it self of a vital light, and assumes a Caustical or burnt Alkali; which thing is seen in moist and compressed Hay, where Fire voluntarily ariseth. So in Escarrie effects, our heat being forgetful of its former life, passeth into a degree of fire: For through a congresse of light some beames, and a degeneration of the salt of the Spirits, even as in Hay, true Fire is bred, and would burn us, if the Archeus should expect this end of the Tragedy before death. Our heat indeed is in the Fire, as the number of Two is in the number of Forty; yet the Fire is not in our heat: And so, neither can our heat be called fiery, as neither is the number of Two the number of Forty.

But besides, a disease occasion doth sometimes burthen with its weight alone, and by its hateful presence; such as is that of a hateful guest. Afterwards from the more mild beginnings, a porous quality oft-times increaseth or groweth, being of the order of Tastes.

Thirdly, Or at length it stinketh.

Fourthly, It snatcheth up a strange ferment.

And Lastly, it threatens destruction unto us through the contagion of an unluckie poison; and the cruel seminal occasion of Diseases either comes unto us from far, or ariseth from within. It often-times also degenerates in its last qualities, which the Schooles have neglected, because (as being content with their first humours) they have fallen asleep. There is something, I say, of a hurtful chaffe separated from the guiltless vitals, and the co-mixed occasion of a Disease floateth among the good nourishments, and hath even more roughly married, adhered to, and chosen its local bride-bed in the same. But it on both sides, stirs up the hostile properties of disease seeds, by variously sporting in their Innes. The Archeus therefore is not affected by heat and cold, but from an excelling quality, and strange fellowship of a taste, and fashions the seminal Idea of a Disease. And I wonder that the Schooles of the Greeks, do profess Hippocrates to be their standard-defender; yet that they have despised this hing of healing in him, and have even sunk themselves into meer heats, and the foolish wedlocks of qualities. For a Disease according to Hip-

pocrates,

pocrates, is made of a good, or before-condemned liquor, being turned into an excrement.

- 81 Therefore I do truly pardon this (as yet) undistinction of that Age; and therefore I call those superfluities, not the Diseases themselves, but the occasional Causes of these; For an excrement being vitiated in its own, or the last Kitchens of Digestions, or sticking the longer elsewhere, through the delay of its slownesse, is first accused of sloath, and afterwards, through the activity of the place of its residence, abhorring it, as a troublesome guest is corrupted, from that Title, as it is destitute of the Balsame of Life: For our Archeus-Faber, or master-workman, seeing he is never idle without blame, neither is ever destitute of a local exchanging ferment; therefore by a continual heat and warmth, he doth more and more disturb excrements bred within, or brought thither from elsewhere, and shakes them into their appointed ends. Therefore, neither can any excrement long remain in its former state. It is also altogether to be despaired of, that Nature should ever receive that again for a true citizen, which was once abhorred by her; or
- 82 againe adopt it, by entering into a reconciliation (such as is the fiction, that of Phlegmatic Blood is made, of burnt venal Blood, yellow Choler, and of this, a leekie æruginous or cankered Choler; and at length, a melancholly or black coloured humour) for Nature cannot but alter a forreign contained guest, which of its own condition is alterable, and promote it unto its own ends: And if that shall happen within the Innes of its own digestion, the excrement shall be far more mild, than if it shall be once brought unto others Cottages, and out of its own limits. Then indeed, that adulterous fruit, and Young, applied to, or placed in that part, is refused, as a strange, ominous, and tumultuary enemy; into whom therefore the strange ferment of another harvest (from the necessity of an unquiet alteration) is introduced: Whence of things retained, which are at first, simply troublesome, are hurtful things made, and at length the retained things or excrements are transchanged: Wherein, if a notable savour be not, it doth at leastwise, for the most part, presently arise, being designed by *Hippocrates*, in the place cited, for a disease signature. For as long as a nourishable liquor is restrained by the bridle of the Balsame of Nature, it of right enjoyes the favours of blood, and assimilable nourishment, all things are in a good state; but it being once divorced from the Archeus, it presently also assumes a forreign disposition; So also a savour, and through the agitation of dayes, doth varie the degrees of its malignity: That indeed is the sharp, bitter, and soure, from which the old man doth search out by his oracles, almost all Diseases to spring. For this although in its quantity it be very little in weight, light, and scarce perceivable by the sight; yet it is the true occasion of a Disease; But a Disease it self sits more inwardly, to wit, in the vital Beginnings, and those more active and commanding, than those things which are called Excrements, do. For every seminal Disease, and that which is cherished by an occasional cause, as it began from a being immediately sensitive, and the subject of concupiscence, which is full of Passions, and perturbations, and inordinacies; so also it hath its seat in no other thing, than in the Fountain, Prince, and Ruler of all motions: Yet by degrees it strives not with one onely weapon of malignity, but its More or Root being defiled, doth also occupy the part it self, and likewise deprive it of the continuation and communion of Life, if besides, it doth not burden it with the hurt of its impression, or the filth of a ferment being drawn, in a similar part, it doth not threaten its extinction.
- 83 A Disease therefore begins from the matter of the Archeus, as it rageth in us by a forreign Idea, from a conceived injury, which it judgeth that occasional Causes hath done it. But let the concomitant action, and that which results from the proper exorbitancy of its efficient Cause (as the head-ach, doatage, &c.) be the Symptome: But whatsoever Springs are caused by a Disease, or by reason of Pain, the Cramp, the Government of the parts, or a fermental Action, if that do really subsist in its own Root, that is the Product of the Disease.
- 84 But of Products, some are ultimate effects, left by a Disease, as a Scirrhus, or drop-sie after a Feaver; or they do break forth, in its being made; As the pissing of muscilage or slimie matter by those that have the Stone: The which, do neither meditate of the propagation of another evil, as neither of a Disease matter, or of after products: These again are like to their Causes, because they are those, which from the contagion of a ferment, do creep farther; even as is familiar with the Scab, Leprosie, Lues Venerea or Pox, &c. But others by proceeding inwards do wholly enlarge themselves, and generate after an irregular manner: As an *Apnæa* or shortnesse of Breath, Convulsion, &c. from the Womb or Stomack. So Wringings of the Bowels, the Diarrhea or Flux, Hemorrhoides or Piles, Dyscenteries or Bloody-fluxes, and other evils of that sort, do proceed,

as being made by sharp or foure things : Yea the seed of Diseases being at quiet, by intervals, some unaccustomed and dis-continual thing is budded forth from the hidden seminary of the Archeus : Such as is the Falling-sicknesse, the Gout, Madnesse, &c.

Truly in all these things, there is a manifest Errour of the Schooles, which teach, *That whole Nature is governed by a Ruler, or a created Understanding, not erring, knowing all ends, and for the sake of these, acting after a most excellent manner.* For truly, it is not to be doubted, but that a Wound might be healed or closed, without the Tumor, Pain, corrupt Pus, and Inflammation of its Lips : But that a Thorn may be drawn out of the Finger, with greater brevity, than that the Finger should therefore arise into a corrupt matterly Apoplexie : For the fat or grease of an Hare, being annointed on it, doth extract the Thorne in one Night : Meanes are not wanting to the Archeus, whereby he might perform that very thing, safely and quickly (even as he doth, in some, of his own accord) but that our Archeus is subject to any kind of Passions, as if he did conceive childish indignations, from the least hurting of the Body. No wonder therefore, that the sublunary being of Nature, by no means subjecting it self to Justice, doth yeeld to, or fall under its own inordinate Passions : When as also, the whole man, whereof the intellectuall mind is President, doth exceed the path of right Reason in many things.

At length, that is remarkable, that in the works of Art, the efficient Cause is alwaies without : and the Schools being deceived through the errour thereof, have not known, that in natural and substantial generations, the Agent is internal: For therefore, they have banished the efficient Cause, as external, in the catalogue of natural Causes: Yea, it hath been unknown, that both the Causes of natural things being connexed (as I have demonstrated in its place) doth not differ from its Effect, but in the priority of flowing; which thing hath deceived as many as have similitudinously contemplated of Nature by artificial things: For neither have they been elsewhere more blinded, than while they have introduced that incongruity of their own speculation into Diseases : For they have not onely made artificial things like unto seminal, speculatively; but also in endeavouring to cure, they have, through a great confusion of falsehoods, bespattered the whole practice of healing, with contrarieties. For they have thought, that to produce, and to generate, are altogether the same; while in the mean time, a generater bespeaks, that he brings forth something from his own substance: but he produceth, who onely couples active things with passive, although he contribute nothing of his own; He maketh, or doeth also, who acteth any thing how he listeth.

Furthermore, I also oft-times admire, that while the Schools do constitute the benefit of healing in the removal of Causes, after what sort, they could place distemperatures within the rank of Diseases; seeing the hor, and most known of diseases, doth both suddenly, and of its own accord, slide into cold; and we are able presently to remove the intemperance of heat at pleasure, without helping of the Fevers. And then, seeing they have never received the vital Cause, which is the impulsive one in Diseases, for the efficient Cause of Diseases, they have determined of removing nothing but the occasional Cause: For the Archeus, although he be the true and immediate Cause, as well according to the matter (the which he brings vitiated, and that out of his own bosome;) as also, according to a seminal and efficient Idea: yet the Archeus doth not shew the removal of himself. But the Schools do act contrarily, while they attempt their Cures by blood-letting, purgatives; and next, by every means fortifying Life: But upon what ground they do that, they themselves shall see.

Moreover, in Diseases, Nature is standing, sitting, and laying. Nature standing, doth her self cure her own Diseases, from a voluntary goodness; as wholesome Fevers: And likewise, a Quartane, which is cured by the proper guidance of Nature, but not by the helps of the Schools. And Nature standing, can also presently walk; the which belongs onely to Health. But Nature sitting, although she be able of her own accord to stand, and at length, to walk, yet she is constrained to arise, before she stands; and therefore she riseth with the more difficulty: But if she attempt to arise by inordinate remedies, she is prostrated from her seat, and lays on the ground; and being not a little shaken thereby, is pained, and sometimes dies of her fall. Yea also, while many, that they may not be sick or ill at ease, do make use of counsels or advices, which do for the most part hasten old age and death, and oft-times also deprive them of life. But Nature laying along, can never rise of her self; as the Leprosie, falling Evil, Asthma, Stone, Drop-sie, &c. Yea, neither is it sufficient for her to arise: for if the nerves or sinews are not confirmed, they do easily relapse.

Furthermore, *Hippocrates* will have a Physitian to be onely the Minister or Servant of Nature:

Nature : but Natures themselves, to be their own onely Physitiannes ; and that thing he thus commanded in his age : When as otherwise, a Physitian is the Patron and Master of Nature being prostrated ; which kinde of Physitian, if the old man had not as yet acknowledged, surely much less, the succeeding heathenish Schools, even unto this day.

- 91 Last of all, dead carcasses are dissected, which is done to excuse their excuses in sins ; for after a thousand years Anatomy, the Moderns do scarce either the better know Diseases, or the more successfully expel them. They rejoyce indeed, that they have found an imminent mark of any corruption in a part, which covers their unfaithfull Aids or Succours, with the Buckler of impossibility: So indeed, the world is deceived with a lofty brow : For neither was that corruption there, before the space of two days, although the place might be pained long before : So far is it from excusing the Physitian which is seasonably sent for, that it rather lays open the fault of the same, who (to wit) had seasonably or in due time, dispersed the accused excrement : For nothing of the parts containing is destroyed in live Bodies, but it is first deprived of the commerce of Life : And besides, neither can it long be deprived of the Balsame of Life, nor a mortified part wait many houres in the lukewarmth of the Body, which doth not likewise speedily putrifie, stink, and draw the whole Body into its own conspiracy. Therefore from thence, it is manifest, that the corruption which is obvious in the Dissected dead Carcass, was made but a few hours before, and began but a few dayes before Death : For corrupt mattery Imposthumes, which are stirred up by malignant assemblies in the Lungs, do indeed contain the Seeds of Diseases ; but the mortifying of Internal parts, doth not many paces, precede the day of Death. One onely thing is at leastwise to be admired, that the Schooles indeed have acknowledged a Spermatical or seedy nourishment, whereby we are immediately nourished : because it is that which they divide into four secondary humours ; yet that they have not known, that the same Humours do become degenerate, in the passage of Digestions, and are the occasions of many Diseases. But that the Liver alone, in Vices of the skin, doth bear the undeserved blame, that is, a thing full of ignorance, and worthy of pity. I will at length, moreover, commune with Christian Physitians by one only Argument.

- 93 To wit, *It is of Faith, that God made not Death for Man : Because Adam was by Creation Immortal, and void of Diseases.*

For concerning long Life, I have explained after what manner a Disease and Death, at the eating of the Apple, as an Effect unto a second Cause, have entred into Nature. Therefore in this place it hath been sufficient to have admonished ; *That the Concupiscence of the Flesh arose from Transgression, and also to have brought forth the flesh of Sin ; and therefore that Nature being corrupted, produced a Disease through Concupiscence.*

I could wish therefore, that the Schooles may open the Causal Band and Connexion between the forbidden Apple, and the Elements, or the Complexions of these : Whether in the mean time they are lookt upon, as the Causes bringing Diseases, or as Diseases themselves. To wit, let them teach ; If the Body of Man from his first Creation, did consist of a mixture of the Four Elements ; after what manner those second Causes, or co-mixt Elements onely by eating of the Apple (which else had never been to fight) the Bonds of Peace, and Bolts of humane Nature being burst asunder, at length naturally exercise hostilities, and all Tyranny. What common thing, I say doth interpose betwixt the Apple and our constitutive Elements ? But if this came miraculously and supernaturally to passe, that Death was made a punishment of sin : Then God had made Death Efficiently ; but Man had given onely an Occasion for Death : But this is against the Text, yea and against Reason : Because Death was made with Beasts, in the Beginning, even as also at this day, unto every one happens his own Death ; that is, by a natural course, and a knitting of Causes unto their Effect. It must needs be therefore according to Faith, that Death crept naturally into Nature ; so that man was made Mortal after the manner of Bruits. For it is certain that at the eating of the Apple, the brutal concupiscence of the Flesh was introduced : Neither do we read (at length) of any other knowledge of good and evil to have been brought in, which was signified under the opening of their Eyes, than that they knew themselves to be naked, and then it first shamed them of their nakedness.

Wherefore I have long stood amazed, that the Schooles have never examined the afore-said Text, that they might search out the Disposition or Respect of the Cause bringing a Disease unto its natural Effect. *In what day soever ye shall eat of the forbidden Fruit, ye shall die the Death.* Which indeed is not so to be taken, as if God had said, by way of threatnings,

nings : *If ye shall eat of the forbidden Tree, I will create or make Death in you, Diseases, Paines, Miseries, &c. for a punishment of sin, or that, through a condign curse of my indignation, ye and your posterity shall die.* For such an Interpretation as that resisteth the divine goodness: because that for the sin of our two Parents, he had equally cursed all their posterity, with an irrevocable curse of his Indignation; who after sin committed, and the Flood itself, readily blessed Noah, by *increase and multiply, &c.* Wherefore those words, *Ye shall die the death*; did contain a fatherly admonition: To wit, that by eating of the Apple they should contract the every way impurity of Nature, as from a second Cause, seated (to wit) in the Concupiscence of the flesh of sin. But seeing such a concupiscence can never consist in elementary qualities; it is also sufficiently manifest, that a Disease and Death, are not connexed as Effects to the Elements, and the qualities of these: But the concupiscence of the flesh, as it infected onely the Archeus, even so also, it did onely respect the same. In the Archeus therefore, every Disease afterwards established 'it self, and found its own onely and immediate Inne: And so also from hence, the Archeus is made wholly irregular, inordinate, violent, and disobedient: Because he is he, who from thenceforth hath framed inordinate images and seales; together with a spending of his own proper substance, as it were the wax of that seal: For images or likenesses, are at first indeed the meer incorporeal Beings of the mind; but as soon as they are imprinted on the Archeus, they cloath themselves with his Body, and are made most powerful seminal Beings, the sealing dames, mistresses, and architectresses of any kind of passions and inordinacies whatsoever: which thing I will hereafter more clearly illustrate in the Treatise of Diseases.

Finally, the adversaries will be able to Object,

That it would be all as one, whether a Disease be accounted a disposition, or a distemperature of the first qualities, or a disproportionable mixture of humours, or lastly, whether it be called an indisposition or confusion, and likewise that it is as one, whether the Cause which brings a Disease, be called the occasional, or the material Cause of Diseases, or the internal and conjoynd Cause thereof: For truly the one onely intention of Nature, and Physicians on both sides, is conversant about the removal of that matter, for the obtainment of health; Therefore that I am stirred about nothing but an unprofitable brawling, concerning a Name. 94

I Answer Negatively, and that indeed, because both the suppositions are false; For as to the First, For that doth not onely contain a manifest fault in arguing, of [not the Cause] as [of the Cause] and of a [non-Being] [for a Being]: But besides the Destruction and Death of mortal men, doth from thence follow: For, for that very Cause, for which a Remedy is administred to correct the distemperature of a Discriasie or the abounding or disproportion of humours (because of things not existing in Nature) they at least cannot deny, that our Disputation is of things, but not of a Name onely; when as (to wit) they accuse, cure, or undertake to cure the Disease for the Cause, or this, for it. They handle I say, things that are never possible, as if they were present.

And then also, they presse a fallhood: Because indeed, I never said, that a naked confusion or indisposition of the Archeus, is a Disease; but I affirme that the immediate and internal matter of a Disease is to be drawn from the masse of the Archeus himself: But I call the imprinted seminal Idea, which springs from the disturbances of the Archeus, the efficient Cause; but as to what appertaines to the other supposition, the occasional or inciting Cause, and the internal containing Cause, or the very Body of a Disease, do far also differ from each other. For example; The occasional Cause of intermitting Fevers is present out of the fit, which should not be if the occasional Cause were the very internal matter of Fevers: For I have seen some hundreds cured of divers Diseases, by some Simples hanged on the Body, without any removal of the occasional matter: To wit, Nature being busie about the rest.

Thirdly, the fits of Diseases are oft-times ended, the occasional Cause being present and remaining, but it is altogether impossible for that to be, while the containing and internal matter of the Disease is present.

In the next place, there are Diseases which have no occasional Cause, whose own connexed matter is nevertheless, excused or struck out about the time of their period, even as fire out of a flint; They not having I say, any other occasion of them, besides Ideal impressions; such as is the Gout, falling-Evil, Madnesse, Asthma, &c. To wit, whose perfect Cure consisteth in the removal of the seminal Character, and incorporeal Ferment, not likewise in the sequestration of any matter: For so a certain odour being drawn thorow the nostrils, hath strangled many, without a material vapour or moist sent unto the

Paunch. However therefore they may strive with me, they shall discern, and confess with me, that hitherto, none hath come unto the knowledge of Diseases; and that there hath been blindness in Healing hitherto: Give leave to the truth. It hath therefore been sufficient for me to have demonstrated, that Diseases do lead their Armie into us, by unknow Seminaries and invifible Beginnings, according to that antient Maxim, *That every direction of Sublunary things depends on an invifible World.* Hence it hath come to pafs, that although Diseases have oftentimes been silent, and have wholly ceafed to be, under the uncertain Cures of experiments; yet nothing hath been hitherto acted from a fore-knowledge of the means and ends, in Diseases of nature ftanding, or fitting: Be-
 caufe alfo, they do very often of their own voluntary and free accord, haftily run unto the end of their race. But in Diseases of nature laying along or proftated, nothing hath been heard hitherto, befides the defpaires of incurable Difcaies, and the Lamentations of miserable men. What things therefore, have been affayed before, touching the nature of a Difcafe, let them be Prologues unto thofe things, which remain to be by and by fpoken concerning Diseases: Where I fhall profefsly touch at or reach, the caufes of all Diseases in the point of Unity: Here only, handing forth by the way, that Diseases do now iffue into depraved and impure nature, plainly after the fame manner wherein they at firft began to be framed and iffue: And the Schooles will not deny that that thing lay hid to the Heathens and their followers.

25

Last of all, new Difcaies have lately happened unto us, and antient ones do hereafter fcarce any longer answer unto the names and descriptions of our Ancestours: Be-
 caufe they have put on ftange fignes and properties, whereby they go masked, and deceive Phyficians under the precept of the Antients: For I conjecture that from thence, there will be almoft the greateft deftrution of Diseases; and fo alfo, that from hence the mercy of God will be fo much the nearer unto Mortals: For it hath pleased the moft High, to have fent *Paracelfus* in the forepaff age, who might propofe unto the World the more profound preparations of Medicines, fo far as it was lawful: But at this day, afterwards he hath vouchsafed alfo, to open the knowledge of Diseases: Wherefore I fhortly expect another to come, whose Schollar I am not worthy to be: For neither therefore, hath the moft High permitted my felf to hope for the coming of the fame man, who hath fent me before, as the publisher of his Praise: For truly with him, every Difcafe fhall equally find its own remedies, under the Stone or Harmony of unity; together with the speculative knowledge of Diseases and Remedies.

I intreat the thrice moft great and excellent God, that he would preferve the fame man from the vanity of arrogancy, and from fudden Death, foerely threatned unto him by hateful men.

C H A P. L X I I I.

The Dropsie is Unknown.

1. At length the Author shewes, that there is the same ignorance of the Dropsie, as of other Diseases.
2. The Distinctions of Names used by the Schooles.
3. He must first strive with the Schooles about the difference of occasional Causes.
4. The hurtful ignorance of the humour Latex.
5. The Errour of the Schooles is shewn with the finger.
6. A cruel Remedy.
7. A ridiculous Opinion.
8. Some absurd Concomitants.
9. A History.
10. Absurd Anatomy.
11. Some remarkable Histories.
12. The Root of Grasse is examined.
13. A Stumbling of the Schooles, that they may fall.
14. The Author answers by Eighteen Arguments.
15. The occasional Cause is meditated of.
16. The occasional cause is proved.
17. Paracelsus is taken notice of.
18. A most secure Remedy of Mercury described by Paracelsus.
19. Some remarkable things.
20. The Dropsie is described by its Causes, and by Nineteen Positions.
21. An Objection of Paracelsus is refuted.
22. The poysonous furie of the Archeus of the Reines.
23. A Maxime is preserved.
24. The carelesness of the Schooles are to be admired at.
25. The Author narrowly searcheth into some hidden things.
26. The examination of a thing or matter, which seems repugnant unto Science Mathematical.
27. The difference of the Latex from the Urine.
28. The use of the Kidneys being neglected, hath brought forth the ignorance of the Dropsie.
29. An Explanation of a new Question.
30. The furie of the Reines is the Efficient Cause of a Dropsie.
31. The manner of making in a Dropsie.
32. It is proved by a voluntary Cure.
33. What the abstinence from Drink in a Dropsie, may effect.
34. Thirst doth in no wise dry up a Dropsie.
35. After what manner, the abstaining from drink hath cured the Dropsie.
36. All thirst ariseth from the the Reines, but not from the Liver, as from the slender Veines, according to the Schooles.
37. The ignorance of Causes hath rendred the Dropsie neglected.
38. The Vanity of Hydragogals or Medicines drawing out Water.
39. A Remedy of the Dropsie.
40. A remarkable thing concerning Briony.
41. That the government of the Reines hath hitherto remained unknown.
42. A Definition of the Dropsie, by its Causes, and manner of making.
43. An examination of the Tympany.
44. A History hath proved to the Nostrils what hath been said.
45. The vanity of Carminating Medicines.
46. Why Paracelsus perswadeth Dungs.
47. Mercury is commended.
48. A Bastardly and new Dropsie.
49. The preparation of Precipitate, and of the Arcanal or secretous Remedies of the Dropsie.
50. Universal and pacifical secrets, do (as yet) more powerfully operate.

I Have made a Treatise concerning Feavers, and seeing that, no seldome Dropsie is the Metamorphosis of malignant Feavers, it seemed meet to me to subjoyne the Treatise of the Dropsie to Feavers; yet afterwards, when I saw that the Dropsie was solved or loosed by the Reins or Kidnyes, I doubted, whether the Dropsie were rather to be considered after the Treatise of the Disease of the Stone; or whether by way of example, I should subjoyne it to the Treatise of Diseases: For truly, if the Belly swell, through a defect

defect of the Urine; therefore the Dropsie seemed to be referred unto the forgetfulness of the Reines: But the Stone hath expelled the Treatise of the Dropsie, therefore it hath made a Treatise singular to itself: But I shall be the less solicitous of order, so my proposed Scope of curing be reached with fruit. I have made it manifest, that the causes of Feavers, the Disease of the Stone, Apoplexie, Palsie, Lethargie, Leprosie, Convulsion, Plague, Jaundice, Colick, Flux, and other like Diseases, are unknown: Then in the next place, I have already achieved to demonstrate the same ignorance to be, about the knowledge of a Disease in general: Now moreover, I will shew, that the same thing doth happen concerning the Dropsie, as it were the heire of many Diseases.

In the Schools, a Threefold Dropsie is observed, to wit, Anasarca, a water between the Skin, and the which, they call a Leuco (or white) Phlegmacie, as if it did arise from Phlegme, and for the most part, they confound it with a local Oedema or Phlegmatish tumour.

And then, Ascites follows, which is the Dropsie of a proper Etymology, being forthwith manifest in the Belly and Legs.

And the Third is a Tympany, or windie Dropsie, concluded only in the Belly: Because indeed, the Abdomen or neather part of the Belly doth extend it self from a Flatus alone, or being mixed with a little wheyishness, and that no otherwise than as through water, and at length, that it doth miserably kill by choaking.

2 The Tympany is more rare and cruel than Ascites, and is easily from the beginning, distinguished from an Ascites: Because the Patient being rowled on his side, doth not feel the water to floate, even as, otherwise, that thing is manifest in an Ascites; yea truly, Authors do scarce distinguish an Anasarca from an Ascites, in its causes or place, especially while this begins about the Ancles, in the same seminarie place with an Anasarca and Oedema: The which, if they do enter the deeper into the Belly, then they name them Ascites, the name of Anasarca and Oedema ceasing: And so, the degree onely doth varie the species of the Disease in the Schooles: But if the whole habit of the Body, doth appear Swollen; as it were through a poyson being taken, they presently think that Phlegm hath committed the crime, and do call it a Leuco-phlegmacie: Wherefore the water between the skin seemeth again to be distinguished from Ascites, onely by degree, and therefore they have accused the Liver to be the one only Fountain of them both.

3 With the Schools therefore I will talk, concerning the occasional causes; for why, seeing the ignorance of the immediate efficient cause, hath hitherto made the Dropsie an unknown guest in us: But I could never conceive, that the Liver should be the cause of the Dropsie, if the whole Dropsie be solved by the Urine; and so, the Liver doth not offend in generating Urine (because it is that which is a natural product of the constitution of our nature) so much as the Reines do offend in not emulging or sucking it out. Wherefore the vice hath seemed to me, to subsist rather in the Kidney than in the Liver: And therefore, I wholly even from the beginning, do decline from the Schooles in the Seminary and Fountain of the Dropsie: For because they blame Phlegme in an Anasarca, Leuco-phlegmacie, Oedema, and a Cacochymia or an affect of bad juice, that doth not seem to touch an Ascites, the which, they think to be bred from heaped up Urine, or a certain whey of the Blood; seeing in very deed, they, with an earnest countenance distinguish the Urine (which they also signifie to be the whey of the venal Blood) from Phlegme, in its whole principles: To wit, while Urine is an excrement in its original: But Phlegme is called venal Blood, being not yet cocted unto maturity: For therefore this swims in the Blood throughout its whole (for such is their pleasure) and is an entire part hereof: Whereas, in the mean time, the Urine, wheyie Latex, and an Excrement, was never fit for, or dedicated to nourishment; for we must not jest in the principles of Medicine, in the Rules, in the Causes of Diseases: For truly, it is seriously treated concerning the skin of man, of subverting families; yea, and of the damnation of Souls: For it is not all one, whether the Dropsie doth depend on Phlegm, or on a vryny Liquor; and on both sides, to have accused the vice of one Liver: For there is a sluggish and stumbling progresse in the searching into Diseases, while they refer, perhaps two hundred Diseases unto the distemperature of one Liver. They have forgotten the while, the manners of making, and sending Phlegme, or Urine unto the bottom of the Belly, and not far of elsewhere: They have thought therefore, that the water of the Dropsie is meere Urine, or a metamorphyzing of Phlegme, melted into Urine after an unheard of manner hitherto: But at leastwise, they have been Ignorant of the Latex to be distinct from the Urine among the principles of natural

4

natural Phylosophy : For even as the food is not dung, although this be afterwards made of food : So neither is the Latex Urine. Furthermore, it is so confessed, that the Dropsie doth universally arise from the error of the Liver alone ; that when I had once, Judged in a written consultation, that Count *Destaires* or *Stegrius*, did labour with a Dropsie of of his Lungs, extended from the left part of his Midriff into a swollen Arm ; the chief Physitians hissed out this my Paradox with loud laughter, because I sought the seate of the Dropsie out of the Liver : Yet, when after death his Breast was opened, perhaps two buckets of water flowed forth, the which had run out or digressed between the left part of his Midriff, and Breast, into his Arm and Fingers. Anasarca therefore seeing it was as it were a lesse and beginning Dropsie, it was derived (by opening things) into the Liver : And likewise they hope, that the remaining white Phlegme, the more crude Blood, Urine, and Dropfical whey (they confound those four in this place) will be hereafter dried up by the one onely abstinence from Drink ; as a capital remedie ; For in the evening, they see the Shanks or Legs that are Swollen, in the morning, as slender, to have fallen : They say therefore, that the Blood is concocted in sleeping, but to be wasted, or consumed afterwards into nourishment, neither dare they to affirm, neither do they say, whither it hath departed : Neither also do they dare to say, that in so small a space of the body, and time, so much Phlegme being turned into Blood, is expelled out of the Legs, by an unsensible transpiration of the Skin, if they shall not maintain that two buckets of Blood are dayly consumed in a like proportion, of one and every night, and of the whole Body.

They are therefore constrained to feign, that the more crude Blood, or Phlegme, being now once hunted out, in the habit of the Legs, is recocted into good Blood about the Ancles, without the Shop of Sanguification, and dominion of the Liver : That is, that the once out-hunted and cocted Blood, is by a forreign agent, and unfit organ, at length received into favour, that it doth by an inspired motion, retire into the mouths of the Veines, and is received or associated, as equally fit for vital Offices : But whence do they spend so much labour in drying up of the Dropfical affect, that they can scarce command a possible abstinence of one year from liquid things, if the Dropsie be the vice of the one Digestion of the Liver ? Why do they referre it, among Diseases offending onely in moisture, the which was to be attributed unto a full half Digestion,

For I will first dispute about the Liver, and under the same by-work, I will discover the occasional cause of the Dropsie. I saw a certain un-savory Simple (nor by any meanes to be manifested) administred by a Physitian in the Suspition of the Stone of the Kidneys, which suspended the Urine for eightes dayes, and even unto death ; the which, presently before death, was loosed, and then it throughly be-pissed the bed cloathes : The Disease brought forth another thing like it : For truly, neither in the Urine-pipe, or Bladder, appeared any obstacle after dissection : But he had his left Kidney, triangular, free or undamnified from all obstruction and Stone ; But the right Kidney was plainly monstrous, and scarce of the bigness of a Filburd-nut : Therefore, he had pissed 76 years with his left Kidney not letted or stopped. That the Liver therefore is guiltless in the Dropsie, I will declare my experiences : For because the precepts of the Schooles, did the lesse satisfie me in the Dropsie ; therefore I was wont, being as yet a young Man, to hasten (although not called) unto the Dissections of Dropfical Bodies, that I might search out the birth-places of the Dropsie : For I thought with my self, to what end, hath there been Anatomie now for two thousand years, if there be not at this day, a more successful curing of the Dropsie than in times past ? For wherefore are we the Butchers of dead Carcasses, if we do not learn by the errors of the Antients ? If we do not amend fore-past things : For we flee unto Anatomie with a prejudice, and sweep the purses of Heires, if we do not look into the causes of Death, that we may learn the cures. For truly dissection, profits the Dead nothing. Heires also do not expend their moneys, that they may heal the dead by Anatomy ; and much lesse, that they may wound the same, least happily he should rise againe ; nor also, that they may learn to cure others, which are unwilling to be healed : But only the dead Carcase is opened for the Physitian ; and that he may more perfectly learn, the Heire paies the reward of his learning.

*Thus Oxen, yee, that yoked are,
The Plow, not for your selves do beare.*

But Physitians, seeing they scarce any longer expect to learn, they stand by, stop their
Noses

Noses, and hope by the expences of the Heires, for the most part, to escape the mark of Death.

- II A Lawyer, after divers Gripings or Wringings of his Bowels, died of a Dropfie: But in the Dissection, we saw his Liver without blemish. An *English-man*, my Neighbour, by eating his fill of roasted Porke, sliding into a daylie Flux, and presently after into a Dropfie, he died, and being dissected, his Liver was seen to be unhurt. Hitherto also, doth the Tragedie of Count *Stegrius* tend.

In the Autumne of the year 1605. I returning out of *England* to *Antwerp*, found some hundreds, after a malignant and popular Fever, to be dropfical: I cured many, and many under the unhappy experiments of others, in the mean time Perished: But that People have a persuasion in them, that unless all the Water be drawn out of the dead Carcases the Dropfie will passe over into the next Heire: And so, they are Sollicitous of Dissection: And I certainly affirme, that I found the Liver of none defiled. A certain Citizen, was long pained between his bastard Ribs, neither breathed he without Pain; at length, the Conjectures of Physitians being tried, he died of a Dropfie: But his Liver was seen to be without hurt. One pertayning to the Kings Treasurie of *Brabant*, after a sudden pissing of Blood, was long handled by Physitians in vain, and therefore being sent by his Physitians, unto the Fountains of the *Span*, he returning, began to shew a hardness in the left Side of his Abdomen, under his Ribs, and thereupon, the Leg of that side was swollen: But the chief Physitians, and those of *Lovain*, although they saw his Urine like unto that of healthy Persons, and thereby did betoken his Liver to be guiltless, yet they desisted not from the continual use of solutive, opening, and Urine-provoking things: yea, they gave him steel diversly masked, against the obstructions of the Liver, to drink: And at length, having a huge Abdomen, he Perished with a Dropfie: For neither was there place for excuse, as to say, they were called late, who were present with him, from the hour of his bloudie Pissing: But his dead Carcase being dissected, his Liver was found innocent: But his left Kidney had swollen, and that more than was meet, with a clot of out-hunted Blood (such as is in a boyled Gut.) A Major of Souldiers, from a bloudie Flux which was at length appeased, died of a Dropfie, whose Liver notwithstanding, was without blemish; however the Schooles may grin.

A certain Merchant keeping his bed through a Colick of four months, fell into a Dropfie; but being dissected, he had his Liver without fault.

A Woman of sixty years old, hearing in the night, Theeves at the windows, and rising, dashed her Belly beyond the Breast-bone, against a corner of the Table: But first it pained her, and then her Menstrues brake forth (as she thought) the which, although it was little, yet it desisted not, but with the birth of a Dropfie: it also expurged into the masse of a greater Tympanie: But she being dissected, Her Liver offered it self undefiled.

Another old Woman, being vexed with a more cruel Husband, after inordinate menstrues, Perished with a Dropfie, and shewed an unblamed Liver.

A certain Hand-maid; hanging some washed webs of Cloath to high for her Stature, sliding into a flux of the Womb, at length, died of a Dropfie, neither offered her Liver, it self guiltie, to the beholders.

A Chaplaine of *Bruxells*, of the age of 31 years, complains to me, of the shortness of his Breath: he shews his Legs to be puffed up, and his Belly to be swollen: And he saith, that his Cod was swelled to the bigness of ones Head: For I saw, that he had a face bespotted with red pricks or specks, as it were with the marks of stripes: He as yet, celebrated the Masse, yet with difficulty: presently after three dayes from thence, he suddenly dieth: but he being dissected, his Belly was found to be without water: But in his Breast, much Blood had choaked him: And so a small vein being burst, had caused a difficult breathing, and did also dissemble a Dropfie: But when as the rupture of the vein, being more rent, had poured forth its Blood, it choaked the man.

A certain Dropfical Man, and but one onely, being seen by me, shewed a black and stinking Bubble in the hollow of his Liver. *Barth-Cabrollius*, an Anatomist of *Mount-Pellier*, saith, that he cured very many Dropfical Persons, by Incision made in the very Navill it self standing out, and that, in both sexes: But surely if the error had been in the Liver, it could not have issued forth with the water, through the Navil: or that the Liver being mortally defiled, should admit of a restoring: Which thing, the Schooles will not admit of. Wherefore I remember, that I have restored above two thousand Dropfical Persons, also whose Urine did now wax-blackish with Bloodinesse, and who had

had scarce made a spoon-ful of water in one night; whose Liver, if it had had but even a mean (and not a mortal) fault, I confess I had not Cured them. I have seen also, that they whose Liver hath been notably wounded, have escaped, who although they thenceforth fore-perceived the Storms of the Aire, yet not the Dropsie. I have seen moreover those whose last day, a slow Fever had closed, in whose Liver small Stones had grown; yet they had not shewn a Dropsie.

It is a familiar thing for the Liver of Oxen to abound with small Stones, although they are continually fed with grasse: Whence at leastwise, I have learned, that Grasse-roots do never remove the obstructions of the Liver. The Schooles will say to these things; the Dropsie, indeed is not made, from a visible corrupting or obstruction of the Liver; as neither from the Salt of the feigned Jamenous-alume (as otherwise hath seemed to *Paracelsus*) but from a meer cold and moist Distemperature thereof, for so a large Flux of Blood, because it brings the aforesaid distemperature, it causeth the Dropsie. But this is wholly prattle, old Wives Fables, and vain sounds.

For first of all I have sufficiently demonstrated the nullities of mixtures and temperatures, not any more to be repeated.

2. I have seen many, all the venal Blood of whom, a Consumption had exhausted, so as that scarce two ounces had remained, when their Heart, Lungs, and Liver were plucked out; but their Liver was of a yellowish Colour, because it was without Blood; yet there was no cold and moist distemper in these Livers, as neither a Dropsie, the Supposed son of its feigned Mother.

3. If much Flux of Blood should generate cold and moist distemperatures, surely the Schooles do not affirm that thing to be done, but by the reason of a withdrawing of the vital Spirit, which alone, is the cause of our heat: But the defect whereof, seeing it includes a privation, it cannot induce a positive Being, such as a cold and moist distemperature and Dropsie should be.

4. And likewise, seeing they will have contraries to be contained under the same general kinde; our vital heat (which they will have to answer to the Element of the Stars) cannot have an Elementary cold, contrary unto it.

5. A notable Flux of Blood, doth of necessity cause cold: And therefore, if a cold distemperature arisen from a Flux of Blood, should be of necessity, the mother of the Dropsie, at every notable flux of blood, the Dropsie should of necessity be present: But the consequent is false: Therefore also the Antecedent.

6. And moreover, seeing cold, from a flux of blood, becomes universal, there is no reason, why the Abdomen should be rather loaden with water, than the Breast, whither to wit, the Aire being continually breathed in, doth increase the cold.

7. If the Dropsie be the son of that distemperature in the Liver; Whence therefore is there an uncessant thirst?

8. If the Expulsion of water into the Abdomen, be an action of a distempered Liver; Why doth not the Liver use the same its own expulsive action, while the Veines do swell with Urine, they being intercepted by a destructive Stone?

9. Likewise the Blood of Dropsical Persons, even as also the Urine, should be exceeding watery, if the Dropsie should be from a cold distemperature of the Liver: But the Urine should not be so reddish and Bloody.

10. In the next place, between a Dropsie, and cold distemperature, arisen from a flux of blood, a positive cause, being a third from a cold, should of necessity interpose: Which the Schooles do hitherto name, because of a non-being there is no search made.

11. Neither also, do such distemperatures produce thirst, together with a Salt Water, in the Abdomen; seeing they do not thirst, who do plentifully detain a salt Urine throughout all their veins, in the Stone which stops up the Reines on both sides.

12. If the Dropsie be from a cold distemper, Then a Dropsie should never be expected after a Fever, or wringing of the Bowels, if there be not a branded confusion of causes. And in vain do they flee unto a cold distemperature for a Dropsie, the which, should equally proceed even from opposite causes.

13. Every old and decrepitate Person, should now nourish the necessity of a Dropsie.

14. A cold distemper, seeing in its root it is like to Death, extinguishment, old Age, and privation, every Dropsie should contain a necessary despaire of health, even as such a distemperature denies a restauration.

15. If the Liver be the Liver and not the Lungs, by reason of its Elementary counter-tempering (as the Schooles say) and so from one only Seed, all the Elements do proceed

ceed and wander hither and thither confused, that they may be the constitutives of appointed Organs! therefore the Liver receding from its natural temperature, shall cease to be the Liver, and shall be the Kidney, Lungs, or Milt.

16. At leastwise, a Member struck with a Palsey, should not be wasted, but should be after some sort, swollen with a Dropsie.

17. At length, if the Venal Blood be resolved into four, or again into three Humours, from whence it is either naturally composed, or they are in it, being applyed unto, or co-mixed in the subject of the Blood; The Blood shall never be able to be changed into a Dropsical water: Seeing this is not any Humour of the constitutives of the Blood: Yet I have seen a country-man, out of whom all the water was taken by a Borer, in twelve hours space; for he being become my Opposite, Scoffed at me: But the morrow morning, being swollen with the former Lumpe of his Belly, he died. For the Dropsie increased not by degrees, even as it had increased from its beginning; but it presently hastened and proceeded unto an extream extension: For I observed, that his Flesh and Blood, being melted into Water, had made their retreat to the neather part of his Belly: For in that one only day, he had descended into extream Leanness: Therefore his Flesh and Blood, shall now wander into an Hydropical or fifth Humour, through the cold distemperature of his Liver. I could perhaps pardon, that the Liver being cooled, doth afterwards generate the more cold Blood (for all Blood being deprived of vital spirit, naturally waxeth cold, because it is a dead carcase:) But that a more cold Liver doth melt fleshes into a Dropsical water, that can be founded upon no reason.

18. The Schooles cannot deny but that a Dropsie is sometimes solved by the Kidneys: But there is no reason, why the Reines do stubbornly close themselves even untill Death, because the Liver was more cold than was meet.

Let these arguments onely, as yet, suffice the Humourists which are distempered with cold, that the Liver may be saved from a mortal offence.

15 Now I will over-add somethings concerning the occasional Cause; I will therefore resume the fact of our Treasurer, who shewed nothing memorable in this dissection, beside Blood out-hunted, and hardned in his Kidney, to be the occasional Cause of his Dropsie and Death: yet while the Stone, plentifully stopping the Kidney, doth not produce a Dropsie, yea although the whole Kidney shall wax brawnie or hard with little Stones, and shall reserve nothing of its substance besides skin: Therefore the obstruction of the Kidney, as such, is not the occasional cause of Dropsie: But the out-chased venal Blood: For so the Woman of Sixty years old, having dashed her self against a corner of the Table, contracted a Dropsie: So those that are wounded in their Abdomen, and badly Cured, do become Hydropical: So out-chased venal Blood lighting and laying on the Menynx or Coate of the Brain, doth presently render the countenance swollen with a Dropsie: So at length great gripings of the Guts, do pour forth Blood out of the Veins, into the space bordering on the hollow bending Bowel: So those that have the Bloodie-flux: And so Drinkers, do enter into a Dropsie, as something of blood is co-heaped in the hollow Bought of the Bowel. But this thing I learned, in a Fracture of the Scull, and in a Dropsie of the Lungs: For there the Blood making oftimes a stop, blows up the whole Head and Face as it were with a Dropsie: But here, I have observed the Blood to have consifted or remained about the conduit of the arterial Vein; for neither doth the venal blood degenerate in the form of corrupt Pus, unless it be cocted in the hollownes of the Flesh; but without the Flesh, in a free place, the Blood presently waxeth clottie, and straight way after it being made more dry, is hardened, and presently conceives a Poysonous ferment: Whence the Archeus, stirs up a Dropsie. Indeed our Treasurer hath taught me, that the blood being hunted out and become clotty, causeth a Dropsie of the Belly; and besides that the Kidney is an Adequate or suitable Aertificer, Cause, Executer, and Judge or Arbitrator of a true Dropsie. That thing hath confirmed it to me, because at the time of a Dropsie, the Kidney scarce makes Urine: and on the other hand, because the Kidney being excited to restore the Urine, himself doth empty the whole Dropsie out of the Belly: Wherefore also, that the water is brought back into the Abdomen, by the arbitration of the Kidney.

Vain therefore is the devise of *Paracelsus*, that the Star *Zedo* is the one only and singular Architector of the Dropsie: For the cause is in our innermost parts, and in the very Beginnings of Life, but not to be so far fetched, and Cured: For the Dropsie is not the workmanship of the Stars, neither is there such an ordination of the Stars: neither is that of concernment, although *Mercurie* being seperated dead from its Vein, doth truly and perfectly

perfectly cure the threefold Dropsie : For Mercurie is an Analogical, and feigned Name, neither doth it denote a Star ; but a running Mettal : For what doth a Name that is Metaphorically feigned, belong unto the feigned Star of Zedo ? For metallick Mercury, is neither a Star, nor kills a Star, nor hinders its operation, nor dis-joynes the conjunction of a Star with us, if there were any : For the Stars are the occasions of Meteors, but of Diseases, occasions onely by accident : For primarily, they are the Causes of times or seasons, and of the Blas of a Meteor ; but secondarily, and by accident, they disturbe our Bodies, provoke Diseases, or ripen the occasional matter: But Causes by accident do not respect Cures, but fore-cautions, especially, where Causes [*per se*] or [by themselves] do operate with or in us by a proper motion, and appointment of their own seeds. For indeed the left Kidney of the Treasurer is stuffed or condensed with the more dry Blood, the left part of his Abdomen is extended, and presently waxeth hard, the right part being safe : His Leg also, presently swells, and afterwards his Thigh on his left side, and therefore the extension of his Belly is extended, not by reason of the quantity of water onely ; but his Membranes are extended from the Disease it self, no otherwise than as the Artery under a hard pulse : But the Membranes are extended and contracted also, before a plenty of water, by the same workman which begets the Dropsie : Indeed it contracts all the pores of the Membrane, that they cannot transmit or send the Wind or Liquor thorow them, when as otherwise, in those that are alive (that is healthy) the whole Body is perspirable, and conspirable, or inspirable. The Treasurer therefore, first of all makes a little water, the Dropsie straightway invades him by degrees, and begins on his left Side : And therefore presently after its Beginning, his left Leg is besieged by an Oedema, and afterwards his whole Body becomes swollen. But why doth not his right Kidney draw the Urine, nor transmit it, the which otherwise happens when but one Kidney is besieged by the Disease of the Stone ? For therefore, there is a double Kidney by Nature, and a single Spleen or Milt, that one may relieve another in their troubles, and banishments of an Excrement : Yea, and from hence it is sufficiently manifest, that the Spleen is not a sink, nor emunctory. Therefore in the Blood being chased out of the Veins, detained, and condensed, there is an exciting ferment, such as is wanting to the Stone.

19

I will therefore declare the whole order of the matter so far as my Observation hath taught me : For the Liquor Latex unknown to the Schooles, as long as it is carried with the Blood in the Veins, or to the Glandules, it enjoyes a common life, neither doth it obey the rules of water-drawing Organs : But it knowes not upwards and downwards, because it hath it not : But it being once rejected out of the fellowship of Life, now it undergoes the nature of an Excrement, and hastens downwards, as being burthened with its own weight : Therefore the Latex is of a vile esteem : And therefore, as oft as every Bowel is ill affected, it presently neglects the Latex, and excludes it from the company of its Venal Blood ; and findes business enough for it self at home, for its own defence. The Latex therefore being once divorced elsewhere, and spoiled of the society of Life, doth presently receive the disposition of an Excrement ; Because its own, and that which is native to it.

20

1. *This is the cause of an Anasarca, or in speaking precisely, the Water is not the Dropsie, as the Anasarca it self, neither is the Wind the Tympany it self, but the Water in the Abdomen, and the Latex in the Anasarca, are the Products of the Dropsie, As the Wind is in the Tympany. Surely the Dropsie is a Guest received with a more inward society of familiarity, and is more intimate unto us, the which doth attempt the vital principles, and faculties of Life before the Water be bred : and so every Disease, doth by occasional Causes immediately talk with the vital Beginnings, wherein at length it findes its matter and efficient Cause.*

2. *And then I have noted, that seeing the Urine of all Dropsical persons in general, is little, and of a ful colour, the Latex was the matter, as of the Urine, so also of the Dropsie : For neither is it formally Urine, but the matter hereof before Urine was made thereof by a co-mixture of other things, and the receiving of a Urinal ferment.*

3. *But I understand in the Dropsie a threefold matter : To wit, the first, occasional, such I have said out-chased venal blood to be.*

And then, a second, which is the Water it self, and the very Latex in the Abdomen, which is a certain product.

And lastly, the third matter hath its internal efficient arisen in the internal vital principles of the Archens of the Reines.

4. Like as also, drink failing, the Reines do notwithstanding, as yet, allure forth the Urine of Blood, although sparingly.

II

5. So also in the Dropsie, the Urine is of the Blood, not of the Drink, not of the Latex: The Reines do actually, conceive, frame, and contain the Dropsie: But the Abdomen or neather part of the Belly, through the action of government of the Reines, doth afford an Inne, and the Kidney sends the Latex thither, as the product of the Tragedy. For it is not, as the Latex is theevishly snatched away by another Bowel, but the Kidney alone doth banish the Latex unto places subjected unto it.

6. But the Latex being lesse chief in the accustomednesse of Life, in an Oedema, and Anasarca, than in an Ascites: it is also again supped into the Veines, and slides unto the Reines, that it may undergo the last determination of Life.

7. An Ascites is regularly cured, if the Kidney shall make much and abundance of Urine of its own accord, or by a Remedy: But it committeth a relapse, if the Disease be not wholly taken away out of the Kidney.

8. The Water between the skin, or Anasarca, by a retrograde motion draws the Latex into the mouthes of the Veines, from thence through the Veines it is sucked into the Kidneys, and expurged in manner of Urine: The least quantity whereof, onely doth exhale by transpiration: And therefore they abusively teach, that the Latex is Phlegm, in an Oedema, and that it is rected into lawfull Blood.

9. Therefore the Command and Action of Government of the Reins doth extend it self, not onely into the Kidneys, Ureters, and Urine Vessells: But besides, into the hollownesse of the Belly, between the Peritoneum or wrapping Skin thereof, and Muscles of the Abdomen, and likewise into the severall Divisions of the hollow Vein beneath its self, even also into the Feet and Legs.

10. The Reins therefore do not suffer the Latex to fall down through its own weight, but do truly send it, no otherwise than as they do truly again draw the same thorow all the blood of the Veines, to wit, until the Dropsie be cured by pissing.

11. And which is more, the Kidney doth alwayes co-operate, and principally operate in the framing of a Dropsie: It is therefore of necessity, primarily affected: Because it wanders from the ends of its acting.

12. And seeing the Kidney is the chief effecter, of the Dropsie, although another member may now and then contain, the occasional Cause.

13. Therefore a Cure which is instituted by a removal of the Water, is alwayes subject to a relapse, and is for the most part attempted in vain: Because a worthy or meet Cure is never instituted from the ultimate or last Agent.

14. Therefore the Dropsie Ascites, is alwaies an immediate effect of the Reins, and so the Cure of the same doth expulsiuely require a restoration of the Kidneys, whether the defect be occasionally stirred up, or in the next place consisteth in the Kidney it self.

15. Wherefore I do far retire from the Doctrine of the Schooles, which, the Reins being passed by and neglected, doth continually behold the Liver, and direct its desires of curing thither.

16. But the Dropsie is not a wandering abuse, or exorbitancy of the Archens in the Kidney, a stopping up thereof by a stone or muckishnesse: But a certain sleepy or stupifying poisonous faculty in the venal blood, which is expelled, or in a like manner entertained; through importunity whereof, the Kidney doth first of all forget its office, casts away the Rains of separating the Latex: and straightway after also, doth snatch up a fury, while through an inordinate motion, it banisheth the Latex into the Abdomen.

17. Even just as I said before, that a Kidney was exclusively shut against the simple Urine, even until death.

18. Indeed I meditate of a co-like devious or wandering quality of out-chased venal blood, in the Dropsie; through the occasional Cause whereof, the Kidney is made forgetful of its duty, and the seasonable removal of which poison doth free the Kidney from its bond, and so the Abdomen from the Water: For when the Kidney seeth that an Error was committed by it, and being well admonished by a right Medicine, it earnestly repents, and again suppeth up the Latex being dismissed unto it, and drives it forth.

19. There-

19. Therefore the true Dropsie Ascites is in the Reins; or to lose the stubborn bolt of the Reins, is to lose the Dropsie; even as to solve the congealed Blood, is to solve the occasional cause thereof: That is, the immediate cause, as well the material, as efficient of a true Dropsie, is the Archeus of the Reins erring; to wit, so far as he becomes Exorbitant, and is as it were driven into a furie by the occasional Cause, he begets an Idea or shape, the which the implanted Archeus of the Reins himself, being stubborn, doth foster and nourish: Whereby indeed, he doth not, or scarce separates the Urine, or imployes himself in the care of his Office, or of his appointment: Yea, neither doth he only pass by and neglect his own Offices; but also, being as it were in a rage, dismisseth the Latex unto the Abdomen, that he may as it were procure his own Destruction. Therefore we must dissolve the vice of stubbornness in the Archeus, so that pissing may follow if health be to be expected.

Paracelsus feigneth, that in the Dropsie, the venal Blood is by the star of Zedo turned into a muscilage; but from hence into water: But that its cure doth consist in the withdrawing of the water, and first matter, or removall of that aforesaid Muscilage: But what other thing is this, than to cure from the effect? I grant willingly indeed, that as oft as the Latex doth not sufficiently serve the turn, the Archeus of the Reins, that he may satisfie his own furie, doth sooner cause the blood to melt, than he desisteth from his error begun: But where there is a plentiful Latex, the dissoluting of the Flesh and Blood into a Latex, is not worth his labour: For in very deed, as speedily as he can, he drives all the Latex unto the places of the Dropsie; neither is he idle, but rageth as if in the driving of the Latex unto the Abdomen, his own profitable end were to be expected: For neither would it detain the Urine if it were the endeavour of the Archeus to dissolve the flesh and blood.

Those in whom both Kidneys are stopped by the Stone, and do die, being at length choaked by the Urine, are not nevertheless therefore Dropfical; because the Urine remaineth in the veins, whereof (to wit) the Kidney intends to unload it self, but cannot: But in the Dropsie it is able, but doth not intend to unload in it self: In a Dropsie therefore, there is a poysonous fury of the Archeus, not likewise in an obstruction by the Stone: And therefore one Kidney being disturbed through a poysonous occasionall cause, together and at once, all the other Kidneys also alike rageth; which thing, in a stoppage by the Stone, doth not in like manner happen: But the Essence of a Dropsie doth require, that not only the Kidney do neglect the separation of the Latex, and shut the bolt of the Urine: But moreover, it must needs be, that together also, it dismisseth the Latex unto the places of the Abdomen, yea and that it doth strictly close the pores of the Membranes, least indeed any thing of the Latex, or Winds, do transpire and break out. Truly the Archeus of the Reins doth rage with a great and foolish carefulness, that he may make a Dropsie; and his fury is nourished with a foolish stubbornness, because when he feels the powers of nature to be dejected, yet he nevertheless, not any thing slackeneth from his conceived furie: If therefore a stoppage by the Stone, doth induce a Disease and death, not a Dropsie; if a Dropsie also brings a Disease and Death, without a total, yea or a material obstruction of the Kidneys: it becomes manifest, that the diversity of the same Diseases doth depend only on the immoderate desire, and intentional fury of the Archeus, being stirred up by a bloody poyson, not likewise from a material error of the Latex.

It is a Maxim, that every being, desires to be and remain. Which indeed is to be understood, of a Being governed by God, by common, and ordered, or regular nature: But not of a foolish Being, and that which is outrageous through a poyson, such as is the Archeus from his corruption by sin, and being provoked by the poysonous occasional cause of a Disease: For it is even all one, as a furious Man, Horse, or Oxe, which casts himself headlong from a high place, and procureth his own end: For so the Archeus in his furies, doth as it were by a stubborn endeavour, procure destruction to himself: The which indeed, in many Diseases is perpetual, wherein therefore it is lawful to accuse the madness and furies of the Archeus: also that furious, and mad images or likenesses are formed, whereby he doth feminally communicate his own furies to a potent ferment: Whence also, it is wont to be said, that a man is immediately, more powerfully hurt of none, than of himself.

Furthermore, with what great carelesness, and with how light a foot, the Schooles of the Humorists have skipped over the consideration of Diseases, may be seen, not only from the cold distemperature of the Liver, the which only and alone, they suppose to be in the present Disease, and so, as if (that being laid down for a Position) they had given a full satisfaction, and had declared a profound Oracle, they repose themselves in quiet:

25 Yet without consideration, that such a cold distemper, cannot be restored; but that Dropical Persons do every where admit of cure. But chiefly, the negligence of the Heathenish Schooles doth clearly appear: Because that, among so many thousands Writers, the first, is as yet wanting who hath dared to think, which way, or by what possible means, the Liver should lay up its water between the Abdomen and its Muscles; none I say, hath hitherto known, that the Latex differs from the Urine: And seeing that sometimes, the Dropsie is for many months leading the Languishing weak unto their Coffin, the Urine should of necessity stink, if it should but for a very small time associate the liquid dung or droffe (the which, concerning the Disease of the Stone, touching Fevers, and elsewhere, I have in words plentifully explained) unto it self as a companion: Which drofs notwithstanding, is required unto the integrity of Urine. But if a Dropical Person, shall assume any of that drofs, from a Bowel, into the meseraick veins; that droffe likewise remains with the small quantity of Urine, neither being co-mixed with the Latex, is it sent unto the Abdomen: All Writers therefore, have hitherto so feared this Gordian knot, that indeed, they have not mentioned so much as a word of it: Let us therefore consider, that which others before me, have neglected: For truly, all juice, or chyle of the Stomach, sliding down through the Bowels, is naturally, regularly, and alwayes attracted, and sucked by the Meseraick veins, to wit, the Mouths or extremitities whereof, do end into the Intestine or Bowel: it hath also remained scanty hitherto, after what manner, so plentifully a Chyle doth dayly passe through the intestine into the mouths of the veins of the Mesentery, without any hole: And likewise, why winds being pressed by the intestine, do not proceed through the same pores, into the veins of the Mesentery, seeing they are by so much the thinner and subtriller than the Chyle, by how much their Body is lighter, which hath no weight, with the ponderous Chyle: But these things shall by degrees manifest themselves under explication, the which, because they being reckoned as it were the impossible, or at least-wise the unsearchable miracles of nature, have suspended every quill of Writers, and the Schooles through the excuse of hidden Causes, have been content to have suspended all things. But go to; as to my search in hand: Every liquor is sucked by the intestines (for that thing I willingly grant without controversy) and is snatched into the veins of the Mesentery, to wit, as well that which is appointed for Blood, as that which is after any sort, at sometime deputed for excrements: But afterwards, there is not any passage of the veins of the Mesentery, but unto the port vein, which insinuates it self into the Liver. Therefore the matter whereof a Dropsie is carried into the Liver, no otherwise than as all the Fibers of roots, do at length end into the Trunk it self, which is called the Root: But what are the Channels, whereby the Liver conveyeth the Matter or Water of the Dropsie, as it were by the hand, unto the space of the Abdomen? If those are the sober veins, whereby that Membrane of the Abdomen, or Peritoneum, is nourished; Why at least-wise, hath the Liver rather designed these veins, and doth afflict these places, when as it might far more commodiously expel such superfluous Water by the fundament veins, before the Liver be burdened with its importunity and weight? Because they are those which seem to be dedicated unto the easing of burdens. In the mean time, it is certain that the Latex, or matter of the Dropsie, doth swim in the veins which are beneath the Liver, seeing it is not then rightly separated by the Urine.

26 At least-wise, however it be taken, the Liver is not able to super-adde even on the only drop more unto the Abdomen, being now extended into a huge heap and hardness, by reason of an heap of water, but that, the mouths of those veins being open, as it were, by a Floudgate broken open, the Dropical watter should retire, and regorge out of the whole Abdomen into the Liver.

For first of all, the mouths of the veins ending into the Membrane or Filme of the Abdomen or neather part of the Belly, have not all of them folding doors applyed unto them, like Bag-pipes restraining the in-snuffed Wind and Latex within.

And then, if they should have such folding doors, at least-wise the Liver wanteth an expulsive faculty of so great force, but rather the Liver it self, and the channels of the veins, should sooner chap and crack, than they can super-add the contained water to the hydropical Abdomen, being extended into an immense hardness.

In the next ylace, if any such veins do end at the Prison of the Dropsie, for its nourishment, at least-wise, they are the Daughters of the *vena cava* or hollow vein: And so, all the water should be in the Liver, and the hollow vein, before it is in the Abdomen, and those Bowels should be swollen into a huge hardness: Yea, all the Dropical Blood should be nothing but meer water; which is false: And the Schooles will grant me of their

their own accord, that the water of the Dropsie should be emunged by the Reins, before it should come unto the Abdomen, unless the vice and offence should be rather of the Reins, than of the Liver: For sanguification belongs to the Liver; but the sepatation of the Latex from the venal Blood, is before, and belongs to another Workman, than the Liver: For the Latex is in the meats and drinks from the beginning, and is essentially separated by the Gall, until it assumes the nature of a certain Salt, and changeth its sharpness into saltness, and remaineth locally well mixed with the venal Blood, until it having obtained the last supply of Urine, being attracted by the Reins, is expelled. The Reins or Kidneys therefore, are governours of the Latex, as the Liver is of the venal blood. And then, the water of the Dropsie, is the Latex, not likewise (as yet) 27 Urine; whose ferment seeing it is dungy, and is imprinted by the Reins, that Latex is not yet Urine: The expulsion therefore of the Latex into the Abdomen, is rather the Office of the Reins, than of the Liver: And therefore the Kidneys, as it were repenting them with an after return, have oftentimes also fetched back the water laid aside in the Abdomen, and have voluntarily restored health from the Dropsie. Then also, sanguification or Blood-making is not hurt or hindred in the Dropsie, neither do Hydropical Persons wax dry through a penury of Blood, for as much as they are choaked with an abundance of the Latex: But if in a Dropsie, Blood doth not abound, yet that comes not to pass, because the Liver denyeth the framing of venal Blood, but because the Blood is even diminished by a forreign thief; yea, neither doth the Liver vitiate the Blood being made, by it self, seeing they are opposites and unco-sufferable actions, to wit, Sanguification, and Destruction of Blood.

For the Kidney hath received the dominion of the water; so that, the drink failing, it vitiates the Blood, and tranfchangeth it into Urine; which things being unknown medicines for a distempered Liver, have proved unsuccessful: For what more blockish thing hath been ever declared, than because the Liver is the shop of venal blood, therefore it is also the shop of water, and of wind, for a Tympany? The water is colder than the blood; Therefore the Liver in the Dropsie, laboureth with a cold distemper: For the water is not so much generated in a Dropsie, as it is reserved, in as much as it is not expelled. But whence, in the whole systeme of Diseases, is there so slothful a blindness of the Schooles? Whence so wan experiences about the Sick? do they not find themselves forsaken by the truth of God, because they have delivered themselves over unto Heathenish Doctrines, with a stubborn sloath? Indeed, I sometimes sticking in the manner of making a Dropsie; did in times past, believe that the water was made in the Abdomen it self; but not to be derived thither, seeing that it should else, regorge thorow the same channels through which it was conveyed by reason of too much extension; but I knew that the water or wind was breathed into the Abdomen, more strongly, than by any Bellows, if by Pipes it were led thither; especially, because those passages ought successively and frequently to open and gape, to wit, as oft as the water should droppingly depart unto the extended Abdomen: But after that, I saw the Dropsie to be perfectly cured of its own accord, by Urine, and the whole water by a remedy, to be expelled through the Kidneys; I also undoubtedly beleived, that the water was brought into the Abdomen, through the same passages, by which, it being fetched back, doth proceed unto the Reins, in the curing of a Dropsie: Therefore I was bound to acknowledge other wayes, and to desert my former opinion: Especially, because I found sparing Urins in a Thirsty and Drunken Dropsie: Indeed, the water is loosed through the same passages whereby it was conveyed into the Abdomen. 28

These things I have known, and beleived, because I have seen them: But I could not come unto the knowledge of those passages, as neither of that violence, which might extend the Abdomen more strongly than Bellows, and nevertheless, by a continual drop, might as yet increase it: Those passages are hitherto unknown to Anatomists, and the manner whereby the tumour ariseth unto so great an extension, is touched by none, or lightly searched out. The great things of God in nature I humbly reverence, and greatly admire: For I am astonished at the furies of the Archeus, and the every where excentrical varieties of these, whereby he sometimes encloseth water, at another time wind, in the Prison of the Abdomen, even until the destruction of the whole Body, and his own.

I will therefore open the matter, so far as my Industry hath permitted me to conceive: For in Nature, there is twofold Action: to wit, 29

One, whereby a Body is enclosed in a Body, as Wine in a Bottle, and the Water of the Dropsie between the Peritoneum and Abdomen: Yea, the pores of these Membranes are

are Diſeaſly cloſed: For the Body is per-ſpirable in health, and the ſweat doth wholly dimin-
iſh the Latex; ſo that the watery drink in Summer doth preſently by ſweat flow through
the ſkin: But ſweat is for the moſt part, unprofitable in the Dropſie, ſo that although
the Belly ſweats, yet it doth not dimin-
iſh the Dropſie, however many have vainly tryed
many things, about theſe trifles.

There is alſo another Action, which is regular and of a different kind in Nature: Whereby, I have elſewhere ſhewed by many Examples in us, a certain ſolid Body (to wit, a knife, beard of corn, needle, arrow, or dart head, bones, ſhells of fiſhes, and the like) are tranſmitted thorow the Stomack, Paunch, Veins, without the hurting or wounding of theſe: And ſo that there is a wonted and neceſſary penetration of Bodies in Nature.

For the firſt of thoſe Actions, as it is every where known, is made ſo far as a Body doth altogether obey its own bolts of ſuperficies, hardneſs, weight, channels, &c. And one Body in reſpect of the other, is as it were dead.

But the other Action is wholly vital, and of the Spirit of Life, which is not cloath-
ed with the Garment of a thicker Body: But its own ſelf is the verieſt Garment of that
Body: And the which it doth therefore derive through another vital body ſubjected un-
to it: For ſo Chyrurgions have noted Apoſtems or Ulcers to be made through the very bones
themſelves: And ſo Authors who are worthy of credit (whom in the Chapter of inject-
ed things, I have alleadged) do admit of a penetrating of corporeal dimenſions, as oft
as a knife paſſeth through the Stomack, and with a corrupt matterly Apoſtome, is returned
through the Ribs, without a wound of the Stomack.

In the Dropſie therefore, the aforeſaid double action is converſant about the ſame La-
tex: For this Latex, as long as it being cloathed with a clear vital ſpirit, doth after ſome
ſort enjoy a venal life, is led through the ſolid places, it ſlighteth paſſages, ſeeing there
is none unpaſſable by it: But it deriveth it ſelf unto the Priſon of the Dropſie, and there,
as well through a conſtriction of the Pores of the Membranes, as ſingularly, and eſpecially
by reaſon of a deſerting of the ſame cloathing ſpirit, it lays up it ſelf, as it were an excre-
ment now dead: And the which, neither doth therefore find deliverance from thence,
unleſs the vital ſpirit doth again cloath and encompaſs it. This is indeed that ſpiritual
force, which is more powerful than any Bellows: The which we bear in our inward
parts, the power whereof we dayly admire, have never known, and being compelled
by demonſtrations to admit of, do ſcarce beleive.

- 30 In the Dropſie therefore, I have found a fury of the Reins, and their erring powers, which
furie ſhutteth, and is ſcarce that which may open, and the which doth open, and lay up,
neither is it that which maketh to re-gorge: Seeing therefore thoſe actions of fury con-
ſpiring toward their own deſtruction, are plainly ſpiritual (for as a Phyſitian, I every
where contemplate of the ſpirit, as a vital air raiſed out of the arterial Blood, but I touch
not at the immortal mind) neither do ſuch ſpirits act, unleſs they are conſtrained by like-
neſſes or Images framed by them: Therefore indeed, I call it the furies of the Archeus,
31 while the Kidney ceaſeth, and is almoſt forgetful of its own Office and appointment in
ſeparating the Latex from the venal blood; therefore it ſhuts it ſelf, and being as it were
wroth, and exorbitant, it lays up the Latex elſewhere: But that I may analogically or
reſemblingly conceive of, and expreſs this tenour of fury as I ought; I firſt of all conſider
the out-chafed venal blood to be detained in the Kidney, or to lurk upon the hollow
boughtineſs of the intetine, &c. Wich blood, when it hath put on a fermental maligni-
ty, preſently the Kidney the governour of the Latex being full of wroth, receives
the ſleepie or ſtupifying poiſon of that blood: But the ordination of the Latex is to
waſh off filths, if there are any detained in any place of the Body; and ſeeing the Kidney
cannot by the Latex waſh off that out-hunted blood, becauſe the Latex cannot deſcend
thither, this co-heaped in the veins for diſdains ſake, and the Kidney, is thereby ſo affect-
ed with diſdain, and wearineſs or grief, that it cannot performe the office enjoyned it:
And therefore it preſently ſhuts the paſſage of the Urine, that that which it cannot do by a
regular plenty of the Latex, it may perfect by an abundance thereof: As if it conſidered:
Thou Latex goeſt not whither I would ſend thee, to waſh off the out-chafed blood; I
will not let thee paſs through thy accuſtomed Ureters: Such therefore, is the fury of the
enraged Archeus of the Reins, the which at length, ariſing to a degree, cloaths the Latex,
and derives it whither it will.

- 32 But beſides, not only the event in making doth confirm this fury of the Archeus; but alſo,
in drying, eſpecially while a Dropſie is ſometimes cured of its own free accord: For truly,
that comes to paſs, as if the Archeus did repent him and were ſorry for his deeds.

- 33 I knew the Counteſs of *Falax*, who while being a young Maid, did ſwell with a Dropſie, by
the

the perſwaſion of a certain Phyſitian (for ſhe was held deſperate, by all) abſtained almoſt for the ſpace of a full year, from drink, being content with the more ſolid food, and broaths: And ſhe became healthy, and is now alive, being ſeventy years of age.

In the firſt place, thirſt, whether it be taken from a ſenſe of moiſture failing, or for the defect it ſelf of moiſture, At leaſtwiſe, in neither manner, doth it dry up a Dropſical water: For although no drink be Drunk, at leaſtwiſe, broaths which do afford a ſufficient quantity of venal blood, do alſo yeild a ſmall quantity of Urine and Latex, ſo much as is ſufficient for the ſubſiſtance of a Dropſie.

34

In the next place, neither doth thirſt, nor the defect of drinks it ſelf take away the occaſional Cauſe of a Dropſie (which for the moſt part, is venal blood expelled) but rather they do the more dry up, and the more ſtubbornly reſerve for it, that it may reſiſt a reſolving, through the abſtinence of the counterfeited thirſt: But that continual thirſt, together with a hope and perſwaſion of health, did pacifie the error, or indignation in the Archeus of the Reins; from whence I have learned, that thirſt doth regularly ariſe from the Kidney, but not from the Liver; and much leſs, from the leſſer branches of the veins, ſucking the greater, until a defect of moiſture be brought unto the Oriſice of the Stomack: But as a defect of Blood, is reſtored by the more meer or pure meats and drinks; So the defect of the Latex, is recompenced by watery things, it being that which experience teacheth.

35

36

Thirſt therefore, proceedeth from the governour of the Latex, and not from the Bowel of ſanguification: for there is as much neceſſity of the Latex, as there hath been hitherto dulneſs in the paſſing it by.

Some Authors do commend live Toads, being faſt bound to both Kidneys, to loſe the Dropſie by the Urine: At leaſtwiſe, I have ſeen a Country-man that had a Dropſie, cured by an Adder tyed about his Belly and Reins: For an Idea of fear is brought on the Reins, whereby they looſe their indignation. Indeed, by the ſame title, thirſt doth ſtir up an Idea of ſorrow, or of a denyed appetite, whence the Kidney forgets its wroth.

From what therefore hath been ſaid before, the ignorance of Cauſes in the Dropſie is ſufficiently manifeſt; and next, with what great obſcurity they have laboured about the diſtemperature of the Liver, and emptying of waters; how vainly they have thought of provokers of Urine, of Veſicatories, and of ſolutive Medicines: and it is to be obſerved in this place, that purgative Cholagogals or movers of Cholar, have been wickedly given to drink, to Dropſical People; becauſe they are ſuch things which trans-change the Fleſh and venal Blood, into a ſtinking and yellow ballaſt, without the help of a Dropſie; But with the deſtruction of the a Hydropſical perſon: But a hydragogal or mover of water, differs from a Cholagogal; becauſe that being drunk down, the Belly aſſwageth, neither doth it expurge ſtinking things or excrements, unleſs the force of a Cholagogal, be adjoynd to an Hydragogall.

37

38

Therefore Mercury precipitated according to the preſcription of *Paracelſus*, cures every Dropſie, not as it purgeth, but for as much as it material paſſing through the Bowels, diſſolves the out-hunted Blood: But if it together with that, do provoke Vomit, or Stool, that is to the Dropſie by accident.

39

Take notice therefore of this; that white Briony or white Vine, being ſcraped or filed, and laid on a bruise wherein the blood looketh black under the ſkin, doth in few hours reſolve that blood into water, the which it likewiſe fetcheth through the ſkin: Wherefore take notice, that there is the profitable virtue of an Hydragogal or mover of water in Briony, if thou ſhalt take away the ſolutive poiſon from the ſame. But ſurely I have obſerved, if Antimony be turned into a liquour, and afterwards into a powder which purgeth only by ſweat, a remedy is procured, which modeſtly takes away every Dropſie without fear of a relaps; for truly it removeth as well the occaſional Cauſe, as the diſtemper of the raging Archeus it ſelf: For ſuch remedies as are carried through the in-teſtines, their natural endowment remaining, and being ſecure, and the which are therefore apt to reſolve the occaſional Cauſe, do free Nature of her impediments; whence the Archeus of the Kidney, perceiving the proper madneſs of his fore-paſt fury, doth open the veines, ſuck to him and ſtrain the water through, according to his due and wonted manner, and recompenceth with diligence, the ſtubbornneſs of his fore-paſt fury by an excentrical and oppoſite motion of the Latex; grieving that through diſorder, he intended his own deſtruction: whence it is plain to be ſeen, that the government of the Kidney over the Abdomen and Veins, hath hitherto been unknown.

40

The

42 The Dropsie therefore, is a Disease occasionally arisen from a bloody depraved matter, as it were from a fermental Beginning : at whose incitements, the Archeus of the Reins formeth an Idea of indignation ; through the power whereof, he shuts up the Urine-pipes, and Veins, corrupts and diverts the abounding Latex, and transmits this Latex into the compass of the Abdomen or nether part of the Belly ; in the mean time he so straitens the pores of these Membranes of the Abdomen, that they can let nothing of all thorow them even until Death.

43 But the Tympany doth very much differ from the Dropsie : For there is unto it a different occasional Cause, a different manner of making, in the next place a different matter, and also a different efficient Cause : Therefore a different Disposition and a different Product : For Water is not generated, but Wind : And then, neither is a Tympany made through the Arbitration of the Kidney, but onely by a poysonom ferment of the spermatick or seedie nourishment, sticking and defiled in the crooked bought of the Intestine, sitting as President. Neither also hath Anatomy hitherto viewed the veines to be swollen with wind, neither ought the Liver to suffer punishment by reason of the wringings of the Bowels, although aswel the Dropsie as Tympany may follow wringings or gripings. Also if the Flatus's of the Intestine should be made by the Liver, a Remedy is to be applied to the Liver, but not a carminative Medicine to the Intestine : or the Schooles make themselves guilty through a different manner of curing : For if they were mindfull of their own Theorem, that of the same faculty, there is a sound and infirm Action, they had known that Belching and Flatus's, are generated by the Bowels and Stomack : And so that the crooked bought of the Intestine is no lesse apt for generating of Flatus's, than the concave or hollownes thereof. A Tympany molesteth from Liquors which were to be assimilated, but are become degenerate : For a Windinesse or Flatus is made in the Intestine, from a certain indisposition of the Archeus of the place, who then doth forthwith change meats which are nothing flatulent, into a flatus.

Seeing therefore in the Tympany, it is in the out-side or in the crooked bought of the Intestine : the same flatulent indisposition is to be considered to be with-out-side, as is within in the Intestine : To wit, it is made from a similar nourishment degenerating, whereby a dungy ferment happening, the very Archeus of the place being wroth and ill affected, doth turn, not indeed the aforesaid occasional Cause, but the proper nourishment of the Membranes into Flatus's : But for this purpose a part of the dungy-ferment, doth passe from the inward cavity unto the outward bought of the Intestine : And therefore that is not the unfavoury, or sour flatus of Belchings, as neither doth it smel of dung, because it is not of a dungy-matter ; but of a degenerated, and cadaverous or mortified nourishment.

44 A certain man by the perswasion of Physitians, sustaining an Incision on the side of his Navel, who was judged to have the Dropsie, and that they might draw out the water (I being a Young Man, and looking on) the Chyrurgions Lancet or Fleam being drawn out, his Abdomen presently pitched, and he by and by died : But a Flatus which hugely stank, uttered it self, and his dead Carcass smelt.

It is manifest therefore that the occasional matter, and next, the true matter, and inward effecter, with all the knowledge which credits a Physitian, have remained unknown.

45 The vanity also of Remedies appeareth, and especially of carminating things, which doe not respect the outward bought of the Intestine : And vainly do they feign, that Winds are dispersed by extenuation or rarefying : For to what purpose do they hope to have Winds extenuated, in a matter more subtil than Wind ? or what shall it profit, for to render the Wind more subtil than it self, if it then requires a larger room, and doth encrease the troubles of its extension ? For it is a home-bred foolish Remedy drawn from Fables.

46 Cabrollius, an Anatomist of Mount-pellier tells, That he cured a man of Eighty Years old, who by the perswasion of Rondoletius, ate nothing but salt things, and least he should be overwhelmed with thirst, he mixed pickels or sauces made of Vinegar and Sugar with his meats : He also fomented him twice every day with a Lixivium, wherein Salt, Alum, and Sulphur had boyled : And thereupon used Cows-dung for a Cataplasme, and at length he escaped, and survived, being a Hundred Years old. For those things are not administred in vain, which do consume the occasional Cause : Neither therefore doth Paracelsus vainly commend dungs, seeing they are the salts of putrified meats, unto whom it is granted to resolve the occasional matter of a Dropsie. Surely there is on both sides a wonderful action of the Archeus, as well where he detains the keys, as where he unlocks the Closets, and expels his Enemy.

But

But *Paracelsus* approves of his *Præcipitulum* or *Mercury*, drawn dead out of its Mine, before other Remedies : But other Simples according to the degree of affinity, wherein they reach unto this metallick *Mercury*. It is a Phrase of his own liberty. I reverence and admire the endowments of Simples, as they arose from God, but not as they are consanguineal or akin to mineral *Mercury*. I confesse in the mean time, that that *Mercury* hath alwayes served or answered my desires. Indeed the attainment thereof is difficult : but the dose of two grains is sufficient, being three or four times administred. But *Mercurius Diaphoreticus* being once obtained, it is sufficient for many thousands of sick folks, as well for himself being a Physitian, as for his successors.

Finally, I have seen a bastard Dropſie, whereof none hath made mention (that I know of) before my self. For I have frequently seen that from an inordinate growth of the Liver, the extension of the Belly did counterfeit a Dropſical Disease : Yea also in those who have died of a Tabes or Consumption of the Lungs, and in those who have been exceeding lean, I have seen their Liver to have increased beyond measure, although wholly without Blood. That *Mercury* therefore slayes the increasing or growing faculty, even as Quickſilver being cast into a tree bored even into its pith or heart, with an Auger, doth kill the same. Therefore it belongs to the property of *Mercury* to extinguish the growing faculty of the Liver : But that that thing may succeed according to thy desire, the *Mercury* ought to die, without any association of external Salts, or fellowship of forreign Spirits: yet thus it ought to die, that a vital Being may remain in the Chariot, which may be able, in the middle life of the *Mercury*, to carry it unto its appointed places. I am thankful in the behalf of him, whom the Fire hath taught me to understand. Hither do I referre the Remedy of Stibium solutive : For truly those Remedies do resolve, consume, and brush off every occasional Cause elsewhere lurking and detained. That indeed is the cure of Arcanums, which is attained by a removal of the occasional Cause: and any one of those secrets doth suffice, the which do resolve, cleanse forth, and disperse without distinction whatsoever (I except the Stone) is besides Nature concluded in the Body. For truly, although of any kind of Diseases there are two pillars whereby the disease edifice is supported (to wit, the occasional matter, and the matter with the Archeal efficient) yet either of the two pillars being with-drawn, the whole building goes to ruine, which was superstructed upon them. Therefore the secrets of *Paracelsus* do take away every Disease by consequence, as they mow down the occasional Cause.

And then, there is another more hidden way of another secret, to wit, whereby peace, rest, and comfort, is brought into the Archeus, to wit, lest he being wroth, do bring forth a Disease, and rather that he may abolish it, being bred : Yea also that he himself may meditate of putting the occasional Cause to flight : For so, as a Thorne being thrust into the Flesh, is drawn out by the fat of an Hare, a common, and milde Remedy ; Otherwise the Archeus is presently as it were angry with the entring Thorne, doth make a tumult, the place swells, and a various exorbitancy of Symptoms is awakened, that indeed, corrupt Pus being at length made, and the place putrified, he may exclude the Thorne ; the which if they had gone more mildly to work, had issued or rushed out, even as it happens under the perswasion of the Hares grease. In like maner, I say, there is an Arcanum or secret in nature, which cures almost every Disease, as it takes away the indignation & confusions of the Archeus, and commands this Archeus to be peaceable. Of which Arcanum I (first) will endeavour to open the way. Therefore in the Dropſie the Archeus of the Reins, loofeth the passages, and riseth up against the occasional Cause that is to be put to flight, no otherwise than as by a stubborn fury he seeks his own destruction ; and so a Maxime of *Hippocrates* shall be verified, *That Natures themselves are the Physiannesses of Diseases, but the Physitian onely their Minister.*

Therefore from the Premises, I conclude, that there would be (as yet) a far more peaceable and desirable cure, from a sedative or appeasing Secret, than by the Secrets of *Paracelsus* : For they make more for the preservation of long life ; of which in a peculiar Book,

C H A P. LXIV.

A Childish Vindication of the Humorists.

1. *The End of the Race proposed or published.* 2. *It hath happened to the Author even as he had judged.* 3. *The Clamours of those who are beaten.* 4. *The more secret Arcanums are not to be openly revealed.* 5. *The Author Answers unto Letters written unto him.* 6. *Ten Reproaches.*

I Had now set forth some small Works which have been hitherto unheard of; to wit, concerning a different kind of sharpish Fountains, and especially of those of the *Spaw*, and of the Original of Fountains; Concerning Fevers, concerning the Disease of the Stone, concerning the miserable state of the deceived Humourists, and of the Plague: That mortals might return the race of all natural Philosophy, and might thereby safely learn the rise, manner, mean, and progress of healing.

First of all, the Book of Fevers, reprehendeth the ignorant Schooles of Medicine, about the knowledge of an infirmity so common, whereby they might repent and excuse the publishing of this Volumn. But concerning the Stone, a Monster accidentally bred in us, and touching the Plague, as it were an irregular by-work of the mind, that I might learn what the judgement of the more learned might be of things hitherto unknown.

But I found that the greater number hath despised those things which I have taught, and presuming to know every thing knowable, hath scorned to learn, by the labours of another, because I did the more sharply carp at Errors, not indeed at the infamy of any man; But at the Ignorance of the Schooles in general: The Errors, I say, which one day, in the very chaires, ought to be chastized with the penalty of infernal punishment, and by expert Princes, shall be judged guilty of Crime: Especially where Admonition being in vain, shall render the endeavours of Charity vain. The more nice or delicate ones therefore, have passed their judgement according to every ones intention and extension: And many of them were offended, because I did not onely bring in, and demonstrate new and unheard of things, above the reach of many; but because I did destroy the Antient Principles of Healing, and did not perfectly teach other better Principles: As if so great a burthen of Labour, were the measure of one day. But many wished that those things which in secret, were once fore-chewed by me, I would thrust piece-meal into my jawes; that they without labour might learn better Instructions, and Remedies. Wherefore some of the more curious wrote to me, praising indeed my Work, and unwearied Paines, and Charges: But not enduring that I had left secret Remedies involved under thick darknesse; neither that I had openly revealed the whole Art of Chymistry, and hidden Philosophy; contrary to the Precept of the Gospel, and that I had not cast Pearls before Swine; that is, the unworthy: But surely, I have on both sides performed as much as I could, and what I was disposed to do.

For I had safely learned by experience, that in the Year, 1602. I returning into my Countrey, cured some that were past hope, by the Spirits of Salt, Sulphur, and Vitriol, and by vitriolated Vomitories, &c. whereof there had been no foot-step of Memory among the Dutch. Therefore the Arch-Physitians, and others the more famous, laid a Privy Snare for my Remedies: For if I had given any of the aforesaid Medicines to any one, they presently procured to have them brought unto them, that they might imitate and exceed me.

I Therefore proposed Chymical Medicines, by my Servants, now married, unto publick Sale: Because they were those who had withdrawn themselves from my Family-Service. These therefore did gain or earn their Bread: But as all things are subject to ruines, other fugitive Servants of Forreigners planted themselves among them, who thrust these saleable Medicines on People at a cheaper price: And so Medicines adulterated with a thousand fallacies, came in place, and all things were accounted the best, whatsoever were sold at a cheaper rate. Hence nothing is found at this day of counterfeited Medicines, which is not thus adulterated, and the which, the hope of greater gain doth not as yet

yet more corrupt daily : And therefore from hence, I being well instructed, have learned, that we must proceed no longer in this path : But that whatsoever of the more rare Philosophy is to be divulged, that is altogether to be performed under the Heroglyphicks or Mystical Figures of the more skilful. Therefore let them pardon me, as many as do write unto me these words : *I pray thee explain thy self, speak more manifestly of the Preparation of Secrets* : Because that is a new method of learning Philosophy, the which they must learn in the same manner that I have learned it. For God sels Arts to Sweats. For nothing in Alchymical things is written to that intent that they may be promiscuously understood by all, but onely, that they may not be understood : And that thing, Chymistry hath alwayes observed singular to it, before other Disciplines, by the Command of God ; least Roses should be spread before Men, and Swine : For our Writings are in stead of Exhortations, that every one may profit by his own Labours, as much as shall be indulged him from above. At length the reproachful, and more unlearned, do reproach me, and insult over me ; saying,

1. *With what face doth this rash, foolish old Man, a trifler, unlearned, affirm or maintaine, that one and the same hot Remedy doth prevail against cold Diseases ? also to break the Maxim of the Ancients which is chiefly or most true ? Of Contraries there are onely Contrary Remedies.*

2. *With what face doth he say, That without Purging and Cutting of a Vein, the abounding of a hurtful Humor is to be taken away.*

3. *If he thinks that the Secrets of Paracelsus doth bring a just temperature of the Elements, as to weight, shall they therefore repose a broken or displaced Bone, or cure Burstness ?*

4. *What if secret Remedies or Arcanums can wipe off the peccant matter, shall this help, if it be not also driven or carried forth by a loosening or purging Medicine ?*

5. *Or what hath this common with the Diseases of mad folks, that we should believe, that as it were with the one Knife of an Arcanum, every Disease is to be cut off ?*

6. *And likewise in some hereditary Diseases, there doth no Lee or Feces reside, but a certain co-bred, and naked incorporate distemperature hath remained, whereby at set intervals, unhop'd for Mists are awakened, the Authors of new fits ; what refreshment shall Arcanums bring, which do alwayes sound the one Cuckow's note, of one quality ?*

7. *Have the industries of so many Men, and Ages been of no value, whom, to wit, a better and safer Minerva or Genius hath been pleasing ?*

8. *We also cure any Diseases without Blood-letting, as oft as we will : But we fear worse relapses, while as a hurtful humour being left within, we should deceive the sick by sleepifying and appeasing Medicines : And therefore, we proceed not according to the prescription of the boastings of Smoak-sellers, while as the health of the sick is dear or near unto us, and by a rational method, we separate our selves from these Empericks. Helmont alone hath known all things, and we have been Blockheads hitherto.*

9. *For he assembles all unto himself, that the credulous may think, that Medicine which the most High hath created out of the Earth, doth issue from the Fire. For learned men do not thus bid Adieu to Academical Studies, being confirmed in healing, by a long course of Years.*

10. *For principal Men are better perswaded, who do not admit of any other besides University Men, unto whom they commit their Life, &c.*

CHAP. LXV.

The Author Answers.

1. *That some one Arcanum cures all Diseases.* 2. *He at length Answers fitly to every Particular.* 3. *Of what sort a true Laxative Medicine is.* 4. *The solving of an Objection.* 5. *The maxime of Hippocrates is retorted on the Schooles.* 6. *A saying of the Schooles is reflected on the Schooles.* 7. *Why Laxative Medicines are foolishly administred.* 8. *He directly and regularly gives satisfaction to his injurious reproaches.* 9. *The Author provokes the Humourists of the whole World unto an actual Combate.* 10. *He gives answer unto the masks of fear objected by the Humorists.* 11. *He goes to meet his Adversaries.* 12. *The intentions of the Authour.* 13. *An old abuse doth not give a right.* 14. *That it is the miseries of Princes to live encompassed with flatterers, and therefore out of the truth.* 15. *The Courts are wanting of the best Physitians.*

I Will prove first, that the liquour Alkahest, the first being of Salts; Lile, the first Mettal; Mercurius Diaphoreticus, or Horizontal Gold; that any one I say, whatsoever it be of them (for all of them, through the consanguinity of one dissolver, do conspire into a Unifone) is sufficient for the curing of any Diseases whatsoever, however the carping Momus's guts may crack.

First of all, Adeptists have known with me, how far the Dispensatories of the Apothecary do differ from hence; yea and how remotely those Writers are absent, who being themselves as yet Young beginners, through a great itch of a little Glory, have set forth Basilicals, and the first principles of Chymistry: But I will prove it by the assumption of this Chapter, and the other Calumnies raised up against me, shall voluntarily melt like Snow: Wherefore I being the last of Alchymists, will thus prove the aforesaid Assumption.

I Health it self, doth not consist in a just temperature of the Body, but in a sound or entire Life: For otherwise, a temperature of Body is as yet in a dead Carcass newly killed, where notwithstanding there is now death, but not life, not health; but health is the one only homogeneal integrity, and unblamed disposition of life; requiring a preservation of that integrity in healthy Persons, and a restoring thereof in sick Persons: And that thing Hippocrates so long agoe smelt out, affirming, that Nature alone (which is only one) is the Physitians of Diseases, but the Physician the Minister or Servant; as also the Medicine, a means of reducing nature being exorbitant: Therefore the integrity of health is in a Unifone, and there is one only governour of Life, and no more: Therefore this governour alone, is ill affected in Diseases: For it is he alone which maketh the assault as well in healthy, as in sick folkes, and the rupture of him only, doth rent asunder the family administration of Life. For although nothing doth provoke from abroad, and nothing from the seed of our Parents doth disturb us; Yet that Archeus doth now and then fail or decay of his own free accord, and from hence our integrity is dissolved; and impurities by an after right, are thereby many wayes bred, which do ensnare the Monarchy of Life. Truly seeing nature it self, as Hippocrates witnesseth, is the Physitians of Diseases; therefore its Unity is to be conserved, and its integrity to be restored: But that thing may be sufficiently over-performed by one only remedy: For there is a Unity of altered nature, a Unity of health being hurt, and therefore a Unity of the Spirit which is disturbed under the Disease is only to be considered; but not a multiplicity of occasional disease varieties: And seeing one of the aforesaid Arcanums, doth plentifully contain in it all things requisite, from the gift of God, and by the preparations of the Artificer: Therefore one of those Arcanums or secrets, is sufficient for every, and any Disease

Disease whatsoever: And therefore the text doth not say, Almighty created Medicines from the Earth; But Medicine, in the singular number; which Medicine otherwise, already prepared for the art of healing, he created not from the earth: That Medicine therefore, pierceth the innermost parts of the Body, which of its own very gift of goodness, doth comfort, and confirm all the members: And next, doth most powerfully dissolve whatsoever filths have been any were co-heaped: The which being once dissolved, nature is busie to disperse the hurtfull matter, through a passage known unto her self.

Let Young beginners take notice in this place, that according to a wonted blockishness, they beg the Principle, after that I have already made it abundantly manifest, that there are not contraries in Nature, no temperature of Elements, and much less, a distemperature of Elementary qualities: Neither likewise Humours, whereunto health, and by consequence an infirmity, do by a just title, owe their patronage.

In like manner also, I have so withdrawn from Fevers, a trust to solutive Medicines, that I may not again recollect the same, without the grief of the Schooles. Indeed a perfect purgation ought to loosen only the sick, but not healthy folk: And for that cause it is most perfect, the which doth at first, unsensibly lull asleep, and pacifie the Archeus, who afterwards (seeing nature is the only Physicianess) doth cut down the Diseases, and the occasional Causes of these: for it is an unheard of thing to learn in a tone or harmony, in the presence of the refusing hinderers of Young beginners, who desire to learn: And they only do apprehend me, as many as do understand the things or principles before recorded.

For they do object for their purging Medicines; that it is nothing material, although a laxative Medicine doth eject a laudable juice out of the veins, especially because by a stronger right, and a briefer compendium, it will expell the Disease Fex or Dreg; neither must we greatly care, although solutive Medicines do with the more crude Blood, a little diminish the strength: But the Books concerning Fevers and Humours do under the consent of experience, deny that purgative things do take away hurtful Humours, or any Disease dedicated to the same Humours: And then, because there are not in nature, such Humours; neither likewise, do any Diseases answer to the same: Then also, whatsoever purgatives do chase away and exterminate, it doth not belong to one of the three Humours, which they say do offend; but it is venal Blood slain by the poyson of the purging Medicine, and the stinking Carcass whereof is ejected by the Fundament.

And therefore, neither do they dare to give purging things to drink, no not indeed, in sharp Fevers, unless after that the matter do swell for anger; which is as much as to say, after that Nature hath become the conqueress; to wit, when perhaps the Disease guest which is vanquished, being presently about to retire of its own free accord, shall as to a part of it fall out of the Body, together with other filths caused by the purging Medicine: Unless the Archeus being wroth, with the injected poysonous purgation, doth stir up a relapsing Disease: Which thing, I remember very often to have happened, and have recorded in my written Catalogues.

And that thing the Schooles are not Ignorant of, who long since affirm with a serious Character; that only Aloes is unhurtful. Therefore every laxative, is absolutely hurtful, if not also, together with that, in vain. I may be guilty therefore before God, if I do not altogether perswade, that we must wholly abstain from laxative things.

For neither, if nature be not foolish, is a Laxative Medicine sucked unto the veins: Neither without danger doth it rush it self headlong into danger, which should draw a hurtful poyson within the veins. Therefore, a solutive poyson, while as yet it is detained, and that in the Stomach, it putryfies and defiles whatsoever was a loof of, deposed in the Mesenteries for better uses, and draws the refined Blood out of the hollow vein, instead of a putryfied treasure, and by degrees defiles it with a poysonous contagion, and dissolves it with the stinking ferment of a dead carcass: For from hence, is there a loss of strength by laxative Medicines, and a disturbance of the Monarchy of Life, without hope of cure thereby: But that fury of laxative things endureth not only so long as their presence; But also, so long as the lamentable poyson doth burden the Stomach and Bowels with its contagion: So indeed an artificial Diarrhæa or Flux ariseth, which now and then persisteth even until Death, and laughs at the promised help, and attempted succours of astringent things.

Unto the second and third I likewise say, it hath been sufficiently demonstrated elsewhere, that the Elements are neither tempered for Bodies falsely believed to be mixt, nor

for the temperature sake of the same Bodies, and much less for a just one, and as to an adequate or suitable weight: Therefore the Schooles presuppose falshoods; yea and contend by sophistry: For although Arcanums do cure a broken bone as well as Comfrey, or the Stone for broken bones: yet it is on both sides required, that the fracture of the bone be reposed: I likewise remember, that a burstness being well bound up, hath been cured beyond expectation, because from the breaking of a bone, some one had layen long on his Loynes: Neither therefore doth it want an Arcanum.

Unto the fourth and also the fifth, it sufficeth, that the Arcanum or Secret doth wipe away the occasional Causes, to wit, nature being holpen, supplying the rest.

Unto the sixth, let the Schooles refrain their tongue: For an Arcanum cures Diseases, which they under blasphemy, have maintained to be incurable: Which thing the Hospitals of those that were incurable, do testifie for me, if they are compared with the Epitaph of *Paracelsus*.

But the seventh reproach, breaks forth from ignorant Jaws, to wit, from the proper testimony of a guilty mind.

Unto the eight and ninth, it is certain, that the Exclaimers do grieve while they are beaten, for from a sense of grief the Mouth speaketh reproaches: But if of thousands of Alchymists, scarce one doth arrive unto his wished end, that is not the vice of the art; because the endowment doth not depend on the will of him that willeth and runneth; But because it is not yet the fulness of time, wherein these secrets shall be more common: Be it sufficient for me, that the signs do no where appear, but among the obtainers of Arcanums, that is Adepts; and that none of the Humourists, hath ever come thither, neither also shall come. Therefore there is no place for reproaches against the truth of the science of healing, but where there is no order, and an everlasting horror doth inhabit: For Owles and monstrous Bats do shun the light of truth; because they are fed with a great lie, to wit, that they have known how to cure Fevers without evacuation: When as indeed they know not by both succours, as well of a cut vein, as of a loosened Belly, how to cure Fevers certainly, and safely; for let them cure a Fever as they affirm: Shall they not likewise for that very cause bring rest to the sick? And afterwards safely take away, that which they say doth remain? which was not lawful so fitly to be done, as long as they believe life to conflict or skirmish with Death, and the Disease with health: But they shun the light of truth under the Cloak of a lie: thus ignorance dictating, and gain thus commanding, miserable men do defend themselves.

For Medicine is not a naked word, a vain boasting, or vain talk, for it leaves a work behind it: Wherefore I despise reproaches, the boastings, and miserable vanities of ambition: Go to, return with me to the purpose: If ye speak truth, Oh ye Schooles, that ye can cure any kinde of Fevers without evacuation, but will not for fear of a worse relapse, come down to the contest ye Humourists: Let us take out of the Hospitals, out of the Camps, or from elsewhere, 200, or 500 poor People, that have Fevers, Pleurisies, &c. Let us divide them in halves, let us cast lots, that one halfe of them may fall to my share, and the other to yours; I will cure them without blood-letting and sensible evacuation; but do you do, as ye know (for neither do I tie you up to the boasting, or of Phlebotomy, or the abstinence from a solutive Medicine) we shall see how many Funerals both of us shall have: But let the reward of the contention or wager, be 300 Florens, deposited on both sides: Here your business is decided. Oh ye Magistrates, unto whom the health of the People is dear! It shall be contested for a publique good, for the knowledge of truth, for your Life, and Soul, for the health of your Sons, Widows, Orphans, and the health of your whole People: And finally, for a method of curing, disputed in an actual contradictory, superadd ye a reward, instead of a titular Honour from your Office: compel ye those that are unwilling to enter into the combate, or those that are Dumb in the place of exercise, to yeild; let them then shew that which they now boast of by brawling: For thus Charters from Princes are to be shewn: Let words and brawling cease, let us act friendly, and by mutual experiences, that it may be known hence forward, whether of our two methods are true: For truly, in contradictories, not indeed both propositions, but one of them only is true. But now the Humourists, while any commits himself to me for cure, do possess him with fear, to wit, least they give up themselves unto an Authour of new opinions; but rather that they go in the paths of Heathens, that they may not, through a novelty of opinion, be accounted to have put their Life in doubt, and that they rather trusting in an old abuse, do enter into beaten paths: Ah, I wish those of another Life, and of the intelligible World, might return, that they might testifie, unto whom their death is owing. Presently, they who being now subtile Scoffers,

Scoffers do seem to ask counsel for their own life, should acknowledge, that they do incur on themselves the destruction and loss of their Life, while they had rather commit their Life to plurality of the great number, only by reason of the constancie of an old error and abuse, than that they are willing to be bowed unto the Admonitions of the truth: As if War were still to be waged only with Darts or Arrows, and Slings, because that is the most antient kinde of Weapons. But nevertheless, neither are our Medicines so new, that there are only the thousandth of experiences in them; the which have been made consonant with truth, by an hundred thousand experiences: Therefore as many Physitians as do object such things as these, from debility of mind, and ignorance of Art, are cruel Impostors, Enemies of Christians, being envious for a little advantage: For truly, they increase fears in the sick, and vex the sick, that they may extol themselves, and their own Medicines.

And they say; for we are willingly ignorant of those things which are evil: Because the new remedies of Chymists (for we make use of them sometimes, when there shall be need) are cruel, hurtful, burning, and dangerous: But if thou shalt admit of a Chymist, thou shalt be alone with thy Chymist; all we will stay at home; because they are Idiots, and boasters, who do not agree with us. Be ye mindful in the mean time, that eyes do see more than an eye. Therefore in a toren ship, thou seekest ship-wrack, if thou shalt depart from the safe shore: They bring the Apostatical rout of Chymistry, and likewise the Jews, and wicked Men, for a confirmation: As if in like manner, all the dross and froath of Harlots, and Knaves, do not insinuate themselves under the name of Humourist-Physitians. For if Brawlers had been of value with me, I had not been constrained to Write.

For if Charity, or the care of your Souls doth vex or grieve you, let us go unto the challenged Combate! For I promise, if ye shall overcome, that I willingly hereafter depart from my Evil, into your Doctrine wholly.

In the next place, while I prefer refined Medicines before yours, and the true principles of healing, before Paganish trifles: This is not done from an intention of catching or alluring of gain: Neither also is it meet, that I should be judged by your coverous mind; for I have begun to preach the truth of Medicine from a pure intention, that Physitians may repent, and may learn those things which they know not; may enter on a safer way, and may cease from badly handling the life of their Neighbour: That they may cease I say, to destroy Widows, Orphans, and their own Souls: For I know, that in the fulness of time (for nothing is so hidden, which shall not be revealed) the Doctrine which I have now divulged by this volume, shall be made manifest: I wish at least, that it may happen the more timely or seasonably, for the safety of Souls, and preservation of Families; but as to that which concerns my self, I do not now for many years, go to see the sick, neither do I invite any one to make use of my endeavour; which thing is sufficiently known to our country men: Because I am he, who get not gain by others miseries: But I dismiss no sick Body from me without comfort. Let the boastings also of the Schooles cease, which do implore authority from the antiquity of possession: For truly a prescription or title doth not happen into nature.

For I grant Paganisme to be older than Christianity: I also presuppose that the errors of the Schooles, began presently together with Paganisme: They are new and unheard of things which I teach, because God taking pitty on our kind, hath under this fulness of dayes, opened a treasure of truth, even when it pleased him, for all the Nurseries of the Heathenish Schooles, that hence forward they may learn to assent unto safer Doctrine; for by reason of an old abuse, those things are withered, rotten, and wormy, which are demonstrated to be deprived of the juice of truth; because it is universally and singularly true, that every gift which descends not from the Father of Lights, is false and obscure; but it is not to be believed, that an Adeptist hath enlightened the Medicinal Schooles of the Gentiles, whose posterity doth as yet cure with so great blindness of Speculations, and is deprived of the Favour, Vigour, and honour of Medicines.

Let those boastings also cease, as many as do glister with a wording or discursive Doctrine, because they are celebrated by the Powers of the World: For those Physitians whom the Almighty hath created, are not Pipers: But in the compassion of Charity, do peculiarly cure the poor, and are acknowledged by that token: But the Father of the poor beholdeth them with bountiful eyes, who hath attended unto the intreaties of his miserable ones, for the remembrance of his Christ: They with-draw themselves from the flatteries of the People, and great men; they live of their own right, being injurious to none: And by this one only sign they are distinguished from poultry Physitians, as in well doing, they

they do suffer vilifying from these, and do willingly bear it : Yea the People (to whom they are bountiful) do report ill and prate of them. Because that is the Lot which the Giver of Lights doth always reserve for his : For without hope of gain, they procure to be merciful : But if money be voluntarily given unto them, they receive it indeed, but they lay it not up but for the former uses. But these are very rare, and not easie to be seen in Princes Courts.

15 There was in times past witten in the Epitaph of an Emperor, [*He perished through a Rout of Physitians*] So that Princes are the unhappiest of men, unto whom none speaketh Truth ; but being environed with flatterers, they hear nothing but flatteries, and are nourished with deceits : At leastwise, it doth not belong to Princes to have known how to chuse the best Physitian, unto whom they may commit their Life ; but they receive this Physitian being commended or approved by a former Physitian ; and thus they remain in Courts by a continued race or line. And therefore a Prince for the most part, is not to be numbred among those that are endowed with long Life : For although he hath honoured his Father, yet of length of dayes promised unto him, he is spoiled by unfaithful Helpers.

So much in Answer.

CHAP. LXVI.

A Treatise of Diseases.

A Diagnostical or Discernable Introduction.

1. *A Re-sumption of the whole work.* 2. *Why the Author useth so great austereness in repressing.* 3. *He invokes God, while he perceives himself deprived of humane aid.* 4. *The poverty, and false paint of Logick were discovered.* 5. *The nakednesse of hearkening to the natural Phylosophy of Aristotle.* 6. *An unheard-of method of searching into a Disease.* 7. *Why the Schooles have wanted the knowledge of Diseases.* 8. *A Disease hath flown from departing out of the right way.* 9. *An entrance into the knowledge of Diseases.* 10. *A Scheme of Diseases out of Hippocrates.* 11. *The Schools being fed with Lotus, have forsaken their own Hippocrates.* 12. *A pithy contemplation of Diseases.*

I T hath seemed necessary to have begun from Elements, Qualities, Mixtures, Complexions, Contrarieties, Humors, and Catarrhes, that I might demonstrate, the Schooles never to have heeded the Nature of Diseases; and therefore that they have been ignorant of the true Scopes of Medicinal Affaires, or the Principles, Theorems, Manners of making, Causes of suiting, Allyances, Agreements, interchangable Courses, and properties of Diseases ; likewise of the Inventions, Choyces, Preparations, Exaltations, Appropriations of Remedies : That is not to have known a Scientifical or Knowledgable Curing of the Sick. For I have believed, that I must proceed by the same Beginnings : Because they referred all sicknesses (a few perhaps being excepted) into Elementary qualities, and the inbred discords of Nature, into Humours, Catarrhes, Flatus's, Smoaks or Fumes : So that the knowledge of the Schooles being withdrawn into a Fume, and Vapours, doth vanish into Smoak. At length, through the Errors of Tartar, it descends unto Tartarers, that they might shew, that they being involved in darkness, have stumbled in their wayes: For it hath behoved me diligently to detect those things, if Young beginners must hereafter repent. But it hath not been sufficient to have shewn their Errors, Unskilfulness, Sluggishness, and stubborn and constant Ignorance, unless I shall restore true Doctrine in the room of Trifles : For the abuses of Maxims, had remained suspected by me for very many Years (the which in the Book of Fevers I have deciphered to the Life) before that I came unto a sound Knowledge of the Truth : And I had a long while thorowly viewed the truth of

of the Theorie, before that in seeking I had found some right Medicines which were sufficient for those that had made a Beginning.

Wherefore seeing I was about to speak of Diseases, under so great a Paradox and weight of things, and found none among the Antients and Modern Juniors to be my assistant, I seriously invoked God, and I found him also favourable.

Therefore I determined before I wrote, to call upon Logick, that by its Definitions it might demonstrate unto me the Essences of Diseases; indeed by their Divisions, Species, and interchangeable courses or mutual respects; and at length, that by Augmentation, it might suggest the Causes, Properties, Meanes, and Remedies of knowing and curing them. But at my acclamations made even into its mouth, it was deaf, stood amazed, heard nothing, remained dumb, and helped not me miserable man in the least: Because it was wholly impotent, without sense.

Afterwards therefore, I called the Auricular Precepts of the natural Philosophy of the Schools, unto my aid: To wit, their three (boasted of) Principles, four causes, fortune, chance, time, infinite, vacuum, motion, yea and monster. Whence at length, I discovered, that their whole natural Philosophy, was truly monstrous, having feigned, false, mocking Beginnings, not principiating, and much less vital, in the sight of the King by whom all things live: likewise Causes, not causing. Also adding or obtruding the phantastick Beings of Reason, and opinions beset with a thousand absurdities, wherein I as yet found not any footstep of Nature entire; and much less the defects of the same, or the interchangeable courses of faculties, or vital functions: But least of all, from such a structure of Principles, was the knowledge of Causes Natural, Vital, of Diseases, Remedies, and Cures to be fetched: Whither notwithstanding I supposed the knowledge of Nature had respect, as unto its objected scope. For whatsoever I sought for from the Schooles, and attempted to handle by their Theorie, that thing wholly Nature presently derided in the Practise, and it was accounted for a blast of Wind: She derided me, I say, (to speak more distinctly) together with the Schooles, as ridiculous: And at length, she, together with my self, complained of so unvanquished stupidity. Then also, Logick bewailed with me her impotent nakedness, and the vain boasting of the Schooles: Because she being that, which even hitherto was saluted the Inventer, and Searcher of Meanes, Causes, Terms, and Sciences, grieved that she ought to confesse, that she was dumb no lesse in Diseases, than in the whole compact of Nature; and also that she ought to desert her own professors, in so great a necessity of miseries: Yea she, by one loud laughter had derided also the natural Philosophies of Aristotle, and the blockish credulities of the World, and of so many Ages, if she her self had not been a non-being fiction, swollen only with the blast of pride.

Wherefore seeing Nature doth no where exist, or is seen, but in Individuals; there is need that I who am about to write of Diseases, have exactly known the Causes of particular things, even as also it is of necessity for a Physitian, to have thorowly viewed those Causes individually, under the guilt of infernal punishment. Therefore it hath seemed to me, that the quiddities or essences, as well of things entire, as of those that are hurt, were to be searched into after the manner delivered, concerning the searching out of Sciences. But seeing the Knowledge thus drank, may be unfolded, I have confirmed unto the Young Beginner, that an essential definition is to be explained by the Causes, and properties of these; which is nothing else besides a connexion of Causes, but not the Genus or general kind, and difference of the thing defined. But this is an unheard of Method of explaining, even as Logick the Inventress or finder out of Sciences hath feigned: And also seeing all that faculty is readily serviceable unto a discursive Philosophy, (for they do vainly run back unto the Genus of the thing defined, and the constitutive differences of the Species, for the Diseases which have never, and no where been known:) Therefore, seeing it hath been hitherto unknown, that things themselves are nothing without or besides a connexion of the matter, and efficient Cause; By consequence also the Schools have wanted a true Definition: That is, a right knowledge of Diseases. If therefore the Essence or thingliness of Diseases, and the condition of Disease properties, do issue out of their own immediate essential Causes; of necessity also, the knowledge of the aforesaid Diseases, and properties; is to be drawn out of the same Causes: Because the consideration of Causes, is before the consideration of Diseases. Therefore I have already shewn, even unto a tiresomeness, That the Essences of Natural things, are the matter, and efficient Cause connexed in acting: Therefore also, the Essence of every Disease, doth by a just definition, consist of those two Causes, and its knowledge is to be fetched out of the same.

3 First of all, a Disease is a certain evil in respect of Life, and although it arose from sin, yet it is not an evil like sin, from a Cause of deficiency, whereunto a Species, Manner, and Order is wanting : But a Disease is from an efficient seminal Cause, positive, actual, and real, with a Seed, Manner, Species, and Order. And although in the beholding of Life, it be evil ; yet it hath from its simple Being, the nature of Good : For that which in its self is good, doth produce something by accident ; at the position whereof, the faculties inbred in the parts, are occasionally hurt, and do perish by an indivisible conjunction.

9 Defects therefore there are, which from an external Cause, do make an assault beyond or besides the faculties of Life concealed in the parts ; and they are from strange guests, received within, and endowed with a more powerful or able Archeus : And from hence they are the more exceeding in the importunity of times or seasons, quantities, and strength.

In the next place, there are occasional defects, which (seeing Good doth bring forth Evil by accident, and doth oft-times proceed from our own vital powers) are endowed with properties of their own, as it were their seminal Beginnings, therefore they immediately tend unto the vanquishing of our powers as their end: The which therefore, I elsewhere call, *Diseases Potestative* or *belonging to our Powers*. But neither is that a *Potestative Being*, which the Schooles do call *A Disease by consent*, and do think to be made by a collection or conjunction of Vapours : But a *Potestative Being* contains the government of a constrained faculty, as well in respect of the authority of Life, as of the disease Being it self ; the which indeed is born by a proper motion, to stir up a *Potestative Disease* of its own order: Just as a Cantharides doth stir up a Strangury : And that also is done through a power of internal authority, and by the force of parts on parts. So an Apoplectical, or Epileptical Being, being as yet present in the Stomack, or Womb, shakes the Soul, yea and from thence transports the Brain, together with its attending powers, will they nill they, into its own service.

A *Potestative Being* therefore, doth not only denote a hurting of the Functions, but also a government of the part, and an occasioning force of a Diseasefying Being prorogued or continued on the subordinate faculties, as on the vassals of an Empire : It being all one also, whether the parts are at a far distance from each other, or whether they are near: For they are the due Tributes of Properties.

10 Yea truly, *Hippocrates* first insinuated, that Diseases are to be distinguished by their Inns, and Savours : And I wish his Successors had kept this tenor. But that Old Man being as it were swollen with fury, presaged of the future rashnesses of the succeeding Schools, and precisely admonished them, That they should not believe, that Heats, Colds, Moistures, Sharpnesses, or Bitternesses, were Diseases : But Bitter, Sharp, Salt, Brackish, &c. it self.

11 But he sung these things before deaf or bored ears : For truly, the long since fore-past Ages, being inclined unto a sluggishness of enquiring, and an easie credulity, snatched up the scabbed Theorems of Heats and Colds, and subscribed unto them by reason of a plausible easiness, and bid Adieu to their Master ; who having supposed that Diseases were to be divided according to their Innes, divided our body into three ranks, to wit, into the solid part containing, or the vessel it self, into the thing contained, or liquid part ; and into the Spirit, which he said was the maker of the assault. The which indeed is an Airy or Skiey, and Vital Gas, and doth stir up in us every Blas, for whether of the two ends you will. Which division of Diseases, although he hath not expressly dictated, yet he hath sufficiently insinuated the same : For he wrote onely
12 a few things, and all things almost which are born about, are supposed to be his. And therefore I wish that posterity had directed the sharpnesses of their Wits, according to the mind of that Old Man ; Peradventure, through Gods permission, they had extracted the understanding of the Causes of Diseases: But they afterwards so subscribed unto the Authority of one *Galen*, that they, as it were slept themselves into a drowsie Evil, being afrightened while they are awakened by me. But in the Title of Causes, I understand, in the very inward or pithy integrity of Diseases, the matter being instructed by its own proper efficient Cause, to be indeed the inward, immediate Cause, and to arise from a vital Beginning.

Wherefore also, I name those, external and occasional Causes, as many as do not flow from the root of Life it self : And therefore I treat of Causes, which are the Disease it self. For Bread being chewed and swallowed, is as yet external, because it may be rejected or cast up again : So also, the Chyle thereof, being cocted in the Stomack, is as yet external : Yea and which more is, after that it is become domestical, and

and although it be made a more inward citizen of our family administration ; Yet while it is separated from that which is living, and rusheth into the Kitchen of Diseases, for that very Cause, as it is become hostile ; so also it is to be accounted External in respect of Life : So also a pestilent Air being attracted inward, although it hath spread its poyson within, and in respect of the Body, be internal ; yet it is not yet internal in respect of Life : And so, neither yet is it the Disease it self : to wit, whereof it contains only an occasion in it self, neither shall it ever lay aside that same occasionality : But the Plague is, while the Archeus, (the contagion being applied unto himself, doth separate a part of himself, it being infected) from the whole : For the banishment whereof, the remaining part of the Archeus doth Co-laborate and is earnestly careful, that it may not be pierced by the Symbole or Impression, and perish. A co-like thing happens almost in the rest of Diseases. For truly, the Life is not immediately hurt, but by a certain poyson of its own, and proper to it, which it hath suffered to be applied unto it self.

C H A P. LXVII.

The Subject of inhearing, of Diseases, is in the point of Life.

THe Life which is perfectly sound, hath no Disease ; because health presupposeth an integrity, which a Disease renteth : And so health and a Disease do contradict each other : Also Life being extinguished, is not a Disease, neither doth it admit of a Disease into it : Because in speaking properly, that Life is a meer nothing, and no longer existing : But a Disease is [*hoc aliquid*] or [this something.] Thirdly, in the next place, a dead Carcass, however poysonous it be, or infected with corruption, yet it is no way capable of Diseases : Wherefore, although a Body while it lives, be the mansion of Diseases ; yet it is not the true internal efficient of Diseases ; much less also indeed have filths or excrements (which are thought to be the constitutive Humours of us) a right or property of Diseases : But if any part of a Disease, be to be ascribed unto inordinate fecundities or dregginesses ; truly that tends wholly unto an occasional Cause : For truly, a Disease is a Being, truly subsisting in a Body, and composed of a matter, and an internal seminal efficient, and so also, in this respect doth it far sequester it self from occasional Causes : Especially, because the internal beginnings of things do constitute the Being it self, and are unseperably of its essential thingliness : So indeed, that if we speak of the Body, or Soul, as *Humane* ; both of them is rightly called a man, although not an entire man : So indeed the matter of a Disease, is truly a Disease : Even as also the seminal efficient thereof, is truly a Disease, although it be not properly an entire Disease : Therefore seeing that a Disease is only in a live Body, but not in a dead one, it must needs be, that the Life is the immediate mansion of a Disease ; the inward subject, yea and workman of the same. But seeing Life is not essentially of the Body, nor proper to the Body ; but that a Body without Life, is a dead Carcass, and a Disease is in the Life : Of necessity also, every matter, or mansion, and efficient Cause of a Disease, doth not exceed the Limits of Life : That is of necessity, every Disease doth inhabite within the Case of the Archeus, who is the alone immediate witness, executer, instrument, as also the inne of Life ; but Apostemes, Ulcers, Filths, Excrements, &c. Are only, either the occasions of Death and Diseases, or the latter products of the same, raised up into a new scene or stage of the Tragedy : Neither surely is it therefore a wonder, that together with the Life, all Diseases do depart into nothing, if the Life be the immediate subject, and mansion of Diseases : But I long since admired, that no Physitian hath hitherto known, in what the essence of Diseases should shine : But that they have wandred about Elementary qualities, Humours, Complexions, Contrarieties, and Dispositions : Neither that indeed, they have once observed, that as filths are not Diseases ; so neither are Diseases in filths ; but that they live only in the Life it self, and being included in the same, do so arise, grow and perish, that seeing they are no where out of the Life, they ought to be the intimate and domestick Thieves of the Life : These things be spoken of the proper receptacle of Diseases. Furthermore, seeing a Disease is without controversie, admitted

to be a Being existing in us, as in an inne, and doth enjoy its own and singular properties, and different Symptoms ; A Disease of necessity, is not of the number of accidents, because an accident is not of an accident combined with it, and distinct from it self in the whole Species : For truly, sharpness, or bitterness, is not a property of whiteness, blackness, lightness, or heat : But every one of them, do stand by themselves. Wherefore if a Disease be a Being, and not an accident ; if in the next place, it produceth from it self, not only alterations, diverse dispositions, weaknesses, &c. But moreover, doth generate substances, degenerating from the ordinary institution of their own nature : of necessity also, it ought to consist of matter, and its own internal or feminal efficient. Lastly, seeing a Disease is internal as to the life it self, it also follows of necessity, that the matter of a Disease is Archeal, and its efficient cause is vital : And that I may speak more clearly, every Disease is of necessity, an Ideal efficient act of the vital power, cloathing it self with a Garment of Archeal matter, and attaining a vital and substantial form, according to a difference of the slowness and swiftness of Ideal seeds ; which things indeed have been hitherto unknown by Mortals, and those things which follow, are as yet more largely supported with this position : *God made not Death* ; and so far is he alwayes estranged from Death, that he refuseth to be called the God of the Dead.

First of all also, although Death doth sometimes invade without a Disease, yet for the most part, Death follows Diseases, so that none doubteth, but that that Death is the daughter of Diseases, or the second Cause whereby, and by means whereof the Life is extinguished : That is, Death is present ; but seeing God is not in any wise the Author of Death, to wit, by whom Death entred into Man, who else was immortal, and that no more, or by a stronger right, in the beginning of the World, than at this day ; A Physician must diligently enquire, from whence Death doth causally invade, from the beginning, and even unto this day, that it may from thence be manifest, from whence a Disease hath drawn its integrity : For truly, although it be sufficiently apparent, that Death doth contain as it were a privation or extinction of Life ; so neither in it self, or for its existence, it doth not require any substantial form, and much less a vital one : But surely a Disease as such, doth not bespeak a privation ; but a Being, truly subsisting, acting by an hurtful act of Life, and ensnaring the Life : So also it behoveth a Disease to consist in the form of its own thingliness, which the Life can receive into it, and be informed by it. But seeing a Disease arose from the same Beginning, as Death did, neither is God ever the Author of Death : It by all means follows, that God is not the Author or Creator of Diseases ; neither therefore although a Disease hath a certain substantial form, Yet it hath not Life nor a vital Light, but what it hath borrowed from the Life it self ; (to wit,) so far as it glistens in the Light of our Life, or in that of Cattel : But not that a Disease doth require, or hath begged a vital Light from the Father of Lights for the being of its seed ; the which in it self, is rather to be named a deadly or mortal thing, and altogether estranged from the goodness of God the Creator. Therefore although God alone doth create all the forms of all things, and the Father of Lights doth give every essential form, to wit, a vital, substantial form, and so also the formal substance, without any mutual competitor, yet that hath not place in Diseases ; in the forming of which indeed, man alone is chief : Because the Life of Man alone containeth the second Causes of Diseases and Death. Therefore because the Creator, God, denyeth that he made Death ; therefore also a Disease : For a Disease standeth in the Life of Man, and therefore all its quiddity or thingliness depends on the Life of man ; and that not only Seminally, even as otherwise, it is proper to all the seeds of any things whatsoever : But besides, also formally, so that the Life of the Archeus, or his Flesh and Blood are, and do remain the whole formal Cause of Diseases, or the effective Cause of the formes of a Disease. For he who from the beginning refused to have effected Death, or Diseases, will never at length thence-forward, be willing to have made Death nor Diseases : For the Father of Lights, will not give his Honour of Creating formal Lights, unto any Creature, except the Mortal formes of Diseases whereof ; as neither would he be called the God of the Dead : Therefore Man remains the workman of his own Death (who the day before was immortal) as also of his own Diseases, as if he were the Creator of Death : So indeed, that whereas God hath made vital Lights, Man Createth Disease, Obscure, and deadly Idea's or Shapes ; and such an Idea doth as much differ from a vital Light, as a black heat doth from Light : Therefore the formal act of Death, and Diseases, sprang from the action of original Sin, and shall so spring even unto the end of the World. For the same Cause which in the beginning of the World, made Death, or the same second natural Cause which gave a natural entrance of Death into humane Nature ; The same Cause

Cause also, doth wholly at this day, make Death and a Disease: For it is repugnant with the Glory of the Creator, not to have made Death from the beginning, and afterwards, when it was made by Man, for him to have assumed to himself the Glory of knowing how to make it; as if he ought to have learned that thing from Man. But what hath been already spoken concerning Death, that is by an equal right, to be understood concerning Diseases: Because that seeing Death, and a Disease have issued from the same point of their original, therefore if God be said to give Diseases, or Death; it is not, that now he will be the Creator of those things, whose Fabrick he before wholly refused: But he is permissively called the Author and Prince of Life and Death: Because as he is the true and alone Author of Life, and therefore doth govern it, and suffer it at his Pleasure; So he permits, that this man doth yield or depart, and the other Man fall, and that second Causes do happen as well directly, as irregularly, whence Man dieth, or a Disease groweth: But the Creation of a Disease, as of a Being subsisting from a seminal matter and efficient, and of an Ideal and deadly evil, never proceeded from God: For while he had placed it in the will of Man, that he might remain without Death, or the same day to die the Death; by the same step also, he put it into Mans hand, to frame Death, and a Disease it self, as a fore-runner and preparer of Death. The entrance of Death into the nature of Man being considered, even as I have elsewhere explained it by a remarkable Paradox, doth most exactly prove, that a Disease doth not only consist in the vital part of Man; but also that a Disease it self is bred by a seminal Idea, out of the Archeus himself. But I will briefly prove that thing: From the concupiscence of the Flesh arose the flesh of Sin, and therefore also, a mortal Archeus in that Flesh, and from thence by consequence also, the Archeus, forasmuch as he is vital, acts in the flesh of Sin, every action, and produceth every formal, hurtful, and deadly act which God hath refused to do, and hath suffered Man to stamp on himself the Causes of Death and Diseases: Yet Man is not therefore a Creator, although he maketh formal acts to himself, or the substantial formes of Diseases, or the hurtful ones of Life: For truly, that was granted unto him by virtue of the Word, *That on what so ever day he should eat of the Fruit of the Tree of knowledge of Good, and Evil, he should die the Death*; and should make guards-men, appointed for his own Death: And that, from the very Nature of Death it self, necessarily brought forth in the flesh of Sin.

The act therefore which is of the Essence, Existence, and Subsistence, even as also of the propagation or fruitfulness of the contagion of Diseases, doth altogether depend in the Life, from the Life, by the Life, within which it is also enclosed: Surely miserable are Mortals, and most exceeding miserable are the Sick, who have hitherto hired Physicians at a great and dear price, who know not what a Disease may be, from whence it may arise, and in what it may consist, and subsist. But I admire that before me the more Antient, as neither Modern Physicians have smelt this out; because their sacred Anchor being for the most part in the hope of a Crisis; and concerning Crises's, they have devised very many things to excuse their own Ignorances. For truly a Crisis or judicial sign in Diseases, proveth nothing besides the Archeus, if they believe their own Hippocrates, who saith, *that Natures themselves are the only Physicians, and helpers of Diseases*. For the Moon doth not make Crises's causatively, but the Archeus alone, who follows the Harmony of the Moon. For the Moon measureth dayes, hath more regard unto the proof of the actions of the Archeus, than unto causality: For the Moon is alwayes on the fourth day, in an opposite place, to that which she was in on the first day: Therefore also the Archeus hath opposite powers or faculties, who doth imitate the Harmonious motions of the Moon; So also on the seventh day, &c.

I conclude therefore for the knowledge of a Disease, that a Disease hath either a Fewell, or an excitement only from the occasional Cause; or doth arise from a voluntary and proper motion, and perseveres in its own contagion of a seed; as while an Epilepsie or the falling Evil is once con-centred, or the Gout hath taken root, doth indeed awaken of its own free accord, as oft as it listeth: Even as also the Disease ceaseth for two or three dayes, or more, and again returns at set Periods, although the occasional cause in the mean time, be alwayes present; and so after a hurtful solutive Medicine being taken, although it be expelled a few hours after, yet the Archens being thereby defiled, rageth and is obedient to the drunk contagion of the venom: So also ready inclinations, and hereditary Diseases, Proper or Natural unto some one whole Family, are co-bred with us: Because they are Con-centred in the Life it self, and are as it were the Characterical marks, and imprinted seales of hurtful Diseases.

C H A P. LXVIII.

I proceed unto the Knowledge of Diseases.

1. *Medicine is the most occult or intricate of Sciences.* 2. *Therefore the ignorances of past ages are excusable.* 3. *In what thing Diseases may inhabit.* 4. *The rise or original of Diseases.* 5. *Whence a Disease began.* 6. *Why a Disease is immediately in the Being of the first Motions.* 7. *Why the essence of Diseases hath been unknown.* 8. *A Disease hath married a vital Being.* 9. *After what manner all seeds do issue from the invisible World.* 10. *The rise of Efficient Causes, and the property of seminal Idea's.* 11. *All the seminal Beginnings of things, are from an invisible Idea.* 12. *How a seminal beginning receives its compleating.* 13. *The Ideal power of seeds is declared by their ranks.* 14. *Although Death and a Disease began from the same Beginning; yet they differ, in that a Disease hath Idea's, but a Death not.* 15. *The Schooles will laugh at Idea's; But the Author carps at the ignorance of the Schooles.* 16. *He proveth their ignorance, at least by one Example.*

I Have already oftentimes, nor in vain asserted, that Arts and Sciences have hastened unto a pitch; but that the art of healing alone, if it hath not gone backwards, at leastwise, to have stood at a stay, and to have whirled round about the same deceitful point. Hence also I have conjectured, that the knowledge of Diseases, and a Medicine depending thereon, was to Man most difficult; On which, so many flourishing wits have for so many ages, vainly bestowed their endeavours: and that thing I do not hereby conjecture to be from a contingency, or events alone; to wit, because the knowledge of Diseases hath even hitherto stood neglected: But because, in respect of the Causes, it is wholly invisible and unpassable. Wherefore although I tax the ignorance of the Schooles, I will not have that to be done by me, for a little vain glories sake, as neither from an intent of reproaching the whole Body of the faculty: Because it is that which hath not transgressed against me; but only from a desire of teaching Mortals: Not indeed that I perswade my self, that the goodness of God doth envy this doctrine for the health of Man, while as even from the beginning of the World, he hath dispersed his gift, by some, throughout the ages of the World; the holy Scripture also do most greatly commend the Physitian: But that most, through a sluggishness of diligent searching, and a readiness of credulity, have stifled in themselves that endowed or gifted Light: And so the Devil being the builder, it hath alwayes been super-structed on the false Principles of the Heathens.

2 Therefore Medicine, the most difficult of Sciences, by reason of the invisibility of Diseases, and deceit much increased by Heathenish Theorems, hath not been penetrable by any acuteness of Wits; which difficulties, the invention and knowledge of so many Simples, and preparations, appropriations, and applications of remedies, fetcht from thence according to the varieties and speedinesses of sliding occasions, hath increased; in every of which, they are on both sides, the invisible actors of their own tragedy: The which Diseases unless any one shall perfectly know, or hath obtained a super-excelling remedy, truly he shall spend his weapons at the effects, but not at the roots themselves. Therefore the gate of healing, hath even from the Cradles or non-age of the World, remained shut, which my Talent received, hath commanded me to open (for of boasting hereof, it hath notably shamed me, God is witness) wherefore, I ought first to free the Hinges, and Bars from rust, that I might set open the Doores to those that are willing to enter

enter: Therefore I ought to expose the one only and golden Key, hitherto hidden in the Arches of the Archeus, unto the Fire of the Art of the Fire, and Light of Truth: That any one may enter into the secrets of the Court, so far as shall be granted him from Above.

First of all, I do not name a Disease, a Diathesis or Disposition; but the very wandering or erring Being, which is stamped by the vital Archeus himself: I do not therefore behold a Disease as an abstracted quality. And that thing I thus perswaded my self of, in times past, that like Life, it is a Being proper unto the Life it self: It being the reason why a Disease doth with so swift a pace, pierce into the Life, by reason of its co-resembling mark. Wherefore the Apoplexie, Leprosie, Dropsie, or Madness, as they are Qualities in the abstract, with me, are not Diseases: But as the Apoplectical, Leprous, Mad-dish, &c. Being, contains the very Scope and Causes of the Diseases in it.

Truly a Disease begun from Sin: For in the integrity, purity of our Nature, and vigour of Innocency, there was no Death, and much less a Disease: For Death was threatened, not a Disease, but that they were understood concomitantly, as to future times. Therefore a Disease doth in its own Nature, oppose the Life, no otherwise than as Death it self, and the powers thereof, the which therefore we call vital: Because through the spending of those, a lingering, or sudden Death happens.

We believe by Faith therefore, that Death and every infirmity hath entred into Man by Sin, and that through the concupiscence of the Flesh of Sin, they were propagated on all posterity: Therefore that neither could the entrance of Diseases and Death, be learned by Heathenisme.

Because it was reasonable, that all the ranks of sicknesses should be rooted in the same concupiscence of the Flesh, whereby Sin entred: For as concupiscence in the conception, doth not Sin before a consent, which fashions an Idea of plausibility; So it must needs be, that every Disease arising in the Flesh of Sin, doth consist in a strange Image, or feminal Idea of corrupt Nature. I have gathered also that it was suitable, that the Being, which under a concupiscible pleasure, consented, and sinned, should primarily also be stricken with Diseases: So indeed that it should not only fail or faint through external violences, but should experience the revenges of Sin in the Flesh, by its own proper exorbitances; to wit, that the Archeus himself, the governour of the Flesh of Sin, should by the same liberty of his own passions, frame erroneous Images to himself, which should be unto him as it were for a poyson: Indeed that from the delights of the concupiscible part, from passions which are the storms of the wrothful part, and likewise even through voluntary disturbances, he might stand subject unto his own Ruine, which he should stamp on himself.

Which Images or Likenesses indeed, as being the seeds of Disease Beings, should be thenceforth wholly marriageable unto him in the innermost Bride-bed of Life. This indeed is an hard saying, in the ears which are not accustomed to hear beyond trifles, heats, and dirt.

Wherefore if any one doth admire at so great an efficacy of the Archeus being Ideated, and of feminal Idea's, as to produce Diseases, and Death it self: He doth not yet know that the natural beginning of all things doth altogether depend on the Ideal part in every seed: Wherefore let him consider, that as the Light being united (for truly in sublunary things, there is scarce any thing more spiritual than Light, because it is that which pierceth solid Glasse, yea also place it self) doth enflame Woods, and Houses: So also that every Idea is a Light, as well forasmuch as it is stamped by the Spirit the partaker of a vital Light, as in that it is lightsome from the property of its own essence.

Otherwise Idea's themselves, as they are conceived, are nothing besides the Lights of a vital Soul reflexed on its own cogitations; and the which therefore are not conceived, but in a lightsome Spirit, in which they receive the figure of the thing conceived. That is, they are there made an intellectual Idea it self: Therefore although cogitation it self be a meer [non-being] Yet every thing conceived, doth from the very right of its nativity, consist of a matter conceived, and of a vital Light intelligibly reflexed on it: And seeing the Imagination is the Ape of the Understanding, although it doth not transform it self into the thing conceived, after the manner of the Understanding; yet by conceiving, it transports this thing figurally into it self, and seales the conception thereof, and decyphers a certain feminal Idea of the thing imagined, together with light, efficacy, and every manner of operation: And that wholly under its greatest Unity, and Simplicity: So that if in fructifying seeds, and those continuing the perpetuity of the uni-

universe, these things do appear to happen, and to operate by a Light, with great efficacy; wherefore shall we be ignorant, that these do not otherwise come to pass in Diseases?

10 Especially while the same things are engraven by a stronger apprehension.

For things conceived do teach us, that from passions, or perturbations which are [non-beings] true, real, actual Images do arise, no otherwise than as the thoughts of a Woman with Child, do stamp a real Image, how strange, and foreign soever it be: Wherefore thus indeed the Phantasie brings forth poysons, which do kill its own Man, and afflict him with diverse miseries: So that, as those Images do primarily proceed from the imaginative power, whose immediate instruments, the Archeus himself is: So it is altogether necessary, that he which toucheth Pitch should be defiled by it: That is, it behoveth the Archeus himself, primarily, and immediately to conceive, and put on that new Image, to be affected with the same, and by virtue of a resembling mark or Symbole, other things depending on him, according to the properties of that hurtful Idea: And that Ferment being once decyphered in that aire which maketh the assault, is a Disease; which forthwith diffuseth it self into the venal Blood, the liquor that is to be immediately assimilated, and next into the similar parts, and into the very Superfluities of the Body, according to the property even of that its own Idea; for from hence the Diseases of distributions, and digestions: What if Idea's are formed in the implanted Spirit of the Braine, or inne of the Spleen by imagining, which also in Bruits are the principal Blas and Organ of all Motions: It nothing hinders, but that the Archeus himself implanted in the parts, may frame singular, and now and then, exorbitant Idea's, not unlike to the imaginative power: for so the Spittle of a mad Dog, Tarantula, or Serpent, and likewise the juice of Wolfesbane, Monkshood, or Nightshade, do communicate their Image of fury on us against our wills: Wherefore likewise nothing hinders, the chief or primary instrument of imagination, from forming, in-mate, seminal, fermental, poysenous, &c. Images unto it self.

11 Whatsoever doth of its own Nature, by it self and immediately, afflict the vital powers, ought for that very Cause, to be of the race and condition of those Powers: For otherwise, they should not have a Symbole, Passage, Agreement, Virtues, or Piercing into each other; as neither by consequence, an application, and activity: For seeing the powers or faculties, are the invisible, and untangible seals of the Archeus, who is himself invisible and untangible, those powers cannot be reached, and much less pierced, or vanquished by the Body; because those powers however vital they are, yet they want extremities whereby they may be touched; whence it follows (which hath been hitherto unknown) that every Disease (for it glistens in the Life) because it is of the disposition of the vital powers, it ought immediately to be stamped, and to arise from a Being which was bred to produce seminal Idea's.

12 And seeing nothing among constituted things is made of it self originally, of necessity the powers as well of Disease, as vital things, do depend either on the Idea's of the generater himself (whence hereditary Diseases) or of the generated Archeus: But that that thing may the more clearly appear, in the seed of Bruites, and Man, there is a power formative after the similitude of the generater: Because it is that which seeing it is dispositive, and distributive of the whole government in figuring, its activity is contested by none: The seed therefore hath a knowledge infused by the generater, fitted for the ends to be performed by it self; for the seed which in its own substance is otherwise barren, is made fruitful by an Image stirred up in the lust: To wit, the imaginative power of the generater, doth first bring forth an Idea, which at its beginning is wholly a [non-being;] but by arraying it self with the cloathing of the Archeus, it becomes a real and seminal Being: And that as well in Plants, as in sensible Creatures: For in vegetables, a seed proceeds from an invisible Beginning (for truly there is a virtue given to a plant of fructifying by a seed, and so it hath an analogical or proportionable conception, which formeth a seminal Idea in propagating) borrows its fruitfulness, and principles of Life from it, but not Life it self; (even as elsewhere concerning Formes) therefore a seed borrows knowledge, gifts, roots, and dispositions of the matter espoused unto it for Life, from a seminal Idea, to wit, the cause of all fruitfulness: And they who a little smelt out that thing, in times past have said, that every generation doth draw its original from an invisible World.

13 The thrice glorious Almighty, by the naked, and pure command of his own cogitation, and conceived Word [Fiat] or let it be done, made the whole Creature of nothing; and put seminal virtues into it, durable throughout ages: But the Creature afterwards, propagates

pagates its gift received, not indeed of nothing, as neither by its own command; but it hath received a power of Creating its own feminal Image from God, of transferring, or decyphering the same on its own Archeus: This indeed is the feminal virtue of Man, Bruits, and Plants: But not that this beast-like conception is in plants, nor is stirred up from lust: for it is sufficient that it happen after an analogical manner, whereby the Antients have agreed all things to be in all, which manner, by a similitude drawn from us, the Sympathy, and Antipathy of things do shew; for they feel a mutual presence, and are presently stirred up by that sense, unto the unfolding of their natural endowments: Because they are those things which else would remain unmoved; but a sense or feeling cannot but after some sort have an equal force with an imaginative virtue: The which I have elsewhere professedly treated more at large concerning the Plague: But now my aim is not to Philosophize concerning Plants; but only of Diseases: It sufficeth therefore that the imagination it self, so called from the forming of an Image, doth stampe an Idea, for whose sake every seed is fruitful: And seeing that in us, that imaginative power is as it were brutal, earthly, and devillish (according to the Apostle) therefore it is subject unto its own Diseases, and can stampe an Image in the Archeus its own immediate instrument. Hence it happens unto us, that every Disease is materially, and efficiently in us.

For whatsoever is bred or made, that wholly happens through the necessity of a certain seed, and every seed hath its [this something] from an Idea put into its spirit; but a Disease is a real Being, and is made in a live Creature only: Whence it follows, that although a Disease doth oppose the Life, as the forerunner of Death; yet it is bred from a vital Beginning, and the same in the Life, to wit from the flesh of Sin: Notwithstanding Death, and all dead things, do want rootes whereby they may produce: And so seeing Death bespeaks a destruction or privation, it wants a feminal Image, wherein it is distinguished from Diseases: Life indeed is from the Soul, and therefore also the premised character of the first constitution: But a Disease hath proceeded from the confusions and disturbances of an impure Archeus, and being radically implanted in him, hath so remained thenceforth unseparable, to wit, as to a formative power of infirm Idea's: A Disease therefore growing together from Idea's, as from its feminal efficient Beginning, cloathes it self with a fit matter borrowed from the Archeus, and ariseth into a real Being, after the manner of other natural Beings: And seeing the Idea is now formed in the Archeus, he presently also begins to act these things, neither is he idle, but defiles a part of the Archeus: In which part, a ferment, as the means of the efficient Cause, is forthwith stirred up through an aversion from the integrity of Life; and at length by assistance hereof, he either defiles the more gross masse of the Body, or at least-wise disturbs the family-administration of the digestions.

The Schooles I well know will deride the doctrine of *Plato*, because I have assigned feminal Idea's, Ideal powers, and formal activities unto Diseases; for they will rather acknowledge four qualities environed with feigned Humours, and do grin that these trifles are trampled on by me, as not knowing whereunto the Causes, Essences, and Medicines of Diseases should be due: Being ignorant I say, that a more powerful, near, and more domestical Being, hath mustred an army against the life of Man, of whom also it was divinely said; *That a Mans Enemies are those of his House*; for they do every where notably accuse obstructions occasionally induced by the injuries of filthinesses, as Diseases; which obstructions do notably argue not so much the obstrueter, or also the thing obstructed it self, as they have alwayes noted with a lofty brow, the majesty of an action, passion, and relation, found in the obstrueter; as if the obstruction it self, or a relation it self, should be a Disease; but that the foundation of that relation, should include the reason of a Diseasefying Cause: Indeed the whole error of the Schooles, ariseth from the ignorance of a Disease, which consisteth immediately in the life it self; but not in dregs, and filthinesses which are erroneous forreigners, and strangers to the Life: 'Good Jesus, the wisdom of the Father of Lights! with how great confusion of Darknes do humane judgments stumble unless thou govern them! For truly while they have consecrated the Stone of the Bladder, in the next place, all the filths, mixtures, powers, properties, effects, and liberties of effects, activities, and interchangeable courses, unto the combates, and wars of the Elements alone, they have signified by the same method, that they will not, and cannot be wise beyond heats, and colds.

For so they have hitherto taught without shame and judgement, that the Stone doth wax dry, is dried, and hardned in the midst of the Urine, by heat, and by the same

priviledge of rashness or boldness, they have neglected every thing, the whole history of Nature, and nativity of things, and have made themselves miserable, because ridiculous in the age to come: Wherefore I have often complained with thee good Jesus, O thou Prince of Life, how difficult it would be for the Schooles, who have been constantly nourished from their childhood with so great an harlotry of trifles, and juggle of mists, to have assumed the true Principles of things: Unless thou hold the Stern of the Ship, and inspire a prosperous wind on the Sailes, I guesse that the envious man will be ready to deliver up my Writings for Volufian, Unlearned, or wast Papers.

Help O God, for the good of thine own Image, that Seeds themselves may testifie the Archeus to be present with them, who unless he be fructified by the onely conceived Idea of the Generater, they do return into a Lump, and dis-shaped Monster, unto which a vigor is wanting, no lesse of figuring, than of unfolding of Properties. Let Diseases witnesse, I say, although I am silent, that they are Active Beings, admitted into Nature by natural Principles: Let them confesse, according to Trismegistus, that things superiour and inferiour, are carried by the same Law of proportion, and co-like Principles: That by the meditation of one Thing, Archeus or Principle, all things do even to this day subsist, and are continued: That by the Meditation, and Idea of that one, they do receive the perfect Act of Superiour or Inferiour Beings: What he spake is Truth, and that Truth shall vanquish every strong Fortresse, and pierce through all Solidities or Difficulties.

CHAP. LXIX.

Of the Idea's of Diseases.

1. A division of the things to be spoken. 2. The Spleen sits in the middle Trunk of the Body. 3. The forming of real Images of the Phantasie, is confirmed by an Example. 4. Why an Idea descendeth from the Mother, into the Young. 5. Consequences drawn from thence. 6. A measuring of the moderatenesse of Wine. 7. The piercing of Idea's. 8. A Child declines from his native disposition. 9. What may be understood by an Agony. 10. Most cruel Idea's. 11. A most especial care of Educations. 12. A difference in the motions of the mind. 13. The doctrine of Desires. 14. The rise, and progress of Desires. 15. A diversity of the Sin of Commission, and of Omission. 16. Why God hath endowed the Femal Sex with a peculiar favour. 17. What the gift of a Sexual devotion may operate by it self. 18. Why the Author hath treated of Morals. 19. The Author repeats Eight Suppositions concerning the Idea's of the Archeus. 20. The Author wanders about forreign Idea's. 21. The foundations of Physiognomy. 22. A Reason why Idea's are so powerful in us. 23. What the Abolishment of the Cause of a Disease may be. 24. A Diseasefying Cause is invisible. 25. The Birth-place of Diseases. 26. The Author brings forth that Divine thing of Hippocrates in Diseases, unto the Light. 27. Why Diseases do imitate the properties and activities of the Life. 28. An Example in the Stone. 29. There is need of two suppositions, for an introduction of the knowledge of Diseases. 30. A Conclusion drawn from thence. 31. A Mechanical proof in a Bean. 32. The same in a Cancer. 33. The progress of a Cancer. 34. How the Beings of Creation, do differ from the Beings of Prevarication or Transgression. 35. The Thinglineffe or Essence of a Cancer. 36. Some products of Diseases do lose an occasional causality. 37. An erroneous Method of Curing hitherto kept. 38. The Schooles, their Causes of a Cancer are Erroneous.

Seeing therefore, a matter and efficient Cause is required unto the Essence of a Disease, and seeing the Idea is the Efficient Cause it self of a Disease, both of them are to be explained.

And first of all, I will describe the thingliness of Idea's, their Efficacy and Fabrick, that the Action and Nativity of effecting a Disease may clearly appear.

And first I will declare the Idea's conceived by Man.

And then I will treat of the Idea's of the Archeus.

And at length of strange and Forreign Idea's.

And Lastly, I will deliver the matter making a Disease, that from a Connexion of both Causes, the thingliness of a Disease, and its immediate Essence may be manifest.

First indeed, I have taught elsewhere, that there is a certain unbridled imaginative force of the first motions, not reduced into the power of the will, being infolded in the Spleen: And that the Almighty hath entertained a faculty of so great moment, even in meer Membranes, and almost un-bloody purses, so that as well the Orifice of the Stomack, as the womb it self, may be of right and desert, equalized to the heart; To wit, by reason of a notable Crasis or constitution of acting, and likewise

obedience performed unto it by the other Bowels : From the prerogative of which power the spleen is situated almost in the middle place between them both ; yet it is inclined a little more demissly or downwards, because it hath undertaken the place of an enrire root : For it toucheth at the Stomack with its largeness, in respect whereof a Duumvirate subsisteth : But it reacheth the Womb with its other extream or end, to wit, being by its Ligaments annexed to the Loins.

And then I have said, that although at first, that which is imagined is nothing but a meer Being of Reason; yet it doth not remain such, for truly the Phantasie is a sealifying virtue, and in this respect is called imaginative, because it formeth the Images, or likenesses, or Idea's of things conceived, and doth characterize them in its own vital spirit :
 3 And therefore that Idea is made a spiritual or seminal, and powerful Being, to perform things of great moment, which thing it helpeth to have shewn by the example of a woman with child : For a woman with child, if by her imaginative virtue, she with great desire hath conceived a cherry, she imprinteth the Idea thereof on the young (even as of the plague elsewhere) an Idea I say which is seminal, sealing, and of its own accord unobliterable : Because the Idea whereof, waxeth green, becomes yellow, and looks red every Year in the flesh, at the same Stations of the Year, wherein these Cherries do, otherwise, give the tokens of their successive change in the tree. But why the Idea of a Cherry, or Mouse, is imprinted not on the mother, but on the young, and doth now presently wander from the imagining woman into another subject, the
 4 which also hath oft-times began to live in its own quarter : the cause is an uncessant, nor that a feigned affection of the Mother, whereby she naturally watcheth more for her Young, than for her self : Therefore the inward, natural, and unexcuseable carefulness of the Mother, laying as it were continually on the Young, directs the Idea bred from passions, by one beam, unto her Young. And because the hand is the principal Instrument of activities, therefore the carefulness descending unto the hand, as it were for the defence of her Young, receiveth the conceived Idea, and proceedeth with it further, on her Young. But seeing Idea's are certain seminal Lights, therefore they mutually pierce each other, without the adultery of Union : Therefore the conceived Idea of the Cherry, through a supervening or sudden coming Idea of the Mothers care, is directed unto the part of the Young where the hand hath touched the Body of the Mother. For indeed, there is alwaies a certain care for the end whereunto the hand doth operate. The Hand therefore, as the executive instrument of the Will, deciphers the Idea of the Cherry conceived, on that part whereto the Mother hath moved her hand.

5 Whence it is even in the entrance manifest, after what manner a cogitation, which is a meer [non-being] may be made a real and qualified Being. And then, it is from hence manifest, that the Spirit is primarily seasoned or besmeared with that Image, and being once seasoned with some one kind of Idea; it afterwards becomes unfit for the execution of other offices; because the Idea being once conceived, it is a Seal onely to perform things determined. Therefore that Character of the seminal Image, being once imprinted in some part of the Archeus, causeth that it is thenceforth incapable of other Offices : For by reason of the skiey or airy simplicity of that Spirit, the Idea's do so marry themselves unto it, that the matter, and its efficient Cause are not for the future separated from each other, as long as there shall be an Identity or Sameliness of the supposed Character; seeing the Idea it self is the seed in that Spirit, which therefore cannot be spoiled of that Idea without its own dissolution : For neither doth it just so happen to the Archeus as to Mettals, which by melting, return into their former State, and do loose onely the labour of the Artificer.

It is alike as while a Woman with Child is affrighted by a Duck or a Drake : For at that very moment, the imaginative faculty imprints the Idea of the Being, whereby she is affrighted, on the Spirit : So that, that Idea is there made seminal, and so indeed, it doth not onely destroy the Embryo now formed, but transformeth this Embryo into a Duck or a Drake. Whence likewise is manifest, not onely the Power and Authority of the imaginative, but also that Idea hath drawn from the imagination a figurative Faculty, and hath a seminal and figurative Power, yea and a Power of Metamorphizing or Transforming.

And it follows from what hath been said before, that a man of much imagination, is of necessity also weakened in his Strength : Because he is no otherways wearied, than he who hath spent the day in tiresome Labour, and should wholly fail, as well in Mind as Body, unless he were refreshed with an acceptable Discourse, a sociable Walking, a pleasant Conversation, and the more pure Wine : According to that saying, *Wine moderately taken sharpens the Wit.*

Neither

Neither is that moderateness to be delivered by ounces, under the harsh Crisis of the Physitian, while as by the Wise Man it is left free to every one, according to his capacity. *Wine*, he saith, *was made for Mirth, but not for Drunkenness*. Sorrowful persons therefore being wearied, exhausted, and oppressed, must be succoured with Wine, even unto a chearfulness.

Therefore Idea's, as it were formal Lights, do pierce each other, and imprint their own Images on that part of the Archeus whose Image and Seed they are: Therefore the Idea's of inclinations do first pierce the Idea of the fructifying seed; to wit, for Manners, Sciences, Affections, Diseases, and Defects: For therefore the Idea's of Women great with Child, are easily co-knit unto constituting Idea's; the which as they do oft-times corrupt manners, otherwise good, yea and also, sometimes beget foolish ones; so also they do not seldom, amend other manners from the Womb: Else, for the most part, *Valiant Men are begotten by Valiant and Good Men*: For a Child by a rigid, or tender Education, begins to decline from his native Inclinations: Then at length when he is endowed with some kind of Discretion, by Exercises, and Companies, he falls into diverse Idea's of Affections, the which he is constrained for the most part to obey for Life; because they are implanted from his tender branches. Presently after that, in Youth, the Idea's of Consideration or Judgement do begin to grow; the which, although they are for the most part as yet guiltless; yet when the Idea's of any Passion being introduced by the hand of Inclinations, shall associate themselves to these; then the former Idea's are pierced by the stronger; to wit, of Hatred, Love, Revenge, Luxury, &c. But if a notable Fear shall happen, from thence so vehement an Idea ariseth, that it inflicts a violent sickness, with a perpetual faint-heartedness. But the mildest of Idea's, are those of Love, Joy, and Desire, which at length delight with their sweetness, and do so ensnare the whole Soul, that they continually gape after Delights and Pleasures. The more violent Idea's, are those of Anger, Sorrow, Agony, Envy, Fear, Arrogancy, Despair, Terrour, Revenge, Drunkenness or Sottishness, Jealousie, and Despair: Where also, this is to be noted; That Agony is not a co-striving of Hope and Fear alone, but also of Anger and Fear, of Anger and Dissimulation, of Hope and Anger, of Hatred and Fear, of Hope and Sorrow, &c. For as there is contrariety in conceptions alone, so also, in Idea's from thence bred. And those which are not contrary, are contracted and do pierce each other: But contrary Idea's do destroy each other, the which shall at sometime, in the curing of Diseases, be made manifest by Histories. As many Idea's therefore as do pierce each other, and co-suffer, do arise together into Unity, the prevalency of the stronger Idea being retained.

But sudden Idea's are the most cruel, and most deadly of all; because they shake the Imaginative faculty at unawares, and to do as it were defile the whole Archeus: And then daily Idea's succeed these; because by a certain accustomedness, they are made household-thieves, have known the Treasures, and Cloisters of these: Hence a strong custome binds the mind, as the Idea's conceived in the inflowing Archeus, do at length also defile the Spirit implanted in the parts: For indeed, the Idea's of inclinations unto Virtue, are supernaturally given, after that the whole Nature is corrupted by sin: But they are implanted in us by the seminal Idea's of the Parents, for Morality, Arts, and Defects: or being instilled into us from our Childhood, by Education, they depart into Nature, as they pierce the native Idea's, and do co-unite with the same. But there are affections of a proper name, the Products of Inclinations, Passions, and the Exercises of Affections, and they do not happen without a new Propagation of Idea's: And the which, therefore, like the life, do prepare in us a natural habitation and disposition: But Passions are the internal Motions of the Mind, about the Bridles whereof, whole Stoicisme is conversant. At length Perturbations or Disturbances, are Passions, being Idea's stirred up for the most part, by extrinsecal or foreign Causes: And the common Mother of all Passions is Desire; For this is in it self either good or evil: For that Desire which is indifferent, or neutral, doth most easily put on the corruption of Nature and is perverted. But the one only Remedy of evil Desires, is the Resignation of the Will: Because Desire is bred after this manner: For corrupted Nature is now naturally turned on it self, and therefore it willingly meditates on things plausible to it self; as it is continually busied about the Objects of the Concupiscence of Sin: And as Fire is struck out of a Flint, so is Desire from the plausibility of the Object: Whereunto, unless thou dost insert *the Fear of the Lord*, by way of a Graft (which therefore is *the Beginning of Wisdom*) for a Bridle, or shalt cut off the plausibility of conceits, in its budding of the first Conceptions; it now finds a fewel in corrupted Nature, Lewdness grows, being not yet apparent by reason of

its

- its smallness ; and presently draws the whole Soul under it : So that it becomes enslaved unto that Appetite, by which it was expelled from its Throne of Majesty. Suppose thou, if Ambition, or a greater Concupiscence do wax hot in the Frying-pan of Desire, those things are either possible in hope, without hope, or against hope : If man persisteth in his Desire, these two latter will make him mad or besides himself : Seeing every Desire of corrupt Nature, hath alwayes something of foolishness and anguish annexed unto it. But if indeed the end of a Desire be with hope, it is carried (at leastwise) on an Object not yet present, and then impossible ; and so it hath a disdainful expectation, and a troublesome companion : For we desire those things which are not. Therefore a painful Desire, is also, for the most part, of its own nature evil, and from its affect far worse, and at length, from its consequence evil : Because the Desires do presently decline into Anger, Hatred, Revenge, Frowardnesses, Crabbishnesses, Un-sufferance, Arrogancy, Contempt, &c. For a natural Desire doth always rush into that which is worse, because it descends from self-love, is formed by corrupt Nature, and is for the most part conversant about the Objects of sin, doth accompany Anguish, Expectations and Troubles, and bow down the liberty of Willing : But so far as it is reflected beyond it self, and on a future thing, it brings forth Impatience, affects a Liberty, resisteth Mortification : It brings Frowardnesses, Perplexities, Un-sufferance, and now and then Despaire. A good Desire is always given by Grace from Above, whose Product is Love, and an endeavour producing the Perfection of the Soul. Vitrues therefore, as they come from Grace, they transcend from the imaginative faculty, together with their Idea's, into the understanding, and so they tinge the Soul ; even as also the vices of Passions, the exercises of Sin, and of withdrawing from the Fear of the Lord, do tinge the Soul, that it becomes as it were beast-like. Hence are ravening Wolves, generations of Vipers ; tell ye that Fox, &c. Therefore sins of Commission will sometimes be conspicuous in the Soul, without the search of a diligent enquiry. But sins which are meerly negative, because they are not Beings, nor have any thing of actuality, they do not tinge or stain the Soul (such as are sins of Omission) and therefore these onely shall be upbraided as faults in the last Judgement : when as other sins shall be distinguished by the sight alone.
- 15
- 16 Furthermore, although God be no acceptor of persons, yet because he disposeth of all things sweetly, according to his good pleasure, he loveth women after a peculiar manner : not onely because he hath surrounded them with very many Diseases (arising from their womb) Perplexities, Miseries, and Tribulations (for the Lord saith to the Woman, *I will multiply thy Sorrows*) but especially because he hath for a comfort required them with the gift of Devotion. For from hence do arise Idea's of Compassion of Miseries, toward their neighbours, of Meeknesse, Contrition, and Compunction ; the which, for a foundation, do precede the Fear of the Lord and Charity. For that Devotion (although it be sexual) is the gift of Grace, gaining Grace or Favour, a desire of Praying, of Talking with God, with humility, an amorous, perfect, and exceeding delightful Faith or Confidence : For these things the World is ignorant of. For I being a Phisitian, ought here on purpose to treat of Morality, however others may laugh : And that not onely as the indispositions of the Soul, do defile and blemish, or corrupt the Health : But especially from that Title, because, seeing a Disease is the Son of Sin, it cannot be perfectly known, if the faculty of the Concupiscence of Sin be unknown, from whence every assault towards a Disease drives it self into the Archeus. But hitherto concerning Idea's conceived by the cogitation of Man, of which it shall as yet be more liberally treated under the Chapter of *Things Conceived*. Now it remains to unfold, from whence Idea's made by man are of so great strength, that oft-times they call for a Disease, yea and also Death on the Imaginer. From the Premises therefore we must resume,
- 17
- 18
- 19

1. That Idea's are stamped in the Imaginative faculty, by cogitation.
2. That they imprint their Image on the Spirit of Life.
3. That they are operative means, whereby the Soul moveth and governeth the Body.
4. That they are seminal Images.
5. But that they are graduated according to the power and strength of the Imaginative Faculty.
6. Wherefore that a humane Embryo is changed into diverse Monsters.
7. That every man by the Images of Sorrow, Terror, &c. doth form seminal Poysons unto himself, which do consume him in manner of the Plague, or else by a violent languishing.

8. That

8. That they do also passe forth out of the Body of the Imaginer ; because an Image conceived by a Woman with Child, regularly wanders into the young, even on the last day of carrying it in the Womb ; yet then it is without controversie, that the young doth enjoy its own Life, and lives by its own Soul, and Quarter.

It is manifest therefore from the aforesaid particulars, not only concerning the question whether it be ; to wit, that there are in Idea's a most powerful force to operate : but also because they are seminal, that they do naturally pierce and operate on all things. For truly if there be not a certain ruling, and forming Idea of the matter of seeds, formed by the generator, the seed by it self remains wholly barren. In the next place, those Idea's ought to be immediately, not indeed in the Soul of Man ; but immediately in the Archeus which maketh the assault ; because without such an Idea, the Archeus should plainly remain an unpartaker of all action, operation, and propagation.

Therefore also by Idea's every motion and action of Nature, as well in remedies as in 20
poysons, and every Natural power, is feminally imprinted by every Parent whatsoever : Yea forreign, strange Idea's are introduced, and those ascending into those already constituted ; because Idea's no otherwise than as Lights, do mutually pierce each other, and do keep a perpetual, and co-mariageable mark of the Archeus with the Archeus, which Idea's, while they take hold of the matter of him, a Disease is now bred : For as seminal, and primitive Idea's being planted in the seed by the Parents, do figure a Man, Bruit, Plant, &c. So also the Idea's of inclinations, affections, &c. coming upon them, do determine or limit the countenance of a Man unto the delineaments or draughts of Physiognomy : Which afterwards also are varied by the future Idea's of manners, customes, &c. 21
For bruit Beasts through the troublesome Idea's of lust, do not wax fat even as those that are gelded do. But Eunuchs, if they are without care do fatten ; who else through the Idea of grief do also wax lean. But from whence there is so great power in Idea's, it is 22
worthy to be known, that the table or matter upon which, even as on water, the phantasie decyphers its Idea's even as on water, is the very substance of the Archeus it self ; the which being once defiled by a conceived Idea, and as it were instructed by a seminal principle, is afterwards uneffectual for other Offices : Therefore indeed those that are without care do slowly wax grey, and in a contrary sense ; but many cares do speedily draw on and ripen old age : according to that saying, *my Spirit shall be diminished, and my dayes shall be shorwed.*

Rightly therefore was it said from of old, *That the perfect curing of Diseases, consists in the removal of the Cause, or Root :* The which if it should be the visible peccant matter it self (even as the Schooles do nevertheless point it out to be) now a Fever, or the colike Diseases could not be cured, unless all the occasional matter were first removed ; which thing is as manifestly false, as it is most exceeding true, that Fevers are silent, the same occasional Cause remaining : So indeed I have oft-times perfectly taken away the Colick, Choler, Flux, Bloody-flux, and other Diseases by a true *Laudanum* without *Opium*, although the residing mass or lump were as yet entertained within : Therefore all visible, and forreign matter, either happening from without, or sprung up of its own accord within, how degenerate soever it shall be from the very nourishment of the solid parts, and a liquor separated from them, it hath it self alwayes by a proper name, after the manner of an occasion, and a provoking Cause ; whether that shall be for a primary Disease, or indeed shall be produced and constituted by a primary Disease, consequently afterwards pricking forward the Archeus unto the erecting of a new storm, or Disease.

And so every Disease is caused from the violent assaulting Spirit, by Idea's conceived 25
in the proper subject of the Archeus, by whose fault alone, a live Body, but not a dead Carcass suffers all Diseases : But if that this off-spring of a Disease be spred into the families of the digestions ; it produceth occasional matters indeed for secondary Diseases, which are bred to stirr up afterwards the same Archeus unto new seminaries of Diseases.

For so, wheresoever *Hippocrates* hath not found any visible matter, as the occasion of a 26
Disease, he accuseth a Divine Beginning in Diseases, because it is invisible from the hidden Store-house of seeds, from the invisible World, or out of *Pluto's* River of Hell, or from the Chaos of successive changes : Therefore I do in all things wholly admire at this Divine Beginning (be it spoken by the liberty of *Hippocrates*) in Diseases, as the judge of a broken purity, so also a revenger of an hidden impurity and concupiscence, lurking in the flesh of sin : And therefore also, persevering in the radical disorder of a vital principle.

But

- 27 But as it doth immediately fit in, and is awakned by a vital and seminal principle : Hence also consequently, Diseases have properties, directions, proportions, durations, affections, and respects, unto members and places ; which things certainly in a good understanding, cannot be attributed unto the ulcerous predicaments of heats and colds, as neither to Distillations, and Catarrhs flowing down with a voluntary fall of weights : But
- 28 it is profitable to have made this history of a Disease manifest by one Example : For in the Stone, a Disease, it is most material and manifest ; but the Stone is not the Disease, but the primary Lithiasis or Stony affect, and the true Disease Duelech is the Idea it self, radically implanted in the powers of the Archeus of the Kidneys or Bladder : The which indeed is wanting in healthy Persons, and therefore neither doth it in healthy folkes, regularly frame, actuate, or separate out of the Urine (the which Urine notwithstanding doth contain materially in it, all things actually necessary unto a Stone) a Stone, or sand existing therein by an immediate possibility : But Ferments being once introduced into the Archeus of the Reins and subordinate parts, an actuating, and fashioning Idea of that is there established, which lurked by a near power in the matter : And thus is a Stone, or Sand made, which are the product of a true Lithiasis : That Idea I say, inhabiting in the implanted Archeus of those parts, is the Disease Separater and Work-man, commanding the implanted faculty of that Organ, and which leads it bound at its own erroneous pleasure : There is also a more eminent power of a seminal and fermental Idea, brought on the implanted and vital faculty of the Reines : But the product proceeding from this primary Disease, in the way of generation, is the monster Duelech it self.
- 29 The same thing is equally manifest in other Diseases, at least by two suppositions : To wit, one that every Disease is in a live Being, and so in the Archeus the Mover, but not in a Being by it self dead, and unmoved : The other is, that a Disease is a substantial Being, by it self subsisting in us.
- 30 Whence I conclude, that a Disease, after the manner of other natural Beings, proceeds from a Non-being unto a Being, and is feminally bred : The which I thus prove mechanically.
- 31 A Bean, as it is the most notable of seeds, is a subject of demonstration. For herein shadowy Idea's do concur, being co-created with it presently after the beginning of the World, and by propagation feminally co-bred there-with : Because between the two Plates which constitute the Body of the Bean, the flourish or beginning of a bud is found, having two leaves, with a root, wherein the seminal Idea doth shadowily sleep : And it is fast tyed unto both the Plates of the Bean, as it were to both sexual Beginnings : No otherwise than as the more thick white doth adhere unto the yolk of an Egge which containeth the perfect act of a seed : The Bean therefore being committed to the Earth, doth presently drink up either the actual, or vaporous Liquor of the Earth, and swells up there-with : But the Earth hath in it its own putrefaction by continuance, or a faculty of imprinting a fermental odour, in respect whereof, a power motive is conferred on it of a voluntary budding, without a visible seed being committed unto it : By consequence, the juice of the Earth being imbibed, the same fermental virtue is delivered unto this Bean, which is otherwise unto the Earth : Which juice having in it self a fermental putrefaction through continuance, determined or limited by the specifical odour of the Bean, doth stir up the Idea of the seed laying hid in the Bean, which afterwards proceedeth to act of its own free accord : Wherefore the bud is not bred : (the which else, the Earth of that place had produced of its self) but from the intrinsecal, and invisible seminal Idea of the Bean the bud is bred or born, which is the Herb Bean : Yet so as that the specifical faculty of the Herb is inclined according to the disposition of the ferment of the hoary putrefaction of the Earth : Hence indeed wine varies in divers places, although the vine be planted of the same branch : For so seeds do flow into their appointed Offices, fruits, and ends, which thing I will explain in a Cancer.
- 32 First of all, a true Cancer doth never arise, but in the Dug, and Womb of the Women : but the Idea's of a Cancer, are not in, and do not sleep in the Womb ; Even as otherwise the Idea's of a Bean, in the bud of a Bean ; because Diseases indeed, are naturally made, but are not naturally in ; unless perhaps from the seed of the generater, Idea's are co-bred, as in hereditary Diseases ; and that is the difference of the Beings of creation, from the Beings of Diseases : I suppose therefore for the occasion of a Cancer, that the Dugs of a Woman, do suffer a co-pressing and confusion or bruising, and the Glandules, the effectresses of milk, are co-shaken or dashed : And then the sensitive Archeus, implanted in that Organ, conceives pain as it were a pricking thorne : Therefore the shaking, and pain

pain do mutually co-touch in the act of feeling: And an unnamed furious passion riseth up in stead of a ferment, as it were fire out of a flint and steel: Hence a fiery seminal Idea, mad or raging (and therefore poysonsome) is struck out, is imbibed and co-fermented with the juice of the place: Whence then at length there is a painful, pricking, beating tumour, because it is also poysonous from fury: The Archeus therefore is stirred up, and made wrothful according to the disposition of the conceived indignation (for neither do all things grow generally every where; but here grasses do spring up without bidding, there more successefully grapes, else where treeie sprouts) so neither doth the Archeus see in the finger, even as he doth in the eye. The Archeus therefore winds up the poyson gotten by his own indignation, in that bunch of the thorny pain, as the Archeus hath there so married himself unto the Paps, that no part of these doth want him: But that swelling is the product of the Cancer seminated or sown in the indignation, as well of the Cancer, essentially, as being that Cancer which afterwards flows abroad, stinking with sanies or thin corrupt matter: For neither are Ulcers, or Apostems in the Dugs ever Cancerous, unless that fury of the Archeus shall be present: Therefore a seminal Image, rising up from the turbulent tempest of the Archeus, and decyphered in the Archeus of the place, is a true Cancer, whether there shall as yet be an Aposteme, or in the next place an Ulcer: For the Archeus of the Paps being their vital mover, acting, to wit, in that part, the Sergeantship of the furious Womb, being tossed with furies, doth locally stamp his poysonous Idea's, and imprints them on himself by the same right whereby the imaginative faculty doth frame likenesses agreeable unto its own passions: No otherwise I say, than as the Womb, Heart, Brain, Stomach, than the propagative seminal faculty of Vegetables it self; yea nor otherwise than as it clearly appear in the very excrements of Simples, to wit, in the Spittle of a mad Dog: So I say a Cancer is bred, and doth propagate its own Idea's on the immediate similar nourishment.

For the primary or first Cancer in the Archeus of the place, through a dependent connexion of contagion, is further extended into the co-bordering part; but as from the beginning, even unto the last maturity, there is one only Ideal, and Seminal Ruler of the Bean: So from the beginning of the conceived Idea of a Cancer, even unto Death, there is nothing but the same poyson: But seeing a Cancer is in a sensitive subject, the Archeus therefore dayly rageth a new, doth substitute new Idea's, and poysons in the room of old ones: Not so a Bean, the which beginneth from a singular beginning, and by flowing, doth proceed unto the continuation of its thred.

For truly in created things of the first constitution, although there be an Ideal beginning, the same with Diseases, and a progress of making from not a Being, unto a Being: Yet in being now made, the progress of Diseases differs. Therefore also a Bean is dayly changed in its outward countenance in growing, although the flourishing part differs not from the budding part, in its vital beginning. In like manner also, Diseases sealed either in the local, or inflowing Archeus, from the various madness hereof the poyson is varied: For although the soyl of an exulcerated Cancer, exposed to the air, was the first object where it was conceived and bred; yet that soile being wasted by Corrosion, another more deep one doth alwayes succeed, even as if a new Bean should dayly bud: And therefore a Disease doth not only bewray it self from a local center of science Mathematical, but from a Physical or natural center also, which is the furious, and seminal Idea of the Archeus: There is the same judgement, and equality of all other poysons bred within, such as hath been already aforesaid in Chyrurgical affects: For in Bruits (even as else where concerning the Plague) every specifical poyson doth not issue but from the Idea of an Image; whence in the Proverb; *The Beast being dead, his Poyson is killed*: For so the Leprosie, fowl Disease, Falling-evil, Apoplexie, and likewise all primary Diseases, do proceed. Notwithstanding, the poysons which are taken into the Body, are not therefore Diseases, or do not arise until the Archeus, through a borrowed ferment of their contagion, hath done injury unto himself: Then indeed he stamps strange Idea's on himself, not so much from his own fury, as he borrows the same from Simples ingested or darted in, and at length doth fall under the same; In which conflict he forms wondrous Idea's unto himself, the which he tragically unfolds by variety of Symptomes: Therefore a Cancer is not a hollow Ulcer which the eyes do see, neither is it, its crufted and wan, or black and blew Lips, which the hand doth touch.

Lastly, it is not the stinking soil or bottom of the Ulcer which looks blackish with putrefaction, or the sanies dropping from thence which the Nostrils do smell: For without these, the Cancer was as yet already clothed with its own Skin: But these are the effects, signs, symptomes of the Being whose Fruit they are: For truly seeing an effect or product,

duct bespeaks an unseperable respect unto its own producing Cause: Therefore a Disease ought to be a Being, containing the Causes, and Properties of its own entity: And therefore, as well the Cancer being an Aposteme, is a Cancer, as while it is now become an Ulcer: For therefore primary Diseases, do for the most part beget an equivocal or doubtful product in the Archeus: As is the Stone in respect of the first Lithiasis or Stony affect.

36 For the troublesome Stone, wounds and hurts the digestion of the Bladder, stops up the passage of the Urine, &c. Also now and then, a product is troublesome only by its presence, as corrupt Pus in an Aposteme, wound, &c. Water in a Dropsie, coagulated matter in a Scirrhus: And those products, have rather the Nature of a Disease effect, than of an occasion of Diseases; unless perhaps they shall draw the abridgements of poyson in a ferment, for then they supply the room of assumed poyson, and do occasionally compel the counsels of a new Disease into the Archeus: Therefore a Disease is a Being truly subsisting in an invisible principle, being endowed with divers properties; but not a distemperature, or disposition arising from the sight, mixture, degree of contrariety, and concomitance of feigned Humours.

37 But the ignorance of a primary Disease, as it hath caused the ignorance of a remedy; So also it hath taken away the hope of curing: because they have employed themselves in nothing but cleansing out erroneous products, and occasional Causes, and have rather consulted of a cloakative prevention, or that Diseases might not increase, or return, through founding of a remedy on the back of the Disease: But nothing hath been thought of against the voluntary storms of fury, whereby the Archeus suffers a greater injury from none than from himself: In the mean time nothing is done, unless that fury of the Archeus which buds forth Idea's shall be silenced, and the persisting poyson bred from thence be choaked: For neither is it slain by Corrosives; yea not indeed in Ulcers, unless also there be a force of killing in the Corrosives; because they are that, which else do more enflame the fury, than pacifie, or kill it. A certain Man in my dayes, living in the region of *Gulick in Germany*, cured every Cancer whatsoever, by a Poudre causing no pain, being sprinkled thereon; and then next, he healed it up with an Incarnating Emplaster; whose Art was buried with himself.

38 For the Schooles being astonished, as oft as the Cancer, and eating Canker, are not appeased by their Egyptiacal Oyntment, do accuse the Menstrues, or the Humour of black Choler: But being asked, whether of these Causes may adhere thereto, they doubting, betake themselves to both: Now Men are altogether free from a Cancer, as also Women whose courses have left them: The young in the Womb shall be nourished with a meer poyson; the Menstrues shall offend, not in quantity only; yea neither shall the detaining of the Menstrues be guilty in a Woman with Child, Nurse, and leanified Women; and those who are subdued by a long infirmity shall be nourished with poyson, and all shall perish without hope of recovery: But if a Cancer ariseth not from the Menstrues, but from black Choler; why therefore doth a Cancer happen at the offence of the Dugs? Why doth it less happen unto jovial or jolly Women, than unto sorrowful ones? or what community hath the spleen with the contusion of the Dugs? Or if black Choler doth wandringly ascend unto the Paps, why is not the milk blackishly Cholerick? Why is there not ordinarily a Cancerous affect to those that give suck? Why when the purgatives of Epithymum, the Stones of Lazulum, the Armenian Stone, &c. being taken, doth a Cancer never wax mild in the least? For in times past indeed they have distinguished Diseases by a property of passion, and secondary passion, and by so much the more unsuccessfully, by how much the more undistinctly: So that the Schooles being dashed against the Rock, have transferred these affects concerning Diseases unto Symptoms: As while from the Wombe, there is a Megrim, and strangling, or from a painful Aposteme of the foot, a glans or kernel in the Groyn: They have indeed named them consensual or co-feeling, or secondary effects; but have never acknowledged them even as they proceed from their own seed: Even as hath been more largely demonstrated by me touching their ignorance of a Diseasefying Essence.

CHAP. LXX.

Of Archeal Diseases.

1. *The necessities of Archeal Diseases rushing on us of their own accord.*
2. *The Schooles have on both sides neglected the First Mover in us.*
3. *Aristotle, Galen, and Paracelsus, have become mad about this Tragedy.*
4. *An unfolding of the thing granted.*
5. *A preparing of a Demonstration.*
6. *The clearing up of a Question.*
7. *An explaining of the Idea's of the Archeus.*
8. *An Objection is solved.*
9. *The passions of the Archeus have the Excentricities of another Market.*
10. *The ignorances of the Author.*
11. *The fourfold Troop of Diseases, proves the Idea's of the Archeus.*
12. *Hereditary Diseases do presuppose the Idea of a Disease, to be connexed with a prolifical or fructifying Idea, yet not to be produced from the intention of the Generater.*
13. *The pleasure reflects the Archeus on its self.*
14. *Death began from the Concupiscence of the Flesh.*
15. *Why a Trunk in an arm doth not generate a Trunk.*
16. *Why all the Diseases of Parents are not equally transplanted by an hereditary right.*
17. *Silent Diseases do prove an Archeal Idea.*
18. *The Diseases of an Astral or Starry Conjunction do prove the same thing.*
19. *What Diseases may pertain unto an unequal strength.*
20. *An unequal strength, hath caused a beginning of the Fiction of a Catarrhe.*

IT was already sufficiently shewn, that the Archeus being even well disposed, is estranged by humane Passions and Perturbations, and likewise that by the forreign Image of a strange Archeus piercing him, and that by the assumed destructive powers of purging Medicines and Poysons, he is soon trodden under foot. But while no vice of things taken doth presse him, nor the stormes of external things do rush on us, nor lastly, Perturbations do shake, it hath not been yet made known, by what League, Way, Manner, or by what Perswader and Guider, the Archeus may voluntarily decline, that he may defile a good thing brought so far into him, by so great Labour; I say, a nourishable and spermatical humour under an unhaken health, and what may straightway corrupt that which was prepared for, and taken into the society of Life; and from thence frame a dross so hostile, that the Archeus may lead himself, together with his Inne, into the dammage of Life. Of these things the Schooles have thought out nothing but that which concerns Rheumes, easily rowled through their own weight, and passable at that their own pleasure: They have not, I say, made mention of the nourishable humour or liquor, but onely of distilled mucks or snivels: For without consideration they have leaped over this Brook, and also the business of Healing hath remained neglected, while they have hitherto neglected the very corrupter of these nourishable and spermatick Humours. They have indeed rightly judged, *That nothing is moved by it self.* They have acknowledged indeed a *First Mover*, and its Intelligences, the motive Forms of the Heavens; but the proper Movers inhabiting in the Seeds, which should by Idea's prepared for them, of their own free accord, effect their own first movable Blas in us, they have not sufficiently considered; and much less have they drawn this Philosophy into Diseases, and the business of Healing. For it hath never been thought after what manner a seminal Being is Governour of Life, may intend its own Destruction, and stir up unto it self a mortal Blas, seeing every thing desireth to be and remain.

Be gone thou *Aristotle* with thy whorish appetite of an impossible matter: For I have else where given satisfaction unto those trifles, even unto thy shame. *Galen* being at the stroke of this Bell, ere while devolved into a Catochus, snorted, so that indeed he never so much as dreamed of this sound. At length *Paracelsus*, who thought the Essences of

things, and the liquours of these, never to perish, began the dissolution of Life from the disorder of the three First Things. For he scarce believed the Archeus to decay, who affirmed, *The Essences of Herbs being taken in Fodder, not to die, so much as in the dung of Fields*: Yea he saith, *The Archeus is never dissolved by reason of the faintings of Old Age, but is sifted onely through corruptions ripened in the power of Nature*: And so, neither doth he think the Archeus then to perish; but being obolved in strange things, to be obscured and forcibly to depart, as suspended from the office of acting, and to return unto his first sacramental Being.

4 Surely these things are more worthy of Laughter and Pity, than of reprehension: For they have hitherto been busied onely about the products of Diseases, and occasional things brought inwards. For *Paracelsus* with his followers hath introduced Tartarous Humours, into the innermost efficient Cause of every Disease, perhaps neither before hurtful ones, but when they should be coagulated at the last line of their extension or passage. But I have heretofore rejected the Errors of that man, and the false paint of falshood being now discovered, I have better instructed a credulous posterity: Because I know that the Archeus hath his own motive, and alterative Blas, naturally given unto him, and proper unto him by a seminal virtue: Because he is he, who even from his first conception, doth move, figure, alter, encrease, &c. as well every living Creature, as Vegetable, at the beck of his proper appointment: And so that the Archeus is he that makes the assault according to *Hippocrates*, and without or besides whom, nothing is moved, felt, or altered in souli-fied Creatures.

In the next place, I know, that the Archeus doth regularly move himself, according to the Idea either left him by the Generator, or another called unto him from elsewhere.

5 Whence also, I have believed, that it belongs to the same Being and faculty, whereby through health, every motion and alteration are made in an ordained regularity, and whereby these same things are irregularly made. Therefore a Disease, no less than health, must needs be naturally derived from the Archeus alone: So that if Life and Health be by Images imprinted on the seed, by co-like Images also: but of over rash or preposterous
6 Idea's, Diseases are made. But from whence may those Image-guests issue, if no external thing doth shake him, and no internal thing not so much as with an hereditary blemish, doth disturb him?

7 For truly, I have already treated of the humane Idea's of Affections, Inclinations, Passions, and Perturbations; but not yet sufficiently concerning Archeal ones, while as the Archeus doth prove exorbitant through his own proper Luxury or immoderate Desire, and like *Prothens*, doth voluptuously transform himself. For as regular Idea's (from whence the Archeus hath all his Blas) are implanted on the seed by the lust of the Generator; so also from the impurity of Nature, he hath reserved every riotous and voluptuous inordinacy of Concupiscence, which is plainly never laid aside, as long as there is a living in the flesh of Sin: Because, it is altogether proper to Nature defiled in Passions: For so the Archeus is after some sort sorrowful, angry, hateth, is vexed, dispaireth and is burdensome to himself, although a man shall procure no such thing to himself, or feel it in himself. Indeed exundations are made in the Archeus, hitherto unnamed, because they are proper unto him, and not even so much a-kin to humane disturbances; whence also, excentrical and poysonous Images do bring forth meer Poysons: For they are as it were voluntary griefs, which gnaweth the Life as the Moth doth the Garment, according to the Wise Man.

These are indeed unnamed Idea's which do bring forth a Disease otherwise lying hid, or an hereditary Character to light. But if the Brain, Heart, Spleen, &c. are the Courts wherein the Prince, the Archeus, doth celebrate his Counsels: Why hath not the very Principal, Original Being, the Motive one of the Imaginative Faculty, also a Phantasie proper or natural unto it self? And they do afford in Nature, corrupted by Concupiscence, irregular exorbitances in that Being, especially while he doth as it were withdraw himself from the Commands of the Soul, and had rather be of his own right.

8 Neither doth it hinder that such Passions of the Archeus, are not properly felt in a man, which otherwise, might seem to be required if they ought to draw out Disease and Sealing Idea's: But certainly dis-harmonies proper to the Archeus, which happen without the commerce of an Organ and the Soul, are never felt in a man: Neither indeed seeing we know not most dreams, yea neither do we know our selves to have dreamed, unless there be made a certain mutual passing over of Faculties into an Inne. For doth the Generator perceive that he doth form an Idea, which shall a while after build so proud an Edifice?

For

For doth he once think at least-wise of forming the young? things to be done? For in the lust or desire, the mind is after some sort alienated, and doth as it were withdraw it self, in the mean time while the Archeus doth imprint his own Image, without the imaginative faculty.

The Archeus therefore being retired without the assemblies of his Court, is molested or vexed within his own possession, as it were with a certain wearisomness (for neither do the irregularities of the Archeus strain themselves unto the rules of passions, and of mental Idea's, especially while he doth violently wander from his Offices, yea and from the command of the mind) whence there are Idea's, which are the authoresses of sloath; and from hence is slowness of digestions, negligence, omission, with a certain unappetite of Life, &c. Of what sort are the immoderate desires of eating, bearing rule, knowing, having or possessing, subduing, revenging, enjoying, &c. And so the Idea's of these conceptions do beget dissolutenesses, desires, lavishments, and unsufferances: From whence at length there are neglects of the digestions, of distributions, and government, expences, voluptuous provocations, irresolutions, loads or burdens, crabbishnesses, &c. Whence at length Plagues, also unknown Monsters of Poysons, venoms, and likewise dissolute or wasting Diseases, and the poverties of an Atrophia or lack of nourishment; for that sort of Idea's are destitute of counsel, and formed without his wonted Courts: And therefore their Matrimonies and Ministeries, are no more regular than the natiivities of the same: Therefore the Archeus having slidden into his own proper, and riotous irregularities, being wholly Symptomatical, and impatient, is as it were mad, doth sometimes forsake the reins of government, the which otherwise can never be idle; sometimes snatcheth them up again being interrupted, sometimes operates more slowly, and is hastily affected with his own heaviness or weariness: Yea in the midst of the fullness of his pleasures, he stirreth up torments to himself, as a being plainly irrational; for the exercise of the Digestions being interrupted, a nourishable Humour being detained in the sixth digestion, through to much delay, conceives the foreign ferment of an abounding digestion, and is frustrated of its end: For from hence again the Archeus being as it were greatly affrighted, and as it were repenting him of his carelessness, doth rashly move all things.

But I cannot meetly explain the means whereby the Archeus doth make his own voluntary excentricities, nor decypher the Idea's of these by a proper Etymologie, if they are invisible, unpercivable, and made in the withdrawing of the Archeus from corporeal Offices: For I have not known the manner or mean whereby seminal Beginnings do express their natural endowments, the which is plainly unknown unto me from a former thing or cause: For I counterfeit it by conjectures only attained from a similitude or like thing. Indeed by things regular in Man, I have made conjectures which another more judicious than my self may explain; but it hath seemed to me that it would not be worth my labour for these things to be now wholly searched into according to individuals; but that it is sufficient as well in knowing, as in healing, to have withstood generated Idea's, and to have taken away all disorder from the Archeus, peradventure by one only Arcanum or Secret, of which hereafter more largely. Therefore ye that will give a wished peace to your Studies, and to the complaints of the Sick; seek and ye shall find.

But besides, all potestative Diseases do assent to the Doctrine already delivered, and those which do as it were wax fresh again without any co-touching of filths: And of that sort, are first of all hereditary Diseases, infused by the generater with the seed: To wit, whose Idea's do patiently wait for some years before they are manifested in the off-spring, yea and sometimes in a late Nephew.

Secondly, Diseases which do sleep through long silences of dayes, and which do now and then relapse, do convince of the same thing.

Thirdly, con-centred Diseases, which I else where call the tortures of the Night.

And Fourthly, Diseases of a disproportioned virtue, do declare the same, the which I call an unequal strength. But as to what concerns hereditary and posthume Diseases: It is certain, that a Disease Idea is transplanted, being decyphered in the seed of the Parents.

Not indeed that the generater hath the character of any conceived passion, or Disease, proposed unto himself in generating, from an appointed end: But (as I now attend to speake) the Archeus in the act of generation, conceiveth a pleasure, whereby he being withdrawn from the Body into his own center, ought by so much the nearer, to reflect himself on the Soul, as it were another extream from the Body; from whence he receiving

- ing a vital Light, cannot but be filled with Vigour, and receive his own seminal Image, indeed the cause of fruitfulness: For it is proper to him in all his pleasures, to contemplate on himself with a well-pleasing, in his own Glass, and with a plausible delightfulness, the which hath even brought a self-love, and a certain arrogancy in the first cradles of Nature, yet diverse in it self, by reason of the variety of Pleasures: For while the Archeus doth with-draw and abstract himself as I have said; yet he cannot but be in a Body, as in a Place: Therefore I call him abstracted, not indeed from the Body, but from his Court, or ordinary Throne: But an abstracted contemplation of the Archeus is not made in the Heart, as if he did floate in the continual motion of agitation, and pulses; as neither are the bosoms of the Heart, the Court of Counsel of the Archeus being abstracted; yea neither in the very substance of the Heart; but his Pallace it self is more inward. To wit, in the stable Spirit it self, implanted in the spleen: Indeed that same Image of his own self conceived in time of lust, doth put on a particle of the Spirit whereby it is begotten, which particle according to a Chymical account, is the 8200 part of its whole: And the which least particle therefore being thus decyphered, passeth afterwards into the in-flowing Spirit, domestique to the Heart, together with the Idea of lust and desire: But the Idea's of desire are only motive directresses (even as else where concerning Sympathetical things), and therefore the conceived Image of Mans Archeus, is implanted
- 14 through that direction, in the material seed: Wherefore as Death began from *Venus* or carnal lust: So it is dayly hastened, even as also the death of a Plant beginneth from a conceived seed, as the vital faculty is thereby mightily diminished. In the next place, surely that is truly made, and not by a phantastical deceit, wherein such an Idea doth not only represent a total or entire humane Being; but also individual inclinations, properties, and defects: For from hence a trunk in one Arm doth not therefore generate an imperfect Arm; because the formative Idea is a branch derived into generation, not from else where, than from the implanted Archeus of the Bowels: Therefore hereditary Diseases do increase on the young, from a Disease Being: To wit, the Idea being imprinted on the seminal Spirit (seeing it is the very Disease as yet lurking, and sealed in the first Life of the seed) doth as yet sleep, and expect its maturity, until it being awakened, and breaking forth from the disturbance of the Archeus, be apt to bring forth its own products: So indeed furies are bred in, and propagated on off-springs, together with the whole race of seminal inclinations: Moreover also from thence it is evident, that not
- 16 all Diseases of the Parents are transferred on their off-spring; but those only whose Idea's have defiled the Archeus of the Bowels in the Parents; for neither is any occasional matter of the Gout or fury, socially transferred with the integrity of a proper or natural seed: For besides that, that strange-born duality doth contain a barrenness of the seed; also that supposed matter of the translated Disease should putrify, it being vanquished by the importunities of the place, and ferments, and repetitions of digestions, should stink, putrify, or vanish away in the successive multiplicity of dayes; but it should not
- 17 accompany unto the period of Life, and stir up its own relapses. But as to what belongs unto silent Diseases, although acquired ones; surely that thing they have proper unto them, that they do rise again at the set periods of importunity: For so the Falling-evil doth sometimes sleep for Months, and Years, yea and is never stirred up but by *Venus*, Anger, Grief, Child-birth, &c. For neither is any matter in any place detained, the fewell of the Falling-sickness: Because it should either putrify, wither, be consumed, or loose the Antient blemish of poyson: The which seeing it doth not come to pass, but remains for Life; it hath therefore chosen another Beginning, and immediate Inne, than superfluities; because it is sealed in the Idea of an active Being, and that constant throughout the whole Life: Therefore the Spirit of Life concluded in the Organs, doth suffer its storms from its own Disease Idea's; the which as oft as the inflowing Spirit receiveth from thence, so often it presently brings the contagions of the same into act: For as the poyson of the Falling-sickness is that which makes drunk, is sleepifying, and after some sort furious; its original cleerly appears about the Stomach, and afterwards is chiefly perceived in the Head, and doth singularly affect the clients thereof: So the Archeus of the Head stamps poysonous Images, which are hateful to the very implanted Archeus, and suspected of a poysonous Contagion, and he is thereby easily made wholly Apogeeal or most remote from his center.
- 18 Thirdly, some Diseases are con-centrical in their matter and efficient Cause, yet seeing they are Youngs conceived in the irregularity of the Archeus being become exorbitant; hence they are ex-centrical in respect of health, but con-centred in the more inward soyl of the Archeus: For hitherto have the stars respect, and they especially are moved

moved at the conjunction of the Moon: They do also fore-shew the hinges of winds to come: For neither doth the Archeus shew himself to be obliged to the Stars, unless through the imporrunities of Diseases: Wherefore those Diseases, are commonly called the Ephemerides or dayes-books of the Sick: Therefore in those that are in good health, the Archeus is not ruled by the Stars: But because they do singularly follow the Moon (which is the night Star) therefore they do most rage in the night: Therefore I call them the torture of the Night, because it seems to be carried by a co-like Blas, and to talk with its Stars; and that thing surely, doth not belong but to the Archeus; seeing a more gross compaction of Body is not fit for this purpose: they are therefore sealed in the vital Spirit implanted in the principal Organs; but nothing is there sealed besides Ideal Characters: The Archeus is a fountainous Being, which by his own Blas doth stir up every assault or violation in us, according to *Hippocrates*; but he remains a fountainous Being, how neatly soever Disease products are taken away: For although he may sometimes vitiate as well things contained, as things containing; yet the Archeus reserves an imprinted vice peculiar to himself, whereby he stirreth up every storm at pleasure.

Lastly, Diseases which in the fourth place, I call those under an unequal strength, are inbred, or obtained: And because they bespeak strength, they have manifestly enrouled themselves under the powers or faculties: But it hath alwayes been a difficult thing in nature, for a desired strength to be bestowed on all particular Organs, without the complaint of some; but that one doth alwayes prevaile over, or is weaker than another: Unto which indeed, Humours or snivelly superfluities, do not flow or run down from the guiltless Head; even as it hath been otherwise attributed to feigned Humours, and Catarrhs in the Schooles: But rather the Archeus implanted in the more weak part, observing the penury of distribution, and perceiving the inequality of injustice, becomes a complainer, and seditious, as it were against a step-mother. The Idea's of which passion or impatience, seeing it is not meet to send else where, he being crabbyish, retorts on himself, and brings forth the effects of sorrow in his own Digestions. Therefore the very seminal Beginnings themselves of Diseases, are drawn out for diverse ends, although they glisten in one only immediate subject of inherency; because they are received after the manner of the reciever: That is, they do sustain a dif-formity or disagreement in their mansions, through the diversity of the humane Body, and parts. And moreover the Archeus himself, according to the diversity of his motions, doth stir up a various household-stuff of Symptoms. *The Spirit (saith Hippocrates) hath made three motions in us, within, without, and into a circuit; and he moveth, and transchangeth all things with himself, even while he is orderly: But in his irregularity, whatsoever he shall perform, he shall also utter memorable effects of his disorder.*

19

CHAP.

C H A P. LXXI.

The birth or original of a Disease Image.

1. A description of a Disease by a numbring up of things denied.
2. What a Disease is.
3. The vain thought of Physitians concerning a Disease.
4. The Inner of Life belongs to a Disease.
5. The force of a Disease Idea is proved by Vegetables.
6. By the Blas of meteours.
7. The Blas of an Archeal Idea in us, is proved from the Premises.
8. The ordinary seat of Diseases.
9. The Images of perturbations are cited.
10. From a mental Non-being, is made [this something]
11. A twofold Diseasefying Archeal Idea.
12. Idea's brought unto the venal Blood.
13. The rule of right in healing.
14. Why the Author keeps the names of the Antients.
15. A probative or prooffe-ful Idea, is framed in the Archeus alone.

I Have already at large described an unheard of Doctrine of a Disease Being premised by me, That Physitians may learn, to look into a Disease from the fountain, and may desist from being seduced by Paganish Opinions: Wherefore a Disease is not a certain distemperature of elementary qualities, or a victorie proceeding from the continual strife of these, even as hitherto the Galenists have dreamed; neither likewise is a Disease one of the four feigned Humours, exceeding its natural temperature or mixture, and matched to the four Elements: Neither at length, is a Disease a certain degenerate matter, awakened by an impression of the Elements: But every excrementitious matter, is either a naked matter preceding a Disease, and therefore an occasional Cause of a Disease, or it is the product of a Disease resulting from the error of the parts, and so a certain latter effect of a Disease, although afterwards it may occasionally stir up another Disease, or may nourish or increase another antecedent Cause. Nor lastly, is a Disease a hurtful quality, budding from the poyson or contagion of another, and that a hurtful matter: Notwithstanding such offences as those do only accuse its presence, but not the effect depending only occasionally thereupon.

2 A Disease therefore is a certain Being, bred, after that a certain hurtful strange power hath violated the vital Beginning, and hath pierced the faculty hereof, and by piercing hath stirred up the Archeus unto Indignation, Fury, Fear, &c. To wit, the anguish, and troubles of which perturbations do by imagining, stir up an Idea co-like unto themselves, and a due Image: Indeed that Image is readily stamped, expressed, and sealed in the Archeus, and being cloathed with him, a Disease doth presently enter on the stage, being indeed composed of an Archeal Body, and an efficient Idea: For the Archeus produceth a dammage unto himself, the which when he hath once admitted, he straightway also afterwards yields, flees, or is alienated, or dethroned, or defiled through the importunity thereof, and is constrained to undergo a strange government, and domestically to sustain a civil War raised up on himself; indeed such a strange Image, is materially imprinted, and arising out of the Archeus: A true Disease Being I say, which is called a Disease.

3 For although Physitians are only busied about the dissolution, cleansing away, and expulsion of the hurtful occasional matter; yet our thought is not able to vary the Essence of a Disease: To wit, that because a Physitian labours in the banishment of the occasional hurtful matter, therefore also that a Disease ought to be that, which that deceived Physitian doth in a rash order intend to expel: For a Disease is essentially that which it is, whether the Physitian be absent, or present: For neither doth a Physitian in the beginning, more determine or limit a Disease, than the Disease doth terminate it self; because it is that which doth not accommodate it self unto the thought or esteem of others, but doth dayly deride the same: Wherefore as health consisteth in a sound Life, so doth a Disease in the very Life it self being hurt; but Life doth only and immediately subsist in

in the seat of the Soul; but the Soul doth not operate out of it self, unless by virtue of its official Organ, which is the vital air of the Archeus: And therefore it is a wonder that it hath hitherto been unknown, that a Disease sits immediately in the same vital inne where the Life enjoys it self; of which more largely hereafter: for hateful persons will scarce believe that every power of sublunary things is stirred up, and contained in Idea's: But that thing I have already before sharply touched at by the way, yet it shall profit to have it more strongly bound or confirmed: For we have known, and believe by Faith, that a power is given to Herbs of propagating their like: But that proprietary faculty is a real Being, actually existing, which is alwayes, and successively manifested in the seed; neither is that faculty a certain accidental power, or naked quality; but it is a seminal virtue, whereby the Plant which is the Parent, decyphers an Idea in his own seed, the container of figure, and properties, according to which it will stir up, delineate the seed it self, and make the Plant its Daughter to grow: For in seeds a manifest Image is known, skilful of things to be acted for a new propagation.

In like manner, the Sea doth not cause, but suffer horrid tempests, which the Wind doth efficiently stir up; and truly the Wind is not moved by it self, and of its own free accord: But by an invisible influence of the Stars, according to that saying: *The Stars shall be unto you for signs, times or seasons, dayes, and years*; for so great a storm of the primary Elements, or Air, and Water, breaks forth from a Being which is like unto Light: But the Blas of the Elements is not stirred up from the meer Light of the Stars: For although the Light of the Stars be incorporeal, and immaterial, yet it is not a certain simple Light, but that which besides the property of a solitary Light (which is only of enlightning) hath a motive Blas in it self, and likewise durations, and directions according to places, strengths, and weaknesses; no less than an alterative Blas hath for all successive changes, and periods of times: These Blas's are Antiently wont to be ascribed unto the aspects of diverse Lights; the which aspects notwithstanding, as such, do not exceed their own efficacy, which is to have enlightned: But for to stir up so unlike stations of times or seasons, and tempests also foreseen, that is, before the coming of the Stars unto the places of those aspects, is surely the effect of a greater weight than only of a simple Light: I therefore suppose that the diversities of aspects spiritual, Astrall or starry Images of the invisible World are framed, which they lay up into the Air for the exciting of a Blas, according to the Image of those properties; for truly the aspect of the Stars is only momentary, as also their place is unstable, but their effects do prefevere for some long time: Therefore it must needs be that the lightsome aspects, besides a momentary Light have laid up in the Air the Idea of a Blas, operating even unto a Consumption of it self, the irregular Rules, Locks, Bolts, Spurs and Period of times or seasons. Such an Image therefore is of the Nature of Light, that it may operate at a set time, for else it should scarce reach to us in the course of many years, unless it were of the Nature of Light: Therefore as there is in Plants, an awakening virtue of a seminal Image for fructification; So also there is in the Stars, a faculty of framing the Idea of a motive Light, which is the original principle of motion, making whatsoever is committed unto it for execution. But our Archeus, whether he hath a virtue or force like unto the Earth, or unto the Stars, it is all one, so we understand that it is proper unto him to stir up a tempestuous Blas in us since the disobedience of our first Parent: Whether such a property increased in him from Sin; or next, whether he doth awaken those Blas's anew by his own beck, and from the aspect of his own perturbation, it is all one, and sufficient; so we acknowledge that all the force as well of a regular Life, as of an inordinate government, doth issue from nothing but from this vital Beginning.

And therefore all Diseases, and the Types or Figures of these, are certain conceptions decyphered by this invisible Ruler, to finish the storms of our calamities. In the Skie therefore of our Archeus, are aspectual Idea's decyphered, as well from the depth of the starry Heaven of the Soul it self, as those formed by the erring or wandering implanted Spirits of the seven Bowels: For so a fear of the Plague creates the Plague: A sudden fear of Death hath oftentimes killed the Gout.

Likewise the fear of Honour lost, or to be lost, if it hath endured for the space of one day, hath now and then caused the Falling-sickness: The sorrow of poverty hath brought madness, but in others it hath brought forth the Scrophulus or Kings-evil: All mad folks are for the most part devolved, or overthrown from Pride: And the Wise Man testifieth, *That sorrow doth gnaw the Life of Man, as the Worm doth Garments*: But Sorrow is a Sorrowful thought, but this is a [non-being] because a mental Being; the which because it is a [non-being] therefore it hath no power of acting from it self.

B b b b

Therefore

- 20 Therefore a sorrowful cogitation doth produce an active Idea, and [this something] is made of nothing, no otherwise than as in a Woman with Child, perturbation doth bring forth a Monster, and transchangeth the humane Young into a beast-like one; because it is proper or natural to the imaginative power, to frame Images or Likenesses as well in mental, as Archeal Beings: Sorrow therefore, which is a slow disturbance, brings forth an Idea which consumes and gnaws the Life; because such an Idea hath the degenerate vital Air of the Archeus for its matter, the which therefore pretends to pervert the remainder of the Archeus with its own likeness; and this degenerate Air is corrupted in the Duumvirate: And therefore presently after Sorrow, there are continual Sighs; and these things thus happen to the faculties or powers of a sorrowful Phantasie: The same thing also happens in the power of the Phantasie proper to the Archeus, whether the inflowing or implanted one; both of whom, (even as concerning the Plaguegrave, elsewhere) doth frame the most powerful Images of Imagination.
- 11 Wherefore also a two-fold Diseasifying Archeal Idea, of a two-fold Archeus, distinguisheth a transient or soon-departing Disease, from a Chronical or long continuing one: Wherefore they who shall hereafter rightly attend, shall find that every perturbation of the Soul, which is strong, dayly, and doth not descend by issuing out of the Archeus of the Bowels dedicated unto imaginative Offices, or out of the duumvirate, doth bring forth a diverse, or distinct madness, through the varieties of Idea's: They shall likewise find that simples, as well degenerated within as received from without, do sometimes affect the Archeus himself from without; do bring forth an equal Idea of madness of the Duumvirate, which thing is manifest in the smallest contagion of a mad Dog: which kind of Diseases also being con-centred in the vital Members, talking with the Stars, (whence there is an unequal strength, the torture of the Night, hereditary Diseases, and such as return by circuite) are seen to have an invisible store-house within, and an original principle of the tragedy; whence according to the command of maturities, or of a most remote excentricity, Idea's the Authoresses of so great storms, are repeated.
- 12 But Idea's, if they inform the venal Blood, or the liquor which is immediately to be assimilated, and nourishable, tempests are bred, conformable as well to the Idea's of perturbations, as to the entertaining Archeus: Therefore the Archeus doth so wantonize within through his own proper luxury, voluntary weariness or heaviness, corruption, defect, furious Blas (for names fail us where a thing layes hid, as being unknown by a former Cause) that although he shake nothing from without; yet the Life forsakes, suspends, despiseth, is averse to the Rains of Government, and rageth, Man knowing not of it: For so Idea's do arise, which being free, do break forth into all dissoluteness, and unbridled tyranny of Diseases.
- And seeing the motions of a wantonizing Archeus, are hidden to a Physitian, and so that we are not able to repose the once rejected Rains, into the hands of such an Archeus: By consequence, a certain Universal Arcanum, which is a sleepifier and appeaser of the Archeus, is to be administered.
- 13 He therefore labours for the most part in vain, whosoever being destitute of a Universal secret, doth place his endeavour in the brushing away of occasional Causes, the Archeus being not first appeased: The which surely is to be exactly noted with a Golden Pen: For it happens unto him no otherwise than as he, who (having not first stopped up the spring head) presumes by exhausting of water to dry up the brook.
- 14 In the mean time, seeing the Archeus proceedeth in an unknown path, in his own fabrics of Images, I am constrained in the explication of Diseases, to keep the Antient Names, and to follow their Sir-names: That in the beaten path of occasional Causes, we may descend unto the knowledge of hidden Disease Essences: But it is sufficient for me, to have shewn in this by-work; that seminal Idea's in the whole Systeme of the World, are the beginning principle of every Blas of seeds, generations, successive changes, and storms: Yet before that I attempt the Scheme of Diseases, seeing it is as yet to scanty, that Idea's are formed by the Archeus, no less than by the imaginative power, it shall be profitable to shew that thing unto the Young Beginner, by one argument.
- 15 For the dead Carcass of a man, which is dead through a voluntary Flux, exceeds all Ice in coldness, not indeed that in very truth, it is more cold than the dead Carcass of a Cow which dyed of her own accord (for I distinguishing that thing by the Organ of qualities, and the degrees of the encompassing air, it is clearly demonstrated) although notwithstanding that thing be thus judged by our touching; for that happens through the fear of the Archeus alone, which greatly dreadeth at the co-touching of Death in the dead Carcass.

1. He feels Death, the which perhaps the imagination is as yet ignorant of.

2. He greatly dreadeth.

3. The inflowing Spirit retires.

4. But that which is implanted in the hand is troubled and fails for fear, and so conceives a beginning of Death unto himself from the trembling fear.

Therefore the Holy Scriptures do not incongruously say, *That he that should touch the dead, is reckoned impure, and half dead*: Which Image of Death, the Archeus, will he, nill he, doth conceive, and doth so stiffly retain it for some good while, as long as that Idea of fear is surviving, that it scarce becomes hot again at the hearth within an hours space: Therefore the Idea of trembling fear is really there; for truly it works its effect, and is formed by the Archeus, and not by the imaginative power of the Man: Therefore if the Archeus runs away trembling for fear, by a like reason also, he shall be sorrowful, angry, shall be stirred up through fury, and other passions, and is in a conflict through the Idea's of any perturbations whatsoever, becomes troublesome and hurtful to himself, according to the pleasure of Idea's, which he hath formed unto himself by his own force, and liberty.

CHAP. LXXII.

The passage unto the Buttery of the Bowels, is stopped up.

1. The difficulty of curing a Disease is concluded from the very seat of the Soul.
2. An example of a quartane Ague.
3. A remarkable thing concerning Remedies hitherto used against a Quartane.
4. Wherein purging Medicines have hitherto deceived the unwary.
5. Purging things have sometimes cured by accident, and have remained through this deciet.
6. A reckoning up of incurable Diseases.
7. Distillation brings forth new generated things.
8. Singularities in things produced by the fire.
9. Decocted things differ from distilled things.
10. What was the scope of the Author in times past.
11. Some Remedies have deceived the Author.
12. An examination of Remedies.
13. An examination of Digestions.
14. An examination of Water-remedies.
15. The abilities of the Stomach.
16. Whence the chief variety of conditions is.

After I had discerned that the Stomach was the root of the tree, or the root as well of a universal Digestion, as of all particular ones whatsoever, I had alike seriously known, that the Mortal or sensitive Soul, the Mistis of all kind of actions whatsoever in us, and the Dispensers of Life throughout the whole Body, did inhabit there: That indeed also the Framers of the first conceptions, was there situated; likewise the shop of sleep, no less than of watchings, and madneses; I held it consonant to reason, that the immortal mind, or Image of God, could be no where more decently infolded, or co-knit, than in the aforesaid formal and vital Light; to wit, in a spiritual principle, for that reason also most near, because akin unto it. And when as the Monarchy of Life being thorowly searched into, I saw, and optically or clearly knew, that every Disease did essentially consist in the Life, and arise out of the same, the causes of difficulties in curing Diseases offered themselves unto me, especially those which are not silent of their own free accord, or which do not hasten through their own violence unto the end of their period, but do accompany the Life which they do bitterly molest.

Wherefore of the more lingring Diseases, I saw a Quartane, an Atrophie or Consumption for lack of nourishment, a Cacoehymia or state of bad juice, likewise weakneses, and

afterwards, as well those which have chosen their bed in the outmost habit of the Body, (such as are the Leprosie, Palsey, Sciatica, Convulsion or Cramp, Gout, &c.) as those which are fast tied to any of the Bowels (as the Apoplexie, Epilepsie, Astma, affect of the Stone, Dropsie, Madnefs, &c.) were not cured, not indeed through a defect of desire of curing, but through want of a remedy alone; but I long laboured in that remedy, and I many times retreated, until I knew that it should respect the very fountain of Life, or sensitive Soul.

Wherefore first, I took the Quartane Ague it self in hand, because it was obvious, most tiresome or tedious, and plainly known; and the which while it did despise the usual remedies of Physitians, it rendred the hope of the same void. First of all, I was more assured by the same, that wheresoever any material Disease product lay hid, the application likewise of a convenient remedy was required; or else it was to be feared, that the effect raised up from that occasional Cause would remain surviving: And therefore from the correlative of this proposition, I found no remedies of Physitians hitherto; how-
 3 ever through their same, unstopping, resolving, cleansing, or purging Medicines may be boasted of; yet that the same do only come or are brought down at most, even unto the entrance of the spleen alone, which bewraies it self to be the inn of a Quartane Ague, by a sensible testimony: Therefore I being from hence certainly instructed, have conjectured, that that unstopping, &c. force of a remedy, doth soon even in the Stomach perish, wax mild, is tamed, or banished through the intestines, if at least-wise it shall not first die: But if any quality of remedies shall remain safe from their middle Life, something broken, and being recieved, shall more fully or inwardly pierce; (as Mace, or Terpen-
 tine do from the necessity of *Magnum Oportet*, retain their Savour in the Urin) but at least-wise the same offers it self so gelded and dismembred, that it doth not effect any of those things, to which end, and for which things sake Medicines are swallowed. Eggs indeed and the Fleshes of Beasts do represent the favours of the nourishment which fattened them: But surely while they pass over into a vital family-administration, although they may retain the foot-steps of their former taste, and so may contain some testimonies of health; yet the helps of these are so sluggish, for the rooting out of any Disease product, that long and lingring Diseases have long agoe manifested the boasting of these remedies to
 4 be vain, yea and have taken away their hope. But purgative things only have most especially deceived, and do deceive as well Physitians, as the unwary Patients hitherto, because they have more subtilly blinded or deceived them than other remedies have done: For as they are of the race of poysons (the which I have on purpose shewed in the Book of Fevers) they do presently stir up a confusion about the first roots, and mothers of digestion: And so whatsoever was taken the day before, or elsewhere also rightly subdued, that thing, solutive Medicines do presently also defile with the Character of corruption, and the more crude Blood being attracted out of the Mesentery, it is straightway wholly driven forth, upon the account of a defiled ejected liquor; the which indeed is there likewise straightway corrupted, until the poyson of the solutive Medicines be satisfied and extinguished by working: It hath been thought hitherto, that this stinking liquor of the
 5 venal Blood and Fleshes, was the very matter of Diseases; or that the now mortified and stinking liquor which is fetched from far, by solutive or purging Medicines, is a Humour (one of the four) selected, and magnetically or attractively drawn unto them before others. Therefore this perverse Doctrine, hath even hitherto most powerfully deceived Mortals, because solutives did promise, and shew forth some effect, although for the most part a vanishing, and now and then a cruel one; yet not the Author of health, unless
 6 sometimes by accident, nature shall suffer its fardle detained in its first entry, to fall out together with them; which effect by accident although it be rare, yet it hath given unto solutives, the smoaky name of purging, and hath caused a right of imploring solutives, and of hanging upon their help, as it were a sanctuary; and in the mean time, most Diseases have remained un-touched, and more cruel: For as many Diseases as do
 7 not of their own accord presently hasten unto an end or bound, are accounted incurable, and they are commanded to be quiet by the vain expected tyranny of solutives: In the mean time, as many remedies as did endeavour by a notably cruelty to compel Nature unto their will, have forthwith felt the resistance of our Life, and for that very Cause are hurtful, because they lay in wait for the Life, while they change the Blood into a mortal poyson: they have become I say, hurtful and dangerous helps; for if they were suspected of poyson, and the degrees of tyranny, presently as soon as they were taken, they were rejected as infamous, because they seemed to stir up a notable storm of disturbance, confusion, and fainting, and nothing besides a threatned turbulency, and slaughter; but only
 and

and alone, the greater secrets, whereinto an endowed faculty of Nature is instilled from above, or being made glorious through the praise of purity, and subtilty, have equally supplanted all tyranny of Diseases, and have thus arose into an universal Medicine, by the one compendium of restoring Life. I have said elsewhere, that every distilled thing is a new Creature produced by the fire; and so not of the first institution of its own concrete Body: Verily even as the fire is a certain thing made for artifices or crafts, yet natural; so whatsoever bewrayes it self by the fire, although it be natural, yet it issues from an oblique or crooked principle of nature, wresting seminal Beginnings aside unto the will of the fire.

Hence whatsoever is made or composed by the fire, doth at once attain its first, middle, and last Life, and they are melted joyntly together, as one only seminal principle, which hath flowed together into the matter, being before subjected unto, and distinct in divers terms, is co-united by the fire, and also is thereby made a new Creature, arising indeed from beginnings existing in the concrete Body: Notwithstanding, those seminal beginnings are so altered by the fire, that by a certain co-melting, a new Being is thereby raised up, and the three Properties of Life do arise together with it: Wherefore also, all distilled things are free from corruption; the which otherwise in a recieved succession of the three Lives, is familiar unto things: For from hence it is manifest, that decoctions are not such Beings as are allured forth by distillation; but only translations of one being into a middle one, foreign unto it self; and therefore they do easily putrifie or stink, and are altered. Furthermore among simples, some have manifested themselves, being bewrayed indeed by no signate; the which notwithstanding have obtained a particular property to restrain the figures of an exorbitant Life in Diseases: For those Simples, although they do not ascend unto the largeness of general kinds, yet they seem to be specifically directed by the glorious bestower of things, for the rooting out of some Diseases: For I who had long since declined from the horreur of purging things, and in thorowly viewing round about, had taken notice of the almost nullities, or unprosperous applications of remedies; and in the mean time, while the secrets of the art of the fire were covered with their vaile of darkness, and that the specifical efficacy of those Simples did lay hid; I diligently enquired, whether I could not (while as new Creatures in springing up are renewed by the fire) prepare remedies by art, which might either profoundly pierce into the Branches of the Veins, or at least-wise might disperse a somewhat light or gentle property of themselves, together with the venal Blood, and Urine, and might seal it among the family-administrations of Life? Which lightish quality indeed, is not understood to bewray it self in taste, but the which should remain so safe, and unbroken in the Kitchens of the Digestions, that without a notable unclemency of savour, it might reach unto the scope had in creating Medicine from the Earth.

First of all, the contemplation of provokers of Urine smiled on me; to wit, the which did seem to be dispersed from the Mouth, through the Reins, even into the Bladder: The same thing a vulnerary drink perswaded, uttering its Fruits even into the external joynts: But at length I manifestly knew, that Diureticks themselves, do not indeed materially descend into the Bladder; as neither vulnerary Drinks, into a remote wound; but that all the aid of Diureticks or Urin-provokers, and wound Potions, is framed in the Stomach it self.

By way of an Example of the Stone of Crabs, or of the most fixed Stone for broken Bones, a helper as well of wounds, as of the difficulties of Urin: For this is not dissolved by Mans Stomach, neither therefore also doth it pierce unto far distant places in its stony matter, or milky form; but if it be not resolved into its first Being, neither also doth it return into the substance of Milke: But the sharpness of the Stomach, and its native ferment, dissolves as much as it can of the injected Stones; not indeed by a retrograde resolution towards its first Being; But only, after the manner of soure things it dissolves those Stones, that is, into Powder: Even as in the Book of Fevers, I have professedly by handicraft operation demonstrated: For from hence it is, that if they are first dissolved in Vinegar, they do more powerfully afford their aide, than if they are first boyled in Wine; also because they are more dissolved in sharpeish Wine, than in Water, or Ale: Therefore also they do more powerfully succour, than if they are drunk in the broath of Fleashes, or Water: because sharp things do break those Stones into the most subtil atomes, and seeing they have as yet a native cream in them, tameable by the Stomach: Therefore also by how much the more subtilly they are broken or prepared, by so much also the ferment of the Stomach doth obtain the more of that Cream. Likewise, although Mace, Turpentine, &c. are taken, and shall change the odour of the Urine: Yet their aides are but weak in the Dis-

ary

- ury, and suppression of Urine: For in very deed, all the Testimonies of the former Life of Simples is annihilated within the Stomach, and none but the flaggy footsteps of tastes do remain; so that the Nutmeg, and Turpentine (which do very much differ in their savours) yet they do breath one only and alike Odour in the Urine, which is a manifest sign, that in the first shop of the Stomach, the primitive Crases's of things taken, do perish, but that new ones do arise, being gotten by cocting: For otherwise, of Turpentine, and its Oyle, and Mace, a sameliness of Odour could not result in the Urine, as neither an acceptable Odour of Violets from thence: So Asparagus stinks in the Urin, as a certain putrifaction being adjoyned unto it, doth hasten the same into banishment. But vulnerary or wound-drinks, do no otherwise succour a wound, than as they do so diminish the unjust sharpness in the Stomach, that they do also restrain, and expel sharpness out of the wound (all which out of the Stomach is hurtful, Disease, and a Companion of putrifaction, as I have elsewhere demonstrated concerning digestions:). For truly the
- 13 general digestion of the Stomach is chief over every Kitchen of all the digestions: Yea indeed, Birds are throughout their whole Body actually, and notably hot, and so they do somewhat long sustain the night rigours of Winter; But they piss not, because they want Reins and Bladder. Therefore whatsoever a drinking Pigeon drinketh, doth wholly depart by unsensible transpiration: Hence therefore it is manifest, that the Kidneys only do make Urine, which else would be sweat: And Urine in Man, differs not indeed in the matter of the first Latex; but in the efficient ferment of the Reins alone: And it is also manifest, that Birds do unsensibly eject every superfluous excrement without sweat; Therefore Urine differs from sweat, more than in matter only: besides the proper Essence of Urin not formally received from the Kidney, it doth receive a liquid, and tinged dung into it self, which is not attracted upwards unto the veins in a Bird, neither do they sweat although they are wearied: Therefore because sweat in a Man, is not unsensibly blown away, even as otherwise in a Swine, the Kidney of Man hath the blame: Even as also, that the liquid dung is separated, and drawn from the Bowels upwards, within the veins, the Kidney hath the blame: But the use of that drawing for the Stone, is shewn elsewhere: But the Urine is not tinged, that it may the more readily be ejected; for the Urin is sharper, and doth more prick, as oft as it is without tinging dross: As the Kidney therefore is the cause of the Urin, and of the aforesaid things, so also it is the cause of the Dropsie, as the Kidney closeth it self, through the indignation of its own Archeus; whose indignation if it be restrained by a due remedy of the Stomach, forasmuch as its
- 14 Duumvirate, sits president over the Kidney, the Dropsie is for certaine, soon holpen: For the wheynesses of the Dropsie are oftentimes expelled out of a swollen, and extended Abdomen, by purgers of water, the solutive Medicines themselves having as yet stayed but a little while within the Stomach: But the Dropsie doth soon repeat the same, because the Kidney being wroth as before, doth persevere in the closure, and diversion of the Urin: For the water which the Kidney hath laid up in the Abdomen, the Stomach fetcheth from thence, and dejects through the Paunch, and so sheweth that it can command the follies, or trifles, and indignations of the Reins, as also reduce the wheynesses unto the intestines by unknown wayes: Not indeed that such solutives are materially, and presentially present even unto the Abdomen, and that by a purgative poysonous faculty they do reduce the deposited fardle of the Dropsie with them: Nay, but these are the Achievements of the one Stomach, and the priviledges of the Life and vital Duumvirate.
- 15 The Pipes or Channels indeed are unknown to us, but the Life, the directress, and mistress of these, reflects it self unto its own seat or center, that is, unto the Soul: And therefore from the very Life it self of the Soul, the Functions, Offices, Vigours, Valours of Powers, and all the defects of these are to be fetched: for the Soul doth distribute all its Offices unto the parts, and doth govern them by the Life; neither only doth it distinguish the Offices by the parts, so that it hath separated diversities in the very vessel of the Stomach, as well in its Orifice, as in the Pylorus; but also it hath co-knit the powers themselves unto a beginning alike in parts indeed; but those which do every one of them perform their own tragedies: Which thing surely is no where more manifestly seen,
- 16 than in Diseases, and so in the defects of the faculties; because that they strow the way unto disorder, and a dis-joynted discord of unity: Seeing that the mortal mind is believed to be of an univocal or simple identity; therefore also conditions, inclinations, cruelties, &c. come to be ascribed unto the mortal Soul: The which indeed follows a material variety of dispositions: from hence therefore is blockishness, barbarousness, furies, madneses, as also provocations to leachery, quicksightednesses or sharpnesses of wit; and lastly, the ruin of sciences, and extinguishments of memory, &c.

C H A P. LXXIII.

The Seat of Diseases in the sensitive Soul, is Confirmed.

1. Ten Paragraphs or Positions elsewhere proved, are supposed.
2. The twelve Properties of the Stomack are rehearsed.
3. That some Diseases do inhabit in the Life of the Stomack.
4. An Objection is Solved.
5. The Life of the Muscles.
6. A consideration of the Apoplexie.
7. The incomprehensibleness of the Vital Powers.
8. Sleep is the last of Faculties.
9. Why sleep was sent in before Sin.
10. The Seat of all Diseases.
11. An unquenchable Consideration of Hunger and Thirst.
12. That the most powerful Ideas of Diseases are framed in the Duumvirate.
13. The largeness of the Power of Ideas is rehearsed.
14. That Remedies for the most part do not dilate themselves without the cottages of the Stomack.
15. The Schooles not heeding these things, have erred in the application of a Remedy.
16. A choice of Medicines.
17. Remarkable things of the Stone for broken Bones.

But that the Roots of Life may more clearly be laid open, I will compose some Beginnings or Essayes founded by me elsewhere, and borrowed from thence, into Positions.

1. The Immortal mind, the immediate Image of the Divinity, after that it delegated the Government of Life unto the sensitive, mortal and frail Soul, although it delivered its Power unto this mortal Light; yet it hath remained connexed to the same, being co-bound unto it by the Symbole or Resembling mark of Life, as it were the band of the nearest Knowledge: Which sensitive Light of Life, because it sits entertained in the Stomack, as the Root of a Mortal Life; therefore also the mind it self hath chosen its Bride-bed and Throne in the same place: The which I have elsewhere more strongly professedly confirmed concerning the Soul.

2. The Soul hath sowed its Faculties necessary for Life, throughout the Organs of the Body: Wherefore neither doth the Ankle See, nor the Ear Walk, as neither doth the Liver transchange Meats received, into Chyle.

3. The vital Faculty of the Organs, in health sends forth healthy or sound Actions, and the same as often as it is vitiated, utters vitiated Actions.

4. But the vital Faculty is not vitiated but by a Disease.

5. Which Disease therefore is nothing but a real and actual Vice of the Faculty; a positive Being, I say, and for that Cause consisting of Matter and an Efficient Cause, after the manner of other natural Beings.

6. But seeing the vital Faculty it self, doth essentially include in it a Disease it self: Hence it followes, That a Disease it self is in the formality of its Efficient Cause, a Faculty not indeed vitiated, but vitious: To wit, the which doth vitiate or hurt the vital Faculty: And so a Disease is a Power very much like to the vital Faculties, and that so intimate with them, that also in some Cases it is united as well to mortal and hereditary ones, as those that are centrally rooted.

7. But a vitiated or hurt Faculty, is either a particular one, proper to some one Organ, as Blindness, Deafness, the Palsie, &c. Or it is every way dispersed in the common vehicle of the inflowing Archens, by way of property of Passion, of a secondary Passion, or by way of Sympathy. And indeed however, and after what manner soever a Faculty is hurt, at least-wise it is discerned

and clearly seen every where to undergo a vital Vice; and that every Disease doth immediately inhabit in the Principle of Life, that is, in the Archæus himself.

8. For all Diseases in general do sit in the universal beginning of Life, whether in the mean time the Archæus be particularly molested by some Organ, or whether he be stirred up and enraged by the Fountain of Life, and a quickned or enlivened Root: For although that may vary the Species of a Disease, yet such a variety doth not take away the maker of a Disease.

9. The Sensitive Soul is chief over all its vital Faculties, whether they are fomented by distributed Organs, or next by the common Archæus: At least from thence it dependeth, that the Cure almost of all Diseases, consisteth and is perfected in the radical Innæ of Life; that is, in the Seat of the Soul and Center of Life: Unless sometimes perhaps a certain Organical part shall drink up a Disease proper unto it self, and the vital Faculty its guest, shall marry its self unto the same.

10. Whence it becomes evident, that almost all Curing of Diseases (Wounds, and likewise those that are Chyrurgical ones I except not) is to be solicited in the Stomack, and in its Duumvirate: and so, neither there to be incongruously sought after or solicited: For so also oft-times, the more outward defects are taken away by an internal Remedy of the Stomack, being else vainly attempted by external Medicines. It is no wonder therefore, that Remedies do scarce exceed the command, order of the Stomack, or are materially farther dispersed.

2 Which things being thus premised by the way, I will subscribe some Priviledges of the Stomack.

1. And First of all, That is a right proper and peculiar to the Stomack, that it doth primarily Cook for it self; but for the whole Body onely by accident, indirectly, and by an extraordinary right before the other Members: Because Divine Ordination hath so suffered it to be, that it may prepare a nourishment of the rude matter of the meats for all the others: But the Stomack it self is immediately nourished by the Chyle concocted by it self, no otherwise than as the Root of Vegetables is nourished by Leffas the Juycce of the Earth: But not that the Stomack doth allure Blood from the Liver for its nourishment, as neither doth the Root of Vegetables fetch back again the Juice, once dismissed from it self, and dispersed upwards from the Bark, that it may thereby be nourished. Wherefore the Stomack enjoys a few Veines for the Office of so great an heap, and a Vessel of so great capacity; To wit, because it is not nourished by venal Blood according to the accustomed manner of other Members, but it is fed onely with the Chyle, the which it afterward suits into a Spermatick Liquor agreeable to it self.

2. But the Veines of the Stomack do not therefore diffuse Blood out of themselves, neither doth the Stomack being hurt by a Wound, weep forth Blood: And the same right the rest of the Membranes have borrowed from the Stomack unto themselves.

3. The Stomack-Veines do not transmit any thing of the concocted Chyle of Meats, or suck it unto them, that they may derive the same unto the Port Vein, according as otherwise, the Mesenterick Veins are wont to do. And that thing I have else where more strongly confirmed concerning the Digestions.

4. In the next place, neither do the Veins of the Stomack imploy themselves in the nourishment of the Stomack.

5. And therefore the Stomack-Veins being full of pure Blood, have a free, vital, undisturbed faculty, appointed for the sucking of the Chyle or dispersing of the Blood: Either of which two notwithstanding, is domestical to all the other Veines.

6. Yet the Veins and Arteries being knit unto the Orifice of the Stomack, are not in vain extended, but the Soul being entertained in the slenderness of the Membrane of the Stomack as if it were not there, yea being scarce tied to the place, breathes forth the breath of its Life into the Organs (to wit the Heart, Spleen, Liver, Brain, Kidneys, Stones, &c.) after an unsensible manner, and through an incredible straitness and slenderness of Pipes or Channels. Hence indeed are there sudden Ecclipses, Apoplexies, Epilepsies, Giddinesses, Swoonings, &c. to wit, as oft as the sensitive Soul ceaseth to beam forth its Light into the Organs.

7. For

7. For there is in the Pipe of the Artery of the Stomack, a Vital Faculty of that Soul, for the beaming forth Beams of Light unto the heart, so long as it is in a good state: But when as it behaves it self rashly or amiss, presently also Heart-beatings, Faintings, Giddinesses of the Head, Apoplexies, Epilepsies, Drowsie-evils, Watchings, Madnesses, Head-aches, Convulsions, &c. are stirred up. In the next place also, there is by the Soul, the Governness of the vital Faculties, breathed its own vital Virtue through the Stomack-Veines unto the Liver, and so from the Unity of the Soul, divers natural endowments do flow forth unto all the Organs: for truly alwayes, and on every side, all things as well in the Universe as in us, do issue from one point: For that mortal Soul, and Seminal constant Governness of the Body, seeing it is occasionally begged from the Disposition of the arterial Blood, it of necessity also inhabits in the Organs, as well in the bloody Spleen, as in the unbloody Membrane of the Stomack: Verily even as the Brain, the Fountain and Judge of the Acts of Perceivances or Feelings, doth most especially want Sense or Feeling, and therefore also it is many times read in the Holy Scriptures, That the Soul of Man dwells in the Blood.

8. It sufficeth therefore in this place, that the sensitive Soul, being placed in these seats, doth there unfold its Virtues, and from thence diversly send them forth.

9. For indeed Sleep, Watching, Appetite, Digestion, Ferment, Chearfulness, &c. do discover by their plurality, a health of the Functions, even as also in the same Fold, and central Fountain, the Apoplexie, Epilepsie, Vertigo or Giddiness, Madness, Fury, Forgetfulness, &c. are entertained: For truly the one onely sensitive Soul is the immediate Cause, Center, Nest, Fountain, and Original of all vital Faculties and Actions whatsoever. But in this Path it is sufficient to have rehearsed that which else where I have professedly demonstrated, that in the more inward Coat of the Stomack, as it were in a Bride-bed, the Mortal Soul doth dwell, and that it involves in it the immortal Mind within its Bosom: But that all those Powers are vital, in their Function indeed distinct, although not in their vitality or liveliness, and so, so proper and peculiar unto the Soul it self, that the Etimology of their Propertie hath sprung from thence.

10. Wherefore without Controversie also, I suppose that all Diseases universally (because they rising up against the Powers of the Soul, are Adversaries, and Hostile) do also immediately assault or invade the fraile and mortal Soul: Against which indeed, they are able to shake their Spears or Darts, and pierce the same by reason of the likeness of a sublunary Symbole.

11. Which strife indeed doth first happen in the Archens himself, the Porter of the Soul, and from thence they are more inwardly derived, and do pierce even unto the kernel of the Soul it self.

12. Diseases also which are brought from without, and forreignly to within, do stand as retainingly subject to this right, as those which of their own free accord do wax hot, or which are struck out of the Flint of the Archens.

Wherefore, although I have already accused most Remedies of an impossibility of piercing; yet it sufficeth a Physitian, if the Medicine doth in the very mentioned Inne of the Soul, talk with the same in its own possession. But surely these things are new and unheard of, an unexpected Philosophy of Healing: But the novelty it self ought little to deterre us, so truths are demonstrated.

Especially it should be most difficult to perswade, that all madnesses do spring from the region of the Stomack, unlesse it had been voluntarily and freely granted me, that some Madness is praeordial or from the Midriffs, and likewise that the Stomack it self is the Seat of the concupiscible Faculty, that Sleep likewise and Watchings are raised up, &c. from thence: Unlesse I say, the Falling-sickness were the more frequently felt to be lifted up out of the inmost room of the Stomack into the Heart and Head, and so that the upper parts do for the most part, languish through a secondary passion of the inferiour parts. But if the Falling-sickness doth sometimes seem to be raised up from the Feet, yet at leastwise it never invades without Swooning, and never takes away the Senses, unlesse it shall first fore shake or trouble the sensitive Soul it self, and the principal Faculies thereof; and the proportion of the commotion should determine or limit the proportion of the fit: So that although its occasional nest be reckoned, to be in the Head or Feet, yet the Epileptical fit doth never depart, the which leaves not Thirst behind it, and by that Sign it bewrays that it had pitched its Fold in the Stomack, and that the sensitive Soul was smitten in that part

C c c c

especially

especially, where in it planted the thirsting Power. But seeing the Falling-Sickness doth prostrate all the powers of the Mind with an Unsensibleness, Convulsion and Beating attending on them: It is for a certain Sign, that the sensitive Soul it self is pierced in its native and wonted place; and that it is there and from thence the Governness of all the Senses and principal Faculties: Yea and seeing such a spoiling of the Faculties doth not happen as it were by hands or degrees, but that there is a commotion of all of them at once by one onely stroke; therefore the government of those Faculties, is denoted to be smitten in its Center, and the Members farther remote from the Stomack, are discovered by a secondary Passion, as to suffer an onset of that Disease: So in like manner also, not to possess from a property those vital Powers which they loose. Neither let any one be amazed or think this a vain kind of Doctrine, although I shall place the Majesty of the Duumvirate within the slenderneis of the Membrane of the Stomack: For let that thing be proper to the Soul, that it is detained in a place as it were without a place. Therefore the Epilepsie painfully and at unawares invading all the Superiority of the sensitive Soul, sitting in the Stomack, doth argue the very seat of the Soul to be there: But not that Epileptical onsets do happen from Fumes or Vapours slowly lifted upwards: The which I have also many times elsewhere, plentifully confirmed concerning Catarhes. For those Eclipses do happen, no otherwise, than as if a hole be suddenly stopped; through which Light otherwise doth beam forth into an obscure place. For the Light is suddenly interrupted and ceaseeth: So that that thing is so natural to an Apoplexie, that among the *Germanes* and *Dutch*, it hath obtained the Name of a Strok; the which notwithstanding, being new, I have many times vanquished, by procuring Vomit, or by the more strong Stomachal and Aromaticall things being Distilled.

4 Furthermore, in as much as in fits of the Falling-sickness, all Sense, not likewise motion, faileth: Yet that doth not therefore argue, that the sensitive Soul is not the Fountain of both: For although all the intellectuall powers do fail, and onely the Testimonies of a shaking and leaping motion do remain as long as that Eclipse endureth; yet all those Powers are denoted or designed as issuing from the Soul into the Body, as if they were proper to it: But those Powers which it self hath planted in the Archeus, implanted in the Organs, are under an Eclipse, and are tumulted by the commotion of the Soul; yet they subsist obscured, because the Life is not taken away, neither doth the Pulse therefore cease.

5 But in as much as an involuntary convulsive motion doth even still remain; that is not to be attributed so much to the Soul, as to the singular Life of the Muscles: The which indeed I have elsewhere shewn, as yet to persevere for some time after Death: And that a Tetanus and strait Extension doth begin long after Death: So that although the Life of the Muscles doth proceed from the sensitive Soul, yet it obtains a certain peculiar Efficacy, as also Station of place. Therefore it is less wonderful or absurd, for the Muscles to be therefore tumulted by their own Motion, if on this side Death, they have felt the common Life to be Eclipsed.

6 But in an Apoplexie and Swooning, even the motion of the Muscles also, doth plainly fail, except the motion of those between the Ribs; because then the sensitive Soul doth undergo a total darkness: Therefore the Soul, the directress of Life, according to the divers Tragedies of its perturbations, doth manifoldly dismiss its Guardians into the Organs placed under it. But every Life, seeing it is of the disposition of Lights, descending from the Father of Lights, it exceeds a humane Understanding: And so by an unfit word, the Father of Lights is called by the Schooles, the *Intelligible World*, who doth least of all fall under our Understanding: For neither is the most Glorious Father of Lights, and his whole Common-wealth, wholly unknown unto us, according to the Testimony of Truth to *Nicodemus*, but also the Essence, Thingliness, Direction, and Distribution of the vital Powers, do exceed our Capacity.

7 For how astonishable is the privation of Understanding, Memory, yea or of Speech onely; especially Motion, Sense, Appetite, yea and the integrity of Health remaining? And how terrible is the fall of these at every onset of the Falling-sickness, Swooning, or drougie Evil? And how much doth it exceed humane Industrie, that so diverse Faculties do arise and inhabit in one Stomack? Because so diverse Symptomes do bewray the same hurtings of the Faculties: For all things do drive us unto the amazement of a Miracle, or Wonder: And therefore we being admonished by so many stormes on every side of our Ignorance, and Fondness, do confesse, that that one only sensitive Soul is the Fountain of Life, alio Life the Spring of many Powers, and Distributress thereof, as well in the healthy as in sick Persons. Therefore also if we Physitians ought to lay the *Ax* unto the

root of the tree) we are intent for the obtaining of Universal Arcanum's or Secrets, which may conserve, preserve, plant, and build up the Life in the very Fountain of Life, the Author of Death and Diseases, no less than of Health. For I now have regard to the frail Soul, but not to the incorporeal and immortal Mind : The which we believe to be Originally inspired alike, and alike perfect in all. And therefore Conditions, Inclinations, Domestick or Forreign, Mild or Fierce, Tractable or Teachable, Humble or Proud, are infilled into us by the Mortal Soul : Wherein as in a Subject or Place, locally disposing the Inclinations of varieties, are unfolded ; which otherwise, from the Mind or Image of God are naturally banished.

Therefore sleep was not in man naturally in respect of his mind, but was afterwards sent into him by the Creator : But before sleep was bred, Sense, Motion, and Appetite were present : Because the Mind as it was thenceforth Immortal, it was also unweariable and had no need of Sleep or Rest.

Yet Sleep was sent into Adam before the Fall : Not so much for that he stood in need of Sleep, especially a few hours after his Creation ; as chiefly, because by Sleep he was not yet made sore afraid of known Death, threatned unto him for eating of the Apple : Otherwise Sleep produceth from it self sluggish idleness, and foolish vain Dreames, and causeth the loss of almost half the Life. Whence even at this day, from the antient Sleep sent into Adam, they have yet retained Dreams, *That the Old Men shall Dream Dreams ; the Young Men shall Prophecie : And Night unto Night shall shew Knowledge.* For the sleepifying Power which was sent into the Mind before the Fall, and the same also being after a sort free from the wedlock of the Mortal Soul, would after some sort draw it into its Original Prerogative of Propheying, unless the darkness of the Soul sprung up, and put in place, did obscure the same.

But while I declaim the Stomack to be the Inne of the sensitive Soul, and for that cause do dedicate the sink of Diseases to the Stomack : I have indeed considered Occasional Causes near the same place, to sit as well in the hollownes and bought thereof, and being as it were strangers onely, there to stick ; and likewise in the tent of the Bowel *Duodenum* (which is the Prison deputed for the Jurisdiction of the Gaul, and Pylorus) and most troublesome to Anatomists for its compofure of Vessels and Glandules, as in the Archeal sheathes, no less of that which is inbred, as of that which is inflowing : To wit, that through the conspiring distemperature whereof, the sensitive Soul is diversly disturbed, and all the Vital Faculties, the Chambermaids hereof, to be co-shaken, and so the same being weakened, that an Army of Diseases doth arise, as well those Radical or Chronical, as those soon hastening ; as I long since have known, being thorowly instructed by many Experiences.

So that I saw Hunger, and unextinguishable Thirst to proceed not so properly from the sharpnesse of the matter provoking, as from the very fury of the sensitive Soul : For otherwise a Thorexis, or Draught or Potion of generous Wine, should not dissolve Hunger, unless Hunger being as it were made drunk by appeasing, should soundly sleep. And therefore Thirst in Feavers doth not afflict but in its own Stations, although the same matter, yea and a more cruel heat doth presse more in their Vigour than at other times.

Now even as the Government of the Stomack hath been enlarged on ; So also it hath been shewn, that the sensitive Soul doth there abide, as in the first or chief Kitchen of the Meats, and that the Life doth there Inhabit : For truly the most potent Powers of transchanging and digesting, do there exercise their Offices, and therefore not onely Kitchen-filths are there collected, but also the Fabrick of hurtful Images is there Stamped : Because they can no where be more readily framed, than from the Soul the Inmate of those parts : For there is none but feels Horrors, Fears, Tremblings, Angers, Wroths, Sorrows, Sighs, and every Perturbation of concupiscible Affects, to arise and be stirred about the mouth of his Stomack : For if a Gun be unexpectedly discharged, who doth not there feel a sudden leaping of some fear ? Who in the next place is there, who being ready to sit down at a Table, and endowed with a notable appetite of eating, doth not perceive, if at sometime a sorrowful Message be brought unto him, that all sharpnes of eating is presently suspended ? Therefore the Faculties do there flourish, whose Effects are there felt. For I have oft-times seen Women, in whom sudden Fear, at another time also, in whom notable Grief had raised up the Falling-sickness. Elsewhere also in whom a lingering and continued Sorrow had moved a Hypochondrial Madnes, yea and elsewhere had caused the Scrophulus or Kings-Evil. So a Fear of the Plague doth very often create the Plague ; Even as a sudden fear of Death hath sometime killed the Character of the Gout.

Pride also hath often made men mad. I have also known others who having suffered Reproach, and not being able to revenge the same, have suddenly fallen into an Apepsia or Unconcoction, into the Straights of an Asthma, and into Beatings, Perplexities or Anguishes, and Oppressions of the Heart. Others who from a suddain sense of Reproach or Contempt, have presently rushed into an Apoplexie. And likewise I have known those that have been wearied with long Grief, have violently rushed into a Dropsie, Jaundise, and Tumors of the Spleen. Likewise very many of both Sexes, who from sudden Anger have departed into an Apoplexie; but others who have gone into divers head-long Grievs of Contractures.

- 13 The Fabricks of which Diseases are manifestly felt about the Orifice of the Stomack: For therefore a certain small Feaver, as it were a Diarie or Daily one, doth precede the Fits of the Gout, under which a Character springs up, which is dismissed from the Stomack into the Joynts that it may tyrannize in the same place. An Apoplexie therefore, whether it break forth from an Inordinate Life, or next from Anger, or Grief; yet at leastwise, it alwaies riseth from the Stomack, and is darted into the Head: For the Jaundise doth in no other place more flourish than in the Court of the Stomack, whence it stirs up its Anguishes and Sighs, denoting, that there the Game of its Cruelty is played.
- 14 Wherefore also I have taught before, that how much soever Vulnerary Potions may restrain the framing of corrupt Pus, and fear of Accidents, in the utmost part of the Foot, yet not that therefore Vulnerary Drinks do enjoy a larger Priviledge otherwise than other Medicines do: For they do not materially hasten unto the remote Wound, when as the while other Medicines are ignorant of a passage to the Spleen, in favour of a Quartan Ague.
- 15 Which things the School of Medicine hath not hitherto known, although they are the Foundations of Medicinal Art: Because they are those things which do not onely respect the virtue or force of Medicines, and the Expedition, Application, and Appropriation of these: But notwithstanding, besides the manner of acting, and hope from thence resulting, they declare the principal efficient of Diseases. The Ignorance therefore of which thing alone, hath caused a sloath and drowiness in the Physitian; but in the sick, Despair, together with a sorrowfull apprehension of Grievs and Discommodities; and at length (alas for grief) have brought forth so many Widdows with mournful Orphans, unto the fowl disgrace, or base esteem of Medicinal Affaires.
- 16 But so far as it respecteth the choice of Medicines, it hath listd me to wander thorow the ranks of Minerals, Vegetables and Animals, and to take them in their own simple Integrity, as they sprang forth from Nature, and those again diversly to agitate, and so to divide them into Salt, Sulphur or Fatness, and Mercury or a seminal Juice. And first of all, the natural endowed Virtues or Faculties of things, which the Divine Goodness hath given from a Gift for the Sick, do for the most part want the testimony of taste; so that even by that same sign alone, they do bewray, that they are endowedly instilled by God for the use of Mortals: neither that they do clearly appear but unto those to whom God hath given his gifts of the Holy Spirit, and hitherto he hath withdrawn them from the knowledge of unworthy Physitians, who to the little ones and ignorant ones of this World doth reveal those things which he hath hidden from the great ones: For there are Gifts dispersed in the Exercise of Simples, by which they ascend unto the largesse of a general kind: So indeed, as things appropriated and specifical, are acknowledged to be directed by God unto the every way Curing of any kind of Diseases.
- 17 For the Stone for broken Bones is of a late Invention, which owes its Name unto the Cure of a broken Bone: But it is unconquered by Fires, nor Calcinable; but notable in its unfavoury taste, being untamed by the Stomack: Yet it is a wonder how much it shews its self Victor as well about the Bowels, and inward Wounds, as in the outmost parts, about the Fractures of Bones.

From hence, First of all it plainly appears, *That on the Digestion and care of the Stomack, do the Cares and Governments of the Sixth Digestion depend throughout its whole.*

2. *That there is no necessity for a Medicine to be derived unto the place affected.*
3. *That a Medicine onely by touching at the Archens of the Stomack, is able to Cure remote Diseases in the Body.*
4. *That there is no need, that for to Cure, the Agent doth touch the remote Patient.*

5. *That*

5. That as the Stone for broken Bones, or the Stone of Crabs doth finish its Cure in the Stomack: after the same manner also do Purgative Medicines, and all other Medicines whatsoever operate.

CHAP. LXXIV.

The Squadron of Diseases according to their Occasional Causes.

A Primary	A Secondary	Disease Being in an inordinate Archeus. For whether it be Primarily raised up from the Idea of a Man, or doth immediately arise from the Idea of the Archeus, it always at length Retires into the Inne of the Archeus.	Things Received,	Things cast in by Witches.	
			Things inspired by Endemicks.		
			Things received by violent Invaders.		
				Things taken	In Drink.
					In Meat.
					In Poyson.
					In Medicine.
				Things Hetero-clital or of an irregular kind.	The Torture of the Night.
					An unequal Strength.
					Barrennesse.
				Things left, or Excrements in the 1, 2, 3, or 6 Digestion.	
				Things transchanged in the 1, 2, 3, or 6 Digestion.	
				Things transmitted from one Digestion into another.	

Mention is made of these by the Antients, under the name of an Abstracted Quality, or Relation of Terms; and so they are onely acknowledged by way of a Name, as they have acknowledged an Occasional, that is, a Remote Cause: By Reason whereof, I have commanded this Division to remain in their retained Sir-names.

CHAP. LXXV.

A Division of Diseases.

1. *The Essence of a Disease is Decyphered by way of Repetition.* 2. *The Method observed in Explaining.* 3. *The Division of a Disease.* 4. *What Things may be called things received.* 5. *What Received Injected things are.* 6. *What Things Retained are.*

Hitherto I have spoken of Diseases as it were in stead of a Preface : Now afterwards I will touch at the Scheme of the same : For a Division also affords Members, which being explained by course, do bring Light thereunto. Truly every Disease (the which being once spoken may suffice for the future) is framed indeed by the Archeus in his own self : But in that part of himself wherein it is seallying constituted, it also materially there consisteth, as it were in its proper and seminary Inne : But for the most part, it hath either an exciting occasional matter, or produceth a Product from it self, the occasional Stirrer up of a Secondary Disease : But for its Efficient Cause, it hath a diseasifying Idea : Whereof, as its matter is drawn and borrowed from the vital Archeus himself, so also no otherwise doth the Idea spring from thence, because it is that which is stamped and polished by the Archeus himself. Therefore there are in the first place, as many Species of Diseases, as there are of diseasie Idea's.

For there are no more, as neither any fewer : Because every Disease draws its Beingness from a diseasie Idea of quiddity or thingliness. By consequence therefore, there are as many Species or particular Kinds of diseasie Idea's, as there are diversities of Filths in us : For whether those Filths shall enter from without, or have been first unfolded within, and have arisen from the Errors of Digestions ; or Lastly, whether they have begun from a nourishable and vital Juice, that is all one in this place.

In the next place also, there are as many diseasie Idea's in us, as there are Heirs of Potestative or Facultative Beings : To wit, as when a too violent solutive Medicine is taken : For although it self be soon ejected through the Paunch ; yet the Venome of the same ceaseth not to remain domestical in the Stomack and Bowels : To wit, so that a stinking Flux doth persevere even until Death. So also besides, some Poysons having lost their primitive matter, do sometimes by a lingering slaughter, and long one being left on Posterity, mournfully slay them : And as well, if that be received from without, as if begotten within.

Finally, so also Hereditary Diseases, and their Consorts, are feminally co-bred in us, issuing from their own Idea's. So indeed the Gout, Falling-Evil, &c. do without a visible matter of Filths, unfold their Harmonies, and are prolonged for Life : Because they have obtained Idea's to be confirmed in the Archeus, or to be as it were intimately allyed, and adhering unto the implanted Spirit the Governour : And the which therefore do molest onely at their set Termes and Periods, native unto them : Which things being laid down, and now known, I consequently say, that in the Expedition of the dividing of Diseases, I will follow the variety of occasional Causes : Not indeed that I would even from the Beginning invert the Names and every Conclusion or Limitation of Diseases, unto the much tiresomness of the Readers, who should either hardly bear such an every way Novelty, or might attain it or follow it with too much trouble : and therefore although I name an occasional Cause for Diseases : yet I will not have it

to be understood, as if the occasional Cause were the Disease it self : But rather that a Disease as an invisible Being, may be understood to be occasionally stamped by an External matter.

Therefore, First of all, I appoint two general kindes of Diseases : To wit,

Those } Received,
and
Retained.

But those things which are Received, are Injected, Conceived, Inspired, or at length Taken. Which Four, I will first expound by course : And then I will soon after Treat of things retained, as well in respect of the Body, and Distributions, as of Digestions, and Transmutations.

Things Received therefore, are those which do traiterously enter into us from without, do disturbe or affect the Archeus, so as that from Counsel hurtful to himself, he frameth a Disease Idea within himself, and Seals it in his own material part : And so becomes a true Parent of a true Disease. For things Received, before their Enterance and Application, did shew a Fore-Caution and Preservation, but not a Curing : Because indeed there was not yet a Disease : Neither is Curing but from a Disease alone. But from what time things once Received, have made but even onely a privy Enterance, and have been even Admitted by the way, they do by and by Invert or Disturbe the whole Family Administration and quiet of the Archeus.

But things Retained do proceed from our Vice and Defect : For Superfluities are for the most part either taken in, or sprung up within, in our own Possessions: the which Being as it were Citizens expelled out of our Common-wealth, as the Enemies of Unity and Concord, they have no part in the Inheritance of Life with us.

CHAP.

CHAP. LXXVI.

Things Received which are Injected or Cast in.

1. *Why the Schooles speak nothing of things Injected.* 2. *A Three fold Rout of Atheists is here found among Christians.* 3. *The Ballance of Karichterus.* 4. *A perswasion of the Devil.* 5. *How much the Devil can act in Diabolical excises.* 6. *Eight Positions brought hither.* 7. *The Devil hath not a free, but a constrained Will from his depravedness.* 8. *Satan miserably deludes his.* 9. *Diabolical means do operate by the force of a Covenant onely, but they have not an operative force in Nature.* 10. *An objected Argument is Solved.* 11. *The top of Operation in Bewitching Effects.* 12. *Why the Devil is Impotent.* 13. *The Devil can onely freely will Evil.* 14. *The Act of Man is proved in Bewitching Works.* 15. *The Prerogative of Man in Operating.* 16. *What the Desire may Operate in this Thing.* 17. *Things Buried or Hung up, how they proceed not, the first Enterer being unknown.* 18. *In vile little living Creatures, there is a Directive Power of their own Will.* 19. *After what manner Enchantments are transferred by a naked touching.* 20. *Why a Repercussion or Reflection doth reach to a conceived Enchanting Verse, or Mischievous Act.*

BUT I thus call Received things Injected: they are those which are as it were Spiritual Wonders, committed by the co-workman of Satan. Of these things the Antients are silent; Because they are those who also have neglected most Treatises of the more manifest things, because they have known none from a Foundation: For truly they had rather admit of the wickedness of inhumanity and cruelty, than diligently to search into the knowledge of Injected things, and acknowledge or confess their Ignorance thereof. And they choose sooner to behold their neighbour fainting under the extreamest howlings; than that by a small Remedy, they would be willing to learn how to help so cruel a Malady.

Divines indeed and Lawyers, have handled their own Examinations; but the Schooles of Medicine I accuse of neglect: For I judge that to be done, because the evil Spirit is the Prince of this World, who therefore hath every where obtained his Patrons in the Chaires, Courts and Pallaces, whereby himself sits as it were President: And the whole World is in very deed placed in Malignity: For some of these being the more inclinable unto Athiesme, do deny Devils, Juggles, like as also Enchantments; and they affirm that they cannot be induced to believe the contrary, unless they shall see them. Whence at length they deride among themselves the Immortality of the mind, and the Fear of God, as Politick Inventions for the restraining of the common People.

And then others according to the Decree of the Holy Scriptures, do indeed believe Devils and Infernal Guardians to be: Yet that they are not Cacogeneal or of an evil property or nature to Humane society, but rather fellowly and near friends: And so they esteem bewitching Juggles, for deceitful Fables, melancholly Trifles, and old Wives Dreams.

There are also Lastly, others among the Learned, who being admonished by the Authority of the Holy Scriptures, of the Works of the Devil, also of the Enchantments of Witches or Sorceresses, do admit of them indeed: Yet they esteem them to be meer Arts, nor to be condemned by any other Title, but that they are thoroughly taught by Satan, and are onely Instituted for evil: And these are the most audacious in all wickedness, and at this day cloak Faith with Hypocrisie.

I therefore since the dayes of *Plato*, do behold three Patrons of Witches to have now constantly flourished among Athiests: And I guess that so cursed an Infection hath not hitherto

hitherto persisted, but by the same president: In the mean time, no Physicians that I know of, except one only *Karichterus*, hath handled this matter: Who indeed hath proposed the manner of making, and some remedies of curing, but not a little suspected of vain superstition: Neither also hath he touched at the Theory, because he seemed to have been ignorant thereof. Physicians in the mean time, being greatly afraid lest they should be accounted guilty of a Magical Crime, while they should by a strong fortune, be reckoned to have conferred a help (which they know not) on their Neighbour, under so great straits of miseries.

Yet that privy shift, hath been commonly perswaded by the subtilty of Satan, that they might seem, to have neglected the searching out of a remedy, for the assurance of their own fame and conscience: But they passing by their languishing Neighbour, as the unbelieving *Scribes* and *Pharisees*, do forsake them in their greatest desolations: For none is otherwise reputed to have carefully heeded the Disease, or to have known the structure of the same, for which he describeth a remedy: And none is believed to have given poyson to drink, who enquireth into the Causes, and discerns the remedies: And least of all, is he judged to have inflicted a wound, who being sent for, hath set to his helping hand compassionately, and freely: As neither is he a Thief, who discovers the dens and counsels of Thieves: Far therefore by that privy shift, that it should be accounted for an infamous thing, to have known the means, progress, ends, and cure of, or medicine against enchantments; seeing these things ought to be known, and had from elsewhere than from the Teacher the Devil: For seeing the Devil is restrained within the Court of Nature, we are not to despaire, but that the most bountiful Jesus, hath substituted remedies for so cruel maladies, unto his own Glory, who hath never been wanting to his own Goodness, Glory, and Wisdom. A good Man therefore proceeds in a strait way, neither doth he look behind him, nor careth he what the World doth judge of him; to wit, most of whose judgements are foolish, and false: For it is sufficient for a good Man, that the hinderer, or destroyer of a Malady, is void of crime.

Therefore according to my capacity, I will shew how far the Devil is concerned in the actions of Sorcerers, or Witches: And the which as to a fundamental concernment, I will rehearse by eight Positions.

1. That every vital Form is a vital Light of its own Body.
2. That although the Forms of inanimate things do differ from Souls in the degree, and disposition of that Light: At leastwise they all do agree in something which is essentially light-some.
3. That by reason of their Light, they immediately touch, and pierce each other: And so Forms being connexed, do operate on or into each other, even as one Light doth divide another in the midst; for the Sun-beams being collected by a Glass into the Crest, for although they shall co-unite into a point; yet they again proceeding from thence, those which were in the Glass on its right side, even unto the Crest, do afterwards pass thorow it, being rebounded in the Glass unto its left side, yet they keep the identity or sameliness of the former Light undefiled; as neither therefore by reason of the penetration made in the Crest, do they labour with contagion: The which I have elsewhere mechanically demonstrated by a Figure.
4. That therefore formal Lights, which are diverse in the general, or particular kinde, do immediately pierce, and communicatively operate, without wearisomenesse, on each other like Light.
5. That all the forms of Bodies are true Lights, yet not substantiall ones, although Entitaded or made Beings, for the reasons elsewhere alladged concerning neutral Creatures: But the mind of Man alone is a Formal, Immortal, and Un-obliterated Substance: In this respect also it operates with a superiority, toucheth at, and pierceth every other form inferiour unto it (as elsewhere concerning the searching out of sciences) by that title especially recieved into Faith, and Nature, because it is the true Image of God, and the Kingdome of God inhabits therein: And who therefore hath put all things under its feet.

6. That therefore the evil Spirit, hath not a power from his Creation of reaching any Form, that in it he can perfect his own will by the absolute command of his Beck: For he is a Spirit abstracted

tracted from a corporeal Being, and bound, and forthwith after Sin, a most miserable Scoffer or Mocker.

7. But only a local motive power of Bodies, hath remained unto him, and the motion whereof doth turn to the hurt of Mortals: For neither can he beat down one only window of himself, without the help of the liberty of his Clients.

8. For neither doth he move the Elements by touching (seeing that he wanteth extreame parts whereby he may touch Bodies, not indeed those which he taketh to him) whereby he may lay hold of, or move any thing; but by his Beck only, he moveth with a beholdable Aspect, such as is, that of the Stars on Meteours, by Idea's, or of our will on its own Organs: Which mutual power, as it was naturally put into the Angelical Nature; So also it is left to the Devil.

Indeed he hath a native Blas, whereby he raiseth up Storms of the Air, and ragings of the Sea, as oft as God permitteth him.

7 For First of all, the Divil is so evil, and our Enemy, that he cannot will good even in the least: Wherefore neither hath he a free will of willing in evil things: But in good things, none but that which is against his will and constrained; for a Being, one, true, good, are convertible terms: Therefore in a contrary sense, that which appears to be, which is false, evil, and manifold, are the properties of Satan; and by consequent from his own will or beck, and natural power, he cannot so much as operate any thing freely, and without the permission of God, or without a free co-operation of the mind of Man: For the Dog of Hell is bound, neither can he operate on Forms, the Bodies of these, or their properties, unless he take to him the mind of Man as a co-operatress with him, under whose feet things more inferiour than it self are placed. In this respect therefore, he miserably circumvents his bond-slaves by deciet, and binds them in a Covenant, at least-wise that so they may the rather depart from God; as if for a reward of the stricken covenant, he were perfectly to teach them secrets, whereby under certain and set Forms, feigned Words, wicked Invocations, Execrations, Conjurations, and Wishes or Vows; in the next place, by Lines, Figures, Marks, Seals, Characters, Numbers, Hours, Moments, Vegetables, yea and the most filthy things, and the Striffes, Consecrations, Refinements, Defilements of all of these, and such his vain and void trifles, they were to effect things incredible: And indeed all evils, to the despite of God, and the destruction of Men. By which means, after their Covenant, he easily insatuates his own, and befooles them through a rash belief of him: Because they are those whom he fully possesseth, and unto those he committeth his commands. For he perswades these who have renounced divine Grace, of whatsoever he will, and promiseth that he will perform Mischievous or wicked Acts, by strength or faculties which he feigneth to be natural or proper unto himself: For he snatcheth his Imps into the detestable adoration of a Hee-goat; as if the government of all things stood in his Power, and that he alone could confer the gift of the working of Miracles: Because from the Beginning he was alwayes a lying Impostour. In the mean time that most unworthy or blamable Cerberus, doth only work meer deceitful Mockeries, and only empty Juggles.

9 For otherwise if those means in themselves prescribed by him, should have in themselves any force of operating (which he boasts of among his own) from a natural necessity also, alwayes, every where, in every ones Hand, and equally, they should effect the same, without reflexion upon a Covenant or Contract, and vain Circumstances.

10 Neither is that argument of value; Satan prescribeth vain superstitious Words to his, and those altogether impotent in themselves; therefore the whole effect of those things which happen unto those that are Enchaunted, are from Satan alone: For truly although the means are in themselves vain and of no moment, power or efficacy (such as are un-significative Words, Figures, Characters, Numbers, Gamahen, Talismannicks, Adorations, with all the superstitious exercise of vain Observations;) yet other operative means besides do concur, which are not of Satan.

11 Seeing that the Devil hath not an Ideal, Semminal, and Sealing power, as Man hath from the dignity of the divine Image, whereby the Bruits, &c. are put under his feet. Therefore the Devil borrows these mental, and operative Idea's of Witches, the which he can seal in Filths and Poysons. He therefore being cursed, and wholly most miserable, and forsaken by the Grace of God, is by himself no effecter of the same Works, unless he be holpen by the Soul of his bond-slave,

1. Because he hath not a formative faculty of an operative Idea.
2. Neither hath he an immediate touching of access, and much less an entrance unto formal Lights (whereon indeed, nevertheless, all the properties of things are inscribed by a figurative Idea) that he may hereby act.
3. Yea neither hath he any free power of acting, and much less unto the hurts of those who do not obey him.
4. For he being wholly most proud, would not ask a Permission from God, that he may hurt the Man that doth not obey him, knowing that the infinite goodnesse will never grant this thing unto him; Although he now and then may use the evil Spirit as an executioner, as in the history of Job.

For we must note that thing seriously in this place; that in Hell and among all the Damned, there is no honour, or sanctifying of the divine Name, but a continual cursing. For the Dead shall not praise thee O Lord, nor all them which go down into the Pit: Yet in or at the name of Jesus, the knees of all the inferior Citizens are bowed: To wit, as oft as God makes use of the evil Spirit as an Executioner; so often that is enjoined him by a command from above, of trembling at the name of Jesus; and indeed that command being heard, the whole infernal Pit doth unwillingly bow its knees: For otherwise, that which is wont to be said, that the Devil by the permission of God doth hurt Man: That must be understood to be granted unto him, by the aforesaid command of God, as to a Tormentor, or by a mutual operative natural power, which God hath conferred on his own Image.

But the Devil himself, the most miserable of Creatures, can do nothing of himself but will Evil: Because whatsoever departs from God, that is Evil, and therefore cannot but will Evil; because he that by willing, hath departed from God, ought originally to be Evil in his will it self. Therefore the Devil is by himself wholly unable for every Fabrick of interchangeable courses or alterations in Nature, because he is incapable thereof: And by consequence, he hath need for operation, to beg natural agents or means, which in their property have a free power, which he wisheth to apply: Yea neither indeed is he therefore able, absolutely, and immediately to administer them, but by the Souls, and Hands of those that are bound unto him: To wit, they reaching by the gift of Creation to the Light of Forms immediately subjected unto them: And therefore the first or chief operation by Witches, doth tyrannize on herds and flocks of Cattle. Indeed Satan making use of that free, and borrowed power, requires anothers co-touching, that he may connect the Idea's formed, and begged, and borrowed of his Client, in a medium or mean; and so that by anothers force he may beam them forth into Formes subjected to Man. And so the lying Impostor dissembles his work, and for it requires adoration; which work is plainly humane, and that wherein the Mocker himself doth least of all operate. Truly otherwise the condition of Mortals were most miserable, if Satan could execute the Evils known by Satan: For the Kingdom of the infernal Spirits, is not in the Earth. For Example;

1. A Man is able by his own perturbations, to hurt his own Prudence, Health, and Life.

2. Those tempests which are of the mind, do not remain the Beings of Reason, but falling seminally into a matter, they imprint the constant Idea's of their own perturbations, which things are proved by a Woman with Child being affrighted at a Mouse, who if shee apply her hand to any place, she presently seals a hairy Mouse on the same part in her Young: Yea if such perturbations are fore-timely made, they do oft-times transform the whole Embryo into a Monster.

3. But whatsoever is natural, and ordinary to a Woman with Child, that none doubteth, but that it may be natural to a Witch not great with Child; Indeed that she can form any kind of Idea.

What Impressions therefore, or what Idea's, and sealing Seeds, the evil Spirit raiseth up in his, he also borrows from thence, and imprints the same on filths which he prostitutes to his own, that they may infect them. And so right calleth those Sorceresses

or makers of Poyson : But not because they offer Poysons to be drunk only, but rather because of not Poysons, they do make Poysons : but those Poysons are applyed, as well by a local motive faculty proper and free to the Devil ; as also because they are transferred unto the intended object, by desire only, being the mover and director : As hereafter more at large. The Witch therefore hangs up, buries, drinks up those filths defiled by her through an Ideal Being ; yea and anoints her own hands, or washeth them with those filths, and seasons or besmeares them with cursed Poysons, that by a co-touching, she may transfer those Poysons into the object which she would hurt : For truly those feminal, Monstrous, and poysonous Idea's, seeing they are now the Citizens of another and foreign Archeus, introduced into the Body of the enchanted, and so being without their proper place and subject, the Archeus of the enchanted is forthwith defiled and corrupted by them. Wherefore seeing the Enemy of Nature cannot of himself compleat the very application (for else all the miserable enchanted Mortals should fall under the will of the Devil) he stirs up the Idea of a strong desire, and hatred in the Witch, that those mental, and free means being borrowed, he may translate his own will by what, and the which he intends to affect or corrupt : To which end, he also first of all prescribes execrations to his Imps, together with an Idea of desire, and most hateful terrour : For Man hath a free will of hurting Man, by which a Man is able to kill a Man with a knife, and so to destroy any innocent Person ; which the Devil likewise cannot do : And therefore as the application of a knife, so also of a Poyson, is equally forbidden to the Devil at his own pleasure. And therefore also is altogether impossible ; that is, without a free-man, or bond-slave devoted unto him : For neither indeed doth a Man kill another with a knife, unless a desire shall happen or have access in the free consent, and command of a resolute will : from whence it is sufficiently manifest : That First of all, the Devil hath not the creation of a feminal Idea, actually, and positively subsisting, such as is granted to the divine Image : And likewise that neither hath the Devil obtained a voluntary application of such an Idea, unless he hath from elsewhere, obtained a free faculty, not bound, and enflamed or provoked by desire ; because that desire, as it is a passion of the Imaginer, so also it creates an Idea, not indeed a vain one, but an executive and motive Idea of the enchantment.

Therefore indeed that hostile Mocker, requires a touching at the Body to be enchanted, or at least-wise at something which may primarily be affected, and at length of enchanting the Body, that the Idea's recieved may act on that thing by a Sympathetical, and Natural force (such as is that whereby Chalcantum or Vitriol doth naturally cure an absent wound) and afterwards on the Body, a Sympathetical commerce whereof, such natural effluxes do hold as means.

17 Lastly, things buried under the threshold, or hung up, do hurt ; yea and do unfold their poysonous cruelty on the first entrer only, without a co-touching of the Witch at the Body of him that is to be enchanted, and without a knowledge, hatred, or hurtful desire against that which is first to enter : But the buisiness is of a more difficult resolution ; to wit, of a more subtile hurt, and propagation, which in Nature, hath called unto it, the sight, the directions of the Basiliske, or Cramp-fish, for approbation : For even so as the Basiliske doth by a beam of Sight, spread his poyson into an object, not into a place, and not into any other Body whatsoever, although it be more near unto him ; but only into that Body on which he hath first directed, and shaken the poynt of his Fye : And as the Cramp-fish doth not cast the Poyson of his sight into any one, perhaps more nigh unto him, but rather, and alone into him that draws the ropes aloof of : So indeed feminal Idea's being connexed to filths hung up, and buried, are vigoured or strengthened by the Idea of the enflamed desire, as by the will of the Basiliske, or Cramp-fish, and do exercise it only on the determined object : And although the similitude may not every way answer in the sameliness of both terms : At least-wise it is sufficient to have demonstrated, that not only in man, but also that in vile small living Creatures, there is naturally an attributive and executive faculty of their intention, whereby they begin to hurt by their sight, intention, desire, or hatred alone. For that natural endowment extends it self also unto whatsoever things do Attractively, or Sympathetically move their Objects being a far of ; which means being naturally given to Man, that they exist in him, as yet in a more excellent manner, is no absurdity, while as we read, *That all things are put under his feet.*

19 Wherefore likewise, Witches do by a simple touching, or stroke, transfer their enchantments into the object, but after a far more gross manner, than that aforesaid ; and therefore it coucheth in it something like unto a Sympathetical mean : And as yet far more strictly, while as those enchantments are tyed up unto the venal Blood, Snot or Snivel,

or any other Efflux : But moreover also, they do of necessity touch or strike the object it self. But neither have I brought Sympathetical things hither, that I might defame the same, as I have demonstrated by those, the manner of application unto a mean : But rather that I may shew that Witches do use natural manners and meanes, otherwise accustomed in the Cramp-fish and Basiliske ; that I may extinguish all hope of diabolical deceit from Sympathetical things. And indeed it is manifest by natural things, how falsly and lyingly the infernal Serpent prescribeth to himself Worships, and Liturgies or praying services, for those things whereof he hath no power in his hand, but to re-smite the smiting Witch, as it naturally reflects the enchantments on its own Author ; So perhaps it might by those who are un-discreetly scrupulous, be despised for a Superstitious means : but surely it is even so, as it is lawful by a natural right to repulse force with force, especially if that thing doth not happen so much from anger or hatred, as from ones own defence, and for averting of hurt, which the moderation of an unblamed defence doth distinguish : Wherefore even as I have already demonstrated, that the most powerful or especial force of an enchantment doth depend on a natural Idea of the Witch : So also it follows that the aforesaid repercussion or re-smiting is altogether lawful, by reason of the natural Idea of desire whereby any one doth desire, and endeavour to rid himself of the enchantment : And so in repercussion, none follows, or is provoked or allured by virtue of the Covenant with the Evil Spirit : Yea that re-smiting alone, doth manifest the force of an enchantment to be altogether natural, as also the impotency of the Devil. In the meantime, that most unhappy and wholly proud on, being ashamed to confesse his own impotency, decieves his credulous Impes, they thinking him to be the only Master, bestower, and ruler of that malignant, and hurtful activity : Wherefore also they adore the same with a serious Worship, and obey him in all his Mockery. Poysons therefore being thus gotten, when as Satan cannot infect, and confest them according to his desire, as neither suit them at his pleasure, and much less apply them ; he commands that that thing be wholly compleated by his bond-slaves, that poysons may be made capable of issuing forth into the proper object of his desire : For so Poysons which before were either wholly material, or things altogether indifferent, nor could they hurt unless by chance they were assumed or taken into the Body, do now hurt Formally, Seminally, and Fermentally, through poysonous Idea's being injected.

CHAP.

C H A P. LXXVII.

These things which follow, the Author left more imperfect, undigested, and uncorrected than those aforegoing.

Since it hath already been demonstrated, that every Disease doth consist in the Life of the sensitive Soul, and in the Archeus the vital Organ hereof, but that this Archeus doth conclude in him a unity and identity; hereafter from hence also we must teach, that curing and restoring from all Diseases doth consist in the Unity of a Remedy. But the Schooles of the *Humourists*, will argue on the contrary, and will say, &c.

Now therefore a necessity of recovery, from the peace of occasional Causes with the Life, being proved: and so that almost all universal Secrets do prevaile unto the aforesaid appealing and pacifying of the vital Archeus: Now next it behoveth me to descend unto those very Arcanum's or Secrets, and not only to hand them forth by denominating of them; but also so far as charity toward my Neighbour doth permit, to describe the same unto the skilful lovers of Medicine: But it is not lawful to make them openly manifest, that the unskilful, and such as only gape after a little advantage or gain, may dispose of them, and commit them to the Apothecary and his wife. God forbid! for I have been better instructed, &c.

I will therefore speak, so far as the order of charity doth permit, about the revelations of Arcanums.

N First of all therefore, Nature hath produced by the goodness of God, singular or particular remedies in the vegetable Monarchy, whereby Diseases also are singularly or particularly restored and cured; which hitherto through a sloath of diligent searching, and a covetous desire, and envy of the Devil, have remained hidden. For so the Elixir of propriety according to *Paracelsus*, cureth the Asthma, Falling-sickness, Apoplexie, Palsey, Atroph ia or Consumption for lack of Nourishment, Tabes or Consumption of the Lungs, &c. But because that *Elixir* is not prepared but by a most skilful Phylosopher, who not by thinking, but by knowing, is perfectly, and moreover doubly chosen hereunto, and so hath obtained the title of an Adeptist: Hence therefore out of compassion, I will unfold a middle way. Take of clear Aloes, of the Best Myrrhe, and of the best Saffron, of each an ounce, for if thou shalt take more, thou shalt find it to be done in vain: Let the two former be exactly beaten; but the Saffron, because it is not beaten unless it be dried, let it rather be made into a round figure by pownsing; let them be put in a most capacious and strong Glass, and sealed with the melted neck of the Glass; and let it be distilled with a moderate heat, that the vessel burst not asunder, until thou shalt see the whole lump to have grown together in the bottom, and a cleer oyl, with a water, to be circulated in the sides of the Glass; then let the neck of the Glass be opened, and pour into a pint of Cinnamon water, and distil it by moist sand, whereon let boyling water be poured by degrees, until not any thing doth any longer drop out of the beak of the Alembick: and with this Medicine, I have presently dissolved as well a Quartane Ague, as a continual Fever: So that he who over night, had received his Sacro-sainted Viaticum, and the extream unction of Oyle, hath had me his Guest about his bed at dinner.

Nature hath also produced in the Sub-terranean, or mineral Monarchy, a certain Mineral, the which for its singularity, is called by *Paracelsus*, the first or masculine *Mettallus*. The which from its Metallick disposition, is of necessity cloathed with Metallick Mercurie and Sulphur; to wit, of a liquid Mercurie not adhering to the fingers, and of a Sulphur burnable with a skie-coloured flame: But this Sulphur is distilled with its corrosive, and so often cohobated or imbibed by pouring on it its own liquor, until it pass thorow the Alembick in the forme of a red Oyl; which Oyle is then at length most exactly cleansed from every whit of its corrosive, not indeed prepared by a separation of its salt, and Mercurie; but anatically or unhurtfully reduced wholly into the form of an Oyl: For that

that thing or matter, as it is as yet oylie, is not to be altered by the whole power of the sensitive Soul, or to be applied to the Life: Wherefore it ought to be transchanged into a Mercurial juice, which *Paracelsus* teacheth, and calleth the Wine of Life; because it doth not cure Diseases after the manner of other Arcanum's, by a cleansing away and banishment of every hurtful matter; besides it renews the strength being lost in the Body in general, and restoreth the inequalities of the strength: And therefore neither is it in vain called by *Paracelsus*, the Essence of the Members; indeed the whole Spire and top of hope for long Life. But how much Light I have brought unto the Writings of *Paracelsus*, he alone hath known who understands *Paracelsus* with me: But seeing that Sulphur is not translated, that it may be turned into arterial Blood, yea and restore and renew the implanted Spirit of the Members, although it be in it self the top of the Wonders of Nature; yet then it doth only as it were pass thorow the two former digestions, and doth not satisfie its calling, for which it shineth with so famous Endowments: And so even from hence it is easie to be seen, that long Life is not but for choise or chosen Men, nor indeed for all of them, not so much because the youth of Princes doth shorten the thred of their Life in fleshly lust, and pleasures, and so that a remedy for long Life is received, and applied to the Life after the manner of the receiver: But especially, because Adeptists are wanting, to whom alone it is given to unmask these kind of Secrets from their husks. I suppose indeed that this is a masculine Metall, because it doth easily suffer its Sulphur to be sequestred from it; and this separated Sulphur is dissolved in the Oyl of Cinnamon or Nutmeg, or in the Oyl, which drops out of Turpentine, till that by boyling it is coagulated into the best Rosin: But at least-wise, although the Sulphur thus dissolved, hath notable virtues; yet because it draws a stinking Odour, and reserveth a resistance of the dissolved Sulphur; neither can it pass thorow unto the inmost parts, but can only act as it were in passing thorow, and by its touching stir up by the way a superficial remembrance of its gift: Therefore it more differs from the wine of Life, than a Carbuncle doth from a flint: Yet if that melted Sulphur be so united in the Oyl of the Spice, that (how-ever stinking) it shall pass through an Alembick, and afterwards be after a due manner circulated with its Alcali or fixed Salt, and at length doth pass into a volatile Elixir of Salt, it doth after some sort imitate the faculties and virtues of the wine of Life, and Essence of the Members: For truly, that Elixir being rectified into the best Spirit of Wine, doth loose all its stink, and resume something of its natural or proper endowment, that it at leastwise takes away difficult and Chronical Diseases; yet it doth not ascend unto the highest perfect act of the Bowels, that it may be the renewed Essence of the Members.

CHAP. LXXVIII.

In Words, Herbs, and Stones there is great Virtue.

THere is a place in the holy Scriptures which taketh Stones for mineral Bodies: Words indeed so far as commanding from a supernatural Power, they do command Creatures; the which because they are subject, they do also obey: And then the virtue of Herbs is that of Medicines, but it doth not comprehend Herbie Meats. There is therefore, a medicinal faculty of Plants, Simple indeed; but most excellling; so that for the most part it ascends into a degree of Poysonfomness, Because it exceeds the ampleness of our Nature, and therefore also is troublesome or offensive unto us: For Pot-herbs, Pulses, and corny Plants, ought to be wholly subdued and dissolved in the Stomach, that is, in the seat of the Soul, into which while they light with unbroken virtues, they do also by their new Hospitality, oppress the same with their Laws: For so the seat it self doth as yet labour about rude Simples, and in operating doth undergo the Crudities, Damages, and Troubles of entertained Vegetables: For in this respect, whatsoever is not rightly subdued in the Stomach, after its aforesaid troubles, is commanded out by the Bowels as an unprofitable and hurtful excrement: Wherefore the more cruel Plants while they do not promise nourishment, nor are directly drawn into meats or foods; if they shall

not

not notably hurt, at least-wise they are totally sequestred, and are driven forth with labour, and anguishes; the which hath hitherto plainly appeared in a Quartane Ague, which hath notably deluded the promised help of Physicians, and hope of Medicines: For although the occasional matter of a Quartane, doth stick only about the Spleen, and in the neighbouring places of the Stomack: Yet the Medicines of Vegetables have not yet come unto the threshold of a Quartane: In the mean time, the more stronger Vegetables, seeing they have obtained degrees beyond the strength of our Nature, they are for the most part for that cause, Despised, or Celded; and so by corrective means are plainly alienated, and do degenerate, and so pass over into a forreign Family: Many also have in vain attempted, to sepearate the Poysonous Power from the appropriated ones, lurking under them. However it is at this day accustomed to be, those Medicines are the more strong, horrid, troublesome, neither are they admitted into our more inward parts; because they rise up against, and weaken or defile our vital Faculties, and do every way bring with them Anguishes as Companions: For although they depart, not into nourishments in us, nor are the more inwardly admitted than to enter the threshold it self; yet by their only touching, and naked passage, yea and as it were by a deaf defilement of aspect, they alter the Archeus, and subject and snatch away this Archeus into their own client-ship: This is the cause why the more strong remedies of Vegetables are for the most part suspected of cruelty, and poysonfomness: Which things are as yet more clearly beheld in mineral secrets, and the more profound Medicines: Because they are those which perform their Offices, and attain the scopes of their Endowments, by no co-mixture of them, but as it were by aspect alone. For so Mothers do dip a piece of wollen cloath in a co-mixture of Argent-vive or Quick-silver, and patch it up between the girdle or circle of Garments, knowing that although Quick-silver doth not evaporate any thing out of it self (for it is a thing so homogeneal, that it is not to be divided into a heterogeneal part, and that which is unlike to it self) yet that it doth hinder the presence, and generation of Lice throughout the whole Body. I have also described, after what manner common Argent-vive may be reduced into a most white or Snowie lump, if the spirit of Vitriol be distilled from it: The which Spirit indeed, is coagulated upon Mercury, and is transchanged into an Alume, but separable, by washing or cleansing, from the Argent-vive: To wit, which Argent-vive becomes a yellow Powder, which easily returns into its antient Quick-silver, and of equal weight with it self: So indeed, the whole spirit of Vitriol being in it self most sharp, is by a bare touching of the Mercury, and without any radical co-mixture of them both, converted into an aluminous Salt; and that shall be done a thousand times, yet it loofeth nothing of the weight, and nature of Argent-vive: For Argent-vive, doth without any participation of it self, or from it self; yea and without any radical co-mixture from it self, change whatsoever of a Sulphurous Spirit it shall touch; which radical or beaming co-mixture of Argent-vive, is as yet more to be admired: To wit, if Argent-vive be steeped in a great quantity of common Water; for this Water, although it doth not sup up any the least quantity of the Quick-silver into it self, or is not able to convert it unto its own Nature, Yet it borrows a property, not likewise a substance, from the Quick-silver, so as that such Water being drunk, doth kill all Wormes and Ascarides, also those which exist where that Drink never comes; Because it is that which is soon wholly snatched into urin; and that Water becomes stronger against Worms, if it shall once boyle with the Quick-silver or Argent-vive: So one only ounce of Quick-silver shall be able a thousand times to infect a measure of Water, and yet remain in its antient weight, and property. For so the Schools also do do against their wills, perfectly learn, that some Agents do freely, alwayes, and with unwearied forces, act without a passion, or re-action of their Patients, and the same weight of themselves alwayes remaining: For Argent-vive doth act on the Water, and imprints its own Character in it; yet it doth not likewise re-suffer any thing from the Water. It is manifest therefore, that a certain Medicinal virtue is transferred, and doth change its natural subject, and departeth into a forreign object, as it were only by its Beam or Aspect: Yet so, that although the forreign object doth attain a forreign faculty or virtue for it self, yet the acting and in-spiring principle, doth not loose or slacken any thing of its former strength, or weight: Indeed that is done without any Suffering, Diminishing, Changing, Weakening, or Interchangeable course of the Argent-vive: Surely the example produced in this place, serves for the celebration of an argument, concerning almost an infinite virtue of Remedies for the future: which thing, after that it had been often and diversly drawn under experience in Minerals, it at length perfectly taught me, that perhaps no Mortals heretofore, had as yet

yet clearly and inwardly beheld, in what manner the more abstruse or secret Remedies might operate, and that indeed without their dissolution, or destruction, without their penetration, inward admission, co-mixture, and changing, they do also freely act aloof of on the stupified, or enraged Archeus, as if it were only by their aspect, in beaming or darting forth of their virtues produced in a mean, their former weight and properties being as yet retained, and unchanged: And so those Arcanums do testify, that they are akin to the infinite Goodness, while as they do by degrees disperse their almost, and as it were infinite virtues. Wherefore Physicians shall not remain unpunished, while as the poor shall at some time mournfully complain, at the last Judgement, that they were neglected, who might easily and by the way have been cured without any charges. Therefore Arcanums can never depart into nourishment, because they keep their own ends, as those things which were not ordained for Meats, but for Medicines, and which do remain Medicines, although taken within the Body: For they begin in the Stomack (the which I have professedly elsewhere demonstrated to be the seat of the Soul) to unfold or expose the direct Beam of their own Faculties, and their endowed Virtue, and to which end they were ordained of God: Whence at length, the bedewed beaming virtue being drawn in by the Archeus, is dispersed into the whole Body, and health thereupon succeeding is greedily received. So indeed these more universal Remedies being administered, cures do happen, such as I have delivered to happen in the Fountain of Nature, and to be due to the same, and such as *Paracelsus* hath promised, and afterwards *Butler* put in execution, I being a beholder, to wit, with the least application of a co-fermenting. Surely, after that this speculation attracted me under it self by a more piercing or inward contemplation, I as it were knew most clearly and visually, that in occasional Causes, and in excrementitious Products, filths indeed did stick, they being the awakeners of peculiar Diseases: Yet I consider the whole Disease it self, and its Remedies to be in the Archeus, to wit, altered, or appeased: And so that with the least touching at, shaking, darting, yea only by radiation or beaming, or illumination (so that they shall in the seat of the Soul touch at the sensitive Life) Cures are perfected and compleated, no regard being had unto occasional Causes: And that thing I do more powerfully behold in the Sulphurous Remedies of Minerals, to wit, in the Sulphur of *Venus* or Copper, of Stibium, and especially in the Sulphur of *Glaura Augurellus*; which Nymph doth hitherto want any other proper name. For these sort of Sulphurs, because they are at a farther distance from mans Nature than the whole band of Vegetables, and do in the mean time obtain famous natural Endowments from the Giver: So also they do most fully and stubbornly resist, that they may not decline by the digestive Faculty, into the Common-wealth of nourishments, and therefore they keep their natural Powers free and unbroken; to wit, the Crasis or constitutive temperature of Minerals remaineth entire, and is the more fit to disperse its own Beam into the Duumvirate the seat of the Soul. For so *Mercurius Diaphoreticus*, doth attain the ultimate scope of its perfect act, by the redness of an ascending Sulphur, whereunto the Sulphur of the Mercury is joined by an undissolvable Union: For in this respect, the Sulphurs of Minerals do under the Vulcan, obtain the utmost compleating of the intent of Physicians. I therefore exhort Young Beginners, that they perfectly learn to spoile Sulphurs, of their foreign and poisonous Faculty: To wit, under the custody whereof a vital fire is hidden, most pleasingly bringing the Archeus into the desired aims. Indeed there are some Sulphurs, unto whom, they being corrected and perfected, the whole band of Diseases doth hearken, because they are those, whose Plurality is contracted into the unity of the Archeus, as it were into a fighting, or clutched Fist: By this means we have seen Madneses, Apoplexies, Falling-sicknesses, Palseys, giddinesses of the Head, Asthma's, Dropsies, Atrophias, and cruel Defects, to be annihilated in the very seat of the Soul, and combined Duumvirate; indeed to the amazement of Nature her self. In Stones therefore, a great virtue is declared to be by the holy Scriptures, which is hitherto hidden as well in the University, as in the Chymical Schools, until that Kings and Common-wealths shall look into the reformation of Schools: it repenteth them of their labour, who hope craftily to get gain by an abuse: They know not, nor desire not, nor will not labour, who deride those that are studious of Virtues; for if ever heretofore, now at least-wise, the whole World being placed in malignity, hath deterred my Pen least I should scatter Pearls before Swine. I will shew to our Sons, as the Lyon by his Paw: Extract thou the Sulphur of Antimony, which scarce differs from the common sight, but that it inclines a little unto greenness: Make this Cinnabar as yet six times, thou shalt sublime it by it self, that the sublimation may serve for the reverberery of Life: Take half an ounce of this Cinnabar, being bruised or beaten, hang it up

for twenty four hours in a hogs head of Wine, whereof one only spoonful being taken, for some dayes, thou shalt admire at the effect; and the same Cinnabar is sufficient for many hundred hogs heads, being again equivalent in virtue, if it be repeatedly re-sublimed.

I have Ingeniously spoken some things concerning the great virtue of Words, the which I more admire, than apply. The use of Herbs indeed is very well known, yet their valour or virtue is not sufficiently known, as neither suitably circumscribed: And that not only by reason of an ignorance of their Powers, but especially by reason of an un-harmonious suiting of Disease Causes, the defects of the knowledge of Causes unto their effect, and the ridiculous Lessons of Complexions and Degrees, and fabulous Dimensions, which others before me have sufficiently hissed out: For I do not here call to mind the thousand confusions of Simples, and wastings or ruines, and the every way extinguishments of their Faculties: But especially, I bewail the defect of the knowledge of the applying of Causes unto their Effects, or of suiting the thing applicable, and of the thing to be applied unto it. For before all things we must know, that as the Nativities, and Promotions of some things are slow: So proportionally also, they have the greatness of Virtues to be expected, and the Varieties of esteems: For even as it is in the Proverb; *That which is soon made, doth also soon perish*: So neither is a thing able to be protracted into a long hope of Maturity, which hath not intimate occasions of its own constancy: For truly it should be in vain expected by a delay of eight hundred years, that some one Mettal should be rightly changed into humane uses, if any Vegetable through the course of some Months, be to be equalized unto it. But indeed under the account of Herbs, I also understand Trees and Fruits, and I could willingly add living Creatures, if happily I did not read by the text of the Law, that many or most living Creatures, and the parts of these were resigned and abominated among impure Bodies: For the whole stock of Insects being directed for Medicines, and the Commodities of great Powers, rather than for the services of Men, was banished out of uses, and every resigned Remedy begged from thence: And therefore there was only a commendation made of Words, Herbs, and Stones: For it is certain that Herbs may be digested and subdued by our Stomack, unless they have a Malignity their companion. Small indeed is the number of Pot-herbs and Corns in the rank of Herbs; which scanitnes doth certainly accuse them of a certain malignity, which being rightly sequestred, they then first, and not before, shall bewray their Powers as the scopes of their sending, which the poysonous Keepers did cover under them. Truly Vegetables do act on us, only so long as the Stomack doth operate about them: Neither do they proceed further, but that they do first lay aside almost all strength of a Remedy; for else it should go ill with us, if the Stomack as not being able to tame the received Vegetable, cannot subdue it under the rules of its Archeus: For otherwise, if a Vegetable should proceed with its faculties entire, it should also be made the consort of excrements, or else should disturb the family-administration of sanguification or making of Blood: For otherwise how could that which had resisted the action of the Stomack, already accustomed unto crude Simples, be transchanged and subdued in the second digestion which is unaccustomed to crude Meats. The effects of such Remedies should likewise be of greater difficulty, and of a more labourious work, than the Fruit from thence to be expected. In the next place, that being granted, an undistinction, confusion, and perpetual turbulency of our family-administration were to be granted, if any thing being not first rightly subdued in the Stomack, and the Excrement being not first separated thereby, should inwardly proceed unto the vital parts: For truly every thing should from thence without repulse, indifferently proceed inwards either of its own accord, or should graciously be admitted without choice: Therefore a Vegetable ought of necessity to suffer the digestions, and the formal transmutations of these, and the digestive faculties themselves do also in operating, ordinarily suffer by the forreign (that is not the food-like) faculties of Vegetal things. A thing surely for the most part dangerous, of a difficult experiment and judgment. Then again, besides all things being weighed at the Ballance, all the virtue of Vegetables is tyed up and limited unto its degree, to wit, after that it hath bowed it self as being prostrated, under the digestion: Neither doth it exceed those limits, and in the mean time hath difficulties, to wit, the commands of Poysonous and Vicious Tyrannies: The which surely, whether they were added for a preservation or cover of their faculties, or indeed for their defence, denial, and impediment or hinderance; at least it is sufficient that most of them have their own annexed cruelty, infamie, immaturities or crudities, scabbedness, rottenness, exhaustings of strength, besides moreover, manifold Dregs and Impurities; because, seeing they are deprived

deprived of emunctories dedicated to the evacuation of an excrement, their whole nourishment must needs be full of excrement; and it is a most exceeding cruel thing, that no Remedy hath been devised in the Schools against these defects, besides a simple Decocti-
on.

Lastly, without the reckoning up of these things, and the injuries of Plants being separated, (whose burdens nevertheless, our Nature cannot bear without great damage) besides their unwonted frowardness, so great is their weakness, that scarce any thing worthy of praise is to be hoped for from the bosome of Vegetables: Seeing they are not only constrained to separate or lay aside their cruelty in their entrance, if they are to be admitted more fully within; but also, to be altogether formally stripped of all their bounty, before they can become Citizens of our Common-wealth: For the single scope of our Nature intends only a sanguification of things cast into the Body, for nourishment sake: The which seeing they ought not to proceed from every thing promiscuously, but only from things truly transchanged into seminal Beings, and from things agreeable to our Species; Surely whatsoever of the Vegetable race is handed forth for the more inward families of Digestions, is vain, so as that it should be thought to retain the ancient Power of its Parents: Which thing in the first place, a Quartane Ague, and all Diseases occasionally procured by Excrements, which have hitherto disgraced the Schools, do sufficiently confirm; because they are those, who have not meditated beyond Lettices, and boyled Herbs. There are indeed Vegetables plainly to be seen, answering unto the Diseases of their first Ages: But for chronical Diseases, which are for the most part increased by the infamous cruelty of Vegetals, and having obtained their privy chambers of the Body and Spirit, far from the Mouth, as that their dissolutions by Vegetables are difficult, they promise full Hospitals, wherein the continual mournings or waylings of the unfortunate Sick do dolefully sound. Wherefore from hence also, every one doth almost daily behold in his own House, a stubborn and uncessant Disease amongst those of his Family, and Physicians are made the Comedy of stages, because they have scarce done any thing worthy of thanks: For some of them confess their own and their Authors weaknesses, and many do unwillingly flee unto Chymical unknown Remedies, most of them abounding with their adultery and ravishment; they fly back to Books, not likewise to Furnaces, for their unexperiences do promise most ample Fruits, and they boast of all illegitimate and ridiculous Remedies: The which, while University Men do not understand, and on the other side, they do behold their withered *Galen* so destitute, they as full of doubt, flee over unto Cauteries, sharpish Fountains and Baths: Alas for grief, what an unhappiness to the Sick, and a vain refuge to themselves, hath so great a stumbling of darkness in the Schools, produced! I will therefore shew, that the text, and that great boasted of virtue, doth by the name of Stones, understand all Minerals wholly, and mettals the Marrow of these, before the rest: Because they are those things, which do scarce shew themselves in any other Image, than that of small Stones, or great Stones: For indeed, this is the most rich, and constant off-spring, and chief treasure of Nature: So that therein the conjunctions of the Stars are laid up or hidden: and moreover in speaking properly, and out of the profound Idiotisme of the Gentiles, the Stars do excel or are chief over Meteours, only causally; but Mettals in their Excellencies or Remedies, do far exceed the Stars. For truly, I have taught according to the text of the holy Scriptures, *That the Stars are not unto us for Causes, but only for Signs, Seasons, Dayes, and Years.* Neither is it lawful for Man, to extend the Offices of the Stars any further: Wherefore I have never in my desire, married the number of the Stars unto the wandering Stars or Planets; as neither have I enclosed both their Offices and Dignities in a like equality, or resemblance: For as they are at a far distance from each other, so also they have unlike Offices, and ends of Offices divided from each other. But this one thing I willingly admit of; to wit, that Mettals do exceed Plants and Minerals in healing, by long stades or distances: And therefore that Mettals are certain clear or shining glasses, not indeed by reason of their brightness, but rather because that as oft as their virtues are opened and set at liberty, they do act by an endowed light, and a vital co-touching: Mettals therefore do operate after the manner attributed to the Stars, to wit, by an Aspect, and the touching of an alterative Blas; which things will by handicraft-operation more clearly appear: For Mettals themselves are Glasses, the most excellent off-spring I say, of the inferiour Globe, to wit, upon which the whole central virtue hath for some Ages before, prodigally poured forth its treasure, that it might most rightly espouse this liquor of the Earth, this duggy nourishment, and this off-spring of divine providence unto the ends which the weakness of Nature did require. Therefore the Glasses of Gold,

Silver, Mercury, Lead, Copper, Iron, and Tin, and the fire-stones of these, are not yet shut up or closed, &c. But I call those shining Glasses, which have such a force of piercing and enlightning the Archeus from his errors, furies, and defects, that they restore him into a brightness, through the tincture of an endowed perfection. For although these Minerals are not for food, or of the condition of the Body of Man; Yet they have the internal faculty of a Glass, and a Power most chiefly efficacious, co-touching with or very near to the Archeus of man being entire, and appeased; such as was the Archeus before the mind was conceived, the which mind indeed was afterwards estranged from its right path, after that the sensitive Soul (wherein the mind sits) drew the government of the Body on it self; the which indeed was wholly frail and brutal in it self. But in shining Glasses (for a distinction to wit of Vegetables which do not shine,) a certain figure of our former immortality hath as yet remained resident, and in this respect, those Glasses are not only communicated, but are willingly received by our Archeus: Yea, and which more is, the restauration of the Archeus should the longer continue, if the Glasses themselves were not presently banished: which thing is manifest in the preparation of Copper, Iron, &c. These things concerning the Tree of Life, I do prosecute in the Book of long Life, that there may be a stable Remedy transchangeable into mans Nature, to be taken from ones childhood, especially as long as the growing faculty doth flourish: This Remedy I say, doth exceed the force of a shining Glass for long Life, but not likewise for a healthy Life. Furthermore, whatsoever is further to be spoken concerning Stones, that was either so far as they do partake of a certain Metallick Sulphurous Tincture, or of a Mineral Salt: But as a mineral Being is neither for food nor nourishment, neither could it be Vital or for Life: but before that I shall pass over unto Arcanums (which is called the great virtue of Stones in this place,) surely it is profitable to enter into the very seat of the Body, and inwardly to view how much any Remedy can there operate: To which end, that which I have already said above, comes first in our way: To wit, that the Stomack doth not cost any thing, but as from a single aime it doth from thence at length frame a nourishment for its whole Body, and for that very cause it hath an intention to make thereof a nourishable Liquor, to wit, venal Blood; and afterwards a spermatick Humour fit for the nourishing of the chief constituting parts; So that it may be turned into a substance fit for the nourishment and increase of the parts: To wit, as long as they are appointed within the bound designed for growth or increasing: From whence it necessarily also follows, that none but fit and foody matters concocted and digested by the Stomack, are transmitted into the more remote shops of the digestions. Wherefore I have first of all withdrawn every Plant, by whatsoever cruelty being infamous, from the border of the Mesentery; because every thing that is unfit for these borders, is for that very cause driven downwards by the Stomack, and adjoynd unto the excrements. But whatsoever hath now passed over into Chyle, hath presently laid aside every strange quality, whereby it may act as it were by choice: But if from *Magnum Oportet*, any kinde of quality of its antient concrete Body shall as yet remain; surely that is drowsie, feeble, sluggish, loose, and vain, and therefore it doth for the most part, deceive Physitians in chronical Diseases, and in Diseases lurking far off, through the crookednesses of the veins; which truth that a Quartane may defend in my behalf, it readily offers it self. Indeed the School of Alchymy, admiring, and trusting in the feeble help of Remedies, hath long since indeed observed a noble treasure of healing to lay hid in Minerals, but it long doubted in what respect they might most fully derive themselves unto the inward Buttery of the similar parts.

First of all, The former sort hoped in vain and to no purpose, to descend unto our constituting parts by their Remedies: And seeing they despaired in the Vegetable Kingdom, they also vainly roasted or wracked the order of Minerals; because they were those things which can never by our will be transchanged into foods; seeing the Artificer cannot at his pleasure induce an essential Form: Yea neither doth Nature by one only leap of Digestion, and by its immediate beck, ever attain that thing: For some being seduced by a deceivable hope of Mettals, and much less also tasting or knowing how much efficacy is seated in shining Glasses, and in the manifest liquors of Mettals: Therefore some have promised almost a certain immortality from their Labours; and *Paracelsus* as ridiculous, doth extend them sometimes into an Aniadan year, into the year of the Fire, and afterwards at least into the year of *Mahusalem*: afterwards others of his followers slid down unto six hundred years. Whereas after that, the later sort promised that they should attain onely unto a renewing of the strength or faculties: Others being content onely with a cropped or defective Cure; To wit, they rested in the cleansing of the pure from the impure. And

although

although a Body was now and then granted to be renewed according to its Nails, Teeth, and Hairs; Yet they have not fitly understood that the Pear Tree is never recalled from its old age, although it might renew its Leaves every Year.

In the mean time, a rashness of these things, and ignorance of our Family-Administration, hath stirred up the vain boastings of the things aforesaid, and every one hath proceeded in the darkness of vain hope, according to his own touching without a seen Knowledge. Therefore while every one hoped most fully or piercingly to introduce his own Remedies, neither yet would they afterwards be admitted within, because they were those things which the more grievous Diseases, and a want of nourishment, and refreshment of the Faculties did exclude; they afterwards thought to mask some Arcanums of a lighter weight, into the feigned shew of a Salt, that at least-wise they might not be separated from the Latex; yea that in this respect they might attain a Liberty of wandering throughout the whole Province of the Veins: And although they have so suited some Remedies, that they were not altogether strange or detestable to the agreement of Nature; however it is, they could not at least-wise so far descend, as to be admitted altogether within: But if through the Error of Separation a very small quantity of them had but pierced inwards; that thing straightway induced a benumbedness in the more inward Kitchings of the Bowels, as also a repentance of the Archeus.

Likewise they who have made tryal of Treely Remedies, have presently refrained from them; because that they were more hard and difficult than Herby ones, and less fit for penetration: For truly the Flesh and Blood are not fat things, but Treely things are fat, Rosiny, and unbroken by our Powers.

First of all, *Paracelsus* supposed, that seeing fixed Bodies did resist the fire, also that they should delude the unwasted or unwearied Labours of the Digestions by the same endeavour; and therefore he established it by an universal Decree, that no fixed Mineral would be taken in at the mouth; because the Salts which should render that thing potable, being wasted through Digestion, that same fixed Body should be toughly affixed unto the inward wals and pipes of the Members, wherein those Salts are changed, and should afterwards by an unexpected annexion, continue for term of Life. Therefore he would that not onely all Mineral Remedies should not onely be made potable, but also more-over volatile: Which admonition, although it be not altogether vain (*Crocus Martis*, and very many prepared Powders of Stones taken into the Body, being excepted) yet those same Minerals do not therefore assume a Foody nature, neither also consequently are they digested, or do they come more fully inwards, unto the intrinsical seats of Diseases. Neither also hath he sufficiently considered, that volatile Minerals have in them a force or faculty altogether Active, (even as I have elsewhere demonstrated concerning the affect of the Stone) and for the most part, so strange a one, that they cannot be promiscuously admitted within, without a notable Errour; unless we shall say that there is no longer any election or choice in Nature, whereby those things are refused by the Archeus, which do less agree with his Borders. But not every potable thing undistinctly, is admitted within, yea nor any thing which was not Foody and Digested in the Stomack, and transchanged into a humane Chyle: Neither doth any thing pass thorow the Liver, which in the Mesentery Veins (because they are those which are the Stomack of the Liver it self) hath not been through an obedient disposition first subdued. And let there be the same Judgement concerning the more utmost Bowels. But seeing as well Vegetables as Minerals being received into the Body, do presently exercise their tyranny, which thing Solutives themselves through a ready obedience do testifie, and so also that it is hence manifest, that any kind of Poysons do powerfully the more piercingly enter, to wit, if they do tyrannize on places at a distance.

Therefore two Opinions are to be reconciled; To wit,

On the one hand, *That nothing which is not foody doth climb inwards, before that it be elaborated by the Digestions.*

And on the other hand, *That as well Simples as Remedies elaborated by Art, however foreign or brutish they are, do exercise their operation even far from the mouth, and aloof off.*

Unto which Controversie, the famous Action of Government hath regard, and also the superlative excelling Force or Authority of the Duumvirate: For neither doth Cardiogmus or a Gripping of the Heart, and Cardialgia or a pain of the Stomack, in vain (of old) note the Heart, and have denoted the Stomack it self, by an Etymology of the Heart and Life:

Life : For in very deed, the sensitive Soul, and the Archeus himself do inhabite in the very Membrane of the Stomack, distinguishing of the Conveniencies or Agreements, Proportions, Likenesses, and Suitings of all things : Whereof, while the sensitive Soul it self doth draw Apprehensions, it communicates the same also, by dispersing them throughout the whole Body, to wit, to every part according to the requirance of necessity : For Solutive things do Purge and cruelly molest, as long as they are detained in the Stomack, and more formerly Intestines : And therefore that they may quickly and speedily finish their task, Broths are given to drink, whereby indeed they may be the more readily washed out of the Stomack. For truly Mineral Secrets (for in Stones there is great virtue) do indeed most powerfully operate; but they do not therefore materially enter into the Bowels at all, that they may be made the co-partaking Citizens of our Life : For neither do things go unto the Third, or more Ultimate shop of the Digestions, unless they first proceed through the First.

Wherefore I have first of all diligently considered, that all Remedies do operate according to a natural endowment which the Almighty hath conferred on them, whether they shall be Vegetables, or Minerals. But seeing the most powerful Virtues of Remedies are not of a foody Substance, and belonging to venal Blood, and much less of an Excrementous substance (for truly the Intestines are onely a Sack and Sink) neither is there granted a fit medium or middle thing between that which is foody, and excrementitious : Therefore it is required that a Remedy which hath so famous endowments, be not indeed foody (because I have already taught before, that that which is for Food ought to be feeble) yet a Remedy as long as it sticks between, not an excrement and an excrement; That is, as long as it is in its passage unto, or in its being made for an excrement, it is detained in the Stomack : To wit, that seeing there is not granted a final mean between a foody Being, & an excrement, there may at least-wise be a mediative mean in the Essence of a Remedy : To wit, as long as the determination is undecided, whether the Remedy taken into the Body, be to be put to flight together with the excrements : For this is as long as it is detained in the Stomack it self, wherein the Archeus the distinguisher, doth most powerfully shine and command. And moreover some Remedies do in this Inne attain faculties which were not before in their kernel; which thing I have elsewhere shewn by the Latex running down out of the branch of a Birch-tree, being indeed the more powerful when it now wanders between the nourishment of its Tree, and the beginnings of corruption presently begun. Therefore now from hence the truth of Remedies hitherto obscure, doth clearly appear : To wit, that every Remedy doth immediately and principally act only into the Archeus of the Stomack (the which is therefore also called the Heart) but this Archeus afterwards acts according to a disposition, drawn and generated to himself from the endowed gift of the Remedies.

It also further followes, that every Remedy exceeding the limits of Food, doth act by its touching in manner of a Glass : For truly it acts onely by touching at the Archeus, without a material co-mixture of it self. Indeed the Archeus himself doth first feel the endowment drawn from the Remedy; but in that act of perceivance he fashions to himself an Idea of things to be done by him, by following the Dispositions of that endowment: from whence he consequently stirring up Peace, Rest, or Anger to himself, and assuming the gotten Idea's of these, doth presently sealingly disperse the same into the Bowels, hearkening to the Action of Government, performing prosperous or opposite Offices, according to the Command of the vital Archeus.

Any kind of Remedies therefore are Glasses, and some are shining ones, others onely through their co-touching, Odour, Taste, and Power : But all and every of Remedies do in respect of the Life, remain external; in this respect also, they do wash off and drive away the inbred, or conceived stain or blemish from the Archeus. But they are never able therefore to detain the Life from a continual defluxion, or to suggest new Faculties, and to create or raise up new Powers for Immortality : Because the Virtues of Remedies cannot together with their Substance, pierce or be transchanged into the vital matter of us, so that it may be admixed by increase with our first constituting parts : For whatsoever they act, all that is busied about the Archeus of the Stomack, and Prince of Life, and Governour of the Stern : To wit, on which Ruler of the Stern, the Center of Life and Pilot of the Duumvirate, all Diseases also do primarily tyrannize, or by a secondary Passion or affect. For, for this cause, neither doth an antient Gout which is pithily rooted within, break forth out of the bosomes of the implanted vital Spirit wherein it is sealed, but that also it doth before its access or fit, molest about the mouth of the Stomack, and thereby violate and disturb the whole disposition of the whole : The which Gout approaching, a
certain

certain precedent small Fever doth for the most part bewray : Wherefore in this respect also do a Remedy and a Disease co-touch, yea and also pierce each other.

For who hath not observed that the Odours of Spices being onely tasted, do straightway refresh fainting Persons, not indeed because those Odours being co-mixed with air, are an addittament of the vital air, that they can substitute as it were a new vital Spirit in the place of that which was lost : Because the very restoring of the vital Spirit by a Spice or sweet Smell, should be of a more laboursome attempt than the restoring of it by the Arterial Blood : Neither is the Odour of a Spice pleasing, as it is like unto the vital Spirit, bred by Arterial Blood : But by reason of the natural endowments inbred in a Remedy.

In like manner, neither do the Oyles of Cynamon, Cloves, &c. refresh the vital Spirit of the parts by their material joyning ; (for neither is the Spirit of Life nourished by Oyle) but those things which are grateful in their Odour and Savour, so many are looking-Glasses, which by a touch of their aspiration or reflexion, do refresh and comfort the Spirit of Life (being burdened) as it were with an endowed gift. For as the sights or beholdings of some things do move Nauseousness, Vomiting, loss of Appetite, Anger, Indignation, &c. as they are visual Looking-Glasses : So there are dotal or endowed Glasses, stirring up the Archeus into Peace, Tranquility, Sleepiness, Joy, cessation from Sorrow, Contracture, Grief, &c. Those are endowed Glasses which do stirre up and occasionally move unto a right and orderly solicitation, or careful performance of their Offices in the Archeus : Even as on the other hand, those are Poysons, destructive Things, and the exalted Powers of things which stir up a Blemish, or Contagion, and Consumption, and every sore shaking in the Archeus : And Poysons do exceed any kind of Remedies in this : That these cannot be so connexed unto the Life, that this may indeed be thereby raised up again, or increase into a more perfect disposition. Whereas Poysons do in the mean time kill the parts, do wholly deprive of the inbred strength, and altogether draw into their own likeness, and do therefore truly transchange their vital parts ; which thing is granted to no Remedies, that they can renew the defects of the parts into their antient youth, and bring forth an Immortality : Because the most piercing Remedies are not Identified or Samified in Union with the Archeus, or a Member which is ill affected. And so neither is it able to perform a stable Effect from a Union of the Agent with the Sufferer, the which otherwise is granted unto Poysons.

Those therefore are touching Glasses, which disperse the natural endowment which the Almighty glorieth in, that he bestowed it on things cropped from, and pulled out of the Earth, the concrete body of that Glass remaining entire : For as some things being hanged on the Body, and born without the Body, or more strictly tied to the Body, do plainly take away very many sicknesses, or at least-wise suspend them : So some famous Remedies are stable, and do produce a stable effect from themselves.

There are also others, which not so much through the force of a touching and nourishing Glass, as of an Odour easily passing thorow, do prostrate great Diseases ; to wit, those arising and cherished onely by an Indignation of the Archeus : For there are also many Remedies which have a certain notable Taste, whereby, although they are not Digested by the Stomack by a passive transmutation ; yet they separate the pure from the impure, although it be the farther remote from them, as they draw the Archeus (being as it were bound and obliged unto their endowments) to cause such Effects.

Yet the Glasses which I name touching ones, are therefore for the most part fixed without Odour and Taste, and do move the Archeus, not so much by cleansing and sequestering Impurities, as by appeasing his Grievs, Disturbances, and a continual and successive substituting of Nourishing Idea's. For *Paracelsus* dispraising all fixed Metallick and Mineral Remedies, yet as being unmindful of himself, commends *Mercurius Diaphoreticus*, being very sweet, yet fixed, and not mutable in the Fire : And the which notwithstanding is a contemner of every labour of the Digestions ; yet it doth in Diseases, as much as a Physitian and Chyrurgion will of right wish or desire : For the sweetness of its Sulphur, sports in the Superficies ; but the Mercurial part being covered over by an external Sulphur, lies hid, neither doth it operate unless by a Glass shining thorow the Sulphur, and so affecting the Archeus at its own pleasure. Otherwise, that sweetness of the Diaphoretick, is of the Sulphur being drawn out of the fire of *Venus*, which is of the same savour with the Diaphoretick.

Wherefore that Fire is harmlesly Anodine, Soporiferous, or Sleepifying, an Appeaser of Pain, and Allayeth all Wroth, Grief, Motion, Disturbance and Tempest of the Arche-

us :

us : And likewise it imprinteth on the Archeus a will of Resolving of all coagulated things : In which respect it takes away every Disease, occasionally, materially, and by way of violent assault, which is attributed unto any Excrements whatsoever.

Likewise it is here plain to be seen, That that *Mercurius Diaphoreticus* remaining indeed in the Stomack undigested, nor piercing inwardly, because it perseveres unchanged, being fixed, stubborn, and untamed in the form of a Powder, doth cause all the aforesaid Effects : not indeed that its very self doth work those things effectively efficiently : But because it stirs up the Duumvirate, the performer of all things. For these things ought thus to be done, not indeed by an actual co-touching of Excrements, which are banished and led forth bound, but by the impresson of its natural endowment (for Stones have great Virtue) on the Archeus, the which is the Effector of all Curing; even as he is the very Original and Fountain of Diseases; from whence indeed I have shewn above, that every Disease doth immediately after sin, thenceforth daily issue.

A Wounded man Cured himself onely by Garden-Nightshade, and that without a Scarre.

Note how that may happen; therefore by applying it about the Seat of the Soul.

What, and after what manner it may inwardly appease and pacifie.

The same thing Assarum performeth.

Those things ought to be done without Fire.

In Stones there is great Virtue.

The Stone for Broken Bones, it is a fixed Stone, as also not Calcinable : It Cures a Broken Bone being taken in by the Mouth. And after what manner that may be done.

2. Doth or may it not Cure the affect of the Stone, Gout, &c.

CHAP. LXXIX.

BUTLER.

I Have already in the foregoing Treatise sufficiently demonstrated, that a Disease doth not exist but in living Bodies, and that it hath not onely a vital body for its proper subject; but moreover, that the very intrinsecal Organ or Instrument of Life, is the workman of a Disease and its internal efficient. Yea I have demonstrated, that both the matter and spiritual air of the Archeus himself, is not onely the Object on which all the glasses of Diseases are first sharpened; but also, that it is the very matter whereof, and about which the vehement motions, overflowings, and exorbitances of that workman do happen about his own destruction. Indeed that such is the foolish off-spring of Sin, while man turns himself away from God, nothing but thenceforth foolishly to convert all things into his own destruction. But seeing every thing in Nature subsisteth onely by a matter and an efficient Cause (the which also I have elsewhere most amply taught in a peculiar Treatise) and a thing in Nature doth therefore require to be defined onely by its immediate and proper matter, and its internal efficient Cause (for truly the whole essence of a thing, and its existence, are nothing besides a connexion of both the same Causes) certainly now it is sufficiently manifest, that a Disease is the very vital matter of the Archeus, into which the seminal Character or Idea of the Archeus being ill affected, is bred or inserted: Whether in the mean time the Archeus doth persevere in that his abomination from the right path, I say, in a hurtful disjoynting, or next, shall spread the same Idea's of his Anger on some Product, and shall afterwards cease: that is even all one in a Disease; seeing it is unto this by accident, to be nourished or not, from a violent assaunting Cause: For truly the Archeus doth sometimes presently seal an Idea conceived by himself on some excrement of his Body, the which he prepareth, if he shall not find that excrement before prepared for him: From whence also, and wherein a Disease is thenceforth by it selfe able to subsist. But elsewhere the Archeus doth not wander far, without the matter defiled by him, and therefore he doth either increase the same by a continual nourishment, or through the conjoyning of a resembling mark, is admitted into the implanted Spirit of the Organs, and doth from thence, as from a Tower, either continually fight against the faculties or strength of the Members, or at least-wise doth sleep and awake at set Periods, because in the vital Principle he hath branded himself with the implanted Guest, and household Inhabitant of Life, and hath not flowed onely in the Spirit of the fluid Archeus.

Moreover, whatsoever of filth is cast in, admitted, or bred up through an error of living, whether that thing may follow the Family of a Procatartical or foregoing principal Cause, or next, the Family of a Product; it is wholly altogether nothing but occasional: To wit, at the importunities whereof, the Archeus himself being sore shaken, doth represent the true Tragedy of a Disease.

From whence, first of all it is evident, that Diseases are as well real while they are silent and sleep, as those which happen being awakened in the meditation of their fit: I ought indeed, thus repeatedly to press the Tragedy of Diseases, if fruit be from a thing so unheard of, and of so great moment to be hoped for, unto those that shall succeed.

The Tree therefore and Fruits of a Disease being known, together with the connexion and progress of concurring Causes; the Tree of Remedies is afterwards to be contemplated of, which is so greatly breathed after, and unknown hitherto.

First of all indeed, I have considered of a six fold Invasion of a Disease, and liberty of taking its possession: as if it were at first stirred up by the evil Spirit, therefore also should follow the Week of Creation. From whence also a sixfold household-stuffe of Remedies in Nature was continually to be considered, unless the Super-eminent Divine Goodness, had rather to communicate the figure of his Unity, every where issuingly erected in Nature, unto mans Understanding: Because it is that which through the Unity of simplicity hath

hath most powerfully every where erected most rich Remedies against the slaughter of Diseases: Whereunto therefore, the more weak nature of mans Understanding being cherished by sloath, also easily hearkening, hath searched into the Secrets of *Paracelsus*; Whereby it might powerfully relieve all the Errors of defective Nature. We being now especially the more safe through this prop, shall hereafter attempt the vanquishments of Diseases, after that we shall behold the one onely Fountain of Life, now wandering from its scope, to have erected the whole entire predicament of Infirmities.

I deny not in the mean time, but that a Disease doth diversly enter into our harvest daily: But that (I say) it is daily received in divers Inns, and occasional Causes, which attempt treachery.

To wit, First of all, *They do of necessity break in by a voluntary declining race of Nature, through a defect and extinguishment of the vital Faculties, from whence at length difficulties of the Functions, and their afterwards awakened Superfluities do arise.*

2. *They do happen unto us from an unequal strength of the Members, from whence there is presently an unequal temperature, or disorder, very much like to that aforesaid.*

3. *From the received Inordinacies of Life burthening the Faculties, and the Offices of these by their immoderateness: Under which slipperynesse or unconstancy of Life, Venus or carnal Lust, Blood-letting, and what sort soever of Lavishments of the Strength do war, and after the beginnings of Diseases do at length hasten an untimely Death.*

4. *Diseases do most manifestly proceed from Perturbations or Disturbances, or Passions of the Mind: And far more occultly, from the Riotous, or Immoderate and Voluntary Disturbances of the Archæus himself, or those being drawn or sprung from an occasional matter stirring them up. Of these especially there is a large Company, and a numerous Army led on us, being even hitherto not attributed to their own proper Causes, because unknown.*

5. *Diseases do break forth from the unclemency of the Heaven, through the Injuries of unstable tempests, and the unhappy draughts of Endemics, whereby a hostile guest is drawn and admitted within, that it may make it self a Familiar.*

6. *Lastly, A Disease enters by external things rushing on us, to wit, Wounds, Breakings of Bones, Falls, Bruises, Burnings, Freezings, Stingings of Asps, &c. But at least-wise, all of them do lay in waite for the one Life, and from the Archæus its Defender, from whence they derive their Beginning.*

Therefore in perpetually aiming at Unity, we shall contemplate of God, as the one onely most glorious Fountain, President of Life, and one onely Permitter of all Diseases whatsoever: So also we shall occasionally, and the more amply reverence the same Giver of a Remedy, in the Unity of his own Type or Figure.

Wherefore, although I have elsewhere written by the way concerning Arcanums, every one whereof in particular, doth mow down almost all Diseases with one onely Sythe, to wit, by a separation, and cleansing from superfluity: Yet those Secrets, even as they are most difficultly prepared, yea and ought to remain in secret for ever, in the possession of those of the Privy Counsel: So also the Cure, through the instituted help of the same, doth not so immediately respect Diseases, as in the first place either the foregoing occasional Cause of the same, or at least-wise, the later product of a Disease: And likewise those Arcanums of Remedies are most sparing, whereof the most part of Mortals is deprived and destitute of hope: And therefore, it doth not seem to me, that the Infinite Goodness of God, would not be so issuingly or largely communicated and made known by so scanty a Remedy. Wherefore I conjecture, that the time is at hand, wherein the Almighty Goodness will manifest unto his Faithful ones, the knowledge and essence of Diseases hitherto unknown: But he hath not discovered the aforesaid Arcanums, but for the glory of his own Power, only unto a very few, lest the Commerces of the World, should otherwise perish. For neither is it otherwise to be believed, that the Divine Goodness after this intimate Essence of Diseases, being discovered, that he will afterwards also hide the endowed Remedies of his Unity from the Faithful ones, and that the healing of Diseases ought to be planted into Arcanums alone. Therefore it is meet or seasonable diligently to search into a Remedy, with my self, which by a single endeavour, may have respect un-

to the Tree of the vitiated Archeus, after what manner soever he be altered. For truly, a certain entire thing is more formerly, Nature, than a corrupted thing: And therefore the Life and the Archeus, as they are simply the cause of its Being, they are more antient than is a Vice conceived in them: For as the immediate Cause of any indispositions, is the very Life it self; So surely the speculation of curing, and renewing of the Life being altered, or weakened, without all discomodity, and burden or pressure, is more principal, more intimate, more formerly by right, and more noble, than the curing which is perfected by Arcanums, or by the most excellent mundificatives or cleansers: For those Arcanums, although they do oftentimes respect, and cut off the more formerly occasion; Yet it is as it were secondary, as to curing, which proceedeth from internal Causes primarily altered, and affected: And the which therefore do first and most principally require an appeasing of themselves by a natural indication, and that a most capital one of all: For truly Natures themselves have been of old known to be the Physitians of Diseases; even as also the vital Nature was revered under the covered Cloud of the Etymology of the Spirit making the assault, as the Maker, and Procreator of any kind of Diseases: Yet from the dayes of Hippocrates, unto Galen, and afterwards from thence the speculation of Diseases, remained and stood neglected. It is therefore scanty, and not very passable hitherto, whatsoever I have said concerning the manner of Curing, by pacifying and appeasing of the Archeus, to wit, by with-drawing or removing of his successive alterations or interchangeable courses: Wherefore in principally contemplating of the conjoynting peace, quiet, and docibleness of the Archeus, I will first explain my self by some brief Histories.

There was a certain *Irish-man*, whose name was *Butler*, being sometime great with *James King of England*, he being detained in the prison of the Castle of *Vilvord*, and taking pity on *Bailins* a certain Franciscan Monk, a most famous Preacher of *Gallo-Brittain*, who was also imprisoned, having a formidable Erispelas in his arme; on a certain evening when as the sick Monk did almost despaire, he swiftly tinged a certain little Stone in a spoonful of Almond Milk, and presently withdrew it thence: But he said unto the keeper of the Prison, reach this supping to that Monk, and how much soever he shall take thereupon, he shall be whole at least within a short hours space; which thing even so came to pass with the greatest admiration of the Keeper, and the sick Man not knowing from whence so sudden health had shined on him, seeing that he was ignorant that he had taken any thing; For his left Arm being before hugely swollen, fell down as that it could presently scarce be discerned from the other: On the morning following, I being intreated by great men, came to *Vilvord* as a witness of his deeds: Therefore I contracted a friendship with *Butler*.

Presently afterwards, I saw a poor old Woman a Landress, who from sixteen years of age or thereabouts, laboured with an intollerable Megrin, presently cured in my presence. Indeed he by the way, or lightly dipt the same little Stone in a spoonful of oyl of Olives, and presently cleansed the little Stone by licking of it, and laid it up into the sheath of his breast; but that spoonful of Oyl, he poured into a small bottle of Oyle, whereof one only drop he commanded to be anointed on the Head of the aforesaid old Woman, who was thereby straightway cured, and remained whole for some years, the which I attest: I was amazed, as if he were become another *Mydas*; but he smiling on me said:

My most dear Friend, unless thou come thitherto, so as to be able by one only Remedy, to cure every Disease, thou shalt remain in thy Young Beginnings, however old thou shalt become. I easily assented thereto, because I had learned that thing from the secrets of Paracelsus: and being now more confirmed by sight and hope: But I confesse with a willing mind, that that new manner of curing, was unaccustomed and unknown unto me. I therefore said, that a young Prince of our Court, Vicount of Gaunt, Brother to the Prince of Episnoy, of a very great House, was so wholly prostrated by the Gout, that he thenceforth lay only on one side, being wretched, and deformed with many knots; he therefore taking hold of my right hand, said: wilt thou, that I cure that young Man; I will cure him for thy sake.

But I replied: But he is of that obstinacy, that he had rather die, than to drink even but one only medicinal Potion.

Be it so, said Butler, for neither do I require any other thing, than that he do every morning touch the little Stone which thou seest, with the top of his tongue: For after three weeks from thence, let him wash the painful and unpainful knots dayly with his own Urin, and thou shalt soon afterwards see him cured, and soundly walking: go thy way, and tell him with joy, what I have said.

I therefore being glad, returned to *Bruxells*, and tells him what *Butler* had said.

But the Potentate answered; Go to tell *Butler*, that if he restore me, as thou hast said, I will give him as much as he shall require; demand the price, and I will willingly sequester that which is deposited, for his security. And when I declared that thing to *Butler* on the day following, he was wroth, and said: That Prince is mad, or witless, and miserable, and therefore neither will I ever help him: for neither do I stand in need of his money, neither do I yield or am I inferiour unto him. Yea, neither could I ever induce him to perform what he had before promised: Wherefore I began to doubt, least the foregoing things which I had seen, were as it were dreams.

It happened in the mean time, that a Friend, overseer and master of the Glassen Furnace at *Amwerp*, being exceeding fat, most earnestly requested of *Butler* to be freed from the trouble of his fatness; unto whom *Butler* offered a small piece of that little Stone, that he might once every morning lick or speedily touch it with the top of his Tongue. And within three weeks I saw his Breast made more straight or narrow by one span, and him to have lived no less whole afterwards: Wherefore I began again to believe that the same thing might have happened in the aforesaid gouty Prince, which he had promised.

In the mean time, I sent to *Vilvard*, to *Butler* for a Remedy, in the case of Poyson occasionally given me by a secret Enemy: For I miserably languished, all my joynts were pained, and my pulse, Vehement, being at length become an intermitting one, did accompany the faintings of my Mind, and extinguishment of my strength. *Butler* being as yet detained in Prison, forthwith commanded my household Servant whom I had sent, that he should bring unto him a small bottle of Oyl of Olives, and his little Stone aforesaid being tinged therein (as at other times) he sent that Oyl unto me; and bad him, that with one only small drop of the Oyl, I should anoint only one place of the pain, or all particular places if I would; the which I did, and yet felt no help thereby. In the mean time, my Enemy according to his lot being about to die, bad that pardon should be craved of me for his Sin; and so I knew that I had taken Poyson, the which I suspected: And therefore also I procured with all care, to extinguish the slow Venom; and through the Grace of God favouring me, I escaped.

My Wife was now for some Months, oppressed with a pain of the Muscle of her right Arm, so as that she could neither lift up her Hand, and much less lift any thing upwards: And moreover by reason of Grief and Sorrow for me, she now by degrees languished in both her Legs, from the Foot, even unto the Groine, with a cruel Oedema, the which did in its pit, shew the foot-step of ones finger dipped into it even unto the second joynt: For because she had contracted these Oedema's by reason of the grief for my tribulation, a Medicine was despised so long as her grief ceased not: She therefore seeing the work of *Butlers* Oyl to be vain on me, and being willing before some Gentlewomen to mock my credulity, anointed one only drop of that Oyl on her right Arm, and straightway it being freely moved, was beyond hope restored, together with its former strength: we all admired at the wonder of so sudden an event; wherefore she anointed the Ankles of both her Legs with one only drop on both sides, being spread about on the circle of the Ankle; and presently within less than a quarter of an hour, all the Oedema vanished away: she also through Gods favour, liveth as yet nineteen Years since, in health.

A certain Hand-maid, as soon as she heard that thing to have happened in her Mistris, required some drops of that Oyl, because she had thrice suffered an Erisipelas, in her right Leg, it being badly cured, she shewed a leaden-coloured Leg and swollen, from the Knee even unto the Toes; in the evening therefore, at her going to bed, she rubs four drops of that Oyl on the hurt part, and in the morning there appeared no footstep of the former Malady; so that she, who now before could scarce go into the Market in one day, the same morning went unto the Temple of the holy God-bearing Virgin, in *Laken*, and cheerfully returned, and broguht me Water from the spring of Saint *Ann*, being far remote from thence.

Which thing being heard, a certain Gentlewoman a Widow, being now afflicted for many Months in both her Arms, that she could never lift her hand upwards, was by a few drops of that Oyl, in one only evening, presently restored into full health, and so remained.

Afterwards I asked *Butler*, why so many Women should be presently cured; but that I, while I most sharply conflicted with Death it self, being also enviroined with Pains of all my Joynts and Organs, should not feel any ease? But he asked me, with what Disease I had

I had laboured? And when he understood that Poyson had given a Beginning unto the Disease. He said: *Because the Cause, had come from within to without, the Oyl ought to be taken into the Body, or the little Stone to be touched with the Tongue: Because the pain or grief being cherished within, was not Local, or External:* I observed also that the Oyl, did by degrees uncloath it self of the efficacy of Healing; because the little Stone being lightly tinged in it, had not pithily changed the Oyl throughout its whole Body, but had only blessed it with a delible or obliterated be-sprinkling of an Odour: For truly that little Stone did present in the Eyes, and Tongue, Sea Salt spread abroad or rarefied; and it is sufficiently known, that Salt is not to be very intimately mixed with Oyl.

Butler also cured an Abbateſs, ſufficiently known, who for eighteen years had had her right Arm ſwollen with an unwonted depriving of Motion, and her fingers ſtretched out, and unmovable, only by the touching of her Tongue at the little Stone. But very many being witneſſes of theſe Wonders, preſently ſuſpected ſome hidden Sorcery and Diabolical compact: For the common People hath it already for an antient cuſtom; that whatſoever honeſt thing their ignorance hath determined not to know, they do for a privy ſhift of Ignorance, refer that thing unto the juggles of the Evil Spirit: But I could not decline ſo far, becauſe the Remedies were ſuppoſed to be Natural, neither having any thing beſides an unwonted quantity. For neither Ceremonies, Words, nor any other ſuſpected thing was required: for neither is it lawful according to Mans power of underſtanding, to refer the Glory of God ſhewn forth in Nature, unto the evil Spirit: For none of thoſe Women had required aid of Butler, as from Necromancy any way ſuſpected; yea the things were at firſt made trial of with ſmiling, and without Faith and Confidence: Yet this kind of eaſineſs, and ſpeedineſs of curing, ſhall as yet long remain ſuſpected by many: for the wit of the vulgar, being unconstant and idle in hard and unwonted matters, is alwayes ready for judgements of the ſame tenour, by reaſon of their facility, and therefore alſo is weak or flaggy; for they do more willingly conſecrate ſo great a bounty of reſtitution unto diabolical deceit, than to divine goodneſs, the Framer, Lover, Saviour, Reſreſher of humane Nature, and Father of the poor. And that thing indeed not only in the common People, but alſo in thoſe that are learned, who follow, and raſhly ſearch into the Beginnings of healing, being not yet inſtructed, or obſerving the common, and blockiſh Rule: Becauſe they are alwayes wiſe as Children, who have never gone over their Mothers threshold, being a fraid at every Fable. For indeed they who have not hitherto known the whole circuit of Diſeaſes to be concluded within the Spirit of Life, which maketh the aſſault, or if they hereafter reading my Studies, by the way, ſhall imprint on themſelves this moment or concernment of healing; nevertheleſs, becauſe they have been already before accuſtomed from the very Beginnings of their Studies, to the precepts of the *Humouriſts*, they will eaſily at length depart from me, and leap back unto the accuſtomed and antient Opinions of the Schooles.

*For looke what Liquor Men do once, in a new Veſſel ſteep;
Its Odour, whether Sweet or Sour, it will long after keep.*

They will again eaſily betake themſelves unto the importunities of Decumbent, or falling down Humours: But I in a more near ſearch, being unwilling to refer the benefits of God unto the Devil, have firſt of all certainly found, that all things in Nature, do conſiſt of an inviſible Seed: That they begin I ſay, are ſupported, and ruled by a Being which the great God began from an imagining Deſire, or derived Power, and which remains afterwards throughout the whole duration of their Eſſence and Being. But that afterwards things are made viſible, or are [this ſomething] onely by the cloathing and apparelling of Bodies eſpouſed unto it ſelf. But I have taught that Diſeaſes do by a ſtronger reaſon, ariſe from a more inviſible Seed: Wherefore that the Diſeaſifying Idea is only to be Vanquiſhed, Aboliſhed, and Extinguiſhed; becauſe a Diſeaſe is a monſtrous, and equivocal or doubtful generated Being, and off-ſpring of Sin, not adhering therefore to the Humane Species, but only to individual Perſons after an irregular manner: Becauſe ſeeing, that after the fall, it began almoſt from a [non-being.]

For in more fully looking into the matter; firſt of all, very many Maladies do depart by reaſon of Amulets or Pomanders being hung on the outſide of the Body; even as is plain to be ſeen, in the Plague, Falling-ſickeſſe, and other Diſeaſes.

In the next place, whoſoever he be, who ſhall rejoyce to have a Towel which was withdrawn from a peſtilent Ulcer, or deſiled with the ſweat of him that hath the Peſtilence applied unto himſelf, nor doth fear in himſelf, that the Plague can thereby naturally be

com-

communicated unto himself; we have seen health restored, as with the anointing of *Butlers Oyl*: For truly a Sympathetical Remedy hath been of late made manifest, which cureth at a far distance.

A certain Doctor of Divinity related to me, that seeing he could not conceive, that in Vitriol there did subsist a natural faculty of curing an absent Wound, if it were sprinkled on a bloody Towel: Therefore also, that he reputed that curing to happen through the work of the Devil; but on the other hand, that he had seen some experiences made by honest Men: Therefore in a doubtful matter, and case of Conscience, that he had made trial of the thing in this manner: To wit, he sprinkled the Powder of the best Vitriol, on a bloody Towel, with an express protestation, that he was unwilling to experience any thing, or to be hereafter cured, if there were even the least co-operation of a contract, or of the evil Spirit; yet that he saw the Wound to be healed sooner than was wont, and the Blood also to be presently allayed: And therefore that afterwards, he believed that natural Causes, although unknown to us, did operate in the aforesaid Sympathetical Cure: The which nevertheless, being not yet sufficiently understood by its Causes, is as yet rejected, only as for the enticements of Satan, by this Argument.

A natural Agent, that it may act, ought to be applied and most nearly to approach unto the Patient.

But a Sympathetical Remedy, ought not to be most nearly applied unto the Patient.

Therefore a Sympathetical Remedy is not a natural Agent.

I Answer; if it be understood, that a natural Agent ought immediately to touch the Patient whereon it most nearly acteth, with an immediateness of Supposition, but remotely through the mediation of other Bodies laying between or interposing, whereby that immediateness is communicated to an object at a distance:

The Major Proposition is granted:

Because it is sufficient that the Agent doth touch the Patient, or its proper Object, and that at a distance immediately, with an immediateness of virtue.

And therefore, then the Minor Proposition is denied:

*Because a Sympathetical Remedy ought immediately to be present, by an immediateness of supposition, in that subject into which the action is first received, but not in the part affected, whereinto it is secondarily and ultimately received by supposed mediating Organs, wandring, and being extended by an interval: For Fire is not in the hand of him that is heated, nor is the Sun or the Heaven in the Chamber. But Sympathetical Remedies have at this day been made known to be like unto influences in this; to wit, that not only the Air, but a covered Rock, and thick or dark Bodies, are the capable Subject and Organ of this action, no less than of a Starry influence: For neither doth any thing hinder in sublunary things, whereby God could not, or would not have made those in some sort, less alike in this thing: Seeing that the manners of the Grand-Father, do sometimes not shine forth in the Son, but in the modern Nephew: A sound also doth pierce far, &c. thorow the Bodies suitably or exactly shut: Wherefore if thou art amazed at the speare of activity in Sympathetical things, and dost allow of them in Astral or starry Bodies, thou mayest either grieve for thy Ignorance of those, or for thy credulity of these: For truly the principle of an action of Sympathy, is a faculty akin to influences, acting by an in-beaming into an object appropriated unto it self: And God hath known why those things are thus made or do thus come to pass: Who hath endowed his created things, according to his own Pleasure: For he was at liberty to deliver his natural Endowments, even to the most abjected thing; neither can a Christian derive those gifts into the Devil, without Punishment: But neither do I in this place contemplate of Sympathetical Remedies, as that I believe the little Stone of *Butler* to act by a Sympathetical faculty: For truly this Stone takes away a distance of the object, and gives an application unto the object: To wit, it is a Remedy familiar unto Mans Archeus, and its virtue is graduated unto a thousand fold, by the goodness of God: And therefore it hath respect unto the peace and quiet of the Archeus in his own Simplicity: For let Young Beginners, before the Terrors of their Judgement, have regard, that a Member at the biting of a Snake, doth presently hugely swell, with great pain, by reason of the storm of the imbittered Archeus, and that the Angry Sting doth by its stroak, presently stir up an hard, painful, and composed Tumour: For what if the Leprosie, or Plague, can speedily defile us with its Contagion, what shall hinder, whereby our Archeus shall the less willingly receive the Contagion of so most powerful a Remedy, if he be defiled by Poysons against his will? If at least there ought to be in Nature, a like authority of a Remedy, and of Poyson, of divine goodness and*

and of Maladies? Let us consider I pray you, that so sudden a Flux of Maladies, may in like manner presently go back or return, being appealed by an opposite re-flux: For I have seen one, whose Fingers had promised the Disease Panaritium, being devided perhaps unto the largeness of his Arm, and had miserably tortured him for some restless Nights, whereabout the Blood, and fresh Skin of a mold being wrapped, they by the morrow morning had restored the Finger together with rest in the Night: For reason required, that the Antidote ought even at the least to be equivalent with the Poyson: For the most swift Antidote of Orniatanus, in Poyson, being taken, and that raging even unto Convulsions, doth so presently suppress all Anguishes, and instant soundings, as if there were no Poyson admitted within: Because as a Disease is a defect of Nature, and the straying Archeus; So a Remedy is of meer divine goodness; the which also having sidden down into Nature, ought, as to equalize every defect, so also wholly to overcome it. Therefore in one respect, the Remedy is far more powerful and famous than the fault, and therefore also less in quantity, and far more swift than delay: And that largeness and nobleness of Power, doth not so much concern a superiority, which with growth or increase is attained by little and little through the obtainments of Maturities, as a present and effective majesty of things, whereby the medicinal thing it self being unfolded by an endowed virtue, doth free, and restrain the Archeus from Impediments and Furies, and also doth imprint an eminent excellency of a helping faculty, for which things sake it was created: These things it performeth by the manner and swiftness of its operation: But besides, as to that which concerneth the Remedies of so great goodness, and the efficacy of these;

First of all, it is manifest, that that little Stone of Butler, however lightly it be tinged in one only spoonful of Oyl, if that spoonful of Oyl be poured into a Can of Oyl, yea into an Hoghead of Oyl, it shall also be made a Remedy; no otherwise than as a pestilent Odour doth infect a whole Vessel with its contagion. What if the Odour of a Sympathetical Remedy, being sprinkled on a Towel with a few drops of Blood, be able to help a Wound, a Bone-breach, yea and an Ulcer, and to appease the disturbed Archeus at a far distance; what wonder is it, if a Remedy being administered to the Sick party himself, doth do that? Yea neither do the Remedies of Chyrurgions cure otherwise, than only by touching at the wounded part; because Emplaisters or Oyls, do not enter into the vital composition of the bottom, or into the nourishment of the wounded part. But in topical Ulcers bred and made in a place, such as are the Cancer, Wolf, &c. Indeed the touching only of a powerful Remedy, is sufficient to extinguish the Poyson there arisen from the wroth Archeus: And let the same and equal Judgment be concerning Apostems, Excrescences, Impostumated Ulcers, and those sealed in a place it self, although first bred from elsewhere, but devolved, and at length deposited in a place; because an external besmearing of a Remedy, doth by a certain attainment of co-touching, tame the whole Archeus, no otherwise than as the Tooth of a mad Dog, although it be most exactly scoured in the Wind, yet doth sometimes bring madness: So also the Remedies of our little Stone, do heal internal Affects; Yet they do the more and sooner dart forth their Effects, if they are received in at the Mouth, no otherwise than as some Poysons are void, unless they are derived or brought down into the open Skin. But if these kind of Remedies shall but even lightly touch at the Tongue, it is no wonder if that they presently affect the whole Archeus with their powerful benevolence, and appease the straying Archeus from his fury, and assuage him from all imbitteredness: Because that little Stone is of the Nature of a Salt, which is in no wise melted in the Oyl, neither doth any thing materially depart from it, which may be received in the Oyl wherein it is tinged, besides a gentle Odour, such as is the Odour of a pestilent impression in the Plague. And a flourish or Essay of this little Stone, hath seemed to me to be in the holy Scriptures: *That the Maker of sweet Oyls, shall compose the Paints or Varnishes of Sweetness, neither shall his Works be consummated or come to an end:* That is, although the little Stone be tinged in Oyl, yet scarce a point of its medicinal Virtue is diminished. Therefore if this excelling Remedy be taken inwardly, it then doth not only change the venal Blood into a Medicine like a Balsam, but the very Excrements of a Man themselves (to wit, his Urin) do remain tinged with its super-eminent goodness: No otherwise than as the Eggs of a Hen do savour of beech-Corn being eaten, and as the Urin of a sucking Infant doth smell of Anise, if the Nurse hath taken the Oyl of Anise in at the Mouth: And even as the Urin smells of eaten Asparagus; So also the Urin by its own washing or anointing, doth cure every Disease residing in the habit of the Body.

Indeed, such is the goodness of God, that one only little Stone is sufficient for many

ten thousands, that the Physician may not excuse himself about the Poor, discussing the charges of costs.

In brief, all Diseases are cured by one only Remedy, to wit, by anointing, or by touching of the Tongue, or tasting alone: Because the Tongue is like unto an open Skin, especially if the succeeding Spittle be presently swallowed. But that there is so great a Power of this Remedy to be demonstrated, not only from Poysons, and so from the similitude of a pestilent Air; but that because the Remedy ought to be far more Powerful than every Malady, if it ought to overcome it, and that indeed swiftly, and so, that it ought after some sort to express the seal of divine goodness: Wherefore from the betokening of Philosophy it self, I presently conjectured, that that Remedy doth require:

First of all, that it be a Body once raised up, and once destroyed, and afterwards as it were after its Resurrection, after some sort glorified: And therefore that neither may it be thenceforth any longer defileable by sublimary Vices, and mischievous Acts or Injuries.

Hence it follows, that therefore it ought to be stronger by a thousand fold, than any pestilent Venom, and to be operative in a more absolute manner; Seeing the Poyson of the Plague is simple, and sits in a corporal Air: For a Pestilent Poyson, is indeed the more familiarly co-fermented, by reason of a humane Symbole or co-resemblance, but it is not therefore a more powerful Poyson: For a Poyson doth indeed, produce a Poyson according to the Rule, and Ferment of the former Poyson, but it cannot exalt the Power of its Product above it self. But in a Remedy rising again from Death, the bountiful goodness of its simple Being is increased unto a thousand fold, and through the thin Odour of its co-touching, it is diffused, and enlarged into the Mean, and presently bears command over the Archeus its Object: To wit, that he may compose himself according to Peace and Virtue: For so the Arcanum introduceth the Foster-child of its Power, there is a hope and jubilee of the Archeus, truly existing, and super-eminent in the Life.

In the next place, I have considered that this Remedy is not of the Monarchy of Vegetables, because it is that which doth easily spring up, and obtain too slippery or fading Sprouts or Linages, and the which therefore are scarce renewed by Art; because they are those which like unto living Creatures, do easily die under the Artists hand; yet do they scarce rise again from Death, seeing they do either wholly perish under the tryal of the Fire, and loose their former Virtues; or if they may seem as it were to rise again, yet they are rather new Beings, altogether secluded from the path of their Predecessors and Parents.

But whatsoever *Paracelsus* promiseth concerning his four Arcanums of his Archidoxals, that they have a Super-elementary, and almost an infinite Virtue: for the first, which supposeth his Homunculus, it is so horrible as not to be spoken of, Sodomitical, Diabolical, and in no respect to be mentioned. But the other three are Chymical ones, whereunto a promise of extending themselves even unto a tenth Generation, doth not belong: But I speak in this place of a Paint or Varnish, the Works whereof shall not be consummated; neither shall there be a Disease or Poyson resisting it: or as the Text hath it, *There shall not be a Medicine of destruction in the Earth, and the Almighty hath made all Nations of the Earth curable.*

But by a more full looking into the matter; all Diseases, because they issue from the fountain of the Archeus, do give place, either by reason of Amulets being hung on the Body, and Medicines bound about the same; or by reason of Baths, Ointments, and Emplaisters, whereof there is not the least uniting with the Disease Body, but only an Odour is offered; or if they are received inwardly, and are digested as Medicines, yet they are even presently transchanged into the Stomack, and do presently put on strange favours and figures of qualities, as they do even fully put off every condition of their former Life, unless they had rather be accounted ungrateful, or poysonome: Yea they are afterwards altogether so truly transchanged, that they do wholly leave behind them the Image of their former act of perfection, or may scarce be reputed to have possessed it: In this respect indeed, are they for that Cause, taken in a great quantity, or abundance, that they may seem the more inwardly to breath some very small matter into a Man: And with what great damage that is done, they have known, who have sometimes experienced, that to live medicinally, is to live most miserably. Therefore scarce any thing of those Medicines which are taken into the Body, doth resemble its former Being; and if it doth shew it forth, woe to the Receiver. Wherefore if there were any Virtue in a Medicine, surely that was before it laid aside its own proper Nature, and antient Being: for it hath pre-

presently failed, as soon as it hath represented only its Odour : Therefore the force of every Medicine is well nigh concluded in the co-touching of its Odour, and in almost a certain momentary perfuming : Neither is there therefore, so great reason for a disturbed Rumour, to wit, because the Oyls seasoned by the little Stone, do presently cure by their Odour : Let them therefore be the murmurings of Young Beginners about the accustomednesses of parts nourished : They are altogether vain, although it shall seem Wonders unto Wits not yet meditating of unwonted matters, but being accustomed unto a subscription alone ; to wit, after what manner, the Archeus being driven into Fury, being so suddenly touched even with a white wand of Peace, doth fall asleep, or being corrected, doth abstain from his own mischief begun : But surely that is less to be wondered at ; seeing every thing doth naturally desire to be, and remain, and easily abstains from its own hurt, so it be made, or be tractable for the pacifying of its conceived Grief, or Fury. What if a Flux of Blood, an Ulcer, Wound, Bone-breach, may be presently restrained, and safely healed, if the out-hunted venal Blood, corrupt Pus, or Sanies, be over-covered with an absent Remedy ? shall not the little Stone season the Oyl with its co-touching, that it may be able, being be-smeared or anointed, to cure a Disease laying hid under it ? For truly no other thing is denoted by these Words : *The Maker of sweet Oyatments shall compose the Paints or Varnishes of Sweetnesse; neither shall his Works be Consummated or come to an end.* For why shall the little Stone touching at the Tongue, less cure, than Woolfes-bane doth cause the Tongue to swell by its co-touching ? God hath made benefits in respect of Diseases, at least, equal in authority, if not much more famous, and more : So far is it, that I should consecrate these kind of Effects to the Devil ; that I am the more powerfully moved in admiring of the divine Goodness, to adore the most ready mercies of Jesus Christ my Lord, whereby without the Labour of Physitians, Apothecaries, and others, who like Lice, are fattened only by others Miseries ; to wit, whereby the miserably Sick are the more safely and speedily holpen.

Indeed Examples of these things, have of late been made manifest in external Diseases, to wit, in Wounds and Ulcers, that we may repay the Honour due to God, out of the midst of our Ignorance of Causes, and may cease to refer those things unto wicked Juggles, and uncertain Superstitions, and so unto the Works of Satan, which are the issuing Pledges of divine Love, manifested from God in the most afflicted Seasons of the deep Ignorance of Medicine, for the comfort of the Miserable and Poor, who indeed would be called *the Father of the Poor*, because he ought so to be.

I say this kinde of Sympathetical Remedy in Wounds, hath first, and that now of late (by the permission of God) bewraied it self, to wit, that we may by degrees, be led by the Hand, from external, and the more appearing Diseases, unto the relieves of internal, and the more abstruse Diseases : But that Diseases should almost by the least point of a Medicine be put to flight : To wit, that *Butler* could cure some ten thousands every year, by almost an infinite Faculty or Virtue, the Text hath perswaded me ; *That the Works of that Maker of sweet Oyls, shall not be Consummated or come to an end.*

And then I ought to believe that thing, as being an eye Witness, that the touching of his little Stone hath blessed first a spoonful of Oyl, and afterwards a whole little Bottle of Oyl, with a medicinal Virtue.

Indeed, I have tried and attempted many things, and that long, about the framing of that little Stone. I have learned indeed, that in the family of Vegetables, there is the Herb Chameleon, and likewise Arsmart, which by their touching alone, do presently take away cruel Diseases, or at least-wise do ease them : I have seen I say, the Bone of the Arm of a Toad, presently to take away the Toothach, at the first co-touching ; some things to take away the Falling-Sickness, and the like Calamities : Therefore I have believed, that in the Herby Family, a Remedy doth also lay hid for every Disease ; but surely that they do only obtain an efficacy of particular Diseases, but do never ascend unto a universal and renowned Government over every Disease. Wherefore I ran over unto the race of Minerals, which is enriched with a long Flux of time or ages.

First of all, that the Virtue of Stones is great, I ought to believe, being admonished by the holy Scriptures. And first of all, I knew that every colour, and power of Gems or pretious Stones, is begged from Metallick ones : Because although Metallick Faculties are enclosed in Gems, by reason of the hardness of their Christal, yet they are commended in the holy Scriptures for great ones : Therefore I consider, that in Metallick Bodies, the same Faculties or Virtues of Gems, do more familiarly converse with us : For *Picus* in some Books unto his Wife, doth narrowly search, *why Gold is of so great Price*, also according to the will and esteem of the Lord : But he was not able to determine his

Gggg

Question :

Question: For it is certain and not to be doubted, that the names of the Planets are put upon the seven Mettals, as whereon the Celestial Virtues, we may believe, are so clearly or famously conferred: But at least-wise, let them be the nourishing or milky Juice of the whole terrestrial Globe: And therefore also for the price of things, and the desires, and rewards of frequent handlings. But the Father of the Poor hath not disposed of *Sol* and *Lune*, of Gold I say, and Silver, for the uses of Diseases in the Poor, for whom notwithstanding, he hath been eminently careful; and therefore he hath so firmly shut up Gold and Silver, that they do for the most part, mock every endeavour of Artificers; so that when they are thought to be most opened, they have slackened nothing from their antient bolts. But Quick-silver, although it seem to be a certain trembling thing, and so also in this respect, very passable; yet there is nothing in the whole race of Nature alike con-closed; even as elsewhere, I have in a long Tract demonstrated against our fugitive Servants. Therefore scarce the hundred thousandth of Artificers (not only of labouring Servants) doth obtain the Arcanums which are to be prepared of *Sol*, *Lune*, and *Mercury*.

There are therefore four Mettals besides, which do more easily obey the guidance, and desire of Artificers: So that *Paracelsus* doth not vainly boast, that with Lead alone, he was able to vanquish, perhaps two hundred sorts of Diseases: And nothing doth so alike victoriously act into the radical moisture, as the first Being of Copper, or is more bountifull unto long Life, than the Sulphur of Vitriol: Because it is that which doth therefore point out the Sulphur of the Phylosophers.

Finally, *Mars*, although he be the cheapest in price, and despised for his numerous off-spring; yet he is not reputed (by *Paracelsus*) the last, from his fighting Nature.

Truly, Metallick Bodies are equally closed with the Seal of a safe or harmless Homogeneity, or sameliness of kinde, according to their Mercuries; but their Sulphurs are never wroth with us, they afford mutual converses, if so be they are rendred familiar unto us.

Furthermore, I a long time, and carefully, so meditated about the Stone of *Butler*, that I thought of nothing else at the time of dreaming: For I did oftentimes see the young ones of Chymistry taking preat gains, who should pour forth bright-shining Trochies, like unto the little Stone of *Butler*: Wherefore I long afterwards attempted the framing thereof; and at length, although I affirmed something to my self, to be undoubtedly the same little Stone which I had seen in *Butler's* possession; yet the business succeeded not according to my desire: And at length I knew, that my errors had proceeded from an accustomed and antient error of the Schooles: For how many soever have hitherto intended to heal by a removal of the occasional Cause, these consequently and necessarily, have had need of a certain delay, and quantity of a Remedy; to wit, whereby they might attain a superiority: But they who shall hereafter intend to trample on a Disease only by a restitution, and restitution of the successive alteration of the Archeus, to wit, they contending to induce a placable Ferment; Surely these Men shall attain their scope, by despising the quantity of a Remedy, and only by the touch of a fermental Odour. I therefore being as yet seduced by an antient Errour, Ignorant of a Diseasefying Essence, did believe that every great Disease was to be put to flight, not but by the great quantity of a Remedy, and a long delay of healing: To wit, I meting out the greatness of a Remedy, not indeed from a Power of Endowment; but from the meer, and only abounding of its quantity. For I, after the manner of the Schooles, deriving Examples from artificial things, have also erred with the Doctrine of the same: For I being seduced, thought, as two Horses do draw more strongly than one alone, and a whole Loaf nourisheth more powerfully than a Crum thereof; so likewise I thought, that for a restorative Remedy of the Archeus, the quantity of Ounces, and Drams was required, which might exceed the products of Diseases in strength, and weight. Indeed I had not yet laid aside the contracted blemish of an antient Errour, whereby Diseases are measured only by their occasional Cause, and the weight thereof; but not by the true efficient Cause of Diseases: For I being as yet sufficiently confirmed, did not yet call to mind, that every Disease was framed and governed by the Archeus of Life, to wit, by the Life it self: And much less did I as yet thorowly weigh, that the erring Life would not be conquered, and subdued by the quantity of a Remedy: Wherefore I soon again considered of what I said before: To wit, That the Tooth of a mad Dog, of a Viper, of a wood Serpent or Land Snake, although their Spittle were first cleansed or wiped off in a Garment, yet that it would kill by its touching alone, without any of its quantity. I considered likewise, that a Liquor

was known unto me, wherewith, the Hand being gently anointed, and it being dried up, if the Chin of a Man should touch at that Hand, the haire of the Beard, Eyebrows, and of the whole Body, would a little after fall off: For if these kind of Poysons do by a gentle touching extinguish the vegetative Life; yea and that of the haire, which do oftentimes grow after burial; that also, Potestative or Powerful Remedies, to wit, those which will restrain the Errours of the Life, only by their touch, would by an easie Compendium or breviary, and without any perceivable quantity, besmeare, and pacifie the Archeus. Indeed I was the more slowly able to apprehend that thing, being partly prevented by the aforesaid Errours of the Schools; and partly because I saw, that if Poysons did kill by one only grain, they did the more powerfully, and speedily effect that by one dram: For I did not yet thorowly consider, that all Diseases did proceed from the Archeus, erring, or enraged; and so that a Potestative Remedy, hath a super-eminent, and no vulgar goodness, whereby it restoreth the Errours of the wroth and angry Archeus: And much less had I as yet thorowly weighed, that therefore a Potestative Medicine ought to be inwardly admitted, as it were without the knowledge of the Archens: Otherwise, if he doth suspect his turbulency of indignation and alteration, to be set upon, or attempted by Remedies, certainly he presently falls down into furies, he will not admit of helpful things, who being himself now Apogal or remote from his Center, doth through his own Errour, prove exorbitant, and will rise up into a greater wrothfulness, and conceptions of stubbornness, the fabrick of his own Diseasefying Idea. Wherefore I have most nearly approached unto the touchings of Butler, with the top of the Tongue alone, or unto Remedies administred in the weight of half a grain: For I (for want of a name) have called the little Stone of Butler, and a Potestative, and Fermental Remedy of that sort, after our mother Tongue, *Drif*; which denoteth a virgin Sand or Earth; and likewise in sensitive Creatures, a chasing or expelling Animosity or Sturdiness; no otherwise than as boyling Sand doth shake off whatsoever foreign thing is inserted in it,

Therefore first, I will shew the things required in *Drif*, and afterwards the manner of its composition; so far as is permitted to a Phylosopher, I will declare, least I shall prostitute Roses before Swine.

1. *Drif* therefore, first of all, even as I have said, requires, that it be a certain Metallick Body: Because it is that which by its long delay, doth signifie constancy, but not a hastened Corruption: And it hath compleated its circle of generation, through a long favour of the Heavens: and it seemeth to be that which by a particular ordination, is directed by the Almighty for the help of the Miserable and Poor.

2. *Drif* is not of those unworied Arcanums not bestowed by God, but on a very few Adeptists, they only being certain of his choice Disciples: For truly, our *Drif* seemeth to be only ordained for the comfort of the Poor.

3. *Drif* requireth, that it be indeed of a Natural Body, partaker of a Metallick bounty, but that before, it be first made obedient and opened by Death; not indeed, with an extinguishment of its Virtues or Faculties, or like a Carcass dying of its own accord; but the benefits of its natural Endowments being retained, that it be unlocked by the Artificer, being free from its bolts, and as it were raised up again; yea that it be an enriched, and plainly a new Being, and rising afresh from the fire..

4. And therefore it ought to have risen again, being as it were altogether Volatile after Death, and spiritual, or to be twice or thrice sublimed, with other things added unto it.

5. But because volatile things do soon perish, are dispersed, and dissolved, even before they are admitted within, do pierce, and draw their excellencies out of their Bosome, or so are able to pacifie the Archeus: therefore *Drif* requires, that after its volatility being obtained, it be connexed unto a certain friendly Body, whereby it may be detained, and in its Bride-bed be communicable unto mans Body, and grateful and familiar unto our Archens: And therefore, it ought to obtain that thing, as it were a middle place between a Body that is easily and not easily dissoluble or to be blown away: And likewise it ought to be connexed unto its mean, while its heat being now almost at the highest, it shall be mild; to wit, least the volatile Body, in the co-knitting, do in a great part of it, fly away.

6. And for this cause, it ought to be plainly fermental, not onely in its constancy of Body, but in the extension of its virtues; so that through the least participation of its Odour it may be able to extend its virtues into the Archeus, and to sleepifie and assuage the same.

In which Six Particulars, as Drif is described; so in a like Number its Composition is discovered.

First of all, In the Book of the Disease of the Stone, in the dainty dish for Young Beginners, I have explained a manner of Distilling, whereby the Spirit of Sea-Salt is drawn or allured forth with Potters Earth being dried. For the Salt of the Sea is akin unto us, and desireable by us, neither is it adverse unto us in any of its Tenour. Therefore for Drif, the residing Salt of the Sea, remaining in its Dreg is required, to wit, it being extracted from its Dreg or Lee, which is called the Caput Mortuum or Dead Head. That Salt, I say, being now spoiled of its Spirits, doth desire strange ones, and doth lay them up within it self: yet it doth not altogether stubbornly fix them.

2. I have likewise taught, That the first Being of Venus or Copper, cannot be sequestred but by the Death and Separation of its Mercury from its Sulphur: But moreover, that neither is that Sulphur to be had but in the possession of Adeptists, whose number as it is choice and most rare, so also it is altogether small.

3. I have taught moreover, That in Vitriol, however its Venus being now depraved, and the more often distilled, yet that the very actual Venus doth as yet remain.

4. Wherefore Drif it self requires at least-wise a Sequestration of the Venus from the Feces or Dreg of the Vitriol, which is not otherwise compleated than by Subliming.

5. Which Sublimation is also of necessity made and perfected by a forreign fermental Being; yet altogether friendly to the Archeus.

6. Therefore the Sea Salt extracted out of its Dreg, being poured forth, before its every way co-thickening; Let about a threefold quantity of the Being of Venus, being raised again by Subliming, and accompanied with its strange or forreign Ferment, be co-mixed with it: and presently let the roof be covered. But when they shall become wholly cold, beat them into a Powder under Marble, and adjoyn thereto, about a tenfold quantity of Usnea or the Moss of a Dead Man's Skul, in respect of the Ens or Being of Venus. Which Powder compact thou into Trochies upon a Stone, with mouth or fish-glew being dissolved: And thou hast a Noble Medicine.

CHAP. LXXX.

Of material things Injected or Cast into the Body.

1. *What material things are Cast in from without.* 2. *Some Histories.* 3. *The Matter of the Deed is admitted, yet it is Disputed concerning the Manner of Injection.* 4. *The penury of Judgement in a Searcher out of Magical things.* 5. *That it doth not exceed Nature, that a solid Body is derived without breaking, by a Passage far more narrow than it self.* 6. *A History rehearsed by Cornelius Gemma.* 7. *Some Histories of the piercing of Bodies.* 8. *The piercing of Bodies in passing thorow to a Place, is proved.* 9. *The same thing in passing thorow out of a Body.* 10. *There hath been a familiar piercing of the Dimensions of humane Nature.* 11. *The same Property doth sometimes persist in the Seeds of things.* 12. *After what manner those things may naturally happen.* 13. *By a like Example in dark Bodies, which cease to be seen.* 14. *A Reason by a Conjecture.* 15. *There is an especial and free force concurring in Enchanting, and therefore also natural unto man.* 16. *A man as he is the Image of God, doth create some Beings, which are something more than Non-beings.* 17. *In an imagined Being or a formed Idea, there is a right of Entity or Beingnesse.* 18. *After what manner an Idea may fall out from the Imagination.* 19. *How the Soul of man doth create Images.* 20. *An Objection is Solved.* 21. *Some Paradoxes of the imagining Soul, for the constituting of an Idea.*

And then also there are things Injected or cast into the Body, which do suppose a visible matter. Of which sort are Darts or Arrow-heads, Sharp Thornes, Chaffs, Haires, Sawings, little Stones, Shells of Eggs, and earthen Pots, Parings or Shells, and Husks, Insects, Naperies or pieces of Linnen Cloath, Needles, Instruments of Artificers, the which are indeed unsensibly darted into the Body, and do enter altogether after an invisible manner; yet are they detained and cast forth with cruel Torments: And it may be, are oftentimes greater than their hole whereby they are sent in.

For of late there was part of a Buffe or Oxe Hide Injected thorow the pores of the skin, the skin remaining entire; the which the Chyrurgion drew out with his Tongues unto the bigness of the Palme of ones hand: Yet an Aposteme was first ripened: But a Witch being burnt at *Bruges*, confessed that she had cast in that piece of Hide into the good Man.

So in times past we have seen the Children of Orphans to have cast up by Vomit the sharp Stake of an Harp, it being drawn out by the hands of the Standers by: To wit, the four-footed Bench or Balk, being furnished with its wheele and Strings. But in whatsoever situation the sharp Stake could be placed, it was easily (by twofold) bigger than the Throat.

I have seen at *Antwerp* in the Year 1622, a little Maid, who might vomit up perhaps two thousand of Pins, together with Hairs and Filths, in a heap or lump.

Another Virgin in the Year 1631. At *Mecheline*, who we being present, did Vomit up Wooden Sweepings shaved of with a Plain by plaining, together with much sliminess, unto the quantity of two Fists.

It is a frequent thing, being seen in many places, and admitted of by Learned men: Yet the more deriding ones do stick at it, because they cannot understand, how things which are

are far more big, do go forth thorow a small passage. For some do excuse the matter, so that although they may seem to be rejected by vomit; yet they will have them never to be admitted within: I say they esteem them the mockeries and bewitchings of the eyes, while they issue forth to appear anew, and do bring us tidings afar off. Indeed they do admit of true things: For Insects do live, Metals are melted, and Woods do burn; all things do by degrees voluntarily go forth, or are drawn forth with the hand: But others think, that in very deed such things are cast within and darted into the Body; but they know not the manner thereof.

Delrio with his followers do grant, that they are brought within the Body, and that they are in very deed such as they appear to be, and therefore they refute the foregoing Opinion. But as to the manner of entrance and utterance, they affirm, That those things are broken in pieces by the Devil into a most fine powder, that they are restored within in the Body, into their former integrity, figure and conditions: But while they issue forth, they affirm them to be again beaten into fine powder, and that in the instant time of their going forth, and on this side the strait or narrow port they are again reduced into their antient Being; to wit, that Woods, Needles, Toads, living Creatures, are broken into powder, and as often reduced unto their former habit, and to revive: For these men, do deny that they do agree with the other in the foregoing Opinion; while as notwithstanding they say the same thing with them, for their utterance, and entrance: To wit, that those things do not in very deed enter, or go forth, even as otherwise they seem unto the standers by, seeing they enter or go forth whole: but being first powdered. They suppose the same bewitching of the eyes, which do think things to be whole which are onely powders.

- 4 For *Martin Delrio* doth frequently suppose that, indeed to infringe his own Judgements: For concerning Magical Inquisitions, in his Treatise of the making of Gold, when as he had theevishly described Arguments word for word out of *Geber*, and *Bonus Ferrariensis*, he at length when as he declares his own Judgement, doth forge 18 Contradictories. Truly I believe that it is resistant with piety, if a power which exceedeth Nature be attributed to the Devil; To wit, to make, destroy, and again to re-make, and so often to reduce the same thing from a privation unto a habit, whose dispositive seed had already come unto its end. But those that are ignorant of Nature, do presume that they are the Secretaries of Nature by the reading of Books: but whatsoever lies hid unto them, let it be either impossible or false, or juggling and diabolical: As if Satan were above Nature, and could operate things impossible to Nature.

I grant him indeed a forreign manner in operating: but surely he, as yet, ought to be restrained within Nature.

- 5 Therefore I will shew, that there is not plainly a need of the help of Satan, that a certain solid Body be derived thorow a Passage far less than it self, without the breaking of it in pieces: Because that this also is certain, That indeed all such Injections, are immediately made by man, but not by Satan: For although the evil Spirit hath a motive Bias, yet it is contrary to piety, that he should be able to hurt the Innocent at his pleasure. Which thing surely should come to pass if he should in all places Inject those kind of things according to his wicked will, into the little ones. I have seen, I say, these things to happen in the guiltless, in pious Virgins, and in those who have been singularly dedicated unto God.

- 6 *Corn. Gemma* concerning Cosmocriticks or Judicials of the World, hath mentioned, that he saw a piece of a brass Gun, of three pound or fourty eight ounces, the which a Maid a Coopers daughter, had voided out thorow her fundament, with its characters or letters, together with an Eele wrapped up in his own skins or coverings. But it is impossible for Nature to melt a powdered Metall in us, and for it to be detained in the Bowels, for so great an interval of Moneths, in his antient figure: For an Eele together with his coverings to be so often bruised in pieces, and to rise again from death: And for pieces of Wood and Hide, to be so often broken in pieces, and again to be restored into their antient state.

For I have seen at *Bruxels* in the Year 1599, that an Oxe having taken three Hearbs, vomited up a Dargon with his Tail like an Eele, a Hidy Body, a Serpentine Head, he being no less than a Partridge. The manner is unknown how Nature could do that. The manner is alike unknown how Satan could do that. They therefore gain nothing who refer the work of Nature unto the Devil. But whether they do sin others shall see: For it hath been at least-wise an invention of huge sloath, to have referred all things which we do not comprehend, unto the Devil.

Truly I find a very near, or co-touching penetration of the dimensions of Nature, although
not

not an ordinary one. Neither will I that the Devil be invoked to satisfie us in our questions, through a rash attributing of Powers unto him.

There is a History of a *Polonian*, a Countrey fellow, being lately seen by the son of the Lord *Ericus Pentecanus* : The rude man had attempted to open a Squinancy in his own Throat with a short knife, the which he at unawares swallowed down, and at length he with much corrupt pus, and after many anguishes, restored the same again out of the right side of the bottome of his belly, and survived in health.

Likewise at *Vilvoord*, in the Year 1636, a country-man, known to me, being willing to fat a Cow, gave her every day a pot wherein he had boyled pot-herbs with bran : At length she becomes more and more lean daily, and began to halt with her right leg : the Cow being slain, a short knife of his Wifes being wreathen into a box haft, was found hidden between her ribs and shoulder-blade ; for the country-woman in cutting of Rape roots, had left the knife among the pot-herbs, and the Cow in drinking had swallowed it.

In like manner *Ambrose Pareus*, relateth of a certain man, whom Robbers had compelled to swallow a knife, the which he afterwards safely restored by an Aposteme of his side.

Alexander Benedikt mentioneth another, whose Back a Dart had pierced, the hook or crook whereof, of the breadth of three fingers, he afterwards voided thorow his fundament without hurt.

The same man tells of a *Venetian* Maid, who had swallowed a Needle, and the two years after voided it out by Urine, being incrusted in a stone.

The same thing *Anth. Benezine*, that a Woman of *Tuscany* had swallowed a copper Needle, the which three years after, she being in health, had voided nigh her Navil.

Valesius de Taranto tells of a *Venetian* Maid (perhaps the same) who cast forth a needle of three fingers length with her Urine.

A certain Capuchin of *Ebuero*, called *Bullonius*, his Sir-name being *Hamprean*, drank a great Spider, which he had seen to have fallen down into the Challice alive, at the time of the daily Sacrifice, with much averfeness of mind. Within few dayes a Phlegmone or enflamed Tumor arose in his right Thigh, and at the time of the first corrupt pus, he restored the Spider whole from thence, yet dead.

A Merchant of *Antwerp*, his young man playing at *Venice* with an unripe ear of Barley in his mouth, swallowed down the same with great fear of Choaking : After three weeks from thence, an Aposteme appeared in his left side above his girdle, and at length, the same ear of Barley was drawn out whole with the corrupt pus, it being now of a clayie colour, but he escaped safe.

According to *Fernelius*, a studious man is read to be restored by him, who rendred an Ear of Corn thorow his Ribs.

Writers also do rehearse, that the Young being sometimes dead and consumed in the Womb, hath dismissed its bones thorow the Womb and Abdomen by the Navil, and sometimes by the Fundament.

Many such like things are met withall among Authors here and there, which are worthy of credit : Whereby it is manifest, that solid Bodies, big enough, have pierced the Stomack, Intestines, Womb, the Omentum or Caule of the Belly, Abdomen, Pleura or Skin girding the Ribs, Bladder, Membranes, I say, which are impatient of such a Wound, That is, knives have been transmitted thorow those Membranes without a Wound : which is equivalent with the piercing of Dimensions, made in Nature without the help of the Devil.

But that the Body of a Man may be drawn thorow a small hole, thorow which a Cat only is able to pass, yet not thorow a Wall : Yea that the Devil is not able to break a Paper Window without the consent of his Master ; is to be seen by the Process and Arrest pronounced against a He Witch by *Lodowick Godfred*, at *Aquisgrane* of *Narbonie*, on the last Day of [the second Moneth called] *April*, 1611.

At length, where have three pounds of Brasse of a piece of Ordinance marked by its letters lurked in the Body ? After what manner shall the dross grow so many Moneths ? in what part is a piece of Brasse detained, which is bigger than the Intestine ? For while I treated of a necessary Vacuum in the Aire, I promised that I would declare, that although a penetration of Bodies be forbidden, by the primary Law of Nature, and after the common manner of Artificers ; yet while a Body doth wholly pass over, and is translated into the jurisdiction of a Spirit, and is as it were weakened by it, that then Bodies do naturally pierce each other, at least-wise in what part they are porie : because the Spirit doth then shut up the Body under it self, and so doth as it were take away dimensions.

I will

8

I will premise some things: A desire of eating Muskles invaded a Woman great with Child; but she ate some of them rashly or over hastily, so that also she devoured the raw Shells, being twice or thrice ground with her Teeth: presently afterwards, within an hour, she brings forth an healthy Young, and of a ripe growth (together with those half-chewed Shells) and wounded in its Abdomen: Therefore, the Shells presently pierced the Stomack, Womb and Secundine, without an opening of those Membranes, or new Shells were generated upon the Young: But neither can this latter thing be true; for they were the true fragments of the Shell-Fishes, but not having strove for an imitation figuratively: And then, the Appetite is not carried unto an unknown object; therefore the Appetite of eating the Shell-Fishes, was not of the Young, but of the Woman: Therefore there was no necessity that new Shell-Fishes should be generated about the Young; for they were desired by the Mother, that they might be made a nourishment for her self, and not for her Young: Otherwise, by the same argument of identity, whatsoever things are desired, are alwayes generated about the Young; by the which, seeing they could not be at all digested, they should either alwayes be made to reside about the Young, or should in the same place putrifie; the which is false in either manner; for if that which is desired should putrifie, it should cause Abortion, or being there conserved, should be regularly found, for the Young is nourished only by the Navil; wherefore those external Shell-Fishes were neither desired by the Young, nor were profitable unto the same; and by consequence, neither were they made anew by nature for an end, but were dismissed unto the Young, as the Appetite was of the Womb: The Appetite is alwayes directed by the end; but the Woman great with Child, desireth Shell-Fishes, not Shells, neither also that the animal Shell-Fish, should remain in its former state, entire, wherein it is unprofitable to the Mother, neither gives satisfaction unto her Appetite: Therefore, much less had it the occasion of generating new and unprofitable Shells about the Young: At length, however it may be taken, the Appetite was not for Shells, twice or thrice scrouched; for if the Shell-Fishes had been cut out of the Shells, she had eaten the Fishes themselves, having left the Shells: And therefore the concomitance, and co-breaking of the Shells was accidental to her Appetite: Indeed I suppose, that as desire, affrightment, &c. do generate seminal Ideas, which the Hand of a Woman great with Child doth dismiss unto the Young, and decyphers in a set place; so the joy of that being found, which was desired, brings or derives that very thing unto the Young: For so the sorrow of the Knife being swallowed, the horror of the Spider being drunk, and of the Eare of Barley being devoured, doth repulse the same, thorow the Membranes which are impotent of, or unable to endure a Wound without Death. These things, of things injected, which enter the Body by an ordinary Power of Nature, without the suspicion of a co-operation of the Devil. Some such like thing there is, in things that are from within, drawn out of the Body, the which I will enclose in one only, or two Examples.

9

The Wife of a Taylor of *Mecheline*, saw before her Door, a Souldier to loose his Hand in a Combate, she being presently smitten with horror, brought forth a Daughter with one Hand, but dead, through an unfortunate and bloody Arm, because the Hand thereof was not found, and a flux of Blood did kill the Infant.

The Wife of *Marcus of Vogelar*, a Merchant of *Antwerp*, in the year 1602, seeing a Souldier begging, whose right Arm, an Iron Bullet had taken away in the Siege of *Ostend*, and who as yet, carried that Arm about with him bloody; by and by after, she brought forth a Daughter deprived of an Arm, and that indeed her right one, the Shoulder whereof being as yet bloody, ought to be made whole by the Chyrurgion; she married a Merchant of *Amsterdam*, whose name was *Hoocheamer*, she also surviving in the year 1638: But her right Arm was no where to be found, nor its Bones, neither appeared there any putrifying Disease, for which the Arm had withered away in a small hours space: Yet while the Souldier was not as yet beheld, the Young had two Arms: Neither could the Arm that was rent off, be annihilated: Therefore the Arm was taken away, the Womb being shut: but who plucked it off, naturally, and which way it was taken away, surely, trivial reasons do not square in so great a Wonder, or Paradox. I am not he that will shew these things; only these things I will say, that the Arm was not taken away, as neither rent off by Satan: And then, that it was a thing of less labour, for the Arm being rent off, to be derived else where, than it was to have plucked off the Arm from the whole Body, without Death.

A Merchants Wife known to us, as soon as she heard, that 13 were to beheaded in one morning (it happened at *Antwerp*, in the time of Duke *Alban* or *D'olue*,) and Women great with Child are led by inordinate Appetites) she determined to behold the beheadings: Therefore

Therefore she went up into the Chamber of a Widow, her familiar acquaintance, dwelling in the Market place ; and the spectacl being seen, a travaile pain presenly surprized her, and she brought forth a mature Infant with a bloody Neck, whole Head no where appeared: At leastwise, I do not find, that mans Nature doth abominate the piercing of dimensions, seeing it is most frequent to the Seeds of things. *Thou shalt bring forth Children in Sorrow*, is the punishment of Sin : Before Sin therefore, she had naturally brought forth tall Young, without pain, at least-wise of that bigness, with which we are now born : But not that a Woman had been unsensible before Sin, but because it had gone forth, the Womb being shut. Therefore it was a proper or familiar thing to humane Nature from his Creation, for dimensions to pierce each other ; because he was made, that he might live in the Flesh, according to the Spirit : But Nature being corrupted, that authority of his Spirit over his Body perished ; and therefore Woman doth thence-forward, bring forth after the manner of Bruits : Yea Writers do make mention, that Ulcers or Imposthumes are made thorow the Bones, that all things are carried upwards and downwards, without the guidance, or commerce of the Vessels.

Indeed that primitive efficacy of piercing Bodies, doth as yet consist in the seeds of things ; but is not subjected by humane force, art, or will, or judgment : For there are many Bodies much more ponderous than the Matter from whence they are composed : It must needs be I say, that more than fifteen parts of Water do co-pitch into one, that one only part of Gold may be thereby made : for weight is not made of nothing, but doth prove a matter weighing in an equal tenour : Therefore Water doth naturally, as often pierce its own Body, as Gold doth exceed Water in weight : Therefore a home-bred, and dayly progress of Seeds, in generations, requireth a Body to penetrate it self by a co-thickning ; the which is altogether impossible for an Artificer to do. Let us grant pores to be in the Water ; yet these cannot contain fourteen times as much of its entire quantity. It is therefore, an ordinary thing in Nature, that some parts of the Water do pierce themselves into one only place.

And the Seeds do act this by virtue of a certain Spirit, the Archeus : For although the Archeus himself, as well in the aforesaid Seeds, as in us, be corporeal ; yet while he acts by an action of government, and sups up the matter into himself, he utters many effects not unlike unto enchantments ; because in speaking properly, the Archeus doth not imitate enchantments, but enchantments do follow the rule prescribed by the Archeus: to wit, as he doth operate far otherwise than Bodies do on each other : As in affects of the Womb, the Sinewes are voluntarily extended, the Tendons do burst forth out of their place, and do again leap back ; the Bones likewise are displaced, by no visible mover ; the Neck riseth swollen unto the height of the Chin, the Lungs are stopped up from air, unthought of Poysons are engengred, and the venal Blood masks it self with the unwonted countenances of Filths. But as to what doth belong unto the penetrations of Bodies, our Archeus sups up Bodies into himself, that they may be made as it were Spirits.

For example, *Aqua-Fortis* doth by its Spirit make Brasse, Iron, or Silver, remaining in their own Nature thick or dark, so transparent, that they cannot be seen, and doth transport a mettall thorow merchant Paper (the which otherwise doth not transmit the finest Powder thorow it) it as yet, essentially remaining in the shape of a mettall ; but not that the similitude of the piercing of dimensions, doth uniformly iquare with the Example of a Mettall proposed: Because (as I have said) reasons do not suite with so great a Paradox ; where I do willingly acknowledge the manner to be undemonstrable from a former Cause: Even as no Man can know, after what sort an Idea imprinted on Seeds, may figure, direct, and dispose of its own constituted Bodies : And therefore we will search after the same, from the effect.

First of all, let it be supposed, that the Devil hath no authority or command over us against our will, unless by the peculiar permission of God : *For know ye not, that we are the Temple of God ? and that the very Kingdom of God dwelleth in us ?* which thing, is to be re-furrowed from its original.

First therefore, it is of Faith, that we are the sanctuary of the holy Spirit, that the holy sacred Trinity doth make its mansion with the Just ; *That the delights of God are with the Sons of Men, unto whom he hath given Power to become the Sons of God* ; but Children being Baptized, are innocent, just, of them is the Kingdom of God, the fitted Temple of God : Yet Children are killed by enchantments, sooner than others : Therefore it must needs be, that that thing happens from some free Faculty, that it concludeth with the excellency of a Christian, (especially of a righteous Man) that the Devil hath no right or authority

of entering, or introducing of his Means; Seeing it is all one to him, to have hurt by a medium, or by himself.

- 15 There is therefore a far other Power of enchantment, besides the Devil; and therefore a natural and free one: over a righteous Man he hath no command: But if the Devil should have a free Power of enchanting, it should also be alike free to him, of killing by a Knife, or a Hammer, and so none should be free: Yea, if the Devil could, he would not enter within the Skin of a just Man, by reason of the divine presence of the Kingdom of Heaven: Indeed the Devil doth behold God to be present in a just Man, after another manner, than any where else, which is an everlasting Cause of his hatred toward us: neither therefore doth he enter, although he could, but he goes about as a roaring Lyon. Therefore a Witch, doth by a natural Being, imaginatively form a free, natural, and hurtful Idea, the which Satan cannot form; because the forming of Idea's requires the Image of God, and a free Power; and therefore Witches do operate by a natural virtue, no less on the righteous and innocent, than on wicked men. Yea, seeing enchantments do more easily infect Children, than those that are of ripe years, Women, than stout Men; A certain natural Power, limited in the enchantment, is signified, against which an opposition is easily made, by a warlike, and strong or stout mind. The Devil therefore, offers Filths or Poysons to his Clients, that he may fermentally co-knit their Idea's formed in the imaginative faculty of these: Yea he preserves that Ideal Poyson, that it be not blown away by the Wind, or that being over-covered in the Earth, it be not destroyed by a putrifying by continuance: But he locally derives that Poyson, according to the object which is to be enchanted; yet he is no way able to apply them, or to bring them into a Man: Therefore a Man also doth afterwards dismiss another executive, issuing, and commanding Mean to enchant a Man, which Mean is the Idea of a strong desire: For it is a thing unseperable from a desire, to be carried about desired Objects: In all which the Devil being only a spectator, is an assistant in its passage; Because in very deed, I have already demonstrated, that the operative means themselves do belong to man alone.
- 16 For God alone is the Creatour, most glorious, and to be praised for ever, who hath created the Universe of nothing: But man, as he is the Image of God, doth create some Beings of Reason, or non-beings, in their beginning of nothing, and that in the proper Endowment of an imaginative virtue; the which notwithstanding, are something more than merely a privative or negative Being.

- For first of all, while those kind of conceived Idea's, do at length cloath themselves with a Body, in the shew of an Image framed by the imagination, they are now made Beings, subsisting in the middle of that garment, wherein they do equally reside throughout its whole; and in this respect do become seminal, and operative Beings; to wit, by whom their very own assumed Subjects are straightway wholly directed: But this Power is given only to Man: Otherwise, a seminal virtue for propagation, is given to the Earth, bruit Beasts, Plants, &c. And likewise, a Dog is able by madness, to transfer his Spittle into a Poyson, because it is proper or natural to his Species: The which also is easie to be seen in diverse Poysons of living Creatures: But to form Idea's abstracted from their Species, and adjacent properties, that is granted to none but Man. Also by a more full looking into the matter, it is seen, that if in an Idea formed by the imaginative Faculty, there was not the authority of a certain entity or beingness present, which was not able to cloath it self, or assume a Body; yea neither could it be associated by the imaginative Faculty, to the Body of the Archeus: For truly that which is in it self merely nothing, doth effect nothing, hath also negatively a right unto nothing: And therefore the conception should perish presently after the conceit, neither should it cause an Idea: yea if it should be a meer nothing, it should presently also wander into nothing: But seeing the plantasie doth proceed from a conception, unto a formed Idea or Image, and from hence unto a seminal Being, it follows, that the conceit is made [this some thing] in the imaginative faculty: That is, that the imaginative faculty doth create a certain seminal Being, which is a Beginning dispositive unto the formality of a Being in Power: Even as out of a Steel and Flint, a spark doth arise, from whence there is a flame very greatly operative: So the imaginative Faculty, doth co-rub it self on an Object by a conception, from whence there is an Idea: And therefore the act of imagination, is not so of nothing, that it hath not some foundation in it, approaching unto a principiating realty: For the imaginative Power hath for this end, either Images proper unto it self, conformed with the Soul; (as many do believe) or at least-wise, Images sometimes present, being stirred up by the Memory, and re-called again by remembring.

- 19 But I consider of these things; not that Essaies or flourishes of Idea's do fore-exist in us, before

before that which is Imaginatively conceived, that they may be the conceived Images of a proper name; but that they are made by a co-touching of the imagining Power in act, (that is by the Image of that which formeth) and of the Object imagined: And therefore the Soul doth nakedly form an Image out of its own Bosom, the which, unless it do presently bind up in the Archeus, it also perisheth, and for that very cause becomes barren: Neither doth that hinder, that in Fevers, or Disease watchings, we do against our will experience the shadows of Images: To wit, the which foolish shadows of Images, do walk up and down without a connexion and discourse, before the imaginative Faculty: But whatsoever imagined thing doth voluntarily walk up and down, yea and bring labours or troubles, we being averse thereunto, and unwilling thereof, that very thing must needs fore-exist, as it were shadows laid up before an imaginative force be reflexed upon them. But those kind of Idea's, are sometimes confusedly imprinted, they running back out of the storehouse of the Memory, but not that they had fore-existed before every act of imagining. And likewise, neither doth it prove; that because the aforesaid shadows of Idea's are confused, oftentimes ridiculous, and false, therefore neither ever before conceived by a sound imaginative Power: For truly Images or Likenesses, being once naturally determined, and seriously constituted, a second, third, and further Image is brought in upon it, and they do fold up, and pierce each other, whence there is a confusion: Otherwise, the following Image doth by course destroy the former, if it be opposite unto it, but if not, and if it agree with the former, it is comforted; or if there be any crookedness between both of them, both are confusedly undetermined, and wander as being shadowie Images; which thing surely no way brings help unto the supposed fore-existence of Idea's. It hath always seemed to me, that Idea's are stamped anew, by the act of the imaginative Power, like a spark which is made anew by a co-rubbing of the Steel and Flint: Neither doth this derogate any thing from the activity of Idea's, no more than sparks unto a great flame.

I answer therefore unto the first Objection: That as Fire is not present in the Steel and Flint, before a co-smiting of them: So neither doth any essay of Beingness, or footstep of an Image fore-exist, before a conception, and co-rubbing of the imaginative Faculty on the Object; but every original entity of an Idea, doth arise in the act of conceiving; and a true Idea is made, while the spark (which elsewhere should presently perish) doth fall upon the Fewel, and the conceived Image falls on the imagining Fewel of the Archeus, from whence the most powerful flames of Diseases do follow. Notwithstanding, because the treatise of Idea's doth most nearly touch Conceptions, I defer, and omit further to discourse of Idea's.

CHAP. LXXXI.

The manner of Enterance, of things Darted into the Body.

1. *The one only means whereby the Devil doth co-operate in darting things into the Body, is the juggling deceit of the Eyes, that they may enter invisibly.*
2. *A motive and determined or limited Blas belongs to the Devil.*
3. *How much Man may contribute hereunto.*
4. *The primary or chief Curing of things injected.*
5. *A natural Cure.*
6. *The variety of Gifts in Simples.*
7. *The Author proceeds by way of naming them.*
8. *Karichteris is commended.*
9. *A fore-caution in Herbs.*
10. *The manner whereby things cast into the Body, being once expelled forth, do hasten their rejections.*

I Will now proceed to supply the manner, whereby things darted or injected into the Body, do enter or are admitted; and also I will subjoin their Remedies.

- 1 First of all, things injected or cast into the Body, do enter it invisible: And this one thing is meerly diabolical. For truly, the most miserably Mocker, seeing he hath nothing real which is left him in liberty, hath only vain appearances; because the father of a Lie dissembles things themselves, and makes them falsely to appear, from the Beginning of the World. In these kind of juggles, a Man who is the Devils Bond-slave, co-operates nothing: But after what manner Satan doth make things which are in themselves visible, not to be visible, whether he involves them in his own invisible Spirit, and doth enclose the things themselves round about; or in the next place, doth act by a bewitching of the Eyes, or also at the very same time wherein any thing corporally pierceth another (as hath been already at large shewn by Examples) it be perhaps for that Cause invisible (for whatsoever looseth the dimensions of a Body, may also deceive the sight) at least-wise I am not a curious Searcher out of the Works of Satan, which do in propriety belong unto himself: And it is sufficient for me, that what things are believed to belong to him, I have shewn to be proper to Man, and that I have discovered the every way, and most poor misery of Satan.
- 2 Things therefore which are to be cast in, being made invisible, the Devil transferreth unto an Object, the Idea of mans desire directing their passage: For because it is not any way granted to the Devil to enter into a Man, much less to hurt him, and least of all, that he should encompass him with an invisible burden: Therefore he makes use of the free Blas of a Man which is bound over unto him. A Man therefore doth imprint his own free motive Blas, on a Body which is made invisible; but the Devil derives it even unto the man into whom it is cast: And as a Knife is through the desire and consent of the Person wounding, infixed into the Flesh of him that is to be wounded; So this Body being made invisible by the Devil, is cast into the Body of him that is to be enchanted, by an Idea of the motive Blas of the Witch; Satan conspiring hereunto, as for direction of the smiting Man.
- 4 The Cure of things injected, is performed partly by Remedies, famous from the rise of the primitive Church; the which do not operate but miraculously; but why they do not regularly alwayes, every where, and amongst all, obtain their effect, I leave it to others: But I do not touch at the unfearchable judgments of God; as neither the Remedies which are out of the compass of Nature. And partly also, a Cure is had by some Simples, whereinto the Almighty goodness, hath put in a natural Endowment, from the Beginning of their Creation, of resisting, preventing, and correcting of Sorceries; and likewise of expelling things injected; such as the suffumigation or smoakiness of the Liver, according

according to *Tobias*, is read to be. And such as that of *Salomon*, or *Eleazer*, according to *Josephus*, *Lib. 8. Chap. 2.*

For some Simples do drive away evil Spirits (a miserable rout of Men it is which gives its service of adoration unto Gods, who are not able to resist the natural efficacy of simples.)

In the next place others take away the penetration of a formal light, being fast tied to excrements : Some likewise do at least hinder their touching, enterance, or application.

Finally, many Simples there are which do correct those kind of Poysons, and kill them.

First of all, the Mineral *Electrum* or *Amber* of *Paracelsus*, which is immature, being hung on the neck, freeth those whom an unclean Spirit doth persecute; the which I my self have seen. But I remember that the drink thereof hath delivered many from Sorceries : But there is none, who (that Simple being hung on the Body) which shall not prevent, that things Injected are not sent or admitted within, or that is presently not loosed from importunate bands.

Barth. Karichterus chief Physitian to *Maximilian* the Second, the chief among Physitians (that I know of) hath dedicated a small *Germane* Treatise (as taking compassion on his neighbour) unto his Master : Wherein, with a few Herbs, he cureth any, and after what manner soever they are enchanted. He hath preferred his Standard-defending Simple *Daurant* (it is the *Phu* of *Dioscorides*) with Purple Flowers (it is the last kind of *Valerian* in the last Edition of *Mathiolus*) before all ; I also greatly esteem *Vervaine* with a Purple Flower, the more herby *St. Johns Wort* with a small Flower, *Southernwood*, *Adiantum* or *Venus hair*, *Rue*, &c. And likewise red *Coral*, and the extracted tincture thereof, I have experienced to have brought much refreshment.

We must use the Herbs raw, cut, but not boiled : Because their entire power consisteth in the integrity of their composed Body. Therefore the Ideal faculty of the herbs perisheth by powning or contusion. But Herbes are gathered, and Roots are digged up in a station wherein there is the more of vigor, and therefore also presently after Sun-rising. For things Injected are driven forth, no otherwise than as a Snake from the Fire. But Divines are wont to consume things Injected, which are rejected in the Fire, for a disgrace of the evil Spirit.

Those things indeed do thus rightly perish, yet the relapsing returns thereof, are not thus hindred. Therefore things Injected which were expelled, are more rightly involved and kept in Simples, in any whereof there is an expulsive force. With the like reason whereby Sympathetical Remedies do cure an absent Wound, do these endowed Simples drive away things Injected, do detain, and restrain them that they are not Injected, and do delude the vain endeavour of the Magitian.

The weaknesse therefore of an in-darting Being is deservedly suspected, which cannot send in things that are to be cast into the Body, because a certain hindering Herb is present, and President. Therefore the force which derives things Injected inwards, is not that of the Prince of this World, and of a most powerful Spirit : But that of a certain Ideal and more infirm Being, which doth so easily hinder all enterance for the future.

C H A P. LXXXII.

Of Things Conceived, or Conceptions.

1. *The Spleen is the Seat of the first Conceptions.* 2. *As well the Idea's of the Imagination, as Archeal ones, do issue from the Spleen their Fountain.* 3. *Therefore also they smell of an Hypochondriacal faculty or quality.* 4. *The Plague alwaies begins about the Stomack.* 5. *Of soulified Conceptions.* 6. *Idea's from the Womb.* 7. *Madnesses.* 8. *A mad Irreligion.* 9. *The reality of Conceptions in respect of the Matter and efficient Cause.* 10. *Presumption doth blind almost all mortal Men.* 11. *An occult madnesse.* 12. *Disease Conceptions.* 13. *Diseases of the Womb.* 14. *Womb Phantasies.* 15. *An instruction of every Monarchy.* 16. *A double Government in a Woman.* 17. *The Womb is not ill at ease but from things conceived.* 18. *The Female Sex is miserable.* 19. *Diseases of the Womb differ from their Products.* 20. *The Cure of its last or utmost Fury.* 21. *A twofold Idea of things Conceived.* 22. *The rise and progresse of a Feverish Dotage.* 23. *The progresse of Idea's unto their maturities.* 24. *The Entry of all good is in Faith.* 25. *The flourishing of Passions.*

Moreover, a Disease Being is like unto things Injected, the which I call that of things conceived; For although this Being doth not come to us from without, nor is nourished from elsewhere; Yea neither doth Satan co-operate with it: yet because it doth not much differ in its root, manner of making, and a certain likeness of effects, from some Injected things, I have not unadvisedly referred things Conceived, among Spiritual things Received: Unto the clearing up whereof, I have already premised many Prologues.

1. Wherefore I have already elsewhere demonstrated the Imaginative Power of the first Conceptions to be in the Spleen, and that it is from thence extended unto the Stomack the companion of the Duumvirate, and that also it is hence easily, and originally (in the other Sex) extended unto the Womb.
2. The Spleen therefore is as well the Fountain of Idea's Conceived in the imaginative faculty of a man, as of the Archeus himself. The Archeus hath his own and peculiar Imaginations proper unto him (for whether they are the Phantasies of a true Name, or onely Metaphorical ones, it is all one to me in this place) for the sake whereof, he continually feels Antipathies, and self-loves, and from thence stirs up derived motions.
3. Surely the, Conceptions of the Archeus, doe forthwith attain the most powerful determinations in the aforesaid places: Because they smell of their native place, they are Hypochondriacal Qualities, they bear the Monuments of the first, and undistinct motions. And although a soulified immagination, which is there delayed without the strength of impression, or the inclination of any prejudiced thing, may be at length made as it were sleepy, undistinct, and almost confused; wherefore indeed, times do seldome wax gray or old with carelesness: yet those which in the very shops of the first Motions, receive the deliberation of some Passion, do also allure unto them the Spirits made old in the Brain, do undergo the contagion of the place, and are made and forged by the Judgement of a deprived Idea, and do feminally bring forth affects co-agreeing with their Causes: To wit those which are suspected of Hypochondriacal madness, confusion and disturbance: For therefore we do all of us suffer, every one his own anguishes of mind; Yet the already mentioned Archeal imagination, as it neither desireth the consent of the Soul, so neither doth it expect it, and therefore it happens unsensibly, and without our knowledge.

There-

Therefore indeed the Plague, whether it be made from a terrour conceived in the Soul, or next from a proper Vice of the Archeus, yet it alwayes holds its first consultations about the Orifice of the Stomack: For the Idea's of the Archeus are most powerful, also the most fierce ones of Diseases; Because they being irrational, do happen unto us without our knowledge, and against our will, and therefore also incorrigible, and are for the most part out-laws, and do therefore invade us after an unthought of manner.

I will now treat of fouldified Conceptions, because they are the more distinct, and sensible ones; whosoever they be, which do as it were weaken, infatuate, and now and then enchant themselves with the perturbations of the first motions, and the conceived Idea's of these, they afford a fit occasion unto the aforesaid Causes: And although this kind of Vice, doth sometimes invade even learned, and judicious Men, produceth foolishnesses, and crabbishnesses; Yet it is more social unto a Woman, by reason of the agreement and nearnesse of affinity of her Womb.

Indeed the Womb, although it be a meer Membrane, yet it is another Spleen: And therefore it doth as it were by a proper instinct of the Seed, presently wrap it self in the external Secundines of the young, as it were another Spleen: As elsewhere in its place. Not indeed that a Woman, doth by this Vice of Nature forge execrable Hypochondrial Idea's for the destruction of others, after the manner of Witches; but they are hurtful onely to themselves, and do as it were inchant, and infatuate, and weaken themselves.

For they stamp Idea's on themselves, whereby they no otherwise than as Witches driven about with a malignant Spirit of despair, are oftentimes governed, or are snatched away unto those things which otherwise they would not, and do bewail unto us their own, and involuntary madness. For so (as *Plutarch* witnesseth) a desire of Death by hanging, took hold of all the young Maids in the Island of *Chios*: neither could it be stayed but by shame or bashfulness, fore threatened unto them after death. Seeing therefore the Vice of things Conceiv'd doth also touch men; let the Reader be averse to wearisomness, if it shall behove me to stay the longer in these things, who as the first, do touch at this string in healing.

Therefore, if mortals shall dash themselves into a presumption of Faith, if they depart from the Word of God, and for the explications of their own consent in Opinion, do as it were behold themselves in the glass of their own complacency, they now thereupon do stamp on themselves staggering Idea's, and those of a careless Religion, they, from one point, [being at first doubtful] do dispute (as being uncertain) of more, they proceed unto Atheism through a height of Irreligion. But if they shall fall into Superstitions, they forge Idea's agreeable unto Necromancy or Divination by calling of Spirits, from whence they prepare an apt Soul for Stygian or Hellish Vanities: Whereunto (as unto those who are become mad) the enemy of mortal men doth now very easily associate himself; especially if a stubborn Superstition be defended, and that with a strong desire of hatred, or some other Sin: For they stamp Idea's on themselves, which are second unto a voluntary blindness.

We must here again call to mind with the first, that all Ideal Images are seminal in respect of a real Being brought forth by imagination: And then in respect of the Spirits (as they are vital, and married to a conceived Seed) whose matter they do assume, or table on, which they are deciphered, they are made the Instrument fit for executing the ends of Idea's: Therefore by both these Prerogatives, they pierce the Archeus, and do estrange him unto the strange Scopes of their own Perturbations. If therefore Faith, and a confident Superstition do offend onely through credulity or a rash belief; now they forge Idea's whereby they think themselves enchanted, incurable, and are made the servants of a desperate madness: For their strength being prostrated, they are made lean, and being mad, do wax pale. But if an undiscree, and inordinate scrupulousness doth vex them, it self frameth a careful Idea on them disturbed with the fear of Hell, from whence their Life is a Horror unto them; Their Conversation of all things is Fearfull; almost, as if it were Diabolicall: For they generate a foolishness, the which they acknowledge, confess, bewail, because they are not able to free themselves from it: And at length, they, as impotent, do so fail or decline, that they snatch to them an Idea as it were their Soul: But if a scrupulousness do run back unto the mind for deliberation, before a totall victory, and nevertheless doth in the mean time, stamp new, and inordinate Idea's; It being unstable easily wanders into the opposite part, and, as if now abhorring its former scruple, doth assume a Spiritual liberty, with a presuming on desert, and a despising of others. For which way soever it endeavours to rise higher, it is sunk so much the deeper: For presumption is nothing but a vain madness, hanging alwayes on others Wills or Judgements:

Yet

Yet is it as it were proper unto the most of mortals : For by reason of Virtues, Wit, Learning, Birth, Riches, Beauty, Strength, Boldness or Courage, Arts, much Talking or Voice, every one forgeth Idea's applauding himself ; the which do make almost the whole World mad: Of whom it is said, *That the number of Fools are Infinite*. But the most hurtful madness of Presumptions is in Political matters, and it is that of boldness, because it is that which doth oftentimes subject its own unto a tormenter.

Surely madness is seldom without Presumption, if Stupidity be not akin to it : For indeed the Idea of Faith, Despair, Scruple, Irreligion, Arrogancy, Esteem, &c. because they respect the Powers which are more abstracted and Intellectual, and do the more oppose infused Grace, they do for the most part, so beget a hidden madness, that it is not but slowly discerned by Spiritual, and those much Exercised men. Which be-madding Idea's, those do follow in Order, which belong to the more corporeal Disturbances.

For first of all, as an hard emulation of Jealousie, is a Hell, which throws a man headlong into very many Miseries : Also, in the next place, the Idea's of Lust and Fornication, do besides Madneses, stir up also many Sickneses together.

12 But all Exorbitancies of Disturbances, if they are sudden, strong, frequent, or of daily continuance, they imprint Idea's and Infirmities like unto themselves, therefore also durable for Life. Indeed there are some who are truly wise, but if they shall pitch upon a matter whose Idea hath made them mad, they do presently bewray an occult madness : I say, a suddain terror and grief have oftentimes extinguished some with an un-fore-seen Death. In others also they have at least-wise caused a Sounding : They have stirred up in many Women an Issue of their Menstrues durable for Life. But if the force of an Idea shall not tyrannize on the venal blood, and therefore shall not banish this as hateful, but shall keep it in its possession in the place about the short Ribs ; it there seals the Falling-Sickness : But lingring grief, and that which is by intervals, being interrupted with a little comfort, doth stamp an Idea, from whence Hypochondriacal Melancholly in Women: but the Jaundice in Men is bred, if the Idea's be sealed in the blood : But if in the very bowels of the Spleen, it attempts an Asthma and Choaking : But if grief be connexed with an Idea of Despair, it breeds the Palsie, or Convulsion, especially in Virgins ; But lingring grief when it is joyned with premeditated anger, or hatred, doth bring forth Sobbing, trembling of the Heart, or a stubborn suppression of the Menstrues. Yea, if those kind of Passions shall be strong, they cause the Falling-Sickness, and Abortion or a Miscarrying, or do Choak those Women which go with Child. If anger be suddain, and the which notwithstanding ought to be restrained or dissembled ; It stamps an Idea from whence there are Fallings down of the Womb, wandrings unto its sides, with intollerable pain ; but in Men there are Asthma's, Shortness of Breath, and a Fever, which at length passeth over into the Jaundice, or Dropsie. If a violent affrightment, or Fear doth rush upon one, Epilepticall or Falling-Sickness Idea's are forged, which do remain for Life. But Hatred and Avarice do generate a Leanness, or Atrophie or Consumption for lack of nourishment ; they stamp I say, Idea's answerable to their own Desires, and they decline so far to folly, that they little esteem of their own Life, and Fortunes of their Neighbours, believing that nothing doth happen unto them, more pleasant in their Life, than the shameful Satiety of Revenge : For those kind of Idea's do make Lean, and because they are bred by slow, and resolute Perturbations, they increase day by day, and do for the most part continue for term of Life. Neither also doth the Seed being corrupted, or the Menstrues detained, stir up Diseases of the Womb ; but these are latter Products, and Defects coming upon the Idea's of alterations.

13 For the Womb, as it hath a particular Monarchy, so also particular Diseases : Because every exorbitant affect of the Womb, is a certain madness, or befooling of the Archeus in the Womb. For even as there is a ferment of a be-madding fury in the Spittle of a mad Dog ; an Idea, I say, which a little after doth make him that is bitten, Mad : So in some Simples, there is a sealifying faculty of Madness, and sealed in some Excrements being detained, or bred in the raging Womb ; a madness of fury there is in them, which doth either propagate the madness conceived, on the off-springs, or perseveres with barrenness unto the finishing of their radical Fury.

14 Surely it listeth me to contemplate of a Power in the Womb, like unto the imaginative one of the first motions ; As it were of a most powerful Blas of the Stars, turning and overturning all things upwards and downwards : For the Womb hath had its own Government hitherto, and hath kept it entire over the whole Body ; yea alwayes hath cruelly exercised it, unto the fore troubling of the Sex which is to be pitied.

But

But for the instruction or orderly preparing of every Monarchy, a certain governing Faculty (such as in malice, and affects of the Womb, doth clearly appear to be monstrous) is alwayes primarily required, and another angryable Faculty which is unfolded under a womanish Life, by the diverse animosities of affections: The disturbances of which Faculties, and the overflowing exorbitances sprung from thence, certainly, do presuppose nothing less, than the fury of the Womb: For what can be more madly done, than that the Womb should strain the Neck of a Woman, and miserably destroy its own subject? should contract the Pores of the Lungs? should violently powr forth the whole Blood? For truly at the killing of its Woman, the proper death of the Womb doth of necessity follow: therefore this very thing is by consequence, to cause its own destruction, by a deliberated force.

From whence the argument of a twofold Monarchy in a Woman, is at least-wise seen:

To wit, from a duality of the Womb with the Body of the Woman, the Enemy of Unity, and Fuel of discord: But although such a choaking doth for the most part, take its beginnings from the disturbances of the mind, and Idea's stirred up from thence, and the which being deadly, doth obliterate the birth or original, comeliness, and life of the whole Body, like unto Hornets that are stirred up: Yet the Womb in a Woman surviveth, so that, she that travaileth, being dead, the Womb hath expelled its Young, sometimes many hours after: Therefore there is in the Womb a certain Animosity and Fury, from Idea's conceived, exercising the Vicarship of the mind from a certain Being, and it is in the Womb by reason of its singular Life: Every Disease therefore of the Womb is potestative, being directed by the government of the Womb, either on it self, or on the Body of the Woman:

From whence entire Idea's may be not unfitly discerned from corrupted ones, For seeing the Womb governs it self, and lives in its own Orbe, from a strange venal Blood; therefore it is scarce ill at ease, unless it be weakened by a Being of things conceived; yea it is alwayes after some sort mad, as oft as it is ill at ease: For whether the monthly Issues shall stop, or immoderately flow, are discoloured, waterish, black, clotty, offend in the smallness of quantity, Gonorrhea's or the Whites do issue forth, or the Womb it self being moved from its place, being eccentricall, doth hugely deface, or destroy, or in the next place, being unmoved, doth bring forth an alterative Blas, or produce effects nigh akin unto an enchantment; or lastly, doth stir up the Being of an Apoplexie, Epilepie, Palley, giddiness of the Head, Megrim, pain of the Stomack, Jaundise, Dropfie, Wounding, Asthma, Convulsion, Heart-passion, &c. it is all one; because its Fury varieth not but by its Tragedies, wherein it abuseth its Power, and the Womb sporteth by a Monarchal liberty, over the whole entire Body: For truly, without material Vapours, it bears the Keys, wherewith it open the Veins, stirs up incredible fluxes of Blood, and without any motion of it, it shuts the Pores of the Lungs according to its desire, yea and takes away the transpiration of the whole Body at its own pleasure: For it is president or bears sway over the Moon in the Body, it despiseth Age, Nature, Maturity, and untimely Ripeness: And likewise it causeth Abortions, and takes away fruitfulness, and in the meantime, compleats its voluptuous Fury by a Lord-like tyranny: It perfects the sore shakings of the Joynts, deprivings of Speech, dis-joyntings of the Knuckles, for the Luxury of its Fury: And although a Woman be not mad under so great Evils, yet the Womb is mad in all the aforesaid exorbitances.

She is miserable therefore, who layes under such a command; She is subject I say, unto so many Diseases as a Man, and doth again obey the same from the Being of her Womb: For she also at this day paies a double punishment, as in *Eve* she is guilty of a double offence: Yet the Womb is not a part of the Man, as she is a man. It is indeed in man, and lives by his venal Blood, no otherwise than as Glew by a Tree, and that sexual part commands the whole Body, much more powerfully, than the Stones do in a Cock or a Bull, who in their gelded ones do expresse notable varieties. For truly, not only every part doth hearken unto the Womb; but the violent commands of the mad Womb do punish the Body of the Woman, together with her Life. Indeed the passions of the Soul, do only stir up the Womb, as it were a sleeping Dog, and the Womb doth thereby assume a cruelty, and presently compels the innocent Woman to repent of its madness: And moreover also, it oftentimes reflects its fury on the very Powers of the mind, by which it had been long since provoked, that it may boast of its absolute command over all things. For the Idea's of the passions of the Soul, as oft as they are importunate on the Womb, if they are introduced into the angryable Faculty of the Womb, and do pierce it, they as forreign and

hateful ones, do straightway disturb it; from whence the impatient Womb doth stir up it self into diverse furies: Which thing also even from thence, was not hid to *Plato*, while he named the Womb a furious living Creature.

- 19 In the next place, although from the fury of the Womb, as well the proper Cook-room thereof doth labour, as of other parts laid hold of by it, and from thence diverse excrements are stirred up, being made remarkable by the seminal Idea's of furies; yet those same excrements are only products: That is, although madneses arisen from conceptions, do bring forth their foolish Idea's, and do decypher them in the strange tables of excrements, by the inordinacy of a part of them (even as the madnes of Dogs doth pass over into the Spittle) yet by a removal of the occasional product, although Diseases may be allayed or eased, the fury of the Womb is not Cured: Because that product being taken away, was a latter thing or effect, causing neither the former madnes in the root; so also neither reaching to it, but only aggravating it: For the curing of madnes
- 20 arising from things conceived in the Womb, requires an extinguishment of the fury of the Idea conceived, by appropriated Secrets or Arcanums (for they cannot be overcome by opposite Idea's, seeing the Woman is now incapable to form Idea's that are wholesome for her self, so long as she is restrained by the fury of her Womb) and afterwards a rectifying of the Organ, for otherwise the madnes doth very easily return. Hellebore indeed (which is wont of old, to be singularly commended for madnes) doth lighten the weightiness of conceptions, in as much as it takes away somewhat from the aggravating product: but surely it cures it not, but in nature sitting; and that helps it self, as a mad Person, who hath become mad by a proper doting Being, arising out of the proper Idea's of his own excrement: Notwithstanding, the foolishness which hath arisen from a sudden perturbation, although it may oft-times depart by such a Remedy, Nature by its goodness buisily supplying the rest; to wit, the Spleen, and Brain being cherished or fomented, if they shall the more slowly proceed unto a recovery: but because the madneses of conceptions do arise from mental Idea's, hence they do so deeply pierce, that they do also radically defile the fructifying Seed in its Spirit, and the madnes of the generater is traduced on the posterity.

- 21 Therefore an Idea conceived in the imagination of the sensitive Soul, is twofold.

For there is a certain one which proceedeth from the disease Seeds of things: For we see a Calfe to grow mad, and a Dog to die with madnes; likewise a Wolfe that is mad every year, to be restored by incredible fasting: The which *Paracelsus* ridiculously ascribeth unto the slow Star of Orion: I say it proceeds occasionally, the Power of a forreign Seed being introduced into us, until our Archeus doth borrow from thence the Idea's of fury, the which himself stirs up on himself, and himself cloaths himself withall. Indeed there are Idea's in some Simples which do naturally infatuate; not indeed that they naturally destroy the temperature of the Brain: Because it is that which doth clearly understand without a temperature; and those temperaments are meer dreams; but because they confer there own Ideal character, and do occasionally imprint it on the Spirit, the instrument of the imagination, and stir up Idea's agreeable to their own Idea's: For so the Poyson of the Tarantula, or Dog, do propagate determined, and their own only and proper befoolments: And so those that are careless, having taken in some Simples, do become mad according to their inbred Idea's.

- 81 The other madnes therefore of conceptions, doth arise from things bred within: So in the first place, Dotages in a Fever, are not from things assumed; but from excremental Idea's degenerated within. And there is moreover, a twofold variety of Idea's conceived within: One madnes indeed, being sprung from mad Idea's, through a wandering abuse of the imaginative Power, doth seal it self in the Archeus, and so from its resembling mark doth pierce deeper, and continually, or repeatedly extends it self on the Life; but the other madnes is bred in feverish and hostile excrements, as in the same, some like thing doth occur, the which we have known naturally to inhabit in the aforesaid Simples: And therefore these kind of madneses, because they are entertained in a corporal, forreign, and hateful Being, they do not so deeply pierce into the inbred Archeus of the imaginative Power.

- 22 For at first, Feverish Filths do bring forth un-sleepinesses, afterwards dreams interrupted by wakings, and at length more continual ones, the labour and tiresomeness whereof, do produce their own Idea's in the excrements, from whence doting dreams opposite to waking ones, are seen: For if dotish furies should be bred in Fevers from Simples, or Excrements, mocking with a similitude of proportion; certainly Dotages should assault

us in the first fit, neither should they expect a heap of dayes, unless the Idea's of the tirefomeness, and labour of dreams, should manifestly engender a dotage. What if dreaming Idea's do cut asunder the cords of judgment? what shall not the Idea's of Apprehensions, Affections, Passions, and Considerations beget or cause? especially as oft as they being advanced to the height, do defile the Archeus, by violently corrupting, or fermentally bespattering of him? for the three former are scarce stirred up of their own accord, but are moved and provoked by some foregoing passion: For an abusive perswasion, and credulity, or esteem of falshood, do at first seduce a man into a despising presumption of others, or into an indignation of self-love, anger, hatred, or wrathfulness towards his Neighbour: From whence indeed there is also an unbelieving Religion, Superstition, Scrupulousness, Impenitent Arrogancy, and Drunken desparation, together with Carelessness. For as Faith is the gate unto Humility, which is the truth of the Intellect or Understanding; So a credulous esteem or judgment of Falshood, is the entrance of Presumption and Arrogancy, and the first madness of the Soul. For therefore among Miracles, one that was foolish from things imagined, is scarce read to have been restored to health; because such do (for the most part) become foolish from an impenitent pride, and refusing to return into the Truth. But disturbances, as Love, Desire, Sorrow, Fear, Terror, are especially stirred up by extrinsecal occasions; and therefore they do produce their Effects, not only in the Soul, but also in the Body: For all Passions do in their Beginning, take away sleep, and then they do at first weaken the desired act of eating: And at length through a long, immoderate, strong, or sudden inordinacy, their Idea's do infatuate the Archeus: The strength whereof is not elsewhere to be measured, than from an exact piercing, and co-mixture of them with a great or small quantity of the Archeus: For the Soul apprehending, or discoursing by little and little, is accustomed to follow without strife, whereby it is oftentimes, and violently led aside willingly with plausibility, or unwillingly, by reason of a superiority of apprehensions: For the Soul is made conscious of that journey, although a straying one, because an accustomed one: And deviations are manifest, and hidden, or unknown, continual, or those renewed afresh. Indeed the manifest ones do presently bewray their excepticalness of madness, it being conspicuous in all things, and about all things: but the more occult and hidden ones, do not appear but in some points, and conceptions; to wit, whereby the Soul hath been once shaken out of its place, and the judgment sorely shaken; whose Idea's have indeed been imprinted on the Organ, by reason of a dayly continuance, or plausibility; that is, by reason of strength and superiority: But in the other points, they seem rightly to perceive. But as to that which concerns the curing of conceptions, I profess deliver the same hereafter, in a Chapter by itself, and in a Theme or Argument plainly Paradoxal. But now I directly behold or cast my eye on the Affects of the Womb: For from the Effect, I am induced to believe, that in enchantments, the most powerful part of the whole tragedy, doth depend on the Idea's of the bond-slaves of the Devil, and so that they do originally proceed from conceptions, even as I have demonstrated in its place; because those things which naturally do help those that are enchanted, do also cure the passions of the Womb, and on the other hand: but that the Womb which else is quiet, is stirred up into animosity or wrathfulness, by anger, and grief, is so without controversie, that it is known to poor Women, and old Women themselves: Neither doth any thing hurt the virtues implanted in the Womb, which is plainly a non-being (as a cogitation is) unless it be made most nearly to approach into the form of a Being, at the original of all motions in us.

But I have endeavoured by a long tract of Words, to convince of this progress in Idea's: Wherefore also I am constrained to ascribe the like nativity in enchantments: For indeed, although Odoriferous and grateful Spices do weaken many Women; yet any ill smelling and stinking things, ought not therefore to cure them: For Example; For Asa, or the smell of fuming Sulphur, do not refresh distempers of the Womb, as they do stink; for neither do they alwayes equally refresh all Women alike, or simply; but because they restrain, or slay the Idea's that are imprinted without the Womb: So although sweet things do weaken them; therefore bitter things, as such do cure them: For I have taught, first of all, that contraries do not exist in Nature. Wherefore an argument from the contrary sense, although it may be of value in the Law; Yet not in Nature: because the contentions and brawlings of the Law are not found in Nature: Neither is it to be thought in the mean-time, that the Remedies of the Womb do consist in that which is temperate, as it were the middle of Extrems, the refuge of qualities mutually broken,

being taken away from extreames, but altogether in a free Arcanum. So indeed, that although no Simple be an unpartaker of the first Qualities; yet things appropriated do least of all cure the Affects of the Womb in respect of those Qualities: But such a kind of Arcanum is the fire, or sweetness of the Sulphur of the Vitriol of Venus or Copper; and likewise the volatile tincture of Coral, the Essence of Amber, the Agath-stone or Jet, the Nettle with a white-hooded Flower that doth not sting, the black Gooseberry, Ballote or the kind of Horehound so called, Rue, Southern-wood, Sage, Nep, the berries of Elder, of Wallwort or dwarfe-Elder, Asa-fetida, the wart or hillock of a Horses Ham: Golden shining Coral therefore is a stony Herb, or an herbie Stone born for the destruction of Sorceries: For even as Sorceries are made by an Idea irregularly transplanted in filths; to wit, the which Idea was already before seminal in its own Spirit; yet while it is inserted in filths, it wanders into a Poyson: So indeed the seminal virtue in Coral is inserted into a stonifying matter: If therefore there be he, who can separate the vegetable part from the stone of Coral, now an endowment of Nature it attained, or the Idea of that Simple, which doth vindicate and transplant the Idea's transplanted into a Poyson: For I have observed how unvoluntarily the Devil could endure this Stone: Because I knew a Noble-man enchanted, on whom, although Bracelets of Beads of Coral were strongly bound, yet they would presently burst asunder from thence: The like whereof doth occur in that; because Women being ill at ease, bright golden Coral doth presently wax pale, as it were taking compassion on them; the which notwithstanding, doth resume its former brightness of redness, with the health of the Womans Womb. But not any kind of Simples do equally cure the enchanted, as neither all Affects of the Womb alike; for all particular Simples have their own Endowments, their Idea's, and do take away hurtful Idea's their compeers. To wit, Southern-wood, Sage, and Rue, do drive away the Idea's of Fear: Mugwort, the Nettle, Ballote, and black Gooseberry do prevail in cases contracted from Grief: But Asa, Castoreum, the Elder berries, the Essence of the Agath or Jet, in cases caused from Anger.

But Nep, Valerian, and Venus or Maiden-Hair, in cases resulting from the Idea of Hatred: Even as Saint Johns Wort and the third Phu, in Idea's that are full of Fury: So an Hare dried, the Stones of some Beasts being dried in the Smoak, the rod of a Stage, *Agnus Castus* or the Willow Vitex, and Amber, in Idea's bred through the suggestion of Lust: But the mineral Electrum, Coral prepared, and the greater Arcanums, do after some sort ascend unto a universality: whereunto the Secundines of a first-born Male, the Gaule of a Snake, &c. do most nearly approach. Truly the greater Secrets perpared by Art, or things appropriated by natural Endowments, do scarce leave any one destitute.

Furthermore, how much the method proposed doth deviate from the Schooles, let themselves judge: for they do acknowledge the Disease of the Womb, after a rustical manner: To wit, they have only known the inordinacies of the Menstrues, and the Gonorrhoea's or Whites; because they refer the inordinate lusting of the Woman with Child, and stranglings of the Womb among Sumptomes: For they weigh the retaining of the Menstrues by a stoppage, and are vainly intent to Cure it by opening things: For they have been so accustomed not to heale, or make sound their Patients, that the name of Sanation, hath departed into Oblivion, and Curation hath obtained its place: For so they will have immoderate Courses to be cured by an inordinate opening of the Veins, it being an undistinct observance with the common sort.

In the next place, it is a thing full of Mockery; that they do endeavour only by Phlebotomy, to help as well the retained, as the immoderate flowing Menstrues. In those being retained, they do only cut a Vein of the Ankle; but in their inordinate Fluxes, the liver Vein in the Arm: In both Cases I say, they do draw out venal Blood in equal quantity; because they have sometimes found, that Nature being as well full of Danger and Fear, as empty of Blood and Strength, hath now and then desisted for a space, from the begun fury of a Flux: Perhaps it shall be alike, if they shall make an Horse that is too wanton, to halt through hurting of a Tendon. But the Menstrues failing, the Schooles have now forgotten Obstructions, and as if the suppressing thereof did involve a necessary Plethora or abounding of Humours, they command a Vein to be cut; the which is to have fought against the Effect, but not against the obstructing or stopping Cause. They know not, I say, that the Menstrues being detained, do offend through a fury of the ruling power or faculty: They sometimes give Solutives repeatedly to drink, and those things which are feigned to be hot in the third degree: In the mean time, as being unmindful of these, they hand forth Steel divers wayes vexed, to drink: I wish the World had known with what vain succours they do disturb Women, how earnestly they labour in unstop-pings

pings, throughout the whole Christian World, and how much the Schooles are busied, that they may derive the errors of their ignorance on the omissions of others: For they enjoy a strict obedience of diet, the which command, if they shall not obey in all things, even but once to a very smell, they cry out that they have laboured, and endeavoured in vain.

In the mean time the strang, or inordinate lustings of a Woman with Child, although they have discerned that they are in vain attempted by their Purgations; yet while they are destitute of better Remedies, they do never theless, every where administer Purgations in curings of the Womb. The stranglings thereof also, the cruel spectacles of Death, they endeavour to withstand by stinking things applied to the Nostrills, others do present Theriaca or Triacle to the smell; but most do violently thrust the Conserve of Rue with Castoreum, in at the Mouth: Being ignorant at least-wise, how much the sweetness of Sugar doth stir up the sleepified fury of the Womb.

Lastly in so great an Agony, a conjectural healing is hoped for, by stinking and sweet-smelling things, being applyed unto diverse places. Ah cruel wickedness, that would pacifie the furious or mad raging Womb, by a phantastical or imaginatory revulsion! Vain are the counsels, and helps of Physitians, which are administered without a knowing of the immediate Causes: For they know not how to apply a finger in the easing of the Malady, and they leave the whole burden on the Womens Shoulders, until they being strangled, do voluntarily give of or die, or by a strong fortune do return unto themselves, the circle of fury being measured or passed over: Frequent Visiter the while, do exhaust their Purfes and Strength.

Most kind Jesus, who when living on the Earth, barest so great a care of Widows and Virgins, and now alone administering the Monarch-ship of Heaven and Earth, have pity on Physitians, that hereafter they may take a meet care of the more harmeless, and miserable Sex, and may search after due Remedies: Bend their Minds, that they may not refuse to learn, and that under a blessed unison or Harmony, we may all alike meditate the one thing altogether necessary, which is to fulfil thy most lovely Will, by worshipping thee with an annihilating of our own will into the super-celestial Ocean of thy sanctifying Will. Amen, ah! I wish Amen.

C H A P. LXXXIII.

The Magnetick or Attractive Power or Faculty.

AS concerning an Action locally at a distance, Wines do suggest a demonstration unto us: For every kind of Wine, although it be bred out of co-bordering Provinces, and likewise more timely blossoming elsewhere: Yet it is troubled while our Country Vine flowreth, neither doth such a disturbance cease, as long as the Flower shall not fall off from our Vine; which thing surely happens, either from a common motive Cause of the Vine and Wine: or from a particular disposition of the Vine, the which indeed troubles the Wine, and doth shake it up and down with a confused tempest: Or likewise because the Wine it self, doth thus trouble it self of its own free accord, by reason of the Flowers of the Vine: Of both the which latter, if there be a fore-touched conformity, consent, cogrieving, or congratulation: At least-wise that cannot but be done by an action at a distance: To wit, if the Wine be troubled in a Cellar under ground, whereunto no Vine perhaps is near for some Miles, neither is there any discourse of the air under the Earth, with the Flower of the absent Vine: But if they will accuse a common Cause for such an Effect, they must either run back to the Stars, which cannot be controuled by our pleasures, and liberties of Boldness; or I say, we return to a confession of an Action at a distance: To wit, that some one and the same, and as yet unknown Spirit the Mover, doth govern the absent Wine, and the Vine which is at a far distance, and makes them to talk, and suffer together. But as to what concerns the Power of the Stars; I am unwilling, as neither dare I according to my own liberty, to extend the Forces, Powers, or Bounds of the Stars, beyond or besides the authority of the sacred Text, which saith, it being pronounced from a divine Testimony; *That the Stars shall be unto us for Signs, Seasons, Dayes, and Years*: By which rule, a Power is never attributed to the Stars, that Wine bred in a foreign Soile, and brought unto us from far, doth disturb, move, or render it self confused: For the Vine had at some time received a Power of increasing and multiplying it self, before the Stars were born: And Vegetables were before the Stars, and the imagined influx of these: Wherefore also, they cannot be things conjoynd in Essence, one whereof could consist without the other. Yea the Vine in some places, flowreth more timely; and in rainy or the more cold years, our Vine flowreth more slowly, whose Flower and Stages of flourishing, the Wine doth notwithstanding imitate; and so neither doth it respect the Stars, that it should disturb it self at their beck.

In the next place, neither doth the Wine hearken unto the flourishing or blossoming of any kind of Capers, but of the Vine alone: And therefore we must not flee unto an universal Cause, the general or universal ruling air of worldly successive change; to wit, we may rather run back unto impossibilities and absurdities, than unto the most near commerces of Resemblance and Unity, although hitherto unpassable by the Schooles.

Moreover, that thing doth as yet far more manifestly appear in Ales or Beers: When in times past, our Ancestours had seen that of Barley, after whatsoever manner it was boyled, nothing but an empty Ptisana or Barley-broath, or also a Pulpe was cooked; they meditated, that the Barley first ought to bud (which then they call Malt) and next they nakedly boyled their Ales, imitating Wines: Wherein first of all, some remarkable things do meet in one. To wit, there is stirred up in Barley a vegetable Bud, the which when the Barley is dried, doth afterwards die, and looseth the hope of growing, and so much the more by its changing into Meal, and afterwards by an after boyling, it despaires of a growing Virtue; yet these things nothing hindring, it retains the winey and intoxicating Spirit of Aquavita, the which notwithstanding it doth not yet actually possess: But at length in number of dayes, it attaineth it by virtue of a Ferment: To wit, in the one only bosome

bosome of one Grain, one only Spirit is made famous with diverse Powers, and one Power is gelded, another being left : Which thing indeed, doth as yet more wonderfully shine forth ; When as the Ale or Beer of Malt, disturbs it self while the Barley flowreth, no otherwise than as Wine is elsewhere wont to do : And so a Power at a far absent distance, is from hence plain to be seen : For truly there are Cities, from whom pleasant Meadows do expel the growing of Barley for many Miles ; and by so much the more powerfully, do Ales prove their agreement with the absent flowring Barley ; in as much as the gelding of their Power, hath withdrawn the hopes of budding and increasing : And at length the Aqua vitæ, being detained and shut up within the Ale, Hogs-head, and prison of the Cellar, cannot with the safety of the Ale or Beere wandering for some leagues, unto the flowring care of Barley, that thereby as a stormy returner, it may trouble the remaining Ale with much confusion. Certainly there is a far more quiet Passage, for a magnetical or attractive agreement, among some agents at a far distance from each other, than there is to dream an Aqua vitæ wandring out of the Ale of a Cellar, unto the flowring Barley, and from thence to return unto the former receptacles of its Pen-case, and Ale : But the sign imprinted by the Appetite of a Woman great with Child, on her Young, doth fitly, and alike clearly confirm a magnetisme, or attractive faculty its operation at a distance : To wit, let there be a Woman great with Child, which desires another Cherry, let her scratch her Forehead with her Finger ; without doubt, the Young is signed in its Forehead with the Image of the Cherry, which afterwards doth every year wax green, white, yellow, and at length looks red, according to the tenour of the Trees : And moreover, it much more wonderfully expresth the same successive alterations of maturities : Because the same Young in *Spain* (where the Cherry-tree flowreth about the end of [the 12th. Month called] February) hath imitated the aforesaid Tragedies of the Cherry, far sooner, than amongst us : And so hereby, an Action at a distance is not only confirmed ; But also a Conformity or Agreement of the Essences of the Cherry-tree, in its wooden and fleshy Trunk ; a consanguinity, or near affinity of a Being, unfolded on the part by an instantious imagination, and by a successive course of the years of its Kernel : Surely the more learned ought not to reject those things unto the evil spirit, which through their own weakness they are ignorant of : For surely those things do on all sides occur in Nature, the which through our slenderness we are not able to unfold : For to refer whatsoever Gifts of God in Nature our slenderness doth not conceive of, unto the Devil, wants not an insolent rashness : Especially when as all demonstration of Causes, from a former thing or cause, is banished from us, and especially from *Aristotle*, who was ignorant of whole Nature, and deprived of the good Gift which descendeth from the Father of Lights, unto whom be all honour, and sanctification.

C H A P. LXXXIII.

Of Sympathetical Medium's or Means.

I Deferred above, to close up the Treatise concerning things Injected, until it should be sufficiently and over-manifested concerning things conceived: For I have conjoyned things Injected, unto things Conceived, because they stood connexed in the root of the imaginative faculty: But I have shewn how much both of them may hurt and weaken us: one indeed as it were a foreign being drawn from some other place, and derived from far into the Body, heaping up a various Calamity; but the other bred at home in our possession: There was only remaining to be searched, Whether those Brans had nothing of fine Wheat adhering unto them? whether nothing could be fetched from the same Beginnings, which might be as a recompence for so great maladies? I have therefore discerned first of all, that Sympathetical Medium's are co-bound together with them. In the year 1639, a little Book came forth, whose Title was the Sympathetical Powder of *Ericius Mohyns* of *Eburo*, whereby Wounds are Cured without application of the Medicine unto the part affected, and without superstition; it being sifted by the Sieve of the reasons of *Galen* and *Aristotle*; wherein it is Aristotelically, Sufficiently proved, whatsoever the Title promiset: but it hath neglected the directive Faculty or Virtue, which may bring the Virtues of the Sympathetical Powder received in the bloody Towel, unto the distant Wound: Truly from a Wound, the venal Blood, or corrupt Pus, or Sanies from an Ulcer being received in the Towel, do receive indeed a Balsam from a sanative or healing Being: I say from the Power of the Vitriol, a Medicinal Power connexed and limited in the aforesaid Mean: But the Virtues of the Balsome received, are directed unto the wounded Object, not indeed by an influential virtue of the Stars, and much less do they fly forth of their own accord, unto the Object at a distance: Therefore the Idea's of him that applyeth the Sympathetical Remedy, are con-nexed in the Mean, and are made the directresses of the Balsam unto the Object of his desire: Even as we have above also minded in Injections, concerning Idea's of the desire. *Mohyns* supposeth that the Power of Sympathy doth issue from the Stars, because it is an imitator of Influences: But I do draw it out of a far more near Subject: To wit, out of directing Idea's, begotten by ther Mother Charity, or a desire of good will: For from hence doth that Sympathetical Powder operate more succesfully, being applied by the hand of one, than of another: Therefore I have alwayes observed the best process, where the Remedy is instituted with an amorous desire, and care of Charity: but that it doth succeed with small success, if the Operater be a careless, or drunken Person: And therefore I have thenceforth, made more esteem of the Stars of the Mind, in Sympathetical Remedies, than of the Stars of Heaven.

But that Images being conceived, are brought unto an Object at a distance; a Woman great with Child doth manifestly prove; because she is she, who presently transferres all the Idea's of her Conceptions on her Young, which dependeth no otherwise on the Mother, than from a Communion of vniversal nourishment. Truly seeing such a direction of desire is plainly natural, it's no wonder that the evil Spirit doth require the Idea's of the desire of his Imps, to be con-nexed unto a Mean offered by him. Indeed the Idea's of desire, are after the manner of the Influences of Heaven, cast into a proper Object, how locally remote soever; To wit, they are directed by the desire, specifying, or specially pointing out an Object for it self; even as the fight of the Basilike, or Nod of the Cramp-fish, is reflected on their willed Object: For I have already shewn in diverse foregoing places, that the Devil doth not attribute so much as any thing in the directions of things Injected; but that he hath need of a free directing and operating Power or Faculty. But not that I will disgrace Sympathetical Remedies, because the Devil operates something about things Injected into the Body: For what have Sympathetical Remedies in common, although the Devil doth co-operate in Injections by wicked natural Means required from his Bond-slaves: For every thing shall be judged guilty, or good, from its ends and intents: And it is sufficient that Sympathetical Remedies do agree with things injected in natural Means or Medium's.

CHAP. LXXXV.

Of Things Inspired or Breathed into the Body.

A N undistinct novelty of things, hath long detained me in mental Receptions : Now at length I prosecute the third kind of things Received. I call them Things Inspired ; for they enter into us from without, and for the most part, together with the Air : To wit out of Dens or Caves, Fens, Mines, Mountains, Windes, Provincial places, Serpents, or Creeping Things, Filths, dead Carcasses, or growing Things. For they are the Exhalations of Things, which do treacherously, and unsensibly filch away our Life : For *Illyricum* and *Dalmatia*, being in times past, populous Provinces, and likewise *Alexandria* sometimes most famous ; although they have the Ground of a fertile Soile, are now almost forsaken, by reason of a cruel Poyson, which presently tends unto the conclusion of Life. So an Alchymist daily draws a wild and pernicious Gas out of Coales, Stygian Waters, and fusions of Minerals ; and the which being once attracted inwards, doth disturb the Archæus, according to the disposition proper unto every Poyson. So the Air being infected with the importunate or unseasonable ferments of a place, produceth a Gas, which affords accustomed sicknesses unto places : The which others have rashly referred unto the Tartars of places. For truly any kind of Smoakiness do, through delay, defile the Walls of their Vessels : To wit, from whence under the sixth Digestion, diverse Excrements are forged, most apt for the putrifying of the last nourishments, and corrupting of the Vessels : because if the smoakiness of Salts are encompassed with an hurtful mixture, they being presently melted within, do pierce and gnaw the tenderness of the Pipes ; Yet they are more mild, than those which are there collected by a dry Smoake or Fume : For if they shall besiege the tender branches of the rough Artery, they stop them up, cut off the hope of dissolving ; whereto, if the excrements of the place do grow, so as that they shut up the Air behind, they are made continual guests, and do stuff the part, that they are also corrupted, and become an Impoſthume full of matter. But those things which enter together with Vapours, the watery parts being consumed, they are cruelly joyned unto the similar parts : For so many Endemical things have made Provinces uninhabitable.

And moreover, the Sea, however it be Salt, yet it is not free from so great Evils. The which, Shoares, by the Scurvy and a various slaughter of Fevers do testifie ; and the Equinoctial Line most manifestly of all.

In the next place, the Ministers or Servants of the Sick, do inspire or breath in cruel things, being now fermented by a mark of resemblance. So they which Guild, do Melt Lead, Copper, Fire-Stones, &c. the Diggers, and likewise the Seperaters, and Boylers of Minerals : For although they do not presently take away Life, at least-wise they shorten it, and subject it to divers disasters. So they which labour in Sublimed Cinnabar, Arsenick, Orpiment, and in Stibium ; and they who prepare Minium, Ceruse, Verdigrease, the Azure of Zaffar or Saffron, and which do serve Painters. For things from under the Earth are far more constant, than to hearken unto our heat, than to be tamed or expelled thereby ; and much less that they should depart into nourishment : For therefore the Products of these are wont to remain for Life, unless through the ascending brightness of a more bountiful Sulphur, those very enemies are converted into Friends, or do seasonably depart. For the Diseases of Minerals have been touched by none but *Paracelsus* ; but have been neglected by the Schooles, who have alwayes dreamed of new Illiad's or commendatory Fictions upon the Commentaries of their Ancestors, and therefore have been very like to the Levites passing by in *Jericho* : Because they have scarce lifted up their head above Heats and Colds. For truly I have sometimes proved, that the Stomack drawes the odours of things in the cup of things given to be drunk : Indeed the places about the short-ribs do tremble, at the offered cups, with however a grateful smell they are masked. therefore also the Air bringing the Odours unto the Stomack, it passeth through the Mid-

riff. For from hence every Endemical thing is born immediately to affect the hollow bought of the Stomack, and there to imprint Odours, Smoakinesses and Ferments: So as that they being married unto the nourishable liquor, they confound the services of Digestion, and bring forth divers Excrements. For so the Plague, with Endemics breathed into the Body, do for the most part originally rage about the Stomack: For the passage of the Wind-pipe, seeing it stood subjected unto the Inclemencies of the Air, is to be believed to have received its Armories from the goodness of God, no less than the bladder of the Gaul-Chest have been fenced against the Urine, and its Gaul. But the Membrane of the Stomack being of a great heap, is for the most part busied about its own Digestions, is interrupted with Endemics, is disturbed by an Endemical Being. Therefore the Cough, Asthma's, Imposthumes full of matter, Heart-beatings, and very many Anguishes do occasionally depend on Endemics being imprinted upon the hollow bought of the Stomack. There is the same reason of malignant Fevers, of Camp, and other Diseases, which do popularly molest.

Fernelius being not contented with the Doctrine of *Galen*, seeking the seat of all Fevers beneath the Pylorus, hath not rid himself of feigned Humours; nor hath ever dreamed any thing of the hollow bought of the Stomack, and that a light Endemick being breathed in, should be sufficient for transplanting of the nourishment of the sixth Digestion.

Tell me, what the Air, the tempest of Times or Seasons can concern the equal temperature of Humours? For shall the hot Air of a scorching day, bring forth Choler, or an Excrement, which a more temperate day had transchanged into the venal blood of Life? Shall thus therefore the primary Shop of Humours, be by every prerogative of right, constituted in the Lungs? I have learned, that the Digestions are substantial generations of the transchanging Archeus, not of internal heat, and least of all of the external Air: And that the Digestions are troubled by the drinking in of an hurtful, or at least a troublesome Endemick: Also that the errors of Digestions do scarce want a diseasifying Product; because it is proper to a Digestion to produce something in Digesting. I deny not indeed that intense cold, or heat do hurt the tender Lungs, or Brain, seeing they do also scorch the skin: But doth such a kind of damage consist onely in a degree more superiour than humane Nature? And there is a certain largeness in every degree, which consisteth beneath an hurt. I now have respect unto things Inspired. But Mineral Inspirations do expect no hope of Remedy from Vegetables. I grant indeed that perfumes do hinder a speedy adhering of Smoaks in our Pipes: But they having gotten possession within, they will not refuse it by Vegetables: For they will scarce receive a healing Medicine, unless by Secrets of the same Monarchy. Wherefore I have not found any help from the Manna of a Nettle, and likewise from *Semper-vive* boyled in the beestings or first-stroakings of Milk, &c. The which, I with the leave of *Paracelsus*, do thus maintain; and they who shall be willing to make tryal, I trust will subscribe with me.

CHAP. LXXXVI.

Things Suscepted or Undergone.

THe fourth kind of things Received, I call things Suscepted; such as are Wounds made by a Point, or a Cut, or Stroak, by Darting, Beating, Casting, Renting, Biting, Bruising, Congealing, Scorching or Burning, or Straining; Likewise, breaking of a Bone, Displacing, Binding, close Pressing together, and in brief, whatsoever things are immediately subjected unto the Chyrurgion. For truly Ulcers which are bred not by a Wound rashly cured, seeing they are nourished by an internal Principle, they singularly have respect unto a Physitian. And by so much the more evidently, because any kind of Ulcers, and how malignant soever, are perfectly cured by Arcanums taken in at the mouth: Therefore Arcanums being obtained, the Chyrurgion (being in penury) will at sometime be idle, who is to be occupied in manual labour only, about things Suscepted or undergone. But because the fulness of dayes hath not yet brought Arcanums into use, hence there is a Liberty for Chyrurgions to invade the Physitian. In the mean time I stay not in the difference between Diseases of the similar and organical members, which is so greatly enlarged in the Schooles: Because I measure a Disease by its Archeal and immediate Causes, but not by the hurtings of the Functions: Especially because all parts how organical soever, do not depart from their homogeniety or sameliness of kind: For neither do I judge it to be of concernment, whether many Offices do concur in one part, or whether there be a particular defect of particular Offices: Because the eye being thrust out, a Disease doth not succeed, but a Death of the power of Seeing: And therefore, an incarnating being introduced over it, causeth an healing of the Wound, but doth not restore the Death. Neither likewise do I clash with my self, although I have elsewhere said, that all Diseases do arise and are nourished from seminal Beginnings. But I will teach in this place that Wounds undergone by a Sword, do operate, in entering after the manner of artificial things; Because the Diseases of things Suscepted are not so long as they are in their being made, but after their being undergone: For things suspected have that thing peculiar unto them, that by themselves they rather introduce Death than a Disease: For it is by accident that a Wound doth cut asunder the fleshy part, or the Heart it self, or an Artery: And therefore a Wound in its beginning, doth threaten Death on the part whereon it is inflicted, and Susceptions do alwayes favour of the nature of artificial things: For Susceptions have first of all deceived the Schooles; For they have argued after this manner:

A Sword woundeth, that which is continual or holding together being divided, is wounded: But dividing is nothing but a relation of terms, and yet a Wound is a Disease; Therefore every Disease consisteth only in a relation, or at least-wise in a disposition, or effect of that relation. Which is to say, That a Disease is either a Being of Reason, or a Non-Being, (such as is the relation of Terms) or that a real Being doth arise from the Being of Reason. But I who do not distinguish Internal connexed Causes from the thing it self, do call Poysons, Foods, a Sword, &c. Occasions. I call a Wound, an absolute or sore threatned Death of that which is continual: But when they have brought their force into the Archeus, so that this shall be wroth through things applyed unto himself, I referre that which is imprinted by things Suscepted among Primary Diseases: For as soon as a Sword hath divided that which held together, the action of a violent occasional Cause being darted into the Archeus, is present, and this Archeus soon begins his tempests, that is, Diseases.

C H A P. LXXXVII.

Things Retained [in the Body.]

THe Treatise of things Received being finished, I now proceed unto things Retained. But in things Retained, let it be sufficient once, and seriously to have admonished of this : That although they are onely the occasional Causes of Diseases, yet I have been willing to distinguish of Diseases according to the things Retained, that I might Retain the antient names of Diseases : But that the Chapter whose Title is, *That the Knowledge of a Disease in its universality hath remained unknown hitherto* : is sufficient for a fore-caution of those things which are to be spoken of things Retained : Whither I refer the Reader.

For truly all particular things which are Retained, do stir up their own Invasions on the Archeus, and from thence also, the differences of Diseases. But those are things Retained, which are either taken into the Body from without, or are bred as domestical things within, by an internal inordinacy. For seminal things, whether they shall be foreign, or homebred, do on both sides stir up a memorable effect of their disorder on the Archeus : Which thing is easie to be seen, even in a simple Lacryma or Tear of the Eye : Because it is that which by a healthy motion of the Spirit is wholly dissolved or blown away without feeling or trouble : The Spirit of the Eye being badly disposed, it is wholly thickened, waxeth clotty, or is changed into a gnawing Liquor.

In the next place, things Retained do not onely vary in their unlikeness of Form ; but also are changed by reason of the dispositions of the Body : For the Body as it is more or lesse transpirable, doth vary Diseases : For some things retained are dissolved, neither do they leave behind them the Root of stirring up a Relapse. Sometimes also they are forgetful of this bounty, they leave an occasional matter, and herewith oftentimes, fermental adulterous impressions, as off-springs which do stir up new Heirs or Products from themselves in the Archeus. Because the inward pores also do sweat, as the whole Body is transpirable, and as liquid things are derived into a strange harvest : The which, because they are brought out of their own cottages, they are therefore soon spoiled of their common Life, are most speedily coagulated (as I have said concerning the Tear of the Eye) or do remain resolved into a liquid Poyson. For so the matter of Coughs, the Dropsie, Pose, Flux, Pissing-Evil, Apostems, and Ulcers are bred. For the retained curdlings of some things do stick the more stubbornly fast, are slowly or never resolved, or they do of their own accord think of a dissolving and melting ; or they leave an impressionall symptome in the Archeus, introduced for a perpetual remembrance of relapses : For so the seeds of Diseases being ready to depart elsewhere, do depart awry or mishapen.

And so in the next place, Diseases do vary in respect of a fix-fold Digestion, being hindered, inverted, suspended, extinguished, or vitiated.

Diseases also do vary in respect of the distribution of that which is digested : For a proportioned distribution doth exercise the force of distributive Justice, due to every part : But if they are disproportioned, now there is an infirm and necessitated distribution, and that as well in respect of the natural functions, which are never idle, as of a continual transpiration, and from thence, for the sake of an uncessant necessity. But that disproportion is voluntary, and as it were an overflowing distribution, in respect of a symptomatical expulsion, by reason of a conspirable animosity of the disturbing Archeus ; or at length the distribution is disproportioned, as it is necessitated in respect of penury or scantiness ; whence at length also, no seldom dammage invadeth the whole Body : To wit, while in some part, the nourishment degenerateth, is ejected, and so is wasted : Such as is the Consumptionary spittle in Affects or Ulcers of the Lungs, a Snivelly Grew in the Stone, in the Gonorrhea or running of the Reines, &c. For seeing the part, its nourishment being once defiled and degenerate, is thenceforth never nourished, but despiseth and thrusts that forth, yet by reason of a sense of penury, that ceaseth not continually, with importunity to crave new nourishment from the dispensing faculty, and to obtain it by its importunity

ty, that it may satisfie its thirst. Therefore new nourishment is many times administred unto it, and is withdrawn from its other chamber-fellows, because a sufficient nourishment for all parts is wanting.

From thence therefore, is Leanness, an Atrophie, a Tabes, or lingring Consumption, and an impoverishment of all necessary nourishment: So indeed, Fluxes, Bloody-Fluxes, Apothems, Ulcers, and Purgative things do make us lean and exhaust us: For the infirm parts are like the Prodigal Son, because they do waste and unprofitably cast away, being those which have badly spent whatsoever was distributed unto them, and the other parts do lament that lavishment.

Things Retained that are taken into the Body, offend onely in quality, or quantity, or indiscretion, or inordinacy: For if they are immoderate in quantity, if frequent, or too rare (for numbers are in quantities) also one onely error doth sometimes give a beginning unto a Disease, whereas in the mean time otherwise Nature makes resistance for some good while. But Poysons received, Solutive Medicines, and likewise, altering things, which are too much graduated do chiefly hurt in quality. Discretion also doth offend in things assumed, if they are taken rashly out of their hour, and manner: As if the Menstrues be provoked in a Woman with young, or in a Womb that doth excessively flow: For indiscretion doth every where bring forth a frequent inordinacy, when as any undue thing is cast into the Body or required the scopes of Causes and betokenings of being unknown. Also harmless things which are cast into the Body are vitiated onely by their delay, and long continuance of detainment; And they become the more hostile, by how much they shall be the more familiar, or the further promoted: for truly, by reason of a mark of resemblance sometime conceived, they do the sooner ferment, and more deeply and powerfully imprint their enmities. And as by things Assumed, things Retained are sometimes at length made inbred: So by things inbreathed, Diseases are oft-times made like unto those made by things Retained. For some inspired things are Retained, and do affect the same parts which things Retained do. Otherwise, they differ in their internal Root, as much as breath doth from drink, and as much as food from blood.

But before I descend unto inbred Retentions, it is necessary to represent the unknown Tragedy of the chief or primary Diseases: Because inbred Retentions do for the most part, take their beginning from primary Diseases: For indeed, I have already before distinguished of all Diseases, that they do either affect the Archeus implanted in, or inflowing into the parts: Although in both cases, Diseases do proceed by the forming of Idea's. The which I will have to be understood of primary ones: To wit, out of whose bosom superfluities do arise, or degenerate, which give an occasion for new Idea's, or onsets of Diseases. For it is scarce possible, that the Archeus being remarkeably smitten by a voluntary Idea of a Man, or the Archeus, a lot of Disaster should not arise in the inferiour family-administration of the Body, from whence the Digestions themselves first of all wandering from their scope, do frame the pernicious collections of Superfluities, whereby the primary distemperatures of the Archeus are nourished (to wit, if they shall proceed from the same root: That is, if the root of a primary Disease shall produce its like, to wit, the former Idea of exorbitancy persisting) or the new off-springs of Diseases are stirred up. But at leastwise, after either manner, the aforesaid Excrements are the Products of primary or the chief Diseases. But primary Diseases are either of Idea's Archeized, to wit, by the proper substance of the influous Archeus issuing into the composure of the Body, the which indeed he by reason of his madness, wafts: And such kind of Diseases are oft-times appeased by Opiates; yea are also utterly rooted out: Because they are, for the most part the off-springs of a more sluggish turbulency: The flame of the chaffe either ceasing from a voluntary motion, or being silent at the consuming of the Archeus, informed by the vitiated Idea. But Idea's arising from the implanted afflictions of the vital Spirits, whether they are the governing Spirits of the similar or organical parts, they do for the most part disturb the family-administration of Life, especially, if the Archeus being badly disquieted in some principal bowel, shall form the Idea's of his own hurt: For then he brings forth most potent afflictions: Yea, sometimes those remaining safe for term of Life. For as they are the Rulers of a greater nobleness and more eminent power: So also they draw forth the more efficacious Idea's, and do propagate Diseases of a prostrating nature: Because the Powers themselves, the In-mates of the more noble parts, are defiled with the same Images, as it were with Seals; the which, disease Products arising from thence, the foot-step of the Seal being as it were received into themselves, do afterwards linkingly expresse through the ranks of the Digestions: For so the primary Diseases of the Bowels do abound; neither do they hearken unto Remedies, but of a more piercing wedlock; yea and do be-
queath

queath their inheritances on Nephews. The Arcanums of which sort I have reckoned up in the Book of *Long Life*, to wit, the which do every one of them represent the Majesty of an universal Medicine : Although I will not deny but that there is that Majesty in some the more refined Simples, which can heal particular primary Diseases.

The *Galenists* do laugh at the promise of a generality: but every Bird doth utter his voice according to the tune of his own Beak ; and every one talketh of the Faires according as he hath profited in them.

From what hath been before mentioned in sundry places, it now plainly appeareth.

1. That the Sanation or sound Healing of a Secondary Disease, is vainly intended, unless the primary Disease which nourished it, be first brushed off and trodden under foot.

2. That then the Healing of a Secondary Disease is conversant onely in a removal of the Product.

3. That Primary Diseases do continue even after the generation of a Secondary Disease, if its Idea's do issue from the implanted Spirits.

4. That Primary Diseases do also voluntarily cease, whose Idea's have failed in their first on-sets.

5. That the Causality, Succession, and Propagation of a Disease, being hitherto unknown, the Healing of the same hath remained unknown.

6. That the Schooles have esteemed Secondary Diseases, yea and the Products of Diseases, to be the Causes of the same : and therefore they have directed the whole endeavour of Healing unto later things, or to the Effects.

7. And that they had more rightly proceeded by taking away of the Product, than by the contraries of Qualities, and they had sought out due Remedies which (their virtue remaining safe) would have been able to pierce unto the places affected.

8. That whatsoever hath happily succeeded under healing, that is to be ascribed to conjecture, and the goodnesse of Nature alone, because they being seduced by false persuasions, have wandered about Distemperatures, Humours, Catarrhes, and Tartars by Solutives, not drawing forth Electively, but putrifying every thing furiously.

9. That they have learned some Remedies from Old Women, or Countrey-Folk, which besides the Maxims of the Schooles, might cure disease Idea's by a specificall gift.

10. That they have accounted as many primary Diseases as did persist by their own Ferment, to be incurable, and those that did not transplant their Vigors into their Products.

For primary Diseases do for the most part respect the transmittings of seminal causes in Idea's, and disturb the action of Government : From whence, not only the framing of Diseases ; but also the Critical, or judicial freeings of the same, do issue of their own accord, by unwonted expulsions, wandring conspiracies, labours, anguishes, and convulsive assaults, especially if they subsist in the matter, by a Seed, and an efficient Ferment : to wit, by which signs they distinguish themselves from the family of Symptoms. But I have confirmed the Doctrine of primary Diseases, above, by hereditary ones, unequal strength, the torture of the Night, and silent Diseases ; the which indeed do not only presuppose the necessities of Idea's ; but moreover also, primary Diseases. Truly, Nature hath no less variously sported in defects, than in integrity : but also, by a Systeme of the Universe, she (being every-where conformable to her self) hath seemed to walk up and down, that also in things of a different kind she may every where represent her self in a proportionable agreement.

I have now done as much as I promised in the beginning of the work. I have demonstrated the errors of the Schools in natural things, so far as they concern the faculty of Healing : and that they have been more ignorant of nothing, than of Principles, Means, and Ends, to wit, the Essence and Causes, manner of proceeding and making, the means of Preparing and Remedies.

Of things retained which are assumed, because they are by themselves known, I have said something: Now I must come unto the Products of Diseases which are inbred, domestical, and degenerated within our Cottages: For indeed our Retents do offend in abounding, quality, intinateness of place, or in their strangeness, or long continuance of delay; and because they have crept into anothers harvest, through a vice of the distributive Faculty, therefore I call all of them things transplanted or transmitted. But other Retents, I call transchanged ones, for their distinction sake from things assumed: Truly things retained, whether they are transchanged, or indeed transmitted; yet they are alwayes made remarkable by an intrinsecal Idea: I say, by a disease Being, from whence they have received an hostility of degeneration: Wherefore the root also, of a primary Disease, doth for the most part adhere unto them, and therefore they do imitate and represent the same, as they are the Products of it: But because all the particular Digestions do first of all contribute their own Citizens, to wit, the nourishable Liquors unto home-bred Retents, which were prepared in their Kitchens, and those otherwise ordained for the solid substance of our Body: Therefore domestical things retained, have degenerated from the scopes of Nature.

But I do as yet divide home-bred Retents, that some may be the dungs of things assumed, which I call Reliques, or they are things which from a good Citizen have degenerated into a Traitor: From whence indeed, I have drawn things transchanged and transmitted; for they are those which do descend from the vice of the Digestions and Ferments, to wit, from a universal offence of the inflowing Spirit, or a particular error of the implanted Spirit, through a voluntary defilement of a wantonizing Idea produced by humane, or Archeal Passions.

Also the Relique of things Assumed, Inspired, and Suscepted, not unfrequently bringing aide hereunto: Therefore Reliques, next after things assumed, do offer themselves unto the publick view or exercise of Products: For although things taken into the Body, and things there left, are not the Products of primary Diseases; yea, do often produce primary Diseases; yet I have accustomed myself to reckon them among secondary Diseases and Products. But not that I am ignorant, that they could have no relation unto a primary Disease, as a Parent; but I refer them among Products, by reason of their strict affinity with those; where we must again seriously admonish, that it is an abuse to distinguish intimate Causes from Diseases: For truly the thingliness of causality is obscured, if it be never so little banished from the rank of Diseases: For external Causes, as long as they are external, are only occasions by accident; but after that they are admitted, and transchanged by the force of Digestions, although they may seem internal Causes; yet they become not Diseases, but occasions by themselves, which disturb the Archeus, stir up an Idea, and defile the material part of the Archeus with an Ideal Seal: For so things assumed, do wander into Reliques or things left, and do lay up their troublesome remembrance into the Archeus, that he may presently tumult, and stir up a Disease his offspring: for they are not Products, although they dissemble the marks of Products; but they leap froth abroad under the name of Reliques: For if by a proper vice of malignity they shall violate the right of their Inn, they are for the most part cast out, crude, half digested, and badly seasoned by Vomit, Stool, Urine, yea, and now and then, do by an Imposthume, pass over into things transmitted: From whence are Paines, Gripings of the Bowels, Un-concoctions, Fluxes, Lienteries, Stranguries, and Miseries of the Parts through which they pass. But if a Vice subsisteth in the Shops of the Digestions, and not sprung from things assumed; Now a primary Parent of confusion is supposed, which hath neglected, and defiled the things assumed: Oft-times also things assumed do scarce continue changed in the Reliques, which is called the Coeliack or Belly-passion, invading with a remaining delight of eating, no less than with a dejected Appetite; that we may know that in the ferment of the spleen, diverse Offices, and dispensations of Properties do lay hid: to wit, those of Digestion, and Appetite.

Things assumed also, which are less grateful or convenient, if they floate about diary Fever, burntish unnamed Contents, likewise inordinate Appetites, &c. are made; but if they shall the more stubbornly adhere, they bring forth diverse, and stubborn Disasters of one Stomack: From whence are Sobblings or Hickets, Swoonings, Faintings, Convulsions, Gripings or Wringings of the Guts, Dissolvings or Loosenesses of the Paunch, Vomitings, Atrophias or Consumptions for lack of Nourishment, &c. the which do manifestly enough appear in the labour of the Duumvirate. But if indeed the Ferment in the first Digestion, shall be diminished through age, or the promoted difficulties of Diseases; Things assumed howsoever good they are, are vitiated: Because Ferments do no otherwise govern things assumed and left, than the Digestions themselves.

Where-

Wherefore I refer the Lientery or Smoothness of the Bowels, Fluxes, Choler, because they are as well the Heires of things assumed, and of Reliques, as of things transchanged, unto the Vices of Digestions. But Stranguries, although they do often happen from things transmitted from the first Digestion unto the third, as the native sharpnesses of things, have remained stubborn in things assumed (even as is especially conspicuous in the drinking of new Ale) yet they happen through a defect of the Ferment of the second Digestion, and therefore, such a kind of Strangury is familiar unto old age: Therefore I have ascribed Stranguries, as well to things left, as to things transchanged in the second Digestion.

Let it be sufficient also, to have admonished by the way, that I have been every where less exact about the splendour, and order of division, in so great Paradoxes, than about the Essence of a thing: For neither do things assumed, only offend through a double fault, to wit, through the error of Reliques, and local Ferments: But also the things digested themselves, are after a twofold manner, badly affected: For the Stomack doth cook, not only for the whole Body, but also for it self.

So also concerning many Organs, in the diverse Offices of whose digestions and functions, their own errors do alienate their Products: Yet the Stomack is manifestly subject unto a double Calamity: To wit, of its own Digestion, and of the sixth: Because every part lives by its own Kitchen; which in the Stomack, being subjected unto that which is assumed, rushing on it, is most easily disturbed, even with every shaking of the mind.

Therefore in the first, second, and third Digestion, obvious, manifest, and frequent stumblings and omissions of Digestions do happen.

But in the sixth, although they do manifestly, every where leave Products; yet these the Schooles have referred unto the four feigned diversity of kinds of the venal blood: Yea, and far more absurdly also, have they for the most part dedicated the Vices of the sixth Digestion, unto the Snivel lifted up by a feigned Vapour of the Stomack, and from thence distilled. Wherefore they have devised, that Rheumes do fall down into the Common-weal of the sixth Digestion; but they unbashfully affirm, that Phlegm also, which they contend to be generated by a vital Beginning in the Liver, together with the venal Blood, is now a Relique, through a casual distillation of Art.

But in the fourth, and fifth Digestions (because they are altogether vital ones, with much care, first refining all things from Filths their Inmates) although there are not so manifest superfluities of things assumed; yet it is not absurd, that inbred Retents should there be procreated, because the Nature of Mortals being now wholly corrupted, is in no place free from all contagion or blemish.

Authors do rehearse, that small Ulcers have been found in the bosome of the Heart: and likewise, that a Woman being dead of a four Months disury or Difficulty of Urin, two small Stones, together with some Pustules or Wheales, have shewn themselves to the Dissecters, &c. in the substance of her Heart: Although indeed, these things do rather convince of the Vice of the sixth Digestion, than of the fourth, or fifth. But dayly beatings or pantings of the Heart do accuse of Reliques, or rather of things transchanged, although not plainly manifest ones.

It is sufficient that Idea's tinged with Poyson, do as much as may be, and often spring into the Spirit of Life, as the causes of unthought of Death: For neither doth the madness of Dogs, otherwise corrupt by their Tooth, the Spirits which are the authors of discourses; because the Tooth being vitiated in its disposition, infects the cases of the Brain, and Spleen, which hath assumed the Nature of a poysonous Relique. Simples also although they are but once only assumed, do oftentimes make mad for term of Life: As they do defile the Spirit of the Bowel with a slow Poyson, that it self degenerates into the condition of the Poyson left. And moreover also, the very Itch-Gum or tenderness of tickling, is folded in the naked sensitive Spirit, that as oft as it being once set at liberty, is by a retrograde motion carried into the Arteries, it causeth that feeling in healthy folk, as it being snatched out of its own Hinge, doth abound with a strange, and insatiating Poyson. But in sick Folks, the aforesaid original of tickling, a manifest Poyson now sufficiently or plentifully abounding, stirs up the dance of S. Vitus, and the Trippings of the Tarantula, by the Arteries derived into the Head. The same Spirit also, because it is of the race of Salts (as of long Life elsewhere) being degenerate in this point, doth receive a Poysonousness into it self, stirs up a proper Idea in it self, and therefore being chased into the Skin, doth receive the blemish or contagion of itching into it self, from whence Scurvinesses or Manginesses, Scabbidnesses, yea Erisipelasles, and a various troop of Ulcers doth

doth spring up, some whereof do afterwards, there sustain themselves by the proper Poyson of a Ferment, and do now and then propagate : Therefore the inflowing Spirit doth also suffer its own defilements by the fourth, and fifth Digestion.

In the mean time, through occasion of a wandring Spirit, if that which was once dedicated to motion, doth repeatedly re-pass into the Head, and from thence be again dispersed into the Sinews ; because it is marked with a double Idea of exercising motion, (the which I have taught mutually to pierce, and co-suffer with each other) it brings forth tollings of the Members, and Fools become four-fold stronger than themselves. But indeed if in the first Digestion, that which is assumed doth not answer unto the ferment of the Stomack (for many do not desire, do not bear, do not concoct very many things) however good it shall be in it self, it degenerates into Reliques, and brings forth oftentimes no mean troubles of it self, and sealeth them in the parts ; and they are the faults of some things, as when Minium or Red-lead is cast into the Body, being too hard, stinking, or rebellious : But those are rebellious things, whose middle Life cannot be subdued and taken away by the Ferment of the Stomack ; which things every one doth against his will experience and acknowledge.

And then I have said, that there is a twofold Ferment in the Stomack.

One indeed for the first Digestion, which flows unto it out of the Spleen.

But the other is proper for the sixth Digestion, which is natural or homebred unto it, from the implanted Spirit, and proper to its own Cook-room.

But both of them are diminished, altered and estranged through Diseases, Grievs, Age, &c. For the ferment infused by the Spleen is peculiarly silent, and altered in Fevers : for instead of a sharpness, a burntishness is substituted, whereby Eggs, Fleshes, Fishes, and Broaths become averse, and do sooner putrifie within, than they are truly concocted into Chyle : And these Hippocrates calls *Impure Bodies*, the which, by how stronger a refreshment or nourishment thou shalt endeavour to refresh them, by so much the more, thou shalt hurt them : For heat doth then more strongly burn in the Stomack ; but the Ferment is withdrawn from the Stomack : Therefore things cast into the Stomack, are not digested, but putrified. So under a dog-like hunger, the Ferment of the Spleen is doubled.

In the next place, if not the Ferment it self, but a strange sharpness doth increase, there are sharp pains in the Stomack, co-pressings of the Breast, irregular Appetites, Head-aches, Diseases called Cholers, &c. In like manner, the Ferment of the Gaul being exorbitant, failing, or otherwise vitiated by a foreign Poyson or somness, Products agreeable unto those Roots do soon bewray themselves : For from hence are Giddinesses of the Head, Swoonings, Apoplexies, Fluxes, Cholers, and likewise bitter, or bloody Vomiting, Atrophias, &c.

I again admonish, that although I leave the antient names of Diseases ; yet I understand the Idea's, the causers of these, by abstracted names : Therefore in the first, second, third, or sixth Digestion, I understand vitious transmutations to be made by disease. Idea's there bred and transchanged. But those kinde of Reliques, or things transchanged, are voided out by a washing of, being made by Sweat, or Urin, or are voided by the Paunch, and an unsensible transpiration.

Indeed the Reliques of the first Digestion, are expelled through the accustomed Emunctories or expunging Places.

But those of the second and third, are regularly driven out with the Urin. But because inordinacies do happen in most Digestions ; therefore there is place for things transchanged and transmitted : But things transchanged are the produced, Excrements of primary Diseases, or the Fruits of things assumed : The which, because they were once domestical, therefore they are bred by the vice of the transchanging Archeus.

But indeed the Retents of the second Digestion, are made, either by reason of a weakness of the Ferment, or a riotous exorbitancy of the same. Hence a sharpness of the first Digestion remaining, and not sufficiently corrected, proceeds unto the Bowels, for Wringings or Gripes : Moreover, it passing thorow into the Veins, doth stir up diverse Fevers, a contracture of the Abdomen, Dropsies, Obstructions of the Meseraick Veins, likewise Palseys of the Joynts, and Stranguries or Pissings by Drops. But if the Ferment of the second Digestion shall too much increase, or be joynd with a vitiated quality : From hence are Jaundises, bitter Vomiting, Faintings, Giddinesses of the Head, &c. But if that of the third Digestion which is digested, be too much delayed under the third Digestion : for although the venal Blood shall in it self, nothing offend : yet a doubled Ferment of the Shop increaseth, and in this respect it is estranged through inordinacy. For truly, nothing

keeps Holiday within, all things do proceed unto the scopes appointed for them, no otherwise than as the water of a defluxing Brook. The venal Blood therefore, although it be the treasure of mans life, being detained beyond its just term, degenerates into Menstrues, Hemorrhoids, &c. And whatsoever things the Schools do generally attribute unto black Choler, they are nothing but the Retents of the third Digestion, retained in the third Digestion. But seeing the Members are not nourished, but under a certain proportion, unknown to Mortals, to wit, of the Blood of the Veins unto the Arterial Blood; it must needs be, that in the sixth Digestion, an inordinacy doth spring up, which the Schools attribute to the heat of the Liver, and do fallily bend themselves to cure by cooling things. For the Liver in it self is a dead Carcass, and cold, unless it be nourished by the Spirit of life: And therefore, all heat being a stranger to the Liver, is foreign. For it hath it self, just even as a finger which is rightly tempered in it self, whereinto if a thorn be infixed, although it be in act, and power cold, yet the finger presently swells, beats, waxeth hot, and is enflamed, &c. So also, the Liver is never hot, unless it shall conceive a troublesome thorn within it: Wherefore also we must diligently employ our selves in plucking out of the thorn, but not in cooling. Therefore the Liver hath a double thorn: to wit, one from a hurtfull Retent; but the other from a troublesome Retent, to wit, the Blood burdening it: For so the Liver hath oftentimes, from a hurtful Retent, darted forth Impostumes and Vices of the Skin, the which, by reason of that which is transmitted, do manifoldly degenerate in the way, and do so co-defile the Skin, that whatsoever (at length) of Blood is distributed unto it for nourishment, is corrupted in the same, through a Title of contagion: Of which sort, are Ulcers, the which if they are healed, they sorely threaten a greater damage within.

Therefore in Retents of the third Digestion, Cauteries have oft-times performed help, unknown in the Schooles from a foundation, who endeavour with the uncertain conjecture and hope of Events: For they are rare Defects, which are from a plurality of good Blood not vitiated (even as in the Book of Fevers) and the scantiness of abstinence of two dayes, doth easily reduce the venal Blood suspected of abounding, into a due proportion: Therefore the Blood offends, if it hath a thorn its Companion; and then, if it stay within beyond its due time, as I have said.

And thirdly, if the venal Blood be disproportioned with the Arterial Blood; Gluttony is for the most part, the Mother of these three.

Whence it is wont to be said: *The Throat smites more than the Sword.* Also for the most part, a plurality of venal Blood is bred, not because more venal Blood is begotten than is meet; but because less is consumed than is meet, by reason of want of exercise, an idle Life, abundance of Fat, &c. For the Gout, and those Diseases which are thought to be the bastard births of Catarrhs, do withdraw themselves from this order: Because that they have a Seed of their own, and therefore also do oft-times rage under the penury of venal Blood. But in this case, an unequal strength flourisheth, seeing that the more weak Organs are quickly filled, loaded, nor do desire to be abundantly nourished, according as the more stronger Organs do: For from hence the Archeus of the more weak Organs is sated, doth through delay, and impatience, wax wroth, and stamps on himself diverse Diseases: Wherein, while Issues weep a plentiful Pus and Liquor, the Ancles do swell in the evening, a more plentiful Snivel is dashed out of the Head, and unthought of Phlegms out of the Lungs, under a consent of the wandring Keeper: To wit, a total deluge of the Archeus, and prone Excrements, do grow or spring up according to the weakness of every part: For the term of the Moon as a Law, doth prescribe to the quantity of the Blood, that it may be wasted in both Sexes, nor may make a longer delay: For from hence it is, that because there is little transpiration under cold, there are the more frequent Spittings. Also under cold, more of meat is Injected, yet there is not therefore more of Blood composed.

In brief, in Diseases of strength, a Vice of the Distributive Faculty is alwayes present. At least-wise, it is manifest from what had been said before, that the force of Appetite is not to be measured from sanguification, as neither from a consuming of the Blood.

But things of the sixth Digestion that are transchanged, have been neglected by the Schooles, and dedicated to their own Humours and Catarrhs: As if all Diseases should arise from the Vice of the Liver, and a defluxing Phlegm of the Head. They have moreover neglected the primary Offences of the Members containing, which are to be attributed unto the inordinate enforcements of the Archeus, but not unto things retained.

For I have seen the Liver, in a temperate Duke of *Catafractum*, to have weighed 16 Brabant

Brabant Pounds: For he complained of the swelling of his Belly; he had drunk of sharpish Fountains, and at length of Wine steelified, who when he was variously disturbed or handled by his Physitians, as for an Hydropical Man, and but the day before had walked thorow the Streets, suddenly died.

I have seen a Woman who lived a single Life, alwayes thirsty, and pressed with a diseasie thirst; for she was thought to be Hydropical, and being tormented with many solutive Medicines, died: But when after Death, her broached Belly did not afford Water, she being unbowelled, appeared sound within, but that her Liver, harmless to the sight, did weigh 21 pounds and a little more.

I have seen a Man, who after a long torment of his Belly, voided many Membranes, the which being dried and affixed to a Board, with Nailles, did dissemble Parchment. We have seen a little Pouch grown to the Stomack of a certain Governour, filled with small Stones. Likewise a new Sack to have grown to the Abdomen of a Woman, wherein were fourteen Pounds or Pints of Water and more.

So very often, another of the Kidneys being stopped up with Stones, to have monstrously voyded them forth: Which primary Diseases, are to be attributed unto the local Spirit of the parts containing.

I sometimes believed, that growth ceasing, the growing Power was extinguished, because all things did stop from increasing: But after that I saw many things to increase through Errour, which were of the first Constitution, I thought that the growing Faculty was detained from its progress, only through the disobedience of the bony Matter. But Pores are bred in Broken-bones, and the Ribs do become longer through an enlarging of the Breast, long after the cessation of growth: A swollen burstness of the Veins is bred anew, and becomes by degrees like a Sinew. A Lobe growing every year unto the Liver of an Wolf, bewrayes his age. Wherefore I refer the Excrecences of Flesh of a remarkable bigness, troublesome through Pain, and endowed with a beating Motion, among the Diseases of the parts containing, which have been neglected by the Schooles: As also new Fibers having arisen on the Muscles, I have observed to have brought the Palsey, and those being taken away, this to have been Cured: For in the Grease, not only fatness alone is bred, but also Fibers, or the Honey-combs thereof, which are of the condition of solid things. So there are notable Super-crescences of the Gristles and Ligaments, which are subject to the Chyrurgion, not as the occasional Causes of Diseases, but as erroneous Products which are to be taken away, they being sometimes annexed unto their primary Diseases: For from an injured Bone, a nourishable Liquor doth oftentimes distil, which dissembles the hardness of a Bone: Yet with rottenness as being a partaker of a bony curd.

Therefore if I shall reckon up the Diseases of the part containing, among Retents, think thou that that is done, because they are nourished by a Root of their own, nor are taken away but by Mortification: Unto these Diseases voluntary Excrecences, Bunchinesses, Strainings, and Disjoyntings have also regard: The which because they follow an inbred inequality of Strength, they for the most part shew a receipt from the seed of the Parents, or from the Defects of Nurseries: For from hence whole Families are inclined unto an Hectick Fever, Asthma, Gout, affect of the Stone, Jaundise, Dropsie, and Madnesse: For if they are not drawn from the Parents, they are drawn from Nurseries: For the Young doth easily drink some Defects with the Milk, and derives them into the similar Parts. For seeing our Powers do uncessantly operate, hence Retents cannot make a long stay in their former state and place, but that the term of their motion being finished, they do revolt from their former Disposition, and being estranged, do decline into a worse: For so things retained do degenerate into things transmitted, as well because they offend through an inordinacy of their own vitiated matter, as through an exorbitancy of distribution caused from the Archeus being provoked. For among things transmitted, the Carrier Latex first offers it self, which by floating up and down, doth manifoldly erre: For seeing that is ordained to wash off the filths of the parts; it first offends by a strange Vice, which it hath contracted on it self: From whence are some Vices of the Skin, which at length a Perment being called to it, do frequently persevere: But if the attractive Faculty labours, Oedema's are made, and the Latex overflows into the Liver and Veins: Whence are Disuries or Difficulties of Pissing, Pissing-evils, and a various household-stuff of Diseases: As also in Squinances, the Toothach, and elsewhere, is oftentimes easie to be seen, especially if by a singular adulterous Allurement, the Latex be derived unto any certain part: So also Pofes, Cataracts, and Pins and Webs in the Eyes, Defects of the Eares, and Teeth, do arise, if the Latex finds either the Vices of Digestions, or brings strange ones thither

with it ; because it is that which from its appointment, drinks up the strange defects of the parts : So also the Latex doth of its own desire, slide into a Sunovie or spermatick glewiness, from whence it stirs up the torture of the night : For it floats about according to the courtly successive changes of stations, and subjects it self unto the government of the Moon : Wherefore it afflicts the Sinews, Tendons, Ligaments, and Membranes, as well by reason of its own transmutation, as through the draught of a forreign Seed.

In the next place, if Drofs (which elsewhere, I call a liquid Dung) from the Bowels, be joined beyond a just proportion with the Latex, and doth float within the Veins, now the Stone shall be present. Or next if it putrifie, it adorns or promotes Dotages, and diverse ranks of Fevers : Even as elsewhere concerning the History of the Humour Latex, of Fevers, and likewise of the Stone in man. In things transmitted also, the Errours of things transchanged are especially regarded, and their Effects are esteemed according to their Qualities, or the Degrees, or Powers of Quality : To wit, the which especially, do on both sides occasionally determine of the varieties of Diseases.

Furthermore, if the things transchanged of the first Digestion, are brought down unto the second, too strange and hateful Guests, do bring forth Fevers, Wrings of the Bowels, Loathings of the Stomack, Faintings of the Spirits or Swoonings, &c. But if they proceed even unto the third Digestion, Dropsies, Cachexia's or ill habits of the Body, Jaundises, difficulties of Urin, pains of the Hypogastrium or neather Belly, &c. do subsist. But if indeed the Defects of the first Digestion are brought into the sixth ; sudden Fevers, Pleurifies, Peripneumonia's, &c. do arise. But if the things transchanged of the second Digestion, do re-gorge into the first ; Un-concoctions, bitter Vomitings, the Iliack Passion, the Disease of Choler, the Lientery, Cæliack Passion, Flux, &c. are stirred up. But if those of the second Digestion shall reach into the third ; now Cachexia's, Fevers, Jaundises, various Obstructions, are at hand.

In the next place, if things of the third Digestion which are transchanged, are derived into the first ; bloody Vomitings, bloody Fluxes, the Piles, &c. do bewray themselves. But if into the second ; Fluxes, and diverse Fevers are bred : For things retained, are on every side hostile, and much more things transchanged which are transmitted ; and therefore the Archeus cannot but stir up feverish Storms. But if indeed things transchanged of the third Digestion, do proceed into the fourth ; It will presently come unto Heart-beatings or Pantings, Swoonings, and sudden Deaths. But if things of the first Digestion transchanged, do go into the sixth Digestion of the Stomack ; From hence are Giddinesses of the Head, Apoplexies, Palseys, &c. And likewise, if the transchanged Retents of the third Digestion, do go into the sixth, there are soon Apostemes, and almost all local Maladies ; for truly, through the error of the sixth Kitchen, as well Diseases of its own proper transchanged Retent, and of a strange one transmitted, do happen, as whatsoever is falsely attributed to, Defluxions out of the Head : But things transmitted, are sometimes mild ; and those things, which as it were through repentance of their deed, do repent them of one only Error, and for that Cause, do cease through one only Importunity : but otherwise they are fountainous ones, which owe the substituting of their continuation, unto the part transmitting ; if they are not also con-centred with the implanted Spirit of the place : For a ferment of their defilement being drawn from thence, they are Poysonous, and defile the part by a certain Contagion remaining ; so as that their Fewel being there laid up, they have as it were by one only stroke, established their Center. I say, they afterwards erect a Colony hearkening to the importunate circular motions of the Stars : They therefore erre, as wandering out of the way, as many as by cuttings of a Vein, solutive Medicines, Diaphoreticks or transpirative Things, Cauteries, Vesicatories, Baths ; and by Diminishers of the Body and Strength, do hope that fountainous Transmissions are to be Cured : For those kind of things do desire renewing Arcanums, after the manner of the Leprosie ; as of the Leprosie in its place.

In the sixth Digestion therefore, Nourishments do either degenerate presently before assimilation, and a curd of their solidity being received from the place, they afterwards lay it up for a durable Disease (the Moderns accuse the Tartars of the Blood ;) or if a thing transmitted be a forreigner in the place, neither while it hath not also associated unto it a Poyson ; the Powers do presently conspire for its banishment, for the most part, with much co-shaking of the Strength or Faculties. But although four Degrees of nourishable Liquor are determined by the Schooles ; yet have they found in none of them an Error, Degeneration, or a Cause of Diseases : And although they take notice of a mattery Imposthume in the Lungs, and a great harvest of obstructions elsewhere, yet they refer all things into the four first and feigned Humours, as if they knew not that the Liquors of

mans Body were slideable, and subject to Corruption every hour: But I determine of much household-stuffe of disease occasions, in a numerous aversion and degeneration of the Liquors which do immediately nourish: And likewise I place not, I know not their number, because I know that it is not knowable, where one only thing runs down with a continual Thred, by a multitude of courfary Dispositions. At leastwise, it is to be admired at, that no Errour hath hitherto been found out, or believed by the Schooles, to be in transchanging, while as, notwithstanding some degenerations do offer themselves to the sight, and every degeneration doth occasion its own Diseases: For so the Ciddiness of the Head, maketh the Sense and Motion to stumble, because a nourishable Liquor being degenerate, hath joyned unto it a bedrunkening Faculty: Also if it shall be sleepifying, it becomes next neighbour unto an Apoplexie: And the which, if be also made stupefactive, it now bears the conditions of the Falling-evil. Let those also take notice, who intend to Cure Mad-folks by sleepifying things: For stupefactive Medicines do scarce procure sleep unto mad Persons by a fourfold Dose; but they increase the Madness: for Madness is nothing but an erring sleepifying Power; because every Mad-man dreameth waking: Therefore stupefactive Dreams, are added unto doating Dreames in waking: For the sealing Character in a Mad-man, presupposeth a restoring of the Member, and a Correction of the Poyson by its Antidote, but not a stupefactive Poyson.

In the mean time, it nothing hinders erroneous transmutations from being bred, and likewise the Digestions from wandering, through the importunity of things transmitted, and from obeying an off-spring of their own condoling Sympathy, agreeable to the impediment: From whence are painful Fluxes, disturbed by a sharp Chyle of the first Digestion, and likewise con-folded and double Fevers: Neither doth it also forbid a primary Disease to be con-folded with its own, or with a secondary one bred from else where: In such a manner as is a primary Fever which brings forth a Product, from whence there is a resolving of the Blood into the putrifying Disease of a malignant Flux, matched with a feverish Ferment. At length, neither is there a necessary passage of the three first Digestions unto the sixth, by the fourth, and fifth: Because the greatest part of the venal Blood never comes unto the Heart, and much less is it snatched into its left Bosom: Because all particular parts are nourished no less with Venal, than Arterial Blood.

From hence indeed it happens, that the Vices of the three first Digestions, do oftentimes immediately pass over into the sixth: And therefore the transchanged Retents of the three first Digestions, if they shall reach unto the sixth, they offend not by transmission of a proper name, but only by transmutation; because a transmission from the third into the sixth Digestion, is regular, lawful, and ordinary. I will add concerning the Spleen.

If from the first Digestion, a sharpness of the Chyle be immediately brought unto the Spleen, A Quartane Ague is soon present, to wit, from a curdled Retent being there a stranger.

But if the sixth Digestion in the Spleen be troubled, seeing it is the Couch of the first Conceptions; The Excrements or things transchanged, which are made of its proper nourishment, are for the most part endowed with an imaginative Power (such as occurs in many Simples, and which is most plainly to be seen in the Spittle of a mad Dog) and the which therefore I call inebriating or be-drunkening, dreamifying or befooling Simples: For therefore, of one Wine, there is a many-form condition of drunken Men: That is, one only Wine doth stir up diverse Madneses; For a mad Poyson halts with the similitude of Wine: For a mad Poyson by reason of its excellling Power, doth not follow the conditions of the Man; but the very Conditions of the Man are constrained to obey the Poyson: As is clearly seen in the Poyson of him that is bitten by a Mad-dog. Poysons therefore, which of a degenerate nourishment, are bred in the sixth Digestion, do follow their own Nature: For by how much the nearer they shall be unto assimilating, by so much the more powerfully do they infatuate: For by how much the nearer the Ferment of the Bowel, and an in-beaming of the implanted Spirit shall be present with it, by so much also the nearer, it calls unto it the Idea of a certain imaginative Power, which at length it transplanteth into a venomous Poyson, not indeed so destructive unto the Life, as unto the Power of that Bowel. But from what hath been before declared, any one shall be hereafter able to erect unto himself the Stages of Diseases. But it hath been sufficient for me to have shewn, that every primary Disease, doth objectively, and subjectively fall into the Archeus, and so into the Life it self; whereof, to wit, it is immediately formed: But that a secondary Disease, fals objectively indeed into the Archeus, but subjectively into a Matter, either the solid one of the part containing, or the fluide one of that contained.

And

And thus indeed to have shewn Diseases to be distributed in Nature, by their Causes, Roots and Essence, according to their Inns; I repose my Pen.

Barrenness also, seeing it is among Defects beside Nature, hath hither extended its Treatise. Wherefore Coldness, Heat, or moistness is not in either of the Sexes the cause of Barrenness, however lowly others may sound out this thing.

For truly first of all, there is no dryness possible in living Creatures, or the vitious moisture of the Womb, is not of the complexion, but a meer superfluity of Digestion, or Transmision.

So in the next place, Heat, and Cold, are signs of Defects in Nature, but not Causes: Because these Qualities do want a Seed, vital Properties, and potestative Conditions: Therefore indeed Barrenness, and Fruitfulness is in every Climate of the World: Yet an *Ethiopian Woman*, is far hotter than the most hot Woman of *Muscovia*. But the excrementitious and superfluous Moistness of the Womb, is an Effect of Diseases: Yea, if it shall be a companion of Barrenness, yet not the containing Cause thereof: For an internal Cause differs not from the Being it self: So neither is the Defect of the Menstrues the cause of Barrenness; if that Defect contains a denial, or proceeds as an Effect of a nearer Indisposition. Women of unripe Age have oft-times conceived, even also before their Menstrues; and those of more ripe years, their Menstrues being silent. Also oft-times Women affected in their Womb, being trampled on by many Perplexities, do successfully conceive, and accordingly bring forth. In the mean time, some Barren Women are in good health: Also many conceive while their Menstrues is urgently present; As also the Menstrues being afterwards silent, hath deceived many of Conception. Some Women do take notice of their Menstrues all the time of their bearing; but many for some months only: For indeed, although Barrenness may after some sort bespeak a privative respect; yet it is meerly a positive, and disease Being; for it ariseth from singular positive Defects: Because by it self, and in self, it is a Malady of Nature: Even as fruitfulness bespeaks an entire Cause: For in a Man which is not Gelded, not an Eunuch, not hindered or disturbed, not mischieved, Barrenness hath scarce place; For from hence an Old-man doth as yet generate: Whence it follows, that there is not so much perfection to be attributed, as neither to be required in the Male, as in the Mother: But I call those hindered Males, who do labour with a Gonorrhea, or who have from thence retained a Vice: And likewise who do labour with the notable Vice of some Bowel. In a Woman the Menstrues abounding, being Deficient, Irregular, Watery, Yellow, looking Blackish, Slimy, Stinking, a Pain in her Loyns, Belly, Hips, and movings of the Womb upwards, downwards, to the Sides, are indeed Witnesses and Signs of the Sickneses or Feeblenesses of the Womb; and therefore also they fore-flow, overflow Conception, move Abortions, and gushings forth of the Courses; yet they do not altogether take away the hope of Conception, nor are they the Disease which is called Barrenness: For indeed old Women are Barren without all those: For I find the one only suitable and co-equal Cause in Time and Age, to be described in the holy Scriptures for a positive Being (which is called Barrenness) in these Words; *God opened the Womb of Sarah*: For it is the Gift of God derived into Nature, whereby the Parchment or Membrane of the Womb being most exactly shut in its Foldings, is opened and enlarged at the co-agreeing moment of Conjunction. There is I say, an attractive drawing Blas, whereby for fear of a Vacuum or Emptiness, an attraction of the Seeds, and a suitable filling up of the opened Wrinkles, follows that opening. To wit, the afore-said opening causeth a sucking for fear of a Vacuum; which if it be made at an undue moment, it now becomes Vain: For the Womb of a Virgin, doth scarce shew the largeness of two Fingers; because it is that which wrinkled into it self by the least foldings: but the opening of it doth not consist in the will of Man, as neither in the tickling, or luxurious desire of Pleasure; but altogether in the good Pleasure of God; from whence also Endowments are dispersed into nature, of opening and shutting: So that some Simples have obtained this Faculty. Neither is it sufficient for the Womb to be opened at the set Moment, unless the Guest which comes unto it be acceptable to the Place: For if it be defiled with a blemish, the hope of generating for the future is void with that Man; because the Womb being wroth, doth conceive a fury of abhorrency, which is scarce appeasable.

CHAP. LXXXVIII.

A Preface.

I Have already demonstrated elsewhere, that the Schooles have passed by the knowledge of Diseases, and Things, the neglect whereof is a Fault: Neither is it therefore a Wonder, if there be nothing hitherto of unheard of things: For it hath been an unwanted and difficult matter to be willing, to be wise in departing from the Opinions of the Schooles, while they should fall from those things which I substituted in the room of acknowledged Errours.

There are few also, who Phylosophize only for the sake of Charity towards their Neighbour. Most of the more preferred ones refuse to learn, as if the *Greeks*, and *Arabians* had known all things; and they despaire that more can be known: And therefore they have put on sluggishness as their Skin. But it is a frequent thing for him, who presently after Promotion, runs up and down from House to House, to be intent upon Gain only, and he prostitutes a saleable health for Visits: Therefore he is most rare who is admitted unto the privy Chamber: Many in the mean time, walking before the doores of Chymistry, do boast of great Matters, being deluded with vain hope. But indeed I first (unless I am deceived) have written the History of Life, and Death, hoping that thereby God his own Honour will redound unto him from his free gift of the Tree of Life, and a useful Fruit unto those whom he reserves unto long Life, after me: For *Paracelsus*, who before me, hath treated of long Life, hath indeed given a Title, but hath been altogether ignorant of the Matter.

In the mean time, unless the Lord shall avert it, I guesse from a just fear, that the Life of Mortals will dayly be shortned, and at length to pass unto the Grave in its green eare, through the Offence of Cutting of a Vein, and Purgings: Unless I say God do make almost all things new: For the attainment of the Tree of Life is most difficult, of much Labour, and revealed unto few: for it behoveth that *the innocent in Hands and Heart, doth ascend by the Mountain of the Lord; who hath not betaken his Soul to Vanity, nor hath prepared Deceit for his Neighbour: For he only shall receive this blessings from the Lord: Until at length in the extreame confusions of times, Man shall dare to teach Man those things, which otherwise for the conserving of mutual Commerces of Men, do remain in secret. For most Physitians at this day, suppose that they know enough, if they being initiated in the Paganish Doctrine of their Ancestors, wax rich only, and by the Rules of Writers are excused from Death among the common sort. Most of them also deride at long Life, because they are ignorant: But these Men will at sometime be at the full, and their Mocks shall fall on their own Authors: Because in the Age to come, it shall grieve God for so great neglect toward the Neighbour and Poor. Vices also succeed one another throughout Ages, in a Chain. It hath already been sometimes an honour to have drunk down many large Cups; elsewhere, to have slain many in a single Duel. Fraud and Deceit flourisheth at this day under the Title of Quickightedness; and virtue doth lay hid as Rare among Few, although it be alwayes nominally esteemed: It shall again wax feeble, while the number of pernicious Wits shall depart from the delicate Idleness, and evil curiosities of Studies, unto Arts and Workmanship: For a tranquillity of times shall spring up, when the root of Worms living on idleness, and that which is other Mens, being covered with the cloak of Piety, shall be driven away. At length repentance to come, bids us hope for reformation: For which happy age I have decreed to write of long Life, praying God, that my Pilgrimage is shortly to be devolved unto a period. But while I open*

unheard

unheard of things, if in any place I shall discover the Errours of Predecessors, I have constrainedly done that, that those who shall follow me may not dash themselves against rough places, and be deprived of the scope of Truth: For I myself by Degrees, beholding from my Youth, the empty Husks, wherewith the Beginnings of Nature did incrust themselves, I began to be accounted an Apostate from *Galen*; and I exposed my self willingly unto the vile esteem of Physitians, supposing it a laudable thing to have my Stupidity to be derided by ignorant Men; because throughout my whole Life, I have neglected the common Applause: For by Haters, I am called a Paracelsian, and a For-faker of the Schooles; and yet I am esteemed an Adeptist, the Obtainer of some Secrets. And although under this Title, I have been invited by two Emperours to Court, yet have I refused Honours, and a Courtiers Life, who all my lifetime have despised the Sents of Ambition: And now much more (I being detained at the Ship of the Mote, by the Bank of old Age) do I as careles, avoid and neglect whatsoever Posterity shall think of me alive or dead; because I in dying, desire the tranquillity of my Soul. Therefore do I every where protest, that I have never taken notice of the Errors and Neglects of the Schooles, but that I might satisfie my calling, and profit credulous Mortals.

- 1 **I** Being about to write of Long Life, it hath seemed good unto me, to premise a Treatise concerning Time, because Long Life owes an unseparable respect unto Duration: Neither yet is that thus by me determined in the first place, as though I would measure Life by Time, but rather, in speaking properly, I compute the continuance of Life in relation unto Dayes, and Years, the which I will by and by demonstrate not to be Time.

Paradoxes indeed, I confess, they are, but nevertheless true Doctrine. For Aristotle I have elsewhere shewn to be altogether ignorant of the Beginnings of Nature, and to be very scanty in the matter of Natural Philosophy, and therefore he being wholly ridiculous hath exposed Time, Place, a Vacuum, Infinite, Fortune, and such like abstracted Considerations, and plainly forreign, in the order of Nature, as though they were the Institutions or First Lessons of Nature.

But I have premised the speculation of Time, hitherto unknown, unto Long Life: Wherefore for the clearing up thereof, I state this

Proposition.

- 2 *Time is no otherwise separated from Eternal Duration or Continuance, than the Light of the Day, the Sun not appearing, from the most lightsome or bright Light of the Body of the Sun.*
- 3 For I believe that God, most Glorious, is the Way, the Truth, the Life, and Essence of all Things: Likewise that he is the Principle or Beginning, in whom all things are Principiated, do Live, and are Mooved. I say therefore, that even a Body, or Motion not being granted; yet Time, Place, on the other side, a Scitual Disposition, and Distance, should be the same which now they are: For truly without the Heavens, an unlimited Place is believed to be, which is deprived of all Body and Motion; yet filled with the Spirit, it being suited thereunto by its Infiniteness of Greatness.
- 4 In like manner, I understand Time not to be tied up to Place, not to a Body, lastly, not to Motion; but to be a Being separated from the same. Therefore neither do I beg Time from the circumscription of the Motion of the first moveable Heaven: For even as the motion of the Heaven is made in a Place, as if it were a certain Measure of a Place; yet as Place is not Motion, although it be made in a Place; So neither is Motion Time, although it happen in Time: For neither can Time be Generated by Motion, or in the Womb of Motion, if the thing Generated be in the particular kind like unto its Generator.
- 5 For indeed a Year, a Day, a Moneth, and Night, are not Time; but Measures, and Accidents of things happening in Time, plainly forreign and external unto Time: For so, our Day is anothers Night: In the mean while, Time is every where the same in the whole Universe. The Spring, Summer, Autumn, Winter, are not Time, but Alterations of the Air, ordained for the interchangable Course, and successive Changes of Things. Likewise Childhood, Young Age, Youth, Vigour of Years, and Old Age, are not Time; but Names of the successive Alterations of the Body and Life.
- 6 For the Schooles, besides that they teach Time, either to be the very Measure of the first Moveable, or at leastwise, that it is concluded under the same (for that thing is not yet determined;) They will moreover, that every undividable natural point of Time, should actually and really have in it, infinite Mathematical points; Seeing that there is a positive, real, infinite Being, even as also actually undividable, which in it self is not positively intelligible, and the which therefore, the Schooles deny to be possible: They now of their own accord, in every the least point of Time, endow, that is bespatter the knowledge of Nature with meer Dreams.
- 7 Therefore it necessarily follows from their Suppositions being granted, that every part of Time is not of Time, but a certain Mathematical point, undividable, and so without Duration, without and besides Time: Therefore that also Time should consist, either of undividable parts, or should be as it were a certain Product, from a connexion of undividable and infinite Points of continuance: So indeed, as that neither should they be the undividable Atomes or Points of Duration, if by their connexion they should coarise into something that is to be divided.
- 8 They mind not, I say, that an undividable negative thing can never grow together by connexion, into any present, actual, long, short, great, or little Thing; because

cause it in it self, comprehends a meer nothing, in a Natural, that is a Real Being. Therefore they contradict themselves in the Word [undividable] They have beheld indeed a Long, and a Short Time, and for this Cause they have reduced them under Quantity.

In the next place they have constituted also the whole Essence and Circumscription of Time in succession, which should actually stand in infinite, and infinitely undividable Points of Duration, being connexed in every the least Point of an instant Natural Being.

Truly they on both sides have too much addicted themselves unto Science Mathematical, while they have seemed to themselves to have Repaired Nature : Indeed Science Mathematical, supposeth infinite Points of Subdivision to be possible in every continued Body; which Suppositions in the mean time, Nature knows not, and Natural Philosophy denies: Because it is that which minds things even as they are, and not even as they are serviceable unto the Speculations of the Measures of Situations.

And then Schooles have separated the Consideration of Greatness or Magnitude from the Consideration of Number, and they will have Time to be more like unto Number, than unto that which is Continued or holding together : As if the Species of Apes, as they are like unto Men, were to be referred among Men, but not among Beasts. It is therefore a ridiculous thing, not to have Separated Time from Number in the whole Heaven or Sphere thereof.

At length, they have thought that Numbers do cast out Unity, while as notwithstanding a connexion of Unities produceth all Numbers : Wherein also, that is a blockish thing, that they account the Gemms called *Zero's* for Unity, while as a thousand subscribed *Zero's* do not contain a Principle of Unity.

Last of all, this also is frivolous, that a Binary or twofold Number, differs in Species from a Ternary or threefold Number, as also this from a Quaternary or fourfold Number, although two Binaries do make and are made a Quaternary : And that not indeed by a generating of a new Being, but by a co-melting of both the Binaries : Wherefore neither do I acknowledge Species in Numbers, but onely commixable and reducible interchangeable courses : For Nature doth not suffer her self to be restrained under Rules at the pleasure of the Schooles, to wit, that Numbers should generate out of them specifical Species, every one whereof should be so many meer Individuals.

Therefore I know those kind of Species, and Metaphors to be Strangers from Nature ; therefore they have from the Schooles reputed Time, (because it consisteth in a point infinitely undividable) for a Pillar of Natural Philosophy : Wherefore I am the more confirmed, that whatsoever the Schooles draw from the Heathen, is the unprofitable instability of Wisdom.

For if otherwise, any the least thing infinitely corresponding with the points of Duration, undividable, and infinite in Act, should bind the points of Time with a proportioned Infiniteness by a Succession or following of Duration, besides very many Absurdities, Time should of necessity have its own actual being before it were, that is, it should not indeed be in Being, but all at once in its being made : Yea, nor indeed should it be so made, be, or should it be able to be made, that it might be, but that it should perish before it were.

Therefore Time (contrary to the prescription of the Schooles) is neither Long, nor Short, neither Before, nor After, neither a Measure, nor Measurable. Surely it have grieved me that it hath behoved me to discover, that I find nothing in the whole Natural auricular Discourse of *Aristotle*, but gross Ignorance, environed with Absurdities, and Impossibilities : Wherefore I have been compelled to write true things from a compassion on Youth, which hath been seduced through credulity.

First of all therefore, the Schooles command, that the Time which is of their consideration, is the Measure of Motions, when as it is already manifest from the convicted Suppositions of falshood, that Time cannot measure nor judge of two Motions made (so I may speak) in the same term of continuance, whether of the two be the swifter : For according to the aforesaid Suppositions, Time should alwayes of necessity joyn nearer unto the swiftest Motion ; because it is more nigh and like unto that which is undividable.

In the next place, If the Succession of Time should happen through a Concourse and Aid of an undividable infiniteness, and that all Motion should be enrouled in a term according to Duration, and that there is no suitableness or proportion of a Finite with an Infinite ; and least of all where both are considered by a sight of the same Duration ; it must needs be from the Doctrine of the Schooles, That Time should be an unequal Measurable

- 17 surable Measure, a vain, lying, and incomprehensible Measure of the first Motion or Moveable : Because they define Time, that it is a Measure of Motions, in relation unto Duration, and that it is as it were appropriated unto Motion by Accident, and unto Succession by it Self, to wit, by reason of Duration. But indeed if Motion be thus made upon something that is unmovable, as from hence *Aristotle* hath (although falsely) conjectured the first Mover to be of necessity Unmovable : Why do they not also give Stability unto Duration? To wit, under which, all Motions and Proportions of successive Motions ought to be co-measured.
- 18 For in all Seeds, there is from the beginning, not onely a Principle of every Motion, but also their own limited Period of Durations proper unto every Motion : Seeing all variety of all Alterations whatsoever, depends on the slowness and swiftness of Motions. Therefore the continuance of Motions is essentially, intimately, and originally included in Seeds, as it were the formal, and directive Principle of the same ; but not that time is a certain outward or forreign Consideration of the measuring of Motions in respect of Duration ; seeing that such a Consideration or relation of Disposition is onely external and accidental unto things themselves, and so a meer Being of Reason ; but not Originally and Essentially implanted in the Seeds themselves, even as Duration is.
- 20 In the next place, the Schools suppose natural Species to be in continued quantities ; when as notwithstanding continued, or disjoyned, are not Things, but naked Considerations of Things according to Measure. Things have indeed their own Species, in very deed ; but the Consideration of those, as a Being of Reason, wants Essential Species in Natural Things. Let it shame them therefore, that they have placed Time among Measures, and the Beings of Reason, or Non-Beings.
- 21 Let it be a shame, I say, that the Schooles of Natural Philosophy have more bestowed their Contemplation about Science Mathematical or Learning by Demonstration, than on Nature it self. It is a foolish thing therefore, to have acknowledged Species in Numbers, by which Species they should be distinguished in the nature of things, and yet not to have known a Unity to be a Number : Because a Unite, in its interchangable course, is no less distinguished by a Unity from any other Number, than is the Number of Ten : For neither is there any reason, for which two Unites should rather constitute a number than one alone.
- 22 For truly in a Binary, both the Unites are as yet different and distinct, yea they are entire in their own Essence, neither have they ceased or departed into any third thing, by reason of their connexion : For a Binary, denotes nothing but two Unites : Therefore it is an Ulcerous thing, that two things being connexed, do remain in their former Being, and yet, that by reason of that connexion alone, a Species was generated divers from either of them. Wherefore Unity is most properly, all or every Number, because all Number flowes from that ; and therefore every Number is nothing but a connexion of Unites : From whence that very Unity is a Figure of the Divinity ; because from thence all Numbers are made, and again into the same are resolved.
- 23 Indeed the Schooles, as often as they have conceived any thing by Science Mathematical, that thing they have presently wrested into Nature, under the generality of Rules : For so of Four imagined Elements, by confusedly suiting four Qualities, Complexions, and Humours, these Brawlings have been translated even into the Stars, and they have determined of all things co-agreeing with their own Fictions.
- 24 By which method indeed, they have fitted a continual speculation in Science Mathematical, unto lineal points, and at length also unto Time. *B. Augustine* confesseth indeed, that Time is something, but that he was ignorant of the thingliness of Time ; to wit, because he was seasoned with false Positions from *Paganisme*. Wherefore I blush again and again, that I am willing to explain the Essence of Time : But this man I fear not to be my hater, who already beholds truth in the Heavens.
- 15 For first of all, I have withdrawn all succession from Time, who from great Authorities had already shaken off the Yoak of the Heathenish Schools. For truly I meditated at first, that the Heavens stood still, yet that there was not any other Time while the Sun was at a stand, than now : Therefore I began to measure out that Duration without the succession of the Motion of the Heaven : And by consequence I by degrees learned, that all Time was sequestred from Succession, and that this Succession did fit or accommodate it self onely unto Motion. Then afterwards I began to repute it a mad thing, that the Sun should at some time stand still, and nevertheless even to this day to sink Time within the Motion of the Heavens. For although that detainment of the Sun was Miraculous, yet the Duration or term of continuance, was not therefore Miraculous. And then I beheld that Time was already from the Beginning, the Day not as yet existing, or before Light was born, and

and a separation thereof, from the darkness. Therefore the Heaven, Earth, Abyſſe of Waters, Darkneſs, and the Day it ſelf, were before that the circular Path of the Heaven did determine of the Day.

In the Beginning I ſay, of the Creatures, but not in the Beginning of Time: Becauſe that Beginning of Things includeth ſome [*Dum*] or [*while*] that it may be of Senſe: Although God appointed from Eternity to create Things: Yet while it pleaſeth his infinite Goodneſs to iſſue into an Operation to without; then, in the Beginning God created the Heaven and the Earth: But that [*Dum*] or [*while*] was before a Creature, becauſe God had no need of a Creature, or a created Duration; neither had the things that were to be created, need of a created Duration, as a concurring Principle of an unlike Dignity, with the Creatour of an infinite Power: For if the Creature did not depend originally, totally, to wit, abſolutely, and intimately on God, as on the Beginning and End of its Duration; verily, neither ſhould God alſo be the immediate and total Principle, as neither the immediate Life of things; that is, he ſhould not be their *Alpha* and *Omega*. Therefore I from thence underſtood, if Nature had at ſometime ſtood rooted in Duration, flowing forth without a Mean, from Eternity it ſelf; that it ought alſo at this day ſo to ſtand, by reaſon of the ſame rules of neceſſity.

For preſently after, I knew that Duration which they name Time, was a real Being: And likewiſe that if Time hath been from the Beginning, before a Creature was made, verily it could not be reckoned among created things: For neither is there mention made of Time being created.

I alſo thorowly weighed, that as a moveable Body is ſo in place, that the place doth not only outwardly encompass the moveable Body (however *Aristotle* in the mean time ſo thought) but place pierceth the very moveable Body on every Side; ſo that every intimate part of a Body, is no leſs in place than the ſuperficies thereof; Yet place is not therefore on the other hand, comprehended by the moveable Body.

So indeed, and alſo much more abſtractedly; Duration is indeed intimate to things; Yet it is not affected, ſhut up, or apprehended by things. Alſo place ſuppoſeth a certain and determined Poſition, indeed capable of being changed by that which is moveable; yet wholly unſeparable altogether from all place: But Duration it ſelf, is ſo unſeparable from things, that it doth in no wiſe ever wander, or is changed from theſe: Therefore ſeeing Duration is above, and within the Being of things, and unſeparable from theſe; Yea more intimate to things, than things themſelves are unto their own ſelves.

Hence therefore have I meditated of a Duration plainly divine, to be in Time, and ſo in that reſpect not to be diſtinguiſhed from Eternity; yet to be diſtributed unto things according to the Model of every Receiver: And ſo I have ſufficiently proved the aforeſaid Propoſition.

Wherefore Time hath neither parts, neither doth it admit of a diviſion of it ſelf, and by conſequence, it knows not ſucceſſion; neither alſo doth it approve of Dreams: To wit, the which may receive into it Poynts actually Infinite, being coupled or diſ-joyned: Yea, neither is Time a Duration, great, or ſmall, rather than plain, round, long, deep, ſhort, or broad: Becauſe in very deed, it is not within the compaſs of Predicaments; becauſe there is one only Infinite, exiſting in Act, to wit, God, who is all things: For if Goodneſs, Life, Truth, and Eſſence after an abſtracted manner, are God himſelf, in created things; it likewiſe cannot be denyed, but that in the ſame things, Duration it ſelf repreſents God. I believe therefore, that true Time is unmixed, without the Spot of a Creature, every where, and alwayes unchangeable, nor to be after any manner ſucceſſive: And that I might the more nearly conceive of this thing, I withdrew all Bodies from Time, and all courſarineſs of ſucceſſive things, or the ſucceeding ſucceſſive changes of Motions: And then firſt, I clearly underſtood, that Time in its own Eſſence, bears or owes no reſpect unto the Unſtabilities, Varieties, or Meaſure of Motions: For truly, Time is that which it is, whether Motions and Mutations are made or not; becauſe I have not found Duration to be related unto Motion; or on the other hand, Motion unto Duration, unleſs by accident, and by reaſon of a mental meaſuring of one thing unto another; the which is altogether impertinent: For truly, Time not having ſucceſſion, cannot be ſerviceable unto co-measuring.

But becauſe we being concluded in a ſublunary place, and being raſhly ſeaſoned by the Heatheniſh Schooles, we have been wont in the Duration of Time, indefinitely to conſider Priorities, and Swiftneſſes, together with their Correlatives; becauſe through a frivolous Abuſe, the limitation of attribution of Motions, and moveable Bodies, hath been accuſtomed to be meaſured according to ſpace: Which Relations (notwithſtanding) of

Priority

Priority, if they are weighed in the Ballance of Truth, they are onely the Atributes of Motions, but never of Time or Duration; because Priority, Slowness, &c. do bespeak only an unseparable Relation unto the parts of Motions immediately following, and slowness compares the swiftness of Motions with each other; and therefore Priority, Slownesses, &c. do not so much measure Time or Duration, but only in respect of a dayly Motion. For truly a humane and undistinct weakness, hath through a certain sluggishness and dullness, meted out all peculiar Motions with a diary or diurnal Motion: Because they do not regard, that the Priorities of Motions are not properly the duration of Time it self, but rather a universal distance of a general Motion: And although Duration it self of Time be, and be present in all things; yet that this is altogether a Stranger from the succession of Motions. From hence therefore, Time hath begun to be considered as it were a successive and frail Being by every instant: Especially, because the Schooles having imitated the blockishnesses of the Vulgar, have at length accustomed themselves to confound Time with the Motion of the Heaven.

It's no wonder therefore, if the great Heroes or Worthies, considering the thingliness of Time by such Beginnings, have not been able to conceive of the same: Because, seeing it involveth an actual Infinite (which one only thing is Eternal) it is from it self of necessity, not to be comprehended by that which is Infinite.

33 For Time is thought to succeed, and to have parts, because parts should follow themselves in Motions: Seeing Time and Motion are unlike things, and so far different from each other, as a Mortal and Finite thing is from an Infinite: For although Motion be made in Time, Motion can be no more co-measured by Man through Time, than Man is able

34 to measure Man himself by God, who is, lives, and is moved in God.

For if God would have the whole course of the Heaven for the future, to be so unequally inordinate, that no Motion could be made equal unto it; should therefore Time also be in it self unequal? Or should that cease to be, which now is? Yea if the Motion of the Heavens should cease (as at sometime it shall cease) shall Time therefore cease likewise? Shall [Now] it self be no longer [Now] for what doth that belong unto Time, which happeneth in Time? For truly it hath its own free Being without Respect, Reflexion, or Reciprocation unto any other thing.

Indeed Time is not given unto us for a measure, or that in it self it is to be measured; but it hath a free Being in him from whence is all Essence.

For Example: God is in every Creature: For God is Good as he is all Good, but not this or that Good; but in as much as he is this or that Good, he is not all or every Good; and in such a respect, he hath a Being in created Things: For as God is one only Good in all things, so in like manner also, all Good is essentially this one true Good: Likewise God is every where present in all things, and his Continuance or Duration, is the Duration of all and every of things.

In like manner also, the light of the Sun is a Being, and something in it self (because it enlightneth and heates) yet without and on this side the Sun, it is nothing: After the same manner, eternal Duration is Time in created things: Because without and besides an eternal Duration, it is a meer nothing privatively and negatively. Wherefore as long as there shall be any created things, Time shall never cease to be. The Lord hath said, *Thou art my Son, this Day have I begotten Thee*: Because Eternity is nothing but one only [Now] but one only [To day] *I have begotten Thee* from the Womb, before the Day-Star was: Christ was born from the Womb in Time, and yet before *Lucifer* or the Day-Star was: Because in Time, there is no Priority or Succession. [Before] therefore, denotes a Priority of the Succession of Motions, and an excellency of Dignity, but not a Priority of Time: Because from the Beginning even unto the finishing of Age, it is nothing but one only [Now:] For so, *The Lamb was sacrificed from the Beginning of the World*, and his death saves the dead before the Lords Incarnation; as the Incarnation which makes blessed, hath respect unto Motion: Indeed it saves the Ancestours, which precede according to the course of Life, and in respect of Motions conferred among each other; but not by the sight or beholding of Duration: *That the Lyon may not snatch them, nor the infernal Pit devour them*: For those Prayers are for the deceased long after Death, when as notwithstanding, Souls do for the most part, undergo their Judgment presently after expiration.

Wherefore such kinde of Prayers should be in Vain, and made too late, if Time should be successive.

The Church triumpheth in the Comforter her Guide; therefore she hath known, that all future things are in the same [Now] of time, as if her Prayers had happened before the party died. For the wise Man affirmeth, *That God made all things at once*; but *Genesis* writing

writing the History of the fix dayes Work, saith also, *that as many dayes were spent* : Which sayings should therefore contradict each other, if Succession be granted unto Time : All things therefore were created in fix dayes space ; yet one only point of time remaining : For to the Devil hath known future things in the succession of Motions ; as they being present in the one only [*Now*] of Time. *The Stars* indeed *are for Times*, that is for the successive changes of Times, or varieties of Motions ; but not for the continuance of our Life, the bound whereof is appointed by the Almighty.

But indeed Priority or Formerliness is most difficultly sequestred from Time : For although we abstract Time from Place, Motion, and a Body ; Yet by reason of an opposite custom, and the novelty of the thing, it is very difficult to desist from Priority in Time, no otherwise than as any one who is wont to cut Bread with his left hand, that thing is troublesome for his right Hand to do, although he rightly performeth many other things by his right Hand : Yet therefore a difficulty and unwontedness of understanding, doth not change any thing in things, or oblige the Essence of Time, that it may accommodate it self to our Errours : For what doth a Priority it self of Motions in Bodies, belong to Time ? Or what doth Priority hurt Time, which is due to Motion alone ? If through ignorance it be translated into Time ? But because a Priority of Motions in order to Duration, be-
speakes an immediate respect unto another Motion (to wit, of dayes and years) whereby we measure all other Motions, therefore Priority is abusively derived into duration. Other-
wise surely it ought first to be manifested, that that Motion of the day, should therefore be Time, because it happens in time ; which being proved, then Priority might be referred unto Duration, and not otherwise ; therefore never.

But it is sufficient for me, for the distinguishing of things, that Duration never depends on Motion in its own Essence, but that it carries in it self and before it self, a certain uniform constancy of the Divinity ; to wit, whereby it is so permanent, that it remains altogether free from all successive change, and succession of Priority, a Stranger, and plainly independent for things, and the successive Motions of things : Therefore Duration is to be placed in no Predicament.

And seeing that, it after no manner pertains unto the order of Relatives, therefore by consequence, Duration shews no internal respect unto things, unless by accident ; and that also, not but according to the miserable, and deceived discourse of reason, making proportions between moveable things ; and as yet, only in as much as they are moveable, in order unto a local, or alterative Motion ; But not in order unto a real Being of those things.

Indeed, certain Fluxes of formerlinesses and latternesses, have respect unto frail moveable things in their Motions, wherewith they hasten unto the appointed ends of their Period ; and so unto their own Death or Destruction : But what relation hath all that unto Time ? For therefore also ought Time to run with all and every Motion ? Verely, so there should be as many Times and Durations, as there are Motions ; or if one only Time doth universally run with all and every of Motions, and seeing such a very Time should most swiftly out-run other Motions, the slow course of the Life of the Crow shall flow in unequal Time, with the Circle of its roulable Wheel : Wherefore they could not flow at once, under one only Duration : Therefore Time hath its own Being or Essence, immoveable, unchangeable, undivideable, and unmixed with things, not successive, but simple and free from all intrinsecal respect of it self unto the Creature : Although Time be more intimate unto things, than things themselves are to themselves.

I suppose therefore, Time to be in the thrice glorious God, Eminently and Essentially, but in the Creature, Dependently, Subjectively, and from an issuing forth to without, participatively.

The Law of destiny indeed, permitteth the Motions of Life, immediately to follow according to a disposition inhering in moveable things, being affixed unto a certain and prescribed order of appointments : But those affixings, and orders, are not of Time it self ; indeed they obtain their own [Before] and [After,] their own [seasonable, meet or convenient thing] and [Late] for the following after, or succession of Motions, and the changes of the Same, but not of Time.

For nothing can be thought to be more absurd, than that one only Time should be moved by a certain succession, should follow after, and make it self a Vassal unto infinite Points, undividable indeed in their Priority, and divided among themselves by suppositionality ; and the which notwithstanding, in every the least instant, should be conjoynd ; and which, without any their extension, should successively perish before their connexion ; and that such a Chymara should be a most sure measure of all Motions : Yea, that Time should

should by such an undivided and mutual coupling of Points, and uncessant succession thereof, be constrained to be moved, and successively to follow: And that at length, this Motion by the Infinites of an undivideable Point, should be the distinct rule, and temperament of all Motions: Yet these so blockish Opinions or Precepts they hand forth to Youth, under the first spring of its Age, for the natural auricular Document of *Aristotle*.

- 40 Priority therefore, is never terminated in respect of Time, but of destiny, related in order unto Motions, without respect of one Motion unto another: For local Motion doth not touch the Essence of Place; but a thing which is successively moved through place, sheweth only a respect by accident unto the scituation of Places. In the mean time, respects of Scituations, or of a Place unto a Place, do remain stable, unmoved, unchanged, neither do they in the least touch or concern Place, whether the thing be moved in its Scituation, or not; seeing that succession of local Motion, in respect of Motion, is a Stranger unto Place.

Truly, by a stronger right do I understand these things to be done with Time, because Time is not a Relative from any internal respect; but it is a certain more abstracted thing, and nearer to Eternity in understanding, and in matter, than Place is.

- 41 Time therefore knows, not Succession, neither in respect of Motion, nor of the thing moved; because Succession is nothing else but a Proportion of successive things in order unto Motion: and although Duration it self be in Motion, yet this doth not therefore, put on the Nature of the Succession of Motions: But as many as have thought Time to be a successive and dividable Being; that also the Rains being loosed, they have believed, is to fall and perish together with the destruction of the World; but that Eternity, or a new Creature, is to be substituted in its own Rooms, without a Medium of succession. Indeed this hath been thus supposed, through a not knowing of the Thingliness or Essence of Time: For while they say this of Time, they manifest, that they speak not of Time, and that they are ignorant of its Duration; because they speak only concerning Motions, and the successive change of these, for the contingences or accidents of Duration. For truly, although Duration be in, and present with Things, yet it hath nothing common with Things, whether they are burnt up, are drowned, do putrify, are moved, do sleep, do begin, or cease to be; because Duration doth not look back unto things, but remains unbroken; and always equal to it self.

- 43 For perhaps the Text hath seduced them: *Hereafter, Time shall be no more*; they not heeding, that Time is there taken for the dayes of an Year, for the successive change of Meteours, and an opportunity of Repenting; to wit, according to the common manner of speaking: But not that Duration should cease together with the destruction of the World, which now is, alwayes hath been, and shall be: For Eternity which is deputed to the Angels, is no way made diverse from Duration, which they call that of Time: For think thou of a Soul the In-mate of the Body, to experience neither day, night, nor likewise old age, as neither to have succession: Yet it is in one only, and the same Duration, and in the same [Now] wherein another Soul separated from the Body, doth exist: Because the changing of the place and condition of Souls doth not any thing touch, affect Duration, or Oblige the same unto themselves, that it may therefore pass into their Essence: But the same Duration of Eternity, issuingly flowes into all things, and sustaineth all things; yet it doth not therefore looie its own simplicity, although the things which do participate of it, receive the same after a diverse and different manner: For a thing subsisteth in, and under Duration, from the which if it shall fall or depart, it departs into nothing.

- 44 For an Angel therefore, in his Substance and Being, enjoyes a continual Time without succession and parts, nothing whereof is great, little, long, short, former, latter, measure, and measurable. Seeing therefore, according to the Schools, there is such a Duration for Angels, which they call Eternity, and they distinguish from the Time of sublunary Things, and that, whether they exist in the Heavens, or in the Earth; and do admit of the Works of the Angels, to be co-measured by a successive, and distinct Time; I conclude, seeing an Angel cannot be in two Durations at once, differing in their whole Orbe and general Kinde, to wit, one whereof doth agree to himself, and another to his Works; both whereof in the mean Time, contain one only [Now] of Duration, it should of necessity be, that both those Durations do wholly melt into one only Being, diverse only in the accident of Respects, that is in a feigned and mental [non-Being:] into one only Duration I say, through a necessary real Act of the existance of Number: And so that Time is in very deed, plainly the same with Eternity, and doth remain unchanged for ever.

But

But it is sufficient for me, that the Schooles do acknowledge some continual Time, and not successive, which they call Eternity. I am not constrained, by reason of their mental Diversities, to disjoyn Time from Eternity.

For if they separate Time, as being a successive change of Things, and Motions, from Eternity; for that very Cause, they do more respect successive change it self, than Duration; the Determination and Definition whereof, they do nevertheless think they do attend: For truly that convinceth, that the thingliness of Time being hitherto unknown, they in vain separate Time as distinct from that which is continual, or from the Eternity; Seeing there is never any necessity of Succession in Duration, and so much the rather, because they assign unto both the aforesaid Durations, certain Respects, which in the whole Heaven (as they say) are banished from the Nature of Duration: Because they are those which do only produce a difference of reason, or of a [non-being] which is equivalent; as though the diversity of both Durations were in very deed a meer device; It being that which I thus convince of.

Time is a Being: Therefore the Creator or a Creature: if it be a successive Being, therefore it is not the substance of the Creator, or of a Creature. But if they will have it to be an accident (for of a neutral Being between a substance and an accident, the Schooles have not yet made mention) at leastwise, it had behoved them to describe the Subject of inherency for Time. Therefore I may conjecture, that the Heaven shall not be the Subject of Time; for so frail and sublunary things should not have a Duration of Time proper unto them; Duration should be a foreign Stranger unto, and surmounting mortal things: And likewise if one sublunary thing should partake of Time, as of an accident proper unto it, another thing that is Neighbour unto it, should not therefore also rejoyce in Time. But if they had rather that every of frail things should partake of the Time of the Heaven: at leastwise, all created things should not have a different Duration, but every of them should remain in the same heavenly external Duration participatively: Yea, sublunary things should sooner have all the other manifest Qualities and Properties of the Heavens, than the Duration of the same: Therefore they do not participate of a borrowed Permanency of the Heavens in Duration. But if indeed, unto all particular things their own proper Duration doth belong, so that things themselves are the Subjects of inherency of Duration, not fetch'd from elsewhere, and the limitation of Duration should be as it were essentially included in seminal Beginnings, now the Light of divine providence appears in Time, that it may be the rule of that which is created, but not a created thing it self; for *in God we are, do live, and are moved*. So also in Duration, which neither also was created: For otherwise, if Time doth inhere in all particular things, as an accident or concomitant; truly besides innumerable Absurdities, there shall be even as many diverse Times, as there are atomes of things: And whosoever doth now subsist at once in the same Duration, shall have as many diverse Essences and Existences of Durations, and Time shall be actually divided into an Infinite: And every accident which is naturally the Object of some one of the Senses, shall not by any sense be perceivable in the Duration of Time.

Wherefore I am constrained to acknowledge in Time a certain universality, and together also a singularity proper to all particular things, and more intimate unto things, than things are unto themselves: I likewise confess a proper rule and determination, which bestows a precise Duration on all particular things; yet in like manner, unsufferable, unapprehensible, or unretainable by things: Wherefore I acknowledge Time to be a Being, which gives and distributes all things to all, according to an ordained participation of eternal Duration, and that for the confounding of Atheists. Therefore I consider of Time, as the issuing Splendour of Eternity, and the which Splendour doth no more subsist beneath and without Eternity, than the Splendour of the Light beneath the Light.

Time therefore, ought to be unto us a manuduction or hand-leading unto the Super-intellectual, One, Eternal, Infinite, Intimate Being in every Thing; yet in no wise Mixed, Concluded, Apprehensible, or Detainable therein; in which Being, is the Thingliness or Essence of things; to whom be praise and glory in its own Eternity.

It is therefore a Paganish, barbarous and absurd Speech, that Time Consumes or Devours us, because there is no action or passion of Time on us, or from us: We perish not through the Vice of Time, neither is Death made any more by Time, than by God: For the dispositions of Motions, are the second Causes of Death, but Time is not of the Nature of Motions: For the divine Judgments do dispose of all things, for reasons known to themselves.

In the mean time, it is to be admired, that the Day is the measure of Motions, and yet that

that they have prescribed no precise measure unto the day. They have indeed made subdivisions of hours, minutes, seconds, &c. by the number of sixty: But none hath hitherto shewn the precise space of one sixtieth part of a minute; for they stuck in the practise. Yea, besides Noon there is no stable moment of the day: That also, doth almost every where vary, so that the certainty of the Meridional point, depends not so much on the Motion of the Sun and Heaven, as on respect of the situation of the Sphere. None therefore hath perfectly taught a certain or defined [Now] or constant point, wherein any thing shall happen, unless a respect being had unto Eccleses.

49 They having imitated the Globe of the World, while they have divided the Sphere by the point of the Meridian, and the altitude or height of the Pole: But seeing the Sun is not alwayes, nor every where conspicuous according to their desire, they have found out Wheels to be for some turns circumvolved for a dayes space, the which because they could not be for moving of themselves, a Weight hath been hung on them, and so they have measured the day; wherein an Error hath straightway arisen, because the Weight increasing by reason of the length of the Ropes did cause an inequality.

50 The measure of dayes by an involuntary wresting of the Steel, is as yet more uncertain; because an exquisite proportion between the Strength of which in-writhed Steel resisting, and between the winding Staires, or for removing of the bending Rope from the Axle, is not as yet certainly manifest: For the north Wind blowing, it is more stubborn than itself, and than it was wont to be. There are not therefore as yet Proportions of the least Minutes in Motion: Musick halfe poured out or by Minums, is also uncertain, because it hath respect unto the pause of an entire sound, which is the more swift at pleasure.

51 Therefore from the measuring of Motions in Duration; I have first meted out the strength and goodness of Guns, and any sort of Gun-powder: For if the warlike Engine or Instrument be distant from the Wall that is to be demolished, 200 Paces, sending forth a Bullet of 22 pound weight, with 10 pound of Powder of known goodness: But let it be noted how much the stroak of the Bullet delays after the enflaming of the Powder; but now in its being distant for the space of 250, or 400 paces, with a Bullet of the same weight not made hollow, and with an equal weight of the same Powder; let it be noted, whether the sluggishness of the stroak answers to the proportion of the distance: The same trial may be made in greater, and less Guns. Therefore the sluggishness or slowness of the stroak shall discover how much resistance of the Air the distance doth bring forth, and how much the goodness of the Powder doth hasten it, and how much the hollowness in the Iron-bullet takes away, or if it be filled with weighed Lead. But I have at sometime with delight, meted out those Swiftneses, Powers, and Proportions of Motions, likewise to be uttered in a great minuts space: I did hang on a Nail, the weight of one Pound, by a slender Thred, of the length of one foot, and its weight hung free in the Air; but I moved the weight that it might strike in the Air like the Clapper of a Bell.

I say therefore, that all and every of the Beatings which do follow, even unto the last, shall in every place be equal to the first beating: For by how much the first Thump is greater, by so much, those that follow are less, and therefore they may be so much the slower in their Motion, but not in the Beginning, or End of the same.

Likewise, whether one only pound, or more, be hung on a Thred, yet they shall not therefore be unequal: But if the Thred be two-footed, all the knocks shall be percisely slower by twofold: therefore according to the length of the Thred, the Thumps or Pulses are hastened, or slackened: And so the delay of every Motion may precisely be known: But the Musitian shall note the equality of those Pulses.

Lastly, seeing the motive Power is on both sides, the one only equal Beginning of motion, the moderative principle of swiftnes according to the distance of place; therefore it must needs be, that the beating of one Pound is as equal, as that of more.

I suppose therefore, that the Pulse of a two-footed length, is of a middle or moderate Pause, therefore that Pulse or Beating may be sub-divided into sixteen distinct lesser Pulses, and it may be observed in the Pin of a Dial, how many Pulses or Knocks of the footed Thred, a quarter of an hour shall yield; and so the year shall be precisely co-measured.

52 But as to what pertains unto Critical or Judiciary Dayes, Observation indeed hath a foundation in Nature, as our Archeus unfolds the harmony of the Heavens. Indeed the Moon doth alwayes on the fourteenth day, proceed unto a place opposite to her self, whether she was brought on the first day: Therefore the Nature of the Archeus, is reckoned to have obtained opposite Faculties.

So likewise, the seventh day also hath the half of opposition, as also a quarter aspect of the Moon as to the point of her Beginning: For therefore the 7th and 14th dayes are evil in respect of the Disease; but good in respect of Mans Archeus. Therefore, there is seldom a Critical day, out of sharpe or acute Diseases, however otherwise *Paracelsus* hath thought.

Yet I have diligently noted, that there is never a Crisis or Judicial Sign, where the Physitian being skillful in his Art, hath taken away the Disease before the expectation of a Crisis. 53

For as Nature rejoyceth in ordinary Motions, and is accustomed unto them, and is willingly governed by a Unity of the motive virtue; So when the whole busines of the Disease is incumbent only on its own Shoulders, Nature her self stirs up her set Crisis's, the which otherwise, the goodnes of a Medicine doth prevent, and the naughtines thereof doth foreflow or destroy. For so the 14th day of a Crisis, is protracted unto the fortieth day: Therefore it is the part of a good and faithful Physitian to neglect Crisis's: And it should be better for the Sick to have wanted a Physitian, as many as do escape by a Crisis, and much more, whose Crisis is the flower. 54

For let the Schooles boast of Crisis's, let them determine of a Crisis, let them teach, that for Nature to fight with the Disease, is unto them a Crisis; without controversie or judge: At leastwise, the similitude of that Battle, and the name of a Crisis unfitly derived, hath seemed to me impertinent: For these kinde of Devises are delivered from hand to hand, whereby every Agent is believed to sustain a strife by reason of Contrarieties only: but one Absurdity being granted, many do presently follow after in a Chain: For I have taught elsewhere, that Nature knows no Contraries, nor that she fights with a Disease: Indeed that Nature doth more employ her self about the Disease, as about an Egge, than that she may be its contrary; If Nature alone be the Physitians of Diseases: and so it ripens all things, that it may come unto its end, and therefore also it intends the end of a Disease, by ripening the Means: So neither doth a Disease resist Nature while it is ripened, no more than an Egge while it is nourished, doth fight with the nourishing Hen: For unto the Seeds of Diseases is their Period appointed; not indeed that which may be due unto the mystical numbers of Dayes, but only unto the necessary requirances of Maturities: For if (according to *Hippocrates*) things cocted, and not crude, are to be moved; The quicksighted, and mitigated Governour of Nature, hath known his own Maturities at set moments, the which himself alone is compelled to perfect, not indeed by reason of a distinct animosity of Diseases, in contention; But the Filths being ripened, they desist from adhering unto the solid Parts. But to what end is there so great a commentary of critical Dayes (I being a Junior, wrote five Books concerning Critical dayes, the which I afterwards committed to the Fire) if it behoves a Physitian to be instructed, that he may render a dangerous Disease harmless, and may abbreviate a long one; that is, may cut it off, that it be not spun out into a Crisis. A Crisis therefore, as it sounds of Judgment, let it be the Judge and Accuser of Physitians, and a testimony of Nature alone bearing the burden; because a Crisis only happens, where a slimie or tough Matter doth adhere, or a noysome or hurtful Matter is enclosed, and wisheth to be sequestred by an ultimate or final Maturity. 55

But as to what respecteth a Climacterical year or year of gradual ascent, drawn from a production of the number of seven into nine, to wit, into the sixty third year of Life, it is a blockish invention: Because *seventy Years are the Dayes of a Man*, &c. Therefore among Christians, they accuse the holy Scriptures of the imposture of Falshood; and so it is an invention of the Devil, who being an Enemy of our Life, doth procure through the fear of Death, to smite Old Men with astonishment before their appointed hour: For otherwise, what doth the production of a number into a number, make or tend unto the course of Life? Years indeed do hasten, and run back into their own Harvests and Maturities. Wherefore also the revolutions of Years, and numbers of revolutions, do rather respect an identity or sameliness of recourses, than the Number, or Life directly, and they after no manner refer themselves unto a past number, because all particular years do end into their own precise singularity, neither do they reflect themselves upon a plurality of Years foregoing. 56

Among the rest, some one doth fortishly betake himself unto the number numbering. Truly, as it is a pious and Christian-like thing, to acknowledge our Life from the hand of the Creatour, the Prince of Life; So it is the part of Reprobates, to have borrowed Life from the Planets, and Numbers: For although God hath from his own Will and good Pleasure, disposed of all things in a certain space, yet let it be a foolish thing to attribute a causality to Numbers. If Plants had the Faculty of fructifying before the Stars were born, and 57

and do grow or flourish by virtue of the Word ; it is a shameful thing for a Christian to have yielded the life of man, and the powers of his Duration and Existence unto Numbers numbering. Therefore a Clymafterical Year, whether we respect the Numbred Recourses of the Stars, or a recursive Number, or next, the Number numbering, is a vain prattle, repugnant to the holy Scriptures, which call our wretched Life from seventy unto eighty Years, not by reason of Years past, as neither by reason of their Number numbering, but because necessities are increased in the Seeds, they being so appointed by the Prince of Life.

58 But they boast of a Sabbathary Number, because it is the Seventh. Adde to this, that is repugnant to the Fiftieth Year, which is that of the Jubilee, and wholly Sabbathary; and so the Seventieth Year, because it is seven times the Tenth, doth more Sabbathize or rest, than the Sixty third Year; because the Ninth Year is the Nintieth, or the Ninth Tenth, which doth nothing belong unto a Sabbatisme or celebration of a Sabbath: For if the Seventh day be Critical by reason of the positions of the Moon, therefore not by reason of Number; neither doth any thing of the Moon interpose, which is common with the Clymafterical Number of 63 Years.

59 For Astrologers do will the 56 Year in Nativities of the Night, by reason of a doubled coldness of *Saturn*; surely a shameful one: but the 63 Year in Births of the Day, by reason of the ridiculous drynesses of *Mercury*, and *Mars*, to be most exceeding dangerous: But these Men, besides that for one half of Births, at least, they bid farewell unto a Clymafterical Year, they contradict the Text: *The Dayes of a Man are Seventy Years*, &c. In the next place, they desist from Numbers, while they call the Qualities of Elements unto their help, and by doating, do transerre them on the Stars. If Death in the Vale of Miseries, be the end of Calamities, the Clymafterical Year ought to be the Fiftieth; which is the Sabbathary Year and that of Jubilee.

60 God indeed hath distinguished the Week into Seven Dayes, not by reason of a Mystery or Dignities of the Number, but because he foreknew men would scarce be at leisure for him, unlesse he had commanded it: Wherefore he would have the seventh day at least to be due unto himself, that we might wholly be at leisure at least once in the Week; But not that a Number did contain a Sacred thing or Mystery; but he testified the Indulgency of his bounty, that of seven dayes he required even but one onely. Go to, if he hath consecrated the Seventh Number to himself, why dost thou adde also the Ninth, which is not consecrated unto him? Why do ye marry a profane Number unto a sacred Number (as thou sayest) that thereby ye may frame a Clymafterical Year? Is it lawful to have made Dayes sacred unto God when thou pleasest?

At length, after what manner, if Seven and Nine should have a Mystery in them, wilt thou make it, that the Number from the Product of Seven into Nine, shall be holy? Seeing that according to you, nothing can be added to, or taken away from the Species of Numbers, but that the Species it self is continually changed?

God commanded ten days for unleavened bread, before and after the Feast; But what authority doth that afford for a Denary, or the number of Ten.

The Lord commanded that Dayes were to be vacant for himself, wherein he had been bountiful unto them, yet are they not therefore to be observed by us: And therefore neither hath he addicted a holiness to Numbers: Therefore that Doctrine containeth the future perfidiousness of the *Jewes*, which things afterwards, from the foolish frivolousness of Astrologers, and melancholly or mad thoughts, they have fashioned into Arts and Rules fitted to their vain pleasure or desire; and some of whom I have Cured by Remedies for madness, seeing such kind of obstinacy wants not its own madness.

Finally therefore, it is manifest, that Long Life which I treat of, is not in respect of Duration or Time; but of Motions issuing forth from the Beginning, even unto the End: to wit, the Measuring whereof in the constancy of Duration, is not Duration it self, but another Motion, such as is the Day, which by its plurality, onely measureth the longitudes or lengths of Life: Wherefore the holy Scriptures do speak dis-jointly: *In those Dayes*.

And likewise they describe the contingencies of things, by the Dayes of Men, but not by the Successions of Times, which *Paganisme* hath introduced by a speech altogether fabulous; because of Time there is no Part, Succession, or interchangable Course.

C H A P. XC.

Life is Long, Art is Short.

1. *The Life deservedly ought to be shortened.* 2. *The Consideration of Long Life issues from the gift of God.* 3. *Some Factions of the Schollars of Paracellus, about Long Life.* 4. *An Objection for the despairing of Long Life.* 5. *How great the length of Life is, according to the Author.* 6. *Why the term of Long Life is so Diverse.* 7. *Long Life is proved.* 8. *The unsufficiency of Galen is noted.*

VVE all almost do complain of the shortness of Life ; but the space of Life is long enough, and the plurality of Dayes great enough, if the whole be well employed : For thorowly weigh thou, how much sleep, leisure or idleness, vain employments, Parents and Friends have divided with thee of the space of Life, and thou shalt presently discern, that ours is a lying complaint concerning the Shortness of Life.

These things *Seneca* sometime judged : But Christians who hope Death to be an entrance unto Life, ought never to lament them of the shortness of their Life : For there is a certain number of Elect, and Reprobates, the which that it might be the sooner fulfilled, by reason of the Iniquities of many, the Day of Life ought to be cut short, as also the number to be speeded, for the hastening of the last Day : For else, although the World should be fruitful in its whole ampleness, yet it should not be sufficient for the nourishing of all that are brought forth, and to be brought forth, by reason of the afore said hastening, if every one of these should attain unto the term of Long Life.

Furthermore, although the Righteous ought deservedly to rejoyce concerning the shortness of their Life, and in a contrary sense, the Unrighteous do most of them wish for a long continuance of Life (for perhaps they shall be amended in old age) yet seeing it is manifest to none, whether he be accounted Righteous in Gods sight, especially because, *In his sight shall no man living be justified* : I have therefore judged, that every one is to be seriously employed for the obtainment of the antient blessing promised unto him that is obedient unto Parents. Therefore Long Life hath seemed unto me to be the top of all Philosophy, because it ponders of a pleasant and most profitable Meditation.

The Death of a Person is first of all most greatly to be lamented, which might be a Pillar unto mortals, to his country, or family, but that by the command or permission of God, he should dye for some better end : For therefore every one is of his own free accord carried into the love, desires, and wish of Long Life ; and onely a miserable loss of Health, or Fortunes, brings on a Desire of Death, and wearisomness of Life unto the desperate ; But a despairing onely of Long Life to be obtained, doth affright those who diligently search after it : Because that in the Ages preceding *Paracellus*, the dumb silence of the Schooles teacheth, that they have meditated nothing concerning Long Life.

Because Death crept in through the subtilty of Satan, therefore I conjecture also, that Long Life hath not undeservedly even hitherto been suppressed through the deceit of the same, seeing he is the sworn enemy of our kind : Which scope of Long Life, notwithstanding the Almighty hath of late vouchsafed to infill into the Mind of man, that after an army of new Diseases mustred against us, we may seriously consider of these things, as those things which are glorious to his Name, and necessary for us : Although the gift of the Tree of Life doth remain in the hand of the Lord, as long as he hath decreed to remain be the dispenser thereof.

The late Adeptists despising the wedlocks of the first Qualities, the collections of Humours, their Prerogatives, and Decayings, or Cessations, have by little and little aspired unto a Unitone of Healing, under which, they at first supposing that they had found the entrance

trance of Remedies, gloried that they were made partakers of their desire, whom those succeeded, who could find that the subtilties of things, or purities of Medicines, were not as yet sufficient for so great a Spire, to wit, that they could enter unto the length of Life; because the Offices of our growth being finished, they could no longer pierce unto, and comix themselves with the first constitutives of us.

The natural endowment, I say, which things have obtained in growing, if they do not put it off within at their first entrance; at least-wise, they do not carry it far inwards towards the roots of the homogeneal parts; but they are as yet far absent from detaining the vital powers from their flowing unto Death.

- 3 For therefore the more learned from *Paracelsus*, have afterwards declined into divers factions of Opinions, and into a despaire of Long Life.

Others also being allured with greater courage and hope, more by the Promises of *Paracelsus*, than as being supported by Experience, the Witness of things, have promised many things, whereunto the events have not afterwards answered; because they together with *Paracelsus*, have not known the root of Long Life.

The more sloathful also have despaired in matters of difficulty, in saying, *The bound of our Life is set, the which none shall over-pass.*

- 4 They therefore thinking it to be vain, whatsoever those who were somewhat too rash have promised concerning Long Life. But they do not rightly well weigh that he who hath appointed the bound of Life, hath together also by the same endeavour, appointed all means requisite unto that term of Life: Otherwise, the Tree of Life had been in vain in *Paradise*, and in vain had the Creator created Medicine out of the Earth, from the Beginning, unless the natural terms or bounds of things might be prolonged by Healing or Medicine: For if I use not Remedies my bound is set, which I shall not pass over; according to that saying, *Wo is me, that my Pilgrimage is prolonged!*

- 5 If *Adam* doth not eat of the Tree of Life, he had a bound of Life appointed him: But if he had eaten, verily neither had he been Dead. There is therefore a hope for Long Life, but the knowledge of the Mean onely hath been wanting: For neither do I speak of Long Life issuing out of the *Scaiola* or four spiritual powers of the Mind; such fables I leave to *Paracelsus*.

Nor in the next place, am I he, who extend the Years of Long Life unto the days of *Mathusalem*: But I greatly esteem of the Age of *Nestor*, or of *Johannes de Temporibus* or *John* of the Times.

But *Paracelsus* calls the Life of three hundred Years (by a despised name) a short, natural, and curtailed one; yea if it be not prolonged unto the Year of Fire, he esteems it unworthy, and promiseth, that by the virtue of his Arcanums, the Life of *Nestor* should follow, as it were with no difficulty: But with me, a Long Life hath the term of one Hundred and Twenty Years, but the utmost of Three Hundred Years, because they are those which some living Creatures do daily of their own accord reach unto, but man very seldom, and that not but in some unwonted places.

- 6 But why Long Life may be extended with so great a largeness, it comes to pass, because it is on both sides received after the manner of the Receiver: For the Modern Tree of Life should now no longer render me capable of the least Dignity, or term, by reason of the light of my Life, being depraved by many storms, the thred whereof they have cut off while it was as yet in the Flax. *He shall fullfil thy desire in good things, and thy Youth shall be renewed as the Eagle.*

For neither is it said, as of the Eagle; because the former Youth of an Eagle is not restored: But the Eagle is renewed no otherwise than as the Serpent puts off his skin, and the Stag his horns; although in the mean time, they do not cease to wax old under that renovation: So that the Eagle hastens into grey Feathers.

Therefore I thus speak of Long Life, not indeed which may be extended even unto the last day, according to the rashness of *Paracelsus*; as neither do I speak of a sound Life, which is plainly free from Diseases: but of that which under some certain kind of Protection of the Faculties doth for some good while enlarge the bound of Life: Which meanes if they are administred unto a Child and strong Infant, are to bring the same unto the afore-said term, if he proceed to use the same.

- 7 What if at length certain Climates do protract the Life, shall that thing be denied unto a Medicine, unto which there is a natural endowment of Long Life? For oft-times, he which is constrained to use Spectacles in the fiftieth Year, doth afterwards again of his own free accord, see clearly in the eightieth Year of his Age.

Why shall not that therefore be done totally by Art, which happens in the Eyes from a volun-

voluntary vigour. But I have alwayes supposed, that whatsoever was once Natural (to wit, in *Nestor*, doth not resist a possibility of Nature : Neither also doth it move me, that Arch-Physitians have found this place untouched and dumb, and therefore also have left it : Because the Schooles do long since despair to be wise beyond *Galen*, who notwithstanding, like an Apothecary, doth substitute one thing for another ; and indeed hath set forth ridiculous Books of Preserving Health, as for Long Life : For he encloseth this, in straight, crooked, athwart, and circular rubbings : to wit, he acting great motion, and being a great Circulator in these things which are of his own Invention, even as an ignorant transcriber of others : For as oft as he faileth, from whence he may copy out serious things, he so discovereth the wonderful poverty of his wit, that he hath seemed to have doated throughout some Books, in a figural friction or rubbing : And therefore none of his successors hath hitherto counted the Books of *Galen*, of Defending Health, worthy of a Commentary, or hath attempted to lift them from the ground ; but rather by a successive Interpretation, every one hath bound that Doctrine of *Galen* unto the obedience of the hucktury of the Kitchen and Diet. For so through the craft of the Devil, Long Life hath wandered into defending of Health, and from thence into the Kitchens.

The Art therefore of some Years is Short, and the Life Long ; if we must have respect unto the Hope of Life, which the loose Doctrine of the Heathens hath neglected.

CHAP.

C H A P. XCII.

The Enterance of Death into Humane Nature, is the Grace of Virgins.

The Index of the Contents.

1. *Why it is Treated of Death before of Life.* 2. *A final Cause is not in Natural Things, as neither is it the first of Causes.* 3. *Some Absurdities of Aristotle.* 4. *The Author prostrates this Treatise to the Censure of the Church.* 5. *God indeed made Death for brut Beasts, but not for Man.* 6. *What may be denoted by the Etymology of Death.* 7. *The Devil could not make Death for Man.* 8. *Man prepared Death effectually for himself.* 9. *Of what sort the Immortality of our first Parents was.* 10. *By what means Immortality did stand in Man.* 11. *Why the Mind is not capable of Suffering.* 12. *The necessity of the sensitive Soul.* 13. *The eating of the Apple did contain in it the second Causes for a necessity of Death.* 14. *The inward Properties of that Apple.* 15. *Man before the Fall wanted a sensitive Soul.* 16. *The Mind Imprints its Image in the Seed.* 17. *A chain flowing from the eating of the Apple.* 18. *To what end the Author hath written this Treatise.*

I **L**ife was indeed before that Death could be; & therefore although Life be before Death in Nature, and Duration, yet for this Treatise, the Enterance of Death into Man's Life, doth precede Life, because I might not treat of Immortal Life (such as it was from the intention of the Creator before the Sin of our first Parent) but onely of the Length of Life, or of the prolonging of Life; whose end, because it is closed, terminated, and defined or limited by Death, Death ought to be first determined of by its Causes, as the remover of the bound of Life.

2 **T**ruly, I have not studied to imitate *Aristotle* in this thing, who teacheth, *That the End is the first of Causes*: For I have elsewhere plentifully demonstrated, that *Aristotle* was plainly ignorant of whole Nature: Wherefore that his Maxime, as well within, as out of Nature, is false.

3 **B**ecause, if we speak of God the First Mover, the Arch-type of all things, and of the invisible World; be it certain, that with him there is not any Priority of Causes, but that they all do co-unite into Unity, with whom all things are onely one.

Likewise, seeing whatsoever is made or generated in Nature, is made or generated from a necessity of the Seeds, and so that Seeds are in this respect, the original Principles, and natural Causes of things, and do act for ends, not indeed known to themselves, but unto God alone: From a necessity of Christian Phyllosophy, a Final Cause hath no place in Nature, but onely in artificial things: And therefore also from hence is verified what I have elsewhere sufficiently proved, That *Aristotle* hath understood nothing less than natural things, and that he hath deceived his Schools by artificial things: And he is wholly impertinent in this place, because he hath reduced artificial things under the catalogue of natural Causes. Yea in more fully looking into the matter, *Aristotle* remains alike ridiculous: For truly a builder, before the bound or figure of Houses made out of Paper, doth presuppose a knowledge of the Place, an attainment of Meanes; in the next place, of Lime, Bricks, Stones, Wooden, and Iron materials: a computation of which Meanes, doth

doth go before a Figure of the Houses. And so neither also is the Final Cause (if there be any) the first of Artificial Causes, in the Mind of the Author. Therefore it is a foolish thing to reckon a Being of Reason, a Mental Being, or a Non-Being, among Natural Causes.

Moreover I had willingly hastened unto the bound which I have proposed unto my self, concerning Long Life, unless Death should cut off the intended thread, interlacingly prefixing its priority as it were a Remora or stop: The Paradox also whereof, I had willingly detained among Secrets, but that the Treatise of Long Life did require its right after Death, whereby it hath naturally stablished an entrance into the Inne of Man.

Surely this Mystery of God is an unheard of Paradox, and the which therefore I humbly prostrate unto the Censure of the Church.

But let it be in stead of a Proposition :

That God made not Death.

But that thing I first understand to be denied for Man onely : For otherwise, for brut Beasts, Death was already naturally ordained before Man was Created, and indeed from the same Root whereby Death entred into Man : For truly most Beasts live not but by the slaughter of each other.

In the next place, Death doth not in this place, signifie a naked separation of the Soul from the Body, as it denoteth a meer privation, as if the sense were ; *That God hath not made a Non-Being, which is called Death* : For such a Declaration or Proposition, in the holy Scriptures, should be ridiculous. For the very Word, (*He hath made*) and a denial thereof is the same, and respecteth, *that he made, and they were made* : And so a denial thereof bespeaks the absence of a positive, and not of a privative Being, and is equivalent to this Proposition,

God made Man without an Inclination unto Death, Neither made he Natural Causes in him whereby he should be Mortal.

In the next place, neither hath the evil Spirit made Death ; Because there is not a kingdom of Infernal Spirits in the Earth, and much lesse was there in *Paradise* : Neither can Satan by any means change Essences instituted by the Creator, invert them, abolish or slay those Essences which God hath made void of Death. Death began in us from the evil Spirit indeed suggestively and excitingly, after a manner plainly by accident and external : Neither could he produce a Cause of Mortality, in a Subject, through the grace of the Creator uncappable thereof.

Therefore if neither God nor the evil Spirit have made the Death of Man efficiently, therefore from a sufficient enumeration of parts, Man alone made Death for himself, and hath applyed Causes unto himself as a Positive Being ; From whence he hath become mortal, and Death hath been made natural : For what the Devil could not do, man having a possibility, but not a necessity of dying, could do.

For he was in the possession of Immortality, and he was able not to dye if he would, because Death was unto him a free Contingent ; but indeed, because the Body of *Adam* had need of the Tree of Life, therefore in respect of his Body he was not absolutely Immortal, and therefore also he stood in need of nourishment : but he was to be Immortal from the free goodness of the Creator : And he who had preserved *Adam* from Death by Grace, and had given him the natural endowment of the Tree of Life, had therefore defended the same *Adam* from any kind of Injuries : Therefore Immortality in Man had been continued by the Tree of Life, and he was therefore banished out of *Paradise*, lest also after the Apple being eaten, *He stretch forth his hand unto the Tree of Life, and eat, &c.* For as the Apple included the Cause of Death, so the Tree of Life contained a superiority of Life over the Causes of Death. For it was not convenient for Man, who had eaten his own Death not to Dye, and to decide threatned Death, and therefore he ought to be banished in *Paradise*.

But Man was Immortal, as his Immortal Mind did immediately perform all the Offices of his Body, and give from it self an Immortal Life : For seeing it knows no Death, neither therefore is it subject unto the importunities of frail things ; it behoveth, if it was to govern the immediate family-administration of the Body, that it should after some sort communicate a like Immortality to its Body, at least-wise as to an excellency of the ruling Powers : Although in respect of the nourishments of the Body, Man had by little

and little failed, if he had not been supported by the Tree of Life.

- 11 Yea, in speaking distinctly, all plurality of his Powers was supt up into the Unity of his Mind: And at this day, the Mind is not capable of suffering through Duration, and the Alterations of mortal Things; because a mark of resemblance is wanting to these, whereby they may immediately touch at, or pierce the Mind.

Therefore that Death might make an access and entrance into Man, it behoved that the Mind did first desist from its immediate and former Function of the Offices of the Body; and that another Soul, to wit, a Mortal one, Sensitive and Seminal, being as it were the Band of the Body, should enter.

- 12 The which indeed, being far different from the Mind, is begged in the course of Nature by the vital Air, from the Father of Lights, the giver of Life (even as elsewhere concerning the birth of Forms) and perisheth with the Death of Man.

For if the Seed of a Dog doth voluntary issue even into a living Soul exclusively: Therefore it was meet that Man should be conceived without Seed, and a manly Copulation; or at leastwise, that the Seed of Man should not be without the disposition of a seminal Life, but to be limited by the common guidance of created Nature, into a living Soul, exclusively: the manner whereof I will explain afterwards.

- 13 Furthermore, that Death was placed in the eating of the Apple, that is, that the natural Cause of Death, the producer (after a dispositive manner) of the sensitive Soul, (which otherwise Man had wanted) was by the Seed, and that indeed, after the manner of Bruits, and that the Mind thereupon, hath forsaken the government of the Body, as it were abhorring the beast-like Impurity thereby contracted, shall be made manifest in following Treatises.

For from what moment of Time, Man made a Seed within himself for the propagation of his own Species, he delineated (at leastwise dispositively) by the same endeavour, the Beginnings of a mortal Soul, occasionally, it being the covering and wrappery of the Mind, that it might receive on it self, the whole ministry of the Body.

For truly the Creator had already obliged himself unto the Seeds of things in Nature, that as often as the Seeds of sensitive Creatures had come unto the bound of multiplying, the Parent himself of vital Lights, might infuse meet Souls into all particular Seeds; the which I elsewhere in the birth of Formes, have professedly prosecuted.

- 14 And therefore, there was in the Apple a Faculty of producing a fructifying Seed, and after a brutal manner, containing a seminal dispositive Archeus of the Young, and by request obtaining for it self a mortal Soul from the Giver of Life: *For on the same day where in they should eat of the Fruit of the Tree of knowledge of Good and Evil, they should die the Death:* because by the approach of the sensitive Soul, there was made another, and a new Generation, by reason whereof the Mind being astonished, withdrew it self from the Sterne of Life.

- 15 In this thing indeed, did the necessity of Death, and Immortality stand: For Man had wanted a mortal Soul, as long as he had wished to be immortal; not only because one only immortal Mind was sufficient for the governing of the Body, neither was it convenient that the Body should serve two Masters at once.

But moreover, because there was no need of a Seed, which might contain in it a Disposition unto a mortal Soul. Therefore the whole seminal Disposition to propagate Seed, was in our first Parent, Presently after the Apple was eaten, and before the sensitive Soul was born, as well in himself, as in his Posterity.

- 16 From thence indeed it is manifest, that the Mind, although it hath withdrawn its hand from the Stern of the Body; Nevertheless that it is no less guilty in every production of a fructifying Seed, than it was in Times past, after the eating of the Apple.

Indeed that thing, the words of the Text contain. *In Sins my Mother hath conceived me.*

But after what manner, under the Mean of the disswaded Apple, the most chaste innocency was defined, being free from the Concupiscence of the Flesh, and from the contagion of a brutal Impurity, I will professedly demonstrate afterward.

- 17 But let it be sufficient to have now said by the way, that a vital Seed hath arisen, and was conceived through the lust of the Concupiscence of the Flesh, for the begging of a sensitive Soul after a brutal manner, on which Seed the Mind imprinteth its seal: And therefore neither with the similitude or determination of a specifical brutality: Without which Seal, every Seed is barren, otherwise ending into a lump of Flesh, or a Monster.

Therefore from the Concupiscence of the Flesh, as the Seed, so also the Mortal Soul, and

and the Life thereof, and by consequence, the flesh of Sin have drawn their original ; and by consequence also, Death.

But indeed Athiests and Libertines, do even at this day, take the Text of the disswaded Apple, together with that Original, for an Allegory : The which the Church hath long since banished for an Heresie , and hath long since condemned it. 18

Therefore the History of the Deed, which *Genesis* describeth, is true. But why, and after what manner, that eating of the Apple hath naturally, unavoidably, unremissibly, and irrevocably caused Death to be equally continued on all Posterity ; so as that the one onely transgression of the Admonition ; being among the most hainous of Sins, hath committed an original Crime, and afterwards should enclose in it the Reason of a second Cause by propagating , from an unexcusable necessity of Mortality, or after what manner, the withdrawing of Life, and Cause of Death are necessitated in the eating of one Apple, I desired not to have narrowly searched into the reason of the good pleasure of God, and the motion of his Decree, from a former Cause, or from a consequent Effect ; seeing it abundantly sufficeth me, that I know and believe, it was so appointed of God ; but that truly, I had hoped it might be for his Glory, the Splendor of Chastity, and Instruction of Libertines , to have more fully sifted this Paradox, and therefore also to have applied it unto my Treatise of Long Life.

For now is the hour come, wherein that Evil shall, from the North, be spread over all the Inhabitants of the Earth.

C H A P. CXII.

A Position.

1. The substance of the Position. 2. A summary Objection compacted of the Law, Sin, and the Curse. 3. 4. 5. 6. 7. are Arguments against the Objection. 8. A new Objection. 9. The Objection is solved. 10. The quality of the Sin in our first Parents. 11. Why the Serpent assaulted the Woman. 12. The Man is not cursed. 13. The Woman is not cursed. 14. The Text which is thought to contain a curse, confirms the Position. 15. The likeness of Conception, and bringing forth after the Fall, and not before the Fall, doth strengthen the Position. 16. The Text proves the Position. 17. An eight Argument against the Curse. 18. A ninth. 19. A tenth. 20. An eleventh. 21. A twelfth. 22. A thirteenth. 23. A fourteenth. 24. It is shewn that Sin hath not caused Death, much less if there had been any Law. 25. What kind of knowledge was included in the Apple. 26. Two faults in arguing, of not the Cause, as of the Cause. 27. From what Causes the Corruption of Nature hath arose. 28. From whence is the continuation of the original of Sin. 29. Some Errours about the abuse of those faults in arguing. 30. The Corruption of Nature, from what immediate Cause it hath proceeded, from what occasional Cause, and from what mediate Cause. 31. A fifteenth Argument against the Curse. 32. A sixteenth. 33. A seventeenth. 34. An eighteenth. 35. A nineteenth. 36. A twentieth. 37. A twenty first. 38. A twenty second. 39. A twenty third. 40. A twenty fourth. 41. After what sort Death entred the Apple. 42. A conjecture from things going before. 43. The conjecture is proved. 44. Brawlings about Goats-wool. 45. A twenty fifth Argument. 46. It is concluded from the Truth of the Text. 47. Death doth not expect an hec-ciety or this very momentnesse, as neither doth Sin. 48. The intention of the Creator placed in the Text is proved, because he hath no where admitted of incest between him that goes before, and him that follows after in generation. 49. The place of Mans corrupted Nature is narrowly searched into by eight Arguments. 50. A ninth is also added. 51. The chastity of the Text is celebrated. 52. The excellency of those that are regenerate, beyond the happiness of Adam.

THe Almighty, out of his vast, and voluntary goodness of Love, hath loved, and raised up Man peculiar for this purpose, that he might intimately and as nearly as might be, express his own Image: Wherefore he adorned the same Image of himself, with so great a Grace of his own divine Majesty, and so prevented it with the bountiful beholding of his Love, that of his own good Pleasure, he created *Eve*, and ordained that she should be the future Mother of all Humanity; and *Adam* after the Fall, called the name of his Wife *Hevah*; because she should be the Mother of all living) who was to conceive her off-springs, not indeed from carnal Copulation, and after the manner of Bruits, nor from the concupiscence of the Flesh, or by the will of Man, but from God, or from the overshadowing of the holy Spirit alone, after the manner whereby the Humanity was conceived and born; in which, and by which, all that are to be saved ought to be regenerated: That is, the Virginity of the Mother remaining entire, and her Womb being shut, she had brought forth without Pain; *Eva* was constituted above the Man.

This

This indeed is the great and new Paradox, which I have undertaken to demonstrate, in this Treatise. Wherefore in the entrance, obstacles that are obvious, and devious, are to be removed.

And first of all, they object the Text : *The Earth shall bring forth unto Thee, Thistles and Thornes. In the sweat of thy Face thou shalt eat thy Bread. I will multiply thy Miseries, and thy Conceptions. In pain thou shalt bring forth thy Sons, thy Husband shall rule over Thee. Thou shalt die the Death* : And by consequence, ye shall be afflicted with the Calamities of Diseases and old Age. All which things issued forth on Posterity, from the curse of the Sin of Disobedience, even unto the destruction of the World, upon no account to be redeemed, and by no act of sanctity to be expiated : Because God had appointed a Law to Adam, that he should not eat of the Fruit of the Tree of knowledge of Good and Evil ; the transgression whereof hath defluxed as into original Sin ; So also it stirred it up into the perpetuity of a Curse, from our first Parents, equally on all their Posterity. These things have been thus diligently taught hitherto. Whereunto, under the peace and censure of the Church ; I will humbly subjoyn my own Conceptions.

First therefore, I negatively affirme the contrary ; because the Words of the Text do not precisely containe any Curses, except on the Serpent, and Earth ; but not at all on Man : Whom, if he with whom there is no successive alteration or change, had cursed, he had truly, and alwayes cursed like the Evil Spirit.

For it is a foolish thing to believe that God should now curse Man, whom presently after Sin, and without the intervening of contrition, or act of repentance, he forthwith blessed with much Fruitfulness, gave him the whole Earth, and placed all living Creatures under his Feet : Yea in the midst of the Curse uttered or brought upon the Serpent, he replenished the femal Sex with his blessing, saying : *The Woman shall bruise thy Head : I will put Enmities between Thee and the Woman, and between thy Seed and her Seed* : The which, seeing it is not understood of the Seed of Man, it promiseth the *Messias* the Saviour of the World, to come of the Seed of the Woman : So far is it, that he had there cursed Man.

In the second place, I deny that a Law was given, and by consequence also, a contradiction or opposing of a Law : For it follows, wheresoever there is not a Law, Transgression nor Disobedience doth not interpose ; and by consequence, a Curse doth not there befall : But I prove that there was not a Law by the very Words of the Text : And he commanded him saying ; *Of every Tree of the Garden eat Thou ; but of the Tree of knowledge of Good and Evil, Thou mayest not eat*. The Word [he commanded] Seemes to include a Precept, and so also a Law ; Yet that one only Word obtains no more the force of a Law or Precept for the affirmative [of every Tree of Paradise eat Thou ; than for the negative [Thou mayest not eat :] For it included not a Sin, although he had not eat of every Tree of Paradise : And therefore it did no more contain a Law, for the forbidding of one Tree, than for a Liberty of all the other Trees. Therefore the Text contained a fatherly Liberty for the affirmative, and likewise for the Grant ; as also a fatherly Admonition of Caution for the Negative : no otherwise than as if a Country-man being expert of the way, shall say to a Traveller ; *If thou shalt go that way, thou wilt Perish and die the Death* So the Admonition of the Creator [thou mayest not eat ; and in whatsoever day thou shalt eat, thou shalt die the Death,] do shew, not a Law, but a Persuasion, and Wish : But the transgression, and Act of the despised Admonition, doth indeed contain a Sin, but not of Disobedience ; and Disobedience, as much differs from a despised Admonition, as a Law doth from an Admonishment it self. The Prohibition therefore [thou mayest not eat,] sounds as an Admonition, to wit, least he should eat his own and posterities Death by an unextinguishable Guilt ; because that Death was placed in the Apple, but not in the opposition of eating : And therefore that Death from the eating of the Apple was natural, being admonished of, but not a Curse threatened by a Law : For the threatnings of Death, which was unknown to Adam, could not terrifie the same Adam : And therefore threatnings had been void, but not an admonition : For Adam had not as yet seen a dead Carcase, and the which, before he saw living Creatures, was ignorant of their Names : And much less could he know what Death should be : And least of all by far, could Eve know what it should be to die in Paradise. Therefore with our first Parents, Death was as yet a non-Being, and unknown ; but of a non-Being, and of that which is unknown, no Conception answereth, and there is no fear at all : Therefore, neither hath God foretold Death for the threats of Terrour, or a Law ; but from his meer goodness : That when they had eaten of the dissuaded Apple, they might know that God had not made Death ; but themselves for themselves.

Neither

- 8 Neither doth the Text in Chap. 3. hinder these things ; *Because thou hast eaten of the Tree, whereof I had commanded thee that thou shouldest not eat, &c :* For the Words do manifestly declare the goodness of the foregoing Admonition, but not a Law : For the Word [*I had commanded*] is the same which before in the second Chapter ; [*and he commanded him, saying*] signifies an Admonition only, and not a Law : Otherwise under an equal original Sin, they had been obliged from eating of every Tree of *Paradise*, which none of a sound mind will ever affirme.
- 10 For the great Sin was in a suspicion of deciet, falshood, and fallacy of God, and that they gave more credit to the Serpent, than unto God, and that they despised a fatherly and kinde Admonition : But there was not Disobedience, because a Law was not given : It was indeed an Act against Gratitude, Love towards God, and a due and rational Obligation. Therefore God cursed them not, because they by eating, had contracted the Penalties of Diseases, Death, and Miseries on themselves for a Punishment. But God speaketh not of Diseases after the Fall : Because it was sufficient once to have foretold Death to come, while he admonished them that they should not eat.
- 11 In the next place, the crafty Serpent assaulted not the Woman as being the weaker ; but because the Admonition was given unto *Adam* from the Mouth of God, but signified unto the Woman, onely from the relation of the Man : And therefore God first requires an account of *Adam*.
- 12 First of all, it doth not containe a cursing of the Man, that the Earth should be cursed in its Work, and should bring forth Cockle, and that he should in the sweat of his face eat his Bread all his Life : But they containe a remembrance of the loving Admonition that went before the Fall.
- 13 Again, neither do these Words sound of a Curse, that the Woman should be thenceforth obedient and subject to her Husband, although therein, the intent of the Creator doth clearly appear, to wit, that he had appointed the Woman to be the head, top, and ultimate Creature above the Man ; But now, by reason of a double Sin, that she ought to be subject to her Husband : But that signifies rather a deserved Punishment, than a Curse ; Even as a Superiour is not cursed, who is laid aside for an Errour committed. But whereas it is said : *In Pain shalt thou bring forth thy Sons* ; the Text expressly confirmeth the mystery of the Paradoxal Position. For from thence it manifestly appears.
1. That Eve was not created, nor appointed, as that she had brought forth in Pain : Wherefore this Message is not declared unto her for a Curse : But there is set before her eyes, how much Calamity she had caused unto her self, that she should hereafter conceive and bring forth after the manner of Bruits, in Pain : For it is not to be doubted, but that Bruit-beasts are not guilty of Sin, yet do they bring forth in Pain : Not indeed that they have sinned in Adam, as their Father, or that they are partakers of his Sin ; because they had brought forth in Pain whether Adam had sinned or not. Neither also is it agreeable with divine goodness, that Bruit-beasts should bear an undeserved Punishment, while as they from a Faculty of Nature, and from an appointment of Creation, do bring forth in pain.
- 15 2. If Bruits bring forth in Pain, a likenesse of Conception, and bringing forth in Bruits, and in Woman after the Fall, is denoted ; which Likeness, seeing it was not before the Fall, therefore this Text strengthens the Position.
3. If Eve had not eaten the Apple, and consequently from the Apple, the concupiscence of the Flesh from the tickling of a corrupt Seed, verily she had brought forth without Pain.
- 16 Where the Text promisseth a Virginitie in conceiving, and bringing forth, and so a perpetual Virginitie appointed in propagating : To wit, that she had conceived and brought forth, her Womb being shut : For what other thing is this, than that which others think to be the Curse of Eve, is in very deed, only a commemoration of the good lost through the copulation of Man, of Seed, and of the concupiscence of the Flesh, in the Flesh of Sin, after the manner of Bruits, henceforward ? The hope I say, was lost of conceiving by the holy Spirit, after that she had conceived by the will of Man, as every Mother in Sins doth.
- 17 For otherwise, if Death had been of the punishment of a broken Law, and not from the concupiscence of the Flesh, there should be every day as many new Deaths, as there are Transgressions ; or God should not make so much account of his Commands of the Decalogue, as of the Admonition of the caution or avoiding from the Tree of knowledge of Good

Good and Evil : For he would not have those Laws to be alike seriously observed, which he would not have to be chastised with an equal Punishment.

Therefore it being as yet supposed, that there had been a Law concerning the denyed eating of the Apple, even as there is a Law of forbidden Worshipping of Idols, Adultery, &c. But these Laws are not punished with a continued unpurgeable Impurity on Posterity, in such a manner as the opposition of that eating is. From hence therefore, it most easily appeareth, that original Sin was not so much from the force of disobeying a command, as from the effect of a defiled divine Generation, being changed into a beast-like one : For else there is not an equality of distributive Justice, nor therefore a conformity in the goodness of God, whether we have respect unto the ingratitude of our first Parents, or next unto the disobedience against a Law : Because the first disobedience should pay a punishment derived on all, even on the innocent Posterity rather than any tenths or hundreds afterwards, and than innumerable, and far more great or haynous Sins.

Indeed, I think that there is the same rule of Justice with the same Lawgiver, of every command preceptively, and defensively given and pronounced, that the breaking thereof ought always to draw after it an equal Fault, neither therefore to be punished in all the Posterity, and those that are innocent : and then that none of Mortals, nor any one of them had been sufficient for the original punishments of their Ancestours, and a hundred-fold of Deaths, (to wit, if Death had taken its original effectively, and immediately from the opposing of a Law) or the unchangeable God had not appointed his future Commands to be alike observed as at first, if Death should not have its root in Nature, the application of which root had been onely from man.

Therefore If Death should be immediately from God alone, from the curse of Sin ; 18
Now God had made Death, and so by Faith we should believe a Falshood,

In the next place, if Death had proceeded from a Curse, and had been from a supernatural Root ; So also, neither should our Death find natural Causes in us, or our Death should not be of the same kinde with the Death of Adam : Yea, which is far more absurd, our Death should not proceed from the same primitive Beginning, from which the Death of our first Parents began : And by consequence, our Death should not be the effect of original Sin : And so, unless Death do happen from elsewhere, than from the punishment of a Law, and the curse of Sin ; that is, unless the Adamical or Beast-like Generation of the Flesh from the Concupiscence of the Flesh, and its Copulation, doth naturally containe Death in it, like unto Beasts ; in very deed, Innocent Children should pay an undeserved Punishment. 19 20 21

Again, if Death should be immediately caused from a Curse, or from Sin, should not the Text unfitly say, *On the same Day thou shalt die the Death* ; while as it should not say : *Presently in the same Moment thou shalt die* : For a Curse doth not want twenty four hours that it may operate, as neither likewise doth Sin require an interval for the Guilt, and deserved Punishment of the same, which was expressly seen, while an impure Man endeavouring to vindicate the reeling Cart wherein the Arke of the Covenant was carried, from a fall, payed the Punishment of his boldness by sudden Death. But seeing Death consisted in the procreation of forbidden Seeds, and of the Concupiscence of the Flesh, it presupposeth the eating of the Apple, and its Digestion : And therefore those Words, [*On the same Day thou shalt die the Death, or shalt be made Mortal ;*] also thou shalt suffer punishment by Death, doubled in thee and thy Posterity, do strengthen the proposed Truth of our Position. 22

But there is no original Sin accounted of from the first, afterwards or unremissibly derived on all Posterity, but that which from the eating of the Apple, thenceforth defiled the whole Nature ; because it transferred the Propagation of mankinde on the Flesh of Sin, of which God saith : *My Spirit shall not remain with Man, because he is Flesh*. But that Sin, if it hath not been sufficiently searched into by Predecessours, I will add freely what I conceive. 23

For indeed in this History of Genesis, do concurr together.

1. The Sin of Distrust or suspicion of an Evil Faith, of Deceit, Fallacie or Falshood in God. For Eve saith to the Diuel : Least perhaps we die : And so she doubted that the Death admonished of, would of necessity come unto them. And likewise the Sin of a despised Admonition, and that they more trusted unto the Serpent than to God ; neither was there disobedience, where there was not yet a Law. 24

2. An

2. *An act of eating of the Apple, not so much forbidden, as admonished of bewarying of it.*

3. *An effect of the Apple being eaten. For in the midst of Paradise, there was a Tree, whose Property is said to be of Life: Least he eat and live for ever; and there was another Tree, whose Property was that of the knowledge of Good and Evil, unto whom there was not another like; but the other Trees, except these two, served only for nourishment. The property therefore and effect of this latter Tree, was to stir up an itching concupiscence of the Flesh, or madness of Luxurie: But it is called The Tree of the knowledge of Good Lost, and of Evil obtained: For they knew not that they were naked, and they were without shame, that is, without the Concupiscence of the Flesh, like Children, because they wanted Seed.*

4. *A carnal Copulation concurrereth: From thence at length, a certain beastlike, frail, Mortal Generation, contrary to the intent of God, who was unwilling that Man should conceive in Sins (in Sins hath my Mother conceived me) not indeed that all Mothers afterwards should eat of that Apple, but because presently after the Apple was eaten, all Conception should not be made but by the will of Blood, Flesh, and Man: And so that from thence, should all Flesh of Sin necessarily proceed.*

26 Therefore while the immediate Cause of corrupt Nature, and Death is ascribed unto the Sin of disobedience; Or while the immediate Cause of corrupt Flesh, is attributed unto the Sin of suspected deceit in God, they are faults in arguing, of not the Cause, as of the Cause.

27 For in speaking properly, the very Corruption and Degeneration of the Flesh of our whole Nature, hath not issued from the Curse, as neither immediately from Sin accompanying it: but from these only occasionally, and as it were from the Cause without which it was not; but our Nature is rendred wholly corrupted, and incapable of Eternal Glory, by reason of the causalities of concupiscence and brutal Generation, effectively, and immediately causing a withdrawing of virgin Chastity, and all hope of generating from the holy Spirit afterwards, and from Eve as a Virgin.

28 And therefore original Sin is defluxing altogether on all Posterity, because after the Virginity of Eve was taken away, the race of men is not possible to be generated but by the will of Man, Flesh, and Blood, the which otherwise, God had determined to be generated by the holy Spirit. It is therefore an undistinction of Causes, and its unapt application of Effects unto their proper Causes, which hath not heretofore heeded,

29 1. *Why that Apple was with so loud a voice forewarned of, that they should not eat of it.*

2. *That they have esteemed that to be a Curse which was not.*

3. *That they have ascribed original Sin unto one Disobedience, as the most near and containing immediate Cause.*

4. *That they have thrown an unexcusable Death, on the Curse and Punishment of a broken Law.*

30 For although a grievous Sin hath concurred with an original declining of the Generation intended by God, together with an impurity of the Flesh, the corruption of Nature, by carnal copulation, Yet the corruption of Nature, the degeneration of Generation, as neither Death, have proceeded from the original Sins of our Parents their distrust, &c. as from an immediate Cause; but from the effect of the Apple being eaten, as a new Product of necessity, Naturally depending thereon: that is, Death hath proceeded from its own second natural Causes existing in the Apple: Even as a total Corruption of Nature hath issued from thence, because both are supported by one and the same Root of necessity.

31 But the Causes of these natural Causes, were by accident co-bound unto the Sins of Distrust, &c. in the Unison of eating. For the very guilt of the Sin of suspicion of an evil Faith, or bad trusting of Decier, and a Fallacy of God, remained expiable by our first Parents, after the manner of Sin, to wit; by Contrition, and Acts of Repentance, after the manner of other Sins: But not that therefore, whole Nature ought to be depraved, that

that a Death and Misery of every Body ought to enter and perpetuate it self on all Posterity, even although they should have guiltless Souls: For God doth sometimes punish the Sins of Parents, upon one or a second Generation: But it is no where read, that he hath chastised the Sin of the Grand-father on all his Posterity afterwards, who had acted evilly for five thousand Years before: For that pain of Punishment exceedeth the love of God towards Man, whom he so greatly blessed, presently after Sin: It exceeds I say, the Rules of Justice, if the Punishment of him that is guiltless in that Sin, be referred unto his Ballance.

And moreover I think, that if God out of his goodness, had not admonished our first Parent of Death, *If he should eat of the Tree of knowledge of Good and Evil*: But if the Devil from his proper and inbred Enmity, had translated the Apple from that Tree under any other Tree, and that both the Sexes of Men had eaten of the Apple, that the Concupiscence of the Flesh and Copulation had equally succeeded; and so although that had happened without any Sin; yet that the Generation following from thence, from the necessity and property of the Apple being eaten, had suspended the intent of the Creator, who would not that the Sons of God, and Posterity of Eve should be conceived from the holy Spirit, after her Virginity was corrupted: And so Death, a Disease, and the very Corruption of Nature, and Beast-like original Inversion thereof had been, and yet not from Sin: Because the Apple contained a natural efficient Cause of Luxury.

For how unaptly do these agree together: Death proceedeth from the Sin of an infringed or broken Law, and so from a supernatural Curse: And those Words of the Text, uttered after the eating of the Apple, and before the banishment out of Paradise; *Least he stretch forth his Hand unto the Tree of Life, do eat of it, and live for ever*. For against the Curse of God, no Creature is able to resist. From hence therefore it becomes evident, that the Apple contained the natural Cause of a defiled Generation, and of their own Death; and that the Tree of Life, did likewise contain naturally a conserving of eternal Life; that is, a Superiority over the necessities of Death.

At length, if death had happened from a Law, from the Punishment and Curse of Sin, it should be false that God had not made Death; because in very deed and immediately, Death had proceeded from God, and not from a natural Cause, or that of Nature corrupted: And by so much a stronger right, where the same Person, the Almighty Creator, is the Law-giver, like as also the Executer.

Last of all, Sin is a mental Being, or a Non-Being, which cannot produce a real and actual Being.

And therefore, Death at its Beginning had not proceeded from natural Causes, even as at this Day, Death doth arise in brut Beasts equally as in us, and therefore Death in its Beginning had been different in the whole kind, from that at this day.

And therefore the Text should speak that which is ridiculous, *God made not Death*; if by reason of disobedience he had cursed Nature that it should die.

It is therefore of necessity, that the Death of Man in its Beginning, began, and was made from second Causes altogether natural, whereby we die at this day. Also at this day, Death hath reciprocally invaded through the natural Causes of defiled Nature, even as in times past, in its Beginning.

Indeed although Adam became Mortal from eating of the Apple, yet his Death happened not but naturally some Ages after, and from Old Age, as from second Causes: Far therefore be a Law, an opposing thereof, Sin, a Curse in the original of Death, appearing so many Ages after from second Causes, speaking as it were in our presence. Therefore every and the total Cause, whereby Man hath immediately framed Death for himself, is to be seen in the Position.

For although we are now Mortal, yet we die not when we will, and when we desire: Because Death proceeded not from the Will, or from Sin; but from the Apple: Neither indeed, because Death it self was in the Apple, as in a mortal Poyson, but there was in the Apple the Concupiscence of the Flesh, an incentive of Lust, a be-drunkening of Luxury for a Beast-like Generation in the Flesh of Sin, which Flesh carried with it the natural Causes of Defects, and necessities of Death.

Wherefore it is likely to be true, if the Serpent had not been able to obtain of Man, that by Sinning he should eat of the Apple, that he had cast an Apple cropped from thence, unto the Root of some lawful Tree; that by this means, the Enemy of our Life, might rejoyce to have introduced Death.

And that thing is sufficiently gathered from the Text, which doth not say, *If thou shalt eat of that Tree*; but he saith, *In whatsoever day thou shalt eat, thou shalt die the Death*:

PPPP

As

As if he should denounce, that that danger of Death to come, was fore-ordained. For, for this purpose the World was created, and the Instruments of Generation were given unto Man, because the Corruption of Nature, the necessity of regeneration in a Saviour, and the virgin Purity thereof, was foreseen.

Let therefore, those brawlings cease, whether *Eve* ate an Apple, or indeed a Fig.

44 For the Text calls an Apple; *That which is pleasing to the Eye*; but a Fig doth not so allure by the sight of it: And that one only Tree was of that Property, whereof then there was not the like, nor at this day is there another read to exist among created Things.

45 Finally, the Words of the Text; *I will multiply thy Miseries, and thy Conceptions*: so far off is it, that they do signifie the Indignation of God, and much less his Curse; Yea rather they denote his love toward the devoted Sex.

For truly, there is none which knows not, that by how much the Life of the devoted Sex shall be the more miserable, by so much also that it is nearer to the Son of Man; for otherwise tribulations which God sendeth on his Saints, and Martyrdom it self, should by an equal right, be Curses.

46 I will add last of all, that as the Works of the Flesh are devillish: So the Text, *I will put Enmities between the Seed of the Woman, and thy Seed*; doth fully or plainly confirm this Position.

For first of all, the Woman of whose Seed God there speaketh, is the God-bearing Virgin; which as a Virgin, hath left no other Seed an Enemy to the Serpent, but the Sons of Light, the Sons of God, and those who are renewed by the holy Spirit, who have no Enmities with the Eggs of any creeping thing, but only with the Sons of the Devil, and Darkneſs, forasmuch as they keep the Seeds of Sin. Therefore the Text there promiſeth a future Regeneration in the God-bearing Virgin, calling those that are not renewed, the Seed of the Devil; because they are *Adamical* Flesh.

47 Therefore those things being heeded which I have already above demonstrated; original Sin doth not properly expect a quickning, or the moment of hecceity: For although the Soul cannot be guilty of Sin, before it be; Yet seeing original Sin is in the Contagion of the Flesh, it self is presently in the supposition of the concrete or composed Body, after the manner of its receiver, and as soon as there is a sexual mixture of the Seeds; according to that saying, *For behold I was conceived in Iniquities* (before the coming of the Soul,) because *in Sins my Mother hath conceived me*: For Sin is in the same point wherein Death consisteth; the which indeed is in the very mixture of the Seeds: For Death is immediately in the Archeus, but not in the Soul; which thing the sometimes mortal indisposition it self of the Archeus, proveth; from whence the conception is made voide, which before now was in its whole hope, vital: And although the impurity of the material thing supposed, be before the Flesh thereby generated, and therefore also before the Soul; yet there is not properly Sin, unless the Soul shall put that on. There is therefore a far different infection of original Sin, than of any other Sins whatsoever, which require a consent of the Soul: For other Sins the Soul it self committeth: but original Sin defiles the Soul not consenting; because the Thingliness or Essence of that original Sin, is the very Flesh of Sin: For neither therefore is it called the Soul of Sin, but the Flesh of Sin, because the Soul is defiled by the Flesh: But the Devil not from elsewhere than from himself: Therefore Man admires mercy, but not the Devil. Therefore from the good pleasure of the Creator, the Apple did carry in it not only the Concupiscence of the Flesh, but consequently also, the generation of Seed: but there was not therefore a Faculty in the Apple, of propagating the sensitive Soul.

The Arbitrator of the World in creating, would oblige himself to create every living Soul in every soulified Body, when corporeal Dispositions had come unto the bound of enlivening: For therefore the Apple, presently after it was eaten, disposed the Arterial Blood unto a Seed, and from thence into a sensitive Soul: And that thing was proper unto no nourishment, which was unto that Apple, so that it not only begat Seed in our first Parents a few hours after, but also Dispositions to obtain by request a sensitive Soul from the Creator: And that which otherwise happens in the Young, in set Terms of Dayes, and is perfected by certain degrees of Digestions, that was presently compleated in the very vital Archeus of our first Parents. And the Text doth insinuate that peculiar thing to be in the Apple, because; *In the same day wherein he should eat of the Apple, he should die the Death*: Because the Apple, although it should anticipate or forestall the term of Dayes, yet it should require a certaine term of Motion, that after it should be turned into vital Blood; it should also be endowed with a sensitive Soul. For they who in the very point

of Creation were formed into a Man, and a Woman, and not into Children, in a short space also, grew old or decayed on the same day, into the maturity of Seeds, and every necessity of Death, and properties of second Causes. For in a straight way, all this falls perpendicularly or point blank on the post of the foundation of my Position, on which the giddy or unconstant businesse of our Mortality, is whirled about even unto this Day.

But at least-wise, seeing Eve was made of the Rib of the Man, that very thing doth insinuate a mark of Chastity, and forbidden Copulation of the Flesh : Because it is that which besides Whoredom, contained Incest ; which thing was not hid from Adam : Of which notwithstanding, the Almighty after the fall of sin, seemed to dispense withal, granting Matrimony. 48

Therefore through occasion hereof, it remaines diligently to search into, whether the Act of Lust were compleated in Paradise ?

Many will have Paradise to be free from filthiness, because the Text saith, Chap. 4. But Adam knew Eve his Wife, who conceived, and brought forth Cain ; saying, I have possessed a Man by God.

But let these men pardon me ; For the contrary appeareth from the very Text.

First of all, The Text cited, doth convince of nothing, but that the ravishment of true Virginity (because it is bloody) doth not admit of Conception as a Companion : And therefore Cain was not Conceived at the first turn, but out of Paradise. For otherwise, 49

1. On the same day ye shall dye the death ; according to the truth of the Position, denoteth, that in the same place the filthiness was committed.

2. The Woman is not called the Wife of Adam before the Fall, as she is immediately after : But the name of a Wife is not given, not indeed unto Matrimony confirmed, but onely unto it being finished.

3. It was said onely to the Man, Thou mayest not eat of this Tree : Therefore it is read, concerning the banishment of the Man, to be made in the singular number : Not indeed but that both Sexes sinned, but because the Man had singularly deserved to be banished for his Whoredom.

4. Therefore it is said ; Lest he stretch forth his hand unto the Tree of Life, do eat of it, and live for ever : But it is not said, least the Husband and Wife do eat.

5. Adam at the first sight of the Beasts, knew their Essences and Properties, and also put right Names upon them : But the Woman being seen, he at first called her Wo-man, because she was taken from Man : But after the Fall, he called her Hevah, or, The Mother of all living : Because he at the first sight of her, as yet knew not, neither as yet had she that property from the Man, and she learned it, because she put it not on, and stirred it not up but by sin : For why had he changed the Essential Name of the Woman, if she had not also changed her whole Nature ?

6. And next, He with-drew her unto the Shrubs, rather to commit his filthiness, than for a cover of his shame : For truly he might have covered his shame with Fig-leaves, and have neglected his hiding through the Shrubs, if he had not also had the signes of chastity corrupted.

7. For truly, if my Position be true ; That Death was caused onely through the Luxury of the Flesh ; His banishment followed not, but after the act of filthiness.

8. For he who but presently before, knew not that he was naked ; After what manner did he presently know his Wife to be the Mother of all living, unless he had committed something ?

And Lastly, The Text which saith unto the Serpent, I will put enmities between the Seed of the Woman, and thy Seed ; doth clearly denote, that the Woman that before wanted Seed, and altogether all the rickling thereof, had now Seed. 50

51 However it is, at least-wise, I cannot but remarkably admire the excellency of the Text, which hath no where made even any deaf mention of the Concupiscence of the flesh: but it every where covers the fowlness of the Flesh, with the greatest silence, by the obtained knowledge of the shame, and involves an induced necessity of Death, and a necessary requirance of Regeneration in the highest Mystery: Determining, that at length, the fullness of dayes being compleated, evil shall be spread out of the North, over all the Inhabitants of the Earth. The which I will by and by manifest.

52 Finally, Nature being now degenerate, it hath pleased the Almighty to raise up the Fall of *Adam* by Regeneration or a being born again: And although he hath not restored untous, the antient clearness of Understanding, and exquisite speculative knowledge of the Mind, yet hath he raised up our dignity far higher: For truly the Understanding being reduced by Grace, into the obedience of Faith, proceedeth in a humble resignation, unto the victorious reward of Love, whereby we are supported and constrained. And the least abiding of that Love, is far more glorious, than the whole unoccupied life of *Adam* in *Paradise*: For before the Fall, Faith was unknown, the race of Virtues, especially also the superexcellency of Divine Love, and they lived onely in the happiness of the purity of Innocency: And therefore, God by the permission of his fore-knowledge and ordination, hath bound the inequality of blessednesse, issuing or springing up from the new Birth, with a certain excellency of Riches: Because the Tribulations of his Life, are not worthy to be compared unto the great or vast things, which the goodness of God hath prepared for us that are renewed.

For I had rather know those things which God hath revealed by his onely begotten Son the Saviour of the World, than to have known the faculties of Living Creatures, and Herbs, with a clear Understanding: It being abundantly sufficient for me to have an Humanity in God, whereby he hath adopted us for the Sons of God, and made us far more like himself, than *Adam* was in his greatest felicity.

CHAP. XXIII.

The Position is Demonstrated.

1. A first Prooof of the Position.
2. A second.
3. The Divine manner of generating cannot be conceived by man.
4. A conjecture from a like thing.
5. A Repetition of Demonstrations.
6. An Argument for the Position.
7. Another Argument.
8. A third.
9. A fourth.
10. A fifth.
11. A sixth.
12. That the Mind doth not create the sensitive Soul, as neither that another Mind is drawn from the light of the Mind.
13. A seventh Argument.
14. The Mind imprints an Image on the seed of the Body, but not the Image of God, that is, it self.
15. It is proved.
16. An eighth Argument.
17. What is generated by the Parents, after sin.
18. Even unto the 74. Article or Content, a reasoning from the holy Scriptures.
75. That it resists Christianity, for Man to be called an Animal.
76. Some Agreements of Fathers with the Position.
77. An every way convincing Argument out of Augustine, for the Position.
78. A solid Argument for the Position.
79. From the rule of falsehood.
80. The progress of Satan.
81. The birth of Faunes and Nymphs.
82. That there are Tudes-quills in the Canaries.
83. Objections against the Position unto the 88. Article.
89. An irregular race of Fishes.
90. There is no figure of the Water, neither doth it fall down circularly.
91. The fructifying of Trouts.
92. The unvalidity of the seed of the Male.
93. The prosperousness of Fishes strengthens the Position.
94. Worms are the admonishers of a Resurrection without a material seed

seed of the Male. 95. The Chick is formed of the yolk, and the seed of the Cock doth materially remain without. 96. A seventh Objection unfolds the Causes of the Flood. 97. The common divulged explication of this Text confirms this Position. 98. An Interpretation about the motive Principle of the Flood. 99. Gyants were not from the first intent of Creation. 100. The proof of a Prophetess.

NOW therefore the suspicions of a Law, Disobedience, and of a Curse, being removed, I proceed unto a Demonstration of the Position: For which, in the Frontispiece, the most glorious Incarnation of the son of God; by the most pure arterial blood of the alwaies unpotted Virgin his Mother, is premised.

And then, the Text hath strewed the way for me: *Except ye shall be born again of Water and of the holy Spirit*; That is, unless ye are co-partakers in the new regeneration of those that are to be saved, of the unspotted and most chaste incarnation of the Lord Jesus, and are as it were Members of that Head; and as it were adopted Sons, ye shall not be branches of that Vine. *For whatsoever is born of the flesh of sin, and of the concupiscence of the flesh, is flesh*; incapable of eternal Life, and of the Kingdom of Heaven. *And he which sows in the flesh doth reap in corruption*: And whatsoever he shall reap is flesh and corruption it self.

For after what manner the holy Spirit had generated in *Eve*, all the posterity of men, that the mind of man is not able to attain unto, unless the sacred Text had manifested the way thereof, in the God-bearing-Virgin; who indeed conceived not of, but from the holy Spirit, whom therefore *Gabriel* had foretold onely to overshadow the Virgin her self, who was perpetually unpotted.

And therefore the Church calls the Eternal Father, *The first person of the holy Trinity, The Father of the Eternal Son*: Neither doth she suffer the holy Spirit to be called the Father of the humanity of Christ, because the material generation of Christ was drawn onely from his Mother: Wherefore neither doth his conception from the holy Spirit, include any Paternity or Fatherliness: But as that generation proceeded without a begetting of the holy Spirit (the which indeed about the conception of Christ, was busied without begetting) so it is safe for us to contemplate, that wholly after the same supernatural and divine manner of over-shadowing in *Eve*, had the generation of adoptive children, and of the divine Image been established. Therefore the Father of Lights, is the onely Creator of all Soules, as also supereminently of the Immortal Mind: Therefore the generation of Man, by the Father of Lights, the Giver of Life, in the creation of the Mind, had been finished or perfected from the substance of *Eve*, and from a co-operation of the holy Spirit in conceiving: For as that conception of men had been plainly supernatural; so also there had been a supereminent chastity of the Mother in the state of Innocency, such as is now in the regeneration by Water and the holy Spirit.

Wherefore I will endeavour to stablish the stated Position.

First by a Reason from Nature.

And afterwards to confirm it by Reason, and Authority fetched from the holy Scriptures.

And Lastly, To fortifie it by the Opinions or Precepts of Fathers.

First of all, it is agreeable to Reason; that if God would make his own Image in flesh, and blesse it by Posterity, that that ought to be done in the Mother being a Virgin: but not in a Woman defiled by *Adam*, least God should have Man his competitor in the intended Incarnation of his own Image. Otherwise, if man should prevent, and by preventing, overthrow this holy and unpolluted production of mankind (for whose sake he hath seemed to have framed the Universe) afterwards also, every generation of men so to be produced, should happen after a brutal manner, and whatsoever should be born thereof, should be naturally incapable of eternal glory. For it is agreeable unto Reason, that the Immortal Mind, before the Apple was eaten, had never made an off-spring Immortal in Duration, because nothing is able of or by it self, to produce that which is infinite in Duration, but God alone; whom therefore as yet unto this day, in *Adamical* generation, the Church confesseth to be the one only Creator of the Immortal Soul.

Else if the Mind should be able to produce any Infinite and Immortal Being, thenceforth of an Infinite Duration, out of it self, and the which therefore should be a Substance; now it should of necessity cease to be a Creature, and should be a Creator.

Therefore the Mind never could, nor never shall be able to produce an Immortal substance,

stance; and by consequence, it fights with the Divinity, that the Mind, which before the eating of the Apple, had immediately undertaken on it self, the whole government of the Body, had of it self generated the Image of the infinite God, and had generated a substance infinite in Duration: Wherefore there is altogether an unlike reason, whereby the mortal Lights of Life, or mortal Souls do issue forth, and whereby an immortal substance is created.

9 So that it is impossible to the whole Nature, that the Mind should generate a substance like unto it self; Seeing that to produce a spiritual, and immortal, is reserved for God alone, even altogether by the consent of all: For truly such a Production presupposeth a creating of nothing: otherwise, if the Mind had intended before the Fall, to produce a substance like it self, of nothing; seeing that thing is altogether impossible unto it, it ought to divide and separate self it into Parts.

10 In the next place, neither had it ever been the intention of the Mind, to generate a mortal or sensitive Soul, because it is that which is besides and against the appointed government of its own Life.

11 Wherefore from a sufficient account or enumeration, I conclude, that before the Apple was eaten, neither could the Mind have generated an immortal Soul, neither that it intended to generate a mortal one, nor indeed any seminal disposition, or substance of Seed: And therefore, neither had there for that Cause, been made any Generation by Man, neither had he felt in himself, any inclination to generate: And in this respect, the Cause of natural Death, of necessity, lay hid in the eating of the Apple, being unfolded by carnal Generation; in which Generation, there is a seminal Disposition co-operating, for the obtaining of a mortal Soul by request; and that Generation doth prevent and pervert the intention of the Creator, about the propagation of his own Image: So indeed the mortal Soul, hath through a brutal Concupiscence of the Flesh, produced for it self a Seed, dispositive unto a Soul, which is to perish after the manner of Bruit-beasts: To wit, the which Soul hath also introduced with it, a brutal condition of mortality: For Death was undoubtedly co-natural unto Bruits, from their Creation; the which indeed have only mortal Souls.

12 But it is lawful to confirm by the rule of a supposed falshood, that we are bound by Faith to believe, that indeed the Mind is created immediately by God; but not to be kindled by the Soul of the Parents, even as Light being taken from Light: For if the Soul of the Person generated, be made of the Soul of the Generater, this shall be either from the Soul of the Father, or from the Soul of the Mother, or from both; but none of these is true: Therefore the Soul of the Person generated, is in no wise made or derived from the Spirit of the Parents.

It is proved as to the first: For truly, seeing the Speech is of the progress of Nature, the which therefore ought to be ordinary; And therefore also, that thing should constantly happen in Bruit-beasts; but this doth not happen; therefore not from the progress of Nature.

The subsumption is proved by a Young, from its Father being a Dormouse, and its Mother a Coney; to wit, the which except that its Taile is like a Dormouse, is wholly a Coney, as well within, as without, also in its Skin, and Haires: But if any Faculty of its Soul should issue from the Father, it should of necessity have a fatherly, and not a motherly Faculty: But by the Example proposed, the contrary is manifest; therefore not from the Father.

Yet neither therefore, are the Souls of off-springs begged from the Mothers Soul: For otherwise, from that which the Soul proceedeth, from the same likewise, and at least, the formative Faculty also should proceed.

And by consequence, off-springs should not only alwayes be made of the femal Sex, and alwayes like unto their Mother; but also a Mola or Lump of Flesh, should never be made where the Faculty or Virtue of the Seed of the Male flows down as barren: As neither should the imagination of a Woman great with Child, transchange the Young, being already formed in its Mothers Womb, into a monstrous, strange, yea and brutal Figure: because the Seed now having a Soul borrowed from the Parent, could not be any longer subject unto the foolish imagination of the Mother, especially while as the Young is now nourished in its own Orbe and Kitchen.

The same Argument also prevaieth in supposing, that the Soul was begotten from the Soul of both Parents; for whatsoever is denyed disjunctively, may truly be denyed copulatively: Whither also this conclusion hath regard; to wit, that that being granted, the Seed should now be actually soulified from its Beginning: And likewise, that of two Souls, a certain composed and mixt soulified and Spiritual Light should be made; which resisteth

fifteth a formal simplicity by reason of a composed duality. Therefore the single homogeneity of the Soul, is averse unto duality, and to a heterogeneous composition of Souls.

Whence I conclude, That the Soul is not so much as in Bruits, derived from the Parents, and by so much the less, in Man.

Wherefore all Souls are immediately created by the very Life it self, and Father of Lights, who will give his own honour of Creator unto no Creature: Wherefore from hence it is easie to be seen, that Man is not able to produce an immortal Mind, nor the divine Image: And so also, from hence it is manifest, that the first intention of the Creator, was not that Man had in any respect, immingled himself in generating; but that the alone hand of the Creator had perfected every Young, which alone createth all Souls, but especially and singularly, that Soul which should thenceforth be eternal, the which he by an essential ordination had directed unto his own Image.

Lastly, it must needs be, that a true Image or Likeness can never naturally be made, but by a proper Engraver: But he is no proper Engraver, who hath not perfectly known him whose Image he intends to Engrave: But Man was created after the Image and Likeness of God; yet he cannot know God, as neither expresses any Image of him in Mind or Word; the which ignorance, every one ought to confesse: Therefore he cannot be a proper Engraver of the divine Image: And therefore, whatsoever Image of him he should frame, it should be plainly Monstrous, and of a finite Duration: And by consequence, Man in the intention of the Creator, was not made that he should generate a man.

In Nature indeed, every Spirit of generating Seed, doth comprehend (because it doth contain) the Idea of the thing to be generated: But Man, seeing he is the immediate and true Image of God, cannot by any means transfuse the divine Image into his own Seed, the which in himself, and out of himself, he is plainly ignorant of.

But seeing that in Nature, a like thing generates its like, Man may imprint on his Seed the Image of a humane Body, made also after the Image of God. Therefore a Man which generates, may imprint on his Seed, the seal, or shadow of himself; but not the Image of God, and substance of the immortal Mind: And moreover, I have demonstrated elsewhere, that all other Souls are only formal Lights, but not substances.

Therefore if the Mind, ought or could be able to produce the Image of God, now the Mind should either cease to be the very Image of God it self, or God should not be the Creator of the Mind.

Wherefore the pure Essence of the Image of God, did by all manner of means require in its conception of creating or generating, God himself, the immediate Creator and one only Father of it, who is in the Heavens, and besides whom there is no Paternity in the Heavens: Otherwise, there is a carnal Paternity or Fatherliness in Man, and Bruits; and therefore the Text saith, *Honour thy Father.* And another Text, *That there is no Paternity, but in the heavenly Father.*

Therefore it is denoted, that there is not for Man a fatherliness of his Mind, but in God alone; and therefore his original Generation and Propagation was reserved in the Power of God the Creator: And especially, while as its knowledge of it self, is wanting to the Mind, which is immortal and infinite in Duration, whereby it may represent it self to it self, to wit, that it may decypher a sealed similitude of it self in the Seed.

Therefore indeed, neither can the immortal Mind ever bring the Seed of Man unto that which it self shall never have in it self, to wit, out of it self to decypher the Image of God.

For Man is so made the Image of God, that he is the cloathing of the Deity, the Sheath of the Kingdom of God, that is, *The Temple of the holy Spirit.*

Man therefore being essentially created into the Image of God, after that he rashly presumed to generate the Image of God out of himself, not indeed by a certain Monster, but by something which was shadowily like himself, with the Whoredom or Ravishment of *Eve*, he indeed generated not the Image of God, like unto that which God would have therefore unimitable (as being Divine) but in the vital air of the Seed, he generated Dispositions careful at some time to obtain a sensitive, discursive, and motive Soul, from the Father of Lights, the Fountain of all Paternity, yet Mortal, and to Perish, into which nevertheless, he of his own goodness inspires ordinarily, the substantial Spirit of a Mind, shewing forth his own Image: And so that Man in this respect, endeavoured to generate his own Image, not but after the manner of Bruit-Beasts, by the copulation of Seeds, which at length should obtaine by request a soulified Light from the Creator, and the which they call a sensitive Soul.

For from thence hath proceeded another Generation, conceived after a beast-like manner, mortal, and incapable of eternal Life, after the manner of Beasts, a bringing forth with Pains, and subject to Diseases and Death, and so much the more sorrowful or full of misery, by how much that very Propagation in our first Parents, dared to invert the intent of God.

Therefore the unutterable goodness forewarned them, *That they should not tast of that Tree*: And otherwise, he foretold, *That the same Day they should die the Death*, and should feel all the Root of Calamities which accompanies Death.

19 Deservedly therefore, hath the Lord deprived both our Parents of the benefit, and seat of Immortality: To wit, Death succeeded from a conjugal and brutal Copulation: Neither remained the Spirit of the Lord with Man, after that he began to be Flesh.

Furthermore, because that defilement of *Eve* shall thenceforth be continued in the propagating of Posterity, even unto the end of the World: From hence the Sin of the despised fatherly Admonition, and natural Deviation from the right way, is now among other Sins for an impurity, through an inverted, carnal, and well nigh brutal Generation, and is truly called Original Sin; that is, Man being sowed in the Pleasure of the Concupiscence of the Flesh, shall therefore alwayes reap a necessary Death in the Flesh of Sin.

But, *The knowledge of Good and Evil*, which God placed in the dissuaded Apple, did contain the Concupiscence of the Flesh, that is, an occult forbidden Conjunction, diametrically opposite unto the State of Innocency; which State was not a State of Stupidity, because he was he unto whom, before the Corruption of Nature, the Essences of all living Creatures whatsoever were now made known, according to which they were to be named from their Property, and at their first sight, to be essentially distinguished.

20 And moreover, *S. Hildegard* unto the *Moguntians* or those of *Mentz*, saith, *Adam was formed by the Finger of God, which is the holy Spirit; in whose Voice, every sound before he sinned, was the sweetnesse of all Harmony, and of the whole musical Art: So that if he had remained in the State wherein he was formed, the weaknesse of mortal Man could not have been able to bear the virtue and shrillnesse of his Voice: But when the Deceiver of him had heard, that Man from the inspiration of God, had begun to sing so shrilly; and that, hereby to repeat the sweetnesse of the Songs of the heavenly Country, he counterfeited (behold how far now Man hath departed from thence with his hoarse Voice) the Engines of Craft; seeing his wrath against him was in vain, he was so affrighted, that he was not a very little tormented thereby: And he alwayes afterwards busily endeavoured, by the manifold Devises of his wickednesse, to invent and search out, that he may not only cease to interrupt or expel divine praises from the Heart of Man, but also from the mouth of the Church.* These things she.

It is a devoted Opinion of mystical Men, *That Birds do sing Praises unto God*. I under a humble correction, do think otherwise: For if that should be true, they should sing all the year, neither should they cease, as soon as the lust of generating is fulfilled; which argument is serviceable unto our Position.

For truly, seeing the Males only do sing, but not the Females; That from a common Nature, *Adam* was the more lecherous, and incontinent, and from his Sex, more lustful than *Eve*; whose Chastity therefore being beloved of God, seemeth proper to that Sex.

Man therefore, through eating of the Apple, attained a knowledge that he had lost his radical innocency, and that instead thereof, he had made an empty exchange of the fordid Concupiscence of the Flesh: For neither before the eating of the Apple, was he so dull or stupified, that he knew not, or did not perceive himself naked; but with the effect of shame, and brutal Concupiscence, he then first declared that he was naked.

21 For the sacred Text is every where so chaste, that the most High would not name the Concupiscence of the Flesh it self, at least-wise, by a proper name; yea, nor also accuse of it, while he forewarned of the eating of the Apple for a necessity of Death; that that brutal Concupiscence might not be made known unto Man, even so much as by name: And therefore neither would he have Concupiscence to be named in Genesis, by reason of the prompt perfidiousness of that People; but he called it innocency lost, from a gotten shame, the which he would afterwards have to be weighed in the Church, by its own circumstances. And so that therefore, he presently translated *Adam* after his Creation, from the Earth, into *Paradise*, and for that Cause also, he formed the Woman in *Paradise*

Paradise, least she whom he had made and appointed to remaine a Virgin, should behold the copulation of Brute-beasts in the Earth.

For in the Beginning, God created the Heaven and the Earth, and every Creature contained therein: But he made, and formed those things materially, by the passive and commanding Word [*Let it be done,*] to wit, he spake that Word, and all things were created: But in six dayes space after, he made the Forms of things created, and all things were orderly made into the Life and Soul of soulified Creatures: For in that, those Words did differ, to say, *Let it be made,* and *to make*: For in the sixth or last day, *Adam* was formed: But on the seventh day, God rested. At length, he afterwards translated *Adam* from the Earth into *Paradise*, and deliberated to make Woman of the Rib of the Man, but not of his Reins, Thigh, or Belly: Therefore on the eighth day, that it might be the Beginning of a new week, for a new and super-natural Generation of an off-spring to come. Wherefore it may be collected, that Woman being wholly an Out-law, ascended into a new heap of Choiceness, as being a Vessel of Choiceness or Election.

But we may after some sort conjecture of the quality of humane generation in *Eve*, a Virgin, before the Fall, by the most glorious Incarnation of our Lord: For indeed the Father, unto whom every name of Paternity is singularly and solely due; and whom his Son, as a Father doth alwayes adore, hath indeed alwayes generated his Son from Eternity; who yet, is not read to be the Father of his Incarnation: The which thing, I even reverence for a vast mystery; and the rather, after that I understood the infinite goodness of the same, as well from the first virginal conception of Creation, as in the restoration by the regeneration of Man.

Indeed the Father Almighty would, that the glorious incarnation of Christ should be conceived of the Person of the holy Spirit; the which it self, to wit, therefore was not generated, but proceeded from eternity, from the Father and the Son: For the Spirit of God had caused a humane conception of off-springs in the Arterial Blood of the Heart of the Virgin *Eve*, it being the Image of the Divinity, with all its free Gifts, without the pleasure of the Flesh: But the Mind being thus in the garment of Arterial Blood, conceived in the Womb of the Virgin, in a humane Shape, had took an increase, and full maturity from thence: For he, who the Womb being shut, and the Gates being closed, came into the World, and unto his own also, out of the Case of the Heart wherein he was conceived, was by a foregoing consent, brought unto the Womb of the Virgin, and kept even unto the maturity of his Body: For he piercing all Members, was brought into the Womb: For therefore our Lord's Incarnation happened altogether, besides the order of Nature now accustomed. For,

1. The Incarnation of the Lord, happened not first in the Womb, but in the very Sheath of the Heart of the Virgin.

2. Of the most pure, and most lively Blood of the Heart; but not of the Seed of the Virgin: For truly, the God-bearing Virgin, in that singular respect, was not only cleansed from Original Sin, but was conceived altogether free from Sins; to wit, that she might be so much the more void of all Seed, than a Child that is newly born: For Seed is composed of a mixture of Venal, and Arterial Blood, or from a co-mixture of Bloods; which mixture was no manner of way, not so much as materially, in the conception of the Son of God, who was conceived not of Bloods, nor of the Will of the Flesh, or of Man; but of God alone, and born of a Virgin.

3. He had not a Man to his Father, nor a masculine Matter from whence he should be made; which thing surely confirms, that a feminine Matter, was the more excellent governess or deputy, and alone fore-elected from the Beginning.

4. He fore-elected the most chaste and unspotted Virginity of a Mother, which he formed with a divine Hand.

5. He was materially conceived, onely, and of most pure Arterial Blood; To wit, whereinto the seal of the holy Spirit, inspired an humane Mind, and a most pure Image of it self, made or framed by his Father, God.

6. That conception was brought from the Heart, into the Womb of the Virgin, with a piercing of Dimensions.

Qqqq

7. Lastly,

7. Lastly. He expected an increase and just maturity of Nativity, as it were in the celebration of a Sabbath.

Furthermore, that the knowledge of Good and Evil signifies nothing but the Concupiscence of the Flesh, the *Apostle* doth manifestly testifie, calling it the Law and Desire of Sin.

24 From whence, to wit, the first Brutal and Original Sin, the fewel of the other Sins, hath immediately issued, and is hereafter to endure for a continued Seed of Mortals. In the 8th. to the *Romans*: *God sending his Son into the likeness of the Flesh of Sin*, hath also, concerning Sin, condemned Sin in the Flesh, that the Righteousness of the Law might be fulfilled in us. Original I say, because it is the Beginning of the original of a humane Generation, whereby all contagion of Impurity is derived on Posterity, and Death became natural unto Man, even as unto Beasts: So that, although the eating of the Apple did contain a note of distrust, and ingratitude; and the which also, is a Companion unto every Sin; Yet therefore, even every Sin afterwards, ought with the same Punishment of necessity also, to descend unto Posterity, unless the unwonted transgression of a loving Admonition should not so much consist in the disobedience of eating or abstaining, as in the horrid Distrust of doubting, and confidence of Faith given unto the Devil: And so that the generation of the Flesh of Sin (which is an effect of the Concupiscence of the Flesh) hath of necessity defluxed into Death, even unto all Posterity.

25 For it pleased the Lord of things to insert in the Apple, an incentive of the Concupiscence of the Flesh; to wit, from which he was able safely to abstain, by not eating the Apple, therefore dissuaded from: For otherwise, he had never at any moment been tempted by the Flesh or his genital Members, the which I will hereafter shew, to be therefore called the North, in the holy Scriptures.

Therefore the Apple being eaten, Man presently from a natural property of the Apple, conceived the lust of being luxurious, and from thence was made an Animal Seed, which hastening into the previous or foregoing Dispositions of a sensitive Soul, and undergoing the Law of other Causes, reflexed it self into the vital Spirit of *Adam*: which therefore like an *ignis fatuus*, or foolish fire, presently receiving an Archeus or ruling Spirit, and animal Air, I say, a household Thief, it conceived a Power of propagating an Animal and mortal Seed, ending into Life: At the arrival whereof, at length the immortal Mind, putting off the Rains of the Life, and government of the Body, substituted the sensitive Soul as its Chamber-maid.

26 From hence therefore we are conceived, born, and do die after the manner of Beasts: For the day before, the immortal Mind acted all in all, and was the very immortal Life it self in the whole Body; because it was solely and wholly immortal in the whole Body. But that very, so great Beauty of Nature, was presently vitiated in our first Parent, after that he was cloathed with the similitude of a brutal generation.

For then the immortal Mind, being moved from its place, descends, that it may imprint a seal on the forbidden Seed, for a common destruction.

Then, although the sensitive Soul was not yet born; yet every natural Disposition requisite for the obtaining that sensitive Soul from the Creator, was forthwith present. And seeing two Souls at once, cannot perfectly preside in one only Plain or Region of the Body, without discord, no more than it is lawful to serve two Masters at once: Therefore the immortal Mind hath departed into the innermost Parts; whether that was by the Command of the Creator, or grieving at the wearisomness of a bodily Impurity; at leastwise, it afterwards delegated the government of its Body on the sensitive Soul, in which it is now bound, because it is involued in it as long as we live. For from hence we do afterwards, for the most part, wax of ripe years, and live after a brutal manner.

27 But the Mind hath betaken it self into the Inn of a frail Soul, and doth thereby inspire hereinto its free gifts, although for the most part, otherwise it sleepeth (perhaps even as Coral doth now and then loose its Colour, and again recover the same) from whence the Body hath undergone every disorder of Impurity. But the Wedlock of the mortal Soul, being a foreign thing unto the ordination of the Mind, is for an occasion, why the Mind hath placed it self into the hidden Parts, so as that the Matter or Controversie is as yet before the Judge or in dispute, whether of the two hath chosen the principal Bride-bed: and a Mind is not believed to be among Atheists, because it by piercing, hath so sunk it self into the depth of the mortal Soul; because the Notions of the Mind do appear as yet to this day to be subject to the imagination, do also so obey the Poysons of some Simples, that

that the principality of the Mind, seems to be fore shaken at the Pleasure and Command of Diseases; which thing, the Dotages of Fevers, Madness in affects of the Spleen, the Biting of a Mid-dog, and Pricking or Stinging of a Tarantula, have the more strongly perswaded in the behalf of Atheism: for in the former immortal Life, the Mind did by it self, and immediately frame immortality, and gave also a perfect knowledge of living Creatures and Herbs: But afterwards, in the brutal Filthinesse of generation, the Image of God remained indeed, safe in the Mind, and its external Figure in the Body: But so great a Corruption of it, hath constrained the Mind to retire unto the innermost Chamber of the mortal Soul: Therefore the Immortality thereof, lived under the happy government of the Mind: And therefore Diseases were banished with the declinings of Ages, and the threatnings of Death: And therefore before the Fall, Man was distinguished from Blessedness, in that he could Sin, Fall and Die: But in Glorification, the Mind shall again immediately quicken the Body, and transsume it into it self. The Mind indeed before the Fall, which did only shine upon the Body by its immediate Splendour, shall forthwith after the Resurrection, through a transchanging of it, clarify it by way of supping it up: For therefore the state of the Faithful, although throughout their whole Life, also in Death it self, be far more miserable than the primitive State; yet it is more happy than that, by how much it is a thing fuller of Majesty, to be more like the Son of God Incarnate, dead, and glorified, than to have lived with Adam free from Diseases, and at length to be taken away without Battle: because the retributions or repayings of Life are no way worthy of the Glory, or Expectation of the Age to come.

Furthermore, the sacred Text hath in many Places compelled me unto a perfect Position, it making Eve an Helper like unto Adam; not indeed that she should supply the name, and room of a Wife; even as she is call straightway after Sin: For she was a Virgin in the intention of the Creator, and afterwards filled with Miseries: But not yet, as long as the state of Purity presided over innocency, did the will of Man overcome her. For the translation of Man into Paradise did foreslew another Condition of living, than that of a Beast. And therefore the eating of the Apple doth by a most chaste name, cover the Concupiscence of the Flesh, while it contains *The knowledge of Good and Evil* in this name, and calls the ignorance thereof alone, the State of Innocency: For truly the obtainment of that aforesaid knowledge did nourish a most hurtful Death, and an irrevocable depriving of eternal Life: For if Man had not tasted down the Apple, he had lived void of Concupiscence, and off-springs had appeared out of Eve a Virgin, from the holy Spirit.

But the Apple being eaten, *Presently their Eyes were opened*, and Adam began lustfully to covet after the naked Virgin, and defiled her, the which God had appointed for a naked help for him, no otherwise than as a Prince is for a help unto his Servants: For so the Man prevented the Intention of God, by a strange generation in the Flesh of Sin; whereupon therefore followed the Corruption of the former Nature, or the Flesh of Sin accompanied Concupiscence. Neither indeed doth the Text insinuate any other mark of the knowledge of Good and Evil, than that *They knew themselves to be naked*, and that it shamed them of that their nakedness, or (in speaking properly) of their Virginity being Corrupted.

Indeed their whole knowledge of Good and Evil, is included about their Shame, and within their privy Parts alone: And therefore in the 8th. of *Leviticus*, and many Places elsewhere, the *Privy Parts themselves* are called by no other Etymologie than that of Shame: For from the Copulation of the Flesh, their Eyes were presently opened, because they had known that the Good being lost, had brought on them a degenerate Nature, Shamefulness, Fowlness, and an Intestine, and unavoidable obligation of Death, sent also far away into their Posterity.

Alas too late indeed, they understood by the unwonted Novelty and Shamefulness of that Concupiscence, why God had so lovingly forbidden the eating of the Apple:

To wit, it shamed them more of their Chastity being Corrupted, and of the Warning transgressed, than of their nakedness. For Adam who had Judged of the Natures of the Beasts, by their beholdance alone; neither is read to have lost the same Knowledge, could not be ignorant of the fowlness of his own corrupt Nature also: And so that through the Shame hereof, they had rather hide themselves, than for their Nakedness sake. Indeed so great was the confusion of so manifold a Shame, that it wanted but little, but that he should rush into madness; the which is clearly enough to be known by the unfit answers of Adam: For God called him, and asked him where he was, and he answereth by accusing his Companion, and Help like unto him, that he might excuse himself, being not yet accused. And by altogether a foolish Endeavour, they offered their Nakedness, which

was known to their Creator, in Leaves, hoping that the Corruption of their Chastity might be covered with Leaves, so they could but hide themselves: He accuseth his Nakedness, not daring to make mention of his lost Chastity: For it is the Part of the more gross stupidity, to believe that they could hide themselves from the Face of the Lord, than not to have known that they were naked; Especially with him, who had created them Naked. Therefore, he being willing to lay hid, he accuseth the guilts, and effect of Concupiscence, by declining the thing committed: Otherwise, meer Nakedness is not Shameful before God, if he had not corrupted his Chastity, which he knew to be stained, and forbidden under the Apple. For in the last Judgment, there shall not be a Shame of Nakedness: And therefore the shame of Nakedness did involve rather the unrestorable Error of Chastity committed, which was veiled in the Apple; the Effect whereof, unless they should perfectly now feel, and acknowledge, they had rather convert themselves unto a Repentance of the eating, than unto a hiding, and covering of their privy Parts.

The Shame therefore of Nakedness, involveth a chaste manner of speaking of the Text, before the People of *Israel*.

31 For otherwise, it is sufficiently manifest from the Text, That *hath knowledge of Good and Evil*, is Carnal, Earthly, and Devilish, a carnal, and certain meer folly of the Concupiscence alone, of corrupted Nature, in respect of the Knowledge, whereby but a little before, he had put proper Names on the Beasts, in the second Chapter, of *Genesis*. v. 17.

32 The Fruit of that Tree is forbidden unto the Man alone, and in the second Chap. of *Gen. v. 25*. They were both Naked, and without Shame. In the third of *Gen. v. 7*. The Apple being eaten, Their Eyes were opened: For although *Eve* had first tasted of the Apple, and had provoked the Man to eat; Yet the Almighty speaks to the Man, not yet the Head of the Woman; and this Man endeavours to excuse himself, because he had first stirred her up unto Copulation, and felt the Disobedience of his Members; which is manifest: For he alone is accused, being not yet the Head of the Woman; the which Fruit, he signified to the Woman, was dissuaded unto them both: For *Eve* saith unto the Serpent, that the abstinence of that Tree, was equally enjoined unto them both.

33 This place in the Text signifying, that although the same Chance did respect both Sexes; yet God had foreknown, a chaste Provocation to Lechery, and Itching of the Man; and because the will of the Flesh was not properly in the Virgin, the which the Almighty had adorned with the Grace or Comeliness of Chastity for himself: Therefore that Concupiscence is by an *Antonomasia*, or taking one name for another, called by *John*, The Will of Man, which is that of Flesh and Blood. Whence I have learned, that *Eve* was of the more firm Chastity; yea, and created more perfect in her Body, and deflowred by the Man; because the Apple, seeing it was the Mean unto the aforelaid end, and first tasted down by *Eve*; yet it was able to operate the more slowly on *Eve*: But that *Adam* was the first which offended; but that *Eve*, as repenting of her Fact, the longer resisted, and a long while struggled, being deflowred by *Adam* by force; the which from thence sufficiently appeareth: For truly, the will of the Man (and not of the Woman) is reputed for the occasion of an eternal loss: and that thing was not unknown unto the Heathens, who in the Silver Age, ascribed Shamefacedness unto Women, as a native Endowment; by Men, being then long neglected. *Levit. 3.* and *4.* The Lord commands a Beast to be offered with his Tail, that its Filthiness may be covered, or least any thing be offered, not being covered in its Shame. And therefore, there was alwayes, and every where, so great an Esteem of an offered Lamb. For *Adam* was created Young, without a Beard, flourishing, after which sort, *Raphael* is read to have Stood before the Doors of *Tobiah*.

35 Wherefore that the first Infringer of Modesty, and deflowerer of a Virgin might be made known; God would that Hairs should grow on the Chin, Cheeks, and Lips of *Adam*, that he might be a Compeere, Companion, and like unto many four-footed Beasts, might bear before him the Signature of the same; after the manner of whom, as he was lecherous, so also, that he might shew a rough countenance by his Hairs. For God at first, signed a Murderer in the Forehead, that the Sign being beheld, he might presently become a horrid and infamous Fratricide or Brother-Killer. So also the Lover of Chastity would at first, sign the first Infringer of Chastity, and the first Workman of Original Sin, about the Mouth, Throat, Cheeks, &c. To wit, whereby he had spoke the first Words of Allurements, and afterwards Threatnings. But *Eve* who was the more constant in Bashfulness, and Chastity, he retained as graced with a polished Countenance.

36 So also the Beard groweth on an in-humed dead Carcass, if he were lustful in his Life, and

and ceased to live through a sudden Death; that is, the virtues or forces of his Chin being as yet retained, the sign of Mortality groweth, even after Death. So also a hoarse Voice ariseth in Adam about his Youth, who immediately before his Chastity was lost, sang most sweetly.

For among Signs wherein Angels are distinguished in Apparitions, one is Capital.

If an Angel shall appear Bearded, let him be an evil one: For a good Angel hath never appeared Bearded, he being mindful of the Chance for which a Beard hath grown on a Man. Therefore a Beard which the Angels abhor, Men believe was given unto them for an Ornament, the which notwithstanding, they know not to be common unto them with the most stinking Goats. Neither therefore is a Beard bred on Man, but about the Years of incontinency; that it may be certainly manifest, that it was brought on him, not but by reason of the Concupiscence of the Flesh, like as a Mask of Filthiness: So that he denotes nothing but his privy Parts, and broken Bashfulness in his Countenance: For therefore indeed Eunuchs also, are destitute of a Beard, as also Children, and Youths; although Bruit-beasts, into whom a copulation of the Sexes was but by Nature, are presently Bearded in their first Dayes.

In the next place, Bruit-beasts do bring forth at this day, no otherwise than as if Adam had not sinned: For they send forth their Young in Pain, because they conceive them with the Concupiscence of the Flesh; except Fishes, the which are therefore designed for Foods for Monks who love Chastity. And Eve after Conception, brought forth the Flesh of Sin in Pain. *My Spirit shall not remaine with Man, because he is Flesh*: That is, Man is now the Flesh of Sin, but not any longer the Flesh of his first Creation.

For a Woman doth for the most part, a good while after Conception, loath and is hurried about with divers Miseries, which Bruits do want; which thing surely argueth, that Woman doth seminally conceive by Man, besides the first intent of Creation.

Wherefore if Man were created, that (at least-wise from a foreknowledge of the consequence) he might supply the Place of the Evil Spirits in Heaven, he ought either to be created in a great Number at once, from the Beginning, or Successively. If therefore, *They which are to be saved, cannot be born by the will of Man, of Flesh, or of Blood*; and there was one only Man created; therefore all Posterity, ought by a successive Continuation, to be born in Paradise, of Women alone, to wit, the Birth-place of the Woman, and of necessity to be Conceived from God, and to be Born of a Woman a Virgin, unto whom he afterwards Gave Power to be called the Sons of God; and to be made with an exclusion of the Will of Blood, Flesh, and Man; which Chastity alwayes pleased God, doth please him at this Day, and will please him alwayes: And whatsoever hath thus once pleased the fountain of Chastity, can never again displease him.

And so that, *Onely those that are of a clean Heart shall see God, and shall be called his Sons*; wherefore the Prophet singeth, *Create in me a clean Heart* (Oh God! such as Adam had before the Fall) *And renew a right Spirit* (of the chaste, and antient Innocency, by the regeneration of the Spirit and Water) *in my Bowels*: Because my Bowels being now impure, have contracted a Spirit of Concupiscence of the Flesh of Sin: For indeed Man, as long as he was Immortal and Pure, *Saw thy Face oh Lord! and thou talkedst with him*; which Face afterwards, *Man shall not see and live*. But after that Man defiled his Bowels through Concupiscence, thou castest him from thy Face, out of Paradise.

I pray thee therefore, that thou cast me not from thy Face, and that thou take not thy holy Spirit of Chastity from me. Restore unto me the Gladness (of the Regeneration) *of thy Salvation*; and with thy principal Spirit (the Comforter) do thou confirm me (against the inbred Impurity of the Flesh:) For truly I shall teach the Unrighteous thy wayes (of thy Regeneration, the which among) the hidden things of thy Wisdom, thou hast manifested unto me, and the Wicked shall be converted unto thee. At leastwise, free me from Bloods (from the Concupiscence of the Sexes) Thou who art the God (of Chastity) the God of Salvation (as of new Regeneration) and my Tongue shall exalt thy Righteousness (and thy just Judgment, whereby thou hast condemned Man, who was born of Bloods, and by the will of Man, in the Concupiscence, and of the Flesh of Sin, as he hath made himself incapable of thine Inheritance) For loe, in Iniquities (afore said) I was conceived, and in Sins hath my Mother conceived me (although under a lawful Marriage Bed).

Therefore I confesse, that besides the primitive scope of the Creator, an Adamical Generation hath arisen into natural Death, and is devolved into original Sin.

The Woman therefore, as she hath conceived after a brutal manner, she also began to bring forth in Pain.

The Male also in the Law, was only circumcised, as for a mystery of the deflowring of *Eve*: Yet both Sexes ought to expiate the Offence committed in their privy Parts, to wit, whereby they had offended; which thing, although it be chaffly insinuated in the Text; Yet that was covered before *Israel*, who were otherwise most ready for all Perfidiousness; to wit, that God might not seem a contemner of Matrimony instituted after the Fall.

The Woman therefore was not circumcised, and yet she was saved: but not the Pain of Child-birth, or the Obedience of her Husband, had expiated Original Sin in her; For both a single young Virgin dying, was saved, as also a barren Wife.

Therefore from hence is manifested the mystery, to wit, that *Eve*, so much as she could, resisted the Insolencies of *Adam*, and was by force deflowred in *Paradise*.

44 So that also, our first Parents were Murderers of all their Posterity through Concupiscence. So also the eldest Son was a Brother-Killer: For the fore-skin being taken away, did of necessity cause a Brawniness of the Nut of the Yard, whereby indeed, he might be made a Partaker of the less Pleasure, Concupiscence, and Tickling, whosoever should desire to be ascribed or registred among the Catalogue of the beloved People of God.

The *Rabbins* also confess, That Circumcision was instituted by reason of unclean Virtues, walking in a circuit: The which I interpret, that the diabolical, and primitive Enticements of Concupiscence unto Mortality were not hid to the *Hebrews*, and that at leastwise in an obscure sense, the Sin arisen from thence, was insinuated.

45 Also illegitimate Persons, were in times past driven from the Temple, and Heaven, and those who should be born of an adulterous Conception, because they did wholly shew forth an *Adamical* Generation: but those who were born of a lawfull marriage Bed, were as yet Impure, until that the fore-skin being taken away, they might seem to renounce the Concupiscence of the Flesh: And in this respect, they represented in a shadow also, those that were to be renewed from far, by the Spirit of God, and the laver of Regeneration.

46 Moreover, the very Word of Truth doth professedly confirm the Position, 1 *John* 3. Except any one be born again, he cannot see the Kingdom of God.

B. Except any one be born again of Water, and of the Spirit, he cannot enter into the Kingdom of God.

C. That which is born of the Flesh, is Flesh; and that which is born of the Spirit, is Spirit.

D. The Spirit breatheth where it listeth: Thou hearest the Voice thereof, but knowest not from whence it may come, or whither it may go:

E. So is every Man who is born of the Spirit.

F. If I shall speak unto you of Earthly Things, and ye believe not, how shall ye believe, if I tell you of Heavenly things:

G. None hath ascended into Heaven, but he who descended from Heaven.

H. And as *Moses* exalted the Serpent in the Wilderness; So it behoves the Son of Man to be exalted.

Christ Jesus descending from Heaven, took not on him the Flesh of Sin by *Adamical* Generation, or by the will of Man; but he receiving the form of a Servant, was made into the Likeness of the Sons of Adam, being found in Habit as a Man; Yet being *Adamical*, was a true Man, such as *Adam* was, being newly created: But he being made into the similitude of an *Adamical* Man, emptied or humbled himself, taking on him the form of a Servant; But he was not made a Servant or Impure: But in this glad tydings he denieth the Vision of God, or the sight of the Kingdom of God, and in *b.* an entrance into the Kingdom of God: For not that the Glory which makes blessed may be seen, without entring into Heaven, or the same thing is twice spoken in vain; or that *a.* doth require another new birth than *b.* but *a.* contains a denial of participating of the Heavens for the Souls of the Dead, before the Resurrection, which *b.* also denies for their Bodies, after the Resurrection.

Therefore it behoves that we are Born again of Water, and of the holy Spirit: For as from the Beginning man was created, and had not proceeded from a being born of Flesh; So whatsoever is afterwards born of the Flesh, is Flesh: But the Water, the Blood, and the Spirit, are one and the same in Christ. *John* 5. and these three do denote an indifferent, and one only Baptism, in valour or effect. Wherefore the only new Birth unto Life, Is by Water, and the Spirit, in the participation of the virginal Body of Christ alone.

For truly it is alike impossible for Flesh to enter into, and see the Kingdom of God, as for to ascend into Heaven by a Motion of ones own: and that is granted to none, but

but to the Son of the Virgin, who for that end descended from Heaven, who was in Heaven, while the same Son spake these things to *Nicodemus*; and the which, a little while after ought moreover for the same Cause, to be exalted in the Cross: The same therefore which descended from Heaven, that he might be incarnated of the Matter of the Virgin, is he in whom the Water, the Virginal Blood, and the holy Spirit are one.

The Spirit therefore which maketh the Corrupted and Adamical Man to be renewed by Water, doth so regenerate the inward man from a new Generation in the Spirit, that it becomes a true Spirit to be glorified by rising again; whose Voice the Sons of *Adam* shall hear; yet shall they not know from whence it may come, or whither it may go: because the Spirit, the Regenerater, is the glorious God himself, who breatheth where he will, and thou now hearest his Voice by Faith, and the Sacrament: Thus every one, who is born again of the holy Spirit, is made Spirit, and united to him, who is not known from whence he may come, or whither he may go.

I call these earthly things, although they touch at a spiritual Generation, and new Birth; because they have some things like unto them, in a sublunary Nature, which things every one hath not indeed every where known; and therefore neither doth he believe them: For the Generations of Bruits do happen from a watery Liquor, and a seminal Spirit.

Notwithstanding, those things are not therefore plainly terrene or earthly, and naturally intelligible by the Vulgar, which the Lord speaks to *Nicodemus*; because the reason of the Love of God is no more conceived in this New-Birth, than of his infinite goodness: To wit, it remains unpassable why he would adopt Man for a Son, and Co-heir of his Kingdom; yea reduce him into a Spirit of a God-like Form, who shall materially be born again of Water: For that mystery of love exceedeth all the understanding of Angels: Yea to believe, and contemplate of the actual Person of Christ in an old Man, a Woman, a young Man, a poor diseased Man, a miserable and naked poor or little esteemed Man, or Woman, none can naturally understand it, unless he being compelled by Faith, hath subjected his understanding unto Faith: So neither are we able to conceive, what one thing all are made, by that new Birth of Baptism in Christ, without a difference of Sexes, or Nations, unless we are holpen by Faith.

At length, it was not enough for the Love of Christ to be born in the form of a Servant, and so to be exposed unto Scorn: But moreover, he ought to suffer a most sharp, and most exceeding reproachful Death; the which so cruel, and disgraceful Death, himself in the abounding goodness of his Love, calls his Exaltation. But he brings it into the similitude of the exaltation of the Serpent *Nehushtan*: Not indeed because the Serpent did any more represent the form of the Son of Man, than the Fork did the Cross; but only the likeness of impure Man flidden into Death, through the perswasion of the Serpent, the likeness of whose Servant the Lord was to assume. Therefore the Son of Man ought to be exalted, not indeed, as being unhurtful in the Fork, or as it were an unsensible brazen Serpent, and the which otherwise, being a live one, was perceivable enough to be most fit to hang up: But the Son of Man must be exalted alive, he being full of Love, and also at length, to die in that Cross, that the deserved New-Birth or Regeneration, might be made effectual by his Death. For truly, else without the Death, and Exaltation of him Crucified; a Participation of the new Birth by Water and the Spirit, had not succeeded, neither had Death Perished: So that plainly from a deep mystery, the similitude of the Fork, Cross, and Saviour, was fetched for a similitude of an incarnated Servant, and him compared with the brazen Serpent.

Neither also did *Israel* Worship God in the Serpent; otherwise *Moses*, by the Command of God, had been the Author of Idolatry: Neither therefore is a live Serpent bound to the Fork; as neither likewise his dead Carcass: but his brazen Image only, as being incapable of Life; that by this mystery it might be manifest, that the whole similitude in that the exaltation of the Fork or Pole and Cross, did manifest, and clearly hold forth unto us the Flesh of Sin, (which the Son of Man by way of similitude represented) was plainly incapable of Life, and of the Kingdom of God, no otherwise than as the brazen Serpent was.

Therefore it is simply, and absolutely true; That unless Man be born again of God, and doth partake of the unsotted Virginity, which the Lord *Jesus* drew in his most glorious Incarnation, from the material substance of the Virgin his Mother; the hope of Salvation is for ever cut off.

Wherefore also, from thence it is manifest, that from the intent of Creation, nothing but

but a Virginal Generation was afterwards required : And by consequence, that a Seminal, Impure, Beast-like, and *Adamical* Generation, was by the Craft of the Devil, drawn, and exhausted from the Apple, wherein the Fewel of Lust was : Therefore unless the *Adamical* Flesh doth again die, and an unspotted Virgin-Flesh be restored in us in its stead, by the favour of the holy Spirit (who saveth those that are to be saved freely) it is certain that the first intent of our Creator, should be frustrate, whatsoever may be otherwise done, or hoped for. For in the Beginning, it was sufficient to be born ; because also then they had been born of God : But after the Fall, it thenceforth behoveth the *Adamical* Flesh to die, and perish, and to be again renewed, or re-born of Virgin-Flesh, which the holy Spirit by Water stirs up in us, while we wish, or desire to be Members of that Head, and Branches of that Vine. We are therefore regenerated in the Lords Body, by Grace, unto the immortal Life of the Age to come ; and that we may be raised up again in the Participation of Virginitie, Death must interpose, and whatsoever is *Adamical* in us, be blotted out.

- 48 *We all indeed shall rise, but we shall not all be changed : for those only shall rise again changed, who shall rise again glorified in the Virgin-Body of Regeneration : which change the Apostle understood, because that, He who is not born again, cannot enter into the Kingdom of God : And therefore, He that shall rise again, being not born again ; by consequence also, shall not be changed from his antient Being, if he shall rise again from Death ; neither therefore also, shall he have entrance unto Gods Kingdom ; because by the new Birth, the whole Man is made Spirit : And therefore, he which shall rise again from the new Birth, shall rise again in a spiritual Nature : Otherwise, He that is born of the Flesh, and not born again of the Spirit, shall hear indeed the Voice of him that is born of the Spirit ; but shall not know from whence it may come, or whither it may go.*

- 49 This indeed is the changing of Bodies into Spirit, and the change of Bodies in the Resurrection ; or it is the Glorification of those that are to be saved after the Resurrection : But other Sins were expiated indeed through Repentance, with the victory, and triumph of the Lamb : but the loss of that Virginitie, and primitive Purity, doth without Regeneration, reserve an Eternal Spot of Impurity, and Uncapacity : No otherwise than as a virginal conservation, and Integrity of the re-born Faithful, gives unto Virgins that are born again, a Golden or Laurel Crown, equalized unto Martyrdom.

Christ therefore, as he is the Father of this Virginitie ; so also the Father of the Age to come : But those that are to be saved, are his own new Creature, and new Regeneration : *Who (to wit) hath given them Power to become the Sons of God, unto these who believe in his Name ; who are born not of Bloods, nor of the Will of the Flesh, nor by the Will of Man, but of God, after a most chaste manner of the holy Spirit ; by whom, before the brutal Concupiscence of the Flesh arose, it was decreed, that altogether every Man ought to be born of his Mother, being a Virgin. Therefore Christ being the Top, and Lover of Chastity, doth distinguish Men as well in this Age, or Life, by Chastity, as in Heaven ; and will grace them with an unimitable, and eternal Priviledge.*

- 50 *For a great Company followed the Lamb whithersoever he should go ; and Sang the Song which no other was able to Sing : But these are they who are not defiled with Women : For there are Virgins of both Sexes ; Because there shall not be there, Jew, or Greek ; But they are all one in Christ.*

- 51 *For the Almighty hath chosen his Gelded Ones, who have Gelded themselves for the Kingdom of God its sake, of whom is the Kingdom of Heaven : Therefore married Persons, are reckoned to be defiled with Women, and Mothers to have conceived their off-springs in Sin ; and in this thing are far inferiour to Virgins : For indeed, because the Gospel promiseth unto Mortals, not only that the Son of God was Incarnate, and suffered for their Salvation : But that moreover, these two Mysteries (least else they should be frustrate) are to be applyed unto individual Persons. I indeed contemplate thus of this Application ; that as man through the Sin of lust, brake no less the Intent of God, than his Admonishment, and the humane Nature was therefore afterwards radically Corrupted, and that thereupon another, and almost brutal Generation thereof, followed :*

- 52 *Therefore the joyful Message hath included as well an Abolishment of Original Sin, as of other Sins consecutively issuing from thence : Who by dying destroyed our Death, not his own ; because he had none : The which is not understood of temporal Death (for the righteous Man as yet to this day, dyeth just even as before the Passion of the Lord) but of Eternal Death. Therefore, seeing man since the Fall, ought to be Born, Increase, and Multiply no longer from God, but from the Bloods of the Sexes, by the Will of the Flesh, and of Man, nor from thence could ever be able to rise again of himself, and to re-assume his*

his lost and antient purity, nor cease that he might again begin to be otherwise and better; therefore the joyful message hath brought an assurance unto us, that Baptisme should be unto us for the remission of sins, through a new birth of Water and of the holy Spirit: That our mind as it were through a new Nativity of its Inne, by Regeneration, might be partakers of the unspotted Virginitie and humanity of our Lord.

Which New-birth, doth indeed repose the Soul into its former state; to wit, by taking away the sin or debt, and the stinks or noisomenesses thereof: but by reason of the continuance of *Adamical* flesh, in which the Immortal Mind liveth, the antient possession, or inclination unto sin, is not taken away, nor is there a translation of the corruption drawn from the impure original of the blood of *Adam*. But that this is really so, we are persuaded to believe:

For God doth manifestly, daily grant a testimony of that actual Grace and attained Purity, to be derived into the Body of those that are Baptized, through a true and substantial Regeneration as well in Body as in Soul: For truly for this end, and in this respect alone *Mahometans* are Baptized, for a proper reproach, because Baptisme from the fact or deed done, however unlawfully it be administered and received, takes away from them for the future, the noisomeness inbred in them, otherwise to endure for their Life time: such as in all the *Hebrews* or *Jewes*, in many places up and down, we do daily observe to be with loathing and weariness.

The true effect therefore of Regeneration, and its co-promised character, doth much shine in Baptisme, even outwardly also, in a defectuous Body: And the enemies of the Christian Name, do serve us for involuntary witnesses unto this thing: Yea the perpetuity of the same Effect, confirms the unobliterable Character or Impression of Baptisme, and the wickedness of it being repeated.

But the New-birth by Baptisme doth not yet, for that Cause, take away a necessity of Death: For Baptisme forsaketh its own, with the fardle of a defiled and *Adamical* body, begotten by the Will of Man.

And for that Cause also, the Soul as subject unto the Vices of the corrupted Body, and of a Will long agoe corrupted: Wherefore, by reason of the frailty of Impure Nature, also an easie inclination and frequency of Sinning, Baptisme hath been scarce sufficient for those of ripe years; otherwise for the more younger sort, it is abundantly sufficient.

Therefore the Sacrament of the Altar, is *Wine which buddeth forth Virgins*: Which is as much as to say, the end and scope of the Lords Incarnation, or of the instituted Sacrament of the Eucharist, should *bud forth Virgins*; as demonstrating, that the intent of the Creator from the beginning, esteemed of, and reckoned upon Virginitie alone, and of how great abhorrency (*Numb. 25.*) Luxury is in the sight of the Lord.

For although Bigamy or a Plurality of Wives, and likewise, a dismissing of ones Wife, and much loosing of Matrimony, were in times past dissembled; Yet *Phinehas* being neither a Judge nor a Prince, from his very own zeal, slew the Fornicator *Zimri*, and the Harlot *Cosby*; and by that famous act, not onely diverted the wrath of the Lord from the whole People of *Israel*; But also, although he were a Man-slayer, and Man-slayers were repulsed from Sacrifices; Yet by reason of that simple Death, the Priesthood was given unto him, persevering in his off-spring.

In the next place, the Potters field, *Akeldama*, called *Acheldamah* or *The field of blood*, as long as it retained the name of a Field, confirms the Position; because indeed by a supernatural Miracle it so consumeth a dead Carcass inhumed in it, in one onely day; that besides a Skeleton of Bones nothing remaineth surviving: which effect, that it was supernatural, I prove: For otherwise, if it should naturally happen, that thing without doubt, should be done by a corrosive force of the Earth; and the which therefore should be wholly a corrosive Salt, or at least-wise, a certain Mineral vein co-mixed with very much Salt.

1. But first of all, That corrosion of the flesh happened not onely at Jerusalem, as long as it was a Field, where there might be a suspicion of some Mineral growing, but also its Earth being brought from thence, the same thing happened in the burying-place at Rome, (for that cause called, *The holy Field*) to wit, wherein that Earth scarce equalizeth the depth of one Foot.

2. But whether we may suppose a corrosive Salt, or next the Earth it self to be Salt; yet seeing it is the property of Salt, and a thing unseparable from Salt, to melt through Water being poured on it:

Rrrr

it : Therefore long ago, before so many Ages, that substance of the corrosive Salt, being melted by Raines, Snowes and Hailes, had wandred even unto the bottom of the sand, and the rather at Rome, where it found not its native place : Wherefore also that faculty of corroding should cease, nor should it continue safe until now.

3. And so much the rather, because the corrosion of Salts, is by little and little satisfied, and desisteth in gnawing.

4. Lastly, Such a corrosive of Earth is not any where found in the Earth, whether thou shalt respect a Vein of Arsenick, Orpiment, or any other : For all the activity of such Corrosives presently after a good while, waxeth mild and is satisfied : Therefore the property of that Field remaining after so many Ages, doth clearly shew withal (against the will of Atheisme) that the Field being purchased with the price of the Life, Blood, and Death of the Saviour, presently consumes the flesh of Adamical generation : Because that, for the consuming and renewing whereof, by the body of Christ, which was sold for thirty silver pieces paid for the price of that field, the coming of the most glorious incarnation, is believed to be directed from God as its onely scope. The unsufferableness therefore of that Earth with the flesh of sin, continually persevering now so many Ages (however the Bowels of the Atheists may burst) convinceth of an honour to be due to the Saviour or Son of God for ever.

In the next place, a humane dead Carcass, was alwayes buried for honour and desert, yet in the Law, it caused an impurity for a time : Because neither did it pollute the Soul, but the Body onely, for the meritorious fact : And that impurity did indifferently affect any one, not as the dead Carcass was deputed to the Wormes (for the Wormes by their co-touching, are not read to have caused an impurity) but because Adamical flesh is horrid in the sight of the Lord, who indeed promiseth, that he will raise them up at the last day, as many as shall reverently receive the Eucharist : For all indeed shall rise again by the finger of God, to wit, by a supernatural Virtue. Therefore, whosoever in rising again shall be changed, are reckoned onely to be raised up again by the Lord Jesus ; to wit, in as much as in a Body which they have attained by the Wine which buds forth Virgins, they shall rise again partakers of the unspotted Virginity of Jesus. *I will raise them up again at the last Day.* What other thing I pray you, doth that Promise denote, but that the Elect shall rise again changed and raised up by the Lord ; not indeed in the flesh of sin, but in the flesh of the Lord, which they have partaked of by Baptisme and the Eucharist. Therefore the horrid and damned flesh of sin, doth besprinkle its touchers with no undeserved spot of impurity.

There is therefore a distinct diversity of Virginal purity :

The First comes to hand before the Fall of Adam, and the which therefore did contain a certain Immortality from the suffrage or consent of the Tree of Life.

But the Second is of them *Who were sanctified in their Mothers Womb*, the which in it self is also twofold :

For such a sanctification, although it dismissed Original Sin, and did restore the integrity of withdrawn purity ; yet because they were conceived by the Will of Man, and by Bloods, or of the flesh of Sin, they were also Mortal. But the most holy Virgin Mother, presently after the feminal mixture of her Parents, was preserved from the knitting and blemish of Original Sin, before hec-ceity or the coming of her Soul.

But *Jeremy* and *John* obtained the same, but after quickening : In these two indeed, there was a Remission of sin admitted ; but in the God-bearing-Virgin, there was a prevention before sin could touch her Soul, and therefore she was taken up with her body into Heaven : but not *John*, or *Jeremy*.

Next, a Third Purity is in being born again of Water and of the holy Spirit, which also happens two manner of ways,

To wit, Unto { Little Children,
and
Unto those of Ripe Years.

For in these, Regeneration doth not onely remit Original Sin, but also every grievous Sin : But in little ones, it remitteth onely Original Sin, because it as yet finds no other.

But

But on both sides it leaveth Death and Flesh hastening into a dead Carcass, because stirred up by *Adamical* copulation.

Fourthly, The purity of those is regarded, *Who have made themselves Eunuchs for the Kingdom of God its sake*; and that as yet in a two-way journey: For they have either from a Child, devoted their Virginity to the Lamb, and have observed it; and therefore also *they follow the same whithersoever he may go, do sing the Hymn, &c.* but all that after Death. For otherwise, they are of the flesh of sin, and therefore are of necessity also, guilty of Death and corruption: But they who have lost their Purity through a proper Error, and afterwards rising up again, have vowed or observed chastity: These, although they are chaste, yet are they not to be reckoned among Virgins. But moreover, after that a Matrimonial generation was constituted by the Lord, Regeneration by the holy Spirit and Water, doth not fore-require Virginity.

Fifthly, The top of all Purity and Chastity, is the Lord Jesus himself, who was not conceived by a copulation of the Sexes, for he was truly Immortal, (and the first who therefore arose from the Dead, by his own Power) unless the amorous or loving Embassage, for which he had come, had made him electively to be born in the form of a Servant.

Therefore now the Question hath seemed to me to be decided, which hath driven many that were in anguish about the unspotted Conception of the God-bearing-Virgin, into many brawlings.

Furthermore, not onely Regeneration by Baptisme is enjoyed; but also unless we shall eat of the super-substantial Bread, we are to have no Life in us: Which benefit of a vital Purity, is the supream pledge given for the Life of the World, or for the frail, *Adamical*, miserable and mortal Life: Because that Heavenly Bread which descends from heaven (which is the Wine budding forth Virgins, and the same in supposition) from its own free property, takes away the spot contracted from *Adam*, and the broken Virginity of *Eve*; Because the Merits of the Passion being participated of in that Pledge, are communicated of from the unspotted Virginity of the Body of our Lord. The Communion therefore, of that most Chast Body uniteth us unto his Mystical Body, and makes us partakers of his Incomprehensible and Amorous Incarnation, as we participatively put on his Virginity, (in which we ought to be saved) by being born again: For Christ was born, that he might be crucified for us: Therefore his Death was; that it might give us Life, and that for the whole Species of men in general: But in the individual, as oft as of the Bread, the Body of the Lord is made, as if Christ is re-born again, not indeed, that he is crucified again: But that he may give the intended scope of his Incarnation unto that individual Body, which there eats the re-born Lamb, that is the Merits of his Passion.

Indeed there are two principal Ends of the holy sacred Eucharist; To wit, that the Virgin nature of Christ, and the Merits of his Passion may be undively communicated unto us.

Truly Children that are Baptized, shall rise again indeed in a glorified Body; Yet by so much the lesse lightsome, by how much they were remote from the Union of the Beatific Body.

And although there do not now appear the visible signes of so great an effect, such as I have above related concerning Baptisme, yet they are in very deed communicated unto their immortal mind; Because it is that which shall therefore at some time reduce their Body into the form of a Spirit: For otherwise, Regeneration doth not grow anew in the Resurrection, which hath not fore-existed in the Life-time, by being born again: Neither is Faith of feigned Non-Beings; but of things chiefly true, although not alwaies visible, because they do primarily operate on the Immortal mind which is invisible.

Wherefore, although the mark of resemblance of Union with God by the Eucharist, be altogether unsearchable, and the fruits thereof are unto us invisible; Yet a Mystical and real New-birth, is reckoned to be in the speech to *Nicodemus*, it being as yet earthly, and as it were natural: By which title indeed, I have transferred this free endowment of Purity among natural Considerations; to wit, that under the Doctrine concerning Long Life, I may speak also of Immortal Life, as it is understood by true Christians, and actually derived into a true life.

For I contemplate of the Regeneration of those that are to be saved, and of the participation of Life in the Communion of the Eucharist, to happen and be reckoned among

58 earthly things, because there is shewn something like unto it elsewhere in Earthly things: Verily, almost even as in the Projection of the Stone which maketh Gold: For I have divers times handled that stone with my hands, and have seen a real transmutation of saleable Argent-vive or Quicksilver with my eyes, which in proportion did exceed the powder which made the gold in some thousand degrees.

Indeed it was of the colour, such as is in Saffron, being weighty in its powder, and shining like bruised Glass, when it should be the less exactly beaten. But there was once given unto me, the fourth part of one grain. I call also a grain the six hundredth part of an ounce.

This powder therefore I involved in Wax scraped off of a certain Letter, least in casting it into the Crucible, it should be dispersed through the smoakiness of the coals: which pellet of wax, I afterwards cast into the three-corner'd Vessel of a Crucible, upon a pound of Quicksilver, hot, and newly bought; and presently, the whole Quicksilver with some little noise, stood still from flowing, and resided like a Lump: But the heat of that Argent-vive, was as much as might forbid melted Lead from re-coagulating: The Fire being straightway after encreased under the Bellows, the Metall was melted, the which, the Vessel of fusion being broken, I found to weigh eight ounces of the most pure gold.

Therefore a computation being made, a grain of that powder doth convert nineteen thousand two hundred grains of impure and volatile Metall, which is obliterated by the fire, into true gold.

For that powder, by uniting the aforesaid Quicksilver unto it self, preserved the same at one instant, from an eternal rust, putrefaction, death, and torture of the fire, howsoever most violent it was, and made it as an Immortal thing, against any vigour and industry of Art and Fire, and transchanged it into the Virgin purity of Gold: At least-wise one onely fire of coals is required herein.

So indeed, if so be a just heat of the faithful shall be present, a very little of this mystical and divine super-celestial Bread, doth regenerate, restore and renew, a huge number of the Elect: Which indeed was the one onely scope of so great a Sacrament.

And therefore it is said, *With desire I have desired to eat this Passover with you.*

Let the Divine pardon me, who being to write of the Life of the World, if by a similitude, I have drawn a demonstration from earthly things, in the persuasion of the Lord to Nicodemus, to confirm the real and Celestial Regeneration of Purity, and Restauration of mans Relapse; because it is by an Argument drawn from Earthly things.

But that person, who is so regenerated, and preserved against the Fire, and Death, the Lord will raise up the same in the last day, who gave his Life to the righteous eater, for the Adamical Life of the World: For so a uniting of the amorous Incarnation of the Lord, makes us partakers of his integrity, so far, as by Regeneration we participatively attain unto the Virginity of Christ, in which we ought to be saved.

This indeed is the most proper Circum-location or expression of the sense of those Words: *The Wine which buds forth Virgins.*

And without this Remedy, some shall rise again being not changed in their former and ponderous Body of Adam, the wished for necessity of death, being onely taken away from them.

I return unto the Priviledges of that purity, that it may be manifest, how most nearly a single Life doth come unto the Primitive state of Innocency: and so that also from thence we may learn, that the intention of the Creator was in a single Life.

59 For now and then, that word of Truth comes into my mind, which requireth the state of little Children, in those that are to be saved, under the penalty of infernal punishment: and that we must despair of Salvation, unless we are made or become like unto them: In whom notwithstanding, I find a suddain, speedy, undiscereet, and frequent anger, stripes, kickings, lyes, disobediences, murmurings, reproaches, a ready deceit, and lying in play, an unsatiable Throat, impudence, disturbances, disdaines, unconstancy, and a stupid innocency; lastly, no acts of devotion, attention, or contribution: But yet those are not the things in little ones, which are required for those that are to be saved, under pain of an Eternal loss.

In the next place, neither do little Children want their pride of Life, and despising of others, and especially their hatred of the poor, also a frequent desire of revenge, cruelty, an

itch of getting or attaining, the concupiscence of the Eyes, and are wholly and perpetually addicted to, and drowned in self-love. But neither are those the things required in them that are to be saved under Gods indignation : But they want the concupiscence of the Flesh alone.

This indeed is the Mark which with so loud sounds, is required for those that are to be saved : Because it is that which was of a primitive intention in Creation : And therefore from an opposite sense, I argue ; That the chief fault of the Fall of the Apple being eaten, was conversant about the infringement of that chaste bashfulness ; that is, that Original sin was scituated in the breaking of Virginity, in the act of Concupiscence, and propagation of seed : But not in the very act of disobedience, and despised Admonition, and distrust of the truth of the divine Word.

For *B. Hildegard* also, in the Third Book of her Life, seemeth to have testified the same thing.

The Author saith, *She freed the Matron Sibylla of the City of Lausanium, beyond the Alps (who required her help by a Messenger) from a daily Issue of Blood, by the subscribed Letters being sent unto her. Thou shalt put these words between thy Breast and Navil, in the Name of him who rightly disposeth all things. In the Blood of Adam arose Death, In the Blood of Christ Death is extinguished: In the same Blood of Christ, I command thee, Oh Blood, that thou contain or stop thy Flux.* And the Matron was cured by these written Words ; the which others have many times experienced.

Therefore Death was extinguished by the effusion of the Blood of Christ, and the participation thereof, in being born again; that is, by the offering up of Chastity to God the Father for those that are to be renewed in his Blood.

And moreover, if we do well mind, it is acknowledged, that God hath loved women before Men, in their Sex, by reason of an inbred bashfulness : Unto which Sex therefore, he hath freely given Devotion as a gift of Nature, whereby there should be some kind of natural faculty, and virtue proper to that Sex, a Medium unto Salvation.

For the first Apostles, before the coming of the Comforter, by one onely Sermon, converted *Samaritania*, the head of the *Israelitish* Kingdom, otherwise most stubborn.

Only the Women from *Galilee*, being constantly, although disgracefully serviceable, adhered to Christ at his Death, and under all ignominy, he being left by his disciples, the witnesses of so many Miracles, and that at the first blast of adversity : For the poor Women rejoiced in their reproaches, so they might but follow Christ, carrying his Cross upon his back.

Magdalen also, first preached the Gospel of his Resurrection, unto her own who did not believe, and confirmed them in Faith, who doubted, and deserved to be the first beholder of Christ after his Death, because she sought the same with the fervor of the greatest Devotion.

God I say, hath heaped very many Diseases, Adversities, and Subjections on this Sex, that it should be by so much the more like, and nearer to his Son : But the World despiseth Women, and preferreth Men : But in most things, the Judgements of God are opposite unto the Judgements of the World ; so that also, the World despiseth the Poor, of whom Christ calleth himself the Father, but not of the Rich.

Then in the next place, Christ calls himself in many places, *The Son of Man* ; But seeing he had not a Man unto his Father, therefore by an *Antonomasia*, he calls the Woman the Virgin, Man, by an absolute dignity of Name, and worthy of, or befitting the Femal Sex ; as if for that reason, the name [Man] ought thenceforth after sin, to be proportioned, and stands for the Woman in the more famous signification : Shewing at leastwise, that in thing the Mother-Virgin, was after the sin of *Adam*, the one onely Man, such as the Divinity had espoused unto it self, in the Creation of the Universe, for the replenishing of the places laid waste by the Evil Spirit : And that what *Eve* ceased to be through an infringing of Chastity, that, *Mary* the most glorious Virgin, was ; to wit, The one onely Mother of those that are to be saved, in the Regeneration of Purity. But neither have I undertaken a laudatory Oration in behalf of that Sex: Only it is sufficient to have shewn, that God hath loved the Femal Sex, by reason of its love of Chastity. For a Virgin thinks on the things of her God.

The Apostle also Commands Widows, which are truly Widows, to be honoured.

And in the old Law, those were reckoned impure, as many as (even conjugally) had known their Wives, if they were not seriously washed, and were to be driven from the Temple unless they were first duly rinsed.

[He] also violently fell by a sudden Death, because such an impure Man (although from

a good

a good zeal) put his hand to the tottering Cart, wherein the Ark of the Covenant, (the Image of the God-bearing-Virgin) was carried.

Indeed on both sides, the Truth being agreeable to it self, doth detest and attest the filthyness of impure *Adamical* generation : For the Impurity which had conceived a contagion, from any natural Issue whatsoever, of Menstrues, or Seed ; and that by its touching alone, is reckoned to be equal to that which should by degrees creep on a person from a co-touching of dead Carcasses, and to be expiated by the same ceremonious rite : That the Text might agreeably denote, that Death began from the Concupiscence of the Flesh, lying hid in the fruit of the Apple : Therefore also, the one only healing Medicine of so great an impurity contracted by touching, consisted in washing ; under the likeness whereof, Faith and Hope which in Baptisme were poured into us, are strengthened.

- 66 For as soon as *Adam* had known by Fratricide, that the first-born of Mortals whom he had begotten in the Concupiscence of the Flesh had slain his guiltless and righteous Brother, and fore-seeing the wicked Errors of Mortals that would come from thence, he then also well perceiving his own Miseries in himself, certainly knowing, that all these Calamities had happened unto him from the Concupiscence of the Flesh drawn from the Apple, which were unavoidably issuing on his Posterity ; he thought it a discreet thing for him, for hereafter, wholly to abstain from his Wife which he had violated, and therefore mourned in Chastity and Sorrow a hundred full Years ; Foolishly hoping, that by the proper merit of that Abstinence, as by an opposite to the Concupiscence of the Flesh, that he should again return into his former Majesty of Purity : But the Repentance of one Age being finished, probably the Mystery of the Lords Incarnation was revealed unto him ; Neither that Man ever could hope to return unto the brightness of his antient purity, by his own strength, and much less that himself could restore his Posterity from Death : And therefore that Matrimony or Marriage was well pleasing, and was presently after the Fall indulged unto him by God ; to wit, because he had determined thus to satisfy his Justice, at the fulness of times ; which should to the glory of his own Name, and the confusion of Satan, carry up Mankind unto a more eminent blessedness.

From that time therefore, *Adam* began to know his Wife, and to fill the earth by multiplying, according to the Blessing once given him, and a Law enjoined him : Yet so, nevertheless, that although Matrimony, by reason of the great want of Propagation, and otherwise an impossible courtly succession of the primitive Divine Generation, be admitted as a Sacrament of the faithful :

- 67 Yet because at length it seemed, by reason of necessity, as it were by dissembling or connivance, to be indulged ; Therefore the Comforter dictating it, it was determined against the *Greeks*, by the Church, that the Priest (by whose workmanship the Lords Body is incarnated in the Sacrifice, ought to be altogether estranged from the act ; whereby Death and the impurity of Nature were introduced.

For the necessity of propagation, hath indeed thus in times past excused the offence of a courtly succession in Generating.

For as *Augustine* witnesseth, *If the propagation of Men could have been made after any other manner, the Conjugal Act had been unlawful.*

- 68 Wherefore Bigamy or a Duplicity of Wives, is not undeservedly expelled from the Bishoprick, even as actual Wedlock from the Sub-deaconship. For however it be a Sacrament, yet it is unbecoming the Sacrament of the Altar, to wit, by which the chastity of the first constitution and intention of the Creator are recompensed : For God despised that blood should be offered unto him, even in burnt-offerings, and that Man should eat blood, being mindful that the blood (in which the sensitive Soul is) had proceeded from the eating of the Apple.

But besides, bruit Beasts are indeed afraid, are angry, do flatter, do mourn, do condole, do lay in wait ; and those Passions, Man from the sensitive Soul possesseth, common with Bruits : Yea also, it shameth Elephants, if they are upbraided with any thing that hath the less generously been done by them : But no Animal or sensitive Creature perceiveth shame from a sexual copulation.

From hence its manifest, that Concupiscence of the flesh, is Diabolical onely to Man ; which in Bruits, is Earthly and Natural.

If therefore both our Parents presently after the eating of the Apple, were ashamed, if they therefore covered onely their privy parts ; therefore that shame doth presuppose, and accuse of something committed against Justice, against the intent of the Creator, and

against their own proper Nature : By consequence, that *Adamical* generation was not of the primitive constitution of their nature, as neither of the original intent of the Creator : Therefore when God foretels that the earth shall bring forth Thistles and Thorns, and that Man in the sweat of his Face shall eat his Bread, even as was already proved above, they were not Execrations, but Admonitions that those sort of things should be obvious in the Earth ; and because Beasts should bring forth in pain, should plow in sweat, should eat their food with labour and fear, that the Earth also, should bring forth very many things besides the intent of the Husband-man, therefore also, that they ought to be nourished like unto Bruit-beasts, who had begun to generate after the manner of Bruit-beasts.

And then, if the Text be more fully considered, it is told unto *Eve* after Transgression, that she should bring forth her off-springs in pain : For it undoubtedly followes from thence, that before sin, she had brought forth without pain, that is, as she had conceived, her Womb being shut, so also she had brought forth. 69

Therefore, what hath the pain of bringing forth, common with the eating of the Apple, unless the Apple had operated about the conception or concupiscence of the flesh ? And by consequence, unless the Apple had stirred up copulation, and the Creator had intended to dissuade it by dehorting from eating of the Apple : For why are the genital members of the Woman punished with paines of Child-birth, if the Eye in seeing the Apple, the Hands in cropping it, and the mouth in eating it, have offended ? For was it not sufficient to have chastised the Life with Death, and the Health with very many Diseases ? Moreover, why is the Womb (which in eating is guiltless) afflicted after the manner of Bruits with the pain of bringing forth, if the conception granted to Beasts were not forbidden to Man ?

After the Fall therefore, *their eyes were opened, and they were ashamed* : It denoteth, that from the filthiness of Concupiscence, they knew that the copulation of the flesh was forbidden them in the most innocent chastity of Nature, and that they were over-spread with shame, when their eyes being opened, their understandings saw the committed filthiness.

But on the Serpent and evil Spirit alone, was the top of the whole curse, even as the privilege of the Woman, and the mysterious prerogative of the blessing upon the Earth : To wit, that the Woman (but not the Man, although he was now constituted for the head of the Woman) should at some time *bruise the head of the Serpent* : And so that it is not possible, that *to bring forth in pain*, should be a Curse ; for truly with the same mouth of the Lord is pronounced the Blessing of the Woman, and Victory over the infernal Spirit. 70

And moreover, to be subject to the Man, was not enjoined unto the Woman in stead of an Execution : But it denoted in the mind of God, humility chosen in a new Law, and another method of living, appointed anew by the Son of Man : For the Son of Man humbled himself even unto death ; also to be extinguished by a reproachful death, he called it, *to be exalted*. Therefore, while the Lord depresseth the Woman under the power of the Man, he exalted the same Woman in his presence, and made her the more like unto himself. After another manner, because the Serpent should for the future, creep upon the Earth ; The name of Serpent proveth, that, that was not proper unto him from a Curse, but from his being made creeping ; and that thing was sufficiently manifest to *Adam* : For herein the Curse seized not so much on the Serpent, as on the evil Spirit, because the lying Impostor had hid himself in the most vile of creeping things ; on whose head therefore, and not on the head of any creeping thing, the Woman trod upon.

But because all Bruits which do generate by a long continued copulation, were in times past reckoned impure, and also forbidden from Man's use in Kitchens (among which creeping Animals are not in the last place) &c. It containeth, and likewise confirmeth the mystery of our Position : 71

To wit, *That the impurity of our Nature, draws its rise from the Concupiscence of the Flesh :*

And therefore the copulation in Beasts seemeth to be taken notice of in Beasts, by God, which was distinct, and defiled with impurity.

In the next place also, in the Law, a Menstruous Woman, and the person touching her, were accounted to bring an impurity on every thing : The which otherwise, being now turned into a second and natural Cause, ought to be plainly guiltless, unless the 72

the Menstrues should by a Natural course, derive it self from the same Causes, from whence Death happened unto us: And therefore also, for this Cause, it being plainly impure in the Law, was reckoned a horrid thing with God.

73 But for that, Woman alone doth suffer Menstrues before Bruits, surely it doth not attest any Prerogative of our kind, but rather every way a defect; to wit, that it is reckoned for a punishment of frustrated Chastity, and referred into second Causes, plainly from a notable Mystery of our Position: neither doth it hinder these things, that chaste Virgins obey the Menstrues, and that she is Monstrous, who an opportunity being given, is not Menstruous; because *Adamical* Generation its self is constrained to carry, no less the importunities of its own Nature, than Death it self.

74 Yea, seeing Chastity doth not excuse a Virgin from the Menstrues, it is for a token, that the Menstrues is not from a Curse, nor from the punishment of Sin, but altogether from Natural Causes; no otherwise than as Death it self began from second Causes: inserted in the dissuaded Apple, although hitherto unknown, nor thorowly weighed.

The Menstrues therefore onely in Woman alone, but not in Bruits, doth accuse that the Transgression of the despised fatherly Admonition happened in the very privy parts; therefore branded as it were with an unclean bloody Seal, for a perpetual sign: The which surely should not have place, if a Sexual Copulation for the Propagation of man, had not inverted the intention of the Creator, rather than in Bruit-Beasts.

75 In this place, a Paradox and impertinent consideration doth occur, being interlaced as it were by a Parenthesis: that *Adam* seeing he was created in the possession of Immortality, God intended not that Man should be an Animal or Sensitive creature, nor should be born, conceive, or live as an Animal; for truly, he was created into a living Soul, and that he might be the immediate Image of God: Therefore he as far differed from the Nature of an Animal, as an Immortal being from a Mortal; and as a God-like Creature from a Bruit; The which is indeed more than in the whole Predicament.

And it is exceedingly to be admired, and deservedly unworthy to be endured, that the Schools of Christ do believe and confess these things; and yet that even until now, they draw the Essence of a Man Essentially from an Animal Nature; because, although Man afterwards procured Death unto himself, and therefore may seem to be made nearer unto the Nature of Animal Creatures, yet it stood not in his Power to be able to pervert the Species of the Divine Image; Even as, neither was the Evil Spirit, of a Spirit, made an Animal, although he became nearer unto an Animal by hatred and brutal vices. Therefore Man remained in his own Species wherein he was created; For as oft as man is called an Animal or Sensitive living Creature, and is in earnest thought to be such; so many times, the Text is falsified, which saith, *But also the Serpent was more crafty than all the living Creatures of the Earth, which the Lord God had made*; Because he speaks of the Natural craftiness of that Creeping Creature. Again, if the Position be true, Man was not directed into the Propagation of Seed, or Flesh, neither therefore did he Aspire into a Sensitive Soul: And therefore the Sensitive Soul of *Adamical* Generation, is not of a brutal Species, because it was raised up by a Seed which wanted the Original, Ordination, and Limitation of any Species; And so that, as the Sensitive Soul in Man arose besides the intent of the Creator and Nature; So it is of no brutal Species, neither can it subsist, unless it be continually tyed to the Mind, from whence it is supported in its Life.

Wherefore while Man is of no Brutal Species, he cannot be an Animal in respect of his Mind, and much less in respect of his Soul, which is of no Species.

For a woman great with Child, while by reason of sudden fear, she changeth the Humane Young into a certain Bruit; the mind indeed doth not wander into a brutal Soul; but the mind departs, and a Sensitive Soul, begged of the Creator, is substituted in its stead; And seeing that it is promoted onely by the *Idea* of the Woman great with Child, without an Original appointment, therefore such kind of generated Creatures, do most speedily die: And the off-springs of *Adam* had likewise presently perished, unless God had granted Matrimony unto him.

Wherefore in the Birth of *Cain*, she truly said; *I possesse a Man from the Lord.*

Far be it therefore, to have placed Man among Sensitive living Creatures.

Truly, we must indulge *Pagans* who know not that thing; but not equally Christians who too much adore *Paganish* Doctrine.

At least wise the Schools confesse, that there is an ordinary Progress of Nature, from not a sensible Creature into a sensible Animal: but that the Life and Sense of Men is immediately infused by the hand of the Almighty.

They

They confesse in the next place, that the Conditions of being, living, and feeling or perceiving in Man, differ in their whole Condition from an Animal Nature, because it follows the Faculty of the rational Form or Immortal mind: But they shamefully believe, that a Man atwel of the first Constitution, as being now Divinely Regenerated by the Sacraments, is an Essential Animal.

Fie, let it shame man not to know that the Evil Spirit, and whole Nature also, are not able by any means, or any way to change the Essence given unto him from the foreknowledge of the Creator, but that he should continually remain such as he was created; although in the mean time, he hath cloathed himself with strange properties, as Natural unto him from the vice of his own will: For as it wants not an absurdity, to reckon man glorified, among Animals, because he is not without a sense or feeling; So, to be sensitive doth not shew the unseperable Essence of an Animal.

And seeing otherwise, the definition of every thing is from the Essence of the thing (as they will have it) but man according to his Essence, was made in a full possession of Immortality, and henceforth of an Eternal Duration, according to his Soul; the Schools could not believe, that man, by reason of a sensitive Soul alone, was essentially an Animal; Especially while they believed his Essence to depend on an Eternal Duration, and an uncorruptible Soul or Form.

All which absurdities, I acknowledge to have crept into, and to have remained in the Schools, by reason of the truth of our Position being unknown.

Even hitherto, I have established the Position out of the holy Scriptures. Now again the same, by the Authorities of Fathers; which matter *B. Augustine* hath seemed to have understood before others; saying, 76

After what manner had it shamed Man of the Transgression of a Law, when as his very Members had not known shame? Lib. 14. De Civitate Dei, Cap. 17.

As if he should say, His Members were stirred up unto the Concupiscence of the Flesh, and acts of his Privie Parts, presently after the Eating of the Apple. Their Eyes were opened; but for this they were not opened, that they might know, what might be performed by them, through the cloathing of Grace, when as their Members knew not how to resist their will. Lib. 4. Contra Jul. cap. 10.

And dost thou not blush at that Disease, or that thou, although shamefac'd, dost confess, that that Lust entred into Paradise? And to impute it unto Husbands and Wives before Sin?

He who was to be without Sin, would be born without the Concupiscence of the Flesh, not in that Flesh of Sin; but in the likeness of sinful Flesh: As if he should say, whatsoever is born from Copulation, although it had been born in Paradise and before Sin, would have been, and is the Flesh of Sin; Seeing that alone, which is not born of Copulation, is not the Flesh of Sin. Lib. of Marriages, 12.

Whatsoever off-spring is born from Concupiscence, or of the Flesh of Sin, is obliged unto Flesh of Original Sin, unless it be born again in him, whom the Virgin conceived without Concupiscence. Sin. cap. 24.

The Flesh of Christ drew a mortality from the mortality of his Mothers Body; because she found not the Concupiscence of a Copulacresse. Lib. 5. Cont. Jul. cap. 15.

For indeed, as Original Sin is not derived on the Posterity any other way, than by the Concupiscence of the Flesh; So it must needs be, that in the Apple was included the Concupiscence, from whence the humane stock degenerated, and was vitiated in generating: For truly if off-springs could have been generated any otherwise than by carnal Copulation, the Matrimonial act had been unlawful. Lib. 5. Cont. Jul. cap. 12.

Whereunto this every-way convincing Argument; serveth, That act, before the Apple was eaten, was either unlawful, and not thought of; or it was lawful. 77

If it were unlawful, now our Position is proved. But if lawful, therefore whatsoever I have above described out of *Augustine*, is false.

Seeing therefore they had now actually felt the effect of the eaten Apple, or the Concupiscence of the Flesh in their Members in Paradise, presently it shamed them, because their Members, which before they could rule at their pleasure, were afterwards moved by a proper incentive of lust.

At length, how greatly Virginity hath alwayes pleased the Bridegroom of the Soul, doth clearly enough appear out of divers Histories of the Saints.

And indeed, in *Cana of Galilee*, the Bridegroom having left his Bride, followed the Lord Jesus, and it is that Disciple whom Jesus therefore so greatly loved.

The same thing was familiar unto *Alexius*, *Egidius*, and to very many others, especially with poor Women-Virgins.

- 78 For indeed the infinite goodness, from the proper motion of its good pleasure from Eternity, created Man and fore-loved him with so great a love, that he determined to co-knit his own Divinity unto him, and to enlighten him with the Light, *which enlighteneth every man that cometh into this World*; and to Adopt him for the Son of God, *giving him Power to become the Son of God* by the new Birth; which new Birth, before Sin, was not necessary.

Seeing therefore he requireth People to be re-born of God, therefore before Sin, they were all born of God; which thing, *Lucifer* with his own Spirits, seeing, through a long-since Pride of his Beauty (and since his fall, being wholly become Envious) supposed that he was wiser than God, who had raised up a vile creature unto that height: wherefore he aspired to exceed God, whom he had not yet seen, and to throw him down from his Seat of Majesty: Presently afterwards, he, after that he had paid the punishment of his Sins, being more cruelly wroth, saw also, that *Eve* being a Virgin, was by the onely Goodness of God, without all desert, and freely now appointed for the aforesaid Instrument of that Adoption, and Mother of Men:

Therefore he endeavoured to hinder the Love of God through the Eating of the Apple; Because, as seeing that the Lasciviousness and Concupiscence of the Flesh implanted in the same, was Diametrically opposite unto Gods intention: Therefore the Eating of the Apple was not forbidden unto man by a Law, but by a fatherly Admonition: neither is Original Sin from the Transgressions of a Law, from the Eating of the Apple, as being forbidden food; but by Reason of the effect arising from the Apple, and the properties inserted in the Apple.

After another manner, the Transgression or Eating, did offend onely in a Voluntary Act, but not for Posterity; unless Naturally, and by the second Causes of a brutal Copulation following from thence (otherwise in our first Parents impossible) it had inverted the intention of Divine Generation; Yea, Original Sin, fell not so properly on the guiltless Posterity, as the effect of Generation: the which indeed hath brought forth an Adulterous, Beast-like, Devilish Generation, and plainly incapable of the Kingdom of God, and of Union with, and Enjoyment of God: By Reason of the Similitude whereof, those that were born in Adultery, were excluded from the Participation of Heaven.

- 79 But let us feign the opposite thing; to wit, that our Parents were conscious, that there was a Law declared by God the Creator of the Universe, touching the forbidden Apple, and that upon such an account Death was foretold unto him, and all his Posterity, and undoubtedly came unto them; but at least-wise, an irregular Sin being so bold, and so ungodly and cruel a Wickedness on all their Posterity, could not be forgiven without a great note of Contrition: Neither had God, how Merciful, and Good soever, straight-way, so suddenly made that man fruitful with so great a Blessing, and substituted the other living Creatures under his Feet; he not being ignorant, that neither of them did Grieve, Repent, Pray; but only it shamed them, and that they endeavoured as Fools to hide themselves from God, and to cover their privy Parts with Leaves.

- 80 Therefore I collect from thence, that on the same day, not only Mortality entred through Concupiscence; But moreover, that it presently after also, entred into a conceived Generation; in which respect, the same day also they were driven out of *Paradise*: Therefore Original Sin was effectively bred from the Concupiscence of the Flesh, but occasionally onely in the Apple being eaten, and the Admonition being despised: But the Poyson of the Concupiscence was placed in the Admonished (or rather dissuaded) Tree, and that Property was radically inserted, and implanted in it. But when Satan (besides his Hope, and the Deflowring of the Virgin, nothing hindred it) saw that man was not taken out of the Way, according to the forewarning (for he knew not that the Son of God had constituted himself a Surety before the Father for man) he indeed looking into the Corrupted and Degenerated Nature of Man, and so that a Power was withdrawn from him, of Uniting himself to the God of infinite Majesty, he most greatly rejoiced; but he grieved after that he knew, that Matrimony was now granted; To wit, that the divine Goodness did as yet incline towards man; and that Satans own Fallacies, Deceits, and Thoughts were thus Deceived: And so that also, from hence he conjecturing that the Son of God was to restore every Defect of Contagion, and therefore perhaps to be Incarnate; He ruminated or searched, whether he should defile the Stock that was to be raised up by Matrimony, with a mortal Soul, that he might render every Conception of God, Vain: Therefore he stirred up not only his Fratricides, and notoriously wicked Persons, that there might be much Evil at all times; but he procured that *Atheism* might arise, and that together with *Heathenism*, it might increase, and wax strong dayly; whereby indeed, if he could

could not hinder the Co-knitting of the Immortal Mind with the sensitive Soul, he might at least, by destroying the Law of Nature, bring man with himself, under infernal Punishment: But especially he meditated, after what sort he might by Degrees expunge the immortal Mind out of the Stock of Posterity:

Therefore he stirred up detestable Copulations in this Atheistical Libertines: But he saw that from thence nothing but brutish or savage Monsters Proceeded, to be abhorred by the Parents themselves; and that the Copulation with Women, was far more Plausible unto Men; and that by this Method, the Generation of Men should equally, and constantly continue. For neither was it sufficient for the infernal Enemy, to have rendered man incapable of Heaven; but moreover, he endeavoured to prevent, that there should never be a hope of restoring a Remnant; that is, to hinder the Incarnation of the Son of God; therefore he attempted, whether he could by an Application of active things, frame the Seed of Man according to his own cursed Desire: The which, when he had found to be in vain, and impossible for him to do, he tried again whether an Impe, a Witch, might not be fructified by Sodomy: And when as, neither thus did the event every way answer his Intention, and that he saw elsewhere, that of an Ass, and a Horse, a Mule was bred, which was nearer akin to his Mother, than to his Father: Likewise that of a Coney, and a Dormouse being the Father, a true Coney was bred, being distinct from his Mother, only in his Taile like a Dormouse, he declined his Crafts: And indeed through a remembrance of these Things, the old Law also very much abhorring such co-mixtures of Species to be horrid unto God; although at this day, they are among Christians so admitted, that the Primates or chief Men of the Church, do Ride on Monsters horrid in Gods sight.

Therefore Satan instituted a Connexion of the Seed of Man (being first for some while nourished with Warmth) with the Seed, and in the Womb of a Junious Witch or Sorceress, that he might exclude the Dispositions unto an immortal Mind (which God, Matrimony being by him appointed, promised that he would create in the Word, *be ye Multiplied*) from such a new polished Conception: And afterwards came forth an adulterous Generation of Faunes, Satyrs, Sylphs, Gnomes, Nymphs, Driades, Nerides, and other Monsters, according to the Various Disposition, which the Seed of Man did undergo.

And seeing the Faunes, and Nymphs of the Woods were preferred before the other in Beauty, they afterwards generated their off-springs among themselves, and the Posterities again contracted their Copulations among themselves, and at length began Wedlocks with men, feigning that thus they did obtain an immortal Soul (as credulous *Paracelsus* witnesseth) for themselves, and their off-springs which should be born by that Conjunction: But they feigned that thing through the Perswasion of the Devil, that men as doing a pious Work, might admit those Monsters unto carnal Copulation: Which thing the Ignorant also were easily perswaded of, as if the Creation of the immortal Soul, and the knitting thereof unto the mortal Soul, did depend on the free Will, and Seed of Man: the which I will beneath teach to be false, as well from the holy Scriptures, as from the Relation of *D. Antonius* in the Life of *Paul* the first of Anchorets, described by *Jerome*: And therefore those Nymps were antiently named, *Scenba*: Although Satan afterwards, that he might commit a worse Wickedness, frequently transchangeth himself by dissembling the Persons of the *Incubus* and *Succubus*, in both Sexes: But they conceived not a true Young by the Males, except the Nymphs alone: the which indeed, seeing the Sons of God (that is, Men) had now without distinction, and in many places taken to be their Wives, God was constrained to blot out the whole race begotten by these detestable Mariages, through a deluge of Waters, that the intent of the Evil Spirit might be Frustrated.

A Merchant of *Agina*, our Country-man, an Honest-man, Sayling divers times unto the *Canaries*, or Fortunate Ilands; was baifly asked by me, his Serious Judgment about certain Creatures, which Boys did there bring home from the Mountains, as oft as they would, and named them *Tulesquils*, or little *Germans*: for they were dried dead Carcases, almost three-footed, which any Boy did easily carry in one of the Palms of his Hand, and they were of an humane Shape: But that whole dead Carcase was clearly like unto Parchment, and their Bones were Flexible as it were Gristles: Against the Sun also, their Bowels and Intestines were seen: Which things, when as afterwards, I by *Spaniards* there born knew to be true, I considered, that at this day, the destroyed Race of the *Pygmies* was there: For the Almighty would render the expectations of the evil Spirit, supported by Mankind, vain, and void: For he hath therefore manifoldly saved us

from the Craft of the encompassing Lyon, unto whom Eternal Punishment is due in his extream, and perpetual Confusion, unto the everlasting sanctifying of the divine Name.

83 But now I will propose some doubts against our Position.

First therefore, that nothing withstands it, that the most due or worthy Work of Married-folkes is the very Copulation of the Flesh: Because from thence it doth not follow, that Matrimony was lawful from the Beginning of Creation: Yea, neither is that true in any other Sense; but that afterwards Children are not procreated without the Copulation of the Flesh: To wit, if any Married-folks shall live as they ought, and those that have Wives, be as they had none, and never using their Wives but for fructifying sake, unto the Honour of God: These indeed do deserve the Favour of Increase: But as yet do they far differ from those unto whom God, from the title of Gelded-persons or *Eunuchs* alone, promiseth the Kingdom of Heaven: But it is said unto Married-persons, *When ye have done all these things, ye shall be as yet, unprofitable Servants*: But that is nowhere read to be spoken unto one abstaining from lawful things in Patients, and not in Agents; and least of all, doth that touch at the Flour of Virginity: For abstinent, and chaste Persons, seem by a certain fore-choice to be sanctified, also to be promoted unto a further Degree of Perfection: And therefore, *They follow the Lamb whithersoever he goeth*. For those that do well, as they suppose a hope of reward; So Virgins abstaining, and suffering, do contain themselves within Love, and Humility.

84 Neither doth that argue on the contrarie, because it is said, Gen. Chap. 1. v. 27. *God created them Man, and Woman.* and Gen. Chap. 1. v. 28. that *He blessed them, that they might increase, and be multiplied, and replenish the Earth*: As though Wedlock had been from the appointment, and first intention of the Creator: For the first Chapter of *Genesis* doth briefly finish the whole History of the Creation: But the second and third Chapters do prosecute the Creation of the Woman in *Paradise*; likewise Sin, &c. And therefore the blessing of Generation was not described in Gen. 1. v. 28. For truly, not as though the blessing of Generation had been given in the Beginning of Creation, before the Woman was created; the which was neither given in *Paradise*, after the Woman was framed; but after Sin, and after their Banishment out of *Paradise*, into the Earth: For it is said, *That they should fill the Earth with Off-springs*, but not *Paradise*: And a full Dominion was given them over the Bruits of the Earth; wherein is manifested the goodness of the Creator, that he blessed a guilty Creature (nor as yet repenting) in off-springs, being also Corrupt, and Impure.

Indeed he foreknowing the Restauration for which his Son had appointed himself a Surety before the Justice of the Father: For otherwise, on the same day wherein they had tasted of the Apple, they had actually, and of necessity died, unless the Father had accepted of the Death of his Son, for the Remission of Sin.

85 Thirdly, it might be objected; *God made nothing in vain; but he framed the sexual Instruments of Generation from the Beginning, the which, while they did denote a necessity of appointment, God also from the Beginning sufficiently exposed his own intention, and modern manner of Generating in their Bodies.*

I answer, By granting that the Creator conferred on them Members, and a Freedom of Will; otherwise, if they had wanted Instruments, a liberty of Sinning through the Concupiscence of the Flesh had been in vain conferred on them: As therefore the Intention of God for a future Regeneration, is not rightly turned unto a freedom of will of sinning; So much less rightly, is the same Intention inserted by reason of the framing of Instruments: For this Argument is like as if it should be said;

God made Remedies against Diseases, and Death; therefore God made also Death, and Diseases.

The Consequence is false; Therefore also the Antecedent.

For the Almighty fore-saw from Eternity, the Fall of *Adam*: Neither therefore being content with *Paradise* alone; he moreover, created the Earth, and from the Earth, Medicine against Death, and Diseases: So also, he made Genitals in our first Parents.

It was sufficient for *Adam*, that he never felt any Spur in himself, either from his Members, or from the beheld nakedness of the Woman; as neither the Woman likewise from the Society of the Man, which unsensibleness was called, *The State of Innocency*: Otherwise it might likewise be concluded; God created Man, that he might live happy in *Paradise*: Therefore he in vain created the Earth before the Fall, or Corruption of Nature; especially because Sin was from a free Contingency: For both of the aforesaid

Argu-

Arguments is from a non-premeditated end of Contingences or Things which happened; and therefore it contains an Implicite Blasphemy: For God had not created the Earth for himself, and the Bruit-beasts; So also the Instruments of the Sexes do denote indeed a foreknowledge of future things, but not a divine Intention in creating them.

Next the Atheists strive, and will have the Text to be Fabulous, and Ridiculous, 86 that the Effect, or Disobedience of the eaten Apple should go over all Posterity: The which Argument we have already sufficiently opposed.

And likewise they Argue; *If Shame be from Original Sin, truly as Sin doth equally touch 87 all: So also Shame should touch Children, those of full growth, the Blacks, Americans, Egyptians, Ethiopians, &c. And neither indeed hath it hitherto shamed the Abyssine or Ethiopian Priests who are Christians: Therefore Shame is not from the Apple being eaten, not from the Sin of Disobedience, as neither from an unwonted newness of Generation, or Concupiscence of the Flesh.*

But Sophisters know not that Shame was forgotten in Barbarians by Degrees, and that the loss of Bashfulness grew up through a scurrilous accustomedness, and a foregoing Penury of Rayment: Which Shame that the People of Israel therefore might not loose (they being for a great part of them Wicked) God suffered not their Garments to be worn out for 40 years in the Wilderness.

By that Miracle I say, God continually diverts the loss of Bashfulness, and by that Signe sheweth, that nothing could be alike hateful unto him, as is the loss of Shame.

From whence it becomes conspicuous, That the Shame attained by the eating of the Apple, was not troublesome unto, nor forbidden by God; but that under the Etymology of Shame, the chaste Speech of the holy Scriptures, whereby it covered the forbidden Concupiscence of the Flesh, lay hid.

In the next place, as many as do lay *Barbarisme* aside, do also likewise re-take their Shame that was at first lost. Yea neither is it a wonder, that People have lost their Shame through the persuasions of that Mockers, which teacheth Shame to be in the knowledge of evil.

At length the Atheists do oppose, *that it is a ridiculous fable, if it believed, that the Ser- 88 pent spake with a Humane Voice, and as perswading Adam, who had given unto Bruits their proper Names, and therefore neither could he be ignorant that Speech was wanting to the Serpent: for he ought to have been amazed, but not to believe such a perswader. But the miserable men are deceived.*

The Serpent dissembled the countenance of a Man, unto which wonder, if Adam had not yet given the name of a Monster, it is no wonder: And if he ought to give that Name from the Essence, as to other Bruite Beasts, he had called that Serpent a Scholastical and speaking rational Animal: The not unlike to which appeared to B. Anthony in the Wilderness.

For first, there came to meet him a fourfooted Monster, the which, when it had begun to speak, it spake imperfectly, and avoided or ran away: And afterwards, another, which in the Form of a Satyr, did perfectly speak the Dialect of the Country: For neither must we judge, that Monster to have been the Devil (because he is he, who never requires Prayers to be made unto God for him) and therefore, by the Church, it is called an Animal or sensitive living Creature, from the same Authority whereby Paul the first of Hermites was Reckoned among the number of Saints: but it is not called, a Devil or Spirit; and it is Decyphered by B. Jerome by its tokens borrowed from B. Anthony: Therefore Adam might speak to the Serpent, no otherwise than as Anthony to the Satyr.

The present Text therefore of *Genesis*, hath hitherto had no Arch-heretick since Origen, and Atheists, because it shews a true and literal History.

Last of all, I will add some things, as it were by way of impertinency. For indeed, I 89 have said that Fishes do Generate indeed, but not by way of Sexual Copulation, although they have Genital Instruments.

First of all, I think that there is an Univocal or single Generation of Fishes bringing forth Eggs: Therefore, I shall say enough by the example of one Fish. For neither were it meet for me narrowly to search into Fishes which are under the Waters, by their species or particular kinds.

There is a certain Fish in stony Waters, a devourer of Flesh, and easily the most swift of Fishes, called by our Country-men, a Trout: For nigh a little River or Brook, where Tyber

Tyber Perpendicularly falls from a high Rock, he is seen to ascend the whole height of the Rock in a straight line, five hundred foot at least: therefore he swimmeth threefold swifter against the Gulf, than the steep Water doth fall downwards.

- 90 First of all, here the Opinion of the Schools is false, to wit, *That the Water doth always fall down in a Circular Figure*: For there is seen a certain small drop of Water with a Spire or Point behind, and the Spire is the more sharp backwards, by how much the higher it falls: And that thing, the resistance of the Air convinceth of: For although they will have the Water to Imitate a Circle, because the Sphere is the most Capacious of Figures: for the same Reason of its greatness it most difficulty cleaveth the Air, the which therefore hinders the speed of its fall.

- 91 Furthermore, the Female Trout, her Eggs growing big within her, feels the Membrane of her Secundine to be broken, and to cleave asunder by Degrees, wherein the Eggs are entertained as in a purse, and presently she voids her Eggs, and layes them up in the Sandy bottom; yea the very Imagination of the Trout, destroyes her Eggs: For if the Water hath onely a Stony bottom (as I have perceived in our Springs or Wells that are Cemented with Chalk) the Eggs do not fructifie; but if the bottom be strewed with Sand, the Eggs do bring forth: But the Male Trout besprinkles the Eggs (being brought forth, with his Seed, and that Seed layes upon the Eggs without, like a Spiders Web: And at length, the Eggs being thus fenced, they passe over into little Fishes.

In this Species therefore, there is not a Carnal Copulation, and the Copulation should be void, the which within indeed, should not touch at so much as the thousandth part of the Eggs.

- 92 In the next place, neither is there an annexed Seed seen laying on the Eggs; and therefore neither is the Seed of the Male of the Constitutive part of Fishes; Although Eggs that are destitute of the covering of Seed, do never become Vital.

- 93 For it is seen, that Fishes have in this thing almost kept the shadowy Image designed for Humane Generation, before the fall. But as there is an innumerable Fertility of Fishes bringing forth Eggs, so also a possession of long Life; although the long Life be so easily attained, yet it doth most toughly adhere: And moreover, many seem to grow for their whole Life time: For by how much the farther, they depart from the Copulation of the Flesh, by so much the more fruitful they are, and of a longer Life.

So in the Lake of *Lemane*, a Trout doth oft-times ascend unto an hundred pound.

A Pike also, by a sign hung on him, is noted to have lived unto three hundred years, and to have grown unto an amazing bigness, and then neither as yet to have dyed, but by a violent Death.

- 94 An Eele in the Rivers of *Lire* nigh the Village *Rumst*, being sent to *Bruxells* unto the Emperour *Charls* the fifth, is observed to have been 17 foot in length.

Worms (in the Silk-worm by a Famous Example) after a Death or sleep of two Months, do Degenerate into Butter-flies. They Figure out a shadow of the Resurrection (for because they never go together or Copulate before, they rise again changed) neither hath the Female conceived besides an inspired *Chaos*, while as the Male being plainly without blood, and the whole Female is melted into her own Eggs. That Worm by its own will as by its own Funerall, co-weavingly encloseth it self in the Bombast, it represents the Image of the Death, and Resurrection of the Faithful, while as being a winged Bird, it flies out from thence, being before not instructed to flie, neither doth it afterwards stand in need of food; For we are taught by the abject Creeping things, of how much esteem it is with God to have abstained from Copulation throughout our whole Youth and Man-hood.

- 95 Moreover also, if thou shalt look more fully into the matter, that very wrapping being the Masculine Seed, doth adhere to the yolk without (almost after the manner of Fishes) notwithstanding, a Chick is Materially formed out of the yolke alone, however the *Aristotelicks* may grin to the contrary; and that thing after 12. dayes from thence, it hath lifted me to behold and prove against Idiots, by breaking the Egg daily. Truly the Curde of a Cock, adhering to the yolke, doth by Degrees melt, and is thorowly mixed with the putrifying white, the Chick in the mean time, forming it self of the yolke.

For from thence I have learned, that the Curdy Seed of the Cock, doth breath indeed a Spirit, the stirrer up, but not the former or framer of Life; And that thing a Coney with the Tail of a Dormouse, hath more plainly confirmed unto us.

At least-wise, there is a fruitful multitude of Fishes, and a prosperous Benediction thereof, and a less necessity of things requisite for bringing forth, a long continuance of Life,

Life, and a constant and easie Endurance of Cold and Hunger : Nimbleness also and swiftness of Motion, lastly, they bring forth without Pain ; which thing, Beasts that do admit of a Copulation of the Male, do not likewise do ; and so they unfold something concerning the first Intent of God, in Man.

At length in the last place, the Sophistical Atheists do oppose themselves by the Text of Genesis, *That God overthrew the World by a Deluge : Because the Sons of God had chosen and taken Wives of the Daughters of Men, which were fair ; and because these had generated Gyants, being strong and famous Men in their Age :* And that thing is there reckoned for much Wickedness ; the which notwithstanding, literally is seen to be none, in the Words of the Text, after that Matrimony was now established, and lawful : Yea, especially because Concubine-ship was a good while after dissembled in the Law, the which by reason of that Impurity especially, they named the *Mosaicall Law*, but not the Law of God : For truly, the Text doth not mention the Sin of *David*, but in the Death of *Uriah*, the Adultery of *Bathsheba*, and the proud numbring of the People.

Wherefore they are wont to refer this Text of *Genesis*, unto the religious Sons of God, and the free Daughters of Men.

But it hath seemed a vain thing to me, to have fled unto a single Life, and monastick Vows, and Evangelical Counsels, while as a plurality of men was required from the Command, *Increase ye, and be ye Multiplied, and Replenish the Earth ;* which Words indeed did excuse Concubine-ship.

Then in the next place, seeing Virgins are far more prone unto a single Life, Bashfulness, likewise unto Chastity and Monastick Vows, than Men ; The Flood had rather happened from the Sex being inverted or turned on the opposite Part ; and it hath been Written, because the Daughters of God had taken the Sons of Men for their Husbands. And moreover, neither can there be any thought or project of keeping Chastity probably taught, which had then separated the Sons of God from Virgins, nor any Apostasie in those Ages, which had provoked the Indignation of God unto a Flood.

Yet if that be so (the which I can in no wise through a Dream, perswade my self of) at least-wise it is from thence proved in behalf of my Position, that Chastity alone doth distinguish the Sons of God from the Daughters of Men ; and that therefore, the deflowering of Virginitie, hath procreated Original Sin.

But seeing that before the Flood, there was no promise of a single Life or Chastity, and that a Monastick or Monkish Life came not as yet into their Mind so long as Multiplying stood in a Command and Blessing ; I have conjectured (under a humble censure of the Church) that the Sons of God were the Posterity, and begotten of a Man and a Woman, having the true Image of God ; but that the Daughters of Men, were Daughters procreated by the Sons of *Adam*, and Nymphs, the Satanical-birth whereof, God alwayes very much abhorred : But there was an incredible Multitude of these in the Desert, one whereof was sent unto *B. Anthony*.

Also in the Dayes of *Constantine*, a live Satyr was carried about to be shewn, and afterwards was shewn being seasoned with Salt.

So once, there were also diverse Monsters drawn out from the Ocean, which spake, were instructed in divers Arts, and therefore rational ; they also lived among our Countrymen.

Indeed rational living Creatures were conceived as well in the Waters, as in Wildernesses, from a detestable Copulation.

Seeing therefore, the first Monsters had begotten Off-springs by the Sons of *Adam* of the Female Sex, they distinguished the Sons of *Adam* by the name of the Sons of God ; and these kind of Monsters, they name the Daughters of men : And these Nymphs, Heathenism, thence-forward after the Flood, named *Dryades*, *Nereides*, *Naiades*, &c. The which seeing they were fair to look upon, and men had taken them to be their Wives ; God from so great a Filthiness, and destruction of the humane kind (which the Text calls much Wickednesse in every Season or Age) abhorring them, determined to wash away the World with a Deluge. From that Copulation of Monsters and Nymphs, they generated strong Gyants, and those famous men of their Age ; and the which therefore, Heathenism long worshipped as Gods and Heroes : For otherwise there seem to be frivolous reasons of the Flood, according to the Letter : To wit, because men were married with women, and these had generated Gyants that were strong and famous men of their Age. Therefore the Text ought to contain the Indignation of God, and a suitable Cause of the Flood. The monstrosity is not only in the Figure and Forming of their Body, even as in the beginning of Degenerations ; but their Deformity being by degrees withdrawn and diminished

nished, the monstrosity stood in the sensitive Soul; the which an immortal Mind did not accompany, however outwardly they were Animals using Reason.

99

At least-wise, it is manifest from the aforesaid Text, that the true Posterity of Adam were not Gyants, but of the Stature of Christ the Lord, and framed by the same Statuary. But the Copulation of diverse Species, hath alwayes been execrable in the sight of the Lord, least Man should follow it by imitation.

The Law therefore forbad, that many Seeds should not be sown in the same Field, nor that Webs of Linnen and Wollen should be combined: To wit, it being mindful of that most Ample and much Wickedness, for which God ought to destroy the World. But the co-mixture of those Men before the Flood, with Nymphs, was so usual and ordinary, and likewise the copulation of Faunes with Maids, that a few only being excepted, and saved into the Ark, the whole Stock of Adam was defiled, and therefore passed by in silent: Therefore God decreed to destroy every living Creature, that he might likewise extinguish the guilty rational Monster: For besides a few which the Ark shut up, there was not he who had not contracted a consanguinity with that devilish Progeny.

For the B. Prophetess Hildegard, writeth (for she is the Prophetess of this Book, which was canonized in the Synod of Trevirum or Triers) unto the Clergy of Triers: *For very many People arose from the Sons of Adam, who had a forgetfulness of God, so that they would not know themselves to be Men: From whence they by shamefully Sinning, lived according to the manners of Beasts, except the Sons of God, who separated themselves from those same Men, and their Loves, of whom Noah was born.*

These things she, who acknowledgeth the Sons of God in both Sexes, and clearly approveth of my Interpretation of this Text.

For Satan had tried by this Mean, to overthrow Mankind, and to hinder the immortal Soul, that there might not be He, from whence the Son of God should be born: Therefore there was need of the Flood, not only for the Correction of Sins; but for the Salvation of the whole humane kind: For otherwise Cham had not been saved by the Ark; for he was now wholly perverse from Atheism: Wherefore I interpret the Text (yet under the humble Censure of the Church) to wit, *that the Sons of God* (who did bear the Image of God in their immortal Soul, and in their Body) *Took the Daughters of Men* (which only shewed forth a humane Image in the rationality of their sensitive Soul, and beautiful Fairness) *for their Wives, because they were Fair*; And from them they generated Gyants, strong and famous Men of their Age: For there was much Wickedness in every season, or at all times, so as that it repented God, that he had created Man; according to that saying, *All Flesh had corrupted its way*; that is, every Man had not only left the ways of the Lord; but he had also corrupted the way which he had chosen to himself: For God had purposed to generate man by the overshadowing of the holy Spirit, which was his immediate Image, and to conjoyn himself intimately unto him: But Man perverted the Intent of God: Wherefore afterwards, God who is totally Good, permitted Wedlock. And then again, Man bespotted the Generation of Adam; and had almost proceeded unto the Destruction of the Species, unless the Miracle of the Flood had come.

And at length, the Devil had again prevented the Intent of God by *Paganism*, unless in the fulness of times, the compassion of God had withstood him, he sending his Son from his own Heart or Bosom: To whom be all Sanctification. However God be no acceptor of Persons; therefore neither of Sexes: Yet it hath well pleased him to stuff the female Sex with a straight measure of tribulations, by reason of his unsearchable Judgments: *For the Hairs of our Head are numbred*; and a Leaf falls not from the Tree, but by Permission: And much less is a poor Woman or Maid born, whom the Finger of God hath not formed. Therefore I have many times enquired throughout the Parishes, after the knowledge of this Paradox; and I have every where found in the Books of those that are yearly Baptized, twice more Daughters at least, to be Born and Baptized, than Males. Also that twice more Males at least, are extinguished by Diseases, Travels, War, Duel, Shipwracks, &c. than Females: From whence it follows, that God doth every year create more Daughters, and that more do come to ripe Years; And from hence, lastly it is manifest, that so compleat a number of Maids is not appointed by God, but for the choiceness of Virgins; Seeing that he which hath forbidden Luxury, and Adultery, doth nevertheless create, and conserve a more plentiful Catalogue of Females, and a sparing Catalogue of Males; and he therein denoteth, that the Constancy of a single Life in the Woman, is acceptable unto him: To wit, as she comes so much the nearer unto the Purity and Innocency of the first Intention in Creation.

For

For a conclusion of this Treatise, I will adjoyn what S. Hildegard writeth unto the Grisean Monks, Page 186.

Virginity signifieth the Sun, which enlightheth the whole World; because God hath adjoyned Virginity unto himself, the which, Man being left, begat that Virginity, which a Ray or Beam of the Divinity plentifully poured forth; and the which Ray doth govern all things: For the King which ruleth all things, is God, and Virginity was conjoyned unto him, when God and Man was born of a Virgin. Thus the Queen stood at his right hand in Rayment guilt with Gold, with an encompassed Variety; because Virginity resisting the Devil, stood to the Virtue of the Divinity in its resplendent Work, being on every side encompassed with the Multitude of diverse Virtues: For the Divinity hath espoused Virginity unto it self, when as the Angel at first fell on the left Hand; and now also hath he elected a People of Salvation for himself, being in Adam, which People, he hath named his right Hand; concerning which People, he hath adjoyned Virginity unto himself, which hath brought forth the greatest Work: Because as God created all things by his Word; So also Virginity through the heat of the holy Divinity, begat the Son of God: Thus Virginity is not without Fruitfulness: Because a Virgin begat God and Man, by whom all things were made. But also by this means, all the Virtues of the Old and New Testament which God hath wrought in his Saints, are beguiled, being as it were a Garment beautified with Gold: And the Virgin shall freely collect these Virtues unto her self; Because the Ligament of a man shall not constrain or knit her up. The Wheele also which Ezekiel saw, hath fore-signified Virginity; because the same Virginity was pre-figured in the Law before the Incarnation of the Son of God: But after his Incarnation, she wonderfully worketh very many Miracles; because God by her Purged all Offences, and rightly ordained every Institution. For Virginity supports old Things, and sustaineth new things, and is the very Root, and Foundation of all good things; because alwayes and ever, it was with him who is without Beginning and without End: For the Nature of Man, which was destroyed by Sins, hath by Virginity revived in Salvation; seeing that by another Nature she hath withdrawn Sins from Men.

These things the Prophetes; wherein indeed are confirmed, those things which I have hitherto spoken concerning the entrance of Death into humane Nature.

CHAP. XCIV.

A Supply, concerning the Fountains of the Spaw.

The first Paradox.

1. Which are to be called Fountains.
2. Diverse Opinions about the exposition hereof.
3. The diversity of Soils in the Earth.
4. Incorporeal Seeds are Reasons entertained in the Elements.
5. The Root of Rocks is the Inn of Mettals.
6. The last Ground or Soyle, is the springing Womb of true Fountains.
7. The Virgin-Earth.
8. In the last Soyle the Waters do live.
9. When Waters do as it were undergo Death.
10. After what manner the last Soyle is in the highest Mountains.
11. A vital reason of Fountains from the similitude of the Microcosme.
12. What the Sea in Genesis is.
13. The External Sea is the Fruit of a greater Sea.
14. The boyling Sand is a thousand times bigger than the Sea it self.
15. A Paradoxal Explication of a Text of the holy Scripture.
16. The last Soyle is the internal Sea.
17. A Paradoxal Explication of a Text of Ecclesiastes.
18. A Regression of the Waters from the Internal Sea unto the External,

T t t t

ternal, and from this to that. 19. In this Regression, the benefits of Waters and Minerals are granted unto us. 20. Night, Darknes, Oromasis, Iliadus, are one and the same. 21. A Life of its own is attributed to the Internal Sea, from a Similitude or like Thing.

1 **W**E must needs before all, sharply touch at the Original of Fountains in general. Indeed I do not with the Vulgar, name any kinde of issuings forth of Waters, even those that are continual and unwearied Ones, Fountains: For although the decaying Snow, and repeated Rain, shall afford a dayly and continual issuing De-fluxion of Waters through the blind Passages of Rocks, and intervening Places of great Stones, or steep Windings; I do not therefore name them Fountains: For truly that heap of Waters is too casual, and accidentary, and so a dead one.

2 Therefore whereby it may be manifest, that there is a certain vital Principle, and spring in Fountains: In the first place, the Testimony of *Jesus Syrach*, being hitherto an obscure one, yet a most true one, comes to be considered: Whereby he would have all Rivers (by consequence also Fountains) to proceed and issue from the Sea, and at last to finish their Courses into the Sea.

Truly *Syrach* hath hitherto left a disquieted or dubious Posterity of Phylosophers; to wit, in what manner the Waters do contend upwards from the Sea: Seeing that the Earth every where constituting a Lip of the Sea, hath retained the Victory; because it hath restrained it by a Superiority of Scituation: But it is not yet therefore sufficiently manifest, how the Sea (seeing there is an off-scouring of heaped-up waters into the lowest Valley of the Earth) should besides, be able to ascend to the highest Rocks, and there to stir up Fountains.

Certainly the Rules of the Art of drawing Water are here silent, if the Scripture be to be observed, as it ought to be done: Therefore some neglect this place as un-touched; but others undertake to explain it with a Moderation.

To wit, that Rivers being indeed allured out of the Sea, in manner of a Vapour, should at length, by Rains, Snows, and Showrs, an interjected tragedy of a masked transmutation, require or return to the Sea: But this is to contend, that all Fountains have arose from Rain, or at least-wise from condensed or co-thickned air. And then they unjustly command, that not any Vapour is fetched from the Earth, but from the Sea alone, or the holy Scripture shall in vain affirm, that Rivers are begged only from the Sea; and not likewise from the Face of the Earth, not to be separated in manner of a Vapour: Which Straits, when as they seemed to many to be irreconcilable, or not to be shaken off, they by chance drave and dashed a certain Author, of the Fountains of the Spaw, against the Rock: For although I shall dissemble any thing that is of Mans weakness in the same, yet Christian Piety in an honest man, doth not suffer publique Blasphemy to pass over un-admonished of: The which Author therefore, I beseech to indulge my Liberty.

Aristotle (he saith) would have all Fountains and Rivers to be bred of Air resolved into Water: He had not read, I believe, although he were *Plato's* Schollar, that those four River of *Paradise*, (in *Phado*) issued forth from the Command of God. Why I pray thee, if thou sayest, that great Rivers are even at this day also bred only by a constriction of the Air, have they not also (*Phado* being read) and Nature moreover, being a Virgin, issued from the same Constriction, forthwith after the Creation? And he who believed the World to be from Eternity, to have left *Phado* neglected, nor to have expected any condensing of Air; unless perhaps he doated before *Goropius Becanus*; That those four Rivers were nothing else, but the Ocean sending forth Rivers into the four Coasts of the World: in which Sense also, the *Syrachian* Preacher saith, *That all Waters do come from the Sea*, and again, *that having passed their Course, they render themselves unto the Sea*: which Words do thus sound in the Schooles.

Goropius doated, and *Plato* before him, if he said that the Ocean did disperse four Rivers into the Coasts of the World, without any co-thickning of Air; in which same sense notwithstanding, the Preacher hath affirmed it: Therefore in the same sense *Ecclesiastes* or the Preacher, doated. But is not yet enough said, is not, I say, the Interpretation of the holy Scriptures as yet plain enough?

3 Therefore we must of necessity, first of all, set before our Eyes, the Diversity and Pavements of Soyles in the Earth: For elsewhere a Black-earth, abounding with Muds and Filths, a Clayie, White-clayie, Fat, Barren, Fenny, Metally, Sandy, Stony-Earth, and adorned

dorned with a various Comeliness, is presented to our Sight, according to the temperature of the Soyle and Heaven, the Influences of the Stars, and Suiting of Showrs, because indeed they are Fruits, but not an Element. The which first Soyle of Nature, if thou shalt Pounce, thou shalt in most places discover great or rockie Stones, again, Mettals, or Mineral Juices; but in some places, a Sand, and that here yellow, elsewhere ashie, there skie-coulered, next a little greenish, according to the changeable and many-formi dis-junction of the lurking Spirit (for Nature is subject to the Soyle) and the appointment of the subterraneous Archeus received from the creating Word.

Indeed in the Cup and most rich Storehouse of the Elements, do lay hid Reasons or Respects, being entertained from the Beginning, durable for Ages, they being the knowledge of things that are afterwards to be in their time, they being instructed for the uses of ungrateful Man, and patiently expecting from the Creation of the World, the compleat Digestions of things, and the fulness or maturity of Times or Seasons; and the which, an Architectonical or Master-working Chaos, being the impetuous or forcible Chaos, the Spirit I say, limited to our necessities, and filled with the Idea's of things which are to be in process of time, doth assist.

Furthermore, of Soyls there is not every where a like depth: For in some places, much depth of Sand, but elsewhere, very much of Earth doth occur: But straightway under the Soyle or bottom of the Sand, there is another for the mostpart, rockie or stonie: For that is by our Country-men called [*Keybergh*] whereon a race of Rocks being supported, here the more wealthy ranks of Mettals, and in the next place, of Minerals, have their Inns: And at length under a long and much unlikeness of Sand, under the Rudiments of Rocks, that Sand, that Sand I say, being most bright, offers it self, being void of a metallick Quality, and a strange Defilement; which Sand I say, is the last Soyle, and unpenetrable, yet oft-times plain to be seen in the superficies of the Earth: For therefore Nature indulging her own liberty, laughs at our Laws, and despiseth the Bolts of Predicaments, by an univocal or single Soyle.

That last Ground or Soyle of Nature, our Country-men name the [*Quellem*] but the French [*Sable Bovillant*] the which a Spade or Mattock hath not hitherto passed thorow: Because how much Sand soever, and how much Water thou shalt empty out from thence, yet presently others do fly unto it with an uncessant and swift course, for the supplying of the former Defect: From thence therefore I conclude,

That the aforesaid Soyle, as it is the last in order of Nature, doth so continue even unto the Center, unless perhaps the neathermost doth hold or possess some miles of the heart of the earth.

It followes from thence, that that Sand is the matter of the earth, not subject unto successive change; but is a perpetual and constant Sieve, whereby Nature doth strain thorow her uncessant Treasures of Waters, and most clear Fountains, for the communion of the Universe.

In this Soyle I say, there is a vital Vigour of the boyling-up Water: For as long as the Waters are conversant in the same Ground or Soyle, they are lively, being not subject unto the respects of the Superiority or Inferiority of Places, nor in the next place, obeying the Laws of drawing Water: For because they are lively, they keep their vital Property no less than the Center it self, unhurt.

Yet as soon as they run down from thence, they presently die, no otherwise than as out-hunted Blood, or a Hand that is cut off: for then they are at first constrained to obey the Laws of the more weighty Bodies, the importunate Positions of Places and Situations: To wit, that they may not cease, thenceforth to rush through steep Places, into the Sea, requiring as it were the Inn of their Antient rest.

In the fourth place it is to be noted: That even as this Soyle being exposed in the Air, in the superficies of the Earth, doth express its natural Properties, no less than that which lays hid some hundred of Ells from thence, beneath the Horizon of the Earth; So also thou shalt remember, that the same Sand doth ascend unto the greatest heighth of Mountains, and now and then unto their very top through the Seams and broad intervening Passages of rockie Stones, and from thence do thrust forth daylie Fountains, not any thing diminished by summer Heats.

For in Man, as long as the Blood doth float in the Veins, there is a like respect of Situations, as well in the Forehead, as in the Feet, and it is ignorant as well of [Above] as [Beneath :] But beeing chased out of the Veins, it puts on the Condition of weighty Bodies: So also in the *Macrocosm* or great World, as long as the Water doth enjoy a

common Life in the former Inn, it hastens upwards and downwards without labour, because it knows it not: But being once shaken from its vital Inn, it ceaseth not to hasten, until in its Iliad or Night, it recovereth its blessed Retirances or Receptacles of rest: Therefore the Spirit nourisheth the Waters within, also the swelling of the vast Sea, as the mind being diffused through the Joynts, doth stir the whole Lump. But from hence the Sea hath not yet sufficiently been made known, which watereth the Fountains, and vomiteth out Rivers, and whither the Scriptures saith, the same do at length unweariedly hasten.

12 For that which the Scripture calleth the Sea, is a Collection of all Waters, into their Antient and continual Cup-board: Of which Collection this beholdable and external navigable Sea, is nothing but the Fruit disposed into its Sconce.

13 Wherefore the Receptacle, congregating Root, and Collection altogether of all Waters, 14 containeth that boyling Sand, which verily being a thousand times more wealthy, and bigger, doth also therefore contain as much more Water by a thousand times, as the Ocean: Because it is that which fills up almost the whole Diameter of the Earth; for whose outmost Lip only, the External Sea doth fill up the depth of one or two Leagues at most.

15 For the *Arch-type* or first Framer, separated the Waters from the Waters: Not indeed the Sea from the Rivers (or the Sea should not be the Collection of all Waters) or both these from the Clouds; but the true and Internal Sea, from this External Navigable Sea, he disjoyned on the first dayes.

16 This Internal, I say Invisible (hitherto an Abyss) and great Sea, are those waters, whereby the Prophet Sang, the *The Foundations of the World were supported*; and the which, although they have hitherto stood neglected, are called in Genesis, *The Sea*, by the Creator of Things.

17 From thence indeed also *Ecclesiastes*, hath likewise fetched Fountains and Rivers, which were to return thither.

18 They run down therefore, out of this Soyle, and for fear of a Vacuum, the External Sea doth again pierce the same Sand, as it were by straining, and presently almost in its first Paces, sequesters or layes aside its Salmess.

19 But because Fountains and Rivers have by a leasurely Decursion or Race, dispensed the seeds and matter of all Minerals (which before they kept in their Bosom, and the commerces whereof, the Life of Man can scarce want;) therefore they swiftly hasten into the External Sea, whereby they may again require fruitful Entertainments at the internal Sea, the Night of *Orpheus*, the Darknes of *Pluto*, according to *Hippocrates*, the Oromafis of the *Persians*, the Iliad of *Paracelsus* (where Reasons, and Gifts, the Seeds of Minerals I say, being not as yet joyned unto Bodies, do lay) for the Water which is again to be gotten with Child by the Seeds. Therefore there is not an idle sliding down of Waters into the Ocean: For they are governed by Intelligence, and as if they were strong in understanding, cease not to utter their Offices, the Testimonies of an infinite goodness and providence. Surely as many as shall behold the Cabalastical Science, shall admire at this in the fore-front; yet most true: Because those that are ignorant of most things, must needs admire at most things.

21 But the Ocean doth dayly hand forth some convenient thing to our sight, by a double ebbing and flowing: To wit, the Navil or Bos of the Water ascending contrary to the Art of drawing Water, and the Waves swelling according to the Conjunction of the Moon: For the Sea liveth almost by a certain right of its own; to wit, the Wind being silent, it stirring up voluntary Ragings, curiously observing a proportionable Scituation of the Moon, and being swollen with Waves, it going to meet the same, lastly with a various successive change of Seasons, Light, and Motions, and a continued heap of Waters, lifting up its overflowings on high, sometimes here, sometimes elsewhere, at set Intervals. Therefore whosoever thou art, although thou seest dayly Wonders of Nature in the Ocean, the vital and fountainous Disturbances of the more inward, true, and lively Sea, and of the far more straight or narrow Abyss, which are dedicated unto humane uses, cease thou to wonder.

C H A P. XCV.

Another Paradox.

1. No Fountaines are from Air thickened.
2. Elements are not changed, or perish.
3. Whatsoever is generated, is generated by a Seed, and whatsoever is made in Nature, is made from the necessity of a Seed.
4. There are onely two primitive Elements, and two secondary ones.
5. A Paradoxal Explication.
6. A proof by handicraft operation.
7. The Heaven and the Earth shall perish, not the Water and the Air.
8. The Art of Distilling unfolds Natural Phylosophy.
9. What a Vapour is.
10. A proof against Aristotle.
11. A second Mechanical Proof.
12. What, and of what sort the Magdal or Sheath of the Air is.
13. Why small drops do not fall down in a Vapour and Snows, and when they do fall.
14. A proof against Aristotle.
15. A proof.
- 16, 17. A handicraft operation.

WWE have treated concerning the Spring, concerning the immediate original and nativity of Fountaines, more briefly than a Paradox, and more tediously (I confess) than the Doctrine of those of the *Spaw*, did require (for it is a most difficult thing to have kept a mean in all things) to wit, as the Waters do proceed from a most rich Inn of Waters, unto their appointments: Although in the mean time, they do now and then as-soon as may be reach the Air, but sometimes they run head-long down by long journeys and Pipes of Earth, and rockie Stones, before they yeild themselves to the Light: yet there was the same reason, necessity, and end of their Institution on both sides; to wit, the will of him who created all things for our uses.

But it remains to crave leave, that *Aristotelical* spirits may indulge my liberty, if I shall judge it a dream impossible to Nature, that Fountaines should be bred from a co-thickning of Air: For indeed that also is chiefly true, That Air was never, nor is it to be in any Age, Water; even as, neither was Water to assume the Form of Air.

For they are first-born Elements, and the constant Wombs of things, stable from the Creation of the World, and so remaining unto the end thereof: But whatsoever hath through the ranks of Generations, subscribed it self unto successive change, whether it may seem to be Earthly, Stony, or Liquory, it derives all that from the ma's of three Principles, dedicated unto the Tragedy of Generation, but not from the first Elements, which rejoyce not but in a stable continuance, and the which do again lay up their deserved Youngs into their antient receptacles, until the seeds are ripe for the Generation of a new Off-spring; which Seeds, the same Principles of Bodies being in the mean time thorowly changed by Digestions, do again cloath, and re-assume.

For from an invisible and incorporeal seed, entertained in the Wombs of the Elements, and putting on the Principles of Bodies, all Generation in the Universe, which is called voluntary, is made.

Others have called that thing a Flux, from a Non-being, unto a Being; which things that they may become more perspicuous, it is to be noted, that unto the production of every thing, two onely Sexes, if not one promiscuous one at least, have concurred.

Therefore also, by the same Law of a worldly harmony, there are Originally two onely Elements in the Universe, to wit, the Air, and the Water; which are sufficiently insinuated from the sacred Text, by the Spirit swimming upon the Abyffe or great Deep of Waters, in the first beginnings of the World.

The Earth therefore, and the Fire or Heaven, if they are Elements, they are called secondary ones, proceeding from the former.

For whatsoever of Earths, rocky Stones, Gemms, Sands, &c. doth exist, or flowes forth

forth into a stinking Vapour, or is at first changed into Ashes, a Calx or Lime; or at leastwise, through the Society of some Addittament, into a Salt (the off-spring of Waters) presently afterwards they all (the volatile Summe, exceeding or overcomming the fixed Summe) are made aieri and vapoury Effluxes, rushing into water with a hastened Violence: And so that, whatsoever is earthy, hard, solid, and compacted, seeing all that is reducible unto a more simple, thin, pure, and former remaining substance (pardon the Novelty most resplendent Prince) it must needs be, that it hath no Efficacy of an Element at all; but that they are more latter things than Air, and Water.

7 In like manner, we say of the Heaven, that the Heavens shall be changed, shall wax Old and Perish; and so that the Heaven and the Earth shall at length Perish; the like message of which Destruction thou shalt not find concerning the Air and Water.

In the next place, the Water, or Air, could never in any Age be reduced into any other former Body, by Art, or Nature: This therefore is the Face, this the Ordination, this in the next place is the Office, Combination, Fate and End of the Elements; to wit, that the unchanged Essence of two most simple Bodies, and their unmixed substance, may afford a vital Womb, or Prop, unto Seeds and Fruits, until at length the number of things to be generated, being accomplished, the heap of Principles, together with the Seeds, do constitute strange Families and Colonies, (their Bride-bed being separated) in a more blessed
8 Seat: For the very many Dreams wherewith the World hath suffered it self to be hitherto circumvented, the handicraft Operation of the Fire doth deride with loud Laughter: Who indeed will deny but that the Water is easily changed into a Vapour? But that Vapour or Exhaultation is so far from being Air, that the Powder of Marble or a Flint may sooner be Water, as we have shewn.

9 For a Vapour is in very deed, materially, and formally, nothing else but a heap of the Atoms of Water lifted up on high: The which our School shews forth more clearly than the Light at Noon.

10 The Air therefore, whether it be received in hot, or cold Glasses, and pressed together therein, shall never afford Water, but according to how much of a Vapour, that is, of an extenuated Water, it shall contain within it.

11 But the Water is separated into very small conspicuous Drops against the Sun, thorow the Glass, at the Beginning of Distillation, as long as the sides are cold; to wit, while through the vigour of Heat, it flies away extenuated into a Vapour.

12 And that thing indeed happens no otherwise, than by a proper Magnal (which in things mixt, and so also in the Water it self, is the Skie, thinner than the Air, and dis-joynable from the same, and sustaining its compression, and enlargement, contending for a middle thing, or Nature, between a Body and not a Body, receiving the Impressions of the External Stars of its native Soyle, being altogether intimate in all things, by reason of which alone, and not of Air, we draw our Breath) a proper Magnal I say, and a spiritual Being
13 in the Water, doth indeed lift the Water on high, it being lightened by Heat, procuring a divulsion or renting asunder of the Magnal; which same rent Magnal, detains a quantity of Water proportioned unto it self, which is rent upwards as well in the Glasses, as in the Clouds, and doth preserve them from falling, until through the compression, perhaps of succeeding Atoms (as it comes to pass in distillation) the former do grow together into drops, and do enclose the former Magnal or vital Being within themselves: Or the same Magnal of the Water being rarified through Heat, and being straightway after condensed through help of External Cold, doth constrain and restrain those same its own Atoms of small Drops, within the Limits of its command. I return unto thee *Stagyrian Aristotle*.

14 If Air be co-thickned into Water, seeing thou teachest Air more to excell in Moisture than Water; I pray thee why shall Cold which is natural to the Air, change the Nature of the Air into a matter which is too moist of its own Nature?

In the next place, now Cold, and no longer Heat, shall possess the vital Principle of Generation.

15 Wherefore, although a Vapour be Air generated of Water formally transchanged, and
16 of the same again alike water doth grow together; Now thou differest from thy own self, who admittest of so frequent and easie a return from a privation unto a habit. At length take thou also this handicraft Experiment: Air may be by force pressed together in an
17 Iron-pipe of one Ell long, that it can scarce fill up the space of five fingers; the which afterwards, in its enlargement, casts out a Bullet like a Hand-gun, it being driven with fire: which thing verily should not happen, if Air being pressed together, could through the coldness of the Iron, be made Water.

CHAP. XCVI.

A Third Paradox.

1. Concerning a Diet. 2. Seeds, from what things they are free. 3. A proof.
4. The best Fountaines, which, where, and of what sort they are. 5. Rivers from sharpish Springs. 6. A happy keeper of Fountaines. 7. Fountaines generating a Stone : From whence are Rocks in Banks. 8. Many Fountaines do make a plurality of Minerals. 9. From an invisible thing, is made a visible thing. 10. A hungry or eating Salt is an Hermaphrodite. 11. A twofold Excrement in us. 12. What Tartar is. 13. A manifold hungry Salt. 14. How the best Vitriol is made. 15. Another best Vitriol. 16. Iron is not changed in Fountaines of Brasse. 17. A third Vitriol. 18. A fourth Vitriol. 19. There is not a hungry sharpness of Vegetables. 20. The Salt of Sulphur is fixed. 21. That there is a hungry Salt of Fountaines. 22. Why a natural Salt is more noble than an artificial one. The Error of some. 23. The Manna of Alume. 24. From whence the matter of Vitriol is. 25. An error of neglect. Vitriol is in other Mettals.

W E now approaching nearer unto the Fountains of the *Span*, it is convenient first of all to re-assume what hath been spoken ; To wit, That Mettals, small Stones, Rocky-Stones, Sulphurs, Salts, and so the whole rank of Minerals, do find their Seeds in the Matrix or Womb of the Waters, which contain the Reasons, Gifts, Knowledges, Progresses, Appointments, Offices, and Durations of the same : The which, while they have expected the sufficiently digested seasons of their Original or Birth, they break forth under the Day, with the Waters their Wombs, which do lay up by little and little, their Youngs, accustomed to the Air, in the Earth ; no otherwise than as the Earth doth also expose its own Family of Vegetables into the strange Womb of the Air. Therefore Seeds now issuing out of the dark Womb of the Water (which the Voice of the Word hath there deposited as durable unto the end) even as they are the more nigh in their beginning, therefore also the more noble.

Indeed, Nature, Essence, Existence, Gift, Knowledge, Duration, Appointment ; were at first connexed in the root of the Seeds, which afterwards, by the unfolding of their Gifts, and necessity of their Functions, being by degrees drawn asunder into a plurality, do become subject unto disorder.

From whence it is, that an Oracle containeth it self in the admirable testimony of Hippocrates : *Numbers being increased, to wit, that (in generating) Proportions are diminished, and likewise that Proportions in decrease, being increased, Numbers are diminished.*

From whence it is undoubtedly manifest, that by how much a Body shall be nearer unto its first and seminal Beings, whether in Nature, or by Art, by so much it is more Powerfull, Noble, and Famous.

Wherefore, Seeds entring into the World, are at the first free from the Dimensions of Colours, Savours, yea and from the dimensions of Quantities : For Example sake,

The same Humane seed doth sometimes beget a simple, sometimes a manifold Young, received onely through a simplicity, numerousness of places ; and so it is not as yet, in its first Moments, subject unto the command of Numbers and Quantities.

From hence indeed it comes to pass, that in the highest Rocks, far from dregs, and among

4 among rockie-stones and sand, sharp Fountaines do arise, which are more excellent than all others; but being so called, not because they bear a tartness before them (for they are without savour) but because they are healers like unto sharp things, therefore they are more noble than sharpish things, by how much they are more grateful, and potent, containing the seed of an eating or hungry Salt, which is as yet free from the unfolding of Savours: For those Fountaines have joyned in a friendly league with our Nature, because they are drawn in with the sweetness of the palate of the drinkers, and an intimate good will of the Stomack, although in the greatest quantity. But through the refreshment of Nature, they do so most nearly imitate that universal Medicine, *Moly Homericum*, to wit, by defending of health, and propagating of the vital Powers, that they have seemed to have ascended as it were unto the top of Medicine. Such a Fountain *Paracelsus* would have to spring up in *Veltin* a little Village of *Helvetia*, in his Book of Tartarous Diseases, as he believed that the whole compass of the World did scarce contain such another in a Valley, for in the highest Rocks there are many.

5 For truly *Danubius*, the *Rhene*, the River *Rhoan*, *Saw*, *Po*, &c. do obtain such a Fountain in their first Spring.

6 I will add more: What if the President of the Heavenly Host shall be appointed chief keeper of the Den of *Garganus*, it shall not be from the matter, to believe that there is a certain happy Keeper prefixed unto these kind of Fountains; no otherwise than as Antiquity placed their Demie-gods, turning or tossing their Pots in the beginning of a River: However it be, those Fountains are nearest unto the Womb of darkness, and are well furnished with the first Beginning of hungry Salts.

7 On the contrary, there are other Fountains, wherewith a stonifying juyce is co-mixed, the which, through the Waters sliding down by degrees, do here and there sow great Stones, and Flints, as well in their bottom, as in the sides of their Paunch, and through the blind conduits of Veins, rocks in their Banks: For the River *Mose* shall be for an Example; for this River, doth from his rise, longly and largely, with his brim imbibing a stonifying juyce, strew the little Hills, from hence, even as far as *Visetum*:

8 Which juyce being now wasted, and having finished its appointment, *Mose* afterwards doth not behold Rocks: For it is not a simple Stone, but here it scatters Coals, there mines of Iron, and as yet nearer, sulphurous Fire-stones, according to the over-flowing of its banks: but elsewhere he shews forth Veins of Lead, either unmixed, or well mixed, with an Hermaphroditical birth according to the original of his Fountains: Which dispensation of Mines by a Trival Line, Adeptists do distinguish into their soils of *Peroledes* or Pavements.

9 Moreover, it is doubted, why Fountains may be called sharp, and from whence that tartness is to be derived: I will briefly shew it: For all the Seeds of Salts, as we have said, are situated in the Waters; Yet they have not as yet put on a Savour, but when they have found the convenient Principles of Bodies, and due Wombs of the Earth: For then, and not before, they express a Saltness, and cloath themselves with Salt: For here they break forth into an Alum, there into a Seay Fountainous Salt, but elsewhere into a Nitre, &c.

10 Wherefore it is to be noted, That a certain Hermaphroditical Salt of Mettals doth exist, the which for want of a Name, began in Deed and in Name, to be called, *An hungry or sharpish Salt*. Indeed it is a general one, and accommodable unto all Mettals, and therefore if it pleaseth thee, not to account it the first, and as it were the remotest matter of the same; at least-wise, it is the secondary matter of Mettals, and co-natural to all Mettals whatsoever.

That Salt therefore being void of a strange co-mixture, is sharp, and acceptable to our Body in a due quantity, because it cleanseth away, and consumeth altogether every Humour which is not Vital, and which is Tartarous:

11 For there is a two-fold Excrement in us;

One there is of ours, which is subject unto putrefaction and stink:

But there is another of things, which being a Traitor, perfects its Tragedy by an hostile coagulation; and by a general Etimology, is called *Tartar*.

12 A sharpish Salt therefore, is now and then considered like an Embryo, in order to a Mettal: Also often times, as it were a solitary Individual, but not as yet completed in its Ordination.

I will explain the thing by the example of Vitriol or Chalcantum.

14 For the best for Medicine, is according to an imitation of Nature, artificially made of Copper; and therefore that is by far the best, which is composed of Copper alone, without

out earthly filths, and a mixture of foreign things; the which notwithstanding cannot flow together in the Wombs of Nature: But it is made after this manner.

First, Sulphur is cast upon the melted Brass, until the flame hath consumed the whole; but the Brass being straightway poured forth, is infused in Rain-water, from whence it waxeth green: And that thing is so often repeated, until all the brass shall pass, as being pierced, into the Water: At length, the Water being exhaled, thou hast thy Vitriol: For that which before was Copper, now moreover, from Sulphur, hath attained a Salt.

Secondly, The most excellent Vitriol, growes naturally in Mines, wherein Nature hath brought forth that hungry Salt, corroding a fertile Vein of Brass, and being dissolved in the liquor of a licking Fountain, which afterwards Cauldrons do boyl into Vitriol. The *Cyprian, Hungarian, Romane*, is praised, and by all means that which in its examination hath contributed the most of Brass: But the sharp juyce of that Vitriol, is thought to change Iron into Brass; Indeed Metallick Men scarce acknowledging the delusion: because it consumes the place of Iron, the succeeding Atomes of Brass should supply it. Nor taking notice, that as Brasse, renders dissolved Silver beholdable, and corporeal, which else, in *Aqua Fortis* is invisible: So that it is the property of Iron to manifest the Brass dissolved in the Vitriol, by snatching it unto it self, and also that by the same Act, the Iron it self is dissolved, and doth vanish away in the Fountain: Fountains are my Witnesses. For truly Vitriolated Waters do become far more poor than themselves, in Copper, after that they have received the Iron, the benefit of the recovered Brass. Wherefore also indeed out of the Fountain (where, and as oft as a continual inundation of new Brass out of the Gulfe, faileth) after another manner the supposed transmutation of the Iron doth not happen.

Thirdly, in the next place, Vitriol is made by Art, of a Brassy-Fire-stone or Marcasite, being begot with childe by Sulphur. Indeed the Sulphur being abstracted from thence, a sharp or acide Salt, doth in a coursary number of daies, by degrees resolve the remaining Brassy-Body being exposed to the Air, in its marrowes or inmost parts, the which, through the same sharpness of resolution, doth dissolve a certain Brassy matter into it self: And the which being through the help of Water drawn out from thence, being also presently boyled, is made Vitriol: And so that, whatsoever at the first turn, resisted the gnawing of the hungry Salt, the burning of the Sulphur being repeated, doth wholly at last yeild and becomes into a Vitriol.

Lastly, in the *Fourth* place, the hungry Salt is co-bred, being grown together in the Fire-Stone, the which by a co-burning, and resolving, brings a certain Brassy matter with it from thence, and is made Vitriol.

From whence it is manifest:

First,

That a hungry Salt, although it be sharp, yet doth very much differ from any other sharpness, as much as the Vitriol differs from the Rust or Verdigrease, which is made by the Air of Vinegar, and so also by the Salt of the Vinegar being conceived within.

Secondly,

That although the Sulphur be wholly fat, and inflamable, yet in the piercing of the Brass, it leaves a certain acide Salt, half fixed, which else flies away in time of burning, and by the Campanie, is constrained into a juice.

Thirdly,

That the sharp hungry Salt of Fountaines born in the Bowels of the Earth, is the Salt of any Sulphur embryonated or not perfected: Yet that it is by so much the more noble than an Artificial Salt fetcht out of Sulphur, by how much it is nearer to its first Being, and unto the Seeds of the Illiad or Womb of Darknes: As is read above. Therefore thou shalt acknowledge, that they do far wander, who esteem of the natural endowments of the Fountains of the *Spaw*, from the properties of contained Minerals, even as they have now proceeded into their last matter: For truly it is manifest from what hath been said above, that the hungry Salts of Sulphur do most far differ from the property of Sulphur: And moreover, which is more, that the Artificial hungry Salt of Sulphur doth as much differ from that which is natural, as this embryonated Salt is nearer in its Root unto its first Seeds. They erre, I say, in the whole circumference, who compare the hungry Salts of Lead, with Lead, which is hugely distinct there from: For there is a very strange similitude of the perfect Salts, to wit, of Alum, Nitre, Vitriol, and of the same, not perfect. It is

U u u u

manifest

- 23 manifest by an Example: For the hungry Salt of Alume, which is sweeter than any Sugar (it is called the Manna of Alume) knowes no astringtion, being like unto its first Being.
Fourthly.
- 24 Seeing therefore the most excellent Vitriol, is materially nothing else but the embryonated hungry Salt of Sulphur, which hath gnawn out a certain part of the Brasse, but the Salt of the more base Vitriol, is drawn from a perfect Sulphur; we being therefore led by the proportion of things, have passed over the same Etymology of Vitriol, unto all the co-like Dissolutions of Mettals, which by others who write of the Fountains of the Spaw, I do not find as yet recorded.
- 25 For truly Vitriol is dayly made of any Mettal (except Gold) as well in the progress of Art, as of Nature: To wit, as a metallick Liquor, a coagulable Vitriol, I say, is effected from a Mettal, and the Wedlock of a certain hungry or eating Salt.

CHAP. XCVII.

A fourth Paradox.

1. Things contained in the Water of the Spaw, according to the Opinion of others. 2. The Falshood of their Positions is proved. 3. Ingredients of the Fountains of the Spaw. What the Vitriol of Mars may be. 4. Coagulation is never made without Dissolution, nor this without that. 5. Bodies do not act into each other. 6. Between an Action, there is the Odour of a dissolving Spirit. 7. The dissolving Spirit is Coagulated. 8. Why a vein of Iron is Invisible in the Waters. 9. Why Waters do smell of Sulphur. 10. Why Sharpnesse perisheth in the Waters, and when. 11. That which is manifest becomes hidden; and that which is hidden is made manifest. 12. Why not the Iron but the Vein, may be said to be in Being. 13. The Salt of Fountains doth not grow in the vein of Iron. 14. Why one Fountain is stronger than another. 15. The difference of Things contained in Fountains. 16. Why the Fountain Savenirius is not translated elsewhere. 17. Why the Water of Savenirius is the Lighter. 18. The Spirit of Salt doth for some time operate upon a Vein.

1 **V**Vriters do with one accord, affirm Water to be the continent of the Fountains of the Spaw: But we differ from them only in their Original; because it is that which brings no small moment unto the Nobility of the same: But in respect of the thing contained in the Waters, they far disagree from us: For indeed they affirm, that Vitriol is in the Water of the Spaw, and that Calchitis or red Vitriol, Mysy, Sory, Melantera or Blacking, Salt, Nitre (that Nitre I say, hath been found to be in them, by the examination of Distilling, which elsewhere they never saw, because they testifie it is that which since the Age of Hippocrates, had failed from thence) Bitumen, or a liquid Amber, the pit Coal, Alume, Bole, Oker, Red-lead, the Mother of Iron, the Vein of Iron, Iron, Ærugo or Verdigrease, burnt Chalcantum, Burnt Alume, also the Flour of Brasse and Sulphur, have therein discovered themselves: These things I say, we read to be attributed by Authors, unto the Fountain of the Spaw, under their Mistris Uncertainty; and so they doubting unto what Captain they may commit so great an Army, do conclude, that there are some

some Fountains, in which thou mayest most difficulty discern an eminent Subterraneous Matter.

Elsewhere in the Fountains of the *Spaw*, that a Heat of Vitriol is tempered with the Cold of Red-lead and Brass,

In another place, that the Fountains of the *Spaw* are actually cold and moist, but in Power or Virtue (which one, Physicians do examine) to be hot and dry; and therefore especially because they extinguish Thirst.

At length, they say that there is the Faculty of Iron, Sulphur, Vitriol, and of other mineral Things in these Fountains, yet an uncertain Proportion of the first Qualities remaining, whether thou dost consider the Variety of subterraneous Things, or the various Disposition of the Drinkers. And I also read that, that is to be noted; That the Fountain *Savenirius*, puts on it, rather the Virtues of mineral Things, than their Substance (that is, Faculties above, without, or not substantial ones:) For elsewhere they say, that Fountains wax sharp by Vitriol alone, and that Vitriol is of a most sharp Savour; but in another place, with *Diascorides*, they find in Vitriol, more of an ungrateful and earthy attraction, than of a sharpness.

Lastly, even as nought but the extremest torture of the Fires, doth allure forth a most sharpe Oyl out of Vitriol (to wit, a hungry and sulphurous Salt elevating the brassy Spirits;) So from hence they suppose Fountains to wax sharp, and not otherwise; to wit, that such an Heat in the Earth doth stir up the sharp Spirits of Vitriol, unto the Superficies of the Earth, which being there constrained by Cold, and changed into a sharp Matter, are co-mixed with the neighbouring Fountain: Which Position, many Anguishes do accompany.

First. Because there is no such voluntary Distillation in the Universe.

And then, because at least the inward parts of the Earth, according to *Hippocrates*, are Cold in Summer; to wit, when the Water of the *Spaw* is at best.

Thirdly, Because the Spirit of Vitriol cannot but gnaw the Earth or Rockie-stones which it toucheth, and therefore put of all sharpness, which is vainly dedicated to Fountains.

Fourthly, Because in Summer, the coldness of the Earth is not in its Superficies only, because it is more in condensing the Spirits, than the more inward Parts, from whence they imagine the Spirits to be chased, through the force of heat.

Fifthly, Because the Spirits of Vitriol being immingled with the Water, although negligently locked up, do neither lay aside their sharpness, nor are they tinged with a ruddie colour; the which notwithstanding, is altogether social unto Fountainous Waters.

Hitherto the Opinion of others hath led me aside.

I will confess my Blindness. I at sometime seriously distilled *Savenirius*, and *Ponbon-tius*; and indeed, I found not so great a Catalogue of Minerals, yea not any thing in them, besides Fountain-water, and the Vitriol of Iron, by other Writers before me neglected: But the Vitriol of Mars consisteth of the hungry Salt of embryonated Sulphur, and of the Vein of Iron (not of Iron) which Vein, the hungry Salt being as yet volatile, hath by licking, corroded.

In which Act of corroding, there is made a certain kind of Dissolution of the Vein it self, and a coagulation or fixation of the volatile Salt: The Salt I say, as long as it is volatile, that is, apt by being pressed by the Fire, to fly away, is reckoned among Spirits. But Bodies do not corrode Bodies, as such; neither do fixed things act on, or into each other; but only as one of them is volatile, that is, a Spirit, whether it be grown together, or liquid.

In the next place, in all solution (as may be seen in the activity of *Aqua Fortis*, distilled Vinegar, &c.) Some Exhalations are stirred up, being before at quiet, which as they are wild ones, they do not again obey coagulation; therefore the Waters do of necessity fly away, or being restrained, do burst the Vessels. But besides that also is afterwards to be noted, that how much of the Spirits hath compleated the solution of the Body, so much also it hath assumed a corporality in the solved Body.

From hence therefore, a reason plainly appeareth, why the Waters of the Spaw, in so great a clearness or perspicuity, do hide in them the dark Body of the Vein of Iron.

8 Next, why in the activity of an hungry Salt, they do cast a smell of Sulphur, notwithstanding the corporal Sulphur be absent.

9 At length, it is also easie to be seen, why the Waters about the end of their activity (for that speediness of solution doth continue a longer or shorter time; in diverse Fountains) do loose their Sharpness, and why the Vein being before transparent, doth then appear ruddy.

10 To wit, the Spirits being now partly chased away, or the same being weakened, and coagulated at the end of Activity, the imbibed Vein settles, and is manifested, which before had remained hidden; the Waters in the meantime, recovering their natural or proper Simplicity.

11 Furthermore, it is not idly to be denied, that Iron, or the Fragments of Iron are in the Fountains of the Spaw, but the Vein of Iron to be in them: For truly there doth more Virtue occur in the Vein, than in the Iron, to wit, of those subtile Parts, which the Furnace filched away in time of Fusion: Wherefore the Juice, Spirit, or hungry Salt (call it as thou listest) doth not grow within the Vein of the Iron, so that there may be a like co-melting of both in the Waters; far be it: The Salt hath obtained other Wombs in the Earth, from whence the Water sliding by, melts that Salt, and snatcheth it away with it self, as it were a Cousin-germane, being once the Son of another Water.

13 But if therefore, it be the longer detained in a notable hollowness about the Vein, it supbeth up more of the Vein into it self, as doth *Ponhontius*, and this the Fountain *Geronster* doth as yet more amply do: But *Tonneletius* being richer than the two foregoing Fountains, in a hungry Salt; yet is poorer than the same in the Vein: For from hence it is Cold, and more troublesome to the Stomack: Therefore which-soever Fountain doth more provoke Stool, is the more fertile in the Vein. Neither indeed was that thing unknown to the Antients, who used the Scale of Iron for the loosing of the Belly.

14 Virgins also taking Stomoma or the Powder of Steel, are wont also to vomit on the first dayes. *Geronster* therefore hath received more of the Vein than *Tonneletius*; but as much of Salt, but mitigated by reason of the Activity of the Vein received into it; and therefore that Salt hath become more gross and corpulent: But *Savenirius* is far more washy in Waters, having the least of the Vein, and hungry Salt; and therefore it sooner finisheth the Action of the hungry Salt, and Vein, and the Medicinal water sooner dyeth: And for the same Cause, it most easily passeth thorow the Stomack, is sooner concocted, and doth penetrate.

The presence therefore of the Spirit acting into the Vein, enlargeth the Pores in the Water, and works up the Water of the Fountain unto a lighter weight.

It is further to be noted, that even as in Wines, and unripe Oyl of Olives, there is a fermental boyling up; So the Action of the hungry Salt it self, is made: And not only upon the Vein, while it gnaws and passeth thorow the same; but also it operates for some time, upon the same, being snatched away with it: *Ponhontius* I say, far longer than *Savenirius*, &c. until that the Activities of the Spirits being worn out or exhausted, as well the Agent, as the Patient, the thing dissolving I say, like as also the thing to be dissolved, do decay or faile in the same endeavour.

CHAP. XCVIII.

A Fifth Paradox.

1. The virtues of a hungry Salt. 2. The effect of obstruction. 3. How far Fountains may act in a Man. 4. Whom they may not help. 5. An example of an effect by it self, and by accident. 6. A Woman is subject unto double Diseases. 7. The faculties of the Vein of Iron. 8. An objection. 9. A Solution. 10. After what manner Iron opens, and after what manner it doth binde. 11. A proof by an allied Example. 12. Whether they are convenient in the Stone, and how far. 13. That is a Cloakative Cure, which doth onely expell the Stones. 14. The Waters of the Spaw are for a Cause, that the Stone doth the more easily re-increase or grow again. 15. Wherein the true Cure of the Stone is placed. 16. From whence the remedy is to be fetched, and of what sort it is. 17. The first qualities are in Fountains. 18. Water, not Air is Internally moist. 19. The Virtues of Rellolleum and Cherio. 20. An objection. 21. A resolution thereof.

WE being now about to Treat, in a brief Method, concerning the Virtues of the Fountains of the Spaw, and being to speak by the Rule of a supply, will resume, that no other Natural Endowments are to be found, than those which are drawn out of a hungry Salt, and the dissolved Vein of Iron.

Wherefore, seeing a hungry Salt dissolves Muscilages, cleanseth them away, consumes them, and sends them forth; therefore first of all, it helps Stomacks that are beset with Muckiness: also by the same endeavour, it dispatcheth the same preter-natural sliminess (which we have called a Coagulable excrement of things in us) being crept a little more deeply and inwards, as well into the innermost Chambers of the Veins, as into those of any Bowell, but by so much the slower, by how much farther it hath taken its Journey from the mouth: Hence, it doth not sluggishly succour the obstructions arisen in the Liver, Spleen, and Kidneys, and Fevers, the Dropsie, and Jaundise bred from thence: For the matter obstructing being consumed, the obstruction ceaseth; which otherwise, seeing it is a hinderance whereby the Spirit of Life may spring the less freely throughout all Places, and perform its offices.

Therefore it deprives the parts which are behind it in a future order, of a Vital Communion, and consequently calls for Putrefactions. Therefore the Waters of the Spaw being drunk, are convenient altogether in all Diseases which arise from the Enemy, Tartar being received and Coagulated within besides Nature; So that a sufficient Root of Life be remaining, that is, if they are drunk seasonably enough.

Yet with that adjoynd Limitation, that the Power of the Waters doth not Transcend the Hypochondrials or places about the short Ribs: For the Waters do not reach beyond the Reins, to wit, unto the Heart, Lungs, or Brain.

Wherefore also, the Waters of the Spaw do not succour those affects which are Naturally or peculiarly from a property of Passion, unless by accident: The reason is, Because seeing Minerals are altogether unapt for nourishment, they are banished out of the Body with the Urine, the last excrement of Salts, to wit, the Commerce whereof, the lively Arterial blood doth no longer suffer. Therefore if they may seem to bring any help unto the Head, Heart, or Lungs, all that is to be reckoned to happen by a withdrawing of the affect, which causeth a distemperature therein, by a Secondary Passion and consent.

In the next place, neither do the Waters of the Spaw profit in Epidemical, Endemical,

cal, and Astral Diseases, as are the Plague, Plurisie, burning Coal, &c. as neither do they very much profit in those Diseases wherein a Poison subsisteth, being either inwardly received, or bred, or participated of from contagion: As also, neither in Diseases of Tincture, such as are the Leprosie, Pox or Foul Disease, the Morpew, Cancer, Falling-Evil, &c. Wherefore, we do not well agree with those who commend the Water of the *Spaw*, for all Diseases altogether without Exception: And so that, they extoll the same, even unto blasphemy: To wit, There is no cause, that we, having obtained the Fountains of the *Spaw*, should now henceforward be amazed at the Miracles of Ancient Waters, or of the Fish-Pool of *Siloah*, or of *Jordan* curing of *Naaman*: seeing, here also, we see those that labour with the astonished Disease, Convulsion, and Palsie, and Leprous Persons to be Cured. Fie, fie, Miracles are manifested by an Unimitable finger.

5 Besides, it behooveth rightly to distinguish effects by Accident, from those which are due unto their Causes by themselves: As, if a Virgin, through the failing of her Menstrues, doth labour with a strangling, Epilepsie, or affect of the Palsie: but her Courses bewraying themselves, upon the drinking of the Water of the *Spaw*, she be freed from the annexed disposition, there is not cause, that therefore, we should commend the true Apoplexie, Asthma, falling Evil, or Palsie to have been Cured by the Fountains of the *Spaw*.

6 For Diseases which proceed from the Womb, are, Uniuersally, the Client of another Monarchy and do consist of another Root, than those which break forth from the Condition of the Microcosme, as well in the one, as in the other Sex; The which indeed, if any one shall not distinguish of, he procures loud laughter to himself from the more discreet Person.

7 But besides it hath already been spoken, how much a hungry Salt may profit in Fountains: but hereafter we must shew, what the Corroded and dissolved Mine of Iron may act.

That therefore first of all, doth manifestly binde, and therefore it strengthens the Stomach, and any of its neighbouring parts. In loose therefore, and dissolute Diseases, the Waters of the *Spaw* do agree or are serviceable, to wit in those of the Lientery Flux, Cæliacke Passion, and Dysentery or bloody Flux, &c.

8 Whereunto, I expect that it will be objected, that whatsoever Irony matter is offered, it provokes the mouth Issues, and alwayes the breaches or enfeeblements of the Liver and Spleen, and so that from hence it is agreeable to truth, that the Waters of the *Spaw* are rather opening than Astringent: By reason of which difficulties, some perhaps doubting, do rather flie for refuge, unto the unlike parts in *Mars*.

I answer from the Adeptists; That there doth oft-times wander up and down in us, a certain resolved Salt, and Mineral one, plainly Excrementitious, a resolved Tartar I say, existing either in the first, or in the last matter, whereof, whether the Womb, Liver, Spleen, Kidney, the Mesentery, or Stomach be the Mine, we now reckon it all one; So that it be manifest, that it brings forth remarkable troubles unto that labour with it.

10 *Stomoma* therefore, that is, Steel or Iron Administred in Powder, being drunk down; as soon as may be, that hurtful Salt (which hearkens not to the commands of purging things) runs headlong unto the Iron, and adheres unto it, that it may dissolve that, and display its own Faculty: and so is Coagulated nigh that, and together with the Iron, goes forth. But if the Iron or Steel be drunk, being dissolved in a sharp Liquour, yet not hostile unto us (to wit the *Spaw* waters) Nature, the same liquours being wasted, and more inwardly admitted within, presently separates the Iron (because it is unapt for nourishment) from that which was co-mixed with it, and sends it forth thorow the Bowels: As may be seen in the blackness of the dungs of the Fountains of the *Spaw*.

11 In which Sequestration of the Iron, there is straightway made a Con-flux of Mineral Salts, no otherwise than as Silver dissolved in *Chrysulca* or *Aqua Fortis*, doth flie unto applied Brasse, and dissolved Brasse, unto Iron: The received Iron therefore, freeth from obstruction, and openeth by accident, to wit, the vanquished obstructing matter being taken away with it: yet not that it therefore ceaseth by it self, to be con-

12 It opens I say, by a specifical and appropriated power, but it constrains or binds, by a second quality. Now moreover, seeing the drinking of the water hath increased a courage and hope in the miserable sick, especially in those that have the Stone I will declare my judgement. It is certain, that the Waters of the *Spaw* do wash or rince the region of the Urine, both because they do easily pass thorow, and also because they being many and abundant-

abundantly drunk, and Mineral, their hungry Salt hinders, whereby the Spirit of the Urin (the onely Architect of Stones in us) may by a property inbred in it, the less Stonifie any thing : Because another more potent Salt doth now derive the same Spirit, being as it were bound, into its own Jurisdiction.

But because that is onely a Cloakative or dissembled Cure, although the made Stones and Sands are expelled, as it were by the cleansing of the sliding water ; yea, as long as the waters shall be drunk, they hinder new Collections of the Stone : yet because they do soon after grow again, we judge them to be unfaithful or untrusty Remedies for those that have the Stone : For by so much the more readily indeed, the Stone hastens to grow, by how much, that womb, the other parent of the Stone, shall be the cleaner : For shall not the Urine more easily glew a Stone unto a clean Urinal or Chamber-pot, than unto one that is besmeared with Oyl ? For from hence perhaps, the Kidneys of Bruit Beasts do abound with very much grease.

We therefore know a perfect Cure of the Stone, and the desired rest, to be a far different thing : wherein, the lesser Stones being sweetly expelled (which is the least thing) the greater indeed may return into their former Juice, by a Retrograde resolving of their Concretion or Composure.

But neither shall that be sufficient, unless the Stonifying inclination be taken away by restorers, to wit by the Collected harvest of a few remedies, nor is any one able to hope for an entire and wished for health, from the Stone, no less than from a Fever : concerning which, we have written in other places, and afforded Remedies : For the Virtue of healing, stands right under every weight, that is, all Diseases, are with it, of one value or esteem, and it can be diminished by no Disease. The more noble powers of remedies onely, are desired, which cry unto Heaven to the Creator, that they have come as it were in vain, neither that there is any one almost, who can loosen their bands : We must timely abstain from complaints, in an Ulcerous or corrupt age.

Therefore as to what belongs unto the first qualities of the Fountains of the Spaw, although we are very little careful of those, because they are Momentary, and those which have not a Vital Anatomy, as often as they are not infamous in a very incensed degree ; yet we Decree, that their hungry Salt, is in the first Degree of heat and dryth : but that the dissolved Vein of Iron, hath reached to the second Degree of Cold and Dryth.

But it hath been shewn with an indulgence of *Aristotle*, and by the above-said Inferences, that the water it self is moist in the highest degree, but remissly Cold.

But because those qualities, as well of the water, as of the Minerals, are *Relollecons* ones, or those which have not a Seminal Being in them ; they have not any thing of a Cure in them ; but they Preposterously or over-thwartly happen unto constituted things, like unto Colours : therefore we leave the Speculation of those, unto others, being content with the attainment of the Cherionial or occult quality.

Last of all, notwithstanding, we must answer to an objection. To wit, *wherefore is the Fountain Tonneletius, with the Plenty of its hungry and hot Salt, said rather to Cool and to be troublesome to the Stomack ?*

I will give Satisfaction.

The hungry Salt, although it be hot in its first qualities, no otherwise than as Oyl of Vitriol, Sulphur, *Aqua Fortis*, &c. are : yet it Cooleth by a third and proper Cherionial quality, to wit, as either being hurtful through its super-abounding, it weakens our heat ; but especially, because through its sharpness, it dissolves the Secondary humour, or immediate nourishment of the Stomack, and makes it unfit for nourishing : through the scantiness of which lively Liquor, it is no wonder, if the inflowing and begged heat of the Stomack do suffer.

C H A P. XCIX.

A Sixth Paradox.

1. *In what manner Foods are not for hurt.* 2. *A Paradox out of the Text of holy Scriptures, against the Dietary part.* 3. *It is proved also, 1, by an Experiment.*
2. *From the distributive Justice of God.* 3. *From the indication or betokening of Remedies.* 4. *From a Rule.* 4. *From whence the necessity of a Diet came.*
5. *One Precept.* 6. *The praise of Sobriety.* 7. *How the Waters may pass speedily thorow the Midriffs.* 8. *A Purgation.* 9. *The manner and requisites of drinking.* *How much is to be drunk.* 10. *A commendation of Elecampane prepared.* 11. *The sick must drink speedily, an why.* 12. *Returning, after what manner.* 13. *When he must Dine.* 14. *Whether the Water of the Spaw, be to be mixed with pure Wine.* 15. *And indeed after dinner.*
16. *Three Digestions.* 17. *Why he must not sleep after his Dinner at the Spaw*
18. *The hour of Rest.*

1 **I** Will now subjoyn a few things concerning Diet, and the manner of using the Waters
 of the Spaw. That thing in the first place, through experience being our guide, we have
 seen in the Dietary part of Medicine : that the quality of Meats or Foods, as such, doth
 no where bring Dammage, unless where a weakened, bed-rid person, and a defectuous
 2 Remedy is present. (*For God saw, that whatsoever he had made, was good ; and consequent-*
ly that whatsoever he had ordained for meat was a good food) but that its quantity onely
 is able to hurt : For eat thou whatsoever meats thou wilt, for example sake, and be thou
 wounded, so thou shalt not exceed in quantity, and thou hast apt Balsames, and consoli-
 dating Potions of Wounds, thou shalt feel no pressure and no dammage from the Meats,
 no otherwise than as if thou wert nourished with their most delicate choice.

3 A Testimony of which thing, Souldiers, and poor Folks shall give : Unto whom the
 Judge or Arbitrator of things had seemed to have been severe, if in Diseases they ought to
 be fed with Pheasants, Partridges, and other huckstery of Kitchens : For Nature de-
 spiseth the Rules of curiosity, as being defended by that aid, that she were vainly to de fire
 a Help and Succours against a Disease, by a Remedy which from a small quantity of Food
 is not able to satisfie the Defects which are to be prevented : For whatsoever ought to
 attempt the single combate of a Disease, surely by a stronger right, it ought to divert
 Symptomes which are to arise from Meats ; that I say, which is handed forth, or institu-
 ted for the brushing off of blemishes or hurts.

4 Therefore the necessity of a Diet is believed to have been brought in from the penury
 of the more profound Medicines, and not from the dainty allurements of Foods.

5 That one Precept of Diet is to be observed, I counsel him that drinks of the Waters of
 the Spaw, that he study Sobriety, and that he eat sparingly, like his neighbours.

6 For, what shall it profit to accuse the Health of our bordering neighbours, by the Wa-
 ters of the Spaw, if we live the more deliciously, and with too much fullness. Therefore
 let the Supream defence of Long Life (although it be a cruel thing to those that are un-
 accustomed) be Sobriety : Otherwise, those things which favour, do nourish best ; and a
 hungry Man will easily concoct those Foods which do favour him most.

7 By that onely rule of Diet, the Waters will pass thorow him, safely, speedily, and plea-
 santly : But besides it shall be profitable to brush off the filth from the Stomack, but the
 more crude and less sincere Chyle, from the Meseraick Veines : Which shall commodi-
 8-ously be done, if one dose of the Pills *Rysi* being duely prepared, and not from the perswa-
 sion of gain, be for the space of three daies continually taken, before the Waters : Or if he
 listeth not to wait the space of three daies, let him infuse an ounce and half of Conserve of
 Roses

Roses in eight ounces of the Water of *Ponhontius*, adding thereto a Scruple of Salt of Tartar. Let him drink the strained infusion.

He that is to drink of the Water of the *Spaw*, let him endeavour first to unload his Belly betimes in the Morning, and about the Twilight let him drink twelve ounces of *Ponhontius*, and ascend the Mountain : From whence when he shall be come down, let him drink twenty or thirty ounces of *Savenerius*, at the first of the Morning : For he must passe by degrees unto things not accustomed : As also *Ponhontius* shall premeditatingly open the branching passages not with a loaded quantity : He must add to the quantity daily, even unto a sufferance, as every one is his own Judge : The which thereby shall be easily conjectured, because if they shall drink as much as it behoveth them, after the example of *Hippocrates*, they are in a good frame, and do easily bear it.

But at the time of Drinking, in stead of Annise, Myva or Conserve of Elecampane being taken, the Water that is drunk is easily strained thorow the Midriffs.

But let the appointed dose be speedily drunk, seeing the progress of the Fountain is hastened, and therefore let the first Water be costed, (if indeed that is to be said to be truly costed, which doth not depart into nourishment) and expelled before the last Water approach ; which renders the Action of the native Heat renewed or frustrated.

He returning from the Fountain to the Village, let him slowly proceed, that not Sweat, but Urine, which is in his Desires, may be provoked.

But let the hour of Dinner be, when the Stomack shall be dispatched of the Waters, least the remainder of the Water being almost concocted, should over-hastily bring the crude juyce into the Veines.

It hath been doubted, whether the Water of the *Spaw* be with conveniency to be mixed with pure or unmixt Wine : I will say, That so Wines shall be made easily passable, and the passages shall be kept passable, and therefore with the borderers, I shall counsel to admix the Fountains with their Foods (that is, with their Drinks.) And therefore because he must eat sparingly about the tenth or eleventh hour, he is to go to *Ponhontius* at the third hour ; because we intend not a Fattening, but a Healing : Indeed if the Heaven permit, the Afternoon comes not to be enslaved to Cards, or Dice, not in the next place, unto Sleep ; but unto Walkings abroad.

For truly three Concoctions are compleated in Man : To wit, the First in the Stomack ; Another in the Liver ; But a Third, in all particular Members.

Seeing that every part ought to be nourished, the First and Second Decoction, do more prosperously succeed in Walking and Motion, and therefore there is a more plentiful expulsion of all Excrements, the which at the *Spaw*, we do especially attend. But let the Third concoction be in time of Sleep, to wit, while as the Vital light ought to inspire it self into the costed Humour, for assimilating sake : The which also, restrains all avoidance of Excrements, except its own, which is that of Sweat.

But of the hour of Sleep, the ripening of the precedent Morning, and hastening of the following Twilight, by Sleep it self, shall admonish him.

Blessed ye the Lord, oh ye Fountaines, Praise ye and Super-exalt or Magnifie him for Ages.

CHAP. C.

A Paradox of Supplies, being of the number of Judiciary Paradoxes.

1. Two Causes of the Stone among the Antients. 2. In the Stone of the Bladder, much muscilage or sliminess comes forth. 3. The curing of the Antients consisteth in a threefold succour. 4. A solicitous or careful Cure of the Antients. 5. A various household-stuffe of Stone-breaking things. 6. Why Stone-breaking things are derided by most. 7. It is answered about the end, unto an absurd Objection. 8. Despair among the Antients. 9. Of what sort the Curing of the Antients was. 10. A Modern Paradoxal Opinion. 11. Why any one may decline from the Antients. 12. Why the Antients have erred in their Cure. 13. The matter of Stones. 14. The difference of Tartar and Phlegm. 15. A History of Tartar. 16. A Mechanical Example. 17. From whence the Name of Tartar is. 18. An Essential Reason in the Example. 19. Why coagulation is not from a sliminess. 20. Substantial Generations are finished by the limited Seeds, not by a casual congress of the first qualities. 21. What, and where, the Seeds of Stones are. 22. The best Natural Philosophy is taught by an Analysis. 23. Another Reason against the Antients. 24. A third Reason. 25. A fourth Reason in the Macrocosme. 26. An Objection. 27. It maketh for us. 28. Gemms know no viscosity or sliminess. 29. Against the Efficient Cause of the Antients, a first and second Reason. 30. From whence the heat in a Stony-Kidney is. 31. An Example. 32. Why in the Stone of the Bladder they do not complain of heat. 33. Why there is a muckie snivel in the Stone of the Bladder. 34. A former Reason. Another. 35. Causes that are to be removed being unknown, Remedies have been unknown. 36. Safe Remedies which are meet in co-betokenings. 37. Of what worth the more external Remedies are. 38. A Paradox in the distinction of an Effect by it self and by accident. 39. How far they are profitable. 40. What an opening Medicine alone may be. 41. That there is not made an enlargement of the Urin-Vessels, by Drinks. 42. What can enlarge the Urin-Vessel. 43. A sounding Objection. 44. A distinguishing of Effects according to the pertinency of their Causes. 45. A Reason. 46. A Censure of the Remedies of the Antients. 47. A Curative Method. 48. In all urine there is a Stone. Who may be called, one that hath the Stone. 49. What the inclination unto the Stone in the Kidney or Bladder may be. 50. What Hope hath afforded for Curing. 51. How the Inclination may be taken away. 52. The Quality of a Remedy which takes away the Inclination. 53. The Medicine Arophor or of Mandrake. 54. An adverse Barking. 55. Hermetical, and Pythagorical Phylosophy do agree. 56. The quality of a Remedy resolving the Stone. 57. An Answer to an absurd Objection.

Seeing that the frequent Monster of the Affect of the Stone, doth call many unto the Waters of the *Spaw*, through the hope of a perfect Cure; truly it shall profit, more liberally to explain this Paragraph or sentential summe, least a breviary should produce obscurity. I must shew therefore what the Antients, and what the more Modern Disciples of

of the School of *Hermes* do think of the Birth or rise and Cure of the Stones in Man.

First of all, they have accused the matter of the Stone, to be a Phlegm, Snivel, Mucilage, or humane Excrement, but the efficient Cause thereof, to be actual Heat exceeding in the Member.

What else (say they) seeing from a Stony Kidney, much Sediment, but from a Bladder besieged with Stones, a continual muckiness is violently disturbed or expelled: and although there be no Heat in the Bladder, at least-wise, it is sufficient that those that have the Stone do experience the same Heat to be manifested in their Loyns: Therefore, seeing that against things manifest and known by Sense, none but a blinde man makes resistance against the Sun, the Testimonies of the Causes of the Stone already given, ought to remain confirmed, they being approved by a number of Authorities, and Dayes.

But these things being laid down, they go to the Cure, wherein moistening, opening, and cleansing things are their confided succours: By Clysters I say, by Baths, Fomentations, ointments, and moistening, opening, and cleansing Potions, they have endeavoured with all their might: To wit, whereby the Stone already bred, might be expelled, and by the chance of Fortune, the Consulation of Coagulating may be taken away from the approaching Ballast.

But for that which is hereafter to come, not any thing hath been provided. Indeed they have not sluggishly thought of the Oil of Almonds, or the supplying Medicines in the absence of this, to be given to drink for the enlargement of the Urine-Vessels, at the first entrance of the Cure, that there may afterwards be place for the following abstersives or cleansers, the more easily to expell the Stone.

To wit, by these suppositions, not a little (through the facility of the Art) suspected, they have thought, that in so great a Discommodity and lavishment of Nature, they have abundantly satisfied our Calamity, and so a Curative indication or betokening: unless perhaps, some Stone-breaking Medicines, as well of Herbs, Roots, Wood, Seeds and Fruits, as of certain Stones beaten into a Powder, being fetch'd (with a glorious Title received by the more chief Physitians) into the Composition *Lythontribon*, may seem to have been annexed unto the former: But they have been so called, because some have believed that they do break the Stone; others that they diminish it; but most have believed neither.

They indeed smile one us with a Beautiful name delivered by the Ancients: but they have been thus Administred hitherto, with an unfaithful event, and the Aid never answering their Promises.

Therefore others farther declining, do judge, that the Stomack, Veins, and Kidneys shall sooner be pierced and bored thorow, or shall sooner yield to a notable Corrosion, or violent power of breaking to pieces, than that a Stone which is far more hard than those and in its Mine, more separated from the mouth, should refuse the inbred foot-step of dryness and a conceived hardness, and then that it shall give up its name for a Clientship unto those Remedies.

And therefore, whatsoever thing resisting the second and third qualities, shall not obey a Medicine, that being as it were untamed, with the Elke, and as it were Monstrous, being harder than a Club, and Fatal, is Assigned to the Catalogue of incurable Diseases.

From whence we may understand, that the whole Method of curing the Stones, doth stand committed not unto a perfect but onely unto a dissembled healing: For truly they have earnestly laboured hitherto in nothing but in excluding the Stone already made; but they have in no wise gone to prevent it in the making; as neither hath any thing been consulted of, for the rooting out of the impression, or ready inclination to the Stone. Therefore, the curing of the relapses of the threatening stones, hath remained imperfect: As if by reason of that, other Diseases cryed Triumph, because that Providence being sufficient for all ends, should seem to have dealt more liberally with them: but that, for the one Treacherous Lurker, the Stone, as having Hostilely and Traiterously entred, it had refused Remedies.

But now, I will give you the Decrees of Juniors, by their Ranks or Orders.

And first, indeed, it shall not be for a Vice, to have declined from their appointed Rules, when as even hitherto, we observe their Aids to be for the most part uncertain, and do experience nothing but a feeble help, and seeing our purpose is concerning the Life and safety of our Neighbours.

For if other Arts do profit dayly, there is no reason (as if the Virtue of our Mind were

barren in us) why the Rules of Predecessours should deter us from a further search into the truth, and should thrust us into despair: For by the onely Decree of *Aristotle*, *That we must not dispute against him that denies Principles*, Phylosophy being brought into obscurity hath so remained. For if we (following the Flock of those that went before us, not because we must go so, but because it hath been so gone) must not command, likewise, neither must we be servants to the most free gifts of judgement.

12 The Fire therefore, which is the finder out of Arts, doth perfectly teach those of *Hermes* School, by Mechanical and manifest workmanships, *That the Original of the Stone doth not consist of the matter and efficient cause assigned*. For neither for that reason is it a wonder, that, the causes being not sufficiently known, improvident and unlike counsels have been hitherto described for this grief.

13 As to what therefore concerns its material Cause, that is a certain Stonifying juice (for, for want of a true word of expression, it is so called by me) so intimately besprinkled on very many Liquours, that it may seem to be well nigh Natural unto the same; neither is it otherwise subject unto a Divorce, than for that Cause of Calamities, that it may render us perpetually mindful of our thousand-fold frailty.

14 Therefore it is not a muckie Snivel, nor Phlegm: In the next place, we do not think that any Excrement or Putrifiable thing of ours, hath suggested a matter for the Stone; but it is an Excrement of things, a Traytor (we have called it *Tartar*) perfecting its

15 Tragedy within, by a Hostile Coagulation, the which, when it is not rightly separated in the Sheaths Dedicated unto the separation of an Excrement, surely it creeps inwards as being mixt with the Natural and Vital Juices: But it being at length, called back unto examination (because it is plainly unfit and uneffectual for Assimilation, and the information of the Soul) it either goes forth together with the Urine, as it were repenting of its conceived Treason; or if it shall the more subtilly marry the Vital nourishment, it more inwardly or fully enters, and presently after the time of its Digestion, brings forth the diffocible affects of its own Family in us, and Monstrous Conditions, and Ensigns plainly Tyrannical, whereunto Nature being at length trodden under foot, is compelled to hearken: All which things, shall appear even by one onely, and that, not a Forreign Example.

For it is easie to be seen, that every one of us, being also very well constituted or in a very good frame of Body, do send forth a Healthy, Yellow Coloured, clear Urine, void of Sediment and Muckiness, the which, if it doth also happen to be the longer kept even in a clear Glass, yet the space of some hours afterwards being passed, we from thenceforth call it a Stony Urine, because on every side, above and beneath, throughout the whole Jurisdiction of the Urine, the Urinal is infected with a thin sand adhering to its sides (oh what more plainly than the Tartar of Wine, hath given the name of a Coagulable, otherwise a Forreign excrement in us?) notwithstanding, neither was there therefore any presence of a more grosse visible Lee, nor were there any Testimonies of heat present, especially while that Sand became Conspicuous: For truly the Urin had already long before, waxed cold, before it had consulted of Coagulating.

But yet, there is on both sides the like Reason, Essence, Cause and Property of the Stone arisen in us, with that, which of the same Identity, and material subject, is Coagulated abroad in the Urine about the Urinal.

I will add further, that some detain their Urine for honesties sake, for some hours, without any appearance of Sands: the which Urine notwithstanding, being received in a Glass, hath without all doubt, separated its Stone in an equal time.

From hence therefore, at least-wise, it follows, that the sliminess of matter is not for the material Cause of the Stone: truly it consists in the Race or off-spring of a more hidden, and therefore of a deeper search in Nature, than that we should think its Natural Generation to be enclosed in sliminesses and the first qualities alone.

For whatsoever things are made in Nature, we must reckon them to be made from a necessity, and Flux of a Seed.

20 The Seeds therefore of Stones do lay hidden in the Juices, until at length, the Flux of the Seed being ripened, the last Ordination or end of the same, breaks forth into Act.

21 Therefore we have taught above, that the Stone owes its Family unto nought but a Stonifiable Juice, after the Similitude of Fountains in the greater world; And therefore they Err, who contend, that a Juice doth arise in the most clear and transparent Waters, being furnished with a Stonifying Power, as not seeing, so being ignorant, that a Stone doth arise in Phlegmatick Clayinesses and Muckinesses. For truly, that is not to favour any thing beyond Sense, nor beyond Rusticks.

Where-

Wherefore an Analysis or solution by the fire, is to be undertaken, the which indeed, as it proposeth a disclosure of Bodies, so a certain Conjunction of the same, before our Eyes, and promiseth a Man more certainty in his Study, than the vain Dreamed Doctrine which from *Materia Prima* or the First Matter, Privation, Fortune, Chance, an Infinite, and a Vacuum, doth as yet with a scanty or fasting mouth, consume the Spring of Young Men.

What think you I pray, if any Phlegmatick thing should of necessity and by it self, give a Material being to the Stone, and an actual and excessive heat should Coct that matter into a Stone, verily we must think that is done, because the heat did dry the Phlegm into a Stone: But that thing in man, is impossible, who doth every where, and alwayes (yea as yet somewhat more, in the Reins and Bladder) exclude so great a drying, by his actual moisture: And so much the stronger, because in the sudden passage of the Urine thorow the Kidneys, it cannot at an instant dry up any Muckiness, which is mixt throughout Urine, into a Stone, and the which Muckiness, the succeeding Urine, doth not moreover, vindicate from Dryth. Truly it should grieve us or be tiresome unto us to stay any longer in these things, unless we also had been deluded by these Dreams.

I will therefore re-assume: Let us therefore try, whether any muckie snivel being dried by heat, doth depart into a hard Stone, or indeed, into a *Tophus* or soft Sandy Stone: For from the snivel of the Nostrils, to wit, the most tough of all, being dried, a *Brickle Tophus*, but not a hard Stone, is at any time yielded. Besides, the Example lately given, concerning a very clear Urine, which is wholly freed from a visible sliminess, and yet affixing a Stone in manner of little Grains unto the Spondils or turning Joynts, forbiddeth to acknowledge such a Material Cause, also the single Progeny of Tartars, and likewise, the like Progeny of Stones in the Macrocosme, withstands the same.

But if indeed, we say, that heat doth not dry up the muckie snivel, while it begetteth the Stone; but that it constraineth or Coagulateth it by a property, not indeed, of drying, but of heating, or through a Concoction thereof; to wit, by the command whereof alone, the matter being restrained, and excited by heat, puts on the power of a curd, which is internal unto it.

But that is to have said something on our behalf, and is Voluntarily granted us; To wit, to acknowledge a property (subscribed unto Coagulation) in the matter, whether that matter in the mean time, shall be slimy, or cleer and transparent.

Because else Gems should exclaim, that they have stood in need of the sliminess of matter, whereby they may assume so great strength, and lustre; yet neither therefore shalt thou avoid the Rocks: Because neither therefore, hath any actual heat Coagulated a Stone in the Urinal, but far after the Urine had lost its luke-warmth.

In the next place, seeing that hateful sense of heat is wanting in the Stone of the Bladder, when as notwithstanding that Stone is for the most part, harder than that in the Kidneys; it by all means follows, that the necessary efficient Cause of the Stone, is not heat, or else that the more powerful heat should preside, for framing of the Stone in the Bladder.

Therefore the Studies of the more Modern Physitians do Decree, that heat in the Reins is not the Parent of the Stones; but a Symptome, but an effect following upon the placing of the hateful guest, the Stone; in the Bowel.

For as a thorn being thrust into the Finger, is neither hot, nor hardened by heat, nor by reason of heat thrust into the Flesh, yet heat follows the hurt, as a companion: So also, we must seriously take notice, that heat doth happen upon the hurting of the Bowel, made by the Stone existing in it, and being continually cherished thereby: For where Pain is, there (according to *Hippocrates*) is a Disease, and heat doth also flow thither as a certain latter thing or effect.

But that which happens in the hurt substance of the Kidneys, is not therefore made in like manner, in the Bladder, which hath it self in manner of a receptable, and sink of the Urine, which onely slideth by the Kidney, without delay. But if, as well the Reins, as Bladder, do, when the Stone is present, both of them, according to their own disposition, avoid a certain snively matter, cease thou to wonder, that the part being as it were, besieged by an Enemy, and suppressed in its Vegetative faculty, doth continually loose something of its nourishment, and (like an eye that is beset with dust its Enemy) as it were, weep forth its alimentary humour.

For all particular parts in us do well perceive what things are so agreeable, and what are extream hateful and execrable; and indeed, they do every where express no obscure tokens of that perceivance: For otherwise, the Stone of the Bladder being cut out, a continual issuing forth of muckie snivel should not yet cease, to wit, if that muck should have

have the Reason of a Cause, and not of an Effect of the Stones.

35 But as to what belongs to the Cure thereof, we must diligently mark, that it ought hitherto to be un-completed by those unto whom the true Causes of the Stone have not been made known; to wit, if in a removal of the Causes, and not otherwise, a disease Disposition ought to depart.

36 Indeed I admit first of all, that the Bowels lying upon the Urin-Vessels, being unburdened by Clysters, will afford by all means, a more easie Passage for the Stone to go forth: Fomentations also, likewise Anointings, and Baths, I promise to profit very much; because our Body, as it is one only thing in an agreement of all Parts; So according to *Hippocrates*, it is wholly as well within, as without, conspirable, and expirable: Likewise within and without, above and beneath, day and night, Fire and Water, have made three Circuits in us, and so that they wander hither and thither, and that by course.

37 For in very deed, the more external Aids are not perpendicular, but oblique or crooked Ones only.

38 In the next place, seeing nothing immediately reacheth the Stone, but what doth Urin-wise lick the Kidney: therefore it is certain that Moistening, Slymie, and muscilaginous Medicines (to wit, the Mallow, Marsh-mallow, Fleawort, &c.) have put off those kinde of corporeal Qualities in the former Shops of Digestions, as being plainly unlike to Urinary Qualities.

39 In the mean time, we grant that they so far succour those that have the Stone, as by their more sweet Juice, they do assuage, and temperate the Sharpness of the Urin; or as the Muckinesses of their former Life being driven away, they do keep within, in the Root, something of an absterfivive, or dissolutive Matter (which one only Matter we admit of, as being opening) which may be of use: Even as in the Juice of Lemmons, Quinces, Cicers, Pellitory, &c. But surely on both sides these are nought but even a feeble and sluggish Power for so great an Enemy. At length, neither do we sufficiently comprehend the things promised, How Oyl of Almonds may be able to enlarge or extend the Urin-pipes, whereof scarce one small Drop, and that not but through an Errour of the separating Faculty, doth reach to the Urin-pipes: The matter is thus.

41 Surely the Urin-Vessels consist of a moist Membrane, whereinto, as nothing which is not of its own Nourishment, doth the more piercingly enter; So the Oyle, although it should wholly washingly flow thither, it should not performe that in a living Membrane, which otherwise it might do in dry and dead Parchment: So far is it, that the Urin-Vessels being fore-occupied, and moistened with their own Nourishment and Urin, can receive or assume unto them any oylie Substance: For truly, there is not an easie Combination of Oyl with Water, and the too much swift Passage of the Oyl should come as flow, for the enlargment of the Urin-pipes.

Let us therefore account them to be sent Dreams: because the Urin-Vessels are never enlarged or extended, but by a more gross compaction of a Body; but that was not the Office of Oyl or Liquor: For indeed, a Urin-vessel is loosely and softly moist of it self, and being content with its own Urin, refuseth any further Liquors.

42 Therefore it is enlarged only by the Stone, that is, by the disease Cause, and being once amplified, it doth not fall-down, or contract again; As may be seen, that Stones being by degrees increased, are more easily expelled than, when long before being the least Ones.

43 But they will say, loosening Medicines being drunk up, that is, such as extend the Urin-pipes the miserable Diseased, are sometimes holpen; Wherefore enlargments of the Urin-pipes, do also happen.

44 I wish that he may want successes, whosoever he be, that thinks Deeds are to be taken notice of, in Philosophy, from the event, which Deeds, an Effect by it self, is never wont to attribute unto Causes by accident: For any the more sweet Liquor, shall perhaps infect the Urin, and shall render it more washy, through its mixture; these things indeed shall be for a delight and refreshment, in re-pressing the Cruelty of Symptoms; but it is not therefore lawfull to infer, that the more sweet Juice being drunk, the Stomack, Veins, or Urin-pipes, are either enlarged, or at least-wise, more apt for Enlargment.

45 For if any thing that is drunk, should render the Urin-Pipes more extensive in their Latitude, Truly that shall dissolve, and enlarge the Stomack, because it being deputed for the sustaining of a greater weight of Foods, shall on every side suffer an Extension; and as yet so much the rather, because that at the time of the head-long violence of the urgent

urgent Stone, much Vomiting doth excessively molest the Stomack, and therefore should pluck it abroad, even unto a tearing. Hitherto, nothing of Remedies hath been heard of in so great a Calamity: Wherefore we coming nearer unto a censure of those Medicines which have hitherto seemed by a gentle Absterfion, also those which by a certain Property, have seemed to drive out the Stone; with leave, we will ingeniously declare.

For although the Powders as well of Herbs, Seeds, Fruits, Liquors, and Waters, as of Stones and Minerals, the Cruelties of Symptoms being appeased, have at length brought forth the Stones, and Sands; what (I pray you) more famous thing hath even there been done, besides a curing of the present Fit? Surely, we have done no otherwise, than he who hath appeased a Fit of the Falling-sickness: I say, we have on both sides plucked off only some one particular Fruit of the Disease, the Tree being un-touched by the Axe, and the Root remaining safe: Therefore, whatsoever things we hope shall chiefly profit those that have the Stone, we will perfectly reach in two Heads.

First, That an Expulsion of the Stone be not intended (for something less cruel becomes a Physician, than that which Nature her self almost failing under her weight, is voluntarily buised about, as being disturbed by the sting of Symptoms) but its one only Dissolution. The Belts of coagulation, I say, being loosed, the Stone is by a solution, to be reduced into a Liquor, by a retrograde Conversion, to wit, into the matter from whence it grew together by a Composition or Conjunction. Let the second Head be, and that indeed a more famous one; That the stonifying Inclination be taken away: To wit, the which even still persisting, nothing worthy of returning thanks is done.

For indeed, it is manifest by the Example of the Urin abovesaid, that every Man hath a potential Stone in his Urin (for that thing the Condition of the *Microcosm* or little World did require, if it ought on every side to express the *Macrocosm* or great World) but that he is only miserable, to wit, in whose Urin a Power of stonifying lying hid, is actually unfolded within his Skin.

Therefore it is altogether necessary, that there be in the Powers of the things or parts of that miserable Man, a certain Impression, I say, a sealing Gorgon-Mark, by reason whereof, the Powers themselves also, are too exactly, exquisitely, stickingly, and thorow searchingly incumbent about the separation, and examination of the Urin; from whence there is then in that Shop, made an actuating of that Tartar, which before did grow as a watery Matter throughout the whole Urin.

But seeing that the sealing Notes and Impressions of Diseases, do not cohere with Species, but with Individuals only, we must never despair, but that the Impression being brought in may, as vanquished, give place unto a certain more strong and bountiful Ascendent, it holding its Inn in manner of a Tyrant. An Inclination therefore unto the Stone shall be wholly taken away, if the Power it self doth no more hereafter labour in an actual Separation of the Tartar from the Urin.

Therefore that over-exquisite separating Faculty is to be laid asleep: And that in no wise, surely, by an induced Drowsiness of Opium, or by the sloath, negligence, and rest of the like Stupefactive: Far be it; But there is a Planetary Power in the Remedy of *Castia Venus* or *Agnus Castus*, by a specific Property, so restraining all elaboration of Urin in the Reins, that the Kidneys being for the future, through a sweet idleness, as it were occupied in sleep, do give them to rest, indulging only their own Nourishment: This therefore is the golden Peace in us, which in Politicks, commands every one to attend only his own Offices, but not to be intent on the Offices of others, that he may obtain rest or quietness: Where it is to be noted, That the action, and permanent Operation is to be dispatched, not on the Powers of Bodies, but indeed, of Powers, if the vanquishing Faculty shall so overcome the vanquished one, that it shall for the future yield it self into the Army of the Victors: Under which by-work, it is plainly enough to be seen, that the chief Crases or constitutive Mixtures of Medicines, are not but in the most refined Liquors; because the Spermatick and first constituting things have not any commerce with the more gross compaction of Bodies. Furthermore, for the obtaining of that wished for peace in the Reins, we have successfully hitherto used and enjoyed the Medicine of Aroph or Man-drake, by *Paracelsus* described, in his Books of the Faculties of the Members.

I here, do hear Whisperers (who are wont to swallow nothing but afore-chewed things) accusing the unthought of darkness of Words: Those Coale-men (they say) do expose their Medicines unto us, hand to hand, and afford unto us ocular Demonstrations: But that is a new rule of learning the Philosophy of Pythagoras.

Let

55 Let them first buy Coals, and Glasses, and let them first learn those things which watching successive Nights, and Expences of Moneys have afforded us: the Gods do sell Arts to Sweats, not to Readings alone: Therefore the Example of *Altair* affrighteth me, from daring indeed to expose *Diana* to an open view, being spoiled of her Garment: He that can apprehend it, let him apprehend it. Depart thou therefore from thine own self, and bid farwell to accustomed things, who presumest by an easie Compendium of readings,

56 to search into the innermost Chambers of Nature: But besides whereby we may give satisfaction unto the former head of a full Cure; a searching out of a Medicine, for the every way safe and secure Dissolution of the Stone, did remain.

1. Therefore it is fit, that it be changed into Urin, to wit, that it may touch the Place affected.

2. That it have in it a Power of loosing the Bolts of the Stone. For it is the Gift of God, which Art doth not provide, but only sequestreth and extratteth.

3. That it possess that thing in a specificall and appropriated Property, but not in second Qualities, because they are for the most part frail things, failing in time of Preparation, or Infamous, through the Cruelty of Qualities.

4. That it be subtile, that it pass on every side, and be able to demolish its Object at a far distance.

5. That it be friendly to Nature, least indeed it pervert all things: For not every Messenger approacheth unto the Mines of Stones; but he alone, who being loosed from his Bands, hath known the wayes, being fited for his Journey, being a Friend to the Places, and which hath Virtues. They erre therefore, who ascribe this single Combate, only unto Corrosives; to wit, they too much trusting unto second Qualities, as being badly secure, do sleep thereupon, and through a neglecting of specificall Properties, also appropriated ones, (which are only extended on their proper Object) being sleighted, they have gone into Obscurity.

57 For the Oestrich doth not break or digest Iron; or little Birds, Flints, Unions, small Stones, through an emulous quality of Corrosion: There is a Virtue of loosing the Bars and Bolts of Tartar. It is convenient, this Virtue to meditate of, and this to imitate. I have spoken.

Blessed be ye God of Wonders, who at sometime converteth the Waters into Rocks, and at sometime, the Rocks into Pooles of Waters.

C H A P. CI.

The Understanding of *Adam*.

A*dam* put right Names upon all living Creatures; and therefore he had an intimate, or intuitive or clear speculative Knowledge of these, which is called the Attainment of Nature. Perhaps he had likewise a most full knowledge of Herbs, Minerals, yea and of the Stars: For truly an Object not before seen, being presented unto him, he had known the innermost Properties thereof.

From hence therefore, many do conclude, that the same Knowledge is given to us by a natural Property, as to the successive Heirs of *Adam*; but to be obscured through Sin: But others contend that it is wholly withdrawn, through eating of the *Fruit of the knowledge of Good and Evil*. Of these things, I being long since badly perswaded; alafs, I also believed them! For I left something untryed, that I might reach unto the promised Labour of Wisdom, the Paradise of Long Life, through the knowledge of *Adam*: But at length, I observed many things, which might subvert these very principles.

For First of all, I could scarce perswade my self, that *Adam* in the State of Innocency knew those Things, and more, which afterwards he through eating of the *Tree of knowledge of Good and Evil*, was ignorant of: That indeed, was, when he had eaten of the Apple of Oblivion, Drowiness, or Ignorance; But not when he had eaten of the Apple of Knowledge. But if in Original Sin, the Original Transgressor, and Defiler of humane Nature, himself, as yet knew what he knew before; after what manner indeed, by a super-attained new Knowledge, and that of another Disposition, being as it were laid up in the forbidden Fruit, had he withdrawn all knowledge from his Posterity?

And moreover, how had not he (who from his Creation had all Knowledge, except that which by a hidden Paraphrase and Emphatical manner of speaking, is called by the holy Spirit, *The knowledge of Good and Evil*) traduced this likewise on his Posterity? For if through eating of the Apple, *His Eyes were opened*, the which was even made known to him before (after some sort) they were closed, and he became a knower of *Good and Evil*, and *saw himself to be naked*; why was there not, at least-wise, in his Seed, as much knowledge as there was in the Apple? Why, if through his Seed, Sin be translated; is not also Shame translated, that it might naturally Shame the *Indians* of their Nakedness? That likewise a Child of three years old should be ashamed of its Nakedness? no otherwise than *Adam* was, presently after the Apple was eaten.

In the next place, if he were endowed from his Creation with the knowledge of the Natures, Societies, and Properties of Animals, and from hence it was pithily essential unto him; How had God, who is so great a Lover of us, withdrawn our essential, intellectual, and natural Gifts, whereby he will be worshipped in the Spirit of Man, but hath left natural Gifts unto the evil Spirit, the most vile, despised, and worst of Creatures? Had he so greatly impoverished our Spirit, and favoured the Devil more than the Sons of Men, with whom to be, he calls it his Delights? I indeed, after that I conceived in my Soul, the Knowledge of long Life, and the Causes of Death, knew, that as long as *Adam* was Immortal, his Mind did immediately quicken his Body, and governed it; Yea that for that Cause also, he perfectly understood whatsoever things are read to have been put under his Feet.

But after that the sensitive Soul was feminally introduced as a Mean between the Mind and the Body, *Adam* afterwards lived in the Soul, and middle Life; that is, after a modern or mean manner: And his Mind (for the support of the sensitive Soul) dispersed from it self, only a darksom Light, through the Mists of the Flesh, upon the Life of a new and impure Generation. But the former Knowledges which he had before the Fall, were in the sensitive Life, laid up through remembrance; yet over-clouded with the Dim and wretched Discourse of Reason: When as he had now generated after the manner of

Bruit-beasts, and had feminally transferred a middle Life; then all his Knowledge, as well former as latter, of Good and Evil; to wit, the remembrance of the same were obliterated; and Man thereby was born a vain or empty Table: From thence indeed arose a sensitive Power or Faculty in Posterity; or the same Faculty of a middle Life, which arose in *Adam*; the which, when through a just Maturity, it had waxed ripe in the Seed, it was at length brought through, into a true Light and vital Form, by the Creator; on which afterwards, the Mind of Man transferred its Vicarship; yet the Mind hath remained, being as it were retired into its own bottom, as abhorring the Impurities of Nature, nor being any longer able (unless by Grace) immediately to diffuse it self into the sensitive Soul: God so disposing of it by reason of his good Pleasure, as shall be shewn hereafter.

In Man therefore, there is actually a certain natural and formal Act, which is the Soul, or Sensitive Life, very much distinct from the mind: For as the Seed of a Dog tends into a living Dog, obscurely reasoning or discoursing; so certainly the Seed of Man doth not aspire into a dead Carcass, but at least into a vital Soul; and indeed flows into a sensitive, and discursive one, after a far more perfect manner, than in a Dog, Fox, &c. And that I might the more firmly attain this real Distinction of the sensitive Soul from the Mind in us; I have feigned a Young-man to be utterly lost for a Maid: For this Man wisheth with a full sense, and consent of his Soul, that he could be freed from that disdainful Love: And likewise, he would not that he should Love so dearly, and would not be freed from his Love: Not indeed, that he by turns, sometimes earnestly wills one thing, but sometimes another: but at once, and in the same Motion, and violent assault, he wisheth, and not wisheth to be freed from that Love: therefore he declares himself to be happy, and unhappy in one Love: And he suffers many Contradictories of that sort, at once: The which seeing they are not at once entertained in the same Subject and Respect; I long doubted, from whence such Contradictories should happen on every side, in one only Man; until at length the Apostle loosed this Knot for me.

I seeing another Law in our Members, opposite to the Law of our Mind; which Laws surely, he understandeth to be guarded not only with an Inclination and Desire; but also with Discourse and Consent. Then I clearly beheld the Affections of the sensitive Soul to be one, and those of the Mind to be another; but these (because the Operation of the Mind is well nigh obscured by the perturbations of the sensitive Soul) therefore they are weak: For in this sense, the *Apostle* calls Anger, Envy, Grudgings, Worshipping of Idols, &c. the works of the Flesh: For although they may seem to be spiritual Conceptions; yet because they are the Operations of the sensitive Soul, the which it self also is feminally stirred up in Nature by the will of Flesh and Blood; therefore they are the meer works of the Flesh.

We are therefore incessantly affected through the importunate Allurements of the social Soul; because we being forthwith after Sin, become degenerate, have lost Immortality.

Wherefore God doth now require only a few things of us, that we may enter into Life: To wit, that he that is Baptized, do believe the whole History of the Creed, and that he keep the Commandments of God through the Mediation of his Grace. But whosoever will aspire unto a higher Degree of Charity, let him endeavour so far as according to his Talent he shall be able, in all Humility, and by continuing in Charity, through amorous Acts, to run forth unto abstracted Things believed by Faith; until that through the Grace of a daily Continuance of Exercise, he shall feel his Mind to be overwhelmed by a supernatural Light: For the Meditation of natural Forms, doth much help in the entrance, for the understanding of the Thingliness of the sensitive Soul: For all Forms besides the Mind, seeing they are vital Lights which are to return into nothing; I have certainly learned, that the Mind doth by a most long interval, differ from the sensitive Soul.

Seeing that the immortal Mind, however it be retracted into it self, that it may not be defiled through the Wedlock of the sensitive Soul, its Companion; Yet it is president in all Acts, as it is near at hand, and doth totally inhere in the whole sensitive Soul; and so operates herewith after a deaf manner: But that this order of the Almighty, was on this manner, forthwith after the Fall of *Adam*;

I collected first, because he hath created some Men blind, and likewise mad, not for their own, or Parents Sin, but according to his good Pleasure, for his own Glory; for he made all things as he would, and most exceeding well. And then, because he would be worshipped in the Spirit. And lastly, because in his House there are many Mansions. Now, they should be in vain, if every Man should be equal in Grace in his Soul and Life.

From

From whence I collect, that there ought to be a diversity of Spirits among Men, and the Worshippers of the Divinity to be diverse in the degree of Charity. For truly he created the Angels, that they might worship him in the Spirit of Intelligency, without the Turbulencies of Bodies: But Man he deminished a little less than the Angels; yet he primarily chose him after the Image of his Divinity, for his own Glory and Worship, and for his adopted Sons, yet subject to an unhappy and calamitous kinde of living; because he is he, who being now sunk or drowned within the Body, scarce understands that he doth understand, having almost forgotten his Immortality, as being subjected unto the tyrannical Clientships of Diseases; so that the Immortal Understanding, in distracted or foolish and mad People, appears to be almost extinct: For it was the Almightyes good Pleasure, that those diverse Mansions should be inhabited, as it were by the Ladder of Deserts, and that Men being raised up by the Character or Impression of Grace, should come unto higher Dignities of understanding: To wit, according to that saying, *The Learned shall shine as the Sun.*

The first thing therefore, is in the Simplicity of an operative Faith, to have lived in Abstinency from Evils, and to have done good. And then, that they Worship God in the Spirit of naked Truth, and that through an operative Faith, they proceed through an attainment of a fatherly Love, worthy Deeds or Deserts in Charity (although we not intending it) helping to be more and more illustrated in their Understanding. And so at length, the Mind is loosed in that dark Prison of Bloods, and intellectually beholds it self, and with Humility admires the not before seen Light; and being led through unknown Paths, doth then without difficulty proceed by steps, unto the more abstracted Contemplations of a Kifs; where, it being as it were raised up again out of a drowsie Sleep, doth (as happy) adore God in Truth, Righteousness, and the Union of Virtues, under the Light of an abstracted Spirit: For neither, although God will have other Recognisances or knowing Considerations from Man, than from an Angel, ought he therefore less to rejoyce in the Divine good Pleasure; but to proceed in praising him, in an humble Adoration, wherein all understanding of Wildom, and clearness of all Spirits, are as it were supped up in a lively Center: Through this reward therefore of Degrees, the unutterable God hath since the Fall, Crowned Man with Glory and Honour, although degenerate, and hath put other things under his Feet; for neither before the Fall, had Man ever aspired thither: Therefore Man ought neither to have the knowledge of all things which *Adam* knew in his Beginning, nor also of his own self, if it ought to be a Desert: For a Crown presupposeth a striving Desert, and Victory: For we cannot bring back an increase of Grace for Victory, but by fighting. Therefore I conclude, that as we are constituted in the middle and sensitive Life, we know, have, are, or are able to do nothing, but only by Grace; Desert co-operating, and the which Merit, that God might confirm the Moments of Degrees, in the adoring Understanding were to be presupposed.

Therefore he that is of innocent Hands, and of a clean Heart, worshippeth God in the Truth of Spirit; and the State of that mortal Man, is far more happy, than was that of *Adam* being Immortal: For that poverty of Spirit, doth in truth know Wisely, knowes Knowingly, believes Confidently, perceives or feels Truly, and confesseth Humbly, that he is a meer subject of all Defects, that is, an unprofitable and evil Servant. In this Journey, the unutterable Kingdom of God, meets Man, the Ocean of Light, which gives an un-asked-for clearness of Understanding, and much more royal things, than the Desires of the Angels do wish for. These things exceed the Philosophy of the *Heathens*, and of Modern Atheists: So it is; Understanding and Truth hath it self in this manner, wherein our Philosophy doth place its Alpha or Beginning: The which if it shall not do, long Life is unprofitable, being unknown to so many Ages, being neglected by so many Wits, and even unto the end of the World, known unto none, but Adeptists alone.

Yyyy CHAP.

CHAP. CII.

The Image of God.

THe Fear of the Lord is the Beginning of Wisdom: But the Fear of the Lord begins from the Meditation of Death, and Life eternal: But many with the Stoicks, suppose the end of Wisdom to be the knowledge of ones self: But I call the ultimate End of Wisdom, and the reward of the whole course of our Life, Charity or dear Love, the which alone will accompany us, when as other things have forsaken us: And although the knowledge of ones self, according to me, be only a Mean unto the Fear of the Lord; yet from this, is the Treatise of long Life to be begun: Because the knowledge of Life doth presuppose a knowledge of the Soul; Seeing the Life and Soul (as I have the second time said) are Synonymals.

It is of Faith, that Man was created of nothing, after the Image of God, into a living Creature, and that his Mind is never to perish.

Whereas in the mean time, the Souls of Bruit-beasts do perish into nothing, when they cease to live: The weights of which difference I have taught, concerning the birth or rise of Forms. But hitherto, it is not sufficiently manifest, wherein that Similitude with God our Arch-type, or first Example is placed: For most do place this lofty Image in the Soul alone. I will speake what I judge, yet under a humble Protestation, and Subjection to the Censure of the Church.

It is thus: The original of Forms being already after some sort known, it is meet also exactly to enquire into the Mind of Man.

But surely, there is no Knowledge more burdensome, than that whereby the Soul comprehends it self, yea and scarce is there any a more profitable one; because the Faith doth stablish its Foundation upon the unperishable, and unobliterable Substance of the Soul. I have found indeed many Demonstrations divulged in the Books, about this Truth; But none of them at all, for what, in respect of Atheists, who deny the one only and constant Power or Deity from everlasting. *Plato* indeed, makes three sorts of Atheists.

The first indeed, which believeth no Gods.

A second Sort also, which indeed admitteth of Gods; yet such as are un-careful of us, and ignorant Contemners of small Matters.

Lastly, a third Sort, which although they believe that there are Gods, and those expert of the smallest Matters; yet they think them to be flexible through the least Dead or cold Prayer. This sort is most frequent among Christians at this day; even those who profess themselves to be the most Perfect, and therefore they dare do any thing; and believe Religion to be only for restraining People through the Fear of Laws, the Obligation of Faith, and Pain of infernal Punishment: For these impose grievous Burdens on the Shoulders of others, which they touch not so much as with their Finger, they wipe the Purfes of their own People, they prostitute Heaven to sale to dying Men, they everywhere offer themselves to be employed in Secular Affairs, as if they would declare that Religion doth not subsist without the State: It should be my greatest wish, that they might taste, at least but for one only Moment, what it is intellectually to understand, that they may feel the immortality of the Mind as it were by touching. Truly, I have not invented Rules, or a Manner whereby I might be able to illustrate the understanding of another: Therefore I deservedly testifie, that they who alwayes study, as enquiring after the Truth, do notwithstanding never attain unto the knowledge thereof; because they being blown up with the Letter, have no Charity, and do cherish hidden Atheism.

But this one thing I have learned, That the mind doth now understand nothing by imagination, neither by figures, and likenesses, unless the wretched and miserable Discourse of Reason shall have access to it. But when as the Soul comprehends it self, Reason and

its own Image faileth it, whereby it may represent it self to it self : Therefore the Soul is never able to apprehend it self through the discourse of Reason, as neither by Likenesses. For after I had known, that the Truth of Essence, and the truth of Understanding are one and the same thing ; I knew the Understanding to be a certain immortal thing, far separated from frail or mortal things.

The Soul indeed is not felt, yet we believe it to be within, not to be idle, not to be tired, nor to be disturbed by Diseases : Therefore Sleep, Fury, and Drunkenness, are not the Symptoms of the Immortal Mind being hurt ; but only the Pages of Life, and Passions of the sensitive Soul ; Seeing that Bruits also undergo such Passions : For neither is it a meet thing for an immortal thing to suffer by mortal Ones : For as the Mind is in us, and yet is not felt or perceived by us ; So neither are the continual and unshaken Operations thereof to be perceived ; because, if they should be sensible, verily they should not be spiritual, and meely abstracted : For indeed, although it may seem to us, that we understand nothing by a total sequestration of Discourses, and abstraction from all Things which may fall under Sense, under the Mind and Understanding, and that under the Beginning of Contemplations ; Yet the Soul in the mean time, acts after its own un-sensible manner, and spiritual Efficacy ; the which I have thus understood : For he that confesseth, doth oftentimes not feel the Effects of Contrition, and he greatly bewailes that his un-sensibleness ; yet being asked, whether he would Sin ? Perhaps he would answer, he had rather die : The un-sensible Operation therefore, of the Soul in confessing, is an Effect of a supernatural Faith : Because the Actions of the Understanding, are the Clients of another, and uncessant Magistrate. For therefore mystical Men do teach, That the Soul doth more operate in Faith alone, without Discourse, and Cogitation, and in operating, doth also more profit, than he that Prays with many Words, and by Discourse stirs up Compunctions in himself. But he is happy, unto whom it is granted to perceive those un-sensible Operations of the Soul, and issuingly to reflect the same upon the Operations, or Powers of the sensitive Soul : Because they do for the most part, leave their Footsteps afterwards on the Life, and for the future, do stir up the Memory, operating with Grace, in Faith.

The Libertines, of the Christians, and first Atheists, do deride the similitude of God in us, as feigned, or that we are framed after the Image of God.

But the other Atheists of the second and third rank, do not only grant, that we are created after the Image of God ; but do feign an Identity or Sameliness in us, with the vast un-created Deity ; and that neither doth man differ any otherwise therefrom, in his Substance, than as a Part from the whole, or that which had a Beginning, with that which was not Principiated ; but not in Essence and internal Property : The which besides Blasphemy, hath very many Absurdities or blockishnesses : For truly, whatsoever began, for that very Cause, it is a Creature ; but it includes an Imperfection in God, that he could create any thing out of himself, coequal unto himself in Substance : Because it is manifest from Philosophy, that all the Parts of an Infinite, are of necessity Infinite : Therefore a Creature cannot be more infinite in Substance, than as it was in Duration co-like to the Eternal : And much less is the Soul a part of the Substance of God, or essentially like unto him, the which, in Power, Greatness, Duration, Glory, Wisdom, &c. in it self, and of it self, is a meer nothing. If therefore it were not made from God, much less from it self ; but of nothing : Therefore they greatly erre, who believe that the Thingli-ness or Essence of the divine Image is seated in the Soul, by way of Identity of Substance : Seeing they differ from each other by way of an Infinite : yea, it should of its own free accord, be again dissolved into nothing, unless it were conserved in its Essence, by the divine goodness. Truly the Souls of the damned could wish to be dissolved into their former Nothing, which divine Justice, keeps in their Being.

Indeed the Soul hath henceforward, an eternal Permanency, from an internal Eternity, freely bestowed on it, and preserved in it. It is sufficient therefore, that the Mind is a spiritual, vital, and lightsome Substance.

And seeing there are many kinds and species of vital Lights ; that Light of the Mind differs from other vital Lights in that, that it is a spiritual Substance ; but that other vital Lights are not formal Substances, although they are substantial Forms, and therefore also they are by Death, reduced into nothing, no otherwise than as the Flame of a Candle. But the Mind differs from the Angels, because it is after the Image and Similitude of the eternal God. The Soul therefore hath that Light, and Substance of Light, from the Gift of Creation ; Seeing that it self is that vital Light : But an Angel is not a Light it self ; neither hath he a natural or proper, and internal Light ; but is the Glass of an uncreated Light ;

Light; and so that, therein he fails of the perfection of a true Divine Image: Otherwise, an Angel, seeing he is an incorporeal Spirit; if he should be lightsome of himself, he should more perfectly express the Image of God, than Man.

Moreover, whatsoever God more loveth, that is more noble; But God hath loved Man more than the Angel: For neither, for the redeeming of the Angelical nature, was he made the Figure of the evil Spirit, even as the thrice glorious Lamb, the Saviour of the World, took on him the Nature of a Servant: For neither doth that hinder these things, that the least in the Kingdom of Heaven is greater than *John*: For the Son of Man is not less than the Angel; although he were diminished a little less than the Angel. For in his condition of living, while he was made Man, he was diminished a little less than the Angel: For therefore an Angel alwayes remains a ministring Spirit: but he is no where read to be the Friend or Son of the Father, the Delights of the Son, the Temple of the holy Spirit, wherein the Thrice-glorious Trinity, makes its abode; that indeed is the prerogative of the Divine Image, which the eternal Light doth imprint on every Man that cometh into this World.

But moreover, in the year 1610, after a long weariness of Contemplation, that I might obtain some knowledge of my Soul, by chance, sliding into a Sleep, and being snatched out of the use of Reason, I seemed to be in a Hall dark enough; on my left Hand was a Table, whereon was a Bottle, wherein was a little Liquor, and the Voice of the Liquor said unto me; Wilt thou have Honours and Riches? I was amazed at the unwonted Voice; I walked up and down, deliberating with my self, what that might denote. Straightway on my right hand there was a Chink in the Wall, through which a certain Light dazled mine Eyes, which made me unmindful of the Liquor, Voice, and former Counsel: because I saw that which exceeded a Cogitation expressible by Word; that Chink forthwith dispersed; I from thence returned sorrowful unto the Bottle, took this Bottle away with me: but I endeavoured to taste down the Liquor, and with much Labour, I opened the Vial, and being smitten with Horrour, I awaked out of my Sleep: But a great desire of knowing my Soul remained, in which desire, I breathed for 23 full years.

At length, in the year 1633, in the sorrowful or troublesome Afflictions of Fortunes, I saw my Soul in a Vision; But there was somewhat a more Light, in a humane Shape, the whole whereof was homogeneous or simple in kinde, actively Seeing, being a spiritual, Chrystalline, and shining Substance: But it was contained in another cloudy Part, as it were the Husk of it self; the which, whether it gave forth a Splendour from it Self, I could scarce discern, by reason of the superlative lustre, or brightness of the Chrystalline Spirit contained within it: Yet that I observe, that the Mark of the Sexes, was not but in the Husk, but not in the Chrystal: The Seal whereof was an unuttered Light, so reflexed in the Chrystal, that the Chrystal it self was made incomprehensible; and that, not indeed by a Negation or Privation (because they are those things which are in respect of our Weakness, so called) but it represented a famous being, which cannot be expressed by Word. And it was said unto me; This is that which thou once sawest thorow the Chink: But I intellectually saw those things in the Soul, which if the Eye should see, it should afterwards cease to see. The Dream therefore shewed unto me, that the Beauty of the Soul of Man doth exceed all Conception.

At least-wise I comprehended the Vanity of my long desire, therefore I desisted from the wish of seeing my soul: For however beautiful that spiritual Chrystal was, yet my soul retained no perfection unto it self from that Vision, even as otherwise, after an intellectual Vision, the Mind is adorned with much Perfection of Knowledge.

I knew therefore, that my Mind in that Dreaming Vision, had acted the Person of a third, and so that it was not worth the labour of so great a Wish: But as to what hath regard unto the Image of God in the Mind; I according to my slenderness, confesse, that I could never conceive any thing, whether it were a Spirit, or a Body, or in the Understanding; or in the next place, in the Imagination, or in a meer intellectual Vision; which through the same endeavour, may not represent some Figure of it self, under which it might stand in the considerer: Because surely, whether I conceive a thing by its Image or Likeness, or whether the Understanding transchangeth it self into the Thing understood: At least-wise, I cannot consider this thing to be done, unless it should wander from it self, into the thing understood, with an interchangable course of it self; the which seeing it hath a certain actual Being, it hath alwayes stood with me under a certain Figure, or Shape: For indeed, although I conceived the Mind, to be an incorporeal and immortal Substance: Yet I could not as soon as I thought of its individual Existence, consider of the same, as deprived of all Figure; Yea, nor indeed but that it would answer unto the

Figure of a Man. For as oft as the Soul that is separated, seeth another Soul, Angel, or evil Spirit, that must needs know, that these things are present with it, that it may distinguish the Soul from the Angel, and likewise the Soul of *Peter* from the Soul of *Judas*: Which Distinction, cannot be made by Tasting, Smelling, Hearing, and touching; but only by a proper Vision of the Soul: Which Vision or Sight, doth of necessity include an interchangeable course of Figure. For seeing an Angel is so in a Place, that he is not at once, in another Place: Therein also is of necessity included, a certain figural Circumscription, no less than a local one. And then, I have considered the mind of Man to be figured after this manner.

For the Body of man as such, cannot give unto it self an humane Shape: For therefore it had need of an external Engraver, which should be enclosed within the Matter of the Seed, and which had descended into it from elsewhere: Yet for as much as that Engraver was of a material Condition, he was not able to draw a Virtue, as neither an Image of figuring, either out of himself, nor from the Masse of the Body: it behoves therefore, that something doth precede, which was plainly immaterial, yet a real and effective Beginning, whereunto a Power should be due, of figuring by a sealing impression, on the Archeus of the Seed. The Soul of the Begetter therefore, while it slides downwards, and through natural Lust, doth lighten the Body of the Seed, it delineates the Figure of its Seal, and the Seal of its Figure there (which is the one only Cause of the Fruitfulness of Seeds) from whence therefore ariseth so lofty a Stature of a Young: For if the Soul it self, were in it self, not figured, but that the Figure of the Body, should arise as it were of its own accord; a Trunk in any Member could not but generate a Trunk: Because the Body of the Generater not being entire, doth at least-wise faile in the implanted Spirit of that Member.

If therefore a Figure be implanted in the Seed, certainly it shall receive that Image from a more vital and former Beginning. But if the Soul doth imprint a certain Figure on the Seed, it shall not counterfeit a foreign or strange Face; but shall decypher its own Likeness: For so also the Souls of Bruit-beasts do. And although our Soul, by reason of its Original, be above the Laws of Nature; Yet by what foot it hath once entered the threshold of Nature, and is incorporated therein, it is afterwards also, constrained to stand to its own Laws: because there is a univocal or simple Progress, and end of vital Generations: For neither otherwise, doth it want Absurdities, that an Operation of so great a Moment (as is the Generation of Man) should happen without the consent and co-operation of the Mind; which if it be so, it must needs be also, that fruitfulness is given to the Seed by the Soul, by a Participation of its Figure, and other vital Limitations.

Indeed every Soul doth to this end, Seal the Image of it self in the Spirit of the Seed, that the matter being reduced unto a requisite Maturity, shewing a delineated Beauty, and also the similitude of the Begetter, may be able to beg a formal Light from the Creator, or a Soul of that Species whose similitude is expressed in the Figure. For we believe by Faith, that our mind is a true Substance, which is not to die; but that the new Creation of a Substance out of nothing, doth belong to God alone: From whence there is not many, but one only spiritual Father of all Spirits, who is in the Heavens; who if it hath well pleased him, to have adopted the mind only, into his own Image; it seemeth also to follow, that the vast, and unutterable God, is also of a humane Shape; and that from an Argument from the Effect; Seeing that the Body is like wax, on which the Seal of the Image of the Mind is imprinted: but the mind hath its Image, and essential Perfection, from him, whose Image it beareth before it: But because the Body is now and then defectuous, and like unto a Monster; Most have thought that the glorious Image of God, doth wholly consist in the rational Power or Power of Reason: They not considering that the Image of God, doth in the nearest, and more perfect manner, consist in the Soul, and from thence also in the Body, being formed after the exemplary Character of the Soul: In Operation of the Figuring, if there be an Errour, that this be not to be attributed unto the Image, but unto other Causes issuing from elsewhere.

Furthermore, how much is to be granted unto the rational Faculty, for the denominating of the Image of God, I have taught in its own tract, concerning Reason: Yet the more learned Part of Christians, hold that the Soul doth most nearly express the Image of one, and a trine God, by a single simplicity of its Substance, and a ternary of its Powers; to wit, of Understanding, Will and Memory: which Similitude hath alwayes seemed unto me Improper, that the Mind should be the Image of God, from an excelling, high and singular Ability: For truly, an Image involveth a Likeness of Figure, but not an equality of Numbers. And moreover, if the Soul doth in its Substance represent the holy

Sacred

sacred Trinity; but understanding, Will, and Memory, a Ternary of Persons; it must needs be, that the three Powers of the Soul, are not Properties or Accidents of the Soul: Yea, that those Powers, are the one only Substance of the Mind; or such an Image doth badly square with the Type, whose Image it is believed to be.

I therefore consider, that not indeed the Mind of Man alone; but that the whole Man was framed into the Image of God. Wherefore, although the Soul in this sense, doth express a certain Ternary in its Powers; yet in no wise, Personalities: And then, because no Person of the holy sacred Trinity doth represent the Will alone, or the Will a Person; no Person doth resemble Memory, as neither any one being separated from the other two, the Understanding in Property.

Then also, because the three Powers of the Mind, are considered for the most part, as it were Accidents of the Soul; surely, these cannot in any wise express an Image, or any nearer supposed thing, besides a naked Ternary of Accidents collected into the Substance of the Soul: In which sense the Soul doth less denote the Image of God, than any piece of Wood: The which sheweth by its Analysis, only Salt, Sulphur, and Mercury; but not three Powers only like the Mind, in the aforesaid similitude of the Vulgar.

Three Substances I say, being concluded under the Unity of a composed Body, and diverse, the which notwithstanding, in their connexion, made one only Substance of Wood.

Furthermore, *Taulerus* divides the Soul into two Parts: to wit, the Inferiour, or more outward Part, which he calls the Soul; and the other the Superiour and Bottom, which he calls the Spirit: In which Part he saith, it doth specially represent and contain the Image of God: Because the Devil hath not access, thereunto the Kingdom of God being there: But unto both Parts he assigneth far different Acts and Properties, whereby he distinguisheth both. But at least-wise, that good Man blots out Homogeneity or Simplicity of kinde from the Soul, wherein notwithstanding, it ought chiefly to express the Image or Similitude of God: Yea, in this respect, he not only denies the Image of God to be propagated in the whole Man, but also in the whole Soul: Surely, I shall not easily believe a duality in the Soul, nor admit of the interchange of a Binary, if in its Essence, it ought to express the Image of the most Simple Divine Nature: But rather it behoves, that it stand in a most simple Unity, and an undivideable Homogeneity of Immortality, and mark of indissolution, out of all Connexion, or Interchange. I say therefore, that the glorious Image of God, is not only in the Soul; but the very Mind it self, is essentially the glorious Image of God: And therefore the Image of God is as intimate to the Soul, as the Soul it self, is to it self: For I consider the mind as a Homogeneous, Simple, Immortal, Undivideable Spirit, to wit, one only Being, whereunto Death adds nothing, or takes nothing from it, which is natural unto it in its Essence of Simplicity.

But next, as a Partaker of Blessedness; because Damnation is unto it by accident, besides its appointment, and by reason of a future Defect. Such a Soul therefore being separated from the Body, makes no more use of Memory, nor of Remembrance, through a beholding of the Place where it was, or of Duration; But the one only [*Now*] doth there contain all things: Therefore if any Memory should remain unto it, it should be in vain; yea burdensome for ever. The same thing is to be judged of Remembrance or calling to Mind; Because it is that which breaks forth into Act, only through a Discourse of Reason; and therefore in Eternity it hath no longer Place, where the Soul, through the beholding of naked Truth without declining, Wearisomeness, and Defect, stands out of necessities of remembrance. The blessed Soul therefore, should stand out of the aforesaid Ternary of Powers; and therefore neither should it any longer represent the Image of God, for which Cause alone it was created: Yea, by a more full looking into the Matter, I do not find Memory to be a singular and separated Power of the Soul; but a naked manner of Remembrance: For therefore forgetful Persons, do by the help of Imagination (which is the Vicarefs of the Understanding) frame an artificial Memory unto themselves, and they learn a far more strong one, than otherwise, their natural Memory would be.

And moreover, Will departs from the Soul, together with the Life, because it came accidentally to the Soul:

Seeing that God after the Creation, placed Man in the hand of his own free Will; which thing surely denotes that the Will is not, after a proper manner, essential to the Mind; but from a grant, that it may be instead of a Talent, and that he may follow the way which he had rather chuse: Otherwise, seeing nothing is more pernicious than Free Will; because it is that alone, which breedeth all discord between God and Man; surely such a Faculty cannot have place in the blessedness of Eternity: Because the freedom of willing being taken

taken away, the very Will it self perisheth : For otherwise, what shall a power of willing avail, where there is no longer a liberty of being able to will?

But (say they) in Heaven, the Will is confirmed : That is, the heavenly Wights cannot will, but what God willeth : For they that are in Charity cannot but will those things which belong to Charity : Which is as much as to say, The heavenly Wights, can no longer will, but God alone doth there will and nill : Therefore the Will ceaseth, while as a liberty of willing is dissolved.

For truly, the Will cannot be serviceable, or profitable unto a blessed Soul to Eternity, while as, neither is it able to be brought forth into Act : And such a Will should be onely a wishing : The which surely is not in Heaven, where there is a full satiety of all desirable things, with all abundance.

The Will therefore, should be rather a burdensome Appendancy of a blessed Soul : Let it be sufficient therefore, that in this Life, men by a Power of Willing, have well deserved, and have treasured up their Talents for advantage.

Indeed I speak with a consideration, concerning the power of Willing, for after this Life, a substantial Will ariseth and manifesteth it self, which hath a distinct essence, from the power of that accidental freedom of Willing : For as the imaginative faculty dies with the Life, so also, that free power of Willing ceaseth : Therefore I have believed, that the very spiritual substance of the Soul, doth shew forth the Image of God, but not in its Powers : Namely, herein, most nearly, God is an un-created Being, one incomprehensible, eternal, infinite, omnipotent Good, a super-substantial Light and Spirit : But the Soul is a creature being one, undivided, dependent, immortal, simple, and thenceforth an eternal, spiritual, lightsome Substance.

In the next place, in God, there are no accidents ; but every one of his Attributes are the very undistinct most simple Essence it self of the Divine Spirit : which thing also *Plato* his *Parmenides*, even after some sort understood : So the Soul, if it shews forth the Image of God, it shall admit of no accident in it self ; but the whole substance thereof shall be a simple Light and Understanding it self : For just even as Smoak being kindled by the Flame, is the same in figure and matter with the Flame ; so likewise, the Soul also is a naked, pure, and simple Understanding, the Light and Image of an uncreated Light : So that as the eye beholds nothing more truly or nearly than the Sun, but all other things by reason of the Sun it self : So a blessed Soul doth not understand any thing more nearly than the Light it self, from whence it totally and immediately dependeth. And as our eye doth not bear the sight of the Sun, so the Soul cannot understand God, and much less, as long as it makes use of the Medium's of Powers, as being bound thereunto : Otherwise, the Understanding being free, doth by understanding, attain the Figure of the thing understood, by a commigration or passing over it transforms it self unto Unity (as I have taught concerning Reason.) And so indeed the Soul by Understanding, doth principally and primarily contemplate of God, and is formed into the true Image of God.

Yet there are others also, who conceive of the Image of God in the Soul after this manner. That seeing the Law is the Image of God ; but the Law is engraven on our Souls by Reason ; from hence they will have it, That the Soul is the Image of God as it is Rational : But that is plainly improper, yea and impertinent ; For so the Soul containing the Law, should indeed contain the Image of God, but the very substance thereof it self, should not therefore be framed into the very Image of God : Indeed no more than the Law and the Soul it self do differ in essence and suppositionality.

Surely I have hated Metaphorical Speeches in serious matters : As that, *God created Man into his own Image*, should denote, that God had given Man the use of Reason ; and that him that is born mad, and deformed, he therefore had not made into his own Image : And moreover, there was not as yet a Law, while the Soul was created.

Furthermore, to attribute the Image of God to Reason, is to be injurious to God, and blasphemous, even as I have elsewhere taught concerning Reason : For there is no likeness or suitability of Reason with God, of a frail and uncertain Faculty, with an eternal Substance.

The Opinions therefore of others being left, I will speak my own : The Understanding hath a Will coequal to it self, not indeed, that which is a power, or an accident, but an intellectual light it self, a spiritual substance, a simple and undivided essence, being separated from the Understanding onely by a suppositionality of its Being, but never in its Essence.

I find also besides, a third thing in the Soul, the which for want of an Etymology, I name a Love, or Desire, not indeed of having, possessing, or enjoying, but of well-pleasing;

sing; it being equal to the other two, and equally simple in the Unity of Substance, and they are three Suppositions, under one onely, and that an undividable Substance of the Soul: But that Love is not any act of the Will, but it proceeds from the substantial Understanding and Will, as a distinct act: For it happens also in this Life, that we love those things which we understand are not to be loved, and those things which we would not love: We love also those things which exceed or overcome the Understanding and Will: For in an Extasie, the Understanding and Will perish, and are laid asleep, so long as they deliver up their Kingdom unto Love: For neither is that Love a Passion, but a ruling Essence, and a glorifying act. Therefore Will and Love in this place, exceed the circuit of Powers, neither have they any thing common with the Will of the Flesh, or of Man; but they are essential Titles, whereby (under a want of Names) the Mind represents the Image of God; because the Understanding doth then understand God, is intent on him, and loves him altogether with all the Mind, by one onely and undivided act of Love, by reason of the every way simplicity of its Substance. But as long as we live in the Flesh, we scarce make use of a substantial and purely intellectual Understanding, but rather of an imaginative Power, to wit, of that quality its Vicareis: For in an Extasie, Understanding, Will, and Memory do oftentimes sleep, the act of Love onely surviving; but so distinct from those three, that notwithstanding, it stands not without the substantial Understanding and Will, and those equally suited unto it self: For truly seeing the Soul is wholly homogeneous in its substance, it should plainly loose that simplicity, if one of the three should be without or besides the other two.

Love therefore, the other two being asleep, is then as it were in the Superficies, or rather the other two are imbibed, and supped up in the Love. In this World, Love is before Desire; because it is a Passion of the amative or loving Faculty, which proceeds from that suppositionality of the Soul, which is truly true Love, and representeth the Image of a corporeal Faculty in this Life; no otherwise, than as Understanding, and Memory; now, as long as there is a wedlock of the Body, whereinto the immortal Mind is sunk, constitutes a certain third thing: But after Death, Love makes not a priority, as neither a distinction from Desire; neither hath it the nature of a Power, nor is it an habit, or act of Willing, nor doth it subsist out of the Understanding, neither doth Memory survive in a distinct habit from the Understanding: Therefore the Intellect is a formal Light, and substance of the Soul, which doth beholdingly Know, Discern, Will, and Desire in the Unity of it self, whatsoever it comprehendeth in it self, and in willing, judgeth: For it then remembers no longer by a repetition of the Species or particular kinds of a thing once known, neither is it any longer induced to know by circumstances: But then there is one onely knowledge of all things understood, and a speculative beholding within it self; yet so, that the Understanding may know one thing more presentially then another, while it reflects it self upon things understood, to wit, because it is in truth it self, and in a distinct Unity.

What if the same thing doth now daily stand in the artificiall Memory, because that recollecting Memory is not a distinct act from the inductive Judgement of the Intellect? Shall not this thing therefore be more proper to the Mind, being once dispatched of the imaginative turbulencies of Understanding? For neither doth that hinder these things, because in Wine, the Memory perisheth, the Judgement remaining safe, or on the contrary: For he that is drunk, or mad, doth oft-times remember all things before his drunkenness, and in like manner, the other returning unto himself, remembers all things which were done in time of his madness. Indeed those things are heterogeneally distinct in the Body, according to the manner of the receiver. Unto Inanimate things also, I observe a certain deaf knowledge to belong, likewise a Sense, and Affection of their Object, which things began to be called Sympathetical ones: But such a deaf perceivance of Objects, is unto those things in stead of sight and understanding.

There is moreover, a virtue in them, to wit, a certain vital natural endowment, of a certain goodness and valour, for ends appointed by the Creator: There is also a third Power resulting from both the foregoing ones; which is that of Joy or Delight at the meeting of things helpful, and of turning away from things hurtful, wherein a certain affection toward their Objects is beheld.

Likewise Fear, Flight, &c. which threefold degree of ascent, is more manifest in the more stupid Insects, even as in mad or furious Men, in whom no Understanding is President, and onely the governing Powers of a visual Light doth shine forth: Yet besides, there is present with these, the act of Virtues, and vital Functions, by reason of which, and by which, they are Insects.

Thirdly,

Thirdly, There is in them a far more manifest formal act of Joy, and averseness : The which again in other sensitive Creatures are as yet far more clearly unfolded. Unto these indeed, a certain sensitive imagination doth belong, with a certain kind of discourse of Reason, which is unto them in stead of Understanding, clearly appearing more or less in all ; so that Quick-sightedness, Will, Memory, and Remembrance, happens unto them under the apprehension of Understanding : Yet their Objects, and Functions being continually changed according to the matter which is inclined unto renting Divisions and singularities.

There is also in them, an issuing Power of Goodness and Virtues, whereby their Souls do more or less incline unto the exercises of their Virtues, or Brutishnesses : And there is at length also in them, their complacency, and wearisomness, and animosity on the considerations of Objects, things so co-united unto sensitive Souls, that it is scarce possible to behold two persons, but we are presently addicted to one more than another ; and these things being incorporeal things according to the manner of the receiver, they shall (for that reason) in man be more clarified. Nevertheless I will not that the Image of God be considered in man by reason of any ternary of faculties, which may thereto be found to belong unto other things in the Sufteime of the World.

Certainly the dignity of the Divine Image, is not in any wise participated of by other created things : For truly the Divine Image is intimate onely to the Soul, and so proper unto it, as is its own essence unto its self : Yet any properties of the Soul whatsoever, are not the very Essence of the Mind, but the Products and Effects of Essences : For neither is it a thing befitting the Majesty of the Divine Image, to be drawn out of Qualities : For the properties of other things do co-melt into the Essence of the Soul by virtue of the Divine Image : But if they are reckoned as Attributes ; that is by reason of the miserable manner of the vulgar Understanding ; for truly the Mind is one, pure, simple, homogeneous and undivided act, wherein the Image of God, doth immediately and essentially subsist ; so that, in that Image, even all Powers do not onely lay aside the nature of Attributes, but also, do collect their suppositionalities into an undistinct Unity : Because the Soul is in it self, a certain substantial Light, and a substance so clear, that it is not distinguished by suppositions, from the Light it self : And the Understanding thereof is so the Light of the Soul, that the Soul it self which is nothing but Light, is only meer Understanding.

In which Light of its own self, the Soul being separated from the Body, seeth and understandeth it self wholly throughout the whole ; neither hath it need of a brain, or heart : In which organs indeed, its substance seemeth onely to assume the race of Properties : For in the Body, the abstracted Intellect it self, being drowned in corporeal Organs, and seeing it makes use of the same, it represents and assumes a qualitative faculty, which is called Imagination, the which, from the society of the Imaginative Power of the sensitive Soul it self, and splendor of the Understanding, degenerated in the Organs, doth by a certain combination, arise into a qualitative Power : For therefore that Faculty is wearied by Imagining, and failes, so as that it becomes mad, and the haire wax grey ; but the mind being once separated, is never wearied in understanding. And moreover, in living Persons, the Imagination is not onely wearied, but also, it hath not of it self, intellectual species, but those which it draws from Objects : And therefore the faculty of Understanding, which in imagining concurrereth with the imaginative Office of the sensitive Soul, follows the disposition of the organ, and will or arbiterment of the sensitive Life : Like as, regularly in Nature, the effect follows the weaker part of its Causes. But the Soul whatsoever it requireth for knowing, remembring, and willing, whether it be for once or for oftner times, all that, it hath from it self, and not from another : For neither in the Soul being abstracted or with-drawn, doth a Will arise from the thing understood : Yea, neither is there a Will in the Soul, unto the thing understood ; but it is the goodness of a formal love : The which indeed, is not a proper passion of the Soul, not a habit, not an inclination, nor any quality thereof : But a substantial act of goodness, whereby a blessed Soul, is substantially, simply, and homogenially good, but not qualitatively : And it hath this prerogative, whereby it is the typical Image of the Divinity.

But Bodies, as well those which are believed to be compounded, as those that are merely simple ones, do slide with a perpetual free accord, into the Attributes of Forms, they being readily inclined, into the successive changes of a diversity of kinds, and dissolution.

Therefore, now it is manifest, from whence the state, dignity, condition of the Soul, and prerogative of the Divine Image in living Persons, may be over-clouded. But the Desire, or Love of which I here speak, is not a function of the appetitive power, nor the very qualitative power of desiring it self, but it is a substantial part of the mind, or rather the Mind it self, flowing from Understanding and Will: Because those three, are undividably conjoynd by the Creator, under Unity, in as great a simplicity as may be: Yet in live persons, or mortal men, it is separated from Understanding and Will, in its Functions, by reason of the condition of the Organ, and Nature of the sensitive Soul.

For truly, now we desire, oftentimes, those things which the Understanding judgeth not to be desirable, and which the Will could wish were not desired: But it must needs be that things whose operations are different or dis-joyned, that the same things are dis-joyned in their root, according to the manner, whereby all particular things are separated: In the Soul indeed, onely by a relative suppositionality; but in the Body, according to a corporeal and qualitative Nature.

And therefore, that substantial Desire or Love, is an intimate Essence of the Soul, being consubstantial, and co-equal in age with the same: So that, although, in Heaven, there be a full satiety of desirable things, and a perpetual enjoyment thereof, yet that desire in the Soul doth not therefore cease, the which is a study or endeavour of complacency: Neither doth it therefore infer a passion of the Soul, any more than Charity it self: because they are conjoynd in their root, as one and the same thing: For an amorous desire ceasing, of necessity, either a fullness or glutting, or an unsensibleness of fruition or enjoyment should presently arise, which in the heavenly Wights, would be a shameful thing.

That desire therefore of Love, is the fewel of an unterminable or endless delight; under which consideration, the Mind resembles the Spirit the Comforter: For the unutterable Creator hath placed Man in the liberty of his own Desire, that he might live in the Spirit after the Image of God, in a holy Desire, and perfect Charity. It is manifest therefore, that Operations are distinct from the root of Faculties, while we understand those things which we do not desire, but while we desire those things which we do not plainly know, and which we would not desire.

In the next place, we will (as while a man goes willingly to Punishment) those things which we do not desire; and desire those things which we would not (as while any one commands his Leg to be cut off:) And likewise the Desire doth afterward, sometimes overcome the Will, or the Will doth oft-times compell the Desire, and they by turns draw each other under mutual Commands; but wholly in Mortals, because the sensitive Soul draws the Understanding, and the Body the sensitive Soul into a manifold disorder of division: For so impossible things happen to be desired, and things past are wished for as present: For unlesse that Desire were from the root of the Mind, he should not sin, who should see a Woman to lust after her, before the consent of a full Will.

Therefore very many things are desired, whose Causes are not willed; and many things, whose Effects are refused by the Will and Judgement. The Desire also doth operate in one manner, and the Will in another.

Also, in the motion of the Day, or in duration, the Desire doth oftentimes go before, and sometimes followes the Will, and one overcomes the other by course, that it may restrain something that is distinct from it self: And that wholly in mortal Bodies.

But in Eternity, where Love, or Amorous Desire ariseth as the substance of the Soul, nothing is Desired which is not Willed; and that as well in respect of Act, as Substance and Essence: Because by reason of the simplicity of Substance, they are collected into Unity: Although in the Root they have diverse Suppositions, which plainly exceed the manner of Understanding in mortal Men.

In the next place, the Kingdom of God in man is unutterable; that is, God himself; by whose perpetual splendour all things are gathered together into Truth.

Therefore the Primary or chief Image of God is in his immortal Soul; because the very Essence [whereof] it self, is also the [veriest] Image of God, which Image can neither be expressed by words, as neither thought by the heart, in this Life, because it resembles a certain similitude of God.

But in the husk of the Mind, or in the sensitive Soul, and vital Form, there is the same Image re-shining, yet received after the manner of an inferior nature, and defiled through

through transgressions or Death, from whence at length, the Body also borroweth, not indeed the Image of God, but the Figure of him. But the Soul is devolved into utter darkness, even as it hath separated it self from the uncreated Light, and from the virtue of the Image, and therefore it hath (by reason of appropriation) so lost its native Light, as if it were proper unto it, as befitting it, that thenceforth, it understands, wills, or loves, nothing besides itself, and for it self. For the damned shall rise, not changed; because their Body rising again, shall receive its limitations from their Soul: The which, seeing now it is, with all depraved affections, reflexed onely on it self, after a corporeal manner: It shall not in rising again, delineate the Image of God (which is as it were choaked in it) in the Body, but after a corporeal manner: That is, by way of figure.

Lastly, It being deprived through the flood-gate of death, of the helps of Imagination, Memory and Free-Will: It afterwards understands, wills, loves all things from a blind apprehension, as being onely addicted to it self: For it knows its Immortality, but feels Damnation, and complains of it, as that Injustice is done unto it: Because the love of it self is onely to excuse its excuses in sins, as being committed in dayes of ignorance and innocency, with much frailty of Nature, lyings in wait of Enemies, and want of sufficient Grace: As neither that an eternal punishment is deservedly due, for a momentary transgression.

For then it begins to be mad, and persists in hating of God; Chiefly, because it knows the unviolable arrest of its loss, and an eternal impossibility of escaping. It being therefore cut off in its hope, passeth even from the very beginning of its entrance, into the utmost desperation, in a place where no piety, compassion, refreshment, or recantation is entertained.

It happens also, that seeing the Understanding doth naturally transform it self into the Idea of the thing understood, and therefore into the similitude of evil Spirits its Objects: Therefore there is alwaies a present hatred of God, despair, cursing, damnation, and the furious torments of Hell.

The Almighty of his goodness, vouchsafe to break the snares that are extended for us in our passage. Amen.

C H A P. CIII.

The Property of External Things.

THe spiritual beginning of Life being now finished, before I descend unto corporeal and sensible Organs, and other supports of Life, I will propose something concerning Places.

First of all, therefore, it is certain, That the Heaven hath received no other Law since Transgression, because the Earth alone hath undertaken all the Curse on it self: For from hence I have sufficiently demonstrated elsewhere, That the Heaven is free from our sins, neither that it plays the part of a revenger of iniquities: But if some places are subject unto Death and certain Diseases, that is not to be attributed unto the circulation or whirling of the Heavens, & blind influxes of the Stars: But it is altogether proper unto the dispositions of the Earth: For although Eastern Provinces may seem the more fruitful, or happy that is not to be attributed to the Heaven: Seeing that in a circle, every part subjected under the same circle is alike Oriental or Easterly: Otherwise a Circle should not want a Beginning, End, and Extremity of parts: Therefore there is an inbred goodness in the Soil, and the fertility of the ground is holpen by the continual cherishment of the Stars, and a perpetual familiarity of visitation.

Truly, under the circle of the Sun, Climates have an ordinary and equal heat; and so, that as many fruits as by ripening, do ascend unto a degree of perfection, by reason of heat, are there, more happy; the which otherwise, through want of heat, are not alike perfect: But the heat of the Sun hath respect unto Fruits, but not to Long Life, which is of no less length of continuance in Cold, Mountainous, and Northern places, than else where, under the Hot or Torrid Zone.

Surely the favours of the Soyl do not depend on the Stars, as neither the prolongations of Life.

The Stars are daily wheeled about, and do daily almost equally affect the Climates of the Earth, which are under them; but they do every Year receive their Winter and Summer according to the access and recess of the Sun: In the mean time, the Tracts of the more adjoining Lands, do far vary from each other.

They are therefore the particular gifts of the Soyl, but not of the Heaven, which therefore keep a stable goodness, as it were Provincial to the same Tracts of Land.

In the holy Scriptures indeed, *The Land of Promise floweth with Milk and Honey*, being fruitful in Wine, Corn, Pulse, and rich fruits of the Tree: And likewise scarce requiring dunging, and the toyles of Labour. And then I see other Coasts of the World, to owe and pay the Tribute of the Land of Promise: For from both the Poles, continual Rains do steep the Earth that the promised Soyl may without the trouble of Rains, take unto it self, its due Water, and that *Egypt* may repay the favours of the Soyl of Heaven, with a double usury of fruits: For Seas and Rivers, strivingly hasten unto those places with a speedy course: Yea, and from beyond the Tropick of *Capricorne*, *Nilus* brings down his melted Snows through *Egypt*, unto the *Mediterranean Sea*, as it were a Yearly Tribute of Nature, that may water the more fruitful Countries, if not with Rain, at leastwise with Dew, and the blackish cloudy Waters of *Nile*, and that the Vapours being lifted up from the Sea, throughout the Soyl, it may most plentifully repay a plentiful Dew round about: And so that the whole World seemeth readily to serve those more fruitful Regions.

Under the *Æquinoctial Line*, it Rains many times every Day, because the Tributary Waters do not reach thither: But they are supped up in the Countries, which God in times past, appointed unto his own People, but now unto *Barbarians*, by reason of Transgressions, fore-monished of by the Prophets.

He therefore blessed the *Land of Promise* for the People of *Israel*, from the beginning, but

but for Reasons foreknown to himself, from Eternity, and the which, he fixed stable into Nature: Yea, he not onely appointed the Tribute of the whole World unto these Lands, but unto most of them he added Reasons, Idea's, Seeds, and Gifts; whereof the more intemperate Climates are destitute: Nor all that, for any other ends, than because it so well pleased him, for his hidden Judgements.

But these things do not make for the consideration of long Life; for in Is-land, Men are found to be of a Longer Continuance of Life, than in *Palestina*, *Phenicia*, *Egypt*, &c.

Oftentimes also, in Mountainous, and rough Hills, Older Men are met withal, than in a pleasant Champion: To wit, that we may know, that the Prince of Life hath granted a long continuance of Life, unto so miserable places, and to a singular tract of Land, which he hath denied unto whatsoever the most pleasant, and wealthy Countries.

Nature therefore is subject unto the Soyl, even for a stability of Life: For we measure a Disease and short Life from Endemics: Doth happily an Endemical Being breath out of the Lands wherein Life is prolonged? No surely: And it is sufficient, that a place doth want malignity, that a continuance of Life may be attained, so far as is from the nature of the Place.

Lastly, Fountains are either without Savour, or Mineral, they not being those which may have, positively, a long continuance of Life; But as being those which unsensibly mow down the daily Superfluities or growths of oily Dregs, and in this respect, Life is not untimely taken away, by and by: Neither also, doth much, and a sweet temperature of Air prevail hereunto: For truly, in the rough Hills of the Forrest of *Arden*, of *Scotland*, and *Spain*, in our Champion, a longer Life, doth for the most part occur, than in *Aquitane*.

For *Hieres* is a Valley nigh *Apulia*, environed with Mountaines, being fruitful in the sweetest Fruits, where the most sweet Station of the Spring, is almost continued: Yet having Inhabitants of a shorter Life, being deformed with a pale Countenance, so that it hath crept into a Proverb of those that were Sick, and Recovering;

Thou seemest to us, to be a Stranger come from Hieres.

For the pleasantness of Fruits takes up the suspicion of a Mineral Endemick.

Also, not onely Mountainous Colds do extend the Life; but Old Age is frequent among the *Ethiopians*.

Let therefore, those places be fit for Long Life, which being not polluted by any Endemics, have moreover, not unwholsome Waters, nor the which are infamous for a stormy Wind.

C H A P. CIV.

The Radical Moisture.

THe Schooles with one Voice, promote the Radical Moisture of Life : For they declame, *That from it, and in it we live ; and that, that onely being consumed, we die.* For they, who together with *Aristotle*, attribute all things to heat, as to an active Principle, do not say ; That the Radical moisture is the Beginning, as neither the Inn of Life ; unless they derive the Primateship on Heat in the moisture : But the moisture hath more pleased others : From whence, they being sore afraid, through the sloath of a diligent search, least they should erre, they will have our Life to depend on, and be prolonged, as well by moisture as by heat, without distinction : And so they denominate it, not indeed heat, but composedly, Radical heat, or the first-born moisture : That indeed, the first-born or original moisture in us, and the radical heat, may be for synonymals. But moreover, all do with one consent presage, that our Vital heat would never fail us, if there might always be enough and to spare, of that moisture and fodder : Which moisture, because they believe to be hereafter wasted by a necessary action of heat, they finish the hope and Treasure of Long Life, by a denial.

But alas ! with what pernicious blindness hath the Schoole of Medicine, through thinking stumbled in all things ! It had also seen the Flame of a Lamp to be nourished with Oyl, and that through defect hereof, that also failed, but that it was continued by the pouring on of Oyl : Wherefore a plausible Invention smiled on them, and therefore they drew that Invention into the History of Life : Especially because, they by sense took notice, that heat was no less in the four-footed Beast, and Bird, than in a Man : So greatly, with the Patronage of *Aristotle*, have they confounded heat under the Etymology of Life. And then, they presently drew out of heat, the token of true and present Fire ; Yet the Question remained under Controversie.

The *Aristotelicks* indeed, attribute this Fire unto the Element of the Stars, and contrarily distinguish the sublunary Element of Fire, in its species : But others attribute it unto the Element of sublunary Fire : And have about this, and the other, their own Arguments of Brawlings.

In the mean time, the Schoole hath been wholly dumb, about mute and cold Fishes, and although it confessed, that Fishes do live, are moved, and nourished no more unprosperously, than four-footed Beasts ; yea, although it knew that they are enriched with a far more fruitful race of Off-springs ; in the next place, that they live a more healthy Life, and notwithstanding, that Fires and heats are wanting under the Sea (especially the frozen Sea) wherein in the mean time there was the greatest and most populous Commonwealth ; nevertheless it would not forsake the embers of the vital spark drawn in from its tender years, although it took notice that it was deluded through a Patronage of truth.

Wherefore the miserable Schooles flee unto Decrees or Authorities : Therefore they would have Man, Birds, and also four-footed Beasts, to be indeed in a Trine Number, and that the Fish might be involved as a Fourth, and consocial thereunto, and be constrained under their large Doctrine : That they might determine of an equal right concerning the Fish, as absent, in the participation of Radical heat.

But because the Soul comes as a Servant unto established pleasures, and doth also administer Reason even for a non-Being, at pleasure they have devised a privy shift ; and determine, to wit, *That hot living Creatures are actually hot, with a palpable Fire ; but that Fishes are onely potentially hot.*

As if therefore Fishes, should onely potentially live, if the Effect doth not badly square with its granted Causes.

The Schooles I say, do feign Heat to be the total Cause of an actual Life, to wit, they substitute an equivocal or doubtful Quality, like unto heat; but an irregular, unnamed one, because an unknown, feigned, and dissembled one, to be received under the name of potential Heat: For the Schooles by imagining, have abhorred to enter into the Depth of the Sea: wherefore the Speculation of Fishes being left as barren (because it was resisted by a plausible Devise) they have well pleased themselves (as it were wandring in a Dream) in hot Animals, with the Application of Lamps and Life: Shall the radical Moisture, thus, be no longer with *Aristotle*, Spermatick, Froathy, and Muscilaginous, but now to let it be Oylie, Fat, and Combustible? Shall thus therefore a Fat Belly, which through much Grease, shall afford Fewel for the radical Moisture, be only of necessity, Long-lived? A Capuchin in our Country, was Cold for almost an whole year, at least-wise in both his Legs and Arms: because he shall loose less of his Moisture, he shall of necessity retain his Oyl the longer in his Lamp.

But at least-wise, here a certain wan Stupidity of the Schooles, elsewhere by me demonstrated, is adjoynd: To wit, that the Action of Heat (especially, if it shall not be kindled by a lively Flame) doth indeed dry up all Moistures into a Sandy-stone and Coal; but never consumeth them without the remainder of a residence, even as is easie to be seen in us; so that it is even a wonder, that they have not hitherto observed, that Consuming is not made in us, by Heat alone. But at least-wise, there should be need of a torch in the Heart (which thing also the Schooles have not yet considered) least otherwise, the feigned and vaporous fatness of the Moisture (because it is that which in the Heart, should be wholly Spiritual) like *Aqua Viva*, should in a small moment, and great breviary, burn up all at once, and cease to be: For else, without a torch (neglected by the Schooles) the feigned History of Life, shall badly square unto Fires built from the first-born Liquor, which are on every side kindled at once. However they shall say, at least, from one Absurdity drawn out of the Latex or Liquor of Life, there are many Anguishes. But let us freely feign, that this idle Devise of the Schooles might stand: To wit, that the Life is a certain Fire wasting the radical Moisture, because it is Fat, and doth thereby live, and that Lean Persons alone, are of a shorter Life. But from whence is that Moisture in us? Is it not from the Nourishment materially, and from the vital Archeus efficiently? Certainly our Lamp shall never be extinguished, if the Power of burning or blazing Heat (as they will have it) be for the making of Oyl out of the Bread and Drink, and if nothing of a Residence remaineth from the fatness in the Torch, which may stop up and stifle that Torch: To wit, even as nothing at length, remains from the Blood in Persons of ripe Years, which may have it self in manner of a superfluous Coal.

And indeed, in a Feast, hath it not its abundance of Nourishments? and heat the Workman of that fat Moisture, resulting within from thence? Seeing that Light proceeds from Light, and an uncombustible Fire from Fire, with no difficulty? Why therefore doth the Man die? For I find from the Positions of the Schooles, a perpetual Motion in the Theory, but not in the Practick: Therefore Fraud and Deceit do subsist in their Positions, or at least-wise a shameful Rashness. But they will say, that after growth, nothing is any longer applied from the radical Moisture, unto the solid Parts: Therefore it must needs be, that the true radical Moisture, seeing it doth now no longer co-here to the Root, therefore also the sound Parts do by degrees wax dry; and so that the Fodder of the Heat failing, the same Heat dyeth.

But first of all, from hence is drawn, that the Death of Old Age doth not happen, but by reason of the dryness of the similar Parts: When as a Stag of one Year old, is dryer than a Man of eighty Year old, and yet he easily extends his Life, unto one or two Ages.

In the next, if the Moisture ceaseth to be radical, because it reacheth not the end, or Application unto the Root; That indeed is to the moisture by accident, and therefore it doth not change the Essence thereof: For neither doth the Heat of the Fire cease to be propagated in the Neighboring Wood, although the burning Wood shall not receive a fewel of fatness from without.

Neither in the next place, doth the aforesaid excuse subsist: For truly, for every Event, the solid Parts shall have themselves in manner of a Lamp or Torch, which is sufficiently able to burn, in what part Oyl is supplied unto it, and so that Oyl being supplied from without, the Fire should be able to live for ever: For they teach, that the Heat of the solid Parts is from the Element of Fire, the which they think to be for the mixture of Bodies, and to be enflamed in the fatness of the radical moisture or humour.

First of all, that Moisture is spermatick and muscilaginous, but not Oylie.

A a a a

And

And then, if the Fire passeth out of the solid Parts, unto the Moisture which it enflameth; it shall be sufficient for the Moisture to be consumed, and alwayes to be applyed from without, nor to be incorporated in the Root throughout the whole: Because if it pass out of the solid Parts, unto the un-solid Parts applyed unto it, during the whole life time, it shall alwayes be able to pass thorow the un-solid Parts applyed unto it: neither doth that excuse availe, that it ceaseth to be radical, while it is no longer United unto the innermost Root: Because then, presently after growth, the vital Vigour should be extinguished, because the Moisture doth not then any longer receive a Union with the solid or found Parts. But why do I stay any longer in refuting of Absurdities? It hath been so sufficiently and over-shewn, that the Fire is not an Element, that the mixture of the same, for the Subsistence of all Bodies whatsoever, is false; because those of mixt Bodies are meer and antient Fables. The Fire therefore, if there were any in us, should be primarily in the vital Spirit, for the which, enough Moisture doth alwayes supply it self out of the venal Blood. Wherefore indeed, I grieve that they have hitherto so sloathfully stumbled in the Subject of Life, and Doctrine of Integrity or Health: For I, after the time of my Youth, conjectured that there was an Errour altogether shamefully committed, and omitted, in the Consideration of Defects and Diseases: Because none truly knows that which is crooked, who hath not first known that which is right. This therefore is the feigned Doctrine of the Schools, concerning Life, which they endeavour to establish by the supposed Authority of a little Book (feigned on *Hippocrates*) concerning humane Nature: Which saith, That we on the first day of our Birth are most hot; and likewise at length, on the last day, most Cold: As if there should be a different Condition of our Heat, from that of any other things! For whatsoever things do arise from elsewhere, do presently after assume an increase, and that without ceasing, and at length decline and fail.

Wherefore if according to the Mind of the Old-man, Heat should most greatly abound on the first day; yet neither is the Life tied up to Heat: For truly I have demonstrated, that Heat is rather an Effect of Life in hot living Creatures, than the Life it self, or the Cause of Life; and therefore Fishes can most safely want Heat, and now for that very Cause, it commits an Errour in arguing of, not the Cause, as for the Cause.

Truly, I am alwayes wont to behold, search into, believe, and measure Heat as Heat, and as a Quality, neither also to implore any other Witnesses or Judges, besides the Sense of Touching, and an Instrument of Glasse, which I have afore taught, for the searching out of Degrees and Moments of Heat in the encompassing Air: In which Sense, I have found a Man of thirty Years of Age, to be hotter than any Child, however in the mean time they may doat about the diverse particular Kinds of Heat: For let them dispute of Qualities known by Sense, as of Fables, and under potential Considerations; but I have accustomed my self to divide, open, look into, and esteem of things even as they are in themselves.

But moreover *Paracelsus* being ignorant of the radical Moisture of the Schools, doth now and then confound that with the Mummy of our Body; but elsewhere he reputes it to be as it were the inward shadow of our Body, from whence he would have shadowie Flames to shine round about us: To wit, that the radical Moisture is the Image of the Man, extended throughout the whole Man, and deferring or prolonging his Life.

In another place also, he judgeth the radical Moisture to be the Mercury, or one of his three Beginnings (not dividable in living Persons) which is equally participated of throughout the whole: For the Life being extinguished by the Plague (for Death takes away the Mummial Goodness) the Mummy indeed hath very cunningly failed or forsaken the same Moisture in the Body.

At length, although the Schools confess, that younger People are oft-times extinguished; the radical Moisture being not yet consumed, as neither through Penury of Heat; and in this respect, they are not very careful for their own Position, whereby they may equally measure the Life by Heat, and radical Moisture; yet they remain in the Bounds of their Ancestours, by reason of a custom of Assenting, a sloath of diligent Searching, and despair of Learning: For indeed they have been ignorant of lightsome Lights of Life, but that they are indifferent, by reason of the distinction of the two greater Lights: For that they may be hot, like as also cold: That is, they have not Learned that Forms and Lives are Synonymals: But I have alwayes greatly pitied the confused Tradition of this Moisture, which is of so great Moment (although in the Moisture of the Root, they confess both the Hinges of Medicine to be rouled): I bestowed much Labour in my younger Years, by the Resolutions of Bodies, that I might find some certain Messenger of the radical Moisture.

And

And at length, through the Favour of God, I was at last more assured, that not any of those things were in Nature, which with a lofty Brow, are promised by the Schooles in this respect.

I acknowledge indeed, that there is a seminal Original Moisture, which is the constitutive Moisture of us; but altogether of the same Species, Property, and Identity, with that whereby we grow, and are afterwards incessantly nourished: And so that the Bones, Bowels, Nerves, Tendons of Children, do consist of an un-different, and do increase from a like Moisture, whereby young Folks, their Increase being now finished, are nourished: According to the Maxime of the Schooles; *We are nourished by the same thing whereof we consist*: But we consist of Original or first-born Moisture, therefore we are also nourished by it. Yet I have discerned, that the nourishable Moisture, as long as it is homogeneally admitted for Increase, within the Root of the Mixture, is wholly the same with that which is radical: But if afterwards by accident, it be no longer admitted into an inseparable Fellowship, because growth ceaseth; Yet that this doth not in the least change, vitiate, alter, or alienate the Nature of the former Moisture: Because that abundance of it is in every part eminently cast forth by Dreams, it being of the same kind, with the original, and radical Moisture; which two names are distinguished only in this, that of the original Moisture, the Young is formed: But the radical Moisture is that same, and moreover, that from whence we grow and are nourished: For as long as we are increased, there is made not only a solid Application of the moisture, but a solid Application and Assimilation of that which is applied (for that thing happens daylie under every Nourishment) but moreover, there is made a radical Union of the thing nourished, with the Nourishment, which is presently afterwards sealed by the Spirit of Life, and vitally illustrated by the Form: Therefore the sealing contains a Character, which fixeth and confirmeth that Moisture into the homogeneous Substance of the similar Part, to wit, from whose Archeus the Nourishment it self is converted and assimilated; and so that by transchanging, it departs into the Family of the Part containing, which before was only contained; under which Flux, a true Information of the Soul happens.

From its lot only there, and happy success, the radical Moisture is distinguished from the Dew of the secondary Humours, but not in Nature: To wit, because the Dew being as it were a new and young Humour, is consumed as to a great part of it, in time of growth, and as to its whole after-growth, neither is it ever united into the Root of Mixture, that it may be made a partaker of the aforesaid sealing, and attain the Dignity of a part containing. For example; Calx vive, or Quick-lime, when it is quenched or appeased, becomes a Puls, which most intimately couples the Water to the Calx: But if more Water than is meet be poured on it, the same Water abounding, is straightway rejected, and swims a top.

In the mean time notwithstanding, in fulness of time, that Calx is dried and stonifies even under the middle of the Waters; But that hardness being once attained, although it be afterwards most exactly beaten into the most fine Powder or Dust, yet for the future, it keeps the Shape of a Powder, and despiseth the intimate Wedlocks of Water, it assumeth not the Disposition of the former Puls, neither is the Water thenceforth, radically co-mixed with it. Notwithstanding the Moisture of the Water it self, is individually the same, whether it be secluded from the co-mixture of the Calx, or be admitted unto it: And that, because it is contingently contingent to the Water, by accident, not so much through Defect of the Water, as of the Calx or root. But yet, the aforesaid Puls of the Lime is plainly more slowly dried, than the Powder of the Moisture is from without, on every side watered with the Waters.

I therefore considered, that however the Schooles do resound many things concerning the radical Moisture; yet that the nourishable Humour doth not any way differ from the radical Humour it self, as long as it pulsfies, and is solidated within the Root of Mixture, being conjoynd unto the first constituting parts by a radical Union: Because that both the Liquors are the same in Matter, Virtue, Substance, Purity, formal Identity, and Participation of Life, the which, when our solid Parts do no longer pulsfie and admit of, they at least wise for the future, hinder an intimate Connexion of the Root, so much as they can, and fore-flow the dryness of the solid containing Parts, by reason of their continual bedewing: For when that Puls of the sound Parts hath obtained a just Solidity; to wit, because the power of Increasing, defluxing from the Brain, is exhausted; then the Moisture is only made nourishable, which before was made radical: For however Old Age cause dryness; yet Death is not from a more dry Habit or State of Body: For truly, we may rather conjecture Dryness to be from a Defect of the vital Powers, than

the aforefaid Defect from drynefs: For the Moisture of the ſolid Parts, however in an Atrophia, and Diſeaſes of long continuance, it be equally, and throughout the whole entire Body conſumed; yet it is eaſily reſtored by a due Nouriſhment, and the more bountifully by taking the milkie Element of Pearls: So alſo the Ulcers of the Lungs are ſolidated or made whole by the ſweet Corollate of Mercurius Diaphoreticus; to wit, by Virtue whereof, the Epitaph of *Paracelſus* publiſheth, that the *Tubes* was often reſtored: For I remembered, that I in the great Heat of (the 5th Month called) *July*, bored the Head of a Toad with a ſharpe Stick or Staffe, and that I faſtened the Staffe at the other end, into the Ground, that the Toad being hung up, might be dried. But it happened, that full four dayes after, I returned to the ſame place, found the Toad alive, contracting his Thighs, as if he had been there only the day before; becauſe the hole was not with a ſtraight Line, in the middle of his Head, but inclined a little the more unto the left ſide: Wherefore I drave the Staffe into the middle of his Head, and returning about the evening, I found the Toad not only Dead, but to have been wholly dried up.

From whence I the more firmly perſwaded my ſelf, that a Defect or Failing of the Vital Powers, was not from the Drynefs of the ſolid Parts; but rather that Drynefs was and did Increate in us, according to the proportion of a Piece-meale extinguiſhment of the Vital Powers.

Let therefore the Radical Ignorance of the Schools depart, whereby, by an unrepairable Penury (as they will have it) of the Radical Moisture, they cover their Fault under the Ground of the Place of Burial: For the Diminiſhment of the Gifts and Vital Powers alone, ſealed in the Family Adminiſtration of the implanted Spirit, bringeth on Old Age, as alſo the Extinguiſhment of Death, inteſtine Calamities: which is to ſay; *My Spirit ſhall be Diminiſhed, and my Dayes ſhall be Shortned*. Therefore let the Conſideration of the Radical Moisture for the Study of Long Life, depart.

For truly *Hippocrates* calls Natures themſelves or, the Vital Powers, the Phyſitaneſſes of Diſeaſes; and the which therefore Languiſhing, dayly Miſeries of Infirmities wax ſtrong, and theſe departing, do proclaim with lofty Shoulders, a Deſpaire of Life, as oft as the Faculties or Powers fail, whether in the mean time plenty of Radical Moisture, or a ſcantineſs of the ſame be preſent: For they ceaſe not to extend a Crow and a Stage, which are dryer than any toothleſs Old-man, unto ſome Ages, and to be Incumbent on the labourſome gain of Reverence: For becauſe drynefs begins from the Bones, Quickſighted and provident Nature, comes to meet or prevent this ſame Drynefs, with a more large Nouriſhment of Marrow, and She would have it to be Fat, and leſs diſcuſſable, or diſperſable by Heates, that it may vindicate the Old Age of the Bones from Drynefs, by its Unctuous Moisture: For therefore there is a greater plenty of Marrow in four-footed Beaſts that are Aged, than in the little Young Ones, becauſe there is a greater neceſſity thereof.

I therefore do no longer highly eſteem of the irreparable radical Moisture, for the Foundation of Life, as neither being aſtoniſhed at Drynefs, in as much as it is ſuch, neither alſo am I wont to meaſure out the Life, according to the Pleaſure of the firſt Qualities: Becauſe I knew that the Life did not wax dry, as neither was it to be drawn from the Boſom of the Elements, after that I beheld the interchangeable Courſes of a long and ſhort Life, to be in the Center of Life.

CHAP. CV.

The Vital Air.

THe Schools have not performed enough, in teaching that Nourishments are transformed first into Chyle, and then from hence into the Digested Juice of Venal Blood, and so that in the Liver, a natural Spirit is made, which by a repeated Digestion in the Heart, is formed into vital Spirit, and at length, that in the Brain it is made animal; So as that the natural Spirit should be fit for using the Parts, but the Vital for quickning and conserving the same, as also lastly, that the Animal Spirit should be appointed for the Functions of Sense, Motion, and of the Mind.

But moreover, in my Judgment, it had behoved them more largely to discover the Thingliness and History of the Deed, in so long a race of Studies, and Repetition of Writers. Indeed they know that there is a certain Spirit, that Maker of the Assault, according to *Hippocrates*, which holds the Stern of Life in its Hand: It was to be sought for and pronounced in what Organs or Instruments that Spirit should be made, or what it should act, and also they ought to have explained, every Disposition, the Substance thereof, and the Properties of its Substance, and also the manner of its making. I therefore will declare, what I may meet with in this respect. That therefore we may be led into the Knowledge of the Vital Spirit, the Blas of Man should first of all be repeated in this place: but least I be tedious, I will here omit it, and refer the Reader elsewhere, unto the Volume of the rise of Medicine.

I have elsewhere also, delivered a Mean or Manner, whereby through instilled Ferments, an *Aqua Vita* may be made of every Plant and Fruit whatsoever: Which manner the vulgar Sort hath known, and doth exercise, while it frameth an *Aqua Vita* or Liquor of Life out of Grains, Fruits, Ale or Beer, Hydromel or honied Water, no less than out of Juice of the Vine. But an *Aqua Vita* is a volatile Liquor, Oylie indeed (as it is wholly enflamed) and likewise wholly Salt, for as much as being an Air, it biteth, yea and being but a little while detained in the Mouth, it burns and embladders the upper skin of the Gums.

I in this place, taking notice by the way, that two Beginnings of Chymistry are one only and an undivideable Simple thing. I have shewn also elsewhere, after what manner one Pound of *Aqua Vita* being combided in the dried Salt of Tartar, scarce half an Ounce of Salt can be made, but that the whole Body may be made an Elementary Water, as it was before: And so that from hence it is easie to be seen, that Water is by Nature a more formerly and simple Body than the Chymical Beginnings themselves. While as the Water, which at first was not in act, in the most expurging or refined *Aqua Vita*, is nevertheless, by its reducement, thereby made its first Element of Water: The which handicraft Operation, moreover, by transferring unto the Speculation of Life, I find that the Wine in its winy Parts, containeth the *Aqua Vita* the Water of Life; and therefore that is easily, quickly, and without the digested Maturities of the Liver, and Gaul, snatched through the Arteries of the Stomack, unto the Heart; or to be called unto it immediately, for the supply, and defect of the vital Spirit; and in this respect to delude the Opinion of the Schools, which presupposeth that the Spirit of the Liver ought to precede: For if there be more of the Spirit of Wine in the Stomack, than is meet, Drunkenness follows, to wit, as the Spirit of Wine is more largely attracted, than can in a fit Interval be changed into Vital Spirit: Which thing surely proveth first of all, a changing of, and also the Operations of a Digestion and Ferment.

In the next place, that also is remarkable; To wit, that there is a certain more mild Spirit in the Wine, a Partaker of another and more noble Quality, than that Spirit which is immediately drawn out by Distillation, and is called refined or expurged *Aqua Vita*: The which is easily beheld by the Sight, in the simple Oyl of Olives: because Oyl being

Distilled

Distilled without the Additaments of Bricks or Tiles, and the which therefore, is called *Oleum Philosophorum*, differs much from its Oyliness, which is extracted, the simple Oyl being first reduced into unlike Parts, only by the Digestion, and Application of the circulated Salt of *Paracelsus*: For truly the circulated Salt is separated the same in weight, and ancient Qualities from the Oyl, after that the Oyl of Olives is disposed into its diverse kinds of Parts: For then by this means, a sweet Oyl is separated from the Oyl of Olives, even as also a most sweet Spirit of Wine from the Wine, and that far distinct from the tartness of *Aqua Vita*. But in us, although the meat together with the Drink do after some sort putrifie (for that Purefaction is a manner and mean of transchanging a thing into a thing) yet in our Digestions, the Spirit of *Aqua Vita* is not, by such a Putrefaction, and action of the Ferment of the Spleen, drawn out of Potherbs, Pulses, Bread-Corns, or Apples: For truly it is not the Intention of our Nature, to procreate an *Aqua Vita* for it self; but there is a far different Ferment in us, whereby things are resolved into Chyle; And a far different one, whereby things do putrifie, and are separated into an *Aqua Vita*: For this Ferment is introduced by many Mediums; but that is not attained but by a specifical fermental Property of any Species: For while Herbs, through a long steeping in Water, are made to putrifie by their Ferment or Vicar, for the extracting of an *Aqua Vita*, the stalk branches, and entire Leaves remaine in their Figure and Hardness; the which notwithstanding being chewed, swallowed and well concocted within, do in a few hours depart into Chyle, and loose the first Nature of Herbs.

Wherefore I have also elsewhere pressed, to wit, that there are as many specifical digestive Ferments, as many Varieties of Putrefactions, and as many Dungs of one Bread, as there are particular Kindes of Animals nourished by Bread: Yea, and moreover, there are more Ferments for the Corruption of Bread; because also, Bread doth putrifie after many manners, as well of its own accord, as through the Odour of Places, and Impressions of Agents: And that which is said of Bread, the same thing may be understood of other Foods.

The Schooles taking notice also, that nothings will profit us, but that which in its Root containeth the Flourish of Life, therefore also they would, that the Spirit of the Liver being actually natural, should glisten in the Venal Blood like an Air: And they have thought it to be a Vapour, and therefore also, they have confounded it with an Exhalation: Not knowing that a Vapour is Water; but that it is not a Gas, a wild Spirit, an uncoagulable Air and Skie: Therefore they have thought, that a Vapour exhaling out of the out-chased venal Blood (even as elsewhere, it breaths out of any lukewarm Liquors, was that Spirit of the venal Blood, from whence the vital Spirit should afterwards be materially framed: Of which I have elsewhere professedly spoken.

For indeed, whatsoever descendeth into an healthy Stomack, if it be concocted by the Ferment of the Spleen, it waxeth sharp through the fermental and specifical Sharpness of our Species: And Superfluities being first sequestred from thence, it is at length turned into venal Blood: Which Blood after the Bound of its Digestion, is transferred into the Heart, and is made Arterial Blood, which in the holy Scriptures, is called *A ruddy or red Spirit*, wherein the Soul inhabiteth: For it is made fit to pass over into Vital Spirit, and the remainder thereof to undergo the last Digestion of the solid parts; and at length, without that its residence, to exhale into the Air: Therefore also for that very Cause, it ought to be volatile, and to have assumed the Disposition of a Spirit in the Heart.

Furthermore, that Sharpness of the Stomack, by Virtue of the ferment of the Gaul, is converted into a Salt, even as elsewhere concerning Digestions: And the Actual Saltiness is separated with the Urin, and Sweats, because it became Excrementitious.

But the Mass of the venal Blood it self, seeing it cannot pass over into Spirit, but by the Vital Ferment of the Heart; I say there is made a substantial Derivation or Translation of the Venal Blood into Arterial Blood, and of the Arterial Blood into Spirit, wholly throughout the whole, without any residence and separation of heterogeneous Parts; because the Excrements are first withdrawn from thence, and the Substance of the Heart is restless, being continually busied about this Office of Transmutation, that it may incessantly effect Arterial Blood out of the Venal Blood, and of this vital Spirit: So that a certain natural Spirit, doth not fore-exist in the venal Blood, from whence as it were of the matter [whereof] vital Spirit may be made: But the whole venal Blood it self, if there shall be need, is made Arterial Blood, and from thence, vital Spirit. Therefore the making of Venal Blood in the Liver, and the making of Arterial Blood in the Heart do differ: For one is a true transmutation of the Chyle into venal Blood, and the generating of a new Being. But the other is an extenuating of the Venal Blood, into a volatile Arterial Blood,

and

and into a Vital Air: For venal Blood is made with a thickning of it self, and with a Separation of the liquid Excrement, or Urin. But the Vital Spirit is made with a melting of that which is thickned, and an Aiery extenuation thereof, to wit, whereunto the Arterial Blood affords a Degree or Mean.

I confess indeed, that the Spirit of Wine is snatched as a Spirit, into the Arteries, as a certain simple Symbolizing, and previously disposed thing, that it may easily pass over into vital Spirit: but the Schooles do from hence conclude nothing for their Spirit of the Liver. Therefore let the venal Blood be the Spirit of the Liver it self coagulated, and the fore-existing Matter of the Vital Spirits: Which Spirit indeed hath the Nature, together with the Power of a Body, that it may be Spiritualized. Therefore, even as from the Ferment of the Heart, the venal Blood is made arterial Blood, and a volatile Spirit: So in the Arteries, as it were in the Stomack of the Heart, and the Ferment of the Heart being drawn, the Arterial Blood it self passeth over into the Common-wealth of Spirits.

Yea the secondary Humours also, or the immediate Nourishments of the solid Parts, are by degrees made Volatile, least they should leave a remaining Residence behind them; but they make an egress with a total transpiration of themselves. The Heart therefore by its Ferment, frameth arterial Blood out of venal Blood, the which by the same endeavour, it so fits and extenuates, that moreover, so much of vital Spirits is made out of the arterial Blood, in the Arteries, as it were in its Stomack, as the Grossness, and resisting Substance of the arterial Blood, in so small a space, wherein it is agitated or wrought in the Arteries, permits to be made: And there is well nigh a single Action, while the venal Blood passeth over into arterial Blood, and the Arterial Blood into Spirit: Because they differ not in their Shops, and likewise in the Degrees of Digestion, Extenuation, and Subtilizing: For as much of arterial Blood is bred of venal Blood, and as much of vital Spirits is made out of the arterial Blood, by the same Ferment of the Heart, as is needful for every one of them, and the Faculties of concocting are able to make.

Neither is it sufficient also, to have known that the venal Blood doth ascend into arterial Blood; but that the arterial Blood passeth over, partly into vital Spirit, and partly departeth into the Nourishment of the solid Parts: Also that at length of vital Spirit, it is made animal, and the which receiveth an ultimate or utmost Determination in its Nerves: so indeed, that it is made visive or visible Spirit in the optick Nerves or Sinews of Sight, but being exorbitant from thence, and being derived into the Tongue, it should be plainly unprofitable for tasting; even as also the Animal Spirits, the Authors of touching, are unfit for Motion, and those of this, for them.

But moreover, it behoves us to have known the Marrow of the vital Spirit: For indeed, of the Sharpe Chyle, partly venal Blood, and partly a Urin and sweat is made: But that excrementious Saltiness of the Urin, is a volatile and Salt Spirit, the which being co-fermented with Earth, at length a Saltpetre is formed; wherefore that Salt Spirit is excrementious. The venal Blood indeed by Distillation, shews unto us also a saltish Spirit, plainly volatile, not any thing distinguishable in Smell, as neither in Taste, from the Spirit of the Urin: Yet essentially different in this, that the Spirit of the Salt of Venal Blood cureth the Falling-sickness, but the Spirit of the Salt of Urin not so.

From hence at leastwise it is manifest, that there is a Salt, and volatile Spirit, in the venal Blood: But after what manner the whole venal Blood may be homogeneally transchanged by the Ferment of the Heart, cannot be explained by Words: because Natures themselves are not demonstrable from a former Cause: For the Operations of Ferments for the transmutation of things, are essential; but not the accidental Propagations of Accidents, for the causing of Dispositions only. The vital Spirit therefore is plainly Salt; therefore Balsamical, and a Preserver from Corruption: That although the *Aqua Vita* doth easily pass into vital Spirit; yet this Spirit is not Oylie, or combustible, like the *Aqua Vita*; but the Spirit of Wine, only through a touching of the Ferment, is easily, wholly changed into a salt Spirit, and forthwith loseth its inflammable Disposition: Even as I have taught in the Book of the Stone in Man, after what manner *Aqua Vita* may by the Spirit of Urin, be in one only instant coagulated into a subtile Gobbet or Lump: The which concerning the volatile Salt of the arterial Blood, may through the effective Ferment of the Heart, be much more evidently proved.

Wherefore, they who for some good while, do undergo the beating of the Heart, although they shall then drink abundantly, and that, much of the more pure Wine, yet they are not easily made Drunk: Because that by reason of an urgent necessity, the Spirit of the Wine is most speedily attracted into the Heart, and Arteries, which are scanty in spirits, and is suddenly formed into vital Spirit. It restoreth I say, the Strength or Faculties; neither

Yet

yet doth it then make drunk; because it is no longer a stranger; but being drawn into the Heart, it easily becomes domestical, and then is on every side dispensed through the Arteries: For it doth not argue to the contrary, that the Spirit of Salt-peter is sharp, and that therefore the vital Spirit ought to be sharp: For neither was the Spirit from whence Salt-peter was made in the Earth, then sharp: And therefore the vital Spirit is Salt, and nearer to the Spirit of Urin, than of Salt-peter, the which by reason of Adustion, and Extraction, is alwayes a new Creature of its composed Body. That Foundation therefore, which is laid by the Ferment of the Gaul, in volatilizing and making Salt; this afterwards is perfected in the Shop of the Heart: For the foregoing Digestions, are as so many Dispositions unto vital Functions, and Necessities: for a Member being once stupefied, if Sense or Feeling shall return, that surely is made with sensible Spurs and Prickings, which are the tokens of true saltness. But that the whole venal Blood is a meer Salt, may not from elsewhere be more clearly deducted; than that because in the Dropsy Ascites, and in Ulcers, it is homogeneally through a most easie Degeneration, changed into a salt Liquor. But a salt, sharp Quality, and subtile Matter was suitable to the vital Spirit, if it ought to be sufficient for preserving of the Members. The redness also of the venal Blood, assumeth a yellowness, while it is made arterial Blood, because that which is Red through the tartness of Salt, waxeth Yellow in its dissolving: Neither yet hath the arterial Blood lost all its redness, for truly a Part thereof, ought to remain for the Nourishment of the solid Members.

It is a dead or invalid thing, whatsoever I have hitherto said, that the Spirit of Life is a salt, sharp Vapour, and made of the arterial Blood, by the vital Members their own Ferments.

I will therefore Speak of the Life of the Spirit: For seeing it ought to do its Duty with the Offices of Life, it was not required that it should be in the shew of a salt Liquor, or arterial Blood, or that it should befool us under the likeness of a salt Exhalation; but because it ought primarily to live, and receive the Life, it was meet for it to be enlightened: not indeed with a burning, enflaming, or fiery Light; but with a simple vital Light, of the Nature of soulified Formes, of the sensitive Life and Soul; and that indeed of a humane Species: For, for the Understanding thereof, suppose thou, that Worms named Glow-wormes, have by Night, a Light in their Belly, which not only shines like the Eyes of a Cat, but also pouers forth a thin Light round about; that Light is extinguished with the Life of the Glow-worme. A like Light suppose thou to be, which enlightneth the vital Spirit; as long as it liveth it shineth, and is propagated into Spirit newly made, being duly elaborated: And by how much the more impure, and the less elaborated it shall be, by so much shall that Light be the Darker: But that Light is extinguished in us, the Matter of the Spirit remaining, in the Plague, Poysons, &c. even as by Swooning and Beating of the Heart, the Light is extinguished, and the Spirit vanisheth away.

In time of Death also, the Membrane of the Eye is destitute of a manifest Light, plainly to be seen; Yet the Essence of that Light in Glow-worms, is not so alike to that which is in us, to wit, as they differ from us only in Degree: But there are as many Species of these Lights, as there are of vital Creatures: That is unto us a token of divine Bounty, that there are so many Species and vital Differences of Lights, which by us are comprehended under one only Notion; because that those Lights, are the very Lives and Forms themselves of vital Creatures: So that the thrice most glorious Father of Lights doth recreate himself in the abundance of the kinds of Lights, with no less a Lavishment, than as in one only humane Countenance, he hath fashioned almost as many Varieties as Men: because there is in his Power a certain Common-wealth of vital Lights, and Band of innumerable Citizens; a certain Similitude whereof he expresseth in vital soulified Creatures, by a Life, a Form, that is, by a vital Light. The vital Spirit therefore, *Is Arterial Blood resolved by the force of the Ferment and Motion of the Heart, into a salt Air being vitally enlightened*; which Light in us, is hot, but in the Fish it is so actually cold, that it is never able to aspire unto a Power of Heat, as long as it liveth and subisteth: Our Heat therefore is not a consumer of the Original Moisture; as neither therefore, through want of Heat do Fishes hitherto escape Death, although their Moisture be not lifted up into an Exhalation; and least of all, in the frozen Sea: For neither shall the Capuchin our Country-man, who is cold for the greatest part of the year, from his Feet, even unto his Belly, nor feeling himself to have Feet, therefore not undergo a dayly transpiration of the nourishable Moisture, or doth he refuse the Refreshment of Nourishments, or is the Capuchin changed in those parts into a Fish; the which otherwise, should be necessary for him to be, if Heat should be the primary Foundation of Life, but not

not an adjacent and concomitant thereof. God forbid, that we should not know, that there is one Consumption of the Moisture by Heat; but another which is promoted by an extenuating Ferment: For truly, this leaveth behind it no Lee or Dreg, or any Remainder; but that leaves a sandy Stone, or Coal: And therefore the former tends unto a thickning, but the latter unto an extenuating. But if a great Heat doth sometimes arise in us, which scorcheth the Members with the Fire-coal or burning Fever, and Persian-fire, and doth gangreen them, move an Eschar, and sometimes gnaw the Flesh like a Dormouse; For so are the Works of Corrosive Salts, the Acts of the Degenerations of Out-laws, banished from the vital Common-wealth: Truly that is even as by laxative Medicines, the whole venal Blood is resolved into Putrifaction; for they are Errours to be ascribed unto the violences of strange kinds of Seeds, under which the vital Light doth degenerate, no otherwise than as the pressing together of Hay stirs up Fire.

Moreover the vital Spirit climbs into the Head, through the principal Arteries: But there is one only Bosom in the very middle of the Brain, which being beheld from above, seemeth to be double; but its Arch or Vault being lifted upwards, it sheweth a Unity.

But in this Bosom, an Artery endeth into a wrinckled Vessel, and that of another weaving, than the other compaction of Arteries. Hereby therefore, vital Spirit flows forth into the Bosom of the Brain, for the service of the Imagination, Memory, and the spiritual Faculties their Chamber-maids; all which are likewise founded in the implanted Spirit, an inhabitant of the Brain.

But if the inflowing Spirit proceedeth from hence, into the Mouths of the Sinews, beginning from the Brain, or the Cerebellum; it attaineth Properties fit for the Functions of the Parts there ordained.

I have said elsewhere, that this Spirit doth not essentially differ from the vital Spirit; but that in the latitude of its Essence, it is capable of very many Properties, according to the latitude of Idea's imprinted on it: for that which defluxeth to the Tongue, causeth tasting, the which notwithstanding in the Finger, doth not taste; because it puts on a particular Limitation of the Organ, without the transchanging of its Nature, least there should be as many Sub-divisions of the Animal Spirit, as there are Services divided by pluralities of Offices.

In the mean time, call the thing as it listeth thee.

CHAP. CVI.

The manifold Life in Man.

I Have shewn elsewhere, that there is in the Womb a Monarch-ship, and therefore also a singular Life: To wit, whereby after the Death of a Woman, it as yet casts forth the Young.

I have also seen a Woman, which was never taken with the Falling-evil, but when the Pain of Travel was urgent; neither also did it cease, but after delivery. I have shewn also, that there doth live a certain piece of Flesh of a spleen-like Form, grown up indeed between the secundines, and hollow places of the Womb; and that its Life is proper to it self, so as that it lives not by the Life of the Mother, or Young, but by a certain promiscuous Life, not indeed by a sensitive Life, although it flourisheth with a certain vital Power; but not through favour of a certain herby or vegetative Soul.

At length also, that the Veins have their own Life as yet remaining in them after the Death of a Man, whereby it preserveth the Blood detained in them, from coagulation, and in this respect, illustrates it with a certain Life for many dayes after the Death of the Persons.

Wherefore that there is another Life of the Veins, whereby they not only live; but do also conserve the Blood it self, in Life.

Last of all, I have also demonstrated, that there is a certain peculiar Life in the Muscles, together with the sensitive and motive Faculties, whereby they all extend themselves with a fearful Convulsion, at the percivance of Death: As is manifest in a Tetanus, in Rigours or cold shaking Fits, and Convulsions, wherein as well in those that are alive, as after Death, the Muscles are moved with an involuntary will, even after the extinguishment of Life. And although these Lives are distinguished by their various Subjects, and are manifested by their diversity of Offices, yet they all arise originally from the Seed, they are furious or cruel ones, they are implanted in their own Subjects, and are in the whole or entire Life, as in the total Form of the Parts. Wherefore neither are they to be considered in the Treatise of Long Life; because they are those which perish without the hope of Fewel, at least-wise presently after the Death of the Man: Yet are they memorable in the successive Alterations, and curative betokening of Diseases.

CHAP. CVII.

The Flux, or flowing unto Generation.

I Have seen the Beginnings of our Generation by way of Dream, and I will describe them with my Pen, so far as can be expressed by Words.

First of all, I saw a Womb contracted with Folds or Plates after an unimitable artifice, and in time of Conception, to open it self by a proper attractive Blas; and that suitably according to the extension of the Seed: To wit, which Extension or opening of the Folds, causeth a sucking, and attraction of the Seed, by reason of a Vacuum: And therein layeth a Rhombus (or Figure on all sides equal) of conception for the femal Sex: For truly, it contains the immediate Cause of complacency, and attraction of the Seed into the Womb. For neither otherwise in Copulations, however voluptuous they are, is there made any enlargement of the folded Womb, except in the very instant of Conception: For from hence it is, that the Conception of Bruits is almost infallible. For truly there is not any voluntary Extension of the Womb, as neither is it subjected unto Artifices or Crafts: But rather it after some sort, exceeding Nature, plainly sheweth that God is the president of humane Generation, continued on Posterity, according to the Word of blessed Propagation, *Increase and Multiply*: Because it is the Finger of God, which extendeth these Purples, without an organical Mean: The which is called in the holy Scriptures, *God opened the Womb of Sarah*. Truly, the whole History of Generation should seem to exceed Nature, unless it had been received within Nature from the right of an attained Propagation, and a continued frequency of it self. Whosoever therefore meditates on the expectation of Off-springs, let him expect not the tickling or lecherous lust, nor the abundance of Seed, yea, nor health; but altogether and primarily, the aforesaid Magnetisme or attraction of the Womb: And on behalfe of the Male Sex, that the Seed be not infamous through any Contagion: For otherwise, the Womb once receiving a Seed badly seasoned, doth reject that Seed, neither doth it thenceforth open it self, that it may suck the Seed of that Man, inward, for Life: For the Womb doth oft-times conceive in second Marriages, which in the first Marriage-bed, was Barren: But therefore the extension of the Womb ought to be suitable to the Seed, by reason of avoiding a Vacuum: And then, every strange thing, is a hostile impediment to Generation.

Then in the next place, after that the Seed of the Man is joyned with that of the Woman, the sucking of that Load-stone in the aforesaid hollownes of the Womb, presently ceaseth, and the Door of the Womb is shut, nigh its Neck. But the Womb, doth by shutting out all Air, on every side, and equally embrace its Content, with a bountifull Favour,

and

and a more exact co-mixture of them both, beginneth, by reason of an occult co-marriage unfolded in the Seeds on both sides. Presently after, although the conceived Seed, be at the first disturbed, and a thick or dark Liquor; yet two dayes after, it assumeth the likeness of the transparent white of an Egge.

But on the Sixth day (but not before) the Archeus the Inhabitant of the Seeds, appeared unto me, as it were a cloudy Vapour, the which on the thirteenth day after, was shadowily endowed with the Figure of a Man, together with a certain clarifying of its own thickness: For then the Seed had increased, perhaps in the tenth part of it self, and had married the nourishable Liquor unto it self, being the original or first-born Liquor.

In the mean time, I wondered at the begun Self-love of Selfishness, which even in Seeds, should presently begin to meditate of their Increase: For as lukewarm Milk doth presently incrust it self in a thin Skin; so also the Seed, straightway after three dayes, arms it self with a Skin, the which notwithstanding becomes more manifest by Degrees; Yet both the Garments do differ in that, that the Milk over-spreads its Skin, only against the Air; but the Seed on every side: because the thin Skin is not extended over the Milk by a Spirit, the Former or Framer thereof; but by Heat, which separateth the Diversities of the Milk: For from hence it comes to pass, that the more slymie, and more Far, and more Neighbourly parts of the Milk, are alwayes designed for the making of a skin, by a separation from the rest; and the which being consumed, the skinnifying of the Milk ceaseth. In Milk therefore that tendeth to Corruption, unlikeneesses of matter are made; The which doth not happen in Seeds collected, and disposed to Generation.

Furthermore, although the Air was seen under the Figure of a Man; Yet a sexual Character could not as yet be noted by me (after some dayes from the Vision, I lighted on that place of the Apostle, *There shall not be Greek or Hebrew, nor Male, or Female, but they are all one in Christ.*) About the 17th day, I saw that this figured Air did sink, and plainly espouse it self within the White, and did as it were sleep for full three Days space and about 12 hours, and was again a certain dark Chaos in the Seed: In which interval, it covered it self with a visible Secundine, and the hardness of a Membrane which it found not in the Matter, it had made unto it self by a formative and transchangative Faculty: Indeed this forming Air, while it engraveth the Body, it useth not separation, neither therefore hath it need of a diversity of matter, whereby it may frame or fashion the Diversities of Alterations of Organs proposed unto it self in the Figure: Which three dayes being finished, that Spirit the Framer, then first appeared, being markable with the Signature of the Sexes, yet no longer undistinctly walking up and down throughout the whole Lump of the Seed, but under a certain confusion, proper unto that three dayes space, all that very Air had grown together, in every of his Parts, although they not yet appearing: For neither was there as yet so much another wandring and floating Spirit in that Mass; but one only implanted Spirit continual unto it self, through the Rudiments of the Parts, did finish the whole distributive Divisions of Generation; and that its own Pains was incessant, yet without toyle, and grief or wearisomness: And although it was not wearied in its Work, yet it required a Vicar for it self: for a distinction of the Parts is more and more unfolded, and there is made a growth or increasing of the whole Lump, by the Mothers, and that more pure Blood, and it forms unto it self a Radical Moisture, the constituter of the solid Parts: Wherefore also, it draws an Increase, and Fuel to it self, from the vital Spirit of the Mothers arterial Blood, the which, to wit, it soon assimilates unto it self by a most perfect Union.

Indeed the Spirit is nourished, and increaseth in the delineation of the Seed, no otherwise than as the corporeal Lump of the Embryo it self: Yet the inflowing Spirit was not seen by me, before the thirty second day after Conception. It was then indeed as yet thin, and drawn from the arterial Blood of the Mother, being translated into a neighbouring Species. But this Spirit, about the one and fourtieth day, had obtained a certain vital Light or Splendour; and also it expressed the stature of a Man, but heaped round together; yet deformed by reason of a disproportionated bigness of the Head; which Light was as it were a shining or brightness from a flame, which *Aqua Vita* sheweth in burning: And not much after some moments of time, this Light was on a sudden made more Lightsome than it self.

The sensitive Soul, although it make a Species in Bruits, and therefore subsisteth by it self; yet in Man, it contains not a Species, but only a subordinate Diversity of Light, or a Degree unto the Mind, therefore scarce subsisting without the Mind. And although in Man, there be a sensitive Life; yet it is not a specifical Being by Creation; but a seminal

Being occasioned through the Lust of our first Parent, the Character whereof is wholly restrained by the Mind: The sensitive Life therefore, doth presently inform the Spirit of the Seed, under a skie-coloured and obscure Splendour, and is also informed by the Mind, and that with a clearer Light.

Yet 4, 5, 6, or 7 Points of the Cord of a Foot-length, do interpose; because Seeds do differ in the Perfection of Dispositions; and therefore the Spirits, the Formers of Seeds, do differ in their Perfection, and chearfulness of Acting. For from hence it is, that that which happens unto one Conception in one forty Dayes, that happens to another in the second forty, or in the third; neither yet therefore are the more slow or sluggish Quicknings more imperfect than swift ones, no otherwise than as fore-ripe Wits are oft-times to be set behind, or less esteemed than the more slow ones.

At leastwise, the whole race of our Generation breaths forth some famous thing: For although the Archeus the forming Work-man, containeth in it a humane Figure, and figureth the Body after its own likeness; yet the Fabrick of Man, is not from the Beginning, in an erected or upright Stature, as neither confusedly rouled into a circle, but bent or hooked, after which manner the Young is defective in the Womb: It is false therefore, that Nature is every where circular; Because she is that which would every where give satisfaction to his ends, who is cloathed by the glorious Work-man of Nature, and not by Nature,

For neither after another manner, is there a re-bent Reflexion put into the seminal erected Spirit, by the Generater; but it proceeds from the Finger of him, who disposeth of all things sweetly from end even to end: Therefore the Seed being conceived, the Womb forthwith shuts its neather Gate, least any forreign thing should rush into it, which might disturb its Conception.

In the next place, the Vessels of the Womb which are subject unto its command, as if a Door-keeper were added, are also shut above; because then a new Common-wealth ariseth in the Womb, as a new family-administration of a future Young; and therefore also a singular Kitchen is erected in the confining Vessels: Even so that the Embryo is a good while nourished and increaseth, not by the venal Blood of the Liver, but by pure, and fined arterial Blood: But presently after, as soon as this Kitchen is furnished for the Embryo, which is about to live in his own proper Orbe, the Womb prepares venal Blood, which it may hand-forth unto the Embryo, and therefore, whatsoever less profitable thing it meets withal, it is brushed out; So that in that whole Motion, the Mother for the most part is ill at ease.

For truly, seeing Filths can no longer be expurged through the emunctory of the Womb, and the which neither are able to expect the Maturity of Delivery; the Filths go backward into the Veins, they obtain the condition of an Excrement, and are thrust forth by Vomit, and other Sinks: That which is not equally done in Bruits, seeing they want Menstrues, and do not admit of an unseasonable Copulation.

Again, the Conception of Men was not from the first intention of the Creator, after the manner whereby we are conceived in Sins.

At length also, because for Bruit-beasts, pure arterial Blood was not equally required for Nourishment: Therefore the teeming Woman alone, shall pay for the Itch of one Copulation, through a cruel expiation of many Punishments beyond Bruits. The Embryo therefore, or imperfect Young, is at first nourished by arterial Blood, prepared in the neighbour Kitchens of the Womb, until that after the first forty dayes, he obtaining a living Soul, lives of his own right: But the preparatory Kitchen is exercised in the spleen-form Flesh, whereby the secundine cleaveth to the Womb: Therefore Succours for the Young are slow and oftentimes void, and also those that are administered to, the Mother by way of the Mouth; because that before their entrance unto the Embryo, all things are recocted: And again in the Young itself, before they can augment the same.

But the Infant being born, before he is fit for bearing of the more hard Meats, he is accustomed to the more gentle ones: For so he is a good while fed with arterial Blood, which leaves no Dungs be-hinde it: For those things which fall from a little Infant that is born, presently after his first Cry, are the Reliques of the Blood of the Liver, the which for the most part, is not first admitted into the aforesaid Kitchens, but after the third forty dayes: And these indeed, are the Excrements which do ripen and provoke the necessity of travail or delivery.

But moreover, the Spirit that was once implanted in the Seed, being sunk into the Seeds, doth presently, if not fore-know the necessities of the Body, at leastwise perfectly learn

learn them, and afterwards draws unto it self a Confluential or nearly allyed Spirit, or Nourishment, by a certain Harmony of Affinity.

At length, the Womb feeling the Maturity of the Young, by co-wrinkling contracteth it self, which the Antients have called, *Striving to expel the Young or Off-springs*. For I have oft-times with-held Abortion threatned and begun : But sometimes I could not. But I have known that I have detained it, as oft as the abortion should be caused from a Symptomatical animosity, without a fore-ripe expulsive Faculty, to wit, from the digression of the Womb ; And the Remedy did operate by retraining, and sleepifying, appeasing and pacifying the aforesaid Furies of the Womb ; But I could not prevent Abortion or miscarrying as oft as there was a fall of the Mother from an high Place, and much disturbance of Affrighting, Grief, Anger, &c. they being inordinate things.

And likewise, if the Young had a remarkable Monstrosity, which adds no sluggish Spur unto Expulsion : Or if the Young die, or pines away or failes through a notable Weakness : And likewise if the Mother being strongly smitten with astonishment before the Young could live in its own Quarter, hath with-drawn the Arterial Spirit unto her self : The which, if it shall straightway return from thence, yet it finds the same Young as it were in a sound, whereunto as unto a Plant so tender, Life is scarce re-connexed.

By this means, the semi-vital Conception is now and then wont to miscarry into a hard Lump of Flesh, or a foolish Branch : But that thing scarce happens through a defect of the Fathers Seed ; because that a barren or foolish Seed, is either not attracted, and so neither is it conceived, or if it be attracted, it, through a foolish Lust of the Womb, soon falls out again, and frustrates Conception : But the Seed degenerates into a hard Lump of Flesh, by reason of external Incidencies lighting upon the Seed ; whereby *Hippocrates* saith, *That Seeds are withdrawn whither they would not*.

Therefore a hard Lump or Moale is made, while as the Spirit is sunk into the Body of the Seed, and is spoiled of a humane Figure, yet retaining its former growing Faculty.

The drowning or sinking therefore alone, is able to command the Figure out of the forming Spirit, if being to long sleepified within, it becomes fast asleep,

But although the dreaming Vision, did scarce fill up the space of halfe a quarter of an hour, yet it at once represented all the successive Periods of Generation, as it were in a Glass of the Thing : To wit, its Moments, Fluxes, Motions, Aspects, Diversities of interchanges, and also its Errours stood collected into Unity.

But I being awaked, alas, how I sighed at the likeness of our modern propagation with that of Brute-beasts ! And therefore *Adam* not undeservedly bewailed the Death of *Abel*, for the space of an Age : He grieving the while, at the hateful brutish Generation, and knew not his Wife in all that time : As well weighing, that Nature being now defiled in its Root, was to suffer original, and of necessity, durable Miseries.

C H A P. CVIII.

A Lunar Tribute.

SEing Woman onely among living Creatures (the Ape perhaps excepted) suffers Menstrues or monthly Issues, and seemeth for this cause to have experience of the operations of the Moon-star; but since the Schools do prattle of very many things concerning the Menstrues, as if it were the ordinary nourishment of the Young: Surely it hath behoved me to discover their boastings, in the Treatise of Long Life.

For first of all, the Moon doth not heap up or expel this venal Blood although the purgation of the Womb be co-incident with the course of the Moon: For that coincident is unto both terms or limits by accident; for otherwise, if that purgation of the Woman should be from the Moon it self, verily all Women should be Menstruous on the same day, and at least-wise, those which should dwell in the same Climate: Or at least-wise all young Virgins, should likewise suffer the same with the new of the Moon; which is false: For if some Ships do follow one Pretorian or chief leading Ship, which in a dark night, hath a Lanthorn in stead of a Flag: The Lanthorn indeed, affords onely a Sign of their following: but the Wind, Stern, and Governours of the Stern, shall be the immediate efficient Cause of their following.

So the Moon like a Torch, finisheth the task of her circle, in four weeks and six hours: So also a Woman for Reasons straightway to be added: For the Woman ought to encrease and nourish her conceived generation from her own blood, unto a just stature of the Young, and to feed the Infant being brought forth, with her own blood being turned into milk. Therefore she had need of a greater plenty of venal Blood, and therefore while it should not be supt up for those ends, it should also become superfluous, and by consequence, be voided or expelled: Yea although a Woman eats and drinks much less then a Man; yet she abounds with more blood: That is, the shop of the venal Blood makes more arterial Blood in the Woman, than in Men, even out of a more sparing meat and Drink.

From whence it of necessity in the next place, follows, That in the Woman, more is turned into a profitable nourishment, and in the Man, that more is changed into excrements.

But how it is manifest, what, or of what sort, that superfluous blood may be; let all know, that the venal Blood of Man ought to be renewed in a space of daies, wherein the Moon measures all her particular courses through the *Zodiack*: For that is the space, wherein the venal Blood is kept in its Balsam, it being longer reserved, it is corrupted. For truly, he that aboundeth with Blood, it must needs be, that by nourishing, he spends the same on the family of Life, or that he transchangeth it into fatness, phlegms of the Latex, or other droffes; as Sweat, or disease Excrements: For the Woman hath small pores, the fleshy Membrane under her upper skin, doth enrich her with much fat, neither therefore can she consume so much Blood superabounding in her, as she daily makes or concocts. The bound therefore of the course of the blood, being finished, that which is barren becomes all superfluous, the which therefore Nature is busied in casting forth, and sequesters it unto the veins of the Womb, as unto its appointed emunctories: For the blood departs unto those proper places, nor those likewise strange ones, because for the ends already declared, the Menstrues is the superfluity of the Blood of the Woman alone: And it becomes burdensome, by the very title whereby it is superfluous: And as yet by so much the more, because then it puts off the vital Spirit; no othewise than as some Wines, after the Years end, become strengthless.

For these ends therefore, and by these means, the venal Blood is made an Excrement, afterwards a poyson, and attaines worse faculties in going. But at length it assumes the horrid properties of a new dead carcase: For therefore the Menstrues of the first dayes,

is more infected than that which flows forth in the following dayes : For although the expulsion of the Menstrues be the proper office of the Veins : Yet the collection of the same, even as also its renewing, and sequestering, do belong unto the Monarchal Archeus of the Womb.

Therefore indeed, that which is most hateful, is the more speedily cast out of doors, whereby it first separated it self from the good blood; and for this cause, it being the longer detained about the Veins of the Womb, for that cause also, it is the more poysonsome.

In the next place, although this Poyson masks it self with the shew of venal Blood, yet the favour of the vital Balsam being by degrees laid aside, it ascending unto the malignity of a cadaverous or stinking Liquor, assumeth the disposition of a poyson, and hath degenerated from the former nature and properties of Blood : The which handy-craft operation proveth.

For truly, a Towel that is dipped in the Menstrues, if it be plunged into boyling water, it contracts an un-obliterable spot for the future, and the which at least-wise in the third washing, falls out of the Towel, it being made full of holes, no otherwise than if it should be corroded by the sharp Spirit of Sulphur : That which after another manner, is a forreigner to the blood of a Man, whether it shall flow forth through the Nostrils, Wounds, Hemerhoides, or Bloody-flux ; or next, if it shall fall out from Ulcers like a more wan clot.

From whence also, it is manifest, that the Menstrues hath an aluminous tinging property, any besides, a cadaverous sharp poyson fit for gnawing or erosion. But as it once enjoyed the Seal of the Archeus of Life, whereof it being afterwards deprived, it obtains a fermental faculty, full of a powerful contagion, as also hostile sharpnesses : For that Blood through its divers degrees of malignity, stirs up diverse passions within, on the miserable Woman.

For when as it being once sequestered from the other blood, unto the Inns of the Veins of the Womb, hath received the aforesaid sharpness of malignity, and from thence is supped back again into the branches of the hollow vein by a retrograde motion of revulsion (which is made through large cuttings of a vein, or symptomatical wrothfulnesses which are the stirrers up of Fluxes of the Womb) it causeth Swoonings, Heart-beatings, Convulsions, and oft-times horrible stranglings.

But if the Menstruous Blood, being not yet derived unto the Veins of the Womb, or plainly severed from the rest, and so neither hath as yet had its utmost mischief or corruption ; It is detained with a certain inordinacy, and stirs up divers conspicuous Symptomes in many places.

From what hath been said before therefore, it is manifest, That Women great with young, Nurses, weak or sick Persons, blood-less Women, those that are become Lean, those that are not of a ripe age, and swift or circular movers, do want Menstrues, because also Superfluities.

It is also false, that all Menstruous Blood without distinction, is poysonsome or hurtful : And likewise that we are nourished and grow big in the Womb, by the Menstrues : For truly the venal Blood of the Woman hath not the condition of Menstrues, before that untill it being unfit for nourishment, is enfeebled, or deprived of Life, and brought bound unto the sink.

For neither doth he who drinks Wine, drink Vinegar, although this be made of that : As neither is he fed with Excrements who eateth Meats : Yea, which is more ; The Blood which is avoided in or presently after delivery, is not Menstruous through the defect of its condition, because it is not superfluous, from a fore-going course of the Moon.

And then also, because it is not heaped up, fleshy, not aluminous or tart, not staining linnen Cloathes, nor separated from the whole, nor banished unto the places of the Womb, for expulsion.

For that blood which is plentifully voided in time and after delivery, and the which being retained, a doating Fever doth soon after, threaten death, is indeed venal blood, yet not the Menstrues of the Mother : For it is left by the Young, who seeing from his quickening, he lived in his own Orbe, had a kitchin out of himself, in the Vessels of the Womb.

Wherefore it hath taken to it self another property, than that of the Mother, and than that of the Menstrues : For that guest hath indeed the shape of Menstruous Blood ; Yet being an adoptive of another Family, and become a forreigner to the Mother, it is seriously

ously to be expelled, surely no otherwise than as the Secundines themselves : But being omitted and left behind, it is corrupted, and brings on death. But seeing that in a Woman great with Child, there is no Menstrues at all ; by consequence neither is that Young nourished : but with the pure arterial blood of the Mother, and afterwards with pure venal blood, being also first refined in its kitchins.

Therefore the Schools are deceived, who teach, *That the small Pox, or Measels, are due almost to every mortal man, by reason of the tribute of Menstruous nourishment*: For they observed, that there was seldom any smitten twice with that Disease, and perhaps seldom excused from it : Wherefore they searching into the common Cause from whence the Young should be nourished, in the beginning, have referred the Effect on the Menstrues : But in all things, they, without the knowledge of things, have mutually subscribed to each other, and have slidden into Fables, and Conjectures.

For first of all, they have not considered, that it is almost impossible for any one to be made free from that Disease, if all are alike indifferently nourished with Menstrues. And then, because they should be afflicted as it were, at one certain and appointed term of the Crisis.

I confess indeed, that the Measels do spring from a Poyson, and draw a Poyson with them, infect the blood with their ferment, and defile others that stand by, but especially Children, and that the internal essence of Poysons, is not demonstrable by a former Cause : and therefore we measure the Property of a Poyson by the Effects ; even as a Tree by his Fruits.

1. Therefore, *The Poyson of the Measels, is proper onely to humane kind.*
2. *That Nature is prone to the framing of that Poyson.*
3. *But that it is kindled about the Stomack, and so in the Center of the Body.*
4. *That the parts being once besieged with this Poyson, do most swiftly repulse that Poyson from themselves, towards the superficies of the Body.*
5. *That the shops of that Poyson, after that they have once felt the tyranny thereof, being afterwards thorowly instructed with a hostile averfeness and horror, do with great fore-caution prevent or hinder the generation thereof, even from the very beginning, least they should even at first, unwarily fall thereinto.*

Therefore the Poyson is made in Man, but not co-bred in him from the Menstrues. But of what quality that Poyson may be, cannot be described by name, because it hath not a proper name out of its effects.

It is sufficient in this place, that the Menstrues cannot be drawn into a Cause for the Distempers aforesaid.

At first therefore, The Menstrues offends in its matter, by reason of its abounding alone: And then it undergoes a degree, that the first may be, wherein that blood is superfluous, from the foregoing course of the Moon.

But a Second degree, is as soon as it is separated from the rest of blood.

But a Third degree is, while, as designed, it hath resided about the Vessels of the Womb.

A Fourth is that which hath stuck some good while in the same place, and hath entered into the way of death.

At length, the last degree is, while as it now hath slidden forth as a dead Carcass, and into the Air.

Therefore the Schooles offend, while as by cutting of a Vein, they are busied in succouring of Virgins (who in respect of their Menstrues do feel an heart-beating or trembling) without distinction : For although the Menstrues of the first degree, appeaseth heart-beatings or pantings, by a revulsive blood-letting ; yet in the third degree of the Menstrues, I have fore-told it to our chief Physitians, to be a destructive Remedy : Because that the Veines of the Arme or Hams being emptied, I have observed the Menstrues to be drawn backwards from the neighbouring places, into the Veins : And truly those Veins which do not remain emptied, but which are filled again by a communion of continuation : So also, after great heart-beatings, and pauses of intermitted pulses, or after most sharp paines of the sides following from the Womb, to wit, by reason of an aluminous Poyson of the third degree, Virgins have suddenly died, by reason of Phlebotomy by me instituted at unawares.

In the first degree indeed, the abundance of venal blood is taken away : But it is the less evil, although a part of the barren blood be left surviving.

Truly I had rather to help Nature in her sequestration, and expulsion, than by drawing of undistinct blood, to have weakened Nature.

Moreover, that is to be noted, That although I have distinguished Diseases by the Ranks of Digestions, yet I have scarce made mention of the Menstrues ; Because the Menstrues is neither digested, nor is it a superfluity of Digestion, and so is of another condition : For at first it offends with a good abundance, and then, with a burdensom superfluity ; presently after it is deprived of Life, and becomes a Poyson ; yet it cures Swine which are inclining into the Leprosie ; even as Horses, straightway, which were contracted or convulsive from unseasonable Drink, if they drink up but a small quantity of Menstrues.

And likewise the poysonom and true Menstrues of another Woman, being administred in a few drops, hath presently strangled a Woman labouring with a Flux of the Womb.

But the blood which is at length avoided in plenty, in Fluxes of the Womb, being drunk in a few drops, stayeth those Fluxes.

Furthermore, because Woman only, (the Ape perhaps excepted) doth suffer Menstrues ; and although the Menstrues do accuse of an abundance alone ; yet that the Cow, her Dug being dried, suffers not Menstrues, otherwise she flowes down with very much Milk, denoting that the abounding of venal blood, is indeed the material Cause, but not therefore the final, and the which therefore, I have not reduced among natural Causes : For that the Almighty alone encloseth all the final Causes of all things within himself, who sweetly disposeth of all things according to the unsearchable Abyss of his own Judgements. But if it listeth us to enquire into the cause hereof, It is certain, that *Eve*, after the eating of the forbidden Apple, made her self subject to the itch of Lust, stirred up, and admitted the Man unto copulations ; and from hence, that the conceived humane Nature was corrupted, and remaining degenerate thenceforward : Through the Cause of which corruption, Posterity are deprived of an incomparable purity.

From whence there is place for conjecture, that *Eve* did by the Member through which she became subject unto many Miseries, testify among posterity, a successive fault of her fall, and bloody defilement in Nature : For the part wherein the Image of God ought to be conceived by the holy Spirit, became a sink of filths, and testifies the abuse, and fault of an unobliterable sin, and therefore also suffers : Because, *In sorrow shalt thou bring forth thy Sons*, in manner of bruit beasts, because henceforward, thou shalt conceive after the manner of bruits : For so that Curse hath entred into Nature, and shall there remain. And by the same Law also, a necessity of Menstrues : For before sin, the Young going forth the Womb being shut, had not caused pain.

Wherefore, it is lawful to argue from the Premises, That the incomparable Virgin-Mother of God, the Ark of the Covenant, never admitted into her any corruption, and by consequence, was never subject to Menstrues, as neither to have suffered womanish discomforts : Because she was she, who by the good pleasure of God, hath the Moon, and the Properties of the Moon subjected under her feet. *Unto Whom, next unto God, be Honour and Praise.*

CHAP. CIX.

Life.

IF I must at length Philosophize of Long Life, I must first look into, what Life is, and then, what the Life of Man, what immortal and *Adamical* Life is, afterwards what a Sensitive and Short Life is, what a Disease, what a Healthy Life, what the Life of the World, and what Eternal Life is.

To which end, it is convenient to repeat some Lessons from my Premises.

First of all therefore, Life is a Light and formal Beginning, whereby a thing acts what it is commanded to act : But this Light is given by the Creator, as being infused at one onely Instant, even as Fire is Struck out of a Flint ; it is enclosed under the Identity and Unity of a Form, and is distinguished by general Kindes, and Species : But it is not a fiery, combustive Light, a consumer of the radical moisture : It is as well Vital in the Fish, as in the Lyon, and as well in the Poppy, as in Pepper : Neither also doth heat fail in us, by reason of a consumption of the radical moisture : Neither on the other hand, doth moisture fail through a defect of heat, but onely through a diminishment and extinguishment alone, of the vital Powers, and also of the Light. The Fire, Light, Life, Forms, Magnal, Place, &c. are neither Creatures, nor Substances, as neither comprehended in the Catalogue of Accidents : Neither therefore, do I distinguish the Form in vital things, from their Life, the mind of Man being on both sides, excepted : To wit, there is a certain Life which is mute or dumb, and scarce appeareth, such as is met with in Minerals ; The which notwithstanding, do declare that they live, and perform their Offices, by their Marks and remarkable Signs of vital Faculties.

And then, there is another Life, which is a little more unfolded or manifest ; Such as is in the Seeds of things, tending to the period of their Species.

In the next place, a Third Life is seen in Plants, increasing themselves, and bringing forth off-spring by a successive multiplying.

Next, a Fourth Life is manifest in brut Beasts by Motion, Sense, and a voluntary Choice, with some kind of Discourse of Imagination.

At length, the Last Life is now obscured in the Immortal Mind and Substance, and is after some sort unfolded by the sensitive Soul its Vicareffe.

The Life therefore is not the Balsam, not the Mummy, not, in the next place, the Spirit of the Arterial Blood, although this Spirit be the Conserver of the Body : Because the Life is not a Matter, yea nor a Substance ; but the very expresse Form of the Thing it self.

Moreover, I being about to speak of the Immortal Life of Men, I will follow the Text : For indeed, because the punishment of the broken Precept was Death : For Death came not from God, but from the condition of a Law ; I say, the Almighty made not Death, as neither a Medicine of Destruction in the Earth : And that must be understood onely in respect of Men : For neither ought the whole Nature and Condition of the Universe to be bespattered for the Sin of *Adam*, so as that Bruits are made subject to Death through the corruption or deviation of our kind : For truly even before Sin,

Bruits

Bruits ought to dye; to wit, some whereof, the Lord of things had substituted for meat and fodder to others: For they ought naturally to dye, every annihilable Life and Form whereof, were onely one and the same thing.

Indeed it was of necessity, that those Forms should perish, whatsoever do obtain their first or chief antecedent and subsequent dispositions from a corporal wedlock of the Seeds.

The Death therefore of Bruits, was not worthy of the word Death, which included an extinguishment and annihilating of a Light, but not a separation of the same, with a preservation of the Light separated.

Therefore it was the great God his good pleasure, that he made Man into the nearest Image of the Divine Majesty, as a living Soul, nor subject unto death: Therefore neither is it said that God made Death.

It is therefore believed that *Adam* before transgression, was Immortal, from the goodness of the Creator: Therefore I knew that *Adam* indeed was Immortal, before the transgression of a Law; Yet that it was not natural unto him from the root of Life, but for the Tree of Life's sake: For otherwise, the planting of this Tree in *Paradise* had been vain, if Man could not have suffered the successive alterations and calamities of Ages.

That Tree therefore, was created, for the powers and necessities of Renovation, renewing of Youth, yea and prevention of Old Age: For although the Body by Creation, was not capable of being wounded, nor subject unto Diseases; yet it had by little and little, felt the successive changes of Ages, if its vigor had not been continued by the Tree of Life.

For neither is it to be believed, that the Lord of things, the Saviour of the World, was of a worse constitution than our first Parent. But that the Redeemer of the World died, and so felt the Calamities of Ages, that in his thirty second year, he was reckoned fifty years of Age.

That happened not from his Nature, nor from the root of his Life: For Death, as also the rottenness of Dayes, had no right over him; but out of his infinite goodness, whereby he had appointed himself a Surety for our Sins, he would subject himself to miseries, and so also to Death, in his most glorious nativity, wherein the Lord took on him the Form of a Servant. But how much he departed from that former and proper or natural dignity of his humane nature, wherein he was conceived in the Womb, himself sheweth: Because he who came forth into the World, the Womb of the Virgin being shut, and the bolts of dimensions being contemned, presently prostrated himself to the ordained condition of Death, and willingly felt every necessity of a servile nature: For both *Adams* in their beginning, were immortal.

For the first *Adam* ought to be preserved by the Tree of Life: But the second did wholly contain the Tree of Life in himself.

Both of them indeed chose to dye, before a possibility to live: For the former chose it from a Vice; but the second from Charity.

The Tree of Life therefore, and wholsomeness of the place of *Eden* had vindicated *Adam* in his antient vigor, from Death, until that a number of years being finished, he as happy had departed, translated, without death, unto the Country of Glory.

Moreover, it is of Faith, that *Adam* never tasted of the Tree of Life; and that lest he should eat of it, he was cast forth of *Paradise*, who ought to dye the death: Yea he being now banished out of the Garden of Pleasure, was of so perfect a constitution, that he had lived unto some thousands of Years (who was immediately formed by the hand of the Almighty, without the commerce of Nature) and had far exceeded the age of *Martinsalem*, from the voluntariness of his own nature; but that through the continued mourning and grief of one Age, he had cut off the thred of a most Long Life from himself.

The Death therefore of *Adam* is not to be bewailed (as otherwise, *Paracelsus* badly perswaded himself) because that the vital Spirit, and knowledge of Long Life, had fallen at once together with him.

For those are contradictions, to enjoy Long Life from Knowledge; and likewise to be Immortal from the forming of the hands of God, and the suffrage of the Tree of Life; also after sin to have retained the gift of Long Life, by reason of his most perfect and noble constitution of Life and Body.

From whence, the Spirit of a flourishing and abounding Life, being at length translated

on Posterity, its vigor by degrees declining through a passing over of Generations; the injuries of Life, and Diseases, and through the rottenness of Years, the Curse co-operating, manifested it self as a *Magnum Oportet* or a thing of great necessity: The which having once entered into the Bowels of Mortals, presently took possession of the same.

For the Life of those which at first, was by the Tree, without Death, presently also without that Tree, languisheth, as being enrouled in a short term of Time, and underwent an increase, state, or height, declining, and cessation, after the manner of other things.

For so indeed, Death, through the perswasion of the Devil, stablished it self into its Empire: For Poysons that were harmless under the Tree of Life, were afterwards supported for a Medicine of Destruction: For I think that the Conditions, and presence of the Tree of Life, were hidden from Adam; Else that he had extended his hand unto this, sooner than unto the Tree of the Knowledge of Good and Evil.

And although the Tree of Life, which the bounty of the Creator hath of late discovered, may be so prepared, that it may proceed unto the first constitutives of us, with a refreshment of the decaying faculties; yet I do not understand it to be that which is read to have been implanted in the Paradise of Pleasure, whereunto no mortal man shall ever stretch forth his hand: But ours is a shadowy one, and the Vicarefs of the other: To wit, the which hath nothing excellent and famous, unless that under a retainment of properties, it be reduced by Art, into such a juice, which may be able by its least parts, to co-mingle it self with the solid parts: Neither indeed doth our Tree, (of which I as the first do treat) contain a non-sufferance, unsensibleness of the pain of Diseases, and an incapacity of Death, as the other did.

And moreover, although the Tree of Life of Paradise, should at this day be present with us, yet it should not cause immortality: Because the condition of the receiver is changed: For indeed man is become composed by the bond of another generation, of corrupted Nature, and of another Long Life, wherein the immortal mind hath no longer immediately sustained in it all the actions of Life, but a frail or mortal sensitive Soul succeeded exercising the Vicarship of the mind, and providing for the necessities of Life, it self being like the flame, flidable and extinguishable every hour.

CHAP. CX.

Short Life.

THe Air which is the former in the Seed, ascending by degrees unto its Maturity, at length conceives the Light, or essential Form of its own Species, which is made immediately by the Father of Lights, and is of a proper name, Life: For as many things as differ in their particular Kinds, which are involved in Darknes, so many also ought the Forms to be, under the species of Light: For if a thing is what it is, by reason of the Form, in diversity from any other things whatsoever: But the Form of living Things (except the Mind) and Life, are Sunonyms, there must needs be as many Lives, as there are vital Forms: Therefore the Light of Life, is by it self every where simple, and specific, but not fiery; because vital, formal, and essential. But that the Light of Life is hot, or cold, it denotes that the Life hath not married Heat, or Cold, but accidentally: so that Heat, or Cold proceeds from Life, but not Life from Heat, or Cold: Life therefore cannot be otherwise understood, than under the Conception of Light: And neither Light is more demonstrable from a former Cause, than the Forms of things themselves, and whatsoever issues immediately out of the Bosom of the Almighty. A vital Light therefore, by its species, wants a proper name.

We may indeed make a fiery Light to be given unto us for great necessities; but it is not in the Power of the Artificer, even immediately to produce a vital Light, from himself: Which thing the *Chymists* say, *The Artificer cannot introduce a substantial Form*. The Generater indeed, is the begetter and producer of a vital Air, forasmuch as he contributes Matter after the likeness of himself, and Dispositions thereof, in order unto Life; but is in no wise able to produce Life, or an ultimate perfect Art.

In Diseases also, sometimes the Light of Life ascendeth unto the degree of Fire: Because the Archeus, from a threatned distinction or noting of difference, strikes out a fiery Light: Not that the Archeus produceth this Light, as he that generates his Like: But the Archeus through Fury, presseth together the moist Hay, and it is enflamed; the which being dry, comes not so to pass.

After another manner also, Woods by a co-rubbing, and Iron by striking against it, do conceive the fire which they have not: For truly, the same effects in Specie cannot proceed from things which differ in the whole Genus or general Kind, unless by accident, or an equivocal Action: So indeed, the sensitive Spirit, by reason of Grief, or the Archeus by Poyson, doth by accident become fiery besides his own Nature, through a proper wrothfulness of Anger: For he hath a Blas, whereby he departing from a vital Light, declineth unto the other extream of Destruction, wherein the Beams of his Light do as it were strike Fire out of a Flint, from the corruptible Matter, where both Lights of the Archeus, and corruptible Matter do pierce each other, are united, and are promoted into a fiery Light; because Fire is on both sides the Death of a Thing, which from a proper effect of deficiency, is capable to be stirred up in things consisting of a certain inflammable Fatness: For indeed, although there be one only Spirit in the Seed, which is plainly uniform, and the singular Architect of the Embryo, which is durable unto the end of the Tragedy; yet that was the vice and destruction of a material Nature, that the Spirit being divided through a plurality of Offices, may by degrees decline unto the manifold diversities of kindes of Singularities: And it is in very deed a Vice, as it strews the way unto disorder. For otherwise, seeing the Spirit ought to serve the necessities of Ends, surely it were a noble thing for it to be severed into a number of Offices: For necessity hath made the Organs themselves servile unto it, the which therefore hath framed for it many and diverse Organs; and in this respect, it hath drawn it self unto the same Law of necessity: To wit, it having imitated a monarchical State, wherein there is a certain

Independent

Independent Prince, the moderatour of Laws and Government; wherefore also it fashioning a certain Sunny issuing Life on the Heart, but as it were Independent on any other part, hath there placed the Fountain of Radical Life: But because a Common-wealth cannot long subsist, unless it be nourished; therefore after Kings, Husband-men, and Fisher-men are chief, who bring forth unto us Grain, Herbs, Flocks, Fishes, Woolls, Flaxes, Wines, Woods, Honeys, Oyls, and Hides: Because also, before Kings were thought of, happy Shepherds and Husband-men, had now their Flocks: For for that Cause, *Saturn* is feigned to be the Parent of the Starry Gods, unto whom the Heathens have delivered a necessity of Nourishment in us, as a clear Life of vegetation, by a commutative or exchanging Ferment sliding from the Spleen.

Next, they vote for Husband-men, who should prepare Grain for making of Bread, Woolls, also Flax, and Hides for Garments: Straightway, *Jupiter* being substituted in his Fathers place, succeeded by craft and force; and therefore also another disposer of Nourishment, founding its Mansion in the Liver, is adjoyned unto the nourishing Life, and doth of necessity suitably answer from its place, for a Monarchy.

In the next place, *Mars* removing the disagreeing Reliques in the former Digestions, being as a supply placed in the Gaul, is agreeable with the Souldier. There hath seemed to be a need only of these three, and those sufficient, to wit, of *Sol*, *Saturn*, and *Jupiter*, as long as all things or parts should agree in Harmony: But the life of *Mars* was afterwards subjoyned, not indeed that it might be a Common-wealth and State, simply; but that all parts may keep Peace, and their mutual Offices among each other, nor a rout of Impurities growing up, that Unity may be ordained.

Furthermore, to increase, follows to be present: For a thing first is, before it grow or increase: Yea, seeing it cannot be a nourished thing, unless it be nourished, to be nourished, goes before increasing: For the Moon being the last of the wandering Stars, in respect of things nourished, is nearest to the Earth: Therefore the immediate and unexcusable necessity thereof, hath dedicated this family-administration to the Brain, as being sacred to the Judge in the Monarchy: For we live from the Heart, but Nourishment is from the Spleen, and Liver; the correction of Digestion from the Gaul; but the growing Faculty is from the Brain: Therefore to be quickened, or refreshed, and to increase, do differ in their Beginnings, like as also in their Organs: And that indeed, not by accident, or by reason of a stubbornness of the Parts hereafter refusing to increase; but by reason of each particular natural Endowments of the Bowels: For Indeed what I have said, is beheld even in the birth of the Embryo: For truly, because the increasing or growing Faculty flows from the Brain (which thing, none hath hitherto supposed) the head of the Embryo, and of the Young it self, is far bigger in Proportion, than the rest of the Members: For if the hand be dislocated or put out of joynt, it not only ceaseth to increase, but moreover it decreaseth even in Persons of ripe Age. Crump-backed Persons also do stop from growing, although their turning Joynts being by degrees writhen awry, do burgen or tumefie only outwards, or toward the Side: Not indeed that Feeling is withdrawn from, or diminished in Crump-backed-folks, who have no less feeling than any others: Wherefore the defect of Growth, dependeth not on any Dislocation of the Sinews, Veins, or Arteries; but from the beholding of a Crookedness alone in the Marrow, the very right influx of the Brain, is a little incarnated.

Neither is that humoural Flux, to wit, through the Veins and Arteries (for truly, in the wreathen Branches of Trees, even as also in crooked Legs, a defect of growth is not seen) but it is a Flux of the Light of the Brain; even as concerning the Action of Government, elsewhere.

Flesh grows in an hollow Ulcer, and Marrows increase after the manner of the Menstrues, although the other parts do cease from growing: The Ribs also increase in persons of ripe years, together with an enlargement of the Breast; the Pores do overgrow in Fractures; the Liver through a Disease, grows up after a wonderful manner: Teeth do oftentimes grow in Old-men: And all that, because the growing Faculty obeys the Brain. Astrologers attribute the growing Faculty to the Moon; yet none to the Brain.

The Bones of Old living Creatures (as I have said) by a singular Secret, contain more Marrow than those of younger Ones; Because the Moon makes into the first matter for Transmutation, Rest, Death, and Reducement. Therefore the Moon being very powerful in old Animals, hinders not the Marrow from increasing.

Furthermore, seeing every thing in Being, desires to grow or increase, and doth even from the Beginning, meditate of the Propagation of it self; and seeing Nature is of no other thing, more solicitous, than of the Sex; so that she hath marked Insects, which she

stirs up from corrupt Excrements, with the difference of the Sexes : there was also need of *Venus* or carnal Lust ; to which end, the Schools think the Reins to serve : But I disagree, because I have observed those that were Stony in both Kidneys, to have been more wanton than was meet.

For neither otherwise can I believe, that the fundamental Part of *Venus* being hurt, tickling lust is able to subsist : Because that this is the necessity of the Parts, that a proper Organ being hurt, the Function thereof is of necessity intercepted.

I have sometimes spoken of the *Venus* of the Spleen : At least-wise, here it is sufficient, that the Femal kind is by a divine Testimony of praise, exceeding necessary, and most profitable for the subsistence of a Common-wealth : But at length, seeing every Land doth not bring forth all things ; in this respect, for a good and commodious way of Living, the custom of Mortals hath introduced co-bound Provinces, and Conspiracies of Merchandise : Therefore Profit hath made the Lungs to be its Mercury, and agreeable unto Merchandise with the foreign Parts ; that, after that the Young should be now increased, it should have the vital Vigour of breathing and voice : A participative and distributive Life, I say, throughout the whole, to be blown abroad in an equable Air : To wit, without which, all the Blood should be thickned through nourishing, into a Tophus or sandy Stone, and the Body should soon increase, either into a huge Monster, or presently from the Beginning, should be choaked : Even as elsewhere concerning the Blas of Man.

But notwithstanding, I will not, that the Architect of the Seed should beg this Common-wealth and Harmony (thus compared unto the wandering Stars) for himself from far, to wit, from the Stars of Heaven, elsewhere : For the Archeus intimates the Stars through a proportionable Conjunction, because he hath a heaven-like Being in himself : For he, who by a small Word, made the Stars of nothing, hath constituted a co-like Power of the Word (*Increase and Multiply*) within the innermost Parts of Seeds, which is to endure throughout Ages. Therefore the Seed hath drawn that unto it self from a free gift, that it is able to stir up and imitate the proportionable Respects of the Stars in its own Blas : wherefore it happens, that more successful Emulations of the Stars, than those that are inbred, do follow at set Periods, because they are the more powerful and famous Sealings.

Neither in the mean time, is there that Power in the Stars, that they should be chief in the forming of the manners, health, calling or vocation, and fortunes of Mortals : For he who is all in all, and created all things for his own Glory, from an immediate end, would not that his own Image should be subjected to the Stars, least they should excuse themselves of their Fault, by the importunate revolutions of the Stars. But it is well, that there is a seminal Being, a proportionable thing, which may after some sort answer to the Stars, and to the whole Universe.

Wherefore in Man, the Seed at first cloathes it self with the Secundines, straightway after it earnestly labours about its own family-administration ; in the next place, it meditates on the aforesaid Common-wealth, it variously disposeth of all particular Parts, and constrains them by the Laws of free Denizons ; then indeed also, it thinks of a Kingdom and Empires ; At length of the whole Earth ; and last of all, of the Heavens : And so, by virtue of the Word, he delineates the whole Universe in himself, as he is the Image of God : For he hath put under his Feet the flying Fowls of Heaven, the Fishes of the Sea, Sheep, Oxen, and Beasts of the Field : Because he hath set him over the works of his Hands : But the Heavens are the Works of the Hands of God : Which dignity of appointment surely, seeing otherwise it contains a command, it doth not indeed contain a certain feigned, or remote, and allegorical Power : Therefore it must needs be, that we do after some sort resemble the Heavens in the Image of the Arch-type : But the command, seeing it is already planted into Nature, Man shall have that his proper nobleness in him, from his original, but not from the Stars that are placed under him.

But seeing that by the Schools and rustical Persons, the defects which shall be in deformities, and a vitiated forming, are more considered, than those which were to rise from erroneous Faculties : Hence they have given an occasion that Astrologers should at their pleasure, draw all things unto their own dances of the Stars : But after that a diversity of Offices was by the more refined Men, known to imply a diversity of kind of Faculties, and Organs, those Men therefore began to fetch, interchange, number, and deformity, from the Stars, and to refer them unto the Directions of the Seeds. For neither under Nature now once radically corrupted, could Seeds be long kept fruitful under Unity, neither by this Unity, could so many distinct Offices of the Organs be compleated, but that almost from the Beginning, an unlikeness of strength in the Bowels ; yea and an
unequality

unequality of strength in all particular Parts, should under-creep and be sealed in those places: From whence there should at length, be a breaking asunder of the Thred, a dissolution, an off-spring of Infirmities, and much Destruction: All which things, the Soothsayers of Heaven (the Schools not resisting it, but being astonished thereat) have without punishment transferred unto their trippings of the Stars: Wherefore (a stander-defending Goat, being as it were, taken by the Beard) the whole following troop of Posterity have admired them: For there is so great a diversity of kind in the bosome of the Matter, that there is scarce a Golden thred made, which in some part of it, is not the more infirm, and doth not the sooner burst asunder: Therefore, neither is it a wonder, that in so great a distraction of Members and Functions, an unequal strength increaseth in the Members: Wherefore whole Families do perish with a Tabes, or Consumption, or Drop-sie.

In some Persons, their Going fails after the fiftieth Year of the Age, whose Sight persisteth unto their eightieth Year.

But in others, their Sight is dull after their fortieth Year, whose Going promiseth a Long Life: Because, from a simple and universal Spirit of the Seed, the Rulers of all particular Organs do increase: Which Rulers surely, being there alienated, either through a Vice of the Organs receiving, or through an error of Dispensation, do oft-times depart from their aim: For the Spirit which hath distinguished the Parts from each other, and formed them, hath presently also received all its Limitations in those very Parts: For the optick Spirit seeth in the Eye, and tasteth in the Tongue; because the inflowing Spirit is there limited by the implanted Spirit.

As besides, there is a certain principiating Life in the Spleen, another in the Muscles, and lastly, another in the Womb of a Woman, even as I have often demonstrated elsewhere.

All which, are by so much divided from the common Life, by how much they are those things which have diverse existences. Seeing therefore Plurality includes a certain Duality, it's no wonder, that the Life being tossed by many diverse Governours, did easily rush into Dissolution, after that the immortal Mind suffered the Rains of the Life that was to be governed, to slide on the neck of the sensitive Soul.

C H A P. CXI.

Life Eterual.

THe Gospel promiseth to mortal Men, not only that the Son of God was Incarnate, and suffered for the Salvation of Man; but that these two Misteries are to be applied unto Individuals, which else should be as it were in vain: But I have considered of that Application, after this manner.

For indeed by Sin, Man brake no less the Intent, than the Decree of God, from whence humane Nature was corrupted in its Root; because there followed another almost beast-like Generation thereupon, which of it self is incapable of life Eterual: Wherefore the Gospel ought to include the abolishment of Original Sin, and of all other things issuing from the Corruption of Nature: Therefore, seeing Man thenceforward ought to be born no longer of God; but naturally only of the Bloods of the Sexes, of the will of the Flesh, and of the will of Man: neither yet could his Body rise again (through any Power of his own) into its antient Dignity, and much less cease to be, that it might again, and otherwise begin to be: Therefore the joyful Message was brought unto us, that one Baptisme should be given for the Remission of Sins, whereby Man should be so renewed by Water and the Holy Spirit, that his Soul should be born again as it were by a new Nativity, and be made partaker of the unspotted Humanity of Christ the Saviour, being framed by the holy Spirit: Which new Birth also, reposeth the Soul into its antient State of Innocency, taking away Sin; and we believe that thing altogether really thus to be; but not as if we should

should embrace Allegories or Metaphors for truth; but these things do so really and actually happen in Baptized Persons, that God doth grant a Testimony of that actual Grace, which is conferred by Baptisme, to be sensibly derived into the Body: In which respect indeed, *Mahometans* receive Baptism, as it takes away from them an inbred Stink, otherwise durable for Life, and the which, we observe to be otherwise in all *Jews*, at this day: And so the more inward effect of Baptisme doth even outwardly shine forth: Yea and that thing confirms, that there is a perpetual and unobliterable effect of one only Baptisme.

But that new Birth doth not take away Death, but leaves Christians with the Fardle of a corrupt Body, generated by the Will of Man: and in this respect, nevertheless, leaves the Soul subject to the Vices of a corrupted Body: Wherefore unto those that are of ripe Age, Baptisme was not sufficient, although unto those of younger Years, as long as they are innocent, it is abundantly sufficient.

There is therefore, another Priviledge promulged, whereby Persons of ripe Years may have eternal Life: that he who shall not eat unworthily the Lords Body, Christ shall raise him up unto Life in the last Day; but if he shall not eat, he is to have no Life in him: For this Mysterie was given unto us for the Life of the World: For the Life of the World is *Adamical*, Frail or Mortal, and well nigh Brutal: For the transchanging whereof, a Pledge is given unto us, and likewise an actual and real Participation of Life eternal. Therefore the Merits of the Lords Passion are communicated unto us, through a participation of the unspotted Virginity of Christ the Lord; for the Communion of his most pure and chaste Body, unites us to himself, and doth actually regenerate us in himself, and so gives us a Life conformable unto himself: *The Body of the Lord is given for the Life of the World.* And although the Body of Man, which was conceived of Bloods, doth not presently perish; Yet in that very Moment, wherein we are united with the Lords Body, and his Humanity, it makes us partakers of his incomprehensible Incarnation, and restores us into the antient Integrity of humane Nature; as we do partakingly attain the most pure Virginity of Christ, wherein we ought to be saved. And so by reason of his amorous Union, a participation of the Merits of his Passion is attributed unto us: Therefore the most principal effect of the holy sacred Eucharist, is a Participation of the Purity, and Virgin-uncorrupted Nature of the Lord Jesus: And so for this Cause, it is declared by a proper Circumlocution, to be *Wine budding forth Virgins.*

Furthermore, that this Mysterie of the unutterable Love of God, doth operate the aforefaid real effects of regeneration in the Nature of Man: The Apostle teacheth, *We shall all indeed rise again; but we shall not all be changed:* As if he should say; All Mortals shall at sometime rise again from Death: The Damned indeed shall rise again, being not any thing changed; but in their former *Adamical* Body, being ponderous, not piercing, &c. to wit, only the wished for necessity of Death, being taken away from them. But Children being regenerated by the Laver of Baptisme, shall rise again in a Body, after some sort Glorified, but by so much the less perfect, by how much they were remote from so great an happiness.

But they, who were united in the communion of the Lords Body, shall rise again, plainly glorious throughout their whole Nature; because they were most perfectly regenerated in their life-time: of which Regeneration, although visible Signs appeared not; yet they were in very deed within, for neither are they made anew in the Resurrection, unless they had first fore-existed in the Life-time, by an every-way regeneration. Our Faith is not of things not in Being, but of true things; not Visible, because he will have us to profit by Faith: Wherefore, although this Mark of resemblance of Love, and Union with God, be altogether unsearchable, even as also its Effects are only invisible; Yet the aforefaid mystical and real New-birth, is as yet reckoned earthly by *Nicodemus*, and from that Title, I have transferred it hither.

I therefore contemplate of the New-birth or renewing of those that are to be saved, to be made in a sublunary and earthly Nature, just, even as in the Projection of the Stone which maketh Gold: For truly, I have divers times seen it, and handled it with my hands: but it was of colour, such as is in Saffron in its Powder, yet weighty, and shining like unto powdered Glass: There was once given unto me one fourth part of one Grain: But I call a Grain the six hundredth part of one Ounce: This quarter of one Grain therefore, being rouled up in Paper, I projected upon eight Ounces of Quick-silver made hot in a Crucible; and straightway all the Quick-silver, with a certain degree of Noise, stood still from flowing, and being congealed, settled like unto a yellow Lump: but after pouring it out, the Bellows blowing, there were found eight Ounces, and a little less than

D d d d

eleven

eleven Grains of the purest Gold : Therefore one only Grain of that Powder, had trans- changed 19186 Parts of Quick-silver, equal to it self, into the best Gold. The aforesaid Powder therefore, among earthly things, is found to be after some sort like them, the which transchangeth almost an infinite quantity of impure Mettal into the best Gold, and by uniting it to it self, doth defend it from cankering, rust, rottenness, and Death, and makes it to be as it were Immortal, against all the torture of the Fire, and Art, and trans- flates it into the virgin-Purity of Gold ; only it requires Heat.

The Soul therefore, and Body, are thus regenerated by Baptisme, and the communion of the unspotted Body of the Lord ; so that a just heat of Devotion of the Faithful shall be present. Let the Divine pardon me, if I as being beyond my Last, have spoken of Life eternal by way of a Parenthesis : For I willingly confess, that a regenerated Body is not belonging to my Employment : I treat only of prolonging the Life of the World.

This only I have said, that Baptisme doth bring with it a real Effect of Purity perceivable by Sense, and that the holy-sacred Communion of the Eucharist, hath something like it in earthly things, whereby we may the more easily believe Regeneration.

CHAP. CXI.

The Occasions of Death.

I Have compared the Fire and Light, unto Life, because it bears something before it, which seemeth to be vital : For vital Forms are either the Lives, or Lights of things : Therefore there shall likewise be as many occasions of Death, as there are withdrawals of Light.

First therefore, the Light is blown out, and likewise the Flame perisheth by pressing together, which they call, through defect of Air. But I have demonstrated, that that happens through want of a new Magnal ; but not that the Fire is nourished by Air : So also by the constriction of a strange Smoak.

So indeed in Vaults, and Burrows, Lamps are extinguished, but the Light is blown out by the Wind, or another Flame : For oftentimes Candles are extinguished by a filthy or deformed Flame, being stirred up by the Powder of Rosin, or Gun-powder.

Lastly, Fires die through want of Nourishment.

Death in like manner, doth many wayes rush on us : For either a live Body is suddenly dashed together, or sore shaken by weight.

Also a speedy pouring forth of Blood from a large Wound, pours forth the Life, and blows out the Light of Life : So an inordinate Prodigality of corrupt Matter, Water, or Wind being abundantly made ; likewise Baths, Hunger, loosening Medicines, introduce an untimely Death.

Also by the pressing together of the Breath in Burrows, of the Asthma, of a Cord, of drowning, of Smoak, and by the Symptoms of the Womb ; likewise by the Resolutions and Palseys of the Sinews subjected to breathing.

In like manner, by Burnings, Destructions, Coalifyings, Gangrenes, and Congelations of Cold.

Also by Poysons, Alculies, gnawing Things, Escharrers, Putrifiers, or Things that trample upon us by a fermental Contagion.

Likewise by retained Excrements, Obstructions, and the denied Commerces of Parts.

Likewise through Defect of some certain Digestion, an Atrophia and Consumptions of a Part, or of the whole Body.

Also by over-pourings of the Blood within the Skull, Breast, bottom of the Belly, by corrupt mattery Impostumes, Pleurifies, affects of the Lungs, &c.

Likewise by displacings of the turning Joynts, Contractures of the Parts appointed for expurging of Filths.

At length, by reason of a Feeble, Decrepit, and worn-out Death of the Seeds and Powers.

And also by reason of the more grievous Passions of the Mind, and Enchantments.

Death therefore, doth so many manner of wayes steal away Mortals, whose Life notwithstanding, is alwayes simple and single: For therefore, there is a diverse and differing Consideration of Life and Death; for a Sword takes away Life; Yet there is far different Speculation of preserving Life, than of healing of Diseases by the removals and hinderances of the Cause: For truly, Causes are partly external, as a Wound, the Plague, Scorching, &c. the healing whereof therefore, doth not depend on the removal of their Causes: For neither therefore is the Fire which had burned any one, to be extinguished from the Hearth, that he may be cured; even as, neither is the Sword to be broken, that the Wound may be healed up. But for the preservation of Long Life, the contemplations and removals of external Causes do no less occur or come to hand, than those of a vital Fewel: For indeed, although no Infirmities should molest, yet Death should not for that Cause cease dayly to strew a way for its entrance: For although health hath respect to Life as its Foundation; yet Life doth not include health: For a Blind, Lame, Gowty Person, &c. doth no less live, than a Healthy or Sound Person.

What if Life ends through a Disease, that is forreign and by accident unto the Life; as a Sword contains Death, but not but by Application.

Otherwise, Death doth by it self respect Life; but diseasifying Causes become Mortal only by accident, or by their Application unto the Spirit of Life: For from hence it is, that the Impediments of Long Life are seriously to be heeded, and diverted, if we expect length of Life. From the Beginning therefore, the meditation of Life consisteth not without, but in the Life it self: To wit, after what manner Life may be preserved in the Body.

For the sensitive Soul, now forthwith after Sin (as I have said) drew the whole property of Life unto it self, and became the bond of Life with the Body: But seeing that very Soul is in it self Mortal; it must needs be, first of all, that all the vital Powers co-æval, or of a like Age with the Life, should be slideable and mortal: From hence at length, Death. For a long continuance of Life therefore, first, a curing of Diseases is required, as well of those which touch at the Life of the whole Body, as those which have regard unto the Damages, or preservation of a Part and Functions, and which in this respect do lay in wait for the Life: For truly, seeing there is a single conspiracy of the Members, certain principal Powers cannot chuse but at length go to decay, also the subordinate ones being only diminished: Wherein I disagree from *Paracelsus*, because he thought that every Disease was of necessity to be taken away by a Medicine for long Life: Because that good Man was no less ignorant of a Medicine for Long Life, and the use thereof, than of the very Essence and Properties of Long Life: And therefore his Arcanums do very much conduce into a healthy or sound Life, or unto a removal of Impurities; yet they do not any thing directly and primarily tend to long Life, as unto their ultimate end: Because that, as the Life; So the Tree of Life chiefly concerns the preservation and renewing, or making young again of the vital Faculties implanted in the Arts.

In this therefore the Arcanums, or Secrets which are for the taking away of Superfluities, differ from the Tree of Life: That those indeed do cure Diseases, even those which our parent Nature doth by her self, never Cure: To wit, the Leprosie, Stone, Palsy, Consumption of the Lungs, Dropie, &c. but the Tree of Life doth not heal these Diseases being now admitted: For if *Hippocrates* hath dictated, that Natures themselves are the Physicianesses of Diseases; that is, to be pardoned in his Age, and beginning Art.

After another manner, Arcanums (which had not then as yet been made known, and do at this day, lay in a manner hid) do exceed the Powers of Nature, even as Art doth very often overcome Nature: And that is not only true in Secrets which heal Diseases; but also in the Tree of Life, which restores defective Nature: Therefore the Ordination of that tree, is the Preservation of Life, with a certain kind of renewing of Youth; but with the Remedy of the Tree, the Leprosie, Stone, &c. continues. Therefore, there is plainly one Consideration of the Secrets of *Paracelsus*, and another of the Tree of Life: The which I thus confirm.

Let a young man be considered with some of the aforesaid Diseases : For his flourishing and lively youth doth not cure these Diseases, therefore neither also the Tree of Life ; Because this hath respect onely to the Fewel of that flourishing Life ; the which surely, is as yet received after the manner of the receiver : Therefore there always remains in the part receiving, a disease disproportion of strength in respect of the parts that are in good health, which was before the Medicine of the Tree of Life was taken : For although all particular parts should equally participate of that Medicine ; yet they should not be re-amended with an equal strength.

First therefore, the impediments of Long Life are universally to be removed : But among impediments, some do shorten the Life actively, such as are Diseases ; Inordinacies of living, &c. But other impediments do limit and curtail the Tree of Life in its goodness, that it cannot attain the ultimate end of its appointment.

This indeed, concerning our Tree of Life, but not concerning that of *Paradise* ; and concerning a corrupted Life, not of the Life of *Adam* before the Fall.

Those are therefore some Diseases ; and likewise much profound strong speculation, and that not pleasant, and perturbations, yea and enchantment : Even as in its place.

Happy therefore are they, and for the most part long-lived, who being far from the cares, usuries, busie affaires, and stormes of their age, can Till their fathers lands with their own Oxen in peace, and live cheerfully.

Whatsoever therefore is to be thought of for the obtainment of Long Life, is to be thought of in a peace void of care, with a full resignation unto the most pleasing will of God : For that cause we must think, how much ridiculous thoughts do weary in Fevers, how much serious studies do weaken the strength, and how much anguishes do overthrow the number of Daies : Because thus the Spirit is lessened, and the Dayes are abbreviated.

Furthermore, *Venus* or carnal Lust obtains its chiefdom among the impediments of Long Life ; because it doth abundantly exhaust the Life.

Much, and unseasonable Gluttony or Drunkenness succeeds *Venus* ; and the rather if the Drink be hurtful.

Also Tobacco, and Mushrooms do hurt, and what things by reason of a hidden poyson largely creeping, do prostrate the vital faculties : For Tobacco doth not allay hunger, as if it did satisfy the defect ; but inasmuch as it takes away the sense of the defect, and also the exercises of the functions.

In the next place, the impediments of Life, are frequent Baths, Blood-lettings, Wounds, also the frequent use of loosening Medicines : To wit, which things make the generation of the begetter to be the less flourishing, and therefore also do hasten Old Age.

Lastly, As Climates do make for Long Life, so also some do hinder it : For there are some with which an Old Man is rare : Others with whom Old Age is in honour. For Endemics of Arsenick which are under the Earth, do mow down a flourishing Life ; being as yet in its Flower.

There are some Climates also, whereunto there is a nearness of overflowed Countries : For whatsoever hath of its own accord waxed hot, and was resolved in water from putrefaction, ought also to be brought to us together with the Vapour, and to be supped up by us.

Therefore pernicious are the Vapours of the Fens which breath forth a putrified matter ; and then, those Vapours which puffe out a semi-putrified Salt, together with the filths of a dissolved Clay or Mud.

For I have seen at *Antwerp*, after the Field of *Ansterweele* conceived of Waters, the leaves of the Teil-Trees in the Walls, to be dried from *August*, and that as it were with a gnawn rottenness ; the which, before the Inundation, were kept green in the Tree, even unto *October*.

The same thing is seen at *Amsterdam*, whenas the leaves of the Trees of *Leiden* do as yet counterfeit the Moneth of *May* : For the leaves do suffer this destruction from a Semi-salt Vapour.

What at length is not to be thought to be done on the tender coat of the Lungs, and the sponge of its Substance ?

Truly, so many Enemies do on every side lye in wait for our Life, that unless we shall depart far from the hurtful contagion of the Air, there will scarce under a full grant of the Tree

Tree of Life, be awished for participation of Long Life : For the original Tree of Life in *Eden*, was for its own Inhabitants ; but not for the Natives of the Vale of Miseries.

Therefore whosoever will enjoy the Goodness of the Tree of Life , and profit by the labour of Wisdom ; let him make choice of a Region, which in all places nourisheth many Old Men ; and wherein Diseases do in all places seldome rage.

Then Lastly, Let him begin to make use of the Tree of Life from a Child, (the more rightly, if the Child begin first in both parents, presently afterwards also in the Nurse) while the nourishment is snatched away for the increase of the solid stems.

But those things which hinder and diminish the Medicine of the Tree of Life, that it cannot ascend unto its height, are hereditary and inbred weaknesses, total, or in part ; and in whom attained weaknesses drawn in through inordinacy, do succeed, and the which, have happened through the undue torments of the paines of Diseases and Labours : For whosoever hath suffered a notable injury of Life, let him despair to be fully renewed by the Tree of Life : But he who being a Child, hath admixed the Medicine with the first constitutives of Life, and hath thus waxed of ripe years (for truly, the Tree of Life is not more perfect, as that it is able to restore decrepit Bodies into their former state) let him hope that he shall attain that which the Court Physitians of Kings can scarce believe.

C H A P. CXII.

Of the Magnetick or Attractive Curing of Wounds.

A Disputation concerning the Attractive, Natural, and Lawful Curing of Wounds; against R. P. John Roberti, Doctor of Divinity, an Elder of the Society of Jesus; no less than also against Rodolph Goclenius, Professor of Medicine.

1. Witchcraft, Sympathy or Co-suffering, and Magnetism or Attraction do differ.
2. One Ointment is called Sympathetical, another Magnetical.
3. What Mummy is.
4. Philosophy is immediately reprov'd by Reasons onely.
5. The difference of Law, and Philosophy.
6. From an ignorance of the Cause, Magnetism is accounted a Devil.
7. Who may be the Interpreters of Nature.
8. Why Alchymists onely can Interpret Nature.
9. He is proud, who from an ignorance of the Cause, believes a thing to be of the Devil.
10. Who are the Devils flatterers.
11. Magnetism is no new Invention.
12. The Armory or Weapon-unguent.
13. The intent, aim, remedies or ingredients, and manner in the Ointment, are good.
14. Why the Unguent is not unlawful.
15. Why it is not Superstitious.
16. What Superstition is.
17. Why the manner of the Unguent being unknown to the censurer, can nothing disprove it.
18. What Magnetism is.
19. Some Effects of the Load-stone.
20. The Magnetical Cure of incurable Diseases is perfect.
21. Milk being burn'd dries up the Dugs.
22. Vitriol dies through Magnetism or Attraction.
23. Mummy operates from Italy even to Bruxels.
24. The Carline Thistle, under the shade, draws wonderfully.
25. Likewise the same Disease in number changeth its Subjects.
26. That from Magnetism, Flowers are followers of the Sun.
27. Mummies which are Philtrous or pertaining to Love, how they are attractive.
28. That the Arcanum or secret of the Blood, is the Load-stone of Alchymists.
29. Herbs, why, and after what sort they are Attractive.
30. Asarabacca, and the Elder are Magnetical.
31. An implicate compact or covenant, is the Anchor of the Ignorant.
32. Sympathy presupposeth a sense or feeling.
33. The Mummy of a Dead Brother, being long since impressed on a seat, is as yet attractive.
34. The Sapphire is an imitator of the Unguent in Magnetism.
35. The Saphire, by touching of one Carbuncle, cures others.
36. Why the Prelates of the Church wear skie-coloured Rings.
37. Man hath his Load-stone.
38. An Amulet for the Plague.
39. It is of necessity, that the same accident should pass from subject into subject.
40. Magnetism is an heavenly quality.
41. A Thief, Robber or Murderer, and an honest Man, or Woman, afford the same Mosse of their dead skull.
42. From whence, and what the seed of that Mosse is.
43. The fruit of the Air.
44. That Asnea or Mosse is a fruit of Fire.
45. In that Mosse also, is the Back of the Load-stone, the scope being changed.
46. God in Miracles, follows Nature.
47. God approves of the Magnetism of the Unguent by Reliques.
48. A supernatural

natural Magnetism proves a natural one. 49. A lock of that Mosse being incarnate in the fore-head, is a defence against a sword, but a Thred or rag of the stole of S. Hubbert, against the tooth of a mad Dog. 50. A rag being incarnate in the fore-head, preserves from the biting of a mad Dog for ones whole life time; an impression of blood doth the same in the Zinzilla. 51. Pepper degenerates into Ivy. 52. How we must judge of Persons. 53. Paracelsus the Monarch of Secrets. 54. Every thing hath its own particular Heaven. 55. From whence inclination is. 56. From whence a Disease is Astral in us. 57. Whence sick persons have a fore-feeling of the stormes of the times. 58. What may cause the flowing and ebbing in the Sea. 59. Whence Windes are stirred up. 60. The Heaven doth not cause, but pronounce things to come. 61. The Being of every seed hath the firmament and virtue of its own influence. 62. The Vine, not the Heaven, disturbs Wines. 63. Antimony observes an influence. 64. The Load-stone directs its self, but is not drawn. 65. Glass is Magnetical. 66. Rosin is Magnetical. 67. What Garlick doeth against the Load-stone, and why the same thing also concerning Mercury. 68. The virtue or power of operation on an Object at a distance, is natural, even in sublunary things, and it is Magnetical. 69. Every Creature liveth in its own mode, or after its own manner. 70. What the Unguent can draw from a Wound at a distance. 71. Every Satanical effect is imperfect. 72. Why Satan cannot co-operate with our Unguent. 73. What may be called the Will and Imagination of the Flesh, and of the outward Man. 74. A twofold Extasie. 75. The Ecstatical power of the Blood. 76. Corruption makes that lurking power manifest. 77. The Essences of things do not putrefie. 78. The putrefaction of Alchymy, to what end it is. 79. The Cause of Attraction, in the Unguent. 80. The heart is drawn by the treasure magnetically, or after the manner of a Load-stone. 81. Necromancy or the Black-Art, from whence it is. 82. What Man is as a living Creature, and what Man is as being the Image of God. 83. After what manner the Eagle is allured by the Magnetisme of a dead Carcase. 84. How the venal Bloud is drawn in the Unguent, unto its own treasure. Why Eagles are allured to a dead Carcase magnetically. 85. A natural feeling or perceivance, and an animal feeling, do differ. 86. The Effects of Witches are wicked ones. 87. The power of a Witch is natural, and of what sort that power may be. 88. Where the Magical power in man is seated. 89. Whether man bears command over all other Bodies. 90. Why a man may act per nutum or by his beck or pleasure. 91. What the Magical faculty may be. 92. The Magical power lyes hid in man after divers manners. 93. The inward man is the same with the outward fundamentally, but materially, diverse. 94. What the vital Spirit its knowledge and gift is. 95. In a Carcase which dies of its own accord, there is no implanted Spirit. 96. The divining of Spirits according to Physitians. 97. The Soul acts in the Body onely per nutum, Magically. 98. The Soul acts in the Body, onely by a drowsie beck, but out of the Body, by an excited beck. The knowledge of the Apple, hinder Science, Magical or Wise Knowledge. 99. The beginning of the Cabal is drawn from God in Dreams. 100. The defect of Understanding is in the outward man. 101. What Satan can do in Witches. 102. What are the true works of Satan alone. 103. Sin hath withdrawn the endowments of Grace, and hath obscured the gifts of Nature. 104. Whither the pious exercises of Catholicks tend. 105. The most powerful effect of the Cabal. 106. There are two subjects of any kind of things. 107. Man acts as well by his Spirit, as by his Body. 108. What kind of ray or beam is sent from a Witch into a brut. 109. How a Witch may be bewrayed. 110. How a Witch may be bound up in the heart of a Horse. 111. The Intention depraves or vitiates a good Work. 112. The

112. The Seminal virtue is natural Magick. 113. Why blood issues out of the dead Carcase when the Murtherer is present. 114. Why the Plague is frequent in Sieges. 115. Works of Mercy are to be exercised at least in respect of avoiding the Plague. 116. Plagues from Revenge and execration, are detestable. 117. Why Bodies were to be removed from the Gibbet. 118. Why Excrements cannot cause the Plague. 119. Why the blood of a Bull is mortally venomous. 120. Why the fat of a Bull is in the Sympathetical Unguent, to wit, that it may be made an Oyntment of Weapons. 121. Why Satan cannot concur unto the Unguent. 122. The Basis or Foundation of Magick. 123. From whence Vanities are accounted for Magick. 124. A good Magick in the holy Scriptures. 125. What may be called true Magick. 126. The cause of the Idolatry of Witches. 127. The Sirkers up of Magick. 128. Satan excites it imperfectly. 129. From whence beasts also are Magical. 130. The Kingdom of Spirits nourisheth strife, and love. 131. Why man is a Microcosm or little World. 132. The mind generates real Entities. 133. That Entity or Beingness is of a middle nature between a Body and a Spirit. 134. The descending of the Soul begets a conformed will. 135. The cause of the fruitfulness of Seeds. 136. Why Lust doth as it were estrange us from our Mind. 137. A Father by the Spirit of his Seed, generates out of himself, in an Object presently absenting it self. 138. What Spirit may be the Patron of Magnetism. 139. The Will sends a Spirit unto the Object. Unless the Will did produce some real thing, the Devil could not know of or acknowledge it; and unless it did dismiss it out of it self, the Devil being absent, could not be provoked thereby. Where therefore the Treasure is, thither doth the Magical spirit of man tend. 140. Magnetism is made by sensation. 141. That there are many perceivances in one onely subject. 142. From the superiour Phantasie commanding it. 143. Why Glasse-makers use the Load-stone. 144. The Phantasie of attracting things is changed. 145. Inanimate things have their Phantasie. 146. Why some things by eating of them, induce madness. 147. Why a mad Dog by biting of a Man introduceth madness. 148. The Tarantula by his stroke or sting, causeth a madness. 149. Why other bruit beasts do not defend themselves against a mad Dog. 150. The Sympathy betwixt Objects at a distance, is made by means of a certain Spirit of the world, which Spirit also governing the Sun, and the Sunny Stars, is of a potent sense or feeling. 151. The Imagination in Creatures endowed with choice, is various at pleasure; but in others, it is alwayes of a limited identity. 152. The first degree of power dwelleth Magically in the forms of the three Principles. 153. The second degree is by the phantasies of the Forms of the mixt Body, the which, to wit, being destroyed, the Principles do as yet remain. 154. The Third degree ariseth from the Phantasie or Imagination of the Soul. 155. What Bruits are Magical, and do act out of themselves, by beck alone. 156. The fourth degree of Magical Power, is from the understanding of Men being stirred up. 157. The word Magick is a proportionable answering of many things, unto some one third thing. 158. Every Magical power or faculty rejoiceth in a stirring up. 159. What may be called a subject capable of Magnetism. 160. How Magnetism differs from other formal Properties. 161. Humours and Filths or Excrements have their Phantasie. 162. Why the Scripture attributes Life to the Blood, rather than to any other juyces of the Body. 163. The seed possesseth the Phantasie of the Father, by traduction or derivation; from whence nobility ariseth. 164. The skins of the Wolf and Sheep have retained through impresson, an hostile Imagination of their former Life. 165. What the Phantasie of the Blood being freshly brought into the Unguent, can effect. The manner of the Magnetism or attraction in the Ointment. 166. The difference between a Magnetical Cure which is done by the Unguent,

Unguent, and that which is done by a rotten Egg. 167. The notable Mystery of humane imagination, is the foundation of natural Magick. 168. The understanding imprinteth the Beingness which was procreated or produced on the outward object, and there it really continues. 169. How efficacious Seals or Impressions may be made. 170. The Imagination holds fast the Spirit of a Witch, by a nail, as it were a Medium. 171. If Satan doth naturally move a Body without a corporeal touch or extremitie, why not also the more inward Man? and why not rather also the Spirit of the Witch? 172. The virtue of the Oyntment is not from the Imagination of the compounder, but from the Simples co-united into one. 173. The Author makes a profession of his Faith.

IN the eighth year of this Age, there was brought unto me, an Oration Declamatory, made at *Marpurg* of the *Catti*, wherein *Rodolph Goclenius* (to whom the profession of Philosophy was lately committed) paying his first-fruits, endeavours to shew, That the curing of Wounds by the Sympathetical and Armary or Weapon Unguent, invented by *Paracelsus*, is meerly natural.

Which Oration, I wholly read, and I sighed within my self, that the Histories of natural things had lighted into the hands of so weak a Patron. The Author nevertheless highly pleased himself with that Argument of Writing, and with a continued barrenness of proof, in the year 1613. published the same work, with some enlargement.

There was very lately brought me a succinct Anatomy of the aforesaid Book, composed by a certain Divine, rather in the form of a fine or jocond censure, than of a disputation: my judgement therefore, however it should be, was desired, at least-wise in that respect, that the thing found out by *Paracelsus*, concerned himself, and me his follower.

I shall therefore declare, what I think of the Physitian *Goclenius*, and what of the Divine the Censurer.

First of all, the Physitian proposeth, and boasts, that he will prove the magnetick or attractive cure of Wounds to be natural: But I found the Promiser to be unfit for so great a business: Because that he no where, or at least but slenderly, makes good his Title or Promises: He collecting many patcheries here and there, whereby he thinks he hath sufficiently proved, that there are certain formal virtues in the nature of Things, which they call Sympathy and Antipathy; and that from the granting of those, the Magnetical Cure is natural.

Many things I say, out of the *Egyptians*, *Chaldeans*, *Persians*, Conjurers, and Jugling Impostors, he gathers into one, whereby he might prove or evince the Magnetism which himself was ignorant of: Partly that by delighting mindes that are greedy of novelties of things, he may seduce them from the mark; and partly that they may admire the Author, that he had rub'd over, not onely trivial Writers, but also any other the more rare ones.

Wherefore the Physitian doth rashly confound Sympathy (which he after divers manners, and fabulously, often alledgeth) with Magnetism, and from that, concludes this to be natural. For I have seen also, that Vulnerary Oyntment to cure not onely Men, but also Horses, between whom and us, certainly there is not so great affinity (unless we are Asses) that therefore, the Sympathetical Unguent should deserve to be called common to Us and Horses.

In like manner, the Physitian badly confounds Sympathy or Co-suffering with Witchcraft, and Ligation or Binding up, and both with Magnetism: To wit, he as in anguish, undistinctly alledgeth any the more abstruse or hidden effects whatsoever, whereby (he being destitute of reasons) might make good his own Magnetism.

I will by an Example distinguish Witchery from Sympathy, and both from Magnetism.

A Dog hath an Antipathy (for Sympathy and Antipathy are daughters of the same stock) with a Hen: for he preys upon this Hen, and this Hen flees from the Dog; but when she hath newly hatched her Chickens, this Hen chaseth the Dog, although a courageous one: to wit, the soul of the Hen by Fascination or Witchery, tying up the Soul of the Dog, the former Antipathy, unequal defence of Weapons, and inequality of Strength nothing hindring it; Yea in these things, Magnetism is no where seen.

Eeeee

More.

Moreover, what Examples the Physitian brings concerning Seals or Impresses, Characters, *Gamabens* or magical Images, Ceremonies, and for the most part vain Observances, are altogether impertinent to this purpose, and do rather destroy Magnetism as rendring it suspicious, than build it up: my Genius or Wit carries me not to determine any thing of these things.

2 And then, *Goclenius* Errs, and that indeed rashly, like as also ignorantly: dreaming from the Prescription of *Paracelsus*, that the Weapon which wounded, if it be involved in the Weapon Salve, doth cure the Wound: For the Weapon or Point of the Sword shall be in vain anointed with the Unguent by him prescribed, unless it be made Bloody; and the same Blood shall be first dried on the said Sword. For with *Paracelsus*, the Sympathetical Ungent is one thing, in respect of the Blood fetch'd out of the Wound, and the Ungent wherewith the Weapons that were tinged with no Blood, ought to be Emplastr'd, certainly another; and therefore he calls the former, the Magnetick and Sympathetick Ungent, but the latter the Magnetick Armary or Weapon-Ungent: the which therefore receives (nor that indeed in Vain) Honey and Bulls Fat over and above, into its Composition.

Last of all, *Goclenius*, that he might satisfie his own Genius, hath altered the Description of *Paracelsus*, affirming that the *Ufnea* or Moss, is to be chosen only from the Skulls of hanged Persons; of which his own and false Invention, he enquiring the Cause, blusheth not to dream, that in Strangling, the vital Spirits entred into the Skull, and there remain so long, as until that six years from that time being accomplished, the Moss shall under the open Air grow up thereon.

Paracelsus hath taught the expresse contrary, and by practical Experiences it is confirmed, that the Moss of the Skulls of those that have been slain or broken on a Wheel, is no less commendable, than that of those who were strangled with an Halter.

3 For truly, the Quintessence is not extracted out of living Creatures (because the principal Essence perisheth together with the inflowing Spirit and Life) but only the Mumi- al Virtue, that is, the implanted and co-fermented Spirit, which surviveth in Bodies slain by violence.

What things *Goclenius* hath delivered concerning Remedies for repairing of the Memory, as we acknowledge them no way agreeable to the end intended; so also, we not any thing doubt to prove them to be impertinent flourishes. There is no Question (between our Divine and Physitian) about the truth of the Fact; for both of them grant, that a cure happens to the wounded Person: the controversie layes only in that, that the Physitian affirms such a Cure to be natural, but the Divine will have it to be Satanical; and that from a compact of the first Inventer: of which Censure, he brings not any positive reason in his Anatomy, as thinking it satisfactory, if he in his own judgment shall abolish it, although he shall openly produce no grounds of that abolishment; to wit, he acquiescing in this, that he hath removed the feeble Reasons of the Affirmer, the which to do, is a matter of no labour, of no skill, nor also is it a matter of any authority: For, to what end tends it, to give judgment on the thing it self from the foolishness of the Reasons of some unskilful Brain? and to declare it to be wicked, if he hath not so much as dreamed of one petty Reason of his Sentence? What if I, who am a Laick, should commend Presbitery with untrimmed Reasons, and some one should reject them as unworthy ones, shall the Priesthood it self therefore be to be rejected? What I pray you, doth the Unskilfulness or Rashness of any one touch at things themselves: Surely Philosophy submits not it self to censures, unless a Considerable gravity of the Censurers, well confirmed by reasons, doth concur.

4 I therefore who have undertaken to prove (against the Divine) that this Magnetick cure is even natural: First of all, have supposed *Goclenius* worthy of excuse, if he hath laboured in vain in the finding out of the immediate Cause of this unwonted effect. What wonder is it, when as the Divine confesseth that he is ignorant of the same: and therefore conjectures Satan to be the Author thereof: for such is our Infirmity, that we are destitute of the knowledge of the most, and most excellent things: For therefore we unwillingly wrest very many things aside unto the sacred Anchour of Ignorance, and refer them to the Catalogue of occult or hidden Causes. For who among Divines ever knew how to demonstrate to the full, the Cause of risibility or capacity of laughter, or of any other formal Property, to wit, of heat in the Fire? Is not the Fallacy of Begging of the Principle, committed, if thou shall say, *The highest degree of Heat belongs to the Fire, because it is of the Nature thereof*? Truly the Essences of Forms, because they are unknown to us from their Cause, therefore also the race of formal Properties is wholly scanty, and

and unknown; and where we observe any formal Passion to lay under, the Mind as if it were tired in vain, presently ceaseth from a diligent search thereof, and reposeth it self, being contented with the name of occult Properties.

Go to I pray you, hath the Anatomist the Censurer, haply known the Cause why a Dog that rejoyceth, swings his Tail? But a Lyon in like manner, when he is Angry? A Cat also making merry in token of Favour, lifts up the same? What therefore, if himself hath not known so much as the reason of the moving of a Tail; will he wonder that *Goelenius* hath given an unsolid Reason of Magnetism? and from the refuting of that, presume that he hath more than sufficiently demonstrated the cure which belongs to Magnetisme, to be Satanical? Far be so great a rashness of Judgment from him.

Come on then, why dost thou call that Cure diabolical: Truly it had behoved thee, to have added a reason of thy Censure, unless thou expectest to have it denied by others, with the same Facility wherewith thou declarest it to be of the Devil.

Lawyers require only the affirmative Part to be confirmed; but Phylosophers both parts, least either the Ignorance, or also the malepartness of the denyers should seem greater than that of the Affirmers.

Dost thou perhaps, maintain it to be diabolical, because it cannot be understood by thee, that a natural Reason thereof doth subsist? I will not believe that thou couldst utter so idle a Sentence, from thine own Infirmary, of its Virtue: For thou knowest that the weaknesse of Understanding is our Vice, not that of things. Make hast therefore; From whence knowest thou, that God hath not directed such a magnetical Virtue unto the use or benefit of the Wounded.

Shew thy Evidences: hath God chosen thee to be the Secretary of his Counsel! Surely however thou mayest variously wander or waver, at length thou shalt find, that the Cure is accounted diabolical among you [Divines] for no other Reason, but because your Slendernefs and Calling doth not comprehend it.

What wonder is it, if no Divine hath smelt out these things? For after that the Priest and the Levite had passed on to *Fericho*, a *Samaritan*, being a Lay Man, succeeded, who took away all right from the Priests of enquiring into the Causes of Things. Therefore Nature from thenceforth, called not Divines for to be her Interpreters: but desired Physicians only for her Sons; and indeed, such only, who being instructed by the Art of the Fire, doe examine the Properties of things, by separating the impediments of their lurking Powers, to wit, their Crudity, Poysonousnes, and Dregs, that is the Thistles and Thorns every where implanted into Virgin-Nature from the Curse: For seeing Nature doth dayly Distil, Sublime, Calcine, Ferment, Dissolve, Coagulate, Fix, &c. Certainly we also, who are the only faithful Interpreters of Nature, do by the same helps draw forth the Properties of things from Darkness into Light. But that the Divine may judge of that which is a Juggle, from that which is Natural; he must needs first borrow the Definition from us; to wit, least the Cobler shamefully slip beyond his Last.

Let the Divine enquire concerning God, but the Naturalist concerning Nature.

Certainly, much was the Goodness of the Creator every where extended, who made all created things for the use of ungrateful Man: Neither hath he admitted any of the Theologists or Divines as an Assistant in Counsel, how many and how great Virtues he should endow things withal. I know not surely in the mean time, how he can be excused from the Sin of Pride, who because he perceiveth not the Natural Cause, as it were measuring all the Works of God by the sharpness of his own Wit, doth therefore boldly deny God to have given such Virtue to Things; as though Man, a Worm, were a full Partaker of God, and his Counsel: He esteems of the Minds of all Men by his own, who thinks that cannot be done which he cannot Understand.

Truly unto me, it seems no way a Wonder, if God had given unto things, besides a Body, a Virtue co-like to the Load-stone, and that to be unfolded by the name of Magnetism or Attraction alone: Ought it not to be sufficient for the affirming of Magnetism, that one only single natural Example be alleaged (I shall anon declare it by more, and that, such as fit the purpose) of that Stone, according to the square whereof, other Endowments also variously distributed in the Creatures, may be understood? Because therefore the thing is a new Paradox and unknown to thee, shall it for that Cause, ought also to be Satanical?

Far be it from thee to think so unworthily of the divine Majesty of the Creator: Neither certainly ought we to flatter the Devil by conferring that Honour upon him: For what doth at any time more sweetly affect him, than if the Glory of Gods Work be so ascribed to him, as though himself had been the Author of the same.

- 11 Ye grant that material Nature doth dayly draw down Forms by its Magnetism, from the Superior Orbs, and much desire the favour of the celestial Bodies, and that the Heavens do in exchange, invisibly allure something from the inferiour Bodies, that there may be a free and mutual passage, and an harmonious concord of the Members, with the whole Universe.

Magnetism therefore, because it is every where vigorous, contains nothing of Novelty in it, but the Name: neither is it Paradoxical, but to those who deride all things, and banish into the Dominion of Satan, whatsoever they do not understand.

Truly that knowledge doth never spring up to him that seeks Wisdom as a Desiderer.

- 12 But I pray, what hath the Weapon Salve of Superstition in it? Whether because it is composed of the Moss, Blood, Mummie, and Fat of Man? but the Physitian useth these safely, and to this end the Apothecary sells them without a Penalty: Or perhaps, because the manner of using it is new to thee, unaccustomed to the Vulgar, but to be admired of both, shall the effect therefore be Satanical?

Subdue thy self, and rage not, thou shalt anon have better satisfaction.

- 13 For the manner of using it, contains nothing of Evil therein.
First of all the Intent is good and holy, and tends only unto a good End; to wit, to cure our languishing or woful Neighbour, without Pain, Danger, and the Consumption of Charges: Dost thou call this diabolical?

In the next place, the Remedies themselves also, are natural things, wherunto, that that Faculty was granted by God, we shall by and by prove by Arguments.

I wish, that thou also hadst thus confirmed to us thy negative; to wit, that God the chiefest Good, hath not given unto the sympathetical Ungent, that natural Faculty, and Mumial Magnetism.

- 14 This magnetical Remedy, can no way be rendred suspected, seeing it hath no Superstitious Rites, it requires no Words, no Characters or Impresses, no admixed Ceremonies, or vain Observances; it presupposeth no Houres, it profanes not holy Things; yea which is more, it doth not so much as fore-require the Imagination, Confidence, or Belief, nor leave to be required from the wounded Party; all which Things are annexed to Superstitious Cures.

- 16 For that is called Superstition, as oft as Men relie upon Faith or Imagination, or both, above any kinde of Virtue which is not such, or which is not directed by the Creator to that end: Therefore the magnetical Cure hath nothing of Superstition.

Wherefore, do thou, O censuring Divine, that art full of Taunting, make tryal of the Oyntment, at least-wise with a designe to deride Satan, whereby thou mayest overthrow that implicate compact: Nevertheless, will thou, nill thou, thou shalt find plainly the same Effect as there is with us, the which doth never happen to superstitious Causes.

- 17 Whosoever he be that thinks the magnetical Cure of Wounds is diabolical, not because it consists from an unlawful End, and of unlawful Means; but because it proceeds after a manner unknown to him:

- 18 He also as convinced by the same Argument, shall render the essential Causes of all the Operations of the Load-stone, of which we are about to speak; or shall confess that those Operations are the Juggles of Satan; or at least-wise (which will be more safe for him to do) shall be constrained to acknowledge with us, that there is a Magnetism, that is, a certain hidden Property with this appellation (by reason of the manifest Prerogative of that Stone) divided or distinguished from other abstruse, and commonly unknown Qualities.

- 19 A Load-stone being laid upon a thin trencher of Wood, and swimming on the Water, is forthwith on one, and that a certain side, turning towards the South, but on the other side, toward the North: The Austral or Southern Part thereof, if it shall touch Iron, it turns that towards the North, and the northern Part of the Load-stone, having touched Iron, will incline it to the South. By its Sepentrional or northerly Part, that is, its Belly, it allures Iron or Steel to it; and by its Austral Part, or Back, it drives that Iron or Steel before it: The Northern side, by rubbing of the Point of a Compass-Needle, from the right Hand to the left, will direct the same to the South; but if the rubbing be made from the left Hand unto the right, the direction of the Point will be contrary.

In like manner also, the South side of the Load-stone is varied: Yea which is more, if a Load-stone, by its rubbing on a piece of Iron, doth make it to be Magnetical, that is, an attractive of other Iron, let the same Iron which is now Magnetical, be rubbed again, being

being turned upwards, and downwards upon the Load stone, it will presently put off its attractive Power : Of which Effects if they relish thee, enquire thou of *William Gilbert* a Physitian of *London*, in his Treatise of the Load-stone ; than whom, none ever wrote better concerning this Subject ; and by whose Industry, the variation of the Compass may be restored.

The Needle which now bends to the North, under the Æquinoctial Line, staggers to and fro ; but beyond it, bends it self unto the other Pole.

I shall add this medicinal Faculty of it : The back of the Load-stone, as it repulseth Iron ; so also it drives back the Gut, cures Burstness, and every Catarrh or Rheum which is of the Nature of Iron : for all Magnetisms, are ordained for the use of Man. The Iron-attracting Faculty, if it shall be married to the Mummy of a Woman, then the back of the Load-stone being emplaistred within her Thigh, and the Belly thereof on her Loyns, doth safely prevent a Miscarrying already threatned : but the Belly of the Load-stone, being applyed within her Thigh, and its Back to her Loyns, doth wonderfully facilitate or dispatch her delivery. All which Effects of the Load-stone, our Anatomist shall illustrate by Reasons drawn from foregoing Causes, and explain to us the manner thereof, as made known unto him : Or I shall by a like Argument of Ignorance conclude, that these likewise are the Delusions of Satan, and not natural Effects.

I will now produce some Examples of a co-like Magnetism, that we at length may come with the more seasoned Judgment, unto the positive Reason, and refuting of all Oppositions. What can I do more ? the Reasons which thou hast not brought in thy own behalf, I my self will devise.

Every Effect (thou wilt say) proceeds either immediately from God the Work-man, and so is a Miracle : or from Satan, and so is Monstrous : or from natural and ordinary Causes, and then is natural : but Magnetisme is not a Miracle, neither is it a natural Effect ; therefore Satanical.

I answer : Although I am able to shew this aforesaid rehearsal to be insufficient, in regard the inward Man acteth even after none of the fore-mentioned wayes (the which hereafter, we are plainly enough to declare) nevertheless, we now, with a dry Foot, pass over the Assumption, as being about to deny the Subsumption or Inference ; to wit, in that part wherein it is affirmed, that the effect is not natural : For that was first to be proved, least a begging of the Principle or Question should be committed : but herein our Censurer hath and will be defective, to say that it is not a natural Effect, unless he thought, that for him to say it, was all one as to prove it, and to have placed his own Authority in the room of Reason : For there are many Effects natural, which do not ordinarily happen ; to wit, those which are the more seldom incident : Therefore, in favour of our Anatomist, I shall every where not only defend the affirmative part ; but also, I will declare it by Reasons, and confirm it by Examples : For so the Argument now alleaged, shall violently fall with its own weight.

There is a Book, imprinted at *Frankford* in the year 1611, by *Uldericus Balk a Dominican*, concerning the Lampe of Life ; where thou shalt find out of *Paracelsus*, the true magnetical Cure of many Diseases ; namely, of the Dropsie, Gout, Jaundise, &c. by enclosing the warm Blood of the Sick in the shell and white of an Egg, which is exposed to a nourishing Warmth ; and this Blood being admixed with a piece of Flesh, thou shalt give unto a hungry Dog, or Swine, and the grief is presently drawn, and departs from thee into the Dog, no otherwise, than as the Leprosie of *Naaman* passed over or was transplanted into *Gehazi*, through the Execration of the Prophet. What, wilt thou account this also to be diabolical, to have thus restored the sick Party by the Magnetisms of the Mummial Blood alone ? But yet he is wholly and undoubtedly restored.

A Woman weaning her Infant, whereby her Breasts may the sooner grow barren, Milks out her Milk on hot burning Coals, and her Dugs soon grow Flaggy. Doth haply the Devil suck them ?

If any one shall Foul at thy Door, and thou intendest to prevent that Beastliness for the future ; lay thou a red hot Iron upon the new laid Excrement, and by Magnetism, the voyder of that Ordure, shall soon grow Scabby on his Buttocks ; to wit, the Fire roasting the Excrement, and as it were by a Dorsal or rebounding Magnetism, driving the sharpness of the Roast, into his impudent Fundament.

Perchance thou wilt say, that this is Satanical, because the end is a hurting of the Party : But surely the abuse of Powers is in the liberty of Man ; Yet it is not the less natural in its use.

Make a small Table of the lightest, whitest, and basest kinde of Lead, and at the one end

end hereof, put a piece of Amber, and three spans off, place a piece of green Vitriol ; this Vitriol will forthwith visibly loose its Colour and Tartness : Both which Effects are found in the Preparation of Amber.

At least-wise, this very Experiment, shall be free from all Illusion of Satan.

A certain Inhabitant of *Bruxels*, lost his Nose in fight, he comes to *Tagliacozzus* a Chyrurgion, living at *Bononia*, in expectation of another Nose : and when as he feared the Incision of his own Arm, he hired a Porter for his end, out of whose Arm, he having given him his Price, the Chyrurgion at length digged a Nose. About thirteen Months after his return into his own Country, presently on a sudden, the ingrafted Nose grew cold, and after some dayes fell off through Putrefaction : By the buisie enquirers of the unexpected chance of which thing, it was found that the Porter gave up the Ghost, perhaps at the same moment, wherein the Nose grew cold. There are those yet surviving at *Bruxels*, that were eye Witnesses of these Things.

23 Is not that Magnetism of manifest affinity with Mummy, whereby the Nose, by the right of ingraftment, rejoycing for so many Months, in a common Life, Sense or Feeling, and vegetative Faculty, suddenly mortified on the further side of the Alpes? What I pray, is there in this of Superstition? What of a fond Imagination?

24 The Root of the Carline-thistle (which is that of Chamileon) being plucked up when full of Juice and Virtue, and co-tempered with the Mummy of Man, doth as it were by a Ferment, exhaust all the Powers and natural strength out of a Man, on whose shadow thou treadest, into thy self.

25 But this thou wilt say, is full of deceit, because Paradoxical : as if the same Leprosie were not transferred out of *Naaman* into *Gebazi* ; and the same numerical Jaundises transplanted into a Dog : for a Disease is not in the Predicament of Quality ; but all the Predicaments are in every particular Disease : For truly it shall not be lawful to accommodate or suite things to names, but names to things.

26 The Solisequous, or Sun-following Flowers, are carried after the Sun by a certain Magnetism or Attraction ; not indeed by reason of his heat which they may desire (for in a cloudy and more cold day, they also imitate the Meeter of the Sun) nor also by reason of his Light, are they the Lackeys of the Sun : for in the dark night, when they have left the Sun, they incline from the West to the East. Thou wilt not account this to be diabolical, because there is another privie Shift at hand ; to wit, that there is a Harmony of superiour Bodies with Inferiour, and an attractive Faculty, plainly Celestial, in no wise to be communicated unto sublunary things : As if indeed, the Microcosme or little World, being unworthy of a heavenly Condition, could in his Blood, and Moss, take notice of no revolution of the Stars.

27 I might speak of Amorous or Love-Medicines, which require a Mumial co-fermenting, that Love or Affection may be drawn unto a certain Object : But it is more Discretion to pass them by, when I shall first have mentioned this one only Example.

I have known an Herb, in many Places easie to be seen ; the which, if it be rubbed, and cherished in thy Hand, until it shall wax warm, and thou presently shall hold fast the hand of another Person, until that also grow warm ; he shall continually burn, with a total Love of thee, for some dayes.

I held in my hand, the Foot of a certain little Dog, and this Dog, presently so followed me, a stranger, that his Mistris being renounced, he howled in the night before my chamber Door, that I might open unto him. There are some present at *Bruxels*, who are my Witnesses of this deed : For the heat first heating the Herb, I say, not a bare heat, but being stir'd up by a certain Efflux of the natural Spirits, limits the Herb unto it, and individuates it to it self ; and this ferment being received, doth by Magnetism, draw the Spirit of that other Person, and subdue it into Love.

28 I leave the Cures of many Sickneses, which the secret of humane Blood doth magnetically perfect : For unless the Blood, yea the corrupt Pus or Matter [of Wounds or Ulcers] the Urin, and transpirable Efflux through the Pores of the Skin, shall continually mow down, or carry away with them something of the Vital Spirit ; and there were in these a certain Participation of the whole Body, when they are out of their natural composed Body ; surely the dayes of Man should not be so short : For this indeed hath been the cause of our intestine Calamity.

29 The herbs Arsmart or Water-Pepper, Comfry, Flixweed or Luskewort, Dragon-Wort, Adders-Tongue, and many others, have that peculiar Endowment, that if being cold, they are steeped in Water (for a felled Oake, when the North Wind blows, will grow wormy, if not forthwith sunk under Water) and if being for some time applyed on a Wound, or Ulcer

Ulcer, they grow warm, and are presently buried in a muddy place: When they begin to putrifie, they are also busie in drawing from the sick Party, whatsoever is hurtful unto him: And that thing the Herbs accomplish, not as long as they grew in the Earth, nor also as long as they remain in their antient Form (for it behoves the Grain to die, that it may bring forth Fruit) but in the Putrefaction of their Body, their Virtues being now as it were loosed from the Bolt of their Body, do freely uncloath themselves of that Magnetism, otherwise sleeping and hindered; and according to the contagion and impression received from the wounded or ulcerated Place, do suck out much remainder of Evil, even at a far distance.

If any one in gathering the Leaves of Asarabacca, shall pluck them upwards, they will purge another, that is, a third Person who is ignorant of that drawing, by Vomit only: but if in cropping, they are wrested downwards, they will expurge only by Stool.

Here at least-wise, doth no Superstition subsist, or lurk: for why do I here make mention of Imagination; seeing ye grant that nothing can thereby operate on a third Object, especially where that Object is ignorant of the manner of gathering which the Cropper used?

Wilt thou perhaps again accuse of an implicate compact, and lay hold on the sacred Anchor of ignorance? But here lurks no vain observance, especially when as the gatherer shall pluck off the Leaves either upward, or downward, the receiver being ignorant thereof. Truly, besides Asarabacca, and the outmost parts of Elder, no other purging Medicines have that Endowment, the which after what manner soever they are gathered, do alwayes univocally or singly operate: But in Asarabacca, in the entire Plant, a magnetical Property shines forth, and so it variously endoweth its Leaves according to the sense of their gathering.

But that, not only Plants; but also almost all created things have a certain delineation of sense, they do largely confirm, as well by Antipathy, as Sympathy (which cannot consist without sense) which thing, we shall by and by teach.

Another new Fit of the Gout surprized a noble Matron of my acquaintance, after one Fit had departed, and that Gout, by an unwonted recourse, molested her for many Months without remission: But she not knowing from whence so great and unexpected a relapse of the Disease beset her, at length, now rising from her Bed, as oft as the heat of the Fit was slackened, sat down in a seat, wherein her Brother being Gowty, and that in another City, had in times past, wont to sit; and indeed she forthwith found, that from thence the Disease did revive a-fresh. Verily the Effect is in no wise to be ascribed to Imagination or scrupulous Doubt; because both these were such as were much more modern than the Effect.

But if in the same Seat, another gowty Person happened to have fit, no renovation of the Disease happened unto him: Therefore the Mummy of her Brother already dead, deservedly rendred the Seat suspected of Contagion, which piercing through all her Cloaths, stir'd up in the Sister, and not in any other gowty Person, those Fluxes of Fits, which otherwise would have been quiet: Indeed the Magnetism was to the Mummy of the Sisters Womb, and that a long five Years space after his burial.

I pray, what implicate compact is here with the Enemy Satan? A Sapphire that is of a deep skie Colour, if it shall touch, and be for some time rub'd on a Carbuncle, whereby the Plague discovers it self, but by and by be removed, the absent Jewel now ceaseth not magnetically to attract all the Poyson from the defiled Party; so that it be done before his strength be too much dejected: They are wont therefore (which to us makes more for the Credit of Magnetism) by degrees to enclose the place of the Aposteme with a Sapphire extended into a Circle: To wit, least the departing Poyson, in that place where it unsensibly exhales, should be more largely expended, and thereupon, more largely infect some noble adjacent Part. For in what part the Poyson doth (as it were through a Trunk) magnetically exhale out of the wasted Body, the whole circle presently grows black, and being at length scorched into an Eschar, falls off; the Heart in the mean time, being preserved from the deadly Contagion. Neither is there any place for a privy Evation, as to say that the attracted Poyson, at the same moment wherein the place is touched by the Sapphire, or also being at that time subdued within, doth figure it self, and not to attribute that thing unto the Magnetism of the absent Gem: But notwithstanding, the Sick will bear witness that they did not presently perceive relief, but a good while after; to wit, by the Poyson by little and little departing through the magnetical attraction: Yea, the place it self will afford a more certain Testimony for Magnetisme; the which, waxeth not black under the circular conveyance, or by that conveyance of the Sapphire; but it growes

grows black a little while after, as being immediately scorched by the Pestiferous, that is, Arsenical air, going forth in that very Path or Part, and not in any other: For where the Poyson doth continually exhale, to wit, by the venomous Beams being recollected into a crest or pyramidal Point, the place doth there of necessity suffer violence, wax black, and is burnt or scorched: which Effects, as they happen in a succession of time, they perfectly instruct us, that the Poyson doth also successively flow forth according to the attraction of the absent Gem.

Perhaps thou wilt answer, that every Agent requires a certain duration of its impression; that the Saphire did not benefit this sick Party in an instant, but that it left an Impression behind it, which was to vanquish the remainder of the Malady by degrees; but not that the Gem being absent from the Carbuncle, did afterwards attract any thing: Where thou shalt take notice, that every Agent of Nature doth act in an instant, unless there be some obstacle or hinderance in the Patient.

But in the Body being infected, that there is no Impediment, because it is that which requires help with the greatest speed, and earnestly Paints after it, in all its Veins.

It would be altogether another thing, if in the pained Place the Saphire were to be prepared, concocted, or altered; that the imprisoned Agent which should afterwards be spread through the Body, might be drawn out thereby: But seeing it remains entire and uncorrupt, it requires only a certain time, to this end, that it may couple its own influential Ray (through a touching of the Mummy) unto the Ray or Beam of the pestilent Air, whereby it being forthwith absent, may require or command it forth: For the said copulation I say, that there may be made a fast binding of the Virtue of the Saphire to the Venom, there is required a certain time (grant one eighth Part of an Hour) wherein the Circle-Line is encompassing the Carbuncle; for if there were a certain impression of the Saphire, which by degrees should subdue the Poyson within, and not a magnetical attraction of the absent Jewel, there could be no reason why that certain or particular place of the Circle should wax black and be scorched, nor also why the Poyson should not more largely range, than in the said Circle: And which is more, if the Carbuncle doth freshly shew it self in diverse Places at once; yet that Carbuncle only, which was circumscribed with the Saphire, is burnt, the other settling, and vanishing away.

35 Therefore, what attractive Impression (I beseech thee) shall the absent Saphire, leave behind it, if not a magnetical one? especially, because the thing attracted, bespeaks an unseparable respect unto the thing attracting, and this likewise to that.

Yea, if the Saphire had delivered any Virtue from it self into the sick Body, it (after one or a second using) should be weaker than it self was (for so the hoof of the Elke, driving away Fits of the Falling-sickness, is by little and little, rendred barren or unefficacious) the Faculty which it imprinted being lost, which plainly in the Saphire is truly unlike; for it is commended as so much the more powerful, by how much the oftner it hath sucked out the Venom. Perhaps thou wilt say, that the Saphire generated a Quality in the sick Person, by reason whereof it began to attract, and pluck forth the Poyson that way; and although the Saphire be then removed, yet nevertheless, Nature being once moved or provoked, perseveres in expulsion, and that through that passage where the Poyson began to be expelled. First we ask, whether the Saphire draws by its first quality (suppose heat) or by a formal and magnetick Property? But this desires not a previous or foregoing Generation of a new Quality within the Body; but only a coupling of its attractive Virtue, for to draw: Therefore that an attraction is made by the absent Gem: The Subsumption is proved; because every natural attracter, draws unto it self; for indeed, to this end only doth it attract. Wherefore a new Quality being generated within the Body, should draw the Poyson inwards to it self, and should never be allured outwards by attraction.

Secondly we enquire, whether haply, the Saphire hath produced a Virtue from it self, and hath imprinted it only on the Skin? But indeed, neither can that stand together, because then it should not be necessary for a Circle to be drawn by the Gem, about the Carbuncle; but it should be sufficient, for any other remote, and more commodious part of the skin to be touched, which is false.

Thirdly, whether the Saphire can perhaps, open the Pores of the Skin? And whether Nature could not make use of the same expulsive Faculty, without the touch of the Saphire?

phire? Which if not, then the Saphire shall not attract, but shall only strengthen the expulsive Faculty in the sick Party: But that contradicts this, because the place is not scorched either beyond, or on this side of the Circle; and because those Carbuncles which begin to bud, being not touched also by the Saphire, do settle down, and perish. For truly, if the expulsive Faculty were only strengthened, it would expel the Venom every way round, and not be tied up unto a certain and elect place.

Fourthly, Nature before the touching of the Saphire, had already denoted its own strong Ability in expelling of the Carbuncle.

Whence also it is false, that Nature being once provoked to expulsion, doth afterwards continue it of her self, seeing otherwise, the Saphire came too slow for the Beginning of Expulsion: Therefore whatever thou shalt say, the Poyson must needs be magnetically attracted by the absent Gem.

Wilt thou therefore, that the natural Magnetism of the weapon Salve, be more clearly manifested unto thee? Or wilt thou reproach the attraction of the Gem, and also write to the reproacher? Thou wilt judge (I suppose) that it is better and far better to be of Opinion with us, that as Death, Wounds, a Disease, Slaughters, crept in by the Devil, from whom there is nought but Mischiefe; So that every good Gift, descends down from the Father of Lights; all Men judging that to be good, which neither the Subject, nor the Object, nor the Means, nor the intended End, dare to accuse of wickedness.

For this Cause, the Prelates of the Church, were wont heretofore to wear Rings enricht with a Saphire, the use of that Gem being almost unknown amongst them: For unto whomsoever the charge of Souls is committed, it is also incumbent on the same from equity, and Office or Duty, to be assistant to those that are infected with the Plague: For the darkness of Ignorance, at this day, over-shadowing the most famous Knowledge of natural Things, instead whereof, a polished Grace or fineness of speaking, and a glistering of the windy and dead Letter, and a presumptuous Prattle, have succeeded; which is greatly to be bawailed, and more to be admired, that mechanical Arts do daily thrive; but that the study of natural things alone, is affrighted and goes backward, through unjust Censures.

I have been the more tedious about the Saphire, because it contains a Case or Condition, wholly like and equal to the Armary Unguent or weapon Salve.

In this respect therefore, Man also hath his Load-stone or attractive Power, whereby in time of the Plague, he draws the Venom from abroad, out of the Infected, by an unsensible transpiration: For Nature, which at other times, is wont to admit only of a kind or wholesome Juice, and diligently to separate it from the Excrements, now yielding to its Magnet or attractive Virtue, allures unto it a hurtful Air, and invites Death into the Body: Against which Magnet, there is its contrary Magnet (this is inserted, to wit, least our Dispute should become barren in any part of it) namely the Saphire it self, or also a clear piece of Amber, being first rub'd upon the seven planetary Pulses (but those are in the Throat, the Wrists of the Hands, nigh the Insteps, and on the Seat or Region of the Heart) and being hung about the Neck instead of an Amulet or Pomander, excel the Magnet of Man, hinder it, and so are the most certain Amulets or counter Poysons against the cruel Contagion, otherwise plainly un-efficacious, if a co-rubbing of the Pulses hath not preceded: For those things which before, were a Saphire, and Amber, have from the rubbing on those Pulses, changed their Family, do first loose their name, and afterwards are called a *Zenexton* or preservatory Amulet against the Plague.

Will any one account these Effects also to be diabolical, and attribute them to a Co-venant struck with Satan?

It is sufficient, that we have brought a few, yet satisfactory Examples, and such as contain the like condition of the Armary Unguent: we shall now seasonably turn our selves unto thy Arguments.

Thou reprovest *Goclenius* of Ignorance of the Doctrine of *Aristotle*, for that he insinuates the same accident to pass from Subject into Subject (I wish thou hadst been as ready in proving, as thou art in refuting) for as much as this also is a Mother of great Stubbornness, to think that a scar in a dead Carcass is not the same, which it was in the Man that was yesterday alive: For in vain do we reverence the Reliques of Saints, if only the impossible matter of the *Aristotelicks* remaineth, and there shall not remain certain accidents in the corrupted Body, which were heretofore in the live one. Behold!

F ffff

whither

whither a Paganish errour doth hurle those that unadvisedly carpe at others : To imagine (I say) that to be impossible, which is altogether necessary, is the part of the grossest Ignorance.

Indeed the Light from the Sun, even unto the Earth, doth even more swiftly than the twinkling of an Eye, also through the smallest Atomes of the Air, produce new Species, and Species of Species of Light : truly this is to wax blind in Sun-shine : for if we should not have the Light and Virtue of the Sun amongst us, but only the thousandth (of thousands of Millions) Species of its Light and Virtue, not any thing could grow, and Fire should never be produced by the re-bounding or union of its Beams : For the Species of Species of Light, seeing they are no more Light, than the Species of Colours are Colours, they should never cause Fire. Certainly, I rejoyce in the behalfe of the Ignorance of such a Doctrine, whereof *Goclenius* is accused as ignorant : Doth not the Needle of the Compass through a Glass that is sealed with scalding Sodder (wherein no Pore is found) incline it self to the northern Pole ? And is it not drawn unto a neighbouring piece of Iron, the Pole being the while neglected ? Therefore the same accident passeth thorow the Glass from the Load-stone into the Air, and perhaps reacheth to the Pole it self.

40 And Magnetism also, is a celestial Quality, very like to the Influences of the Stars, neither is it restrained unto distances of Place, even as neither the magnetical Ungent of which I dispute, is.

41 Thou smilest, because *Goclenius* chooseth that hereby Mosse which is gathered from the Scul, of a Man of three Letters : Nor is there here, truly any ground for thee to think there lurks a Snake in the Bush, or the Vanity of Superstition : for although a *Jesuite* being put to Death by Hanging, or any other kinde of Martyrdom, be left to be dried according to the Influence and Obedience of the Stars, his Head will afford a springing Mosse, every way alike useful, and also alike in time for shaving it off, co-agreeable to the Skull of a Thief : for truly, the Seed of the Mosse falls from Heaven on Mount *Calvary* : For sometimes there rains a Froath, which is called *Aurora*, and now and then a more tough Musilage descends, which is called the Sperm or Seed of the Stars : Sometimes the Heavens shows down Frogs, Spiders, &c. the which in falling, are made a tangible, and vital Substance.

42 In Mountainous Places elsewhere, it rains Milk, no less than Blood : Oft-times also, there lyes upon Stones and Bones, a white and slimie Substance, let down from Heaven, which becomes Mosse : This Substance in other Places, where it putrifies or grows stony, induceth a Crust or Parget upon Stones, and elsewhere degenerates into a Mosse.

43 Hitherto the Dew or Balsam of the Air Manna, *Troni* or the sweetest celestial dewie Manna's, *Tereniabin* or the Fatness of Wood-hony found in good quantity in the three Summer Months, *Nosbeck* or that which is called a falling Star, being a kinde of slimie or gelly found oft-times in Fields and Meadows, *Nebulgea*, or the Salt of the Moisture of a Cloud falling upon Stones in Meadows, and hardened with the heat of the Sun, *Laudanum* (which in the place, may not be taken either for the Paracelsical preparation *Laudanum*, or for *Laudanum* which is the liquid Sweat of the shrub *Cistus* or *Ledon*, but for some Aereal Meteor or Production, arising from the Conjunction of some seminary celestial Influence, with the fatty evaporation of Plants) and such like Aereal Productions have regard, although these partake more of the Substance of Air.

44 Whereas in the mean time, Mosses growing on dead Skuls are of a higher pedegree, being the Excretions or Superfluities of the Stars, and are named celestial Flowers : By these, many things or rare effects have been achieved ; because, seeing they are enriched with the continual favour and influence of the Heavens, they want not the Foundation of excellent Virtues : The *Usnea* therefore, or Mosse of the Skull, seeing it hath received its Seed from the Heavens, but its Womb and Increase, from the Mumial Marrows of the Skull of Man, and Tower of the Microcosm ; its no wonder if it hath obtained notable Astral and magnetical Powers, and that beyond the common Condition of Vegetables, although Herbs, as they are Herbs, want not their own Magnetism. I will declare what I have seen.

45 A certain, and that notable Souldier, bare a small Lock of the Moss of a Mans Skul artificially fastned between the Skin and Flesh of his Head ; who friendly interceding between two Brothers who were fighting a Duel with each other for their Life, was smitten with a Sword on his Head, that he fell to the ground, with which stroak, his Hat and Hair were cut through, as it were with an incision-knife, even to the Skin, yet he escaped with

with his Skin unhurt: Conjecture your selves, to what Cause the safe-guard of the Skin may be ascribed. I have not accustomed my self to perplex my Mind with uncertain Conjectures: for truly Lightning, which is more powerful than a Sword, if it shake or smite a Bay-tree, yet at leastwise, not a Sea-calfe, neither doth it touch upon a Horse, whose Snaffle is anointed with the Fat of a Sea-calfe; neither doth it smite the Stable, whose Posts are besmeared with such Fat: the Experience is trivial or frequent: Yet I pass by this Controversie, and leave it to others, when I shall have first put you in mind of a like Example.

In *Arduenna*, *St. Hubert* is worshipped, whither all that are bitten by a mad Dog have address (even as others flock unto the Chappels or Temples of *St. Domine* and *Belline*:) there, a small lock of the Stole or upper Garment of *St. Hubert* is fastned within the Skin of the Forehead of him that was bitten by a mad Dog, and for the future, he can be smitten by no mad Beast whatsoever; and that small Lock drives away or secures from their Teeth.

Thou wilt answer, that that is a Miracle of God, by the way of Reliques: be it a Miracle; Yet that God, doth for the most part, in Miracles, walk side by side with Nature, and observe the custom or rules hereof, those bitten Persons, by their smal Lock of the Garment, do shew: For He who can do all things by his Word alone, doth now and then also make use of Means. So let the Sweat in the Stove of *St. Paul*, be a magnetical Unguent: But let the Sweat of the Sick, or also the unsensible Efflux issuing from them, be the Blood of the Wounded, put on a piece of Wood within the Box of the Unguent, forthwith all hurt is on every side, magnetically drawn out of the sick Party: And that is the more powerfully done, by how much that supernatural Magnet is of the greater efficacy.

47

Indeed there is on both sides, a like reason, and a like manner of Operation: but that, in the material World, it happens through the Blood and the Unguent, as from corporeal Means; but in the supernatural, through the Reliques of the Friends of God, which even in this respect, are much to be revered: which Reliques, that they may become of a nearer Affinity with the magnetical Unguent, our merciful God, hath out of some of them, raised up a Fountain of Oyl, incessantly dropping Liquors of Balsam.

Whereby we being indeed on both sides supported or relieved by a magnetical Remedy, may certainly know, that the magnetical or attractive Cure is received from God, and doth proceed in both Worlds, in a co-like order, in an equal space, and by one Guide or Director. Hence indeed it is, that new Reliques work more, and more famous Miracles, even where they are carried about, applyed by touching, &c. because it is of necessity that the Magnet or Load-stone, be rubbed and stirred, if it must attract.

48

I return unto thee *Usnea*, thou seminal Off-spring of Heaven: for he who hath recovered from his Hydrophobial Madnes, by the small Lock of the Garment, and other pious Rites, is not only himself left free from a mad Dog for the future; but which is more royal, he can grant unto another that hath been bitten by a mad Dog, a delay for the space of many Months, until the Patient can with his convenience come to *St. Hubert*; the Poyson of the mad Dog being in the mean time, silent and suspended.

49

Nature hath also afforded a magnetical Remedy Cozen-Germane to the other. The *Zinzilla* (which is an Excrement of the Diaphragma or Midriffe, departing into an Inflammation) when it hath like a Circle encompassed the same, kills the Party; but it is safely and speedily cured, if the place be outwardly, and even but slenderly anointed with the Blood of any one who hath once laboured with that Disease:

50

For he who hath once recovered of that Disease, hath obtained not only a Balsamical Blood, from whence for the future he is defended from the Disease; but also he cures the same Effect in his Neighbour, and by a touching of his Skin with the same Blood, through the Power of Magnetism, transplants his blood into the like Balsam.

Thou wilt say, if the Magnetism be in the *Usnea* or Moss, other Ingredients are in vain.

Physitians answer, that some of them are principal Ones, but others less principal; that some are as the hinderers of Contraries, but some as spurs or exciting ones; some also are Promoters by increasing the less active Magnetism: That this indeed was the necessity of a Composition in the Ungent. Wherefore as it was an impertinency to say; if the *Usnea* contains the Magnetism, therefore Man is embowelled in vain, for other Ingredients; so also, it would be an absurdity to press, if the *Usnea* hath not of it self a sufficient Magnetism, nor the Fat, nor the Blood, &c. Therefore, neither shall that

Magnetism that is attributed to the Oyntment, enter into the whole composition, since single Ingredients cannot bring into a Composition, that which before they had not in their Simplicity. I shall now and then be constrained to supply thy Place, and to devise Cavils for thee; notwithstanding thou oughtst first to have learned from rustical Experiments, that in a Composition, a new and unwonted Quality doth frequently arise, which before was not at all couched in the single Simples: for it was convenient for thee to have known, that neither Vitriol, nor Gauls are black; yet being joyned, that they make Ink.

Thou wilt again object: If the Usnea preserves in it self a Magnetism from the Mumi-
al Virtue of the Bones, and the circular Tract of the heavenly Bodies, then the same shall be to be gathered, not only from the Skuls, but also from the other Bones of a Skeleton: that Argument also is ridiculous; because Nature also is subject to the Soile; and therefore new Pepper being planted in *Italy*, begets or brings forth Ivy.

51 Hellebour that grows in the Region of *Trent*, is deprived of a purging Faculty: And Poppies with us, are deprived of a deadly Quality, however our Country be tenfold colder than *Thebes* (now called *Sibes* or *Siber*) it self: Therefore the Moss is various, as it grows in a various Soile of the Bones: For if Lightning melt Money without scorching the Purfes, and often Companions sitting close together, takes one out of the Middle, and dashes him together or to Ashes, and that I say, happens, not casually, but by Permission of him, who would not have so much as a Leaf fall from the Tree without Command, and by whose Power alone, all Virtues are established; It also shall be no Wonder, that one Magnetical Seed of Moss, distils from Heaven upon the Skul, and the Seed of another sort upon the rest of the Bones. Only the Bone of the Head, prevails again the Falling-evil; the other Bone, not so: Then lastly, the whole Brain is consumed and melts in the Scul; through the continual bedewing of which Liquor I say, of the Bowel, the Skul attaines other Virtues, which we observe to be absent from the other Bones.

I have sufficiently known the customs of Contradicters: For when they have nothing more of moment to say against the thing it self, they become the more reproachful, and fall foule upon the Man: Wherefore perhaps, some or other will say, that Magnetism is a certain novelty, invented only by *Paracelsus*; but that he was a wicked and ignorant Man. And then, if there had ever been any such natural Virtue, it had not remained hidden to so many Ages, and its Revealmēt not have waited for the coming of *Paracelsus*.

I answer, as to the Scoffes, and Mocks or Taunts of many showre'd down on a Man that was the Ornament of *Germany*, they are indeed not worth a Nut, or not at all to be regarded, and for that very Cause, render the asserter of them the more unworthy; because he is such a one, who attempts to judge not only the living, but the dead also: For there is no reason, that I an unequal or unfit Person, who have undertaken the Song in Commendation of no Man, but do sift out things themselves, should enter upon the praise of those things which his Monuments hold forth concerning his Learning, Wisdom, and obtained Gifts.

The Objection therefore is Barren through its Pride, the which indeed, besides the Living, and the Dead, takes upon it to judge even God himself; to wit, that he ought not to have infused that Secret into *Paracelsus*, but into some other (perhaps a *Jesuite*) nor to have disclosed so great a Consonancy or Harmony of Nature in the Age of *Theophrastus*; but much sooner: But I pray, why came *Ignatius Loyola* so late, for the establishment of a Society so profitable to the whole World? Why sprang it not up many Ages before?

52 Alas! whither dost thou wretched Man, hurry thy self through Presumption: Is not God the free-giver of his own benefit? and is he not well pleased in an undeserved bestowing thereof? He hath afforded us a Touch-stone, according to which we may judge of Persons; namely, *That by their Works we shall know them*. But what the Works of *Paracelsus* were, and how much greater than the expectation of Nature, and the biting of Tongues, his Epitaph, hung on that well-deserved Monument of his, by the most Illustrious, and most reverend Prince, the Bishop of *Salzburg*, in the despite of Envie, sufficiently declares.

The Epitaph of *Paracelsus*, which is seen Engraven in Stone at *Saltzburg*, in the Hospital of *St. Sebastian*, on the erect Wall of the Temple.

Conditur hic Philippus Theophrastus, insignis Medicinæ Doctor, qui dira illa vulnera, Lepram, Podagram, Hydropisim, aliaque insanabilia Corporis Contagia, mirifica Arte sustulit; ac bona sua in Pauperes distribuenda collocandaque honoravit. Anno. 1541, Die 24 Septem. Vitam cum Morte mutavit.

Here lyes entombed *Philippus Theophrastus*, a famous Doctor of Medicine, who by a Wonder working Art, took away those cruel and mortal Wounds, the Leprosie, Gowt, Dropsy, and other incurable Contagions of the Body; and honoured his Goods so as to be distributed and disposed of to the Poor. In the Year 1541 on, the 24 Day of the Seventh Month, He made an exchange of Life for Death.

Paracelsus therefore, is so far from having deserved his Ill, because he hath disclosed Magnetism, unknown to Antiquity, and in the room of that natural Study which is barrenly taught up and down in the Schooles, hath brought to us another real one; which by the Resolution, and Composition of Bodies is made probable to our hands, and far more plentiful in Knowledge; that from thence he hath rather by a just title, snatch'd away the Denomination of the Monarch of Secrets, from all that went before him unless with hateful Persons, we as ignorant Judges, dispraise all his good Actions, and those Benefits that were heaped up by him for pious Lives. I am thus a Man:

All things are of vile esteem with me, whatsoever deserves Credit only by custom; Seeing there is nothing that involves us in greater Darknes, than that we are conformed to custom, assenting as credulous, unto Rumour, and Dreams: We must therefore proceed to enjoy our Liberty, not to enslave the gifts or habilities of our Judgment.

Thou wilt object; that in sublunary things, there is not an influential Virtue like to the Impression of the celestial Bodies: but if thou shalt stumble at this, thou wilt also reprove all that have rightly Philosophized, who have rightly observed, that in inferior Bodies, there is a superiour Tribute paid after an Inferiour manner, and a proportionable resemblance of the Tribute of Inferiour Bodies, in the Superiour. Do not Herbs, Animals, and Sick or Diseased Man, fore-feel and presage of future changes of Times or Seasons? Is not the more cruel Winter to be expected, by how much the deeper, a Frog shall scrape his Inn in the Earth for harbour against the Winter at hand? For from hence arise meteorical Divinations; not indeed that those happen from a fore-timely Motion of celestial Bodies, and that as yet to come, because then it should cause that presagious feeling in Sublunary Bodies, before it be present: Far be it: For the Firmament doth only foreshew future Events, but not Cause them.

But indeed, all particular created things have their own Heaven within them, and the Revolution of that Heaven depending on the Being of their Seed, in whose Spirit (because it is that which contains the Idea or Engraving of the Universe) is their own Heaven; and there are moreover, their own Ascendents. Neither is there cause to think that we hereby trample upon Astrology; but we illustrate or explain it; because every thing contains its own Heaven, and for that Cause, a conjunctive relation of the Heavens; yet the Motion of the Heavens, because the most known, because the most common, directs the Heavens of particular things (I may so call them for want of a Name: according to it self.

This indeed is the Cause of every natural Inclination: and where a Creature, by the perswasion of its own proper Heaven, wanders from that Motion of Heaven, as the most common rule, Sicknes and Defect is forthwith present: For a Sheep without a guide, wanders into uncertainty: For therefore sick Persons do fore-feel the Seasons, and the future Mutations of Times, healthy Persons not so: For if the Sea did flow and ebb through the guidance of the Celestial, that is, the fiery signal Moon only, and not from the conduct of its own watry signal Moon:

Winds also, if they were stirred up through the guidance of the celestial Mercury only, and not from their own Chaomantical or feminally signal Star, truly there could not be any

any provincial Winds in any Place, and (because there is one only Mercury, and one single Moon in the Heavens) a co-like Wind should blow throughout the whole World, and the Sea should every where flow, if not at the same time, at least-wise in the same harmonious Motion; which modern navigation disproves. Sufficient it is therefore, here to have shewn by the way, that there is a celestial and impulsive Nature in things themselves, the which notwithstanding, doth excite and govern it self according to the Harmony of a superiour tributary Motion, so long as it will not be accounted refractory: That the Firmament also doth not Cause future events, unless remotely, and that only by the first Qualities, playing the part of a certain Cook; but otherwise doth largely or loudly proclaim the Handy-works of God.

60 But that things themselves do contain a particular Firmament in their seminal Being, by reason whereof, Superiour Bodies do by the Law of Friend-ship and Self-love, bear a co-resemblance with inferiour ones: From all which, we may now at least collect, that there is a Magnetism, and Influential Virtues, every where implanted in, and proper to things; the which he, who expels from Sublunary Bodies, seeks a vain Evasion. Thou wilt urge, that we must yet come nearer to the point, neither that it is yet sufficiently manifest, that in Sublunary Bodies, there is a Quality imitating the Heavens, and such a one indeed, which carries an Influx unto a far removed and absent Object; the which notwithstanding, is presupposed in the Armory or Weapon Salve; and so that Magnetism is indeed a celestial Virtue, yet in no wise to be attributed to Sublunary things, and much less to the feigned Weapon Salve.

61 But what other thing is this (I pray) than to deny Magnetism, without, or besides Magnetism? For if we universally call every Influence of Sublunaries on each other, Magnetism, and for want of a true Name, do name that Occult co-suitableness, whereby one absent thing acts on another absent one by way of Influence (whither that be done by attracting, or impulsing) a Magnetism; truly whosoever denies an Influential Power of Sublunaries toward each other, to be by Magnetism, and requires an Instance to be given him to the contrary, he requires an Absurdity, to wit, a Magnetism, without Magnetism, and knows not what he may deny, or what demand.

For truly I have alleaged Examples of the Fact, in Sublunary things, and brought very many and suitable Instances, namely concerning the ingrafted Nose, of the Saphire, of Water-Pepper, Asarabacca, and most Herbs: But ye deny (I sufficiently know, because ye are ignorant thereof) that either those Effects do not thus happen, or thou wilt affirm (which thou art more ready to do) that they come to pass through the assistance of the Devil.

It is not suitable to the custom of Naturalists, to dispute from naked Authorities: we must come up to Handy-blows with those that contend with us, to wit, unto Experience.

Make tryal therefore, and convince us of a Lie: if thou canst not, at least, believe us. Therefore it is an Action of insolent malepartnesse, for any to deny the Being of that Fact, which is every where frequent, because indeed he hath not searcht out the Truth thereof, nor hath endeavoured so to search: and much more insolent it is, indifferently to ascribe that to the Devil, which is every where consonant to Nature, as shall be hereafter taught: and that indeed for one only Fault, to wit, because the manner of its Operation by its Cause cannot be understood by our Censurer; by a Censurer, who by the sharpness of his own Understanding, and the Study of *Aristotles* Physicks, presumes that he hath on every side exactly viewed the whole Circle of Nature: by a Censurer I say, who although he can discern nothing of Superstition in the Ungent, and nothing of unlawfulness; yet by reason of the manner of its Application, being Paradoxical to him, he condemns, and detests it as Impious, and affirms that it contains, I know not what diabolical Juggle in it. But for what I beseech thee? Indeed, because the Sword, or Splinter thereof besmeared with Blood, is emplaistred with the Mumial and Magnetical Unguent; because the Blood which is once expelled out of the Veins, knows not how to hold a correspondence with that which is as yet nourished within the Veins: and because he doth not believe that the Action of the Unguent is extended unto an Object scituated at a far distance.

But return to thy self; because anon thou shalt both understand, and believe those things, unless thou art stubborn.

We will now for thy sake, recal the Action of Magnetism in Sublunary things, unto the Bar of Light.

For indeed, I will now shew, that there is without the Classis or order of things and Herbs, undeservedly suspected by thee, an influence of some things on each other, and that

that it is observedly between objects at a distance. The Vine which is in its Flower, disturbs Wines a far off.

Thou wilt excuse, that the same Perturbation is made by the violence of the Heavens : We prove that it is not : For if the Heaven should cause the flowings in the Vine, and the Turbulency of Wines in Hogs-heads, it would needs be, that both those Effects should be wrought every Year at a set, and as it were determinate moment, which is false : For sometimes the Vine sends forth her Flowers, and the wine is troubled before the Solstice or sunstead, and in the same Region, another Year, long after ; but the Sun and the fixed Stars (some few minutes excepted) return every year unto the same point : therefore the Vine should flower, and the Wines should be disturbed alwayes at the same time. But if thou seekest an Evasion, and shalt say, That other Planets besides the Sun, are the Cause of this thing, which have not every Year a like situation at the time of the Solstice, but only that that Motion of the Heavens or superior Orbes is most common, all Vines would for the most part (the same Year) flower every where at once, which is false : For as there is an Astral Nature subsisting in the ground or soil ; So also there is the same Particular Nature in the Vine, which also it self, of it self (no otherwise than as the Earth hath a Power given it of budding, by it self) brings forth the Flower, Fruit, and Seed, and composeth and moveth it self according to the Meeter of the most general Motion of the Heavens. Hereunto they affirm, that Wines are never disturbed in those Countries, wherein no Vine grows ; therefore the Flower of the Vine, and not the Motion of the Heavens, troubles the Wines, and that many miles off, but indeed, so much the more powerfully, by how much the Wines are nearer to the Vine.

I gratefully applaud publick Studies, and I bear good will to him, who first discerned, after what manner vulgar Antimony, in time of its preparation, continually directs it self unto an Influence.

I am willing to have the same measure I mete, to be measured to me again : Therefore I shall satisfactorily prove, that there is a certain Influential Power, familiar unto sublunary things, which is not subject unto distances of place, and so much the more forcibly in favour of Magnetism, if I shall teach, that the Load-stone himself, doth direct himself of his own free accord unto the Pole, but to be in no wise drawn by the Pole : for one Load-stone declines unto three, another unto six, seven, and eleven Degrees from the Pole : but none (that I know of) doth in a direct line, point upon the Pole : therefore if the Load-stone should be drawn, it should be pulled either by the Pole, or by some neighbouring Star to the Pole ; but not by the Pole it self : because, whatsoever attracts, draws unto it self by a direct or right, and not by an oblique or crooked line. Wherefore if the Load-stone were drawn by the Pole, it would also point in a direct line upon the Pole : therefore Load-stones (at least accord to what I have seen hitherto) are not attracted by the Pole or North Star ; nor also, by any other neighbouring Star, for that very Star is never at rest, but is incessantly carried in a circular Motion : therefore if it should attract the Load-stone, it should also render it disquieted, by drawing it sometimes some Degrees towards the East, and anon, as many Degrees toward the West, but should sometimes pull it toward the Zenith or Vertical Point either above or beneath us ; which is false : Therefore the Load-stone is not drawn, but is carried thitherwards of its own free accord.

But that otherwise, the Load-stone is of it self elevated upwards towards the Zenith, there is a certain Instrument invented by *William Gilbert* (the glory of which Invention *Lodowick Fonseca* lately endeavoured to arrogate to himself, in the presence of his Catholique Majesty) this Instrument I say, by a voluntary elevation of the Load-stone, in a Brass-Ring hung up, shewes not only the latitude, but also the altitude or height of the Pole in all Places of the World.

Thou viewing for a way of escape, wilt contend in behalf of the Pole, that the Pole indeed attracts the Load-stone, but that it pulls the same Load-stones, not in a direct line towards it self (for such is the condition and will of the Attractor) but unto a neighbouring place : Which is to say ; The Pole or North Star drawes indeed the Load-stone unto it in a right line ; yet the Load-stone is not attracted in a right line to the Pole, by reason of a certain unknown Impediment (which thou callest a certain Disposition thereof) existing in the Load-stone, which resists the attraction of the Pole, and is more powerful and superiour than it ; although the same influential allurement reach safe and sound unto the Load-stone at so many thousand miles distance.

Dost thou see, how much truth thou hast granted by thy Evasion ? And how that against

against thy will; thou notwithstanding affirmest, that there inhabites in the Load-stone some certain motive Disposition (thou callest it certain, yet feigned to thee, and to all others wholly uncertain) which thou rejectest from being in the Load-stone, besides and above the attraction of the Pole? Which is as much as to say, that there is in the Load-stone a directive virtue unto some distinct Place; but that it is not drawn by the Pole.

Thou wilt retort in behalf of a neighbour to the Pole, by saying, that the Load-stone is drawn, and doth not direct it self; not that it is drawn by any one point of Heaven, or Star, but by a certain whole Circle nigh the Pole.

I answer, this Shift is far fetched; for that Circle shall have a latitude even of eight Degrees at least, to wit, from three Degrees to eleven: Because I have seen Load-stones of so great a variation. Therefore if there were a Power of attracting, in the whole Circle, the same Load-stone should continually varie, and in the same hour, decline, sometimes to three, and anon, to eight, or eleven Degrees from the Pole; which is false: Therefore, there shall in a Circle of so great latitude, be at least diverse lesser rounds, every one whereof shall allure its own Load-stone; which being granted, thou wilt fall again into the same Gulfe; to wit, that there is a certain disposition in the Load-stone, why it can rather be enticed by this, than by the other Circle; and by consequence, thy fictions being stretched according to thy own desire, there will nevertheless be a motive Virtue in the Load-stone himself.

65 We are not yet satisfied: if the Pole should draw the Load-stone, this should be done, either by reason of the Elementary and Material temper of the Stone, or by reason of the Form thereof: But a Glass, wherein the Magistery of a Load-stone hath been prepared, though it be most exactly washed, and however cleansed by often rubbings, doth also for the future observe its Poles; to wit, by reason of an Impression communicated to the Glass without corporeal remainders. Steel also, after the touch of the Load-stone, though well washed and cleansed, doth nevertheless point at the Pole: which two Bodies, seeing they have neither a like co-temperament, or form between themselves, nor with the Load-stone, do demonstrate, that the Pole doth not attract Load-stones for either of those two ends.

66 Thou wilt say, that by rubbing on them, there is a participation of the Load-stone made in the Pores of the Steel, or Spondils of the Glass.

A miserable excuse! For the Rosin of the Firr-Tree, is of it self coagulated into the hardness of the Stone; the which, then allures Iron unto it, no otherwise than the Load-stone doth.

Here at least-wise, thy feigned participation of the Load-stone sinks to the Ground.

67 The Load-stone only by the affriction or rubbing of Garlick thereon, neglects the Pole, its Form, Matter, and Properties being the while preserved; indeed because that spiritual sensation or feeling in the Load-stone, is by the Garlick laid asleep; which sensation, we have already before avouched to be the one only Cause of the Act of formal Properties. Verily, that would be a weak attraction in the Pole, which could pass through so many Orbs of Heaven, and the vast Region of the Air, through Houses and Walls, but should not know how to pierce the Juice of Garlick alone (or the fumousness of Mercury, the same material Root, and one only Form of the Stone remaining stedfast.

A swimming Load-stone is carried in one certain part thereof, to the North, in its other part to the South: Therefore if that positional conversion should be made by the drawing Pole, the whole Northern side of the Stone would be alwayes drawn by the North Pole; which is false: For if it shall touch a piece of Iron with its North side, it shall not incline that Iron according to its own Property, to the North, but to the South, although the dust of the Stone shall adhere to the Iron: but if it shall touch the Iron with its Southern side, it shall turn that Iron to the North.

Likewise the Load-stone, in what part it hath alwayes inclined it self to the North beyond the Equinoctial line, it tends to the South.

As yet a little longer, let us prosecute this Argument.

A Load-stone swimming in a Skiff of Cork, on a quiet Poole, if in its Northern Part it shall be violently turned to the South; presently that that North side, as it were by a forcible conduct, re-addresseth it self to the North: Therefore if the Load-stone should by the Pole it self, be pull'd towards the Pole, and that direction of the Stone were not voluntary, the whole Skiff should of necessity, by the same drawing, float and be drawn or towed to the Northern Bank of the Poole; which is false: for the direction of the
North

North side being attained, both the Load-stones and Skiffe, stand unmovable upon the water.

There is therefore in the Load-stone, an influential Virtue, which without respect had unto the nearness of its Object, is after the manner of Celestial Bodies, freely carried as far as the Pole it self; seeing there is a voluntary eradiation or darting forth of the Rayes of the Load-stone unto the Pole or North Star: therefore, if there be now found, one only natural Virtue in Sublunaries (to wit, in the Load-stone) beaming forth it self unto an Object at a most remote distance, which is never, or in no wise, to be ascribed to Satan: It shall be also sufficiently proved, that there may be also many the like Virtues or Properties, wholly Natural, as in the Examples alleaged, and the Weapon Salve.

68

The Load-stone therefore, or Iron touched by the Load-stone, seeing they voluntarily convert themselves to the Pole, a certain Quality is of necessity extended from the Load-stone to the Pole: the which, seeing we have known to be done without any corporeal Efflux, therefore we denominate the same to be a spiritual Quality, herein disagreeing from our Divine, who distinguisheth a Spirit in opposition to every corporeal Nature, as it were something besides Nature.

But Physitians only in opposition to the more gross compact of a Body; and in this respect, we say, that the Light of the Sun, and Influx of the Heavens, the ejaculation or stupefactive darting forth of the Cramp-Fish, the sight of the Basilisk, &c. are Qualities plainly Spiritual; to wit, because they are not dispersed on an Object at a distance, by the Communion of a substantial Evaporation; but as by the Medium of an unperceivable Light, they are beamed forth from their Subject into a fit Object.

Which things being thus supposed and proved, it is sufficiently manifest, that our Divine not having as yet understood *Goclenius*, hath nevertheless many times undeservedly carped at him.

First, because *Goclenius* would establish a Spiritual Quality in a Corporeal Unguent.

Secondly, because He affirmed, that it being drawn or conveyed as through a Medium or Vehicle, is carried unto its appropriated Object, like as a radial or darting Light.

Thirdly, inasmuch as such Qualities are derived unto a remote, and appointed Object, by a certain feeling of the Spirit of the World, the causative Faculty of all Sympathy.

This Spirit, the Divine interprets to be a *Cacodæmon* or evil Spirit, but by his own, and I know not what Authority; seeing it is the more pure and vital Air of Heaven, which Spirit nourisheth the Sun, and the sunny Stars within, and being a mind or intelligence diffused through the Limbs of the Universe, acts the whole heap thereof, and so governs the World by a certain Communion, Conspiracy of Parts and Faculties, according to the consent of all that have rightly *Phylosophized*.

For Examples sake, the Sun-following Flowers, do feel the travail or journey of the Sun; the Sea takes notice of both Lunefices or the full and change of the Moon.

69

In Summ, every Creature doth by its self (*Let us worship the King to whom all things live*) Essence, Existence and Sensation or Perceivance, bear witness to the Majesty, Liberality or Bounty, and Presence of the Creator. Wherefore our Censurer is deservedly to be reproved, in that, before he understood the Physitian Writing in a *Phylosophical Style*, he hath plainly carped at him with an unsufferable boldness: For so hard a thing hath it been to have kept a Mean in all things.

Thou askest us, what can be attracted out of the wounded Party? and after what manner an attraction can be made by the absent Unguent? But surely I should not answer injuriously, when thou thy self shall shew us, for what Cause the Load-stone shall attract Iron, and convert it self to the Pole: Then shall I also shew thee, after what manner Mummy can cure another Mummy being touched on by a third mediating Mummy: but because we have determined to reparaire the insufficiency of *Goclenius*; in this respect, we are also presently to shew by a doctrinal Argument from the Cause to the Effect, how a Magnetical attraction of the Unguent happens, yet provided that I shall first satisfie thee what can be drawn from the Wound.

It is to be noted therefore, that in a Wound, there is made not only a Solution of Con-

Ggggg

tinuity

tinuity or disunion of the part which held together, but also that a foreign quality is introduced, from whence the lips of the Wound being enraged, they by and by swell with heat are apostemized, yea and from thence, the whole Body is in a conflict through Fevers; and a various concourse of Symptoms: For so an Egg whose shell is but even slenderly hurt or crackt, putrifies, whereas otherwise it might be preserved.

The Magnetism therefore of this Unguent, draws that strange disposition out of the Wound, from whence its lips, being at length overburthened or oppressed by no accident, become without pain, and being no way hindered, suddenly hasten unto a growing together. *Natures themselves are the Physitians of a Wound, the Physician onely the Servant thereof;* Neither doth the Medicine beget flesh in a Wound, it hath enough to do, if it shall but remove impediments: Which impediments, the one onely Armary Unguent or Weapon Salve, doth otherwise, sufficiently, securely, and plentifully expel.

Thou wilt Object, *That the Weapon Salve ought not rather to allure forth the forementioned strange quality, than the natural strength and powers of the Veins; and that the Blood, seeing it is found or uncorrupt in the Unguent, ought to call to it the Health, but not the indisposition of the wounded party; even as indeed was written of the Carline Thistle.*

I Answer, that there are divers Magnetisms; for some attract iron, some chaffs and lead; some flesh, corrupt pus or matter, &c. but such is the favour of some Magnetisms, that they extract onely the Pestilential Air, &c. Yea, if thou shalt couple the effect of curing in our Ointment, with thy own Argument, thy own Weapon will wound thee.

For from thence, that the Effect of the Unguent is to heal perfectly, speedily, without pain, costs, peril, and loss of strength: hence I say, it is manifest, that the Magnetical Virtue in the Unguent is from God, in a natural way, and not from Satan.

71 Because, if this Satan should be a co-worker of the said Cure (which thou affirmest) the same Cure would be imperfect, together with loss of Strength, Weakness, Damage, or hazard of Life, a difficult Recovery, or with a sensibility of some greater inconvenience, and relapse of misfortune: All which events, as they are annexed to Diabolical Cures, so they are far absent from the Cure of our Unguent.

As many as ever have been cured by this Unguent, will give in their Testimony for us.

Satan is never a teller of Truth, never a persuader unto Good, unless that he may deceive thereby; yea, neither doth he long continue in the Truth: For alwayes, if he shall bring any thing of good to any one, this Enemy under-mixeth somewhat more of evil therewith.

And surely he would (according to his custome) observe the same rule also in this Unguent, if he were the Author or Favourer thereof: At least-wise this Remedy would then fail, when the wounded Person is recalled as it were from the pit of death, who otherwise through the mortal contagion of Sin, had through his dangerous wound, soon poured forth his Life together with his Blood: unlesse haply thou shalt say, that Satan then takes compassion on us; and that he hath now attained to himself a right or jurisdiction over such a wounded person, himself leaves it in doubt, to wit, in curing him by the Magnetical Unguent, whom he had rather should perish; perhaps because Satan is now in your esteem a strict observer of his Word and Bargaine, and no longer wholly a turn-coat, fraudulent, impostor, and lyar.

Besides, we deny the supposition also, That the out-chased blood, is perfectly sound or uncorrupt; but rather, that it being now deprived of a common life, hath also entred into the beginnings of some degree of corruption; onely that it obtains a Mumial Life.

Hitherto conduceth the putrified, and yet Magnetical blood in an Egg.

I therefore pass by the absurdity of thy Objection, in that it hath been so bold as to wrest the Magnet or Attractive faculty of the Unguent, according to thy own pleasure, and not to that end for which it was given of God.

Positive Reasons of Magnetism, more nearly brought home unto us by Metaphysical and Magical Science.

It is now seasonable to discover the immediate cause of Magnetism in the Unguent.

First of all by the consent of Mystical Divines, we divide Man into the external, and internal Man, assigning to both the powers of a certain Mind or Intelligence: For so there doth a Will belong to flesh and blood, which may not be either the Will of Man, nor the Will of God; and the heavenly Father also reveales some things unto the more inward Man; and some things flesh and blood reveales, that is, the outward and sensitive or animal Man. For how could the service of Idols, Envy, &c. be rightly numbred among the works

works of the flesh (seeing they consist onely in the Imagination, if the flesh had not also its own imagination and elective Will ?

Forthermore, that there are miraculous Ecstasies belonging to the more inward man, is beyond dispute. That there are also Ecstasies in the Animal man, by reason of a intense or heightened Imagination, is without doubt : Yea *Martin del Rio*, an Elder of the Society of Jesus, in his Magical disquisitions or inquiries, brings in a certain young Lad in the City *Insulis*, that was transported with so violent a cogitation of seeing his Mother, that through the same burning desire, as if being rapt up by an extasie, he saw her being many miles absent from thence, and returning to himself, being mindful of all that he had seen, gave also many signes of his true presence with his Mother.

74

Many the like Examples daily come to hand, the which for brevities sake I omit. But that, that desire arose from the more outward man, to wit, from Blood, and Sense, or Flesh, is certain : For otherwise, the Soul being once disliged or loosed from the Body, is never but by a miracle re-united thereunto.

There is therefore in the Blood, a certain ecstatical or transporting power, the which, if it shall at any time be stirred up by an ardent desire, is able to derive or conduct the Spirit of the more outward man, even unto some absent object : But that power lies hid in the more outward man, as it were in *potentia*, or by way of possibility; neither is it brought into act, unless it be rouzed up by the imagination enflamed by a fervent desire, or some art like unto it.

75

76

Moreover, when as the Blood is after some sort corrupted, then indeed all the Powers thereof, which without a fore-going excitation of the Imagination, were before in possibility, are of their own accord drawn forth into action; for through corruption of the grain, the seminal virtue, otherwise drowisie and barren, breaks forth into act : Because that seeing the essences of things, and their vital Spirits, know not how to putrifie by the dissolution of the inferior harmony, they spring up as surviving afresh. For from thence it is, that every occult property, the compact of their bodies being by fore-going digestions (which we call putrefactions) now dissolved, comes forth free to hand, dispatched, and manifest for action.

76

77

Therefore when a Wound through the entrance of air, hath admitted of an adverse quality, from whence the blood forthwith swells with heat or rage in its lips, and otherwise becomes mattery; it happens, that the blood in the Wound freshly made, by reason of the said forreign quality, doth now enter into the Beginnings of some kind of corruption (which blood being also then received on the Weapon or Splinter thereof, is besmeared with the Magnetick Unguent) the which entrance of corruption mediating, the ecstatical power lurking potentially in the blood, is brought forth into action; which power, because it is an exiled returner unto its own body, by reason of the hidden extasie; hence that blood bears an individual respect unto the blood of its whole body. Then indeed, the Magnet or attractive faculty is busied in operating in the Unguent; and through the mediation of the ecstatical power (for so I call it for want of an Etymologie) sucks out the hurtful quality from the lips of the Wound, and at length through the Mumial, Balsamical, and attractive virtue attained in the Unguent, the Magnetism is perfected.

78

79

Loe, thou hast now the positive reason of the Natural Magnetism in the Unguent, drawn from Natural Magick, whereunto the light of Truth assents; saying, *where the Treasure is, there is the Heart also.*

80

For if the Treasure be in Heaven, then the Heart, that is, the Spirit of the Internal Man is in God, who is the *Paradise*, who alone is Eternal Life.

But if the treasure be fixed or laid up in frail or mortal things; then also, the Heart and Spirit of the more external Man is in fading things: Neither is there any cause of bringing in a Mystical sense, by taking not the Spirit, but the Cogitation and naked Desire, for the Heart; for that would contain a frivolous thing, that wheresoever a Man should place his Treasure in his Thought or Cogitation, there his Cogitation would be.

Also Truth it self doth not interpret the present Text Mystically, and also by an Example adjoyned, shews a local and real presence of the Eagles with the dead Carcase : So also, that the Spirit of the Inward Man is locally in the kingdom of God in us, which is God himself; and that the Heart or Spirit of the animal or outward sensitive man is locally about its Treasure.

What wonder is it, that the astral Spirits of carnal or animal men, should as yet after their funerals, shew themselves as in a bravery, wandring about their buried Treasure, whereunto the whole Necromancy (or art of Divination by the calling of Spirits) of the Antients hath enslaved it self?

81

82 I say therefore, that the external Man is an Animal or living creature, making use of the reason and will of the Blood : But in the mean time not barely an Animal, but more-over the Image of God.

Logicians therefore may see, how defectively they define a man from the power of rational discourse. But of these things more elsewhere.

I will therefore adjoyn the Magnetism of Eagles to Carcases ; for neither are flying Fowls endowed with such an acute smelling, that they can with a mutual consent, go from *Italy* into *Affrica* unto Carcases : For neither is an odour so largely and widely spread ; for the ample latitude of the interposed Sea hinders it, and also a certain Elementary property of consuming it : Nor is there any ground, that thou shouldst think these Birds do perceive the dead Carcases at so far a distance, with their sight, especially if those Birds shall lye Southwards behind a Mountain.

But what need is there to enforce the Magnetism of Fowl by many Arguments, since God himself, who is the beginning and end of Phylosophy, doth expressly determine the same process to be, of the Heart and Treasure, with these Birds and the Carcase, and so interchangeably between these and them?

83 For if the Eagles were led to their food the Carcases, with the same appetite whereby four-footed Beasts are brought on to their pastures ; certainly he had said in one word, *That living Creatures flock to their Food, even as the Heart of a Man to his Treasure* ; which would contain a falshood : For neither doth the Heart of Man proceed unto its Treasure, that he may be filled therewith, as living Creatures do to their Meat : And therefore the Comparison of the Heart of Man, and of the Eagle lyes not in the end, for which they tend or incline to a desire, but in the manner of tendency ; namely that they are allured and carried on by Magnetism, really and locally.

84 Therefore the Spirit and will of the Blood fetch'd out of the Wound, having intruded it self into the Oyntment by the Weapons being anointed therewith, do tend towards their Treasure, that is, the rest of the Blood as yet enjoying the Life of the more inward Man : But he saith by a peculiar Testimony, that the Eagle is drawn to the Carcase : Because she is called thereunto by an implanted and Mumial Spirit of the Carcase, but not by the odour of the putrifying Body : For indeed that Animal, in assimilating, appropriates to himself onely this Mumial Spirit : For from hence it is said of the Eagle in a peculiar manner : *My youth shall be renewed as the Eagle.*

For truly, the renewing of her youth proceeds from an essential extraction of the Mumial Spirit, being well refined by a certain singular digestion proper to that Fowl, and not from a bare eating of the flesh of the Carcases : otherwise, Dogs also, and Pies would be renewed, which is false.

Thou wilt say, that it is a reason far fetcht in behalf of Magnetism ; But what wilt thou then infer hereupon ? If that which thou confessest to be far remote for thy capacity of understanding, that shall also with thee be accounted to be fetcht from far. Truly the Book of *Genesis*, avoucheth, *That in the blood of all living Creatures, doth their Soul exist.*

For there are in the blood certain vital powers, the which, as if they were soulified or enlivened, do demand revenge from Heaven ; yea and judicial punishment from earthly Judges, on the Murderer : which powers, seeing they cannot be denyed to inhabit naturally in the blood, I see not why they can reject the Magnetism of the blood, as accounting it among the ridiculous works of Satan.

This I will say more, to wit, that those who walk in their sleep, do by no other guide than the Spirit of the blood, that is, of the outward man, walk up and down, perform business, climbe Walls, and mannage things that are otherwise impossible to those that are awake : I say by a Magical virtue, natural to the more outward man : That Saint *Ambrose*, although he were far distant in his Body, yet was visibly present at the funeral solemnities of Saint *Martin* ; Yet was he Spiritually present at those solemnities, in the visible Spirit of the external man, and no otherwise : for inasmuch as in that Extacy which is of the more internal man, many of the Saints, have seen many and absent things ; this is done without time and place, through the superiour Powers of the Soul being collected in Unity, and by an intellectual vision, but not by a visible presence : Otherwise, the Soul is not seperated from the Body, but in good earnest or for altogether ; neither is it re-connexed thereunto : which re-connexion notwithstanding, is otherwise, natural or familiar to the Spirit of the more outward man.

85 It is not sufficient in so great a Paradox, to have once or by one single reason toucht at the matter. It is to be further propagated, and we must explain, how a Magnetical attraction

tion happens also between inanimate things, by a certain perceivance or feeling, not indeed animal or sensitive, but natural.

Which thing that it may be the more seriously done, it behoves us first to shew, what Satan can of his own power contribute to, and after what manner he can co-operate in the meerly wicked and impious actions of Witches: for from thence it will appear, unto what cause every effect may come to be attributed.

In the next place, what that Spiritual power may be, which tends to a far remote Object; or what may be the action, passion, and skirmishing between natural Spirits; or what may be the superiority of man as to other inferiour creatures; and by consequence, why indeed our Unguent being compounded of humane Mummies, do thorowly cure Horfes also: We will explain the matter by an Example.

Let a Witch therefore be granted, who can strongly torment an absent Man by an Image of wax, by imprecation or cursing, by enchantment, or also by a fore-going touch alone (for here we speak nothing of Sorceries, because they are those which kill onely by Poyson, inasmuch as every common Apothecary can imitate these things) that this act is Diabolical, no man doubts: However it is profitable to discern, how much Satan, and how much the Witch can contribute hereunto.

The First Supposition.

First of all, *Thou shalt take notice, that Satan is the sworn and irreconcilable Enemy of Men, and to be so accounted by all, unless any one had rather have him to be his friend; and therefore he most readily procures whatsoever mischief he is able to cause or wish unto us, and that without doubt and neglect.*

The Second Supposition.

And then, *Although he be an Enemy to Witches themselves, forasmuch as he is also a most malicious Enemy to all Mankind in general: yet in regard they are his bond-slaves, and those of his Kingdom, he never, unless against his will, betrays them, or discovers them to Judges, and exposeth them to scorn to other men, and that for three Reasons.*

First,

Seeing he is the parent of Pride, he is not ignorant that hereby it much detracts from his Reputation, Authority and Dominion.

Secondly,

Seeing he is the unsatiable Persecuter of Souls, he hath known, that through certain punishments and flames of Justice, such as were otherwise ready and willing to slide into his Protection, are affrighted and plainly diverted.

Thirdly,

Because he hath many times seen a Witch, which this Tormenter could (by wresting round of her neck, or stopping of her breath) wish to destroy, sometimes repenting even before the Flames, and so to be snatcht out of his clutches.

From the former Supposition I conclude, That if Satan were able of himself to kill a Man who is guilty of deadly sin, he would never delay it; But he doth not kill him; therefore he cannot.

Notwithstanding, the Witch doth oftentimes kill; hence also she can kill the same Man; No otherwise than as a privy Murderer at the Liberty of his own Will, slays any one with a Sword.

There is therefore a certain power of the Witch in this action, which belongs not to Satan; and consequently Satan is not the principal efficient and executer of that Murder: For otherwise, if he were the executioner thereof, he would in no wise stand in need of the Witch as his assistant; but he alone had soon taken the greatest part of men out of the way.

Surely most miserable were the condition of Mortals, which should be subject to such a Tyrant, and stand lyable to his command: we have too faithful a God, than that he should subject the work of his own hands to the arbitrary dominion of Satan.

There-

87 Therefore in this act, there is a certain power plainly proper and natural to the Witch, which belongs not to Satan.

Moreover, of what nature, extent, and quality that power may be, we must more exactly sift out.

In the first place, it is manifest, that it is no corporeal strength of the Male Sex; for neither doth there concur any strong touching of the extreame parts of the Body, and Witches are for the most part, feeble, impotent, and malicious Old Women: Therefore there must needs be some other power, far superiour to a corporeal attempt, yet natural to Man.

88 This power therefore, was to be seated in that part wherein we most nearly resemble the Image of God: And although, all things do also after some sort, represent that venerable Image; Yet because Man doth most elegantly, properly, and nearly do that; therefore the Image of God in Man doth far outshine, bear rule over, and command the Images of God in all other Creatures.

89 For peradventure by this Prerogative, *All things are put under his feet.*

90 Wherefore if God act *per nutum* or by a beck, namely by his Word; so ought Man to act some things only by his beck or Will, if he ought to be called his true Image: For neither is that new, is that troublesome, is that proper to God alone: For Satan the most-vile abject of Creatures, doth also locally move Bodies *per nutum* or by his beck alone, seeing he hath not extremities or corporeal Organs, whereby to touch, move, or also to snatch a new Body to himself.

91 That priviledge therefore ought no less to belong to the inward Man, as he is a Spirit, if he ought to represent the Image of God, and that indeed not an idle one: if we call this faculty Magical, and thou being badly instructed, art terrified at this Word, thou mayst for me, call it a spiritual strength or efficacy: For truly, we are nothing solicitous about Names, I alwayes as immediately as I can, cast an eye upon the thing it self.

92 That Magical power therefore, is in the inward man, whether thou by this Etymology or true Word, understandest the Soul, or the vital Spirit thereof it is now indifferent to us; since there is a certain proportion of the internal Man towards the external in all things, glowing or growing after its own manner, which is an appropriated disposition, and proportioned property.

Wherefore this power or faculty must needs be dispersed throughout the whole Man; in the Soul indeed more vigorous, but in the Flesh and Blood, far more remiss.

94 The vital Spirit in the Flesh and Blood performes the office of the Soul; that is, it is that same Spirit in the outward man, which in the seed formes the whole figure, that magnificent Structure, and perfect delineation of Man, and which hath known the ends of things to be done, because it contains them; and the which as President, accompanies

95 the now framed Young, even unto the period of its Life; and the which, although it depart therewith, some smatch or small quantity at least thereof, remains in a Carcass slain by violence, being as it were most exactly co-fermented with the same. But from a dead Carcass that was extinct of its own accord and from nature failing, as well the implanted as infusing Spirit, passed forth at once,

96 For which reason, Physitians divide this Spirit, into the implanted or Mumial, and infusing or acquired Spirit, which departs, to wit, with the former Life. And this infusing Spirit they afterwards sub-divide into the natural, vital, and animal Spirit: But we likewise, do here comprehend them all at once in one single Word.

97 The Soul therefore being wholly a Spirit, could never move or stir up the vital Spirit, (being indeed corporeal) much less flesh and bones, unless a certain natural power, yet Magical and Spiritual, did descend from the Soul into the Spirit and Body.

After what sort I pray, could the corporeal Spirit obey the commands of the Soul, unless there should be a command from her for moving of the Spirit and afterwards the Body?

But against this Magical motive faculty, thou wilt forthwith Object, *That that power is limited within her composed Body, and her own natural Inn: Therefore although we call this Soul a Magitianses, yet it shall be only a wresting and abuse of the Name; for truly, the true, and superstitious Magick draws not its foundation from the Soul: Seeing this same Soul is not able to move, alter, or excite any thing out of its own Body.*

I Answer, That this Power, and that natural Magick of the Soul, which she exerciseth out of her self, by virtue of the Image of God, doth now lye hid as obscure in Man, and as it were lay asleep since the Fall or corruption of Adam, and stands in need of stirring up;

all which particulars, we shall anon in their proper place prove, which same power, how drowfie, and as it were drunk soever it otherwise remains daily in us; yet it is sufficient to perform its offices in its own Body.

Therefore the knowledge and power Magical, and that faculty in Man which acteth only *per nutum*, sleeps since the knowledge of the Apple was eaten; and as long as this knowledge (which is of the flesh and blood, outward man, and darkness) flourisheth, the more noble Magical power is trampled under foot. 98

But because in sleep, the whole knowledge of the Apple doth sometimes sleep: Hence also it is, that our dreams are sometimes Prophetical, and God himself is therefore the nearer unto Man in Dreams, through that effect: To wit, when as the more inward Magick of the Soul not being now interrupted by the knowledge of the Apple, doth even on every side diffuse it self in Understanding: to wit, even as when it sinks it self into the inferiour Powers thereof, it safely leads those that walk in their sleep, by moving or conducting them whither those that were awake could not climb.

Therefore the chief Rabbies of the Cabal, affirm, that it was learnt or conceived in time of sleep, to wit, when the knowledge of the Apple was consopited or lull'd asleep. The intellectual act of the Soul, is alwayes clear and unshaken, and after some sort perpetual; yet as long as the principal agent, hath not transferred its power so far as the limits of sense that kind of action is not yet propagated throughout the whole man: For we who are only conversant with the virtue or faculty of thinking, or of the senses, and with our carnal intelligence, are perpetually drawn away (Alas for grief!) by the same, from the more superiour and Magical Science or Knowledge, and are retained in the shadow of Knowledge, rather than in the Light of Truth: For neither do we the Inhabitants of darkness observe that we do understand, but when there is made a certain mutual traduction or passing over of faculties, and till as it were the angles or corners of actions being prorogued or propagated by divers Agents, are folded together about the middle. 99

Satan therefore stirs up this Magical power (otherwise sleeping, and hindred by the knowledge of the more outward man) in his bond-slaves: and the same readily serves them in stead of a sword in the hand of a potent Adversary, that is the Witch: Neither doth Satan contribute any thing to the murtherer at all, besides an exciting of the said drowfie power, and consent of the Will, which is for the most part compelled in Witches; by reason of which, two contributions, the mocking Scurie, as if the whole office or performance were due to himself, requires by a compact, a continual, firm, and irrevocable submissive engagement, a perpetual homage, and devout worshipping of himself, if also nothing more. 100

When as otherwise, that kind of power was freely conferred by God the workman, being plainly natural to Man: For indeed, juggling Impostures, bewitchings by the emission of the sight or eyes, and how falsely soever disguises of Witches may appear, and such like delusive acts, they are only from Satan, and are his proper acts: For therefore his works are onely ridiculous ones, and false apparitions, because our merciful God suffers not the same miscreant to have any longer power, but keeps him bound: When as otherwise the Witch displaies real and wicked acts from her own natural faculty. 101

For truly through sin, not the gifts of Nature but those of Grace, were obliterated in Adam: And moreover, that the same natural gifts, although they were not taken away, yet that they have remained as it were restrained and benumbed with sleep: For even as Man from that time became subject to mortality, after the manner of his fellow creatures; so also were the Heroick or excelling powers in Man obscured, which therefore have need of a stirring up and drawing out of darkness. 102

For hitherto have contemplations, continued prayers, watchings, fastings, and acts of mortifications regard, to wit, that the drowsiness of the flesh being vanquished, men may obtain that nimble, active, heavenly, and ready power toward God, and may sweetly confer with him in his presence, who importunately desires, not to be worshipped but in the Spirit, that is, in the profundity or bottom of the more inward man. 103

Hitherto, I say, hath the art of the Cabal regard, which as it were by sleep shaken off, may restore that Natural and Magical power of the Soul. 104

I will (after the manner of Mathematicians) yet further explain my self by Examples, and will assume the very works of Witches; the which although they are wickedly mischievous and detestable, yet are supported by the same root, namely a Magical power, without difference as unto good, and also unto evil. 105

For neither doth it blemish the Majesty of free Will, or the Treatise of the same; although

though we now and then discourse of a Thief, Robber, or Murtherer, a Whoremonger, an Apostate, and Witch.

Grant therefore that a Witch kills a Horse in an absent Stable; there is a certain natural virtue derived from the Spirit of the Witch, and not from Satan, which can oppress or strangle the vital Spirit of the Horse.

- 106 Suppose thou that there are two subjects of Diseases and Death, namely one of these, the Body wherein a Disease inhabits: And because all Beings act on this Body, as that which is the most passive subject, the other spiritual Dominion hath been thought to have been from Satan. But the other subject is the unperceivable and invisible Spirit, which of its own self is able to suffer all Diseases; The Spirit suffering the Body also suffers, because its action is limited within the Body (for the Mind after that it is fast tied to the Body, flows alwayes downwards, even as when the palate is pained, the tongue continually tends thither) but not on the contrary: For there are some material Diseases which are tinged onely materially: For so manifold is the occasion of Death, that there is no other ground from whence we may receive an ability for pride.

The act therefore of the foregoing touch of the Witch, is plainly natural, although the stirring up of the virtue or power be made by the help of Satan: No less than if a Witch should slay a Horse with a Sword reach'd unto her by Satan; that act of the Witch is natural and corporeal, even as the other fore-going act is Natural and Spiritual.

- 107 For truly, Man naturally consists no lesse of a Spirit, than of a Body; neither therefore is there any reason, why one act may be called the more natural one, or why the Body only may be said to act, but the Spirit to be idle, and to be made altogether destitute, at least of such action that is proper to it self, as it is the Image of God: Yea, the vital Spirits in speaking most properly are those which perceive, move, remember, &c. but in no wise the Body and dead Carcass it self: Every act therefore doth more properly respect its agent than the Body the Inn of the Agent.

- 108 Therefore some certain Spiritual Ray, departs from the Witch into the Man, or brut Beast, which she determineth to kill: According to that Maxim, *That there is no Action made unless there be a due approximation or most near approach of the Agent to the Patient, and a mutual coupling of their Virtues, whether the same approximation be made Corporally, or also Spiritually*: Which thing is proved to our hand by a visible testimony.

- 109 For if the fresh Heart of a Horse (for that is the seat of the vital Spirits) slain by a Witch be empaled upon a stick, and be roasted on a Broach, or broyled on a Gridiron: Presently the vital Spirit of the Witch, without the interposing of any other mean, and from thence the whole Witch her self (for truly not the Body, but the Spirit alone is sensible) suffers cruel torments and pains of the fire: The which surely could by no means happen, unless there had been made a coupling of the Spirit of the Witch with the Spirit of the Horse: For the Horse that was strangled retains a certain Mumial Faculty (so I call it, whensoever the virtue of the vital Liquor is as yet co-fermented with the Flesh) that is, the implanted Spirit, such as is not found in Bodies dying of their own accord, by reason of any sickness, and any other renting asunder of an inferiour order, whereunto the Spirit of the Witch being coupled unto, is a companion.

- Therefore there is made in the fresh Heart, a binding up of the Spirit of the Witch, before that by a dissolution, the Witch her own Spirit return back to her again: which Spirit is retained by the Stick or Arrow being thrust into the Heart, and through a roasting of both Spirits together, from whence by Magnetism it happens, that the Witch in the utmost limit or gradual heat of the Fire, is sorely tossed or disturbed in her sensitive Spirit. That effect is changed from the intention, for if Reveng stir up the experimenter, then the effect is reprobate. But if tryal be made, that the Witch may thereby be constrained to bewray her self, to be subjected to Judges, or the Justice of the Magistrate, and that a benefit may be hereby procured to his Neighbour, and himself, and as by the taking away of so impious, blasphemous, and hurtful a Vassal of Satan, glory to God, and the greater peace and rest may arise amongst all Neighbours, then certainly the effect cannot be rejected as reprobate.

We must not think, that the whole Spirit of the Witch departeth into the Heart of the Horse (for so the Witch her self had departed from the living) but that there was a certain univocal or single participation of the vital Spirit and Light, even as indeed a Spirit which is the Architect or Master-workman of the whole Man is propagated in the Seed at every turn or act of Generation, being sufficient even for many off-springs, the Spirit of the Father remaining entire notwithstanding.

Indeed that Spiritual participation of Light is Magical, and a wealthy communication by virtue

Virtue of that Word: *Let Animals and Herbs bring forth Seed*; and one Seed produceth ten times ten thousand of Seeds of equal Valour or Virtue, and as many entire seminal Spirits, as Light is kindled or inflamed by Light.

But what a Magnetick Spirit may properly be, and the Entity or Beingness begotten by its Parent the Phantasie; I will hereafter more largely write: I am now returned unto our Ends proposed.

Neither is there any ground for any one to think, that this rebounding of the Heart into the Witch, is a meer Supposition, or plainly a superstitious and damnable Juggle and Mockery of Satan; seeing she is infallibly discovered by this Sign, and is constrained, will she, nill she, to bewray her self openly, which is a thing opposite to the intent of Satan, as in the second of our suppositions, is above sufficiently shewn: for the Effect is perpetual, never deceiving, having its Foundation in reason, and the spiritual Nature, but not in the least supported by Superstitions.

Hath not likewise a dead Carcass also that was murdered, be-bloodied it self before the Judges or Coroner and his Inquest, when the Murderer was present, and hath oft-times procured a certain Judgment of his Offence? Although before, the Blood had already stood restrained?

Indeed in the Man dying by reason of his Wound, the Inferiour Virtues which are Mumial (for these are unbridled ones, and are not in our Power) have imprinted on themselves a Footstep of taking revenge: Hence it is, that the Murderer being present, the Blood of the Veins boiles up, and flowes forth, as if also being in wrath, it were disturbed or sorely disquieted by the imprinted Image of revenge: for indeed there is in the Blood, even after Death, its Sense of the Murderer that is present, and its revenge, because it hath also its own phantasie:

Therefore not *Abel* himself, but his innocent Blood cries notwithstanding, unto Heaven for revenge. For which Cause in Sieges the Plague for the most part enters as a Companion: to wit, because the magical Spirit of the more outward Man, hath conceived in combates, an imprinted Character of revenge: but sometimes the Souldiers being through Poverty, reduced to desperation, and their Wives are almost adjoyned with them in dying, and many Misfortunes are by way of Imprecation, bequeathed to the more wealthy Souldiers or Officers, from whence most strong Impressions are left as Posthumes or Survivers after Death, on the Sidereal or Astral Spirit of the dying Man, (especially of a Woman with Child) which Spirit presently after Death, wandring about in the Air, deviseth meanes or wayes of its own verge, rank or order (that is spiritual ones) of hurting and revenging, and then readily commits it self to Execution.

But such kind of Plagues are outrageous, sparing none, and as it were immediately sent down from Heaven; and because they being spiritual, do implore help from corporeal Remedies in vain; I am silent as to that: For neither is it sufficiently safe to express the connexion, and agreement of Mummies betwixt each other: for from thence hath issued the whole Nectromancy of the Antients.

For that reason also, God, in the Law, forbade the Bodies of those that were hanged (even of *Heathens*) to be left on the Gibbet, and the Sun should not go down upon them. Thou wilt answer, that the Plague of Sieges ariseth, by reason of the manifold Filths of Excrements.

But on the contrary, Curriers, Tanners, or Leather-dressers, Emptiers of Jakets, and those who spend their time about Glew, to be made by the Putrefaction of Skins, are at hand: for all of them (so far are they from being subject to the Plague) for the most part, are long lived: wonderful is God in the Spirit of the Microcosm.

Dost thou desire to know perhaps, why the Blood of a Bull is Poysonous, but not that of his Brother the Ox?

Indeed the Bull in time of Killing, murmurs against his Executioner, and imprinteth on his Blood a Mark and potent Character of revenge: But if it happen, that in slaying of an Ox, through one stroake, he hath become furious, and hath the longer continued in the same Fury; he leaves his Flesh but unwholesom, unless first the disturbance being pacified, he as idle and shut up by himself, be left to return to himself by fasting. The Bull therefore dies more excelling in revenge than other Animals; and therefore his Fat (but not his Blood, unless the humane Blood in the Unguent be conquered by the foreign Tincture of the Bulls Blood) is altogether necessary for the Weapon Salve, if the Weapons the Authors of the Wounds, shall not be besprinkled with the Blood of the Wounded: And if by the besmearing of the same Weapons a perfect or safe Cure be to be

H h h h

expected;

expected; truly the Uinea or Moss, together with its fellow Ingredients, are not sufficient, that a Cure should be made without fresh Blood had out of the Wound, for a more violent Efficacious or taurine Impression is required, and an aerial Communication of the Honey of Flowers.

121 From hence therefore, it is sufficiently manifest, that the Efficacy of the Unguent is not to be imputed to the Concurrence of Satan (who also could Cure the Wound without Honey and Bulls Blood) but to the communion of natural Qualities, with the derived Post-hume revenge, left in the concrete or composed Body of Blood, and Fat.

Our Adversaries will prate, rejoicing, that the Power of the Magnetick Unguent could scarce have been proved, but by a Witch, by Satan, and the spiritual Magick of the invisible World, which is a suppositious or imaginary Science, plainly of no weight or worth, and a damnable Errour.

Notwithstanding, not any sinister perverting of the matter in handling, but the gross Ignorance of others, and the miserable Condition of humane Frailty, hath required that thing; which more promptly inclines to Evil, knowes Evil, and is more readily taught by Evil than by Good: But certainly, whatsoever we have here alleaged concerning Satan and Witches, it is not, that from thence, others should hope for a conformity or suitable resemblance of the Oyntment with Witches: for neither are the spiritual Virtues of the Unguent, and the Phantasie of the Blood, stirred up by Satan, as a Guider, or Enforcer. But this is that I aim'd at; to wit, that there doth inhabit in the Soul, a certain Magical Virtue, given her of God, naturally proper and belonging unto her, inasmuch as we are his Image and Engraving; that in this respect also, she acts after a peculiar manner, that is, spiritually on an Object at a distance, and that much more powerfully, than by any corporeal helps; because, seeing the Soul is the more principal part of the Body; therefore the Action belonging unto her, is spiritual, magickal, and of the greatest Validity: That the Soul doth by the same Virtue which was rendred as it were drowfie through the knowledge gotten by eating of the Apple, govern and stir her own Body: but that the same magical Faculty being somewhat awakened, is able to act also out of her

122 Prison, on another distant Object, only by her Beck, convey'd thereunto by Mediums: for therein indeed is placed the whole Foundation of natural Magick; but in no wise, in Blessings, Ceremonies, and vain Superstitions; but that all these wicked observances were brought in by him, whose endeavour it hath alwayes been, every where to defile all good things with his Tares.

132 But we do not tremble at the name of Magick, but with the Scripture, interpret it in a good sense:

124 Yet we have granted that it may be indifferently employed to a good or evil Intent, to wit, by the use or abuse of that Power.

125 And so that, under that Word we understand the most profound inbred knowledge of things, and the most potent Power for acting, being alike natural to us with Adam, not extinguished by Sin, not obliterated, but as it were become drowfie, therefore wanting an Excitement.

126 Therefore we shew, that Magnetism is exercised, not indeed by Satan; but by that which belongs not to Satan; and therefore that this Power which is co-natural unto us, hath stood abusively dedicated to Satan, as if he were the Patron thereof: that the Magical Power doth as it were sleep in us since Sin, and therefore that it hath need of a stirrer up.

127 Whether that Exciter be the holy Spirit by Illumination, as the Church mentions to have happened in the Eastern Magi or Wise Men of the East, and which at this day sometimes happens in others: or Satan doth also for some foregoing submissive Engagement, stir up the same in Witches: And in such as these, the Excitation is as it were by a waking sleepiness, by a Catochus, and therefore is imperfect in regard of the manner, Evil in regard of the end, Obscure in regard of the Meanes, and Wicked in regard of the Author: Nor doth the Turn-coat-impator suffer that the Witch should know this Power to be natural unto her self, whereby he may hold her the more fast bound to himself, or least the exercise of so noble a Power being stirred up, should incline otherwise than to Wickedness, therefore he commands the Rains himself; neither hath the Witch known how to stir it up at her own pleasure, who hath wholly prostrated her self to the Will of another Tyrant.

Also Man himself is able through the Art of the Cabal, to cause an excitement in himself, of so great a Power at his own Pleasure, and these are called Adeptists; or Obtainers, whose Governour also, is the Spirit of God. That this same Magical Virtue is also in the more outward Man; to wit, in the Flesh and Blood.

Yet after its own, and far more feeble manner; yea not only in the external Man; but also proportionally in Bruits (for so the Book of *Genesis* minds us, that the Soul of Bruit-Beasts is in their Blood, and upon this account, it deservedly enrouls the same out of the Bill of our Food) and perhaps in all other things; Seeing all particular things contain in them a delineation of the whole Universe, and upon that account at least, the Antients have seriously signified unto us that there is a God, that is, an All in All: that the Magick of the more outward Man hath need of exciting no less than that of the more inward Man; neither that Satan doth stir up any other Magick in his Imps, than what belongs to the more outward Man: For in the more inward bottom of the Soul, is the Kingdom of God, whereto no Creature hath access.

We have further taught, that there is a connexion between things spiritually acting, and that, Spirits, as they combat with Spirits, as in example of the Witch; So also we have shewn by Magnetical Examples, and proper Reasons for the fascination and binding up of Soules, that they hold a friendly correspondence, even as concerning *David* and *Jonathan*, &c.

130

Last of all, we have endeavoured to shew, that Man predominates over all other corporeal Creatures, and that by his natural Magick, he is able to tame the Magical Virtues of other things; which predominacy others have fallly and abusively transferred on the authority of Verses or Charms, and Enchantments: By which Hierarchy or holy Dominion, we have sufficiently, and over-sufficiently cleared up, that those Effects whatsoever they be, are wrought, which those (who not but too rustically and corporeally Philosophize) have referred unto the dominion of Satan.

It must needs be, that those who were ignorant of all things that have been spoken, should as yet doubt of many things; therefore we determine to repeat all things.

First of all, whereby those things may become the more clear, which we have spoken above, concerning the Duel of Spirits, or their mutual friendly Conspiracy; It is worth our labour to define the Weapons of Spirits, and the Common-wealth of the same. Wherefore we must seriously note the Example of a Woman great with Child, who, if she hath with violence of desire, conceived a Cherry in her Mind, the Foot-step thereof is presently imprinted on her Young, in that Part whereon the great-bellied Woman shall lay her hand: Nor is it indeed only an idle Image or Spot of a Cherry, but that which flowers and grows to Maturity with the other Trees in their season; to wit, the Signatures of Colours, and Figures being changed: Truly, high and sacred is the force of the Microcosmical Spirit, which without the Trunk of a Tree, brings forth a true Cherry, that is, Flesh ennobled with the Properties and Power of the more inward or real Cherry, by the Conception of Imagination alone: from whence we understand two necessary Consequences.

The First is, that all the Spirits, and as it were the Essences of all things, do lay hid in us, and are born and brought forth only by the working Phantasie of the little World.

131

The Second is, that the Soul in conceiving, generates a certain Idea of the thing conceived; the which indeed, as it before lay hid unknown, and as it were, Fire in a Flint; So by the stirring up of the Phantasie, there is produced a certain real Idea, and a quiddative, or some particular essential Limitation of a Cherry, which is not a naked quality, but something like unto a Substance, hanging in suspense between a Body and a Spirit, that is, the Soul.

That middle Being is so spiritual, that it is not plainly exempted from a Corporeal Condition; since the Actions of the Soul are limited on the Body, and the inferior orders of Faculties depending on it; nor yet so corporeal, that it may be enclosed by Dimensions, the which we have also related to be only proper to a seminal Being. This Ideal Entity therefore, when it falls out of the invisible and intellectual World of the Microcosme, it puts on a Body; and then also it is first inclosed by the Limitations of Place and Numbers.

The Object of the Understanding is in it self a naked and pure Essence, not an accident, by the consent of Practical, that is, mystical Divines: Therefore this Protheus or transformable Essence, the Understanding doth as it were put on, and cloath it self with this conceived Essence.

But because every Body, whether External, or Internal, hath its making in its own proper Image; The Understanding knowes or discerns not, the Will loves and wills not, the Memory recollects not, but by Images or Likenesses: The Understanding therefore, put on this same Image of its Object; and because the Soul is the simple Form of the

H h h h h 2

Body

Body, which turns her self about to every Member; therefore, neither can the acting-Understanding have two Images at once, but first one, and anon, another:

- 134 Therefore the whole Soul descends upon the Intellect or Understanding, and the comprehended Image being as yet tender, and forms this Knowledge of the Essence into a persisting Image, or Ideal Entity or Beingness: The Mind being defiled, hath slidden into the Indignation of God; and because the same mind was at once polluted, the nobleness of its former Condition being put off, Death found an entrance, not indeed by the command of the Creator; but from the degeneration of Man being slidden into filthiness, and degenerate from himself, by reason of the same Ideal Entity being now put on: which Filthiness seriously and diligently springing up, even in all particular Sins, it is convenient to extenuate or consume by Repentance here, or in the World to come. This Entity therefore, being as yet in the Understanding, is but lightly imprinted; neither doth it find a consistence any where but in a Woman with Child, the which in us Men, it doth not obtain but by the Will, that is, the Understanding doth alwayes procreate an Entity, but it puts it not on but by the Will, except in Women with Child. Whether therefore, we call Sin a nothing, or a something; at least-wise, there is never made a Consent to Evil, without a real Procreation of this certain kind of Entity, and the assuming and putting on thereof: This hath been the Cause of the Fruitfulness of Seeds: for
- 135 the Phantasie or Imagination being much moved by Lust, produceth a slender Entity; the which, if the Soul puts on through the Will (as the action of the Mind being imprisoned in the Body, doth alwayes tend downwards and outwards) it disperseth this same Entity
- 136 into the Liquor of the Seed, which otherwise would not be but barren: Which Action is made as it were by an estranging of the Mind; to wit, the Will through the true Magick of the more outward Man, departing into a certain Ecstasie, in which there is made a communicating of a certain Light of the Mind, upon the Entity descending into the Body of the Seed.

As oftsoever therefore, as the Cogitation or Thought drawes the Sense and Will into a consent; so often a filthy Skin is bred and put on, being a bastardly Ideal Entity, by which birth the Will is said to be confirmed: Also that Ideal Entity, whithersoever it is directed by the Will, thither it goes; by this meanes the Will moves, sometimes the Arm, sometimes the Foot, &c.

Furthermore, when the said Entity is spread upon the vital Spirit, for to love, help, or hurt any thing, it wants only a light Excitement, whether made from the assistance of God, of the Cabalistical Art, or of Satan, that indeed the small Portion of the Spirit which hath now put on that Entity, departs far off, and perform its Office enjoyned it by the Will.

- 137 So the Male layes aside his Seed out of himself, which through the Entity which it hath drawn, is very fruitful, and performes its Office without the Trunck of its own Body. Truly Bodies scarce make up a moyity or halfe part of the World: But Spirits even by themselves have or possess their moyity, and indeed the whole World: Therefore in this
- 138 whole Context or Composure of our Discourse, I call Spirits the Patrons of Magnetism; not those which are sent down from Heaven, and much less is our Speech of infernal ones; but of those which are made in Man himself: for as Fire is struck out of a Flint, so from the Will of Man, some small Portion of the inflowing vital Spirit is extracted, and that very thing or portion assumes an Ideal Entity, as it were its Form and Compleating: Which Perfection being obtained, the Spirit, which before was purer than the Aethereal
- 139 Air, is subtilized or rarified like Light, and assumes a middle Condition between Bodies, and not Bodies: But it is sent thither, whither the Will directs it, or at least, whither the inbred infallible Knowledge of the Spirits sends the same, according to the scopes of things to be done. The Ideal Entity therefore being now readily prepared for its journey, becomes after some sort, a Light, and as if it were no longer a Body, is tied up to no commands of Places, Times, or Dimensions; neither is that Entity a Devil, nor any Effect thereof, nor any Conspiracy of his; but it is a certain spiritual Action thereof, plainly natural and proper unto us.

He who well receiveth this Wisdom, shall easily understand, that the Material World is on all sides governed and restrained by the Immaterial and Invisible: But that all other created Corporeal Beings are put under the Feet of Men: for indeed, this is the Cause, why also the Mummy, Fat, Mosse, and Blood of Man, to wit, the Phantasie existing in them in the Unguent, overswayes the Blood of a Dog, of a Horse, &c. being conveyed by a Stick, into the Box of the Unguent.

- 140 There hath not been yet said enough concerning the Magnetism of the Unguent.

I will

I will therefore resume what I spake of before ; namely, that the Magnetisms of the Load-stone, and of inanimate things, are made by a natural Sensation or Feeling, which is the Author of all Sympathy, is a certain Truth.

For if the Load-stone directs it self to the Pole, it ought of necessity to have known the same, if it be not to commit an Errour in its Direction : And how I pray, shall it have that Knowledge, if it be not sensible where it is ? 141

Likewise if it wrest it self to Iron placed aloof off, the Pole being neglected, it must needs have first been sensible of the Iron : Therefore one single Load-stone, hath diverse Senses and Images : Neither also shall it be sufficient that it hath Sense, unless we add the Spurs of Friendship and Self-love ; and so that it is endowed with a certain natural Phantasie, and by reason of the Impression whereof, all Magnetisms are forged : For it is directed by another manner of Phantasie toward the Iron, than toward the Pole ; for then its Virtue is dispersed, only through a neighbouring Space.

Its Phantasie is changed when it restrains the abortive Young, Catarrhs, or Rheumes, or the Bowel in a Rupture : Also by another Phantasie, doth the Load-stone draw any thing out of Glasfe throughly boyled or melted by Fire ; for a very small Fragment thereof, being cast into a Mass or good quantity of Glass, while it is in boyling, of Green, or Yellow, makes it White. 142

For although the Load-stone it self be filled with a red Colour, and be consumed by the Fire that dissolves the Glass ; Yet in the mean time, while it hath Life, it attracteth and consumeth the tinged Liquor out of the Fiery Glass ; and so its attraction is not only to Iron ; but moreover, unto that airy Part which would with difficulty depart out of the Glass, and for this Cause it is of common use with Glass-makers. 143

The Phantasie of Amber drawes Chaffs and Moates, by an attraction indeed, slow enough, but yet with a sufficient perfect Signature of attraction : for it being married to our Mummy, is also stronger than our attractive Faculty, drawes in opposition thereunto, and becomes a *Zenexion* or preservatory Amulet against pestilential Contagions : But Amber being mixed with Gums, its imagination being now transplanted, draws the Poyson and Bullet out of a Wound, indeed its pleasure and desire of drawing, being on both sides varied. But what Wonder shall it be (unless with those who being ignorant of all things, do also admire all things) that inanimate things are strong in Phantasie : 144

When as he, who is wholly the Life creates all things, and hath therefore promised that nothing is to be expected as dead out of his Hand ? Also no one thing at all shall come to our view, wherein himself also may not clearly appear as present ; *The Spirit of the Lord hath filled the whole Globe of the Earth* : Yea this Expression, *That he containeth or comprehendeth all things*, carries the force of the Word. Do we not believe that there was much Knowledge in the Apple ? and that through the eating thereof, our first Parents both ate it up, and together also conceived it within ? and doth not that Knowledge presuppose a Phantasie proper to its kinde ? for so some Simples induce an Alienation of the Mind, but some others, a Madness or maddish Fury, not indeed through a Destruction of the Brain, or a dispersing of its Spirits (for then at least, the Strength and most strong Faculties of the mad or furious Person would not remain) but by a strange kind of, and furious Phantasie of those Simples being introduced, which being victress, subdues ours, and keeps the same a Servant to it self for a time, as in Deatage, the Phrensie, &c. Sometimes also, perpetually, as in lunatick and mad or Bedlam-persons. 145

Doth not the Madness of Dogs thus pass over into Man ? For the maddish Phantasie of Fury is transplanted into the Spittle of their Tongue, which as victress soon triumphs over the Blood of that Animal, which the Skin being opened, it shall never so slenderly touch : Then indeed the antient Phantasie of the whole Blood gives place, and will it, nill it, assumes an hydrophobial Phantasie, or an estranged Imagination of the fear of Water : 146

From whence at length, comes a *Binsical* Death, that is, from the sole Sicknes of the Mind, to wit, the magical Virtue of the Dog being exalted and excited, or stirred up above the non-excited, but drowsie Imagination of the Animals.

Plainly after the same manner, is the Phantasie of the *Tarantula* imprinted by a slender stroak of his Sting, and the Wounded or Stung Persons being presently alienated in their Mind, fall a dancing, and leap hugely ; yet the Venom of the *Tarantula* differs from that of a mad Dog, in this, that this acts by a Magical Power being stirred up, and so, by the Magick of a true name : But the other by a drowsie Magical Faculty (even as the same difference is manifest in Wolfs-bane and other destructive Plants, which kill with a very 148

a very small quantity ;) because no living Creature Secures or defends himself against a mad Dog ; because there is in him, a binding magical Power, against which, Teeth or Horns do not prevaile : which cannot be said of the Poyson of the Tarantula.

In the External Man therefore, even as in his fellow Animals, the magical Power is as it were laid asleep, neither can it be stir'd up only in Man (although indeed much more easily in him) but in some living Creatures his Consorts.

150 Yea, neither is it sufficient that Spirits do observe this Law of Concord and single Duel with Spirits ; but moreover, there lurks a certain Spirit in the whole Universe, which we call the great Magnal or Sheath, which being the Pander of Sympathy or Fellow Feeling, and Dyspathy or difficulty of suffering, doth exist as a Communicater and Promoter of Actions ; and by reason whereof, Magnetism or Attraction is by a Vehicle or Instrument of conveyance, extended to an Object at a distance. That thing is proved to our sight : For if thou shalt place a slender Straw upon the Cord or String of a Lute, hanging with a doubtful extremity, or with an equal weight in the Air, like a Ballance, and shalt strike the like string of another Lute that is aloof off, when the Tunes do co-agree in the eighth Note, thou shalt see the Chaff to tremble : but when the Tunes or Notes agree in a Unifone, then otherwise, the string of the quiet Lute being impatient of delay, quavers or hops a little, skips for joy, and shakes off the hated Straw by its jumping. Shall here also Satan be the Fidler in their esteem ? Which Straw doth not happen to leap, although all the Strings of the other Lute, be unanimously, strongly and near at hand struck upon : Nor also, doth the naked Tune constrain the other and quiet string to leap a little ; for then every Note would effect that : but it is only the Spirit which is the common Pander, inhabiting in the middle of the Universe, which being the faithful executer and assistant of natural Actions, derives, promotes, and also causeth the Sympathy.

151 Why are we so sore afraid of the name of Magick ? Seeing that the whole action is Magical ; neither hath a thing any Power of Acting, which is not produced from the Phantasie of its Form, and that indeed Magically. But because this Phantasie is of a limited Identity or Sameliness, in Bodies devoid of choice, therefore the Effect hath ignorantly and indeed rustically stood ascribed, not to the Phantasie of that thing, but to a natural Property ; they indeed, through an Ignorance of Causes, substituting the Effect in the room of the Cause : When as after another manner, every Agent acts on its proper Object, to wit, by a fore-feeling of that Object, whereby it disperseth its Activity, not rashly, but on that Object only ; to wit, the Phantasie being stirred after a sense of the Object, by dispersing of an ideal Entity, and coupling it with the Ray of the passive Entity. This indeed hath been the magical Action of natural things, yet the Magick and Phantasie that is properly so named, is in Creatures enlarged or ennobled with a Power of choice. I will go thorow them according to their ranks.

152 The formal Properties therefore, which issue from the Forms of the three Principles, Salt, Sulphur, and Mercury, or Salt, Fat, and Liquor, from whence every Body is composed, and again resolved into the same, and the Mercury or Liquor is so often diverse, as there are Species or particular kinds of things ; let the same Judgment be of the Salt, and Sulphur : Those Properties I say, flow from the Phantasies of these Forms, the which, because they are exceeding corporeal, and do as yet stick in the Bosom of the Elements ; therefore they are called formal and occult Properties, by reason of the Ignorance of the Forms, which otherwise, are magical Effects propagated from the Phantasie of the said Forms ; but they are ignoble and very corporeal ones, yet abundantly satisfying the ends which they have respect unto. Of this kind are the subductive or loosening Property of the Belly, the sleepifying Property, &c. in things.

153 There are also besides these, other more noble Properties, arising from the Phantasie of the Forms of the mixt Body ; and those of this sort, are in the whole composed Body, by reason of its Form ; as the Magnetism of the Load-stone, the Virtue of Tinctures : Likewise, all specifical and appropriated Things or Medicines, which happen by reason of the whole homogeneous Mixture, or of the Form of any one entire part, but not of some one principle alone ; such as those are, which are seated in the Flesh or Trunk, Root, Leaves, and Fruit, and not in any one of the three Principles being separated there-from.

Likewise Antimony, as long as it remains in its Form, obtaineth most excellent Properties, the which, it never attaineth in its Principles, and these are also from a corporeal Bosom ; and therefore the spiritual Magick is also hidden in these, and is thought to be due only to Nature, by unfitly distinguishing this in opposition to Magick.

So the Leaf of the Rose hath another kinde of Virtue ; which the Stalk or mossie yellow rust thereof, hath not : and that Virtue in the Leaf is not from the three first things

things, but from its native Life, which when its destroyed, then it hath other Virtues; as suppose thou a grain of Corn, which nourisheth in its first Life, the which, if it loo-
eth, then it fructifies.

And then thirdly, there is a magical Virtue, which proceedeth from the Phantasie of
the Life of the whole entire compofure; that is in Bruites, and in the external Man,
which being now spiritual, is more absolute than the former, nevertheless not yet ad-
vanced unto the highest pitch of Efficacy; notwithstanding, now and then, through much
exciting, by a strong Phantasie introduced by an Entity, it ascends unto a great height,
and as near as may be, imitates the true Magick of the inward Man. 154

But moreover, the Soul of every Bruit-beast, hath a Power of Creating a real Entity,
or Beingness, and through the Will, of dismissing the same to a far distant Object: The
Bruit of this sort, is Magical, as the Basilisk, the Dog, many Fishes described by Olaus,
&c. Such also is the Virtue inhabiting in the Blood of many Animals: For from hence
the holy Scripture saith, *That the Soul is in the Blood though hunted out of the Veins,*
and although boyled by Fire; perhaps also, being plainly putrified through a keeping
warm. 155

Last of all, there is a magical Virtue, being as it were abstracted from the Body, which
is wrought by the stirring up of the more inward Power of the Soul, from whence there
are made most potent Procreations, most famous Impressions, and most strong Effects:
Indeed Nature is on every side a Magitianess, and acts by her own Phantasie: and be-
cause by how much the more Spiritual her Phantasie is, by so much the more powerful
it is; therefore also the Denomination of Magick is truly proportionable or concor-
dant. 156

Every magical Virtue almost stands in need of excitement; for the lowest sort wants an
excitement by a foregoing luke-warmth. Indeed a certain Vapour or spiritual Air is
stirred up, by reason whereof, the Phantasie which profoundly sleeps, is awakened, and
there begins a skirmishing of the corporeal Spirits as a Mean, which is that of Magnetism,
and it is excited by a foregoing touch. 157

But that of the highest sort, which is that of Bruits, and Men, is stirred up from an in-
tellectual Conception: and indeed that of the inward Man is not excited but by the holy
Spirit, and by his gift, the Cabal: but that of the External Man, is stirred up by a strong
Imagination, by a dayly and heighned Speculation; yea and in Witches, by Sa-
tan. 158

But the magical Virtue of the out-chafed Blood, wherein the Soul dwelleth, which is
as yet made to lurk in Potentia, or by way of possibility only, is excited either by a more
strong ascending Imagination, conceive it of the Magitian making use of the Blood as a
Mean, and establishing his kindled Entity thereon; or conceive it through the ascending
Phantasie of the Weapon Salve, the exciter of the Property lurking in the Blood; or
by a foregoing Appointment or Disposition of the Blood unto Corruption, to wit, where-
by the Elements are disposed unto Separation, and the Essences (which know not
how to putrifie) and the essential Phantasies, which lay hid in the Power of the Proper-
ties, come forth into Action.

The Phantasie therefore of any Subject whatsoever, hath obtained a strong Appetite to
the Spirit of another thing, for the moving I say, some certain thing in place, for the
attracting, expelling, or repulsing thereof: And there, and not elsewhere, we acknow-
ledge Magnetism as the natural magical Endowment of that thing, firmly implanted in it
by God. There is therefore in this respect, a certain formal Property, separated from
Sympathetical, and abstruse or hidden Qualities: because the motive Phantasie of these
Qualities doth not directly flow unto a local Motion; but only unto an alterative Motion
of the Object. 159

Let every Magnetism therefore, be either Sympathetical, or Antipathetical; yet every
Sympathy shall not be Magnetical.

We returning to our scope proposed: I think, ere this, that it is well understood, that
there is not only in the Blood, a phantasie, and magical Appetite; but also in the Humours,
Meats and Excrements; since the various off-spring of Diseases doth also make manifest
that thing. For teeming Women desire strange Meats, and Virgins, through a natural
sting or fury of the exorbitant Womb, do with paleness, and speediness digest what they
desire; not indeed by reason, nor a near affinity of humane Nature requiring that par-
ticular Meat: but they being seduced by the forreign Phantasie of those Humours thus
foolishly over-powering them: which Filths being expelled, we have oftentimes restored
a sudden Health to their hurt or vitiated Appetites: Or also, we have restrained
them. 161

them by fully satisfying of the mad Phantasie of the same Humours : Therefore the Blood hath its own Phantasie in it, the which, because it there more powerfully flourisheth, than in other things ; therefore doth the Scripture, by a high Elogy or Publishment of praise, call the Blood, as yet boyled and ready to be eaten, an animated or soulified thing.

163 And because this same Phantasie therein, is capable of Derivation ; for that reason indeed, the Manners, Gestures and Conditions of the Grand-father, shine forth in his posthume Nephew. Nobility drew its Original from well deserving Virtue : Hence Nobility should be suspected to be without desert, increased by a continued Propagation of the Stock or Family, unless the Manners and Virtues of the Ancestours should probably be hoped to shine forth in their modern Nephews.

164 Doth not also the enmity conceived betwixt the Wolfe, and Sheep, remain in their Skins ? Wherefore the stubborn Phantasie of an Animal is imprinted not only on his Blood after Death ; But also, whosoever is covered with Bed-cloaths made of the Skin of a Gulo or Glutton (it is a living Creature frequent in *Swethland*, and of a most devouring Nature) is constrained to dream continually of Feasts, devouring, and laying Snares for, or catching living Creatures therein, to wit, according to the Disposition of that Animal while living ; and so that only by an external covering, the Phantasie of the Beast which when once alive, was entertained in his skin, is derived into a Man that sleeps under it : Therefore by the Ministry of the Phantasie of the Blood, it come to pass, that the out-chased Blood being received on the Weapon, is introduced into the magnetick Unguent.

165 For then the Phantasie of the Bloods being otherwise, as yet drowsie, and slow as to Action, being stir'd up by the Virtue of the magnetical Unguent, and there finding the Balsamical and Medicinal Virtue of the Unguent, wisheth that the quality induced into it, might be bestowed on it self throughout, and from thence by a spiritual Magnetism to draw out all the strange Tincture of the Wound ; the which, seeing it cannot fitly enough effect by it self, it implores the aide of the Moss, Blood, Fat, and Mummy, which are conjoynd together into such a Balsam, which not but by its own Phantasie becomes also Medicinal, Magnetical, and is also an attractive of all the strange quality out of the Body ; whose fresh Blood I say, abounding with Spirit, is carried unto it, whether it shall be that of a Man, or of any other living Creature. The Phantasie therefore is a returner, or reducible and Ecstatical from part of the Blood that is freshly and most newly brought unto the Unguent ; but the magnetical Attraction begun in the Blood, is perfected by the medicinal Virtue of the Unguent : But the Unguent doth not draw the infirmity of the Wound unto it self, that it may be made a Pandora's Box ; but alters the Blood newly brought unto it, in its Spirit, makes it Medicinal, and stirs up the Power thereof : From thence it hath a certain medicinal and magnetical Virtue, which returns unto its whole Body to cure its Cousin German, the Spirit of the Blood throughout the whole Man : To wit, it sucks out the sorrowful Impression from the Wounded party, and expels it (being ready to perish) by its medicinal Power, and commands it forth : which medicinal Virtue being the conquerefs of the Malady, is stir'd up partly in the Blood, and is partly also generated in the same by the Unguent ; to wit, by the Spirit hereof thus commanding over the Spirit of the Blood, by its own Phantasie, that is, by its created Endowment.

Otherwise, the Blood putrifying with its entire Faculties or Vigours, under the enclosure of an Egg-shell, and the Spirit thereof being now as it were freed from its Fetters, through the foregoing Putrefaction, drawes by the mediation of the Mummy of a Dog, and really translates the Grief which sits in the Phantasie and astral Virtue of the Filths of the Sick, into the Dog himself that eats it.

166 Indeed for no other Cause, than because the Magnetism is not perfected without the interposing of the Balsam of the Oyntment.

We have also observed, that if a wounded Man happen to have received many Wounds at once, it is sufficient that Blood be had only out of one of his Wounds ; and indeed, that by that one endeavour the rest of the Wounds are cured also ; because that Blood keeps a concordant Harmony with the Spirit of the whole, and draws forth from the same, the offensive quality communicated not only to the Lips of the Wound, but also to the whole Man : For from one Wound the whole Man is wont also to grow Feverish.

167 I have hitherto deferred to make manifest a great Mystery ; namely, to shew to our hand, that in Man there is placed an efficacy, whereby he may be able only by his beck, and

and Phantasie, to act out of himself, and to imprint a virtue, a certain influence, which afterwards perseveres or constantly subsists by it self, and acts on an Object at a very far distance; by which onely mystery, those things which have been spoken hitherto concerning the Ideal entity conveyed in a Spiritual fewel, and departing far from home for to execute its offices, concerning the Magnetism of all things begotten in the Imagination of man, as in that which is proper to every thing, and also concerning the Magical superiority of Men over other Bodies, will come to light.

It is a clear truth, and manifest without controversie, that of Steel is to be made a Needle, which by the touch of a Load-stone, shews the Pole or North-Star to Sailers: but in vain is the Steel hammered into a Needle, and placed on the Marriners Compaſs to point out the Pole, if a due rubbing of the Loadstone upon it hath not gone before.

Which things, seeing they are undoubtedly true, it is now convenient to frame a Marriners Needle onely by a Magnetical beck: On the Anvil therefore whereon the Needle is hammered out of Steel, let the North Point be marked out, and that in a straight Line; then stand thou the *Vulcan*, with thy back towards the North, that when the Steel is drawn under the Hammer, for making of the Needle, thou mayest draw it towards thy self and the North.

I say therefore, that such a Needle so made, shall without any other help observe or point out the Pole; and that indeed, without any wonted variation, which is a great Mystery.

Moreover, the Needle which is made upon the said Line, by chance, and without the knowledge or intent of the Workman, is void of that quality and doth not observe the Pole.

From hence it consequently follows, that the Imagination of the man that frames it, doth as it were in that moment of the Needles Nativity, when as now indeed the greatest heat or glowing of the fire hath ceased, and as yet, under an obscure redness of the Steel, imprint this kind of Magnetical faculty, and that indeed on the Steel or an appropriated subject: But not that the Heaven doth then make that impressiſion; because then it also should influx it self into the Steel, without the intention of the Smith, which is false; for if the Heaven should give forth its influence at a certain Hour and Position; now might the Characteristical or Notary and Sigillary or sealing Science of the Stars triumph; which we pass by.

But the Constellation which flows into the Steel, and perhaps every Seal or Impressiſion, flows from the Microcosmical Heaven, that is, from our Olympus, or the Heaven in us: Therefore, in vain have been those Seales, which were not stamped by the Magitian exalted in his Phantasie or Imagination; for inferiour Entities and Phantasies are constrained to give place to ours: Whereby a wise Man shall bear rule over the Stars; to the command of whom, the Parent of things hath subjected whatsoever is concluded in the Circle of Heaven. What things have been alledged concerning the Phantasie making this Impressiſion on the Marriners Needle, I have learned from the Testimony of many, also from my own experience; and shall be confirmed ten thousand times to be true, by the experience of every one that is willing to make trial thereof.

So indeed Alarabacca, and the tops of Elder, hearken to the commanding Imagination of the Cropper, who imprints on the plant, but this Magnetically on the absent leaf: seeing otherwise, the leaf being boyled (as the Needle that was re-heated in the fire) and administered as a Potion, the virtue of the Phantasie imprinted on it, would perish, if the Magnetism were not cherished from the entire plant. That blood which is boyled, and ready to be eaten, doth as yet contain the Soul, is true: But that virtue consisteth not from the impressiſion of the humane and external Phantasie, but from the proper endowment of its own Phantasie.

After this manner also, a Nail, Dart, or Arrow that is thrust into the heart of the Horse, withholds the Spirit of the Witch, and conjoynes it with the Mumial Spirit of the Horse, whereby they may be roasted together, that by that torment, as by a sting, the Witch herself may be bewrayed; and that at length, she that is offensive to God, destructive to mortal men, may by the Judge be taken away from the society of these, according to the Law of God.

For if the Work be limited unto any outward Object, that work the Magical Soul never attempts without a medium or mean: therefore it makes use of the Nail, or Arrow aforelaid.

Now this being proved, that man hath a power of acting *per medium* or by his beck, or of moving any Object remotely placed:

It hath been also sufficiently confirmed by the same natural Example, that that efficacy was also given unto man by God, and that it naturally belongs unto him.

171 It hath been hitherto an absurdity, to have thought that Satan hath moved, altered, and transported any thing, and to have applied Active things to Passive by local motion, onely *per nutum*; since indeed they doubt not that he himself was the first moover in the said motions, that by those outmost parts or extremities whereby he toucheth, he can snatch away, transferre, or any way move, at least an airy body (which they feign) yet wanting a Soul.

Absurd I say, it is to think that Satan since his Fall, hath retained a Magical dignity, whereby he acteth any subjects, by beck alone, because that was once his natural gift; but that the same natural faculty was withdrawn from man, as denied unto him, and given unto the Devil, the most despicable of Creatures: But if there are any such effects proceeding from man, they have also attributed them at least to a suppliant or servile compact with him.

Open your eyes, for Satan hath hitherto promiscuously gloried in your so great ignorance, as if thou didst make his Altar smoak, with the Incense of Glory and Dignity, and didst extract thy own natural Dignity, as pulling out thine own Eyes, and offering them up unto him.

We have said, that happily every Magical faculty lyes dormant or asleep, and hath need of excitement, which is perpetually true, if the object whereon it is to act, be not most nearly disposed, if its internal phantasie doth not wholly conform to the impression of the agent, or also if the patient be equal in strength, or superiour to the agent therein.

But on the contrary, where the Object is plainly and most nearly disposed, as Steel is for the receiving of a Magnetism: or plainly weak, and conscious to it self, (as the Murderer, Adulterer, Thief, Witch, are) then the Patient without much stirring up, the alone phantasie of the more outward Man being drawn out to the work, and bound up to any suitable mean, yeelds to the Magnetism.

The Magician I say, always makes use of a Medium: for so unless a Woman with child shall stretch forth her hand unto her Leg, Fore-head, or Buttocks, the Young will not be marked in the Leg, Fore-head, or Buttocks. For so the words or forms of Sacraments do alwayes operate; Because from the work performed. But why Exorcisms or Charms do not alwayes operate, the defect is not in God; but onely because the unexcited mind of the Exorcist or Charmer, renders the words dull or uneffectual.

Therefore no man is a happy or succesful Exorcist, but he who hath known how to stir up the Magical virtue of his mind, or can do it practically without Science.

Perhaps thou wilt say, *That in the Army Unguent or Weapon Salve, there was obtained no other Magnetical Virtue, than what was begotten by the Phantasie of the Compounder.*

Thou erreth: Yet if that should be granted, thou wouldest be never the better thereby; because the effect should thereupon happen not to be ascribed to Satan: For so the Unguent would be Magnetical or attractive, not from a Phantasie inbred in it, but from that which was imprinted on it from without, by the compounder; since there can be no nearer Medium of the said Magnetism, than humane blood with humane blood.

Truly the blood alone, as the most disposed subject, should be sufficient for the Oyntment, and the other Simples would be in vain: (which is false) especially Bulls blood, and honey, where there is a sufficient cure without the blood of a Bull, by the Weapons of the Wounder being bathed in the Unguent, without being distained by the blood of the Patient; which is false.

172 Lastly, the Magnetism of the Unguent should be plainly general, because the person compounding it, had intended by his Phantasie, to effect an impression, too liberal, wandering, uncertain, and unsolid, for all Wounds of man, and also of all brut Beasts. What if he shall not intend the Cure of a Dog: Shall therefore the Oyntment not be for Curing the Wound of a Dog?

Fie, What hath Bole Armeniack, what Lynseed-Oyle, what Honey, and lastly, what hath the blood of a Bull, of disposition to the Wound of a Horse, or Man, that on those as on a proper mean, and not on any other, the Phantasie of the compounder should be imprinted? the which notwithstanding, if they shall be banished out of the composition, they will render the unguent Barren, and void of Efficacy.

The natural Phantasie therefore of the Unguent is the cause of the Magnetism, or attractive influence, and the proper cause of the Cure; and not the Imagination of the Compounder.

Behold!

Behold! Thou hast our, that is, a Christian Philosophy, not the Dotages or idle Dreams of Heathens. 173

Beware I beseech thee, that thou for this cause, cast not me also into censure, who hast been too ready in thy censures.

I am thine, and a Roman Catholick, whose mind hath been to ponder of nothing which may be contrary to God, and that may be contrary to the Church.

I know that I was not born for brawlings, or contentious debates, not to Write the Commentaries or Patronages of another: Therefore what I knew, I was willing to divulge abroad in the liberty of a Philosopher.

I shall as yet subjoyn this one Clause.

Whosoever attributes a natural Effect, so created by God, so bestowed on the Creatures, unto the Devil, he estrangeth the honour due to the Creator, and reproachfully applies the same unto Satan: The which (under thy favour I shall speak it) if thou shalt well recal under thy Anatomy, thou wilt find to be express Idolatry.

I beg of God our most Clementious Father, that he would be favourable or merciful to the Faults which from humane (not stubborn) ignorance, and frailty, we have contracted. Amen.

There are three that bear record in Heaven, the Father, the Word, and the holy Spirit; and these three are onely one: (and presently speaking of the humanity of Christ) There are three that bear record in Earth, the Blood, the Spirit, and the Water; and these three are onely one.

We therefore who have the like humanity, its no wonder if we contain Blood and a Spirit of a co-like Unity; and that the action of the Blood is meerly spiritual: Yea therefore in Genesis, it is not called by the Etymology of Blood, but is made remarkable by the name of a Red Spirit.

Depart thou therefore, whoever thou art, from thy stubbornness, and acknowledge thou another Spirit in the Blood, besides the evil Spirit, unlesse thou canst go on in opposition to the Scripture.

C H A P. CXIII.

The Tabernacle in the Sun.

THe Schools deny the Sun to be fervently hot : For they will that they also should [herein] be believed without demonstration. Because they think that a man is generated by a man, and the Sun : And therefore that it becomes Nature, least if the Sun should be of a fervent heat, he should consume himself, his Inn, and all neighbouring things into hot Embers:

For seeing he is of a huge bigness, and also heats afar of, why should he not commit a cruel outrage, if he should be fervently hot in himself? For how should he generate a man and also all sublunary things?

As if first of all, the Sun being exceeding hot, the substance of the Heavens should therefore be burnable! And that it should not be more meet to admit the Sun to be hot without nourishment, than to deny all the Senses; to wit, that the effect doth exist, being produced by no proper Cause! To deny I say, heat indeed, which makes hot with so great a force, and at so great a distance! Chiefly, because according to the proportion whereby we do the more approach unto the direct beams of the Sun, by so much we meet with the greater heat.

I believe this fear of the Schools to be vain, because the Light was made by the Word, which contracted the whole Light into two Globes: That the Sun should be the Light of the Day, and the Moon of the Night.

The lightsome Globe of Sun is said to exceed the Diameter of the Earth and Water 160. times:

Out of which Globe of the Sun, the beams of Light are dispersed, as well above as beneath himself, on the whole Universe: And they most thoroughly enlighten all trasparente bodies but dark or thick bodies in their superficies onely.

But I have shewn, that the beams of the Sun being united by a Glasse, are true fire shining in its properties: For whether the beams are united or not, that is to the Sun by accident.

And therefore, if the beams of Light being connexed, are true fire, and do burn, the Sun also, as the very Center of the connexed beams, shall of necessity be most exceeding hot: For the Fire of the Sun persisteth without nourishment, by the command of God. Also seeing the fire in the middle of the cress, wherein the Sun-beams are united, subsisteth without nourishment: Kitchen fire only bears before it a Light subsisting by it self, without the intervening of the Sun: Yet in that thing, being different from the Sun, that it ought to be nourished that it may subsist. But the Sun because he is of a heavenly Nature, wants not food; because he is void of Usuries and appointed of God that he may thus burn.

The Sun therefore, is a most fervent fire, the principal Center in Nature, of created Lights. Peradventure, when at sometimes, dayes shall be at their full, and the harvest of things shall be ripe, the watery vision of the Heavens, the Waters I say, which are above the Heavens, through a divine virtue, shall assume a ferment, and the seed of a combustible matter, and it shall rain fire from Heaven, and the Stars shall fall.

For the Sun by the command of God, breaking open the floodgates and bolts of his Globe, shall burn the Heavens, as well those which are nigh, as those which are very far of, and shall consume the World into hot embers. For the Heavens shall be changed, shall wax old, and shall at sometimes melt like wax: And the Stars shall fall down on the Earth, not indeed whole, (because they are for the most part bigger than the Globe of the Earth) but the parts of the Stars that are burnt, shall make an Abyss of fire upon the Center.

Therefore, the Sun is a fire in himself, and being nigh; but by how much further his beams are dispersed throughout the Universe, they shall give the more apt nourishing warmth

warmths unto the seeds of things ; because the Sun doth suggest onely a general and common Light, which is fit for exciting and promoting the seeds of things, and for this cause it is vital : But not that it conferreth Life, and that which gives Essence to the seeds of things.

In *Caire of Egypt*, Eggs are nourished by the fire of a furnace, and Chickens are abundantly bred without the nourishing of any Hen ; yet the fire of the furnace neither gives, nor hath a seminal virtue, neither doth it burn the Eggs ; nor because it nourisheth, doth it cease to be burningly hot in its Fountain.

So the beams of the Sun being dispersed throughout the Universe, are no longer fire ; but a simple Light. Kitchen fire therefore, doth after some sort dispose it self according to an emulation of the Sun : To wit, it enflames, burns, and consumes things that are near it ; but from far, it onely heats, and at a very far distance, onely shines. Yea, neither is it reckoned true fire, unless it be hot in the highest degree, unless it centrally stick fast with its connexed beams, in the cresset of Light. But it differs in nobleness from the Light of the Sun, that it is not of the first created things, not of an heavenly disposition, not subsisting without fewels, nor therefore is it universal. The Almighty therefore as he hath created the Sun a singular thing ; so he hath created as it were one only Sun in every species of sensitive Creatures, which should suffice even unto the end of the World, and should propagate them thenceforward, not indeed being hot in the highest degree ; but that it subsisting by the poynts of dispersed beams, may not cover to ascend unto further moments of degrees. Therefore in the smallest minutes of specifical Lights, a formal Light of species or particular kinds, is restrained by a Divine virtue, which hath tied up every species unto a particular moment of Lights, general indeed in respect of the Sun ; yet made individual by the co-ordination of my Lord : For the Sun of Species's shall endure for ever no otherwise than as the Species themselves shall. But because it doth not subsist but in individuals ; therefore the sun of Species is daily slidable in individuals, even at every Moment, unless it be nourished as it were by a continual fewel.

Therefore the light of Life hath some similitude with the Sun, and a part agreeable unto Kitchen fire : To wit, in this, that our Sun ought to have vital Spirits for an uncessant Fewel, and those capable of an administering to a depending Light that is to follow : Not indeed that the Spirits do in themselves, and of themselves, heat any more than the beams of the Sun ; the which the light of the Sun being withdrawn, do presently die from heat and light. Nevertheless they bear a mutual resemblance with the Sun, because they seem to propagate an enflaming, and subsist centrally in the heart. For when the Schools took notice that the heart did voluntarily and of it self, hasten into a cold dead Carcass, and that the Spirits being dissolved or spent, it indeed was presently cold, they thought that those in-blown Spirits, were the beginning Center, and primitive sunny point, and that of heat ; not regarding that the Spirits themselves are of themselves cold, and that their heat doth perish in an instant, as soon as they are snatcht away from the beam and aid of the heart. A very great wonder it is, that it hath been hitherto unknown and undetermined, unto what heats the whole Tragedy of things vital and not vital, is ascribed : Whether of the two may prevail over the other in the original and support of heat : For seeing neither the heart nor vital spirit of the same, are from their own nature and substance, originally hot ; for this cause, it hath not been so much as once thought, from whence our heat comes, or from what original it is in every one of us : For seeing the knowledge of ones self is the chief of Sciences, as well in Moral as Natural things, the Schools ought never to have been ashamed, to have enquired into the Fountain of Heat and Life in things. How great darkness hath from thence remained in Healing, and in preserving of the Life, God hath known. This controversie therefore, I have discussed with my self, from my youth, after this manner.

First I knew, that fire (even as in the Chapter of Forms) was not an Accident, nor a Substance ; and much less, an Element : The which, I have elsewhere demonstrated with a full sail of Philosophy.

And then that the Sun was hot from a proper endowment, and that the fire of the Kitchen was likewise given, although for the workman, and a death subjected to the hands of Artificers : But when as both of them forsake us, that we have a Flint and a Steel, from whence we make a fire : To wit, we strike fire out of two cold or dead things. So also the waters of hot Baths under the earth, are enflamed by Salt and Sulphur, which are volatile things, and that the arterial blood is partly Salt, and partly fat and Sulphurous.

Then in the next place, that there ought to be a smiting of Pulses together ; not indeed for a cooling refreshment (as the Schools do otherwise dream) but indeed, that as but-

ter is made of Milk by charming or shaking of it together : So a vital Sulphur, of the arterial Blood : The which afterwards, by a smiting of the same endeavour, conceives a Light in the volatile Spirit, and a formal or vital Light is propagated, as it were Light being taken from Light : To wit, the salt Spirits, and Sulphur of the arterial Blood, do by the Pulse, rub themselves together in the Sheath of the Heart, and a formal Light together with Heat, is kindled in the vital Spirit ; from the Light I say, of the most inward, and implanted sunny Spirit, in which is the Tabernacle of the specifical Sun, even unto the Worlds end.

In this Sun of Man, the Almighty hath placed his Tabernacle, and his delights, his Kingdom, together with all his free gifts. But the Light which is conceived by smiting together, is not indeed, made a new, as from a Flint and Iron ; but it is propagated by the obtainment of matter from the sunny, specifical, and humane Light, or is kindled, and enlarged by it.

It is there indeed universal, and vital, consisting in the points of a tempered Light ; and it is in Nature indeed specifical in respect of its production, and limited for the Life of Man ; but it is every way made individual by him, who hath placed his vital Tabernacle in the Sun of the Species : Out of which Tabernacle, he thereby *enlighteneth every Man that cometh into this World* : Because the Lord Jesus is after an incomprehensible manner, the Light, Life, Beginning, Way, Truth, and the All of all Things : For as the Life cannot subsist for a moment, without the lightsome Spirit, by which it is enlightened and fountained in the habitation of the Sun ; So neither can the Soul, nor Life in any wise subsist for one only moment, without the Grace of the same eternal Light.

But I have conceived of the quality and intension of Heat resulting from the Light, as a whole humane Body weighing perhaps 200 Pounds, is hot with an actual warmth, and the which, without that Light of Life, should presently be cold, and be a dead Carcass.

There is therefore so much Heat in the Heart, as is sufficient for diffusing warmth through so many Pounds of Water, otherwise cold. The Life therefore of Species, as it consisteth in a simple, and ununited Light, contains a mystery of divine providence : For a fiery Light, however (by reason of distance) it be mitigated, and reduced into a flourishing luke-warmth ; Yet naturally it cannot stop, as that it cannot confire for the top of a connexed Light, and so contend for its own ruine or destruction. Therefore the Father and dispenser of Lights hath provided, who sitting in the Tabernacle of the Sun, hath constrained or tied up Lights by Species or particular kinds, and bolts.

Here it is sufficient to have shewn, that they are the Reliques, and plainly the Blasphemies of Paganish Errour, to have said ; *A Man and the Sun doth generate a Man* ; Seeing Life belongs not to the Sun ; but the Jewels, Excitements of sublunary Actions alone, as also the necessary supplies readily serviceable to the Life.

C H A P. CXIV.

The nourishing of an Infant for Long Life.

IT is already manifest, that Life is not from the Stars : but that from a seminary Faculty of the Parents, Life is short, Disease, Healthy, and Growing : For it is limited according to the Disposition of the Seed, and Trunks of the Body, no less also according to the goodness of Nourishments and Climates. Among the Impediments of Long Life, is an infirm Constitution of the Young, and a bad nourishing of the Infant.

The Young therefore being generated and brought forth, the quantity and quality of the Nourishment is to be regarded ; seeing its little Body ought to be nourished, and to wax great, and so to be settled or confirmed : And it is now chiefly known, that the nourishable Juice in a Child, is adopted into the Inheritance of the radical Moisture : For Nature hath appointed Milk in the Dugs, for the Meat and Drink of the little Infant ; which Nourishment hath rendred it self common unto him, with Bruit-beasts.

It might be thought by some, that it would be injurious unto God, if we should think of any other Nourishment ; as if he had not alwayes chosen out of Means, that which should be most exceeding good : But surely, shall not the God of Nature be a Step-father, and Nature her self a Step-mother, because he made not Bread, not Wine, but Grain and Grapes only ?

Nature is governed by the Finger of God. It is thus.

Milk therefore, as an ordinary Nourishment, hath afforded a sufficiency for living ; but not that it should be serviceable for long Life : For Nature no longer meditated of long Life, after that she knew her Author had cut short the Life, nor would have every one to be long lived : But he hath given Milk for Food, unto every one alike : For he hath sent an Army of Diseases into Nature, that a thousand fore-ripenesses of Death might bend unto the Foundations of Life, for Ruine.

Nature therefore by Milk, satisfies the ends of her Author, and hath afforded a beast-like Nourishment : But the Doctrine of long Life, is exceeding diverse ; in its unfolding and I know that it hath remained in secret, even among those that have been divinely chosen the Sons of Art.

The present Doctrine therefore, hath not regard unto the ordinary course of Nature ; but unto a new mark.

Therefore, I do not think that I am injurious to Nature, if I shall prefer an unwonted Nourishment before Milk : For truly in Milk, very many Discommodities do invade.

First of all, Milk waxing clotty, very often produceth frequent Vomitings, Wormes, Wrings of the Bowels, Fevers, Fluxes, Falling-sicknesses, Convulsions, and contains many unthought of Occasions of Death : For Milk in the Stomack, obeying the proper Ferment of the place, doth of necessity wax sour before that it turn into Nourishment ; whereunto, if a new sucking of milk succeedeth, an hard clot of milk lays on the little tender Stomack, which becoming callous or brawny hard, into small clods, counterfeits tough Cheese ; not much otherwise, than as milk doth oft-times grow together within the Dugs, and breakes not forth but with an Apostem : the which, seeing it stubbornly resists Digestion, if it shall not also be exceeding hurtful, at least-wise, it presently putrifies, growes bitter, waxes yellow, becomes green, contracts a burntishness, and estrangeth the Pylorus or lower Mouth of the Stomack ; from whence the aforesaid Slaughters of Diseases are often stirred up : For an Infant sucks long, and frequently repeats it. The first Milk is curdled, another new milk is sent in the third and sixth time, and there is made a co-mixture of them all, and a strange one being sharp or sour, besides Nature, is stirred up with howlings, and a common curd is made of them all : In which are the
mani-

manifestations of Heterogeneity or diversity of kind, and a co-resemblance of a cheefed, burntish, and putrified matter follows the new Milk.

These Vices are almost unavoidable, and they are the material offences of the milk, which the new Young being brought forth, begins from the beginning to expiate; as though from the birth, the Mother doth frame snares, and the threatnings of Death for her little Infant.

There are moreover, other faults of the milk, pernicious by a more hidden gore: For not only the Pox, Leprosie, Plagues, and Fevers (infamous through contagion) are sucked from the Nurses: but also, a disease Inclination of the Nurses, is stamped on the Child from his Cradle, no otherwise than as if it were hereditary.

Surely, it is a Character to be bewailed from his Life time.

I knew a certain Governour, blessed with a Sixth, and sound Off-spring, whose seventh (because he was nourished by a Nurse who was subjected to the Stone of the Kidneys) with a mournful Disease of the Stone, finished his Life on the 13th Year of his Age, under cutting for the Stone, at the third cutting.

In the next place, it is not sufficient for the material Diseases of the Milk, the hidden Consumptions of Diseases, and their hereditary Roots, to be transplanted by the milk into the sucking Infant, and to be most stubbornly incorporated into the Life: But also the moral Seminaries of any kinde of Vices do pierce inwardly with the milk, and prefeveres for the term of Life.

So I have observed, that a lecherous, theevish, covetous, and wrothful Nurse, hath transferred her Frailty on the Children.

So an unwonted blockishnesse, anger, madnesse, and many Passions of the Mind (also beside moral Defects) sleeping a long while, and at length, being under the maturity of Dayes, unfolded, do bewray themselves on Families, they being begged from Nurses, and propagated by the Milk.

Then in the next place, the Milk being as yet in the Nurse, is in danger to be mortified or wax stinking, if the Nurse be privily gotten with Child, doth partake of Fevers and Maladies which are after some manner bred, for the infecting of the Milk.

Lastly, the Milk undergoes diverse Impressions every hour, from all the disturbances of the Mind; from whence it not only waxeth clotty, and putrifies or stinks: but also by an unsensible quality it puts on Deformities, which the guiltless Infant drinks, and is held to pay the punishment of: For the Nurse doth not alwayes bridle her Mind with one tenor; but she failes, being sore smitten with a thousand Apprehensions of Anger, Sorrow, Agony, Envy, Wantonnesse, Theft, Covetousnesse, &c. all whereof, there is no doubt, but that they badly dispose the Milk, as well in respect of the Body, as the Soul: For they are most of them unavoidable, yet dangerous.

Whosoever therefore would study long Life from the Birth, let him not expose his Children unto this sort of voluntary, unthought of, and certain Dangers. By how much the rather, because a Medicine for Long Life, as it is dayly (from the Cradle) extended for a long and healthy Life, by drops, cannot be digested, as neither Penetrate, if it be buried within the gross clots of Milk: Because so also, Poysons in the Milk, do well nigh become unhurtful, and being as it were gelded, become barren.

I therefore have hated the oft extended nourishing of an Infant by Milk: For this Cause, I am not wont to eat milk, unless it be meer or unmixed, alone, without other Meat and Drink, until that it being fully digested, hath slidde out of the Stomack.

I praise, for our Child, Nourishments which are made of Bread boyled so long in thin Ale, with clarified Honey, if not, with Sugar, until they shall come together into the likeness of a Muscilage, or Glew or Jelly: Then as much thin Ale is mingled with, and washed on this Jelly, as is sufficient for it to serve instead of Drink.

Nevertheless, he must abstain from Rye-bread, if he be nourished with Honey, because it breedeth Wormes: Yea, a piece of that Bread being cast into a Vessel of Honey, it passeth into Ants.

After this manner, I bad (among others) the Son of an Earle to be nourished from his Birth, who far exceeded his three Brethren in Strength, Health, Stature, Wit, and all Valour, and so that, if he had not died in war, as being pierced thorow with a Bullet by a warlick Hand, he had been of great hope. For indeed, as the aforesaid Meat and Drink is harmless, not putrifying, not coagulable, not stubborn against Digestion (for whatsoever things are fetch'd from living Creatures, do easily putrifie in the more tender Stomacks) as neither a partaker of Malignity, or of a forreign unstable Disturbance, or the

Heir

Heir of an induced vitious Impression : So it is alwayes equal, like, and constant to it self, becomes most familiar to Nature, not wormy, not sharp, not stinking, or of a burntish Savour ; in the next place, not tart, acute, feverish, yea, nor ever hurtful, although it shall exceed in quantity, for more, or less, may be washed off : So also, the Infant growes and waxeth of ripe Years without Diseases, and is made capable of a Remedy for a Life of long continuance.

Therefore also according to the Letter, it is not badly read concerning the thrice glorious Messias being incarnated, *That he shall eat Butter, and Honey* : For truly, the one contains the Glory of a Dew, together with the extraction of Flowers : But the other is the Magistery almost of all Herbs : Therefore he shall eat Butter, but not Milk : From whence the discerning of the Good from the Evil, and the sharpness of Judgment is promised. But the strength of dayes increasing, let our Child accustom himself to the more vigorous and hard Meats ; yet I fitly praise a Mean or Moderation. But let him take twice every day, four Drops of the Tree of Life.

CHAP. CXV.

The Arcanums or Secrets of *Paracelsus*.

But moreover, we believe by Faith, that the Life of men was by the divine Will, shortened ; but that the Sins of mortal Men gave an occasion hereunto. The Will or Command of the Lord hath entred into Nature, and the Reasons of Death, which it found not, it made before the Floud, as it were in a successive order, the Life was continually changed by Off-springs, at length it was extended unto the hundred and twentieth Year.

And last of all, the Dayes of a Man were seventy Years ; which moreover, is a Misery ; except in the Powers which he would should attain unto eighty Years : This therefore is a short Life, an ordinary Life, unto which, Man (necessary supplies being brought unto him) doth by the free will of Nature, flow and come ; the which, was (by a divine Testimony out of the holy Scriptures) appointed. The Roots therefore of short Life, have henceforward a place in Nature.

First of all, the Mind, which knowes not how to die, waxeth not old.

But the sensitive Soul, although it be at length extinguished like Light ; yet the Light it self doth not wax old, because it cometh not unto it by Parts or Degrees : For if the sensitive Soul, or the vital Light it self should wax old, seeing nothing can be added unto this, perishing, which may be of the Disposition thereof, I should meditate of long Life in vain.

Therefore the vital Powers only, wax old, which are implanted in every Organ under the Beginnings of Generation : The which, I do not contemplate of, as naked Qualities ; but I behold them as Governours failing by degrees, in an aery Body ; and therefore also, that the Powers of the Spirits do follow the Nature of that Body which is worn out by little and little : For Sorrow gnawes the Life, no otherwise than as the Moath doth a Garment : So also, the Inordinacies of Living, do violently overthrow the Life.

In the next place, Man is a Wolfe to Man : Which things surely, do mow down the Life in many, being as yet in its flourishing estate : Nevertheless, these are not the natural Reasons of a short Life ; as neither the necessities of a connexed Species, or of an inbred shortness.

Surely, besides accidentary Contingences, we do bear about with us the Cause of short Life, in the middle of our delights.

K k k k k

For

For first of all, the memory decays ; and then, the sight, taste, hearing, and walking, wax dull : For to savour, doth not undeservedly signifie, as well tasting, as a judgment of the Mind without distinction ; because they oftentimes die together : but the Taste, first fails in the Stomack, by reason of the Spleen : Wherefore I have elsewhere sufficiently distinguished the tasting of the Tongue, and the tasting of the Stomack.

Presently, by reason of the unequal strength of the Parts, the inbred Ferments of the Shops, do here and there, by degrees, fail : but the Ferment of the Spleen being astonied, the Power of the first Conceptions goes to decay ; *And old Men are said to become Children.*

For the Schools grant a lively Memory to be in Children, by reason of the tenderness of their Brain, easily receiving any kinde of Seales : but that the Brain being the harder through dryness, the Impressions of the Seals should be by so much the harder, by how much the more stubborn they are from dryness, to retain the marks of Conceptions. But the Comparison of the Schools is frivolous, that the Brain should have it self after the manner of Wax ; as neither do the cogitations express the interchanges of a Seal.

For first of all, there should scarce be a fit place for ten Seals : For if those kind of Seals should be so corporeal, as that they ought to follow the disposition and alterations of the Brain, they shall of necessity square themselves unto the extension of the place ; because Place is more difficultly sequestred from a Body, than to be hard, or moist : And therefore let the Schools shew, how great an extension all particular Seals of Conceptions in the Brain, may require. Doth the Memory for the seal of a Conception, require a bigger place in the Brain of an Horse, than that which is of a Mouse, or Flie ? Therefore also consequently, the extension of place in the Brain for a Horse, should be also ten thousand times bigger, than for a Mouse ; and so the whole Brain should scarce suffice for the remembring of two Horses : That since place should fail, I should rather remember the good things of the middle half, than of the whole ; Yea, I should far better remember things past for one Year agoe, than those things which at sometimes happened unto me in my Childhood : For I have seen a Boy, who at the second time, had learned the *Aeneides* of *Virgil* by way of Memory, who scarce underitood the hundredth Verse : And so every particular Word did require as many Seales, and Places of these : But if the Seals of Conceptions should require no place, nor do occupy an Extension of themselves in the Brain ; Therefore nothing is sealed, and there is no Seal ; and also the Comparison of the Schools is dull : For the Schools are too muddy, who ascribe the Offices of the vital and principal Powers, unto the first, or second Qualities.

But what will the miserable Schools do, if they scarce dare to withdraw their Finger from these accidents of Bodies.

Therefore Scholastical Respects of hardness, dryness, and tenderness, being neglected, I descend unto the Cause of short Life. I have said indeed, that from a decaying Vigour of the vital Powers, the Life is of necessity and proportionably diminished :

From whence I will truly repeat, that the Powers themselves wax old, as it were with a covered Rustiness, and do by little and little cease ; because the Arterial and Venal blood are at length, successively transchanged into the nourishment of the Parts to be nourished, and the growth of youth being finished, truly the Juice that is prepared from thence, is bedewed or besprinkled on all the solid Parts, and a certain muscilaginous and spermatick or seedy Liquor is glewed unto them : but it doth no more, long remain with them ; but being consumed, and concocted by the Ferment of the parts no longer coagulating (even as otherwise under growth was wont to be done) it wholly exhales without a residence, lee or dreg, or remainder of Reliques.

That therefore, is the conclusion of the Venal blood ; that for the end of its Tragedy, it is at length wholly expelled by way of an Exhalation, through an unsensible transpiration, after that it hath undergone the Offices of moistening : Therefore, while as that Liquor being now co-mixed through the innermost Parts, and the Digestion having thorowly performed its Office, doth by way of effluxing, exhale, it cannot but have assumed the disposition of an Excrement.

From whence it alike unavoidably follows ; That the vital Spirit inhering in, and conjoynd to the Bowels ; and also the implanted Powers of the same, are by a continual, and necessitated Fumigation, blunted, alienated, and at length extinguished : This therefore is the containing, and natural Cause of short Life.

Therefore the whole consideration of long Life, is conversant about the conserving of the vital Powers : For it is not sufficient, that venal Blood be present with all the Members, to be delightfully nourished with their desired venal Blood.

Neither

Neither again doth it suffice, that the implanted Spirit be thus far sufficiently refreshed from the inflowing Spirit, by a continued substituting of Nourishment : For nothing is done in the Stage of Life, unless the seminal Powers, the vital Characters, I say, be preserved from the destruction already mentioned : For otherwise, the Spirits are reduced unto nakedness, and are lessened, from whence our dayes are of necessity abbreviated : For truly, it by degrees looseth the Character of the Powers, or Gifts of the Seed, and is made a Spirit like unto that which is not soulified, or like unto a Gas. For although in Figures, and Engines, a perpetual Motion doth not fail, because there is not required in the Powers moving, a subsequential proportion of a greater unto a less, that it may move some other thing ; Yet surely this hath not place in things which shall not move themselves, nor are of ability to grow, or be strengthened by moving : And therefore they are things unworthy to be considered in feminal things : For truly, natural Generations which are constant even unto the Worlds End, shall be sufficient ; to wit, that the Species and Strengths of these do continue entire, and that they do beget a Seed from them which is never diminished.

By consequence also, if a Man of forty Years old, doth generate one in times past like unto himself ; his Life of forty Years shall be able to be continued, being co-equalized in Vigour, unto himself being a young Man ; if the vice of a broken Thred doth not from elsewhere, rush on it, as I have said.

Therefore we must diligently search into, whether the Reliques of the Tree of Life, or its surrogated Substitutions are to be hoped for in Nature : to wit, by which, whatsoever doth at length vanish out of us, may be unto those Powers instead of a nourishing warmth, nor may any longer through its sorrowful Fumigation, bear before it the condition of an Excrement : But it listeth us to acknowledge the quality of our aforesaid Fumigation, not only in the Odours of some Sweats ; but especially, because Wall-Lice, Lice, Gnats, and the like Insects, proceed from thence ; indeed, the meer off-springs of filthiness and stink.

First of all, it hath seemed to me, an unprofitable Question ; Whether the Garden of Eden, and the Tree of Life thereof, have ceased, or indeed, whether they do remain even unto this Day ? and in what place ? Whether *Enoch*, *Elias*, and *John* do there even till now, live happy under the fellowship of Angels, without the Discommodities of old Age and Infirmities ?

It is sufficient for me, that the Tree of Life began from the Creation, that it was in Nature ; but not fabulous, or parabolical. It sufficeth, that that Tree was, and should be unknown to Mortals ; and so also that the impossible obtainment thereof, deprives us of hope.

In the mean time, I search into a succeeding Plant, although inferiour by many numbers.

Yea, there is no doubt, but that if there be any Plant in this Vale of Miseries, which resembles the Faculties of that primitive Tree, a Place may contribute its Parts unto long Life, as well in respect of the Plant, as of the Man using it : For that the same Plant is ennobled through the Variety of its native Soile, and that our Life is prolonged by places of the better nourishable Juice, and through the Drink of the more sweet Air ; Climates themselves do afford me Credit : For neither is it to be believed, that that thing happens altogether from the favour of the Heaven, for that, in the same degree of distance from the Equator, and altogether in the same Circuit of Heaven, the Parts subjacent to the East, do bring forth more noble Fruits, than those which decline more toward the West.

And moreover, much Variety is oftentimes planted nigh, under the same Circle : both which Parts notwithstanding, the same aspect of Heaven doth sometimes dayly affect with the same Motion : For *Paracelsus* promoting it, a hope is raised up in some Physicians, for long Life : For every one promiseth himself to have been an obtainer of long Life by his Writings, if he had not described his Medicines in so great darkness of Words.

Wherefore most do diligently search to have his obscure Novelties of Names signified unto them : Also others, deservedly suspecting his every where simple, and curtail'd Description, heartily wish for a more manifest method of operating : But none (the Vaile being uncovered) hath attempted to dig unto the bottom of the Matter, and Basis of the Truth promised : For every one either derides, or despairs, or being too credulous, admires all things with a bending Nose : Yet, if these are better than those, because they have not cut off the way of the hope from themselves ; None notwithstanding,

hath chosen a middle way; to wit, of doubting and diligently searching, how much of truth the things promised may contain: For indeed *Paracelsus* promiseth that he could attain extream Old Age by his Elixir of Propriety, and boasts, that it was granted him from heaven, to designe or chuse the Condition and Hour of his Death: but vain are his boastings of long Life, his knowledge, and choice of Death; who the while, dies in the 47th. Year of his Age.

In the mean time, his own followers are astonished, and wonder, by what Disease, or chance the true partaker or obtainer of that Stone which maketh Gold, was snatched away, being as yet in his flourishing Age; and who, with *Hercules* Club, slew thousands of the more grievous Diseases up and down, as it were by mowing them down with a Sithe. Truly I make no Apology for any: I willingly confess, that I have profited much by his Writings; and that he was able by Remedies ascending unto a resembling mark of Unity, to heale the Leprosie, Asthma, Consumption of the Lungs, Palsey, Falling-sicknesse, Stone, Dropfie, Gowt, Cancer, and such like (commonly) incurable Diseases; Yet I have gathered that *Paracelsus* was ignorant of the Root of long Life, as well from his Writings and Medicines, as by his Death: For truly, the renovations and restorations, whereof he deservedly in many Places, and much oft-times, glorieth in, are only the purgings of the Parts containing, with a correcting and banishing of those contained; and thus far he was the revenger, and healer of almost all Diseases; yet his secret Medicines, do not so much respect a long Life, as an healthy one, and the Commodities hereof: For the Haires, Nails, and Teeth are renewed, and although these are most hard, yet they first feel the Flesh. And therefore it is not written in vain, That *Moses* had all his Teeth at the 120th. Year of his Age: For as they live obscurely, they have their Kitchen out of themselves, also they most easily putrifie. For perhaps *Egypt* and the neighbouring Places, have that thing unto themselves, from a Property: For truly I remember, that Prince *Radzvil* the *Polonian*, hath thus written of the Mummy of *Egypt*: For those Bodies are preserved entire, with the least putrefaction of any Member, even unto this Day. But so great is the multitude of these dead Carcases, that there are few who are able to endure with Patience, the disdainfulness of seeing them all: They are so condensed with the Fat of Spices and Oynments, that they shine as being hardened after the manner of Pitch. Especially, their Brain, Muscles, and Shoulder-blades, which are the more fleshy Parts: for the Breast, Hands, and Feet, seeing they have little Flesh, and are extended after the manner of a Membrane, they do not provide for with Mummy. It may be collected from the Judgment of their Nostils, how much Myrrhe ought to have been admixed with these Unguents. Likewise, those Oynments preserve a wonderful Whiteness in the Bones. About the Caues or Vaults without, a great Power of Bones layes cast aside, from which the Mummy was withdrawn; among which, we did not by the way, nor in a short time, contemplate of the Skuls, and the neather Cheek-bones, where the Teeth were fastened: we found none at all, which might have so much as one rotten Tooth, or any mark of plucking out; So in all the Cheek-bones, they were full, sincere, and somewhat white: For among so many hundreds of Cheek-bones, there were also those of old People, whose Teeth were short and worn (such as are seen in old Folks) but there was none, which had any putrified, hollow, holey Tooth, or sign of a Tooth slidden out.

From whence I collect, first; That *Moses* might naturally, have all his Teeth.

2. That as cold things do hurt the Teeth; So also, the cold Air of our Country is hostile to the Teeth.

3. That therefore, the *Ethiopian*, and *Spaniard* have white Teeth.

4. I take comfort for the Dutch from the Words of the same Prince. In *Cairo*, of those commonly reckoned up, they are reported to ascend to the number of seven Millions; of the Jews unto the number of one Million, and six hundred thousand, Women and children being computed: But in so great a multitude of Men, scarce a third part of them have their full Sight: All do in many places, labour in their Eyes, from the eating of Fruits, and the Drink of Water being over-added.

But, 5. *Paracelsus* put confidence in himself, not altogether in vain, touching his Elixir of Propriety, prepared of Saffron, Myrrhe, and Aloes, so he had not erred in the preparation of the same, but had composed that Medicine, after the manner of the Tree of Life: For as Myrrh keeps Mummy from an aptness of putrifying; if a passage of Myrrhe unto our constitutive Parts, be granted, the authority of Myrrhe for long Life, shall not be vain. But as to a renovation

vation so greatly praised by Paracelsus, which reneweth the Haires, Nails, and Teeth, together with an excluding of all Diseases: Surely the Haires and Nails, as they do sometimes fall off of their own accord: So also in any Age, they do easily grow, and their renewing is of little moment.

I have seen also, an old Man and an old Woman, whose Teeth having been once lost, were of their own accord renewed in the 63d. Year of their Age, also with childish Pains; Yet it denoted no long continuance of Life, because both of them died the same Year: For the promise of Paracelsus concerning the renewing again of Child-hood, hath raised up many unto a hope of long Life: To wit, they have thought, that from a renewing of the Teeth, and Nails, there would of necessity, be a renewing of Child-hood: Chiefly, because they should put off grayness, the token of Old Age, and the former colour of hairiness should return: But their error was from an undistinction: For Alexander makes mention; that he saw a Man of eighty Years of Age, in whom, as many Teeth as failed, new ones grew up; but he doth not therefore mention also his length of Life: And although he might also by accident, have been long lived; Yet seeing one doth not contain another in the Root, or necessary Causes; it was a faulty Argument, to derive from the one, the other, by a sequel:

Because Nature hath often attempted such kind of Renovations, under which, in the mean time, she hath cut off the Thred of long Life: For it is not unlike, that the Pear-Tree is every year renewed with Leaves: Yet not, that therefore, that Tree is long lived: the Turpentine Tree, or Cedar, or Firr Tree, of a short Life:

Yea, neither doth the Pear borrow any virtue of Long Life, because its Tree is renewed every Year.

Therefore the renewing of Medicines, hath deceived Paracelsus; because it is that, which proves health only, by reason of an intimate and supream cleansing of the similar Parts; but not the renewing Root of Life, or a prolonging of Life thereupon: For they have been deceived, because the Stag puts off his Hornes, and the Snake his old Skin, and are long-lived Brutes: And therefore, they have abusively referred that Renovation unto the Cause of a Life of long continuance: For Crabs, Spiders, Grasshoppers, and Insects of a shorter Life, do oftentimes happen to put off their Skin:

But on the opposite Part, a gelded Stag changeth not his Horns, because neither doth he make new ones; Yet he ceaseth not therefore, to be alike long-lived: For the Stag casts not away his Horns in time of Autumne, or Winter, while as great Beasts compose themselves unto a greater rest; but while he is fed with a new bud of Branches, wherein a renewing Faculty of his Bud is: as also, it is transferred on Stags, but not on Oxen; because the Stomack of the Stag, by a proper and specifical Ferment, preserves the budding Faculty or Virtue of young Sprouts, and derives it into the middle Life of the Stag: Which thing happens not unto a gelded one wanting Horns; as a Beard is denied to Eunuchs.

This sort of renewing therefore, is an Effect indeed, of a more flourishing or growing Life; yet not an unseparable token, as neither a conjoined Cause of long Life: For neither hath Renovation, long Life as a necessary Adjunct; nor on the other hand, is Renovation annexed to long Life: As is manifest in the Stag, Goose, &c.

Be it therefore, that every of the Arcanums of Paracelsus, do take away almost all Sickneses, renew the Nails, Haires, and Teeth; yet they cannot, first of all, make equal the unequal Strength of any failing part, much less vindicate the failing Powers from Death; and least of all, restore the same into a youthful Vigour. Therefore those Arcanums or Secrets, do not respect the Powers of the Organs, as neither long Life depending thereupon; but only the greatest cleansing or refining of all the Members, and Health sprung from thence.

All Diseases indeed, which either issue from Filths, which lurk in the Filths themselves, or lastly, which do further propagate Filths by their Contagion, are cured by the aforesaid Arcanums; but not those which do primarily concern the vital Powers: Not those I say, which contain a weakness inbred, or attained from a Disease, or Old Age, together with a diminishment of the Powers: For those of this sort, return not into their ancient State, but by the Remedies of long Life; neither yet, into their ancient State with a perfect and full restoration: For otherwise, this thing should conclude an absolute Immortality. For the Weakneses which invade Men from Gluttony, or Drunkenness, Leachery, &c. are very little restored by the Secrets of Paracelsus; but not unless an infirm Nature doth accompany them: For Madneses which arise from an evil framing or compofure, are not any thing restored; but those which have arisen from a remarkable

Animosity

Animosity of Pride, stand alwayes in fear of a relapse : But otherwise, the Phrensie, Doatage, Falling-evil, Raging Madneses of the Womb, of the Hypochondrials, and whatsoever Weakneses are made from some off-springs of Impurity, are perfectly and compleatly healed by the Remedies of *Paracelsus*.

Madneses therefore, which proceed from a notable Arrogancy, are indeed presently cured, but with the fear of some less relapse ; because those do argue a meer Defect of the imaginative Power : and therefore they so defile the Seed, that they being thenceforth translated into some Generations, do oft-times shine forth.

So also the Sons of Drunkards, do oftentimes retain the Tokens of vitiated Powers, as though the Sons, being Heires of their Fathers Crime, ought to pay the Punishments thereof : That is, strong or valiant Men, are generated by strong or valiant, and good Men. And on the other Hand, a bad Egg of an Evil Crow. For the Sons of Drunkards, are for the most part, drowsie in searching into things, stubborn or stedfast in their Conceits, Cup-shot or giddy in things to be done, and easily to be drawn aside into Vices.

At least wise, I doubt not, but that *Paracelsus* made use of his Arcanums, because he was he, who saw not only prosperous Cures to succeed ; but also, that some who the longer used them, were renewed in their Haires, Naites, and Teeth :

Notwithstanding, seeing he had not a long Life, his aforesaid Arcanums shall be for a Testimony unto us, concerning my Judgment delivered : For indeed a Will or Testament of *Paracelsus* is born about ; the which, because it contradicts the publick Authority drawn out of his Epitaph, which is seen in the Hospital of *Saltzburge*, in a Wall near the Altar of *St. Sebastian* ; and the which mentions, That he appointed his Goods to be distributed to the Poor, and to be honoured thereby ; Therefore that Testament, I believe, was feigned by the Haters of *Paracelsus*. Others therefore of that leaven, affirm that *Paracelsus* (a limited term being compacted with Satan) died in full Health : The which, contradicted the aforesaid Testament, from the published Language of his Enemies : To wit, wherein it is said, that himself was some dayes before his death, Diseased : And that Act of so great Guilt, contradicted, that he was so bountiful to the Poor.

There are also others, who say that he was taken away by Poyson ; For which, seeing Remedies were no less known unto him, and in readines, than for other Diseases, they supposed him to have been slain by the Powder of the Adamant eating out his Bowels : But I no way admire at the untimely Death of the Man, who was solicitous or carefully diligent from his Youth, about Chymical Secrets.

Most especially, if a too much Curiosity of searching into Science day and night, hath vexed those who were careless of their Life. For which of Mortal Men, may not the Fumigations of live Coales infect ? those of *Aqua Fortis*, graduating or exalting, and Arsenical things : And likewise a new dayly examination of *Antimonials* : The which, we through the long tediousness of experiencing, being not yet experienced, draw in from the malignity of those things, as being not admonished but by late experience : For what can the somewhat curious, and undaunted Young Beginner, in an Art so abstruse, otherwise do, and he refusing any other Master, besides the torture of the Fire ? Where indeed the Speculations of Art, are obscured from his desire, not indeed, that they may be abruptly known ; but rather, that they may not be known ? For Understanding is given only unto those that are chosen through a long preparation of Dayes and Works, to those that are furnished with sufficient Health and Money, nor those that have deserved Indignity through the load of Crimes.

I grant, that there are some Universal Medicines, which under a most exceeding grateful Unison of Nature, do unsensibly lead forth the bound Enemy after them, together with a famous clarifying or refining of the Organs.

I grant likewise that there are some appropriated ones, whereby they imitate the largeness of a Universal Medicine, in the Specificall directions of Diseases, take away the forreign Society of Impurities, and plainly lord it over the already contracted Vice ; no otherwise, than as an Axe plucks up a Tree with authority.

An Index or Table of the Secrets of *Paracelsus* ; is,

First of all, the Tincture of Life, reduced into the Wine of Life, from an untimely mineral Electrum or general composition of Mettals ; one part whereof is the first Metallus, but the other, the Essence of the Members.

And then follows *Mercurius Vitæ*, the off-spring of entire *Stibium*, which wholly sups up every Sinew of a Disease.

In the third place, is the Tincture of Lile, even that of Antimony, almost of the same efficacy with that going before, although of less efficacy.

In the fourth place, is Mercurius Diaphoreticus, being sweeter than Honey, and being fixed at the Fire, hath all the Properties of the Horizon of Sol: for it perfects whatsoever a Physician and Chyrurgion can wish for, in healing; yet it doth not so powerfully renew, as those Arcanums aforegoing.

His Liquor Alkalest is more eminent, being an immortal, unchangeable, and loosening or solving Water, and his circulated Salt, which reduceth every tangible Body into the Liquor of its concrete or composed Body.

The Element of Fire of Copper succeedeth, and the Element or Milk of Pearls. But the Essences of Gems and Herbs, are far less Arcanums than those aforesaid.

Lastly, the volatile Salts of Herbs, and Stones, do shew forth a precise particularity; neither do they reach unto the efficacy of Universal Medicines.

But his Corollate, the which one alone, is purgative by Stool, cures the Ulcers of the Lungs, Bladder, Wind-pipe, Kidneys, by purging; so that it also utterly roots out the Gout.

Indeed it is the Mercury of the Vulgar, from which, the Liquor Alkalest hath been once distilled, and it resides in the bottom, coagulated and powderable, being not anything increased, or diminished in its weight: From which Powder, the Water of the Whites of Eggs is to be co-hobated, until it hath attained the colour of Coral.

I praise the Lord of things, in an Abject or lowly Spirit; because he reveals his Secrets unto the little Ones of this World, and doth alwayes govern the Stern, least these his benefits should fall into the hands of the unworthy.

I have therefore discerned, that the Secrets of Paracelsus do take away Diseases; but that they reach not unto the Root of long Life.

I have also discerned, that Mineral Remedies, unto whatsoever the highest degree they are brought, yet that they are unfit for yielding Nourishment unto the first constitutive Parts; because they reserve the middle Life of the concrete Bodies from whence they were extracted: For, for that cause, they never wholly lay aside a mineral Disposition; Yea, and therefore they depart from the tenour of long Life.

Yea, neither shall I ever be easily induced to believe, that the Philosophers Stone can vitally be united with us, by reason of its exceeding immutable substance, which is incredibly fixed against the tortures of the Fire, being undissolvably homogeneous or simple in kind; that is, by reason of its every way impossibility of separation, destruction, and digestion; so far is it from conducing to long Life: Histories subscribe unto me, that none who obtained that Stone, enjoyed a long Life; but that a short Life hath befallen many, by reason of the dangers undergone in labouring.

But moreover, neither let Hucksters hope, that Meats which do mightily nourish, will perform long Life: For although they may afford strength unto those that are upon recovery; yet they afterwards weaken them, being nourished: The which, *Cæsar* also testifies: For the more tender Meats are easily consumed, breed tender Flesh, and suffumigate or smoakifie the vital Powers through their more greatly adust savour. But the Studies of Physicians, are buisied about the delights of the Kitchen, which they name the Dietary Part: for they have been misled into error, by thinking; that if Food of good Juice, and tender, being administered in a due dose, doth profit those upon recovery; they have thought also, that the more strong Persons, being manifoldly nourished with the same Food, shall be raised up into the highest increase of strength: For there is not a process made in feeding, as in Arithmetick, where ten Pounds lift up nine; and by consequence, a hundred Pounds, ninety: But he that eats very much, and drinks abundantly, shall not therefore become stronger than he that shall live more moderately: For truly, Nature keeps not so much the proportions of Numbers, as the proportions of the Powers of things alterable according to the Power of their own Blas. However it is, at least-wise, it succeeds with Physicians according to their desire: Because plenty of venal Blood breeds Excrements, Physicians are called for, and so they command the rules of Food at least-wise to profit themselves, and they shorten the Life in those that live medicinally, and miserably.

C H A P. CXVI.

The Mountain of the Lord.

WHo shall ascend into the Mountain of the Lord? Or who shall stand in his holy Place? *He that is innocent in his Hands, and of a clean Heart, who hath not betaken his Soul to Vanity, nor hath sworn in deceit to his Neighbour: this Man shall receive the blessing from the Lord, and mercy from God his Saviour: The Words sound, Eternal blessedness.* It is so. Notwithstanding, nothing hinders, but that that figural and typical Speech, may also unfold its Truth according to the Letter; seeing it must needs be, that the Type doth co-answer to the thing signified by the Type.

Truly, I have alwayes observed, that almost all the Mysteries of God were celebrated in mountains: For *Abraham* was commanded to ascend a Mountain, and there to sacrifice his only begotten Son, for a Figure of the Sacrifice that was to be offered in *Mount Calvary*. God commanded *Moses* to ascend up into a Mountain, that he might talk with him; and he gave him the Law: And *Moses* talked with him face to face, for the space of forty dayes and nights. In *Mount Horeb*, the Lord was transfigured, &c. All which things might have been done in the Desert, and the God of Armies could have encompassed *Moses* with Lightning and Fire, as well in a Plain, as in a Mountain, that no Mortal might have approached thereunto: but a Mountain was alwayes chosen from a privilege: And the blessing from the Lord is promised, in ascending unto the Mountain of the Lord: For the Lord could have signified his Precepts unto *Moses* in a shorter space; neither was there need of forty continual Dayes and Nights, but that also, delay, might by its weight (for delay in natural things, is required for a just or due Efficacy of the maturities of things) denote some hidden Mystery: For naturally, I understand that in Mountaines wanting an endemical malignity, there is, not only a most pure Air, far remote from Dreg and Corruption, commonly seperated from Errours, and Defects, and by reason of Colds, most refined from all defilement: but also that there is the Place, from whence, through the continuation of its Magnal, there is a most dispatched in-beaming of the heavenly Bodies, or Influences; because a drinking in of a most pure Skie: For I remembred, that one Morning, I being fasting, felt in the Alpes, the sweetness of an in-breathed Air, the which I never before nor after, felt in all my Life: For it is certain, that the Almighty hath not framed so great a Bunch in Nature, in vain: And it is certain, that all the Riches of the World are issued out of Mountains: And then, the best Fountains, and most famous Rivers are conversant with us out of Mountains, by reason of their steepness.

In the next place, all Nations which are the inhabitants of Mountains, are of an hardier Body, and of a more vigorous or flourishing Life, than those who inhabit pleasant Fields: Which Effects do manifest their Causes, because a more sweet, and purer Air is there in-breathed, and every Gas being deprived of its Filths, returns into the pure matter of Water. But that God lifts up so great an Earth, or the very face of the Earth into an heap, or hath built so many great or rocky Stones upon the same, or hath conjoynd it into one rocky Stone, nor yet hath enriched it with any Mineral, in which respect he might seem to have collected so great an heap; neither doth he rain down Fountains, nor lastly hath poured forth Fruits worthy of so great Borders; but that he hath exalted it above all Turbulences of Air and Clouds, whirlings of Windes, and monstrous omens of Thunder-bolts, into a most pleasing rest of Air; Surely, that thing seems to me, to be dedicated unto a famous Mystery: For the promised blessing did of old, for the most part, respect long Life, and the Commodities thereof, and the fruitfulness of off-springs (*that thou mayest be long lived upon the Earth, &c.*) Blessing therefore unto those that ascend into the Mountain of the Lord, according to the Letter, seems in Nature, to have respect unto the Endowments of long Life: For he, who is alone, and wholly the Life, and Prince of Life, doth likewise, give long Life unto none, not so much as by natural Means, *who hath betaken his Soul to Vanity*. Therefore the blessing of ascending into the Mountain of the Lord, seemes to contain a long continuance of Life.

Therefore those most high Mountains, which are read to be endowed by Nature for no Fruits sake, and the which pertain unto the sweetness of a not much disturbed Air, seem

to promise a singular Image or Likeness of the Mountain of the Lord, and of a long Life : And that thing is from a certain singular prerogative before other Mountains, and that they may as it were by that right, have the surname of the Mountain of the Lord : for if it reach beyond all the incidencies of inferiour things, it after a singular manner, promiseth unto me, that God is there after a peculiar manner. For he that was not in the Whirle-wind, but in the sweet Air, was perceived by *Elias* : He, he I say, hath his Mansion in the same place ; that is, the Prince of Life doth there give his blessing : Not indeed, that which may be communicated in a few houres ; but being signified to *Moses* in Mount *Sinai*, in the revolution of forty dayes (to wit, by two full Moons :) For he who could every year continually stay for forty dayes in the Mountain of Rest, about the Feast of the building of Tabernacles, the Commodities of living being called unto him from elsewhere, I divine that he might much profit himself for long Life ; especially if he were there daily refreshed with a Medicine prepared of the Tree of Life ; because that in such a Mountain, by reason of a notable Purity of the Air, there is a greater co-mixture of the Nourishment with the Body nourished, and a more piercing access unto the first constitutive parts. Lastly, although the highest Mountains do bear before them the priviledge of long Life ; Yet those that are less high, promise some singular thing, from the sense perceived in the Alpes. Nevertheless, I alwayes reject Mountains, which breath forth some Mineral Gas : For therefore, in Chymical things, Arsenick hath obtained the name of the fume of Mettals. But unto whom the Commodity of living in a healthy Mountain, should be granted, and that not great with Child with the Fruits of Minerals, they certainly should rejoyce in the benefit of long Life, so far as the Nature of the place hath bestowed.

C H A P. CXVI.

The Tree of Life.

I Am constrained to believe that there is the Stone which makes Gold, and which makes Silver ; because I have at distinct turns, made projection with my hand, of one grain of the Powder, upon some thousand grains of hot Quick-silver ; and the buisness succeeded in the Fire, even as Books do promise ; a Circle of many People standing by, together with a tickling Admiration of us all. But it was not a thing extracted out of Gold, because it should change as many weights of Quick-silver, as there were of Gold from whence it had been extracted. First of all, that being granted, as yet, at least-wise, a true transmutation of one thing into another, and that indeed, a manifold one, should stand. Secondly, those that work on Gold, and Money-makers, have known, that nothing which is not Mercurial, can enter (by flowing) into Mettals, or be co-melted with them ; but swims a-top in the flowing. Therefore thirdly, that Extraction should be fatter than any Mettal is, if it ought to tinge so many thousand Parts. Fourthly, that Extraction should be no longer a Mettal, seeing it should exceed the perfection of the purest Mettal, so many thousand times : For a Mettal doth not suffer so many degrees of largeness in its perfection, by how many times the Powder which maketh Gold, converts an inferiour Mettal into true Gold. Fifthly, He who first gave me the Gold-making Powder, had likewise also, at least as much of it, as might be sufficient for changing two hundred thousand Pounds of Gold : But there is none who may have more than a tenfold quantity of Gold ; and if he should have it, he should destroy it, that he might at length, make as much Gold from thence : For he gave me perhaps half a grain of that Powder, and nine ounces and three quarters of Quick-silver were thereby transchanged : But that Gold, a strange Man, being a Friend of one evenings acquaintance, gave me. However therefore the Phylosophers Stone be in the Nature of things ; yet I have alwayes supposed for the reasons aforesaid, that no Metallick Remedy contains the blessing of the Tree of Life. I willingly confesse in the mean time, that that Stone is in its Beginnings, partaker of the Life of a *Zoophyte* or Plant-animal, and that it hath that Life, distinct from a vegetative, and sensitive Life ; the which, for this Cause, is an un-named Life : For according to the unanimous Writings of wise Men ; The Principles of the Stone being once conjoynd to a glassen Egg, if through the Vice of interrupted Warmth, it once happen, that they are even but a little while plainly cooled, they so die, that there is no remaining hope of a future Stone : the which likewise happens also in the nourishing warmth of Eggs : And therefore I have judged, that it is to be believed, that these do live also in a like Life, with the Beginnings of the Stone : And that is a true Life, which a true Death testifies ; because that that errour is never to be corrected by any Paines ; it being thus once dead, there is no hope of restitution left for the future.

L I I I I

I know

I know in the next place, that the Tree of Life is in vain to be sought from Animals, how long lived soever: In all which, I have found a voluntary Death, a frail Body, and slideable every hour, or the way of all Flesh: For how shall they give a long Life, the which they contain not in themselves? Seeing, if they are long lived, at least-wise, they have put off their own Life, while they are taken into use. I have sometimes beheld Stones, that they did contain sometimes live Creatures within them, that they live for the space of five Years, and are preserved from Death without Nourishments. *Paracelsus* thinks that the whole heap of Stones, and the whole World, was at sometime, one only Stone, or at least-wise a single stony Liquor, the which being by degrees distinguished into Mettals, the fire-Stone, great or rocky Stones, small Stones, and Salts, afforded the beginnings of Vitality by many creeping things; and so that, if they detain Toads, and Salamanders alive, perhaps for an Age, without Food, and as it were snorting with a deep drowsiness; I doubted, whether the Stones, the Sheaths and Wombs of those living Creatures might be the partakers of long life. But the Scripture perswaded me, that the life of creeping things is horrid and hateful unto us: Wherefore I lookt back unto the more pretious Gems: Notwithstanding, neither have I found in those, the Foot-steps of long Life, whether they were Essences, or next, the magisteries of those; because they cannot be immediately assimilated, or adjoynd unto our first constitutive Parts: or if at length, they are after some sort adjoynd unto them, and as long as we grow; at least-wise, they are spoyled of their former length of Life, after the manner of other Nourishments, they nourishingly put on the Nature of Flesh, and are constrained to follow it. I have learned therefore, that Gems or pretious Stones, however they might be endowed with a medicinal Power, to make for long Life; Yet that they never wholly put off a mineral disposition; and so that neither are they co-mixable with the first constituting Parts: Yea, although they should be co-mingled with them, yet they should not be serviceable for a long Life: Because, whatsoever refresheth not the vital Powers, doth not also withstand the intestine necessities of Death, and much less, if it resist the Wedlock of our solid Members. But Aromatical or spicie Herbs, should snatch away this victory from their Companions, if the Tree of Life should be hereby; as they are the more grateful, and spiritual: But that which is the most refined Liquor, and whatsoever contains the whole Crasis of the Herb, doth notwithstanding, respect only Singularities, and Healing, for that the composed Body from whence it issued, is not it self, partaker in it self, of long Life: For the Liquor which knowes not how to preserve its concrete Body, the which, it from the Beginning, married through its least parts, from destruction; after what sort shall it be able, being spoyled of its Virtues or Faculties, to defend our Flesh, which is soon flowing abroad with a hastening Corruption, from Death: And so from hence, the Tree of Life began to be accounted immortal with me, not subject to Old Age, not to the discommodities of Ages, and the which should contain, or admit of no-Excrements, and much less should propagate the same: But rather, should by a certain excellency, if any had once, at sometime lighted on it, brush them off, by reason of the Virtue of its expelling and repulsing: But seeing it is the property of Poyson, by corrupting, to convert Good into Evil; it hath seemed meet to me to search diligently into the Tree of Life, wherein the Poysons themselves might die, being overcome by the goodness of the Tree: Wherefore also, it should refuse them being not yet admitted, and which should correct and overcome those Poysons which were once admitted: For if it ought not to admit of Excrements, which are certain Poysons of the lowest degree; much more shall it divert, drive back, and weaken those which are of a more profound, and manifest hostility or enmity: For unless it shall do that, it shall assume the name of the Tree of Life to it self, in vain. I have observed, that the Colts which were generated of a labouring Beast, and an old Horse, were soon enfeebled or barren, weak in the vigour of their Life, and that they had deeper Pits above their Eyes, than he which had sprang from a younger Horse: But that an old Willow, yields new Sprouts, nothing more barren if they are planted, than the Sprouts of a new stem: Therefore I have found, that together with the Seed of living Creatures, Old Age departs into their off-springs, but that thing is not so easily manifest in the Young of a Tree: Yea, if there be a Long Life in some Beasts, yet it is so enclosed, that it doth not depart from a singularity, and is not communicable out of the Species. In the next place, I have examined Dew, by a resolution of its Parts: For it afforded a sugary Salt, helping great Diseases, but surely not any thing profitable for long Life: For by reason of the unlimited generality of its goodness, it contained not too much Life, as the Properties of Nourishment. At length, I concluded with my self, that whatsoever it were that should supply the Place of the Tree of Life, it was the Young or Off-spring of a Tree: And then, that this Medicine was to be fetched out of a most wholesom, odoriferous

rous, balsamical, and almost immortal Shrub: And the which, should be of the subtlest and purest Parts, from a proper Endowment, and native constitution of its composed Body; and the which, should every way resist any kind of Corruptions, bred, or obtained through the Error of Art, or Nature. At length, that by Art and labour, it should obtain the utmost bound of perfection, and a liberty of co-mixing with us: wherefore, it was chiefly necessary, that that manifold natural Endowment should not any thing be broken in time of its preparation, or be changed by the Fire; and so that there is need of a not burning Fire, for the exaltation of its Faculties, and sequestration of Impediments; to wit, that it may make any Mortals, partakers for the compleating of uncorruptibleness, or for the long continuance of Life, to take us by the hand (so far as might be possible for the receiver, corrupted Nature) by a communicating of its Faculties or Virtues: Surely, it cannot therefore feel any singular Property of passion of a Member, or obey partialities: But it is of necessity, that it be an entire Balsam of Life, reduced unto a seminal Being, remaining in its natural Endowments, grateful in its Odour, throughout all the diligent examinations of its middle Life, and *Magnum Oportet*: So that, when as the Nourishments, at length thoroughly mingled therewith, are dead to their Office; at least-wise, the smoakiness of the same, may by their fumigation, no longer batter and extenuate the implanted Spirits; but rather, may refresh them; and thus far it emulates a certain permanency of uncorruptibleness, and keeps it continued and propagated in the nourishable Humour, under our middle Life: The favour therefore, of its native Endowment, procures its Love with the sealed Powers of the implanted Spirits: its preparation therefore, refuseth an alteration of its native Virtue, and performeth a more full entrance, and application of Virtue; So that, as it were an Out-law, and besides an accustomed wont, it is admitted as conscious, within the secret Chambers of Life, that it may there undergo an Information: For in some Climates, all things are produced more strong and excellent, by reason of the nobilities of a nourishable Juice; and the which therefore, it is certain, do very much excel as for long Life: For so the Sweat of some Persons smells of the Goat or Rank; but that of others, doth not far differ from a Fragrancy. That one thing, I say, in long Life, is only to be procured, least the nourishable Humor, after that it hath ceased from its Offices, being dismissed by transpiration, looseth its Grace, through defect whereof, I have described a short Life: For I have taught elsewhere, that a Sow, or a Goose being nourished only by Fishes, do yield Fleshes, which tastfully resemble the detestable Grease of Fishes. Wherefore, let the Medicine of the Tree of Life, be an odoriferous Balsam, Spicie, grateful to Nature, seasoning the Blood with an excelling goodness, and a nourishment now applied after the manner of a Dew: Even so that, through the vigour of its uncorruptibleness, its balsamical Faculty may be continued even unto the utmost Limits of its exhalation out of the Body. Wherefore we must beware of this one only thing, that the fire do not alter this Fruit by a separating distillation; but that a proper division of that which is heterogeneous, be appointed, as being sequestred into its bottoms, for a greater subtilizing of Purity and Simplicity, and sealing of its Virtues: For in *Eden*, the Stomack subdued the Food from a proper vigour or force; for all things willingly obeyed the Stomack, without the strife of a middle Life; it being that, which they through the decision of the Stomack, kept after some sort safe, even until the deluge of Waters, till that, through a succession of Years and Propagations, all things by degrees, went to ruine: Then the seminal Being was no longer drawn out of Meats, after that the term of Life was restrained unto 120, and afterwards, unto 80 Years: For the Being of Essence, which before, was fetcht out of Meats, bewrayed it self no longer; because the Stomack had enough to do, only to draw forth the Being of Nourishment. From hence it is manifest, that although the Tree of Life was present with us from *Eden*, yet that it will not profit us as it did the first of the Fathers: By consequence also, that the Balsam of our vital Tree, is not so profitable unto Persons of ripe years, as unto Children: For he that hath almost run out the stage of Life, every such one perceives an help according to a Model, or after a small manner; Seeing all things in Nature, are received after the manner of the Persons, and place receiving, and of circumstances: For the Friends of *Job* wept with him seven dayes and nights, without eating, drinking, and difference of health: The which, is now at this day, scarce possible for any mortal Man to do: Therefore the strengths of such a life, should more profit by our Tree, than I, an old Man, who almost worn out with the offences, and labours of Chymistry, and the injuries of Tribulations and Persecutions: *So we Bees do not provide Honey for our selves*. Whereunto is added, that *Eden* was of it self a preserver of Long Life, through the wholesomeness of the place; but that, but a few Paces from thence, there was the command of Death, Corruption, and Infirmities: For if Credit be to be

given to Histories, there are also places at this day, whereunto a Life of three hundred years is ordinary: For where long-lived Persons are born, they are also nourished: But there are other places near at hand, where a renewed tyranny of interchanges, shortens the Life; for so, some Provincial Diseases are accustomed. Therefore mountainous Places which have not the Gas of Minerals (as the Forrest of *Arden*, *Asturia*, or the *Pyrenean* Mountains, &c.) nor those subjected unto the natural Moisture of Lakes; because the bountiful Communications of the Stars do reflect and breath a pure Air, and do make for Long Life: Even as also, a plain Field which knowes not the Incitements of the Throat, adds as much to long Life, as fulness is an enemy to long Life; for the stuffings of Meats do weary the miserable Powers, to wit, that they being as it were worn out with labour, die or go to ruine before their time: which things being thus revolved with my self for full three dayes space, from whence a Medicine for long Life was to be fetched; *Opobalsamum* notably smiled on me; not indeed that of *Pern*, or the Gums of *Capaida* of *Brasile*; But the true *Egyptian* opobalsamum noted in the Scriptures, and primitive, it being the Queen-tear of a low Shrub, scarce saleable to Kings: For I confesse I have worthily attributed very much perfection to this Being: And although there were enough of it to be found; yet it doth as yet decline from the perfection of the Tree of Life, because that Shrub is so frail or mortal. And while I variously wandred in Nature, that I might view the Tree of Life; at length, without the day, and beyond the beginning of the night, I saw in a dream, the whole Face of the Earth, even as it stood forsaken, and empty or void at the beginning of the Creation; then afterwards, how it was, while as it being fresh, waxed on every side green with its Plants: Again also, as it lay hid under the Floud: For I saw all the Species of Plants to be kept under the Waters; Yet presently after the Floud, that they all did enter into the way of interchanges enjoyned to them, which was to be continued by their Species and Seeds: I saw, I say, in the top of Mount *Libanus*, the Cedars to have remained whole under the Deluge, by the Word of the most Glorious God, and that they, in a certain number, did as yet there remain: And presently afterwards, I returned to my self. But I afterwards considered at leisure, that the Ark which ought to save Mankind from destruction, was commanded to be framed of the incorruptible Wood *Cetim*: For the World had endured, perhaps 1652 Years: but *Noah* proceeded slowly in its building, for an hundred solary years: And therefore he took Wood, and Rasters which were not to undergo any dammage in all that time. A leprous Person being separated from the People, coming to the Priest, bare the Wood *Cetim* in his hand, that he might be cleansed. In the feast of the building of Tabernacles, every Hebrew carried Cedar, and Branches of Myrrh, that God might be mindful in the rain of the whole Earth, that he appointed the manners of the Times, and the Stars: I therefore understood by the Cedar, long Life, likewise the blessings of the Times or Seasons, and of the Stars, and also, that in a mystical sense, cleansing was denoted; but that in this Age it was also to be obtained: For other vital things, do soon wither with Old Age; but the one only Cedar in number, by a famous mystery, through the uncorrupted substance of its Wood, and its vegetative Faculty surviving, promisseth long Life, because it containeth it: For the folding Doors of the Temple of *Salomon*, were commanded to be framed of the Wood *Cetim*, with Gold, as it were a more vile covering or involvement. Moreover, it is without controversie in the Church of God, that the Cedar in *Libanus*, in the Temple, in the Figure of the Ark, in the cleansing of the Leprosie, and in the feast of the building of Tabernacles, did represent the Mother of God, the Virgin Queen of Heaven, an incorruptible Vessel, a Tree which brought forth for us, Eternal Life in the Flesh: the Patroness I say, of the Poor, and Mine: But the place of the Cedar in *Libanus*, exceeding the coldest folding door of the Air, covered with Snowes, denotes the unspotted Integrity of the God-bearing Virgin: And so, if the Tree denotes the holy Virgin, especially, conjoynly with so many mysteries, its no wonder that the Cedar doth signifie the Tree of this Life, also in the world: For indeed, there was in the dayes of *David*, an aged Cedar in *Libanus*, because it was that, which by reason of its excellent taleness, was from that time, worthy of a mystical sense: Wherefore, either it being there planted after the Floud, doth as yet hitherto continue the same in number, safe: or a good while before, and perhaps from the cradles of the World, according to the Vision of the Dream: Which thing, after what manner soever it may be taken; at least-wise, it shews that the Cedar despiseth the discommodities of Old Age: But he is not from a Cedar his Parent, planted after the Floud; because that Parent also of the Cedar, was preserved under the Deluge; and much more easily afterwards, than that which remains from the daies of *David*, even until this time. Let those laugh that will, at that age of the Cedar in *Libanus*, and let them say, that Modern ones were raised

raised up by a new Branch, or by Seed falling down : But that being supposed, at this day also, new ones had dayly come forth into a great Wood, where notwithstanding, no new Cedar growes. But moreover, from thence I gather, that the same Cedar in number doth now persist, which was even before the Flood, yea even from the Creation of the World : Because it was given for a Mark of resemblance to the blessed Virgin.

But moreover, for our Magistery, the Fruit of the Cedar is not to be taken ; for that, the end thereof is not for a simple Being in the appointment of the Properties of the Cedar ; but only for a propagation of the Species, which contradicteth long Life from the Foundation : The Wood *Cetim* it self therefore, is to be taken, which is so much exalted in the holy Scripture : Therefore not the Bark, not the Fruit, not the Root, nor the Leaves, are the ultimate end whither Nature hath had respect for long Life : And so that the Cedar, perhaps also is herein distinct from the Tree of Life in *Eden*. A matter therefore, of a Tree which knowes not how to die, is found, whose unputrifiable Wood (and by reason of its many Properties being in a mystical Sense designed to the holy Virgin) is that which brings forth Life to the World, that it may redeem Death. But the preparation thereof, is the most exceeding difficult of all those things which fall under the Labour of Wisdom : For this Cause indeed, Monarchs want a long Life ; because there is none which hath known how to prepare it : For none who is truly a Philosopher, is a Minstrel, neither doth he follow Princes, and flatter them ; for because he stands in need of nothing, he despiseth whatsoever a Prince can give. The Tree of Life therefore alone, refresheth the decayed Faculties, and for some time, detaineth the Life in its flowing : But the difficulty of preparing it, consisteth in this, that the Wood ought to be resolved without a dissolution of its Faculties, by a luke-warmth, such as is that of the Sun in *March*, even unto its first Being : In which Being only, is granted unto it, a fermental Power of preserving and seasoning, with an ingress unto the first constitutives of us, and of insinuating it self into the familiarity of the Spirits implanted throughout all the Organs. But there is in the Juice of this kind of resolving, the entire Virtue of the Cedar ; to wit, a vital one, together with every seminal and formal Property of long Life : For the whole lump of the Wood is dissolved into a Juice, which being otherwise, distilled, is transchanged, and made a certain new Creature ; the which *Aqua Vita* being distilled out of Graines, or Ales, doth also prove ; likewise the Oyl that is distilled out of Woods, yea out of the very Oyl of Olives it self. The practise thereof, is this ; Resolve the pieces of the Wood *Cetim*, with a like weight of the Liquor Alkahest, in a sealed Glas, under a nourishing luke-warmth ; and within seven dayes, thou shalt see the whole Wood to have passed over into a milky Liquor : But presently, about the fifteenth day, a twofold Oyl distinctly swims a top, the which, is increased even for a Month, and is more clearly separated : But then, let the Oyl be separated from the Water by manual Operation : Then distil thou the Water in a Bath, and the Liquor Alkahest remains in the bottom in its own original weight : but let the Oyl be nourished with the Water for full three months space, with a slow luke-warmth, and the whole Oyl assumes the Nature of a Salt, and shall thorowly mingle it self with the Water : and it is the first Being of the Cedar. But as yet, a few things concerning the length of Life ; because I being an old Man do pursue these things, and I my self am about to die. My Mind breathed some unheard of thing within : but I, as unprofitable for this Life, shall be buried : Because the Spirit the Porter, withdrew the Bottle by the command of him, before whom, the whole World is as a Mushroom. Let the praise be to him, who hath given, and who hath taken away that which was his own. The Schools therefore, may deservedly upbraid me : Thou miserable Man, a Man of small note, a Man of great ambition, an old Man, hast paradoxally come to late, that with thy Song in the commendation of Cedar, thou shouldst over-spread the World with mists : The Histories and Virtues of Plants are known to our Herbarists : But thou, that thou maiest vaunt of an unheard of devise concerning long Life, as a Paradoxal Man, proceedest to be mad with thy Cedar : Go to, if there be so great Power in the Cedar, for Life, why are not all Kings long-lived ? From whence dost thou as a new guest, come ? produce thy Learning, and experience whereby thou wilt be believed : For as a Lawier bluntheth to speak without Law, so doth a Physitian without Experience : For thou canst not deny, but that the decoctions of the Leaves, Kernels, Wood, Bark, Root, or Rosin of Cedar, had long since produced a continued Life : But nothing of these things is manifest by our Herbarists : Thou therefore dost deter or fright us away, through an hidden manner of preparation, and by a crabbed Style of a smoak-selling Art, desirest to involve a feigned mystery of Cedar : Which thing (the Alkahestical Mask being laid aside, it being taken up, only to hide thy improvident rashness) almost all the learned will laugh at, who suffer not themselves to be led
aside

aside into new precepts, by Dreams, or feigned Exstasies. This Argument springs partly from an inveterate hatred towards us, and partly from an antient Simplicity: For how much soever it concerns my person, of writing unwonted rashnesses; God hath known that I write those things which I know to be true. I give him thanks, that when as he had conferred on me five Talents, and I had made my self unworthy, and for this Cause, had made a divorce before him, it pleased his divine goodness, to take from me three, and to leave me as yet two; that so he might expect me for better Fruit: He had rather I say, impoverish me, and suffer me not to be profitable to very many, so he might but save me from the Perils of this World: *Let eternal Sanctification be unto him.* But as the argument of the Schools is supported with the appearances of Decoctions and Broaths, surely that had proceeded from a simple rudeness: For truly none hath hitherto, in acting, plow'd up the Faculties of things: Therefore it is supposed, that although many things are made more acute by distilling, and so the more active; yet by that very thing, that they depart and are estranged from the genuine Property of the Seeds; because the Fire is an artificial Death, the which, if there be made an open Flame, happens through an extinguishment of the Seeds and the Archeus: But a natural Death of things, presupposeth a weariness of the Seeds: But an artificial Death, which is not made by a consuming of the Flame, separates indeed things volatile from things fixed, together with a dissolution and death of the last Life of the composed Body: But therefore also the former Faculties are altered and estranged by the Fire, and a new Creature riseth again out of the fire, from a material Disposition, from the antient Properties of the Being, through an inversion or turning in and out, which is easie to be seen in the artificial Death: So indeed, most volatile Salts, which by a co-melting, do make a conjunction with the Oyl of the thing, are fixed into a Coal, the which, at length, the fatness being burnt up, returns into ashes.

There are also fugitive Salts, which do act by lurking within the fatnesses of Oyls, do attempt a new product: So that Oyls, otherwise sufficiently flowing, are changed through the combination of Salts: Some things therefore become soapy, some things lay up smoakinesses; at leastwise, all adust things contract a Corruption of Matter, and are throughly changed into another thing; for nothing of the old remaineth: Because that is the property of Fire, not indeed, simply to separate; but by its own authority, to alter and change under it self. Therefore it is not lawful to weigh the Faculties or Virtues of distilled things, by the composed Body from whence they issue: neither is it lawful to believe, that although the Virtues of things are not abolished, not extinguished, or plainly killed by the fire, therefore the antient Virtues of things are not renewed within, by Adustion: But those things which are made new by the fire, are oftentimes made worse, but also they are oft-times, so distinct from themselves as they were before, that they are made an hundred-fold better.

In the next place, there are Simples, which by seething, do melt their Muscilage or Gum, and in this respect, do transmit their Virtues into the Broath of the Decoction.

First of all, they do not therefore notwithstanding, retain the same Faculty which they had in their entire composed Body; but their Action is alwayes feeble.

For first of all, they ought to be concocted in the Stomack, after the manner of Meats: Most of whom, although from the property of *Magnum Oporter*, they do in favour shew forth some thing of their former Virtues, yet these are either cast forth of doors together with Excrements, or being rashly concocted, and appropriated, do stir up nothing but the brawlings of an unaccustomed heterogeniety or diversity of kind, instead of a Remedy: Or at leastwise, if they affect the Blood and Flesh with their Odour, they promise nothing but a feeble help; So that also, from hence, a Quartane the inhabitant of the Spleen, doth hitherto remain untouched, to the mockery of Physitians. But that something may be admitted into the Family-administration of the Spirits, and Family of the solid constituting Parts, it is not that that may any way be hoped for by Decoctions, as neither by Distillation, which through the intervening of an artificial Death, wholly puts off every perfect Act of long Life, which the Wood encloseth in it self. But the Juice, Powder, or Conserves fetched from the Cedar, are such strangers unto us, that unless it be subdued by the method of its first Being, it promiseth not any thing of Familiarity with us: Far off surely, that it should overcome our Nature, and endow it with its uncorruptibleness. Distilled things therefore, have nothing of moment, and crude Simples nothing of moment (with whatever noble Faculty they may shine) for long Life: For it behoves, that the uncorruptibleness of the Cedar being exactly preserved, as ignorant of Death, nor the bounty thereof toward us being in the least worsted or diminished, every foreign impediment be separated from it, the which, else through the much strife of our Archeus, is reflected

flected into the Being of Nourishment, but not into the Being of Effence; Yet so, that a Penetration, Communication, and Conspiracy with the first constituting Parts of us, and refreshment of the in-existing Faculties, be over and above added thereunto. Let the Schools of *Galen* be in the mean time, amazed at the unwonted manner of preparing and describing it, and let them laugh at my promises; let them believe them to be meer Dreams; let every Bird sing according to his own beak; be it lawful for me to be vilely esteemed by them: For truly, I have long since covered my Ears with a thick covering, against aged Obloquies expressed for the sake of Gain alone.

I have written concerning long Life, what I know to be true; not indeed for Young Beginners, as neither to be comprehended by readings; for God hath known why he hath given unto the Goat, a short Taile. There shall at sometime be an Adeptist (in its own maturity of Dayes) who shall understand that I have spoken Truth. But as to that which pertains to the Sentence attained in the Dream; He may read the Dream of *Nebuchadnezzar*, which was known to *Daniel* alone; Yet he had commanded all his wise Men to be limited to the Fire, unless they should shew the undoubted Explication of the Dream: surely such Dreams do promise a certain certainty within, neither that they are vain: He who oft-times gives the Dreams, may presently also unlock the same with so great a certainty of them, that Death nor Hell are able to bring in a doubt. But although I prefer the Cedar before all Woods; yet perhaps *India* affords Woods not any thing inferior to the Cedar of the Shoar of *Palastina*; Yet I have alwayes given a Primate-ship unto the Authority of the holy Scriptures; Yet not that therefore the hand of the Lord hath bound up it self to the Cedar: but what things I have written of the Cedar, I have offered for a memorial of honour towards God, who hath been propitious or favourable unto me. But other things which there are concerning the Cedar, shall be buried with me; for the World is not capable thereof. But that which the Moderns do boast of the Elixir of Propriety, that doth not succeed according to the Description of *Paracelsus*: For the three Simples being shut up together in a most large, and sealed glassen Vessel, afford at least, a few small dorps of a milkie Liquor, and some small drops of a somewhat palish Oyl, after two dayes space, and as many, not more, after two Months; but scarce a third part of the matter suffers by the Fire, but that a collection of corrupt Matter is threatned: but if it be but a little more strongly urged, the Vessel, how most large soever, bursts asunder: But if the Ingredients be connexed with the middle Liquor, the thing it self is at length, of no worth. Indeed *Paracelsus* hath been silent (even as in most of his other Descriptions) as to the addition of the Liquor Alkahest, wherewith the whole matter is presently solved throughout its whole, and the Medicine succeeds according to his Description: For there is in this Elixir, a subtille Fragrancy, by reason whereof, it preserves the liquid matter of our Body from Corruption, as it were a Balsam: for with one only small drop being given to drink in Wine, I have oftentimes so refreshed those that were desperate through a contagious Fever, that they have as yet dined with me at noon, who at midnight had received the last or extream unction of holy Oyl. Truly through want of the Being of Cedar, the Elixir of Propriety doth relieve. But what shall I say? The Alkahest is required; which is not granted to thinkers, but only to knowers, and that indeed, to those on whom Knowledge is doubled. Wherefore I will declare a certain trivial thing for the use of the vulgar, for the preservation of long Life.

In the Year 1600, a certain Man serving in the accounts for military Provision, but being burdened with a numerous and small off-spring, complains that he was in the 58th. Year of his Age; but if he should fail, it would happen that his Children would beg their Bread from door to door: He begged of me some defence of Life: I being as yet a young Man, condoling his Condition, considered that the Odour of a Sulphurous Torch being enflamed, did preserve Wines from Corruption: Therefore I inferred in my mind, that the sharp distillation of Sulphur, did so necessarily contain this Fume of Sulphur, and plainly all the Odour thereof, that it self was nothing but the very Fume of Sulphur combined into its Mercurial Salt.

Then in the next place, I supposed, that our venal Blood was the Wine of our Life, and that being preserved, if it did not give a Long Life, at least-wise, it would defend from many Diseases of Corruptions, through the efficiency whereof, the Life would at least, be after some sort defended in Health, free from Diseases, and free from Pains: Wherefore I gave him a Bottle full of the distilled Liquor of Sulphur, and likewise taught him the art of preparing that Oyl from enflamed Sulphur. Moreover I bad him, that at every meal, he should take two small drops at least, of that Liquor, in his first draught

draught of Ale or Beer, neither that as wanton, he should easily exceed that Dose; I supposing that two small drops did contain much Fume of the Sulphur. That Man obeyed my admonitions, and he as yet walks through the Streets of *Bruxels*, in the Year 1641. And which is more famous, he never at all lay by it with any Disease, in all that forty Years; although he once, through a fall upon the Ice, brake his Leg nigh the Ham; Yet he alwayes remained free from a Fever, slender and lean, although the old Man lived in the penury of conveniencies: The name of the old Man, is *John Mass*, who served in the Bed-Chamber of *Rythovius* Bishop of *Yper*, when the Counts, *Edmond*, and *Horn*, were beheaded; and then was he five and twenty Years of Age.

EDICINE

TO THE
ILLUSTRIOUS MAN
THE LORD
CASPAR ULDARICK,

BARON of Hoensbroeck, COMMENDATOR of the Teu-
tonick Order, of the sacred Romane Empire, in Gemert; A
FAVOURER of good ARTS, and his singular
FRIEND and PATRON.

Hou remembreſt, that the Illuſtrious Lord, Lord *Werner Spies* of *Bullenſheim*, Provincial Commendator of the *Teutonic* Order of the Confluence of *Baillive*, and Commendator of the Houſe of *Putzenburg* of *Mecheline*, Lord in *Elſen* and *Herrn-Mulheim*, &c. of late thy Uncle, the moſt favourable of my Friends, three dayes before his Death, ſent his Horſe-litter for me, becauſe he lay ſick of a cruel *Tertian Ague*; and when I came unto him, that he as yet ſaluted me with his Head, and offered to embrace me in both his Arms: I was willing preſently to ſuccour the ſame man, becauſe an intermitting pulſe bad me to make haſte; but that his Friends deferred the promiſed help, till the afternoon, that the Phyſicians might be preſent: Who when they had explained their own endeavour, and that now in 13 dayes, they had cut a Vein twice, and as often purged him; but that they had nourished him with Broaths and Whey; Laſtly, that they had ſtrengthened him with the Confections, *Alkermes*, and *De Hyacinthos*; and therefore, that they muſt proceed in the ſame path, except, that at length, his Legs and Arms were to be Ulcerated by *Cantharides*: But that I answered; Ye ſee, oh my men Friends, how much hope theſe ſame Remedies have afforded, increaſed, and left: Wherefore if ye proceed on in the ſame way, to morrow will yield horrors and the agony of Death, for a concluſion of the Tragedy. I pray you let five hours at leaſt, be granted unto me, and it will as yet appear, whether that famous man commanded me, his moſt loving Friend, to be ſent for yeſterday in vain.

They readily conſented, except one *Fonſeca*, perhaps, becauſe he was a *Portugal*, who deſpiſed Chymical Remedies, as being fiery, and that they poured Oyl on the Fire. And ſo by the Vote of one Phyſician, that Knight underwent
m m m m m Death,

The Epistle Dedicatory.

Death. For although Priests, his Friends, stood by, also Noble Persons of his household; yet they more hoped in the accustomed Remedies, and the Votes of many, than in, as yet, unknown Medicines. Therefore he began to be left by good ones, because thou wert absent, when these things happened: For as just Indignation brings forth a Song, so I being provoked by the unskilful, determined to set forth a Little Book of an Unheard of Doctrine concerning Fevers: And it fitly fell out, that Cardinal *Ferdinandus*, our Kings Brother, is killed by *Portugals* his chief Physitians, through an immoderate exhausting of his Blood, and inordinate cooling: But that that would so come to pass, I had foretold in my Writings, unto *Carmelita* his Confessor.

But forthwith after his Death, that thing was disputed by a controversial right: *Fortunatus Vopiscus Plempius*, a *Dutch-man*, very well learned, and Professor at *Lovaine*, was Victor in the Controversie. But I have prefixed a Verse to my Book, whereby not so much the Malice, as the Brutish and unpunished Blockishness of those Physitians might be manifested. Therefore I have added, that none was ever made free from a Fever by the method of *Galen*, as neither that he who otherwise laboured with a more grievous sickness, did escape, but whom the strength of Nature did the more timely snatch out of their hands: Because that in the Schools, as well Fevers essentially, as the Remedies of the same, were hitherto unknown.

Therefore I set forth a Book which might confirm that thing; but bespattered with so many faults on every side, that I blushed to acknowledge it for my own: But however it was such, yet by reason of the novelty of the matter, it began soon after its birth, to be desired, because it was wanting or not to be had.

For I shew that a Fever is unknown: That its Remedies are unknown: And likewise, that a Quaternary or Fourfold number of Humors, are old Wives Trifles, whereby credulous mortals do as yet to this day, sat the places of Burial. Therefore let it be a Probleme; to wit, that I have altogether erred therein, or not indeed I, but the Humorists have erred: And the whole School of the Humourists hath gone to the Wall; Because now, the Hinge whereupon the posts of Healing are supported, doth lye on the ground.

That matter, since it toucheth the Life, the Common-wealth, and most Families; I intreat the Christian World, that from Charity, it would take good heed to the deciding of a difficult Question, so unthought of, and of so great moment.

I in like manner, adde a Book wherein I have demonstrated, That the Causes, Remedies and also the Manner of making the Stone in Man, have been constantly unknown hitherto. That the Pest also, Apoplexie, Palsie, Leprosie, Lethargy, Convulsion, and that sort of Diseases, are as yet alike unknown in the Schools.

But I have written these Paradoxes, for a Pledge of a bigger Section promised; wherein I will lay open the Beginnings of Natural Philosophy, and new Maxims of Healing, for a publick good; To wit, that the Schools may learn, and repent.

Let them learn indeed, not of me (who otherwise, have always despised all vain glory) but from the Giver of all Good. But I have endeavoured so to manifest my Talent received, for the profit of my Neighbour, that hereafter any one of a sound mind, ought to confess whether he will or nay, that very darkness it self, hath hitherto banished Truth out of the Schools of the *Gentiles*.

And since I wish my Labours may speak to the whole World; therefore I decreed to dedicate the same unto thee, for a Pledge of Friendship; because
thou

The Epistle Dedicatory.

thou wert a Patron of the Muses, and a Favourer of the Art of the Fire. For I have never dedicated my Books unto chief men, that I might represent their famous deeds, and the pictures and pedigrees of their Ancestors: Indeed I would not seem, to have been willing by flattery, to corrupt their integrity. I know also, that whatsoever is of flatterers, doth no less displease thee than my self.

Lastly, neither do I offer my Writings, that they may be fenced under thy authority: Far also, be such stupidity, which knows not, that Kings themselves are unfit for such Protection: Nor that any thing can subsist, which hath not obtained its Patronage from God.

I give therefore, (O Illustrious Man) and dedicate these my Labours unto thee, with a naked title, that thou mayest proceed to love me, thy most loving Friend; who intreateth God, that he would preserve thee in health! In the mean time, Enjoy thou, Rejoyce, and Farewel, as thy Friend

THE END OF THE WORLD

On the WORKS of the Noble and most Famous D. J. B.
HELMONT. A Verse of the Noble and most Ho-
nourable Lord, *Janus Walborn*. D. Coun-
sellour to his Majesty.

*Hut up thy Schools, O Galen, for, enough of Men are slain,
Ho, now it is Sufficient; full Graves do ring again!
For Blood and Clyster are thy Medicines: nothing oftentimes
Thou giv'st: but to a Critick day thy hope alone confines.
In touching of a Vein, the while, and eke of parched tongue,
And in the Urine wholly th' art dismayed, and so in Dung.*

A Med'cine's to be got for him, this helps not the sick man:

No need of tests of the Disease: but of a Physitian.

Yet thou expect'st a great reward, after the man's enshrind.

So doth the Dog look for and love, the Cattle sickly kind.

Helmont is one, who able is by his Apollo's art

To snatch from th' jaws of Death whom t' oher left to dye in smart.

TO

TO THE

Medicine - Loving Reader,

John Baptista Van Helmont

of Brussels, Toparch or Governor in Merode, Royen-
borch, Oorschot, Pellines, &c. Being a Philo-
sopher by the Fire; wisheth Peace,
Joy, and Knowledge.

Lately sent forth a new Doctrine concerning Fevers, wherein I have shewn,
That a Fever is unknown to the Schools, in its Essence, Root, Pro-
perties, and Remedy: That matter diversly affected Physicians, and
especially it perplexed those that refuse to learn: For they who perswaded
themselves to be wise enough, said; Shall therefore the Universities
sustain this Calumny without punishment? and have so many fa-
mous Wits, and we our selves been Blockheads? doth Helmont a-
lone sit at the Table of the Sun, that from those Dainties, he hath

dared to arrogate the Adeption or Obtainment of Healing to himself? But although my
ignorance doth most poorly accompany my Intention, and the Confession hereof, doth not blot out
the Stain of Ignorance; yet the Integrity and Sincerity of my Intention deserves pardon: For
truly, in healing, the truth of every thing comes to be judged or esteemed, from the Work which
it leaves behind it: For neither ought those to be accounted Calumnies, if the Errours of Pre-
decessors are discovered, their names being suppressed. A publick humane affair is treated of by
me, for the sake of Charity alone: If therefore I shall say, that the first of those, who fetch the
Fundamentals of Medicine from the Heathens, who hath known, not only the root of Fevers,
but also of any Diseases whatsoever, and their just Remedies, is as yet desired; and I shall demon-
strate that thing; I am void of blame, neither shall I seem to be injurious: But if not, I pray
let those who take pity of my Ignorance, instruct me; even as I suppose myself to have been mo-
ved only from a compassion on mankind, lest any one should hereafter entrust his Life in the hands
of unfaithful Helpers, who hitherto have made none free from a Disease, from a certain know-
ledge; but as many as have escaped, that they have recovered through the bounty of God alone,
and the goodness of their Nature: For this is that Paradox, which I promise that I will demon-
strate, and in promising, to stand to my Promises. But I had said, in the aforesaid Book of Fe-
vers, that I owed to the Stone also, its own Treatise; because the Disease of the Stone, is like
unto a Monster, and therefore that it was to be separated in a fold or section by it self: For other
Diseases are no where bred but in our possession; but the Stone alone, doth also grow together in the
Urinal: It becomes stony indeed, as it were the product of Universal Nature; but it grows, in-
as-much as it is the product of Nature changed to another use; and that it may be made a Stone
in Man, but not a rockie Stone, it requires a matter disposed by Man. By this entrance there-
fore, the Universities will see, that they have not touched at the Causes of the Disease of the
Stone, so much as in its utmost coasts: and they who grieve, that they are blamed for their Ig-
norance of Fevers, will acknowledge that they have more Companions of their Calamity: For I
would never be injurious to all that went before me; and it is sufficient for me to protest, that I
want a mind of doing injury: For, far be it from me to be ignorant, that an unknown matter

demonstrated

To the Medicine-loving Reader.

demonstrated for the uses of ones Neighbour, should want reproach; especially, while the ignorance of Physicians hath it self in manner of a crime, and Man is at sometime to render Skin for Skin: No otherwise than as a Pretor or judicial Officer, accusing any one of a Crime, is excused from Calumny. I have alwayes greatly grieved, that in the devout Profession of Medicine alone, it hath been subscribed to so dull, sluggish, and frivolous Principles; But that in other Professions, they have so ingeniously laboured: For indeed, what of subtilty hath not been attempted, about the five Words of Porphyry, which they name Predicables? and what subtile wiles, have they not moved about vain things? Prattles I say, the witnesses of a discursive industry? Raymund notwithstanding, being not contented with these, invented nine other most Universal Words; and afterwards added unto these same nine, twenty eight other Words, less Universal: and lastly, he at length subjoynd seventytwo other Universal Words, whereby any things may seventeen thousand, four hundred, forty six times be described, predicated of, and distinguished. Those unprofitable prattlings are the great Husks of Sciences, without a Kernel. Surely, humane Wits, are of their own accord, prone to subtilties without Spurs, if the ends of those subtilties are vain: But in things that regard Life and Health, they have snorted with a continual Lethargy. The Law also, is so incumbent on subtilties, about the Explications of Decrees, as the Sublimities, wherewith the Wit of Man is snatch'd away with so wouderful an Admiration, and beholds it self in its own delight, that by a singular Prerogative, they are called the Subtilties of the Law: These indeed are less vain than talkative Faculties; because that they are provided to attain and defend right. But in matters of Divinity, what famous things do not the Chairs hope for, by their accute discussings of Questions? I would to God, that Mans necessity might want all these things; that meum and tuum, or mine and thine, might be rendered to every one, without any false Paint! that the Faith also (as in Mahometism) might stand without disputation; that every subtilty may depart, whereof an account will not be required in the last day: for so Apostolical Sincerity should return; So I have received, and so I have delivered unto you. At least-wise, they shall undergo the milder Judgment, who in their Life time have been most estranged from these Subtilties. But in Medicinal Affaires (alass for grife) where a diligent search is most necessary, profitable, and commended for charity, almost all things have remained untouched; because careless sloath is on every side, readily inclined to subscribe unto the ancient blockishnesses of the ignorant: it is also more damnable among those, who wander through the Streets, and run thorow them from house to house, that they may prostitute Health to Sale, and put a Disease unknown unto themselves, to flight: For it hath not been once by the way, doubted by the Universities hitherto, about the belief of the Speculations delivered by the heathens; which otherwise, vail a folly, even with their facility alone, and at the first view, ought to stir up a suspicion of themselves; because nothing in humane Affaires hath been now for so many ages received, which is more hardened in shame, and blockishness, nothing more full of lying and deceit, nothing more wonderful in cruelty, and also in credulity, than a profession which maketh Experiments daily, by the Deaths of Men, under a con-centrical subscription unto the Wills of the Heathens: For the Nations who live without a Physitian do confess that thing with me, by what a Life they lead. That thing I say, the more refined Physitians, also, do confess: For a godly and sober Man, but a very famous Physitian, Doctor Johannes Vander Wegen, being not so long since asked by me, Why (for truly he dwelt at Lovain, and had Friends in the Court, and Potentates which he cured, and he was most fit for the Chair) He did not desire some Lecture? He ingeniously answered, It was not lawful to give a tast of any other kind of Doctrin unto Youth, besides that of Galen; and so (said he) I should knowingly damn my Soul, I knowing better things, and teaching worse. Therefore others know what I discover that I know, but they dare not to discover what they know.

Good Jesus, how long shall the drowliness of Physitians remain? and so great cruelty against the Works of thy Hands? Grant, grant thou oh Infinite Goodness, that mortal mankind may know, that the Devil Moloch, envieth no Subtilties, but those which are sifted about Charity, and which regard and preserve the Life of thine own Image. For I grieved at the first, at so great rashness of belief of Principles, and at so great a sluggishness of Mortals about things of so great moment; and the pitty of this thing increased with me daily. Hence at length, I having obtained a little Light, I knew with great grife, that the Errours of the Schools ought by me, plainly to appear: But indeed, in the entrance, that thing seemed to me to be full of untamed arrogancy, that I, the least of all, should brand all before me, with the ignorance of Philosophical truth, but should attribute to my self only, the obtainment of healing: Therefore I oftentimes begged of the Lord, that he would re-take that his own Talent from me, and vouchsafe wholly to take it away, and to bestow it on another more worthy than my self: For I knew, that he who had well lay hid, had well lived, at least-wise, morally, and in this ulcerous age: Therefore I resisted, and a good while deferred to propose this ignorance of the Principles of Medicine

To the Medicine-loving Reader.

Medicine, to its own World, until that now being an old Man, the last necessity constraining me, and being placed in an Agony of Death, I promised the Lord, that I would sincerely divulge his Talent, least I should at sometime be accounted in the strict Judgment of God, to have come into the world in vain, and to have departed as unprofitable from hence: For by a Vision in a Dream, I understood that I was more afraid of gainsayings, than of Gods Indignation; that Nature was crafty, as long as she made a pretence for Pride, in purely obeying God, by reason of deceitful humane respects. Also I saw not, that my own Arrogancy, which was placed rather in fear, did make me less freely or generously to perform what was required against Judicious Men, that would rise up against me for so many ages past, than in purely obeying the most glorious Giver of Truth: Yea, that I did not commiserate my Neighbour, and that I buried my Talent in the Earth, in looking back on the uncertain Censures of the World concerning me: I knew indeed, the doores of Medicine to have been locked, and the Bars and Bolts thereof, to have been covered with rust, for so many ages; but I doubted to open them; as if I should presume the Office of a Porter to be merely my own, and not to be given to any other: Therefore I resolved with myself, to do what Charity, not arrogancy perswaded to be done, as knowing that he is not injurious, who beholds a publick good, although it may make those blush, who have rashly subscribed to the trifles of Heathens, unto the damage of mankind. At length therefore, I stood as a middle man, between the shame, and sore fear of the greatness of the thing, and many times reposed my Pen: And again, I seriously begged of the Lord, that he would vouchsafe to chose another more worthy than myself: Wherefore the Lord being deservedly wroth, suffered this Evil and unprofitable Servant to be sifted by Satan: For an Order, whose Zenith or vertical Point, is the house of Powers, and whose Nadir or Point under their Feet, are other Orders, began undeservedly to persecute me by unworthy Wiles: I knew presently, that the hand of the Lord had touched me: And therefore, in a full tempest of Persecutions, I wrote a Volume, whose Title is, the Rise or Original of Medicine; that is, The unheard of Beginnings of natural Philosophy; wherein I have discovered the accustomed Errours of the Schools in healing: I have I say, afforded, and demonstrated new Principles; as also hitherto, unheard of Speculations of Diseases, that the Universities leaving the Vanities of the Heathen, may for the future, accustom themselves to the Truth: For from thence, I found a rest in my Soul, such as I never found in the times of my Prosperity; so that, I being full of suspicion, grieved that so great Storms did not any thing disturb the rest of my Soul, or sleep of my Body: Wherein, O God, my Protector, I am not able sufficiently to praise the abundance of thy bounty, which suffered not my Soul even in the least, to fall out of a full enjoyment of peace, under so great straits on every side: I fearing this one only thing, least as an unprofitable Servant, I should be buried with my small Talent.

Whosoever therefore thou art, who interpretest my Zeal to be proud boasting, thou mayest do it for me, so thou shalt not hurt thy self: for I will rejoyce to bear back all confusion for the good of my Neighbour, and of Posterity; and I shall enjoy my wish, whether in the meantime, my boldness shall turn unto me for rashness, or not: For God the Sower, will water what he would have to grow. And moreover, in the Book of Fivers, I have declared the Beginnings of my repentance, and in what manner I desisted from Galen and Avicen, to wit, by reason of the discerned falshood of the Pillars of Medicine; from whence a singular boldness of confidence thenceforth increased in me, being as yet a young man, whereby, for my Neighbours sake, I willingly exposed my self to the in various Censures of all; and the number of dayes by degrees running on, the Lord beheld the Candor of my Zeal, and granted me, now a Man, to see, that whatsoever is taught in the Schools of Medicine, is full of Miseries and Ruine, and that it should be a laughing stock to Posterity. Good Jesus! how greatly was I then amazed at the greatness of thy Clemency, which reveals those things unto little ones, which were denied for so many ages, to men otherwise, most religious and ingenious.

Moreover, although I was from thence more assured, that the manifestation of my Talent of truth received, lay heavy upon me; yet Nature is ready to find out excuses, and deceives it self, and its own Sorrows, by the Props of Reason its Chamber-Maid: I presently therefore (fie, it frames me of my own unconstancy) shook off the undertaken burden again from my shoulders, and said; who am I, oh Lord? for the more solid things are defective unto me, which I should substitute in the room of those that are to be depressed: For what things I before believed, were commanded me, I again suspected to be suggested by the subtilty of Satan, because secret Remedies were wanting unto me; to wit, the Letters Patents or Signes of my message: Wherefore, in my youth, I had a good while perswaded my self, that the very Art of healing, was nothing but a meer imposture, devised by the idle Greeks, being at first framed for the destruction of the Romanes their subduers, and afterwards confirmed for the Calamities of Men, whereunto humane Credulity, by reason of a conceived hope, had easily subscribed, and so that that Pro-

To the Medicine loving Reader.

feſſion of Medicine had brought forth its own authority; becauſe for the moſt part, we too readily believe thoſe things which we too greedily deſire. Indeed I knew from that time, that the Medicine of the Univerſities was a thing of no worth; to which end, they afforded me their votes, ſince Diſeaſes were incurable, and moreover, the vanity of Experiments; and at length, ſuccours abounded on every ſide; becauſe I ſaw Phyſicians every where expoſed to a mock; and alſo the Phyloſophy it ſelf, afore choſen in my youth, aſſented unto this my Errour; To wit, that the Logick, natural Phyloſophy, and Metaphyſicks of the Schooles, were not that Phyloſophy, for which Pythagoras in times paſt, took unto himſelf only a few Schollars of the better towardneſs, to be inſtructed by him, they being bound by the ſilence of many years, and by a ſecret Oath, that they ſhould never declare to any one, any of thoſe things which they had there heard: for I ſuppoſed rather, that the Eſſayes of the Art of the Fire were there delivered, than of that Science, which Galen layes open by much Greek rattle: For truly alſo, long before Pythagoras, every one had accuſtomed, faithfully to note by Hieroglyphicks in Temples, whatſoever things had profited his own People: for that thing, ſo great a neceſſity, and ſo intefine a Calamity had convinced of, that they were thus delivered to Poſterity without envy. When therefore the Art of Medicine fell into diſeſteem with me, I lighted on a Text of holy Scripture, having been often read, yet never underſtood; To wit, That the moſt high had created the Phyſician, and had commanded him to be honoured, by reaſon of the neceſſity there is of him. Wherein I preſently diſcerned,

1. That he who created all things, doth notwithstanding, particularly glory, that he is the Creator of the Phyſician.

2. That for his own glory ſake, for the iſſuing forth of his goodneſs for the neceſſities, helping, and ſuccours of the Sick, and ſo by the Phyſician, the Almighty will be appeaſed, in reſtoring health that was taken away.

3. That he to whom all honour and glory is due, hath commanded, that Parents, and Phyſicians onely created by him, be honoured; as if a Phyſician had ſomething of a fatherly Nature.

4. And then, in my manhood, I not a little carefully inquired day and night, what happy Man he ſhould be, whom the Almighty from Eternity ordained, choſe, and created for a Phyſician, and from hence alſo, commanded to be honoured.

Whether happy it were he, who having read over Inſtitutions, and ſome claſſical or renowned Authors, and having ſpent full three Years in the Univerſity; and at length, who by diſputations, and examinations by Profeſſors, having laboured for Preferment, was ſent forth, being admitted as well by Secular, as Eccleſiaſtical authority? Or indeed, whether it were he, who with the ſame Title of a Phyſician, had waxed old under anothers mourning, being in the mean time, full of Tears, Experiments, and Moneys? Then ſtraightway, I with pity conſidered, that the Sick ſtood in need of a Phyſician, whom the Almighty hath created, he being furniſhed with full abilities; and that an healthy Perſon wanted not a Phyſician ſtanding by him, who ſhould be chief over the Kitchen, ſhould number the Morſels, and preſcribe rules of Diet. (Thou ſhalt hereafter find more things concerning the honour due to Phyſicians, under the Hiſtory of Duelech.) I conſidered on the other hand; That the Maker of ſweet Oyles ſhould compoſe the Varniſhes of Sweetneſs; neither that his Works ſhould be conſumated or come to an end: Neither that there ſhould be a Medicine of deſtruction in the Earth: Which ſoundeth, that a true Phyſician, ſhould mow down all Diſeaſes with an equal Sithe, nor that Diſeaſes were with him incurable: Surely, a notable difference between a Phyſician, which the moſt high hath created, and him whom Univerſities have created by the Doctrines of the Heathen. A huge Catalogue of incurable Diſeaſes preſently offered it ſelf unto me; as if the moſt high had been nothing careful for theſe; or as if ſuch ſick Perſons were not diſeaſie; Becauſe that, for the neceſſity of whom, he had neither created a Phyſician, nor a Medicine in the Univerſities: For truly they not only caſt ſuch Sick-folks into deſpair; but alſo, as many Diſeaſes as are not ſilent of their own accord, they reckon up for deſperate ones: Yea, a Quartane Ague, and thoſe which take faſt roots for Years, and which are for the moſt part finiſhed through a voluntary tireſomeſs of Nature, they reckon to be incurable: And but that other Diſeaſes do at the laſt haſten to a bound or limit, truly all Diſeaſes ſhould be equally added to incurable ones: For moſt Phyſicians know not how to take away the pain of a Tooth, but by pulling of it out: So perhaps, they would command the ſame thing for health, in an inveterate Head-ach; to wit, a taking away of the Head.

To the Medicine loving Reader.

Head, if the Life could remain safe. After the notable Labours of some Years therefore, it grieved me, that I knew, or had learned nothing else but that which was of no worth: For although I believed the Physician to be created of God, even as also simple Medicines; Yet I wholly stuck in the knowledge of that Physician, and of the things subservient unto him: For I wished many times, Ah! I would to God, I might sometime, at length become the Disciple of such a Physician. In the meantime, I knew clearly, that the Art of healing, garnished forth as well by the Greeks, as by the Arabians; and that which the Jews feign to have been delivered unto them by hand, from their Rabbins, under the Cabal, did very far differ from that which the sacred Text decyphereth. At length therefore, I inferred in my mind, That the Science of Medicine had a good beginning, from the mean intention, and end thereof; To wit, that it was a good gift descending from the Father of Lights; and therefore, this gift had never, long since descended into the Heathens, and Jews, however they were blown up with our rashness of belief; because they are those, whom the Lord hath not created Physicians, nor for our necessity; as neither hath he commanded them to be honoured, but to be seriously avoided: For a Physician created of God, is not defectuous, given to Gain, and an Enemy of Christians; but full of Charity. But first, I have noted this rarity of that good Gift, from Dioscorides, who from the dayes of Plato (wherein he lived) hath indeed described the Histories of Herbs; yet unto this day, scarce any thing hath been added unto him, but very much detracted from him: And so, scarce any Light hath shined forth from above, into Herbarism, for two thousand and three hundred Years, although it be a most plain or easie, and necessary Science: Wherefore I have conjectured that that Light from above hath soberly enough slidden down into other orders of more abstruse Knowledges; Yet least of all into Heathens, Atheists, and perfidious Jews, they being secluded from the Truth, and Charity, and for that Cause forsaken of God: And as the Nativities of things are banished into the fulnesse of times, covered from us; so that the Gift of the truth of Healing doth not descend, but in the fullnesse of time appointed by God: For neither shall Light, which is freely given, shine at our pleasure: For he who made all things as he would, makes the same things when he will, and perfects them in whom he will: For I have waxed old, now, for forty years and more, in the rout of Physicians; and at length, I being an old Man, have known, that the Speculations of the Schools ought by me to be subverted, that all things, in the Age that is soon to come, may fall into dung, as they being destitute of the Lime of truth, do not cohere together. There hath been so great a certainty with me, of that Gift being obtained, and so reverend an Authority thereof, that I perceived, that the Giver would together with his Gift, be also the interpreter thereof; and that in this respect, I should exclude every doubt whatsoever: and such a knowledge is far more sure, than that which is formed by demonstration; because there is not a Faculty in Words, to make this certainty common to others. I know also, that all who are to read my Beginnings of Medicine, will not carry back an equal Fruit from thence; because God is still to remain the dispenser of his own Gift. I have spoken these things, that ye may also know, that my unworthiness will overspread the Gift with darkness, that he may compass the race of Nature who can: for I have hoped, that when he shall now increase the number and fierceness of Diseases, he will inspire the Gift of Healing into the little ones, and despised of this World. And since that in the aforepast Age, he sent Paracelsus, a rich forerunner in the resolute knowledge of Bodies, and lustre of Remedies; it might be, that he would now over-add the knowledg of an Adeptist, which that other wanted.

Furthermore, if it liketh thee without wickedness, to enquire into the reason of the pleasure of that Divine Decree, for which the Adeptical gift of Healing hath not descended unto Christians; I suppose, that the Schools do resist it, as they stubbornly insist on the Principles of Heathens: And then also, because Medicine is wholly exercised for Gain, presently after its Beginning; the which alone of Arts, is to be mercifully expensed from compassion; But not as though Men were to live merrily and pompously, or to grow rich by the Miseries of the miserable Sick: Wherefore gain hath prevented a necessary Disposition in Men, and the falshood of Paganish Doctrin hath diverted the Adeptical or obtained Gift of Healing: The searching out whereof, hath therefore seemed to me, to consist in compassion towards the Sick, by un-learning of false Theoremes, and by putting on deep humility of Spirit; The which, as it is not then blown up with the Letter, nor pressed down through inordinacy; So in a humble beholding knowledge of ones own nothingness, the Mind empties it self of all Science or Knowledge introduced by the inducements of Reason: Then afterwards, then, I say, the Most High scarce suffers the Mind to be empty, but he replenisheth the same with a fruitful Beam of his own Light. I have already perhaps found some, who, because I say that the obtainment of Medicine descendeth down from above, will have Medicine to be perfectly learned, after the manner of other Arts: The Intellect or Understanding, they say, is a natural Power; but every natural Power is born to work a proper Effect; but the proper Effect of the Intellect it self, is Understandingness: Therefore Man naturally understandeth

To the Medicine-loving Reader.

all intelligible things, as the proper Object of the intellect. Moreover, the Faculty of healing is intelligible, and therefore it descends not from above. I answer; The Soul and the Understanding thereof, are not the immediate Works of Nature, because they are those which arise from a supernatural Fountain: And so, although the intellect, as to its beginning, be a natural Faculty of the Soul, yet it is not altogether to be reckoned among natural Faculties. It is of Faith, that God hath created the Physician, and so that the Art of healing be-speaks something beyond the common rule of created things, so as that the obtainment thereof, doth not happen after the manner of other Arts: For Nebuchadnezzar will testifie a taking away, and a restoring of the understanding. Likewise, do not ye become as the Horse and Mule, which have no understanding; the which had been spoken in vain, if understanding were equally given by Nature. Moreover, the Understanding given (whereof they here declare) exerciseth not its own natural, or intellectual Act, but as by discoursing, it drawes some Notions from Observations, which it received from the perceivance of the Senses; when as it is altogether ignorant of the Causes from a former: But unto the Science of Medicine, a certain clearness of Light is required, which exceeds that knowledge by the Senses, yea and by the consequences of Causes to their Effects, according to suppositions brought on them by reason, for the most part deceitful ones: For it is of Faith, that the intellect, together with the totalness of humane Nature, and so from thence, howsoever clear it be, doth not perceive Propositions firstly or chiefly true, which exceed sense, unless with the afflux or concurrence of a supernatural Light. Suppose thou, I often read a place in a Book attentively; and although I understood the Words, yet I once only draw in the sense thereof, unlooked for, with an admiration of forepast readings: But such Knowledge, I call that of Grace: For so the Understanding, how clear soever it be, doth not alwayes assent to the truth; because neither doth it naturally perceive this truth (for from hence, are there Factions in Sciences and Religion:) So in the gift of Medicine, there is something more noble and superiour, than that which is formed in the imagining Faculty, from a fore-existing knowledge of the Senses; the which is true, solid, good, exceeding the authority of consequences; yea, which can neither be properly taught, or demonstrated: Yet I would not be understood, that the obtainment of healing is such an infused Science, as in times past enlightened Bezaleel and Aholiab; and much less, such a one as on the day of Pentecost, rained down with a large shewre on the Apostles, so that they forthwith spake in diverse Dialects: Neither also, is the obtainment of healing therefore of things plainly sublunary: For the Eternal Wisdom, hath created its Physician, after a singular manner, before other created things; and so, some more famous thing seemeth to be required for him, than for other Professions; the which therefore, neither hath he commanded to be honoured. After another manner, truly all our understanding in Nature, ariseth only by way of discourse, of the Observations of that which is supposed, of consequence, and of a diligent enquiry, and all that from the effect: Wherefore all such Knowledge is encompassed with uncertainty. Therefore, between an ordinary manner of understanding, and infused science of the first degrees, there are certain enlargements, every one being distinct in a particular degree, in an understanding supernaturally arising. Which I thus prove.

Every good Gift descendeth from the Father of Lights:

The obtainment of Healing is a good Gift; Therefore it descendeth from the Father of Lights.

The major Proposition is of Faith: But the minor is manifest, as a Physician, as such, is created by the Father of Lights.

They reply by a certain similitude, and nothing to the Syllogism, after this manner.

The Knowledge of God is more difficult, than that of Medicine:

But the Heathens have naturally found by the Operations of their understanding, the existence of the God-head.

Therefore they far more easily obtained the natural Science of Healing. I answer, by granting the whole, if they shall not bring in four Terms.

Therefore, even as by Nature, none can draw the Light of Faith; but only a certain shadowie knowledge: So also, in the Gift of Medicine I grant, that a certain knowledge of healing is naturally attained by observations of what is helpful and hurtful: but surely, that knowledge is so shadowie, and blind, that it plainly resisteth the Text; which should say in vain, That God created the Physician, as such, and him to be honoured; unless there did shine forth some Light in this created Physician, above the vulgar, ordinary, and natural intellectual Power of the Soul.

At length, that neither Atheists, nor Heathens, as neither Jews, ever received that Gift of healing, it is not elsewhere, nor farther to be drawn, than that, De facto or from the deed done, a Disease, Remedies, and every appropriation hereof, are as yet to this day unknown to Mortals: For it is an invincible argument;

The

To the Medicine-loving Reader.

The obtainment of Medicine hath been hitherto unknown; Therefore God hath not given that gift unto Paganism, in fore-past Ages, as neither to the Schools, they following blind Leaders:

The correlative whereof is, That whosoever assents unto the Doctrins of the Paganish Schooles, is secluded from the true Principles of Healing. For I will demonstrate the Assumption, God favouring me, in an ample Volume: To wit, that the Principles of knowing the Causes, and Roots, in Diseases, Remedies, and Appropriations, have remained unknown. The Consequence is by it self clear, unless they shall shew, that every good gift is derived elsewhere than from God: For it ought to be sufficient for the establishment of the Gift of Medicine, that although the obtainment of Healing, be so near the Nature of the Understanding, that by reason of the nearness of natural Objects, and their necessities, it is accustomed to three natural Sciences, apprehended by a simple Intellect; yet as at least, it includeth the Gifts of Prudence, Counsel, &c. which are the free Gifts of the holy Spirit; truly the Gift of Medicine ought to be brought, and expected from such a Beginning, which is plainly carried above the path of Nature: For oftentimes, some one being sunk into the middle of his Dreams, forthwith conceives a Knowledge, which being awake, he had never attained: For Night unto Night sheweth Knowledge. So oftentimes, some one reads a place that was many times read without Fruit, from whence at length, he begins a more reformed Life. For do not those things descend from the Father of Lights? Therefore, such Knowledges are indeed infused, although not of the more excellent order: They are I say, Talents, upon which, the Understanding being well formed, doth afterwards build profitable Doctrins: For the Learned, as such, shall shine (before the unlearned) in the Kingdom of Heaven, if for the sake of learning, their Soules have fitted themselves for the greater free Gifts: For the Almighty hath pleased himself in the diversity of Mansions, Quires, Clearness, and Understanding of Angels, and of Men accompanying these. At least-wise, in favour of the obtainment of Healing, he causeth, that among the seven Spirits that are next to the Throne of God, the name of one is, the Medicine of God: For he is above Principalities, Thrones, Powers, and Dominions. Nevertheless, the heavenly Wights are not sick, nor stand they in need of Medicine: Neither is that Medicine of God, to be taken metaphorically, which well knew the Properties, even in the Gawl of a Fish. But in this place, I have undertook the Birth or Original of the Disease of the Stone, which I promised, as the Stone contains a Metamorphosis or Transformation, which in no wise can draw its beginning from Humours, but from the meer excrement of the Urin. And therefore this Treatise, might easily want a Treatise concerning the fiction of Humours and Complexions.

AND

A N
E X P L I C A T I O N
O F S O M E
W o r d s o f A r t .

1.  He Liquor *Alkahest* of *Paracelsus*, it resolves every visible Body into its first matter, the power of the Seeds being reserved. Concerning this Liquor Chymists do say; *The common People do burn by Fire, we by Water.*
2. The Archeus of *Paracelsus*, it is the vital Air of Seeds, and the directress of Life, and the $\tau\omicron\delta\ \epsilon\upsilon\psi\mu\omicron\nu$ of *Hippocrates*, that is, the Spirit that maketh the assault.
3. *Blas*, for want of an Etimology, I call it the power of Motion, as well alterative as local.
4. *Bur*, it is the juyce of Minerals, or Mettals,
5. The *Duelech* of *Paracelsus*, it is the proper name of the Stone of man: For *Calculus* or a pebble stone, is a Metaphor.
6. *Gas* is a Spirit not coagulable, such as is from fermenting Wine; and also that red one, which through the operation of *Aqua Fortis*, is belched forth, &c.
7. The *Magnal*, is the Sheath in the Air, being a middle Creature between a Body, and not a Body.
8. *Magnum Oportet*, it is the Thistle and Thorn of the Earth in the middle Life of man: whereof in a particular Treatise.
9. The *Leffus* of *Paracelsus*, is the juyce of the Earth, newly drawn into the Root, as it were the Kitchin of a Vegetable.
10. The *Zenexton* of *Paracelsus*, is an Amulet or Preservative Pomander against the Plague.
11. The Powder of *Vigo*, it is known to Barbers.
12. The Element of the Fire of *Venus*, is the Oyl of the Sulphur of Copper.
13. *Aqua Chrysulca*, and *Regis*, it is *Aqua Fortis*; and this same being married or joyned with somewhat less than a fourfold quantity of *Sal Armoniack*.
14. *Horizontal Gold*, it is Gold in its Weight, but not yet sufficiently Yellow.
15. *Diaceltateffon* of *Paracelsus*, it is the Quicksilver of the Vulgar, being coagulated in the *Alkahest*, and tinged with the water of Eggs: And it is made the Coralline Secret, of the Essence and condition of Aureity or goldiness; because it is also *Horizontal*.
16. The *Relolleum* of *Paracelsus*, is a Quality not having in it a seminal Being; even as are the Elementary Qualities; likewise the Colour and Signature of Simple things.

But the other Words less usual, are either Medicinal ones, or at least described and cleared up in the present Text of the Author, and so are obvious to, or easie to be understood by the Reader.

se, Convulsion, Coma, &c.

All things being new and paradoxical hitherto.

7. The title profitable, as well for a natural Philosopher, and
Physician as for an Alchemist: but most profitable for
the sick.

John Baptist van Helmont of Brabant
being the Author

A
TREATISE
Of the Disease of the
STONE.
PETRIFICATION;
Or the Making of a
STONE.

CHAP. I.

1. **T**He Schooles of Medicine did already doubt before Paracellus. 2. The opinion of the Antients concerning the causes of making of a Stone. 3. A sounder doctrine of Paracellus. 4. The flux of seeds for a Stone. 5. The disposition of Minerals from the Creation of the World. 6. What the Trival-line is. 7. What the Flinty Mountain is. 8. From whence the diversity of Stones is. 9. The powder of the Alamanit is alwayes yellow. 10. Great or rocky Stones, and small stones, how they differ. 11. The seed of a stone, wherein it exceeds a Vegetable seed. 12. Stonifying in a man, and why a stone growes to the Tooth. 13. Some remarkable things. 14. Why some Insects do not become a stone, but the more perfect Animals, sometimes, altogether.
- Ooooo 2
15. That

15. That the form is not introduced from the power of the matter. 16. After what manner a man is made a stone. 17. Nothing of a rocky stone is common with the Stone in a man. 18. The Duelech of Paracelsus. 19. The praise of wild Carrot-seed, &c.

He more refined Physitians of the late past age, were silently astonished at the Doctrine of the Schooles, concerning the Elements, Temperaments and Humours, which was so unfortunate and unobedient to their own positions. For neither could they satisfie themselves with a quaternary of humours for all Diseases. Wherefore, it was most exceeding easie for *Paracelsus* (who by a most excellent testimony of Medicines, had drawn all *Germany* into the admiration of himself) to perswade those that already doubted of the fiction of his *Tartar*; that *Tartar* traiterously entring out of meates and drinckes, was the true cause of any disease whatsoever; which thought of his begat Credit, and hath now fixed so stable a Root, that there is not almost any one, who doth not flee unto the *Tartar* of *Paracelsus*. I did owe indeed a singular Treatise unto *Tartar*, who was readily prepared for the History of the *Stone*, but that, I had abundantly written thereof among the Beginnings of Naturall Philosophy, and therefore I had left that Volume maimed, if I had from thence transferred the Treatise of *Tartar* hither. For truly, the Original integrity of Nature being there placed within the matter, the *Archens*, and the Life, or Form, together with seminal Beginnings, hitherto unheard of, the Ferments also, the Authors of any kind of transmutations whatsoever, being newly discovered: but the Elements, Qualities, Complexions, and the fight, strife, contrarieties, and victories of these being rejected: Also the fictions of Humours and *Catarrhs*, being banished out of Nature, and Medicinal consideration: At length, *Flatus's*, *Tartars*, and the three first principles of the Chymists, being excepted out of the place of exercise of Diseases: and then I by degrees declining from things Speculative unto Discourses, handling Affects, have explained the defects, and successive alterations of Nature: and have pithily manifested to the World, the true cause of Diseases, hitherto unheard of. Therefore, the *Stone* being as a Monster bred at home in our own House, I have named this Book as it were an Outlaw, and now the error of *Tartar* borrowed from *Paracelsus*, being forsaken, I now come unto *Petrification*, or the making of a *Stone*, unknown to the Schooles.

2 For indeed, the Antients giving vp their Names to *Aristotle*, do (according to the principles of this man) as yet think, that all Stones and Minerals, without distinction, are made most especially of earth, by the mediation of heat and cold, as external workmen, yet with some additament of the three other Elements. Notwithstanding, since the weight of the rocky Stone exceeded the weight of Water: they from thence conjectured that the Earth might be the proper matter of all Minerals, And although they doubted in the weight of Gold, and knew nevertheless, that a Mathematical demonstration, which is stronger than any Syllogism, was to be fetcht from its weight: yet, in the meantime they could not believe, having neglected their own dimensions, that Gold was Earth, many times piercing it self. And now they distrusted their owne positions much more; seeing they determined Gold to be composed not of Earth alone, which is more ponderous than the other three Elements: but of the other more light ones, being mixed in a just or equal measure and proportion. Therefore, as destitute of counsel, they hung the diligent search of its weight upon the nail; and Controversies being laid aside, they being as it were oppressed with drowsinesse, were content with saying, that mettals being as it were frozen with cold (because they did again flow through the torture of the fire) and the superfluity of water being dried up, but the ayr and fire being well nigh excluded, remained as it were withered. Thus the dry Philosophy of *Aristotle* hath reported hereof: But they proved their position as I have said: For Mettals (as they imagine) flow all abroad through a contrary heat. As if indeed, a frozen work could not melt, but by the service of the Bellows! Or that earth should be capable of melting by fire; And again, at its pleasure, could require the countenance of earth, as oft as it should feel cold! Are the Schooles so unmindefull of themselves, in that they not so long since said, that the Element of water is of it self vehemently cold, and slackly moist? and so that Mettals ought to be congealed not from earth,

earth, but from Water? But that the earth of it self is vehemently dry, and slackly cold? and so ignorant of congealing; so that from hence it followes: if Mettals in their chief part, are earth: they shall never be able to flow or be frozen up, seeing that they shall be able to be at the most, but remissly cold. Neither by a heightened heat, shall earth be ever able to be converted into water; or a watery substance, while it melted in the mettall. For truly, they grant unto the earth an intense or heightened dryth, which cannot but be fortified by the fire, but not destroyed thereby. In like manner, neither can the remiss or slack cold of the most strong earth, convert this earth (while by the force of the fire it should be dissolved into water) again into earth; Because they believe the remiss qualities of the Elements, not to have so much activity, as that they can break the intense qualities of another Element. For with the same foot of stupidity, wherewith they began, they proceed to say, *that great and small stones, are earth hardened, and as it were withered, with heat.* The which they prove by *Potters earth*, which by heat alone, becomes a stone, as they will themselves. For, because a stone melts not by fire, even as otherwise, mettals do; therefore they conjecturing of Nature from a Negative, have supposed they have untied every knot. And this grosse wit ought to have been suspected by every one long since, if they all did not sleep a diseased drowsie sleep. For what will they say of *Sulphur*, which flowes or melts with the fire? Hath frozen water or earth given a beginning to *Sulphur*, because it melts? Or what will they say of the condensing or co-thickning of *Glass*, which is again dissolved by the same heat whereby it is made? And what lastly concerning *Salt*, which by one degree of heat, is coagulated and waxeth dry, and by another degree thereof, is melted, and again dissolved by moist things? Surely it is a shame to stay any longer in *Aristotelical* trifles, and the Fables of Elementary qualities, while we must diligently search into the causes and original of things.

Wherefore, *Paracelsus* first taught our Ancestors, that all Minerals (which he believed to be materially made of the conjunction of the four Elements, and elsewhere, onely of the three Beginnings) consisted chiefly of Water, and so, that they are the fruits of the Element of water, no otherwise, than as Vegetables are the fruits of the earth. But it hath not been alway unknown to me, that all Bodies which are believed to be mixt, are materially, onely of water, none excepted. But that their Body is constrained, or coagulated by the necessity of a certain proper and specifical seed, for Ends known onely to the Creator, from their cause; which proposition, I have proved to the full in the beginning of *Natural Philosophy*. It hath also been hitherto neglected, after what manner these seeds of things may come to light, may cover themselves with the wrapperies of Bodies, and dispose the same, and how those very seeds may at length, of necessity hearken to the importunities of Bodies. Wherefore, neither shall it be unacceptable, in this place, briefly to repeat the progress and flux of Seeds to their form, and their maturities; in Minerals, out of the Doctrine by me elsewhere more largely delivered.
